  - Deborah Buccino, MD
  - Ruby Chang, MD
  - Vitaly Nazarov, MD
  - Lisa Sylvia, MD

5. Project Management Approach

The Brien Center will create a project team to manage and oversee the work proposed within this RFR submission. The Team will include oversight from Senior Management (e.g., CEO, Vice President for Service Operations and the Vice President for Administration and Finance). In addition, the Team will include CSA staff and ICCs who will work more directly, on a day-to-day

basis to ensure that project designs and deliverables are met. James Mucia will be the overall Team Lead; Morgan Langlois and Carrie Crews will be responsible for working directly with pediatric offices and youth and families seen at those locations. Ms. Langlois and Ms. Crews roles will not be duplicated, given that they will be serving MassHealth Members in geographically distinct areas.

To manage this project, the Team will create a detailed project management plan that staff will be accountable for adhering to. The overall project management approach is reflected in the Implementation Plan, included as part of this RFR submission.

Mr. Mucia, Ms. Langlois, Ms. Crews and Ms. Ryan will work closely and collaboratively to manage the work associated with the project, meeting on a regular basis to review project deliverables, progress, and youth and family and pediatrician response to the initiative. The Team will maintain a level of attention to detail contained within the work plan; however, the Team will review fidelity to the Wraparound Model and stakeholder responses to the methodology at least weekly.

Mr. Mucia, Ms. Langlois, Ms. Crews and Ms. Ryan will also create a larger leadership team that will include pediatric representation, CBOs, State agencies, families, and other key stakeholders to discuss the initiative's overall progress. This leadership group will meet at least twice annually to review project progress and discuss opportunities to improve the initiative.

C. Implementation Plan and Timeline

Budget Periods: Preparation – Period 2

	Preparation Budget Period					Budget Period 1			Budget Period 2			
Task	Nov-17	Dec-17	Jan-18	Feb-18	Mar-18	Apr-June	Jul-Sept	Oct-Dec	Jan-Mar	Apr-June	Jul-Sept	Oct-Dec
Project 1: Enhanced ICC Pediatric Integration												
Identify pediatric practices for participation	DONE											
Develop design/ approach with pediatric offices and in provider focus group(s)												
Develop workflow re-design to incorporate Brien Center ICC staff and pediatric office staff												
Conduct pediatric staff training												
Conduct mini-conferences for pediatricians												
Implement integrated ICC meetings												
Assess integrated ICC meetings												
Continuously improve integrated ICC meetings												
Conduct regularly scheduled meetings with pediatricians												
Project 2: Increase ICC Workforce Capacity												
Identify optimal training on Fidelity to Wraparound processes												
Schedule staff participation to attend conferences and other training as appropriate												
Send staff to participate in training												

	Preparation Budget Period	Budget Period 1	Budget Period 2
Develop training curriculum, based on staff participation for additional CSA Brien Center staff			
Conduct ongoing training to enhance fidelity to the Wraparound model including staff and pediatricians			

Budget Periods: Period 3 – Period 5

	Budget Period 3					Budget Period 4			Budget Period 5			
Task	Jan-Mar	Apr-June	Jul-Sept	Oct-Dec	Jan-Mar	Apr-June	Jul-Sept	Oct-Dec	Jan-Mar	Apr-June	Jul-Sept	Oct-Dec
Project 1: Enhanced ICC Pediatric Integration												
Assess integrated ICC meetings												
Continuously improve integrated ICC meetings												
Conduct regularly scheduled meetings with pediatricians												
Project 2: Increase ICC Workforce Capacity												
Schedule staff participation to attend conferences and other training as appropriate												
Send staff to participate in training												
Develop training curriculum, based on staff participation for additional CSA Brien Center staff												

	Budget Period 3	Budget Period 4	Budget Period 5
Conduct ongoing training to enhance fidelity to the Wraparound model including staff and pediatricians			

D. Budget Report and Budget Narrative

The Brien Center has provided one Budget Report and one Budget Narrative, included in this submission as Attachment 6.4.D.1 and Attachment 6.4.D.2 of this proposal.

E. Sustainability

The Brien Center will sustainably fund the proposed infrastructure and capacity building investments during the Contract Term and following the initial Contract Term through:

For Project 1, Enhanced ICC and Pediatric Integration, The Brien Center will enhance sustainability by:

1. Building strong relationships with pediatric offices
2. Establishing new processes to serve ICC-Engaged Enrollees within the pediatric practices that participate as founding members of this initiative
3. Leveraging relationships with pediatricians who participate in this initiative from the outset to engage additional pediatric providers to join the project over time, thereby increasing the number of youth and families who receive integrated ICC services
4. Leveraging equipment purchased using CSA Infrastructure and Capacity Building funds over time in the original pediatric partner offices and in additional offices as pediatricians also wish to deliver integrated pediatric and ICC services.

For Project 2, Increase ICC Workforce Capacity, The Brien Center will enhance the sustainability of any work funded by the Infrastructure and Capacity Building funding by:

1. Maximizing training efforts funding by EOHHS and leveraging training efforts to maintain staff expertise.
2. Utilize our training and credentialing process to orient future ICC staff. Having an effective in-house training model will reduce the amount of time it takes to orient a new staff person to the Wraparound process which will ensure greater fidelity to the model.
3. Utilize current and future QI/QM processes to identify any areas of drift from the Wraparound process. This will allow management to address training needs and ensure the highest level of fidelity is being met.

Section 6.5 Coordination with ACOs, MCOs, and Primary Care Providers

A. Bidirectional Communication Between The Brien Center and Pediatric Practices

For the CSA program, the Brien Center plans on acquiring the CSA module of the eHana electronic health record software and utilizing this along with its current EHR, iCentrix for historical information. The eHana CSA module will be used to develop and execute discovery, safety and intensive care plans, track client progress and electronically secure releases and authorizations. The eHana software includes a secure messaging component which will allow sharing of information with Primary Care Providers (PCPs) and other providers, and for review of care plans and other Intensive Care Coordination (ICC)-Engaged Enrollee data.

B. Referral Management Protocols

The Brien Center will maintain a strict protocol for referral management, follow-up, and information sharing with pediatric practices. We invite all appropriate and family-approved stakeholders to Wraparound planning meetings. If medically involved and appropriate, Wraparound meetings will be held at medical offices. Wraparound outreach meetings at pediatrician offices will be tracked. A summary of our referral management protocol for follow up and information sharing is as follows:

- At the first meeting with the youth and family, The Brien Center obtains releases for all youth and family collaterals including pediatric, Behavioral Health (BH) and Community-Based Organization (CBO) providers.
- We record collateral contacts in a data file for each youth and family and agreed upon referral sources are added on an ongoing basis.
- ICC staff determines and initiate referrals, based on the youth and family's needs and preferences.
- ICC staff follows up to ensure that the youth and family received services as referred.
- If the youth and family did not receive services, the ICC staff works with the family to identify and address barriers; otherwise, results are tracked as follows:
  - Referrals are tracked from initial first contact, family assignment, first face-to-face meeting, and Wraparound planning. Waitlists are closely monitored by Brien Center staff. Referrals are further recorded and tracked based on the process described herein.
- The Brien Center staff record and share discussions or meetings about care delivery and integration among stakeholders in care management.
- An automatic two-way release of information is sent to medical practices with an immediate telephone or electronic follow up (email) to share information, as needed.

C. Team-based Treatment Planning in Collaboration with Pediatric Practices

Collaborative, team-based treatment planning with pediatric practices is a key component of The Brien Center's Project 1, referred to within this RFR submission as Integrated ICC and Pediatric Services. We intend to conduct team-based treatment planning in collaboration with pediatric practices on-site at a minimum of three pediatricians' offices. Such team-based treatment planning will occur at Discovery Team meetings with the youth and their family or caregiver as well as representatives from State agencies, CBOs, and other individuals involved in the ICC-Engaged youth's care delivery.

The Brien Center further seeks to expand this approach over time by engaging additional pediatricians who provide Primary Care to ICC-Enrolled individuals. In this manner, team-based treatment planning can expand to additional pediatric offices over the course of any contract that may arise from this RFR submission.

D. Timely Access to ICC Services

The Brien Center seeks to meet with youths and families quickly, offering the fastest access to care possible. Today, our waiting list is brief, extending no longer than two weeks for an initial ICC appointment. Recent new staff hires and our sensitivity to staff retention extends our ability to offer timely access to care. The Brien Center will measure access to ICC services on an ongoing basis and will hire additional staff if existing access becomes inadequate.

E. Connections to Social Services

We meet Enrollees' needs through a plethora of longstanding connections to a diverse set of organizations. A partial list of relationships appears below.

Community Organization	Description of Partnership
MassHealth MCEs	Clinical collaboration with providers through training, regular meetings w/ network managers from the Massachusetts Behavioral Health Partnership.
Ad Lib	Refer families for assistance with Supplemental Security Income/Social Security Disability Insurance, peer counseling, housing, Personal Care Assistance.
Advocacy for Access	Assistance with MassHealth.
Berkshire Children and Families	Provides Children's Behavioral Health Initiative Family Partners; parenting skills development and referrals to Family Resource Center (FRC); Subcontract with The Brien Center for Family Partner at the FRC.
Department of Developmental Services (DDS)	Referrals and collaboration for youth meeting criteria for developmental diagnoses. Engagement of DDS case managers and other affiliated Care Planning Team (CPT) meetings
Department of Mental Health (DMH)	Referrals made for youth with serious emotional disturbance for respite, therapeutic day treatment, and outreach services. Engagement of DMH staff and other affiliated supports in CPT meetings.
Department of Children and Families (DCF)	Collaboration with social workers and families in meeting service plan goals; and referrals for outreach and day treatment services. Engagement in CPT meetings.
North Berkshire	Sharing information to provide services to the community; referrals to The Family

Community Organization	Description of Partnership
Community Coalition	Place; subcontract with The Brien Center for Family Partner at The Family Place.
Railroad Street Youth	Provide groups to youth at the program and education.
Schools	CSA staff support families in successfully collaborating with schools to best meet the needs of the ICC-Engaged youth through frequent communication and attendance at school team meetings. Schools include Pittsfield; North Adams; Central Berkshire; Northern Berkshire School Union; Southern Berkshire: Adams-Cheshire; BART Charter and Technology School.
MACONY Pediatrics	Collaboration and engagement of Nurse Care Coordinator and/or PCP in CPT meeting and planning process for youth to address both behavioral and physical health needs. CPT meetings take place in PCP office.
Berkshire Housing	Housing needs for unification with family and children.
Elizabeth Freeman Center	Domestic Violence services.
BUW/NBUW	The Brien Center actively participate in BUW-related programs.
NAMI	Collaboration for training and community events.
Multicultural Bridge	Translation services and training on cultural competency.
Berkshire Health Systems	Collaboration on acute care, psychiatry, and primary care.
Child Care of the Berkshires	Collaborate at Systems of Care meetings; refer for additional family supports and daycare; parenting skills development.

The Brien Center will leverage and build on existing relationships and collaborations to enhance access, integration, and continuity for Enrollees. One of our organizational goals is to grow our collaborative efforts with CBOs over the course of the BH-CP Contract.

To meet this goal, we will implement initiatives that address social determinants of health by enhancing our ability to address housing, food, safety, and other issues, breaking down existing silos and integrating services. For example, we participated in BHS' Community Health Needs Assessment to inform efforts to better meet the needs of the communities we serve. We will continue working side-by-side with community organizations and stakeholders to find ways to help youth and families achieve their recovery goals.

As a CSA, The Brien Center organizes System of Care Committees (SOCC) countywide. Due to Berkshire County's size and diversity, we operate three SOCCs in each part of the county North, Central, and South. Through the SOCCs, The Brien Center builds on and enhances existing relationships among participants, which include local social services agencies like the DCF, DMH, Department of Youth Services, Bureau of Substance Abuse Services, and Probation.

To inform and update staff, The Brien Center will develop a community resource guide; staff training on community resources as part of our overall approach to training as presented in Project 2, and we will hold interdisciplinary care team meetings where we inform the broader team about CBO services. We will maintain and update current information on all community resources and regularly.

CSA Budget Report

Community Counseling of Bristol County, Inc. (CCBC)

Secure Video Conferencing	$ 400.00
Total Other Technology Expenses	$ 400.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Begin training staff and addional team members on how to utilize the secure video conferencing. The cost of secure video conferencing is $200 per month.
Updated Narrative 12/12/17
This is the monthly cost for the video conferencing; we want to start using it in the PBP so that staff can get comfortable with the technology. All CSA staff will be trained, a total of 22 staff members. The vendor will provide initial training to CSA managers, who will then train the rest of the staff and eventually community providers, including pediatricians, who are willing to have it installed in their offices.

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Electronic Health Record	$ 20,000.00
Care Management Programming	$ 10,000.00
WRAP Documentation Development	$ 5,000.00
CANS Interoperability Project	$ 3,000.00
CSA Quality / Accountability Measure Repor	$ 5,000.00
Professional Services	$ 10,000.00
Total Development and Adaptation of EHR and Care Management System	$ 53,000.00

*Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined: Electronic Health Record (EHR) will be used for all clients in the CSA. The EHR has been developed by eHana and is currently in use with other CBHI entities. The projected cost of the electronic record is $20,000. The Care Management Programming will be complete to add the Data Sets rerquired to the existing eHana EHR. This programing will allow for tracking each client during the case management process. These programming changes will only apply to the CSA. The projected cost of these programming changes is $10,000. WRAP Documentation is a strengths based documentation module that will work with Care Management and EHR packet.**
*CANS Interoperability Project will enable a more efficient data collection and reporting system.*CSA Quality / Accountability Measure Reporting to implement data tracking, dash boarding and reporting necessary to support Quality Measure capture, management and submission**
*Professional Services including Project Management, Business Analysis, Training, Development and Support for eHana to develop and program the systems described above, working in concert with CCBC to allow for specific needs regarding analysis, training and support. (*shared with other CSAs utilizing eHana)*

Technology for Service Delivery

Description of Expense	Cost
IPad	$ 5,000.00
Tablets	$ 3,500.00
Smart Phones	$ 1,500.00
Total Technology for Service Delivery	$ 10,000.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Purchase IPads, Tables and Smart Phones for use in the program to use with clients.
*IPads 5 * $1,000 each = $5,000*
*Tablets 7 * $500 each = $3,500*
Smart Phones 10 $150 each = $1,500*
Updated Narrative 12/12/17
CCBC will be using both iPads and tablets, we plan to utilize both types of technology to fit the technology to staff members skills and to determine which type of technology is most useful to the CSA program. A total of 12 CSA staff members will have this mobile technology. The staff will use the devices to collect and record data remotely when they are meeting with children, families and other stakeholders. They will also be able to use the tablets to submit data into the client's eHana record and check on any new notifications that come into eHana relating to client emergency department or inpatient admissions.

Other Technology Expenses

Description of Expense	Cost
Mass HIway	$ 5,000.00
Total Other Technology Expenses	$ 5,000.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Funds for the installation and implementation and connection of the Care Management System to the Mass HIway. This is a quote from our service vendor, it is expected to be a one time expense.
Updated Narrative 12/12/17
The cost is a onetime charge from CCBC's EHR vendor in order to do structural modifications and programing to allow for the use of the Mass HIway. The vendor did not quote the modifications in a cost per hour structure.

Recruitment Expenses

Description of Expense	Cost
Indeed Recruiting	$ 4,789.00
Robert Half Placement Fee	$ 5,000.00
Total Recruitment Expenses	$ 9,789.00

Provide a description of each recruitment expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:
Utilizing Indeed Recruiting to search for qualified staff, will utilized sponsored advertising. The cost for CSA sponsored advertising will be $4,787.
CCBC will utilize Robert Half Placement Firm to place a qualified candidate for the Data Analyst / Quality Management staff member. The budgeted expense for this fee $5,000. Since the position is a .5 position only half of the placement fee will allocated to CSA.
Updated Narrative 12/12/17
The way the Indeed Fee works is that we pick a job to be "sponsored". By "sponsoring" the job Indeed continues to pull the job that is sponsored up higher on the feed of jobs. Usually, once a job is pulled onto the Indeed site it falls further and further down the list as new jobs are placed on the Indeed jobs list. By sponsoring a job Indeed continues to place the sponsored job at the top of the list. The fee is assessed by the number of "clicks" or "looks" the job gets, each click costs a portion of the total agreed fee. The fee is like a budget, once the budget is spent the job in no longer sponsored. It is difficult to say how long the fee will keep the job up on the top of the list. From prior experience our sponsored jobs run for about 4 to 6 weeks.
The Robert Half placement fee is for the Full-time Data position, half of which is dedicated to CSA and half to BH CP. The projection for the total fee for the Data position will be at least $10,000 based on 20% of the annual salary, of which $5,000 would be allocated to the CSA DSRIP. When finalizing our budget for the Prep Period we only had $1800 remaining to allocate to the cost of the placement fee. However, since we will be moving some funds due to number 3 below, we will move up to $5,000.

Training Expenses

Description of Expense	Cost
Staff Training	$ -
Total Training Expenses	$ -

Provide a description of each training expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Updated Narrative 12/12/17
Removing training line from budget.

Staff will spend 4% of their time in the months of May and June learning the new Care Management System and the Electronic Health Record. The Calculation was made by taking 4% of total monthly salaries, 4%$102,087 * 2 months = $8,167*

					Operational Infrastructure									
					Operational Infrastructure									

6.2 Executive Summary

6.2 A. Community Counseling of Bristol County (CCBC) is pleased to submit this proposal to MassHealth to strengthen our Community Service Agency (CSA) program and enhance our role in MassHealth's innovative DSRIP and ACO initiatives. We believe that we are well positioned to engage children with Severe Emotional Disturbance (SED) and their families in a strength-based, family-centered approach to behavioral health problems and primary care conditions such as diabetes, asthma, and obesity that frequently co-occur with our population in the Attleboro-Taunton area.

CCBC has consistently been one of the state's highest performing CSA's on the Wraparound Fidelity Index (WFI). Still we seek to improve in a number of areas as identified in our Development Plan. These improvement goals include:

1) Increase staff knowledge of different cultures in the Attleboro-Taunton area; translate the knowledge of that culture to the Wraparound process to enrich and inform the Care Planning Teams process; and

2) Increase skill sets of CSA staff to help families transition out of the CSA to community-based natural supports and ongoing outpatient behavioral health services.

We are fully confident that careful management of the DSRIP resources over five years for our CSA will support CCBC as an active partner with area ACOs in improving health outcomes, expanding the culture of a strength-based and family-centered approach with area pediatricians, specialty providers and hospitals. At the same time, CCBC will also maintain timely access; report on quality metrics and enhanced and efficient information sharing through our electronic health record (EHR) eHana via the Mass HIway. The EHR is currently being updated to contain the necessary fields and data sets to handle the care management reporting requirements.

6.2 B. CCBC's strengths as a CSA include:

- Timely access to Intensive Care Coordination (ICC) services; there are no families on our waiting list;
- A high rate of engagement and retention of families in the Wraparound process as measured by improved scores on Strength-based approach to families;
- Expanded networking into the community by the CSA Program Director; and
- Networking with local police departments.

In addition to the need areas described in Section A. above, CCBC's CSA is working on improving the Team Observation Measure score (TOM) related to Individualizing Care and Persistence. Another need is to increase the capacity to share information on the aggregate CSA population and the associated Total Costs of Care from a population health perspective.

6.2 C. CCBC maintains an agency-wide commitment to timely access to services. We are one of the few outpatient mental health clinics that has an "Open Access" policy where any client – child or adult – can come to the agency and receive a clinical evaluation ***the same day.*** <u>This policy applies to the ICC services where we have no families on our waiting list.</u>

6.2 D. CCBC is very excited about our plan to improve care coordination, care planning and care management for ICC-engaged children with SED and their families. In our proposal, we list three projects that will strengthen our ability in these areas and align the agency's ICC activities more closely with the activities of the ACO-affiliated pediatricians. These projects include:

1. Installation and Implementation of the eHana EHR and Mass HIway connection to improve data sharing functionality with PCCs, ACOs, MCOs and MassHealth, and reporting on quality measures per Appendix A's Quality Slate;
2. Training of CSA staff on improving skills overall, addressing the needs of children and families from diverse cultures, and engaging PCCs in the Care Planning Process; and
3. Strengthening CCBC's technology infrastructure to share information via the Mass HIway and through installation of a HIPAA compliant secure video conferencing capacity to encourage remote participation by PCCs in the Care Planning process.

CCBC is well-positioned to implement this plan. In addition to providing timely access to care and scoring high on the WFI and TOM measures, CCBC has established strong working relationships with over 20 pediatric offices in the Attleboro-Taunton area. Our relationships extend beyond sharing information on treatment plans and results of physicals. ICC's have conducted care planning meetings at the offices of pediatricians when requested by the family. We have also expanded care planning teams to include specialty medical providers and Emergency Room staff for children and families with complex co-occurring medical and behavioral health conditions. ***All of these efforts have been built on a foundation of collaboration with Steward Health Care through four Infrastructure Capacity Building (ICB) contracts that includes data sharing and collaborative treatment planning. There is a joint commitment to continue as Steward transitions from a pilot ACO to a fully operating ACO on January 1, 2018, including real-time notification of ED or inpatient admissions of shared clients.***

6.2 E. CCBC continues to work on the two Goals established in our CSA Development Plan:

1. Increase staff knowledge regarding various cultures and how culture impacts the many aspects of a family's life; translate the knowledge of that culture to the Wraparound process to enrich and inform the Care Planning Teams process; and
2. Increase skill sets within the phase of transition for families and youth engaged in ICC Services.

The activities related to Goals 1 and 2 are ongoing within the CSA and across CCBC as a whole. Interventions include facilitated open discussion among CSA staff to solicit individual definitions of culture and translate that definition to the clients we serve. CSA staff focuses on improving their skills and competency to align individual care coordination to the background in which the individualized Care Plan is developed. Staff continues to improve their skills at helping families articulate the influence of their culture as a resource or an obstacle to achieving the goals of the Care Plan. Staff then revisits the cultural context in subsequent care planning meetings.

Another activity of Goal #1 will be to supplement the internal discussions with regional trainings on engaging families from diverse cultures into the Wraparound planning process. The region has diverse populations, including Cape Verdeans, Portuguese, and Asians. Each culture has its own unique context in which behavioral health needs are identified, accepted and addressed. Finally, supervisors will review staff assessments to make sure that the cultural component is addressed, and indicates that the staff explored the family's cultural orientation in initial meetings.

Goal #2 represents a more focused challenge in improving the Wraparound process. One element is for increased supervisory oversight of the transitions out of ICC to outpatient counseling and natural community supports, transitions from higher levels of care back to community-based services, and transition to adult services for clients who are turning 21. The ICC supervisors will enhance the process by reviewing documentation on care planning to ensure a strength-based approach at the time of transition. Supervisors will be trained to track staff documentation and follow up to make sure any gaps are addressed by staff, especially around transition.

6.2 F. The installation of capacity for a HIPAA compliant secure video conferencing process will be a major step in improving coordination with pediatric primary care providers. The ability to share clinical information via the Mass HIway is a second method to achieve better coordination and improve health outcomes. CCBC's operation of the Psychiatric Emergency Services Program (ESP) is another point of contact that will allow for timely access to care for the child and family *outside of the Emergency Room and more restrictive settings* with timely input from the pediatrician, specialty providers, outpatient behavioral health providers and the ICC staff. CCBC has already been developing the relationships with over 20 pediatric offices in the Attleboro-Taunton area and is poised to enhance the communication through video teleconferencing and the Mass HIway.

Section 6.3 Communities Served and Community Engagement

6.3 A. The Community Services Agency (CSA) operated by CCBC covers the Attleboro-Taunton area as designated by the Massachusetts Executive Office of Health and Human Services (EOHHS) MassHealth. The communities around Taunton and Attleboro are largely suburban and poor rural communities. They include Berkley, Dighton, Mansfield, Norton, North Attleboro, Raynham, Rehoboth and Seekonk.

The CCBC CSA meets the needs of children with SED and their families by practicing the principles of Wraparound Model of care with consistently high scores on the Wraparound Fidelity Index (WFI) indicating successful outreach and engagement with the wide range of families in these communities. The CSA convenes monthly Systems of Care (SOC) meetings to which all community stakeholders are invited. This forum provides an open setting in which solutions to pressing problems of youth with SED can be developed by strengthening relationships among participants. We will build on the prior successes of the SOC meetings that include increasing access to natural community supports and resources such as the YMCA, Boys and Girls Club, and Girls Inc. The SOC meetings have also supported connections of local PCP's and pediatricians to the Massachusetts Child Psychiatry Access Program (MCPAP).

The Wraparound approach includes the child's primary care, overall wellness, prevention of chronic health conditions, and overall community health and support for the child and family. CCBC's CSA will promote the health and well-being of children and families through increased fidelity to the Wraparound process with increased emphasis on a strength-based approach to families; identification of natural community supports and social service supports, a family-centered approach to care planning; and timely, respectful, and responsive sharing of information with all involved stakeholders.

The CSA's customized EHR will enhance communication with the PCCs working with the child to allow for more timely review of critical information. This will result in more informed intervention by all of the stakeholders, especially for children with chronic medical conditions - such as diabetes or asthma - and co-occurring severe emotional disturbances - such as attention deficit disorder or post-traumatic stress disorder. The EHR will also allow sharing of information with the ACOs so that specialty services, emergency services and inpatient services can be accessed when needed and transitions of care can be facilitated smoothly. Finally, the CSA's module will incorporate natural community supports, or their absence, into the family assessment and identify community gaps that a broader range of stakeholders can address.

6.3 B. CCBC has a long history of collaboration with local police departments, court clinics, and Department of Child and Families (DCF) youth. CCBC has shared crisis safety plans with the police to prevent escalation of crisis situations when law enforcement is involved. The police are invited to the CCBC Systems of Care (SOC) meetings in the Attleboro-Taunton area. The CCBC CSA SOC has regular collaboration and attendance from the court clinics, Department of Youth Services (DYS), Department of Mental Health (DMH), DCF and Juvenile Justice partners.

As stated above, CCBC serves on DCF's Advisory Committee for the Attleboro-Taunton catchment area and invites DCF personnel to attend the monthly CSA SOC meeting. The CSA

staff also participates in an interagency collaboration meeting for our area which includes DCF, DMH, DDS and DYS to facilitate coordination of care for families and youth we serve.

Our CSA has established working relationships with residential programs operated by DCF, DYS, the Bureau of Substance Abuse Services (BSAS), and DMH in the Attleboro-Taunton catchment area. The CSA Program Director has a working relationship with the DCF Area Office for the Attleboro-Taunton area.

CSA staff attends Individual Education Plan meetings with most of the schools in the area. Many school districts, including Attleboro, Taunton, North Attleboro, Norton and the Bi-County Collaborative have requested CCBC to conduct trainings and education with their staff to increase knowledge of CSA and CBHI services. Staff have attended various professional development days and provided education to various school staff. In addition, schools have been consistently welcoming to our CSA hosting Care Plan Meetings within the school setting in order to foster collaboration between home-based and school based providers. The work of the CSA staff complements the work of CCBC outpatient staff that provides counseling and consultation in over 50 schools in the Southeast area, working with teachers, guidance counselors and families to address behavioral health needs of students in the schools.

The CSA has developed strong working relationships with pediatric practices in the area. We are actively involved in the coordination and integration of primary care and behavioral health care, especially for children with complex medical conditions, even convening meetings in the offices of the pediatrician in order to facilitate his/her participation with the family.

The CSA routinely collaborates with PCP and pediatric providers. We reach out to every PCP for each client we serve to inform them that we are working with their patient, and we provide the releases obtained and send a two-way communication form to support collaboration. Staff regularly provide to PCP's each updated care plan developed for the client. ICC's have routinely partnered with PCP's and parents to support PCP's connecting to the MCPAP program to foster them providing medication assistance to the child while we navigate the barrier of lack of child psychiatry throughout the state. CSA staff also connects directly with PCP offices to review any child that has medical and mental health needs to specifically understand how the medical needs may be contributing to any social, emotional and/or behavioral needs seen across the life domains. The CSA utilizes our consulting child psychiatrist to support connection to PCP's when working with a child that has complex medical needs and has a direct correlation to their emotional and/or behavioral needs. The CSA participates in the Southeast Cluster meeting, which is facilitated by MBHP. This meeting is a forum and collaboration used to strengthen relationships between mental health providers and PCP's.

The CSA DSRIP Plan will include strategies to strengthen the communication with pediatricians, schools, DCF, behavioral health providers and social service providers via enhanced capacity to share information electronically and address gaps in care more responsively.

6.3 C. CCBC will incorporate our current partnerships as described in Section 6.3.B along with planned collaborations to develop proposed projects that will be described in Section 6.4.A. in the areas of Workforce Development, Operational Infrastructure, and Technology.

CCBC's DSRIP Participation Plan will include expanded training on pediatric medical conditions for the CSA workers and convene collaborative learning forums with pediatricians from the ACO's serving Taunton and Attleboro, including Steward Health Care and BMC ACO.

The CSA continues to make improvements in the program based on the goals established in the Development Plan. The community collaborations will provide a foundation to develop a broader public health focus for better integrated interventions and improved understanding of community health. These goals will be reached with better sharing of clinical information and the aggregation of encounter data to demonstrate how chronic conditions such as asthma and diabetes can be treated on a community health basis. CCBC will work with the ACO's to identify pediatric "hot spots" with high concentrations of pediatric health conditions and bring the data to the forums in which CCBC participates to generate broad based solutions. This approach is one method of addressing social determinants of health, a key component of the ACO initiative. This approach for children's populations has been validated in a recent article from Health Affairs. It should be noted that the assessment of the family's community described in the article relating to "geo-factors" closely parallels the Strengths, Needs and Culture Assessment conducted by the Intensive Care Coordinator (ICC) at the outset of the Wraparound process.

The DSRIP will allow the ICC's to strengthen facilitated care plan meetings and crisis/safety planning meetings in Sturdy and Morton ER's with the participation of the attending nurses and doctors. The project will also allow for more creative work to develop plans for youth who are boarding in the ER to assess if the youth can return to the community safely with a collaboratively designed follow up plan.

The DSRIP Participation plan will strengthen CCBC's capacity for care planning when CSA youth require medical hospitalization and/or surgery to address complex medical needs. CCBC will partner with these doctors, hospitals, and specialists and participating ACOs to develop care coordination plans and ensure that medical concerns are being addressed appropriately. These interventions will lead to integrated care plan development, addressing both medical and behavioral health needs.

SECTION 6.4 – DSRIP PARTICIPATION PLAN
6.4 A. Project Description:
6.4 A.1 WORKFORCE DEVELOPMENT

6.4 A.2 The Workforce Development Project will support the RFR Goals of "Fostering strong integration with ACOs and primary care providers" and "Strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC-Engaged Members and their families." At the same time the Workforce Development Project will support the CSA's Goals in our development plan. Goal #1 is to increase staff`s knowledge of the culture of families served and Goal #2 is to increase skill sets of CSA staff to help families transition out of the CSA to community-based natural supports and ongoing outpatient behavioral health services. Additionally, the Workforce Development Project's goal is to improve the quality of care delivered to children with SED and their families. The project will have two components, including 1) establishment of enhanced workforce development trainings within CCBC for CSA staff; 2) collaboration with other CSA providers in the Southeast to conduct a regional events for partnership with pediatricians and ACO's.

The project will develop training topics to address gaps identified in the CCBC Development Plan, notably improving use of natural community supports with families. Additionally, trainings will also address the evolving relationship with ACOs and MCOs highlighted by the development of joint trainings with PCCs and their ACO representatives. For families that present with complex needs, trainings will be developed to focus on the following: how to coordinate all of the providers, address needs in a timely manner, access specialists and other supports when needed to maintain the child in his/her family, and establishing a language around care planning with PCCs that includes increased focus on a family-centered, strength-based culturally sensitive approach to children and their families. The training will improve the capacity of the CCBC CSA to share service utilization data with the members of the care team to document gaps in care at the outset and paths to service delivery that address those gaps as a result of the intervention

The CSA will commit to ACO /PCP/CSA collaboration events and/or other staff training opportunities. Preliminary conversations have occurred to foster regional collaboration with other CSA's on these endeavors and will continue once RFR funding is officially awarded. We will explore possible regional collaboration with other CSA's within these projects however if collaboration cannot occur we will foster these collaboration and training projects independently. Specifically ACO/PCP/CSA collaboration would foster an event or events to allow local ACO's, PCP's/ pediatricians and CSA's to gather to offer education and training on CBHI and CSA services, develop relationships and establish clear communication gateways between ACO/PCP's and CSA's. Staff training projects will encompass CSA staff receiving additional training in strength based practice models that foster the wraparound process. Some examples include motivational interviewing or collaborative problem solving. Training may occur to CSA staff and also to ACO/PCP partners and training needs will be developed based upon needs identified at that time to foster collaboration between PCP/ACO and CSA. All of these ideas will continue to be further developed upon RFR funding.

6.4 A.3. The Workforce Development Project will be ongoing and extend beyond the DSRIP contract. The planned activities include convening an internal training and workforce development committee, establishing training priorities and working with the other CSAs to plan regional trainings. The training agenda will address the needs identified in the CSA Development Plan and will be designed to meet the quality goals established in this RFR.

6.4 A.4 The CCBC CSA will meet the following deliverables as a result of this project:

- Improved access to ICC services for children with SED in the Attleboro-Taunton area;
- Greater fidelity to the Wraparound Principles as measured by the Wraparound Fidelity Index, specifically improved use of Natural Community Supports;
- Improved competency among CSA staff in integrating primary care information into the CSA Care Plan; and
- Increased involvement of PCCs in the Care Planning process and their embracing of a strength-based, family-centered, culturally sensitive approach to Care Planning.

6.4 A.5 DSRIP funding totaling $26,289ver the five year period will be used on the following to execute the Workforce Development project and an explanation of how each investment will support the execution of the project goals is explained below:

Training and Collaboration Events: Budget for training and collaboration events with area pediatricians, MCOs and ACO representatives to achieve the goal of coordinating strength-based care planning by the CSAs with pediatricians, ACOs and MCOs. CCBC's CSA is committed to collaborate with at least one other regional CSA provider to work with pediatricians, MCOs and AOCs in our region. The goal of these projects is to strengthen CSA capacity to work with pediatricians and to engage pediatricians more actively in the care planning process and to support a regional conference with pediatricians and ACO and MCO representatives. Additionally the goal is to promote the strength-based approach to care coordination with pediatricians and improve skills and competencies of CSA workforce to work with families, help them access primary care, and access natural community supports as part of the care planning. Budget $6,500.

Recruitment will primarily be used to recruit and hire a part-time Data Analyst / Quality Management employee who will be supporting the Operational Infrastructure project; additionally funds will be utilized to hire additional staff needed to complete requirements of the CSA. Recruitment will be a continuous effort for the CSA as it is expected that we will need to replace staff throughout the budget years. Budget $19,787.

Staff Training the training necessary during the PBP will be completed internally by CCBC staff, therefore the only type of reimbursement necessary is salary replacement which is not allowable under DSRIP therefore the training line is being removed. .

6.4 A.6 CCBC has a fully staffed CSA program including a Program Director. She will oversee implementation of these projects and will be the liaison to the other CSAs and to the MCOs and

ACOs and individual PCC offices. The CCBC Chief Operating Officer is responsible for all training programs within CCBC.

6.4 A.7 As described in Section 6.4 A.5 all of the funds for the Workforce Development project will be used in CCBC's Attleboro-Taunton CSA to be able to develop additional training and collaboration with ACO's, PCP's and MCO's, recruitment efforts and newly developed staff training. All of these initiatives will be designed to increase the competencies of the CSA staff as discussed in our CSA Development Plan and to support the goals of this RFR.

6.4 A.8 The internal evaluation of this project will rely on several measures:
Note: the timeframe to show improvement in these measures will BP2. The baseline will be established for 2017 program operations with additional data collected during calendar year 2018.

- Number of staff participating in the training topics; CCBC will train all 22 staff
- Improvements in competency of staff in skills for accessing natural community supports as part of their work with children and families;
    - Staff will improve skills demonstrated by engaging natural community supports as a component care planning for children and families as documented in the EMR.
    - All 22 staff will improve their competencies
    - The Program Director and Program Supervisors will evaluate the skill improvement. The Data Analyst will conduct spot checks of the EMR to validate the documentation of natural community supports in the Care Planning field of the EMR.
    - Staff will also improve skills in transitions of care by including additional notes that reflect the family's access of natural community supports as part of the transition, as documented in the EMR and validated by their supervisor.
- Increase in the number of PCCs participating in Care Planning meetings;
    - CCBC will engage 15 PCCs in care planning process in 2018. Their participation will be documented in the minutes of team meetings, in progress notes, and in correspondence between PCCs and the CSA staff.
    - CCBC will seek to increase the number of PCC's participating in subsequent years.
    - CCBC will install 10 Zoom Video Conferencing software programs in PCC offices to facilitate their participation and increase by five in BP 3.
    - The Data Analyst will track the installations of the software and verify when it is being used by the office of the PCC.

- Increase in the Wraparound Fidelity Index scores of CCBC from 2017 to 2018;
    - Beginning with the baseline from most recent score provided to CCBC in August, 2017. CCBC will improve its score on Natural Community Supports as measured on the TOMS and WIFI-EZ by 3% by the end of BP 2, in December, 2019. The evaluation is conducted by the National Wraparound Initiative. Natural Community Supports are one of six dimensions of Wraparound Fidelity measured.

- Improved ranking on CCBC's CSA Development Plan in subsequent reviews; and
    - The ranking is determined by the MCOs according to many criteria and goals are set each year to design improvements. Success is measured by the MCOs based on monthly meetings and aggregate of the work of the provider.
    - CCBC is not privy to the specific criteria used to evaluate the programs.

- Lower turnover and lower vacancy rate in CSA workforce.
    - CCBC has recently collected information on turnover rates and vacancies. CCBC will reduce turnover by 5% in 2018 and reduce the vacancy rate by 3%. There are new resources in CCBC who are helping track these measures.

6.4 B. Project Team Description for Workforce Development:
6.4 B.1 ATTACHMENT–SEE THE ATTACHED CSA ORGANIZATIONAL CHART

6.4 B.2 The staff who will oversee this project include:

- Director of CSA;
- Compliance and Quality Management Coordinator;
- Chief Operating Officer, who oversees all training for CCBC;
- eHana Program Manager for the collection and reporting of quality measures included in this RFR.

JOB DESCRIPTIONS FOR THESE POSITIONS ARE ATTACHED

6.4 B.3 There will be no new staff associated with the Workforce Development Project.

6.3 B.4 Roles and responsibilities of the project team:

Staff Position	**Roles and Responsibilities**
CSA Program Director	Responsible for all CSA Program activities, including quality improvement, contracting with MCOs; relationships with ACOs and PCCs; and staff development, including training resources inside CCBC and external training.
Compliance and Quality Management Coordinator	Oversees all CCBC quality of care measurement and reporting.
Chief Operating Officer	Responsible for all day-to-day program operations of CCBC; oversees CCBC training program and allocation of training resources to each CCBC program.
eHana Program Manager	Oversees implementation of eHana across CCBC programs; oversees implementation of CSA EHR, including problem-solving with eHana, training of CSA staff, and developing reporting formats on CSA activities related to the CCBC CSA DSRIP Plan.

6.4 B.5. The CSA Program Director will be responsible for managing the Workforce Development Project. She will receive support from the eHana Program Manager, the Director of Quality Management, and the Chief Operating Officer in meeting the goals of the CSA DSRIP Plan as submitted. She will orient staff and develop training on the documentation of data needed to report on the Quality Slate in Appendix A and other quality measures for this CSA DSRIP Plan.

6.4 A. Project Description:
6.4 A.1 OPERATIONAL INFRASTRUCTURE

6.4 A.2 The Operational Infrastructure Project will support the RFR Goals of "Fostering strong integration with ACOs and primary care providers" and "Strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC-Engaged Members and their families." The Operational Infrastructure Project will also support the CSA's Goal #2 in our development plan to "Increase skill sets of CSA staff to help families to transition out of the CSA to community-based natural supports and ongoing outpatient behavioral health services." An additional goal of the Operational Infrastructure Project is to improve the capacity of CCBC's CSA to document and report on program activities related to quality of care, specifically the Quality Slate in Appendix A. The project will have five components, including 1) hiring of a Data Analyst/Quality Manager staff person at .5 FTE; 2) establishment of an internal data collection and reporting format; 3) development of reports to ACOs and MCOs on key measures of quality and access; 4) improvement of CCBC's analytic capability related to Total Cost of Care in conjunction with the ACO program model; and 5) installation of capacity for a HIPAA compliant secure video conferencing process between CCBC and pediatrician offices that are part of the ACO networks in the Attleboro-Taunton area.

6.4 A.3 The Operational Infrastructure project will be ongoing and extend beyond the DSRIP contract. The planned activities include: hiring the Data Analyst/Quality Manager; developing data collection and reporting formats on quality measures; developing key measures with PCCs, ACOs and MCOs; training and supporting the CSA staff on documentation and sharing reports with them; using the reports to develop quality improvement goals related to CCBC's Development Plan; closer alignment with the ACO operations; and installing a secure video conferencing capacity between CCBC and ACO pediatricians' offices.

6.4 A.4 The CCBC CSA will meet the following deliverables as a result of this project:

- Improved ability in reporting on quality of care of the CSA to ACOs, MCOs and MassHealth;
- Greater fidelity to the Wraparound Principles as measured by the Wraparound Fidelity Index, specifically improved use of Natural Community Supports;
- Stronger alignment with participating PCCs and ACOs in care coordination and care management activities; and
- Increased involvement of PCCs in the Care Planning process via secure video conferencing.

6.4 A.5 DSRIP funding totaling $164,217 over the five year period will be used on the following to execute the Operational Infrastructure project and an explanation of how each investment will support the execution of the project goals is explained below:

- Hiring of a .5 Data Analyst/Quality Manager to support CSA in meeting targets in Quality Slate and achieving goals in CSA Development Plan. Hiring of Data Analyst/Quality Manager on February 1 to orient the person to the CSA, Quality Slate and begin to work with CSA staff to develop methods of collecting and reporting data in eHana. The goal is to achieve the targets in the Quality Slate and meet or exceed the goals in the CSA Development Plan. Annual Salary of $50,000 plus 24% tax and fringe. Budget $152,417 (.50 FTE).
- Outreach and collaboration with PCCs and ACOs on sharing reports that identify gaps and demonstrate best practices leading to reduced Total Cost of Care and improved health outcomes; and
- Installation of secure teleconferencing capacity between CCBC and pediatrician offices that are part of ACOs in the Attleboro-Taunton area. Budget $11,800

6.4 A.6 CCBC has a fully staffed CSA program including a Program Director who will oversee implementation of these projects and will be the liaison to the other CSAs and to the MCOs and ACOs. CCBC's Compliance and Quality Management Coordinator will supervise the .5 Data Analyst/Quality Manager. The CCBC Chief Operating Officer is responsible for all training programs within CCBC. The eHana Program Manager will be responsible for ensuring communication via the Mass HIway.

6.4 A.7 As described in Section 6.4 A.5 all of the funds for the Operational Infrastructure project will be used in CCBC's Attleboro-Taunton CSA to be able to focus on the CSA Development Plan goals by hiring the .50 Data Analyst/Quality Manager, focusing on our Quality Improvement plan and the quality measures in the Quality Slate and the installation of the secure video teleconferencing with PCC's in the area. All of these initiatives will be designed to increase the competencies of the CSA as discussed in our CSA Development Plan and to support the goals of this RFR.

6.4 A.8 The internal evaluation of this project will rely on several measures. Because these are all enhancements to the existing system, the baseline period is calendar year 2017:

- Full capacity to share information on CSA activity to other providers via the Mass HIway as documented by a successful file exchange with three PCC offices by 5/15/2017 and expanded to ACO-partner facilities by 12/310/2018;
- Documenting and reporting on quality measures contained in Appendix A, the Quality Slate as documented by a timely submission of completed reports to the MCOs by the end of BP 1 and again at the end of BP 2;
- Establishing two-way communication with pediatricians via secure video conferencing to increase their participation in the Wraparound Care Planning process. See Workforce Development for evaluation measures. 10 pediatricians will have video conferencing installed in BP 1 and 15 by BP 3, with participation documented in the family's EMR; and

- Reducing the administrative burden of CSA staff for documentation of CSA activity and tracking of quality and access measures. The reduction will be measured via a staff satisfaction survey on how the EMR has affected paperwork and other administrative burdens. The survey will be administered in June, 2019.
-

6.4 B. Project Team description for <u>Operational Infrastructure</u>
6.4B.1 ATTACHMENT – SEE THE ATTACHED CSA ORGANIZATIONAL CHART

6.4 B.2 The staff who will oversee this project includes:

- Director of CSA;
- Compliance and Quality Management Coordinator;
- eHana Program Manager for the collection and reporting of quality measures included in this RFR; interface with Mass HIway.

JOB DESCRIPTIONS FOR THESE POSITIONS ARE ATTACHED.

6.4. B.3 CCBC is proposing to add a .5 FTE Data Analyst/Quality Manager who will assist the CSA Program Director and CCBC Compliance and Quality Management Coordinator in the implementation of new quality measures and reporting format that will be part of the CSA EHR for reporting. This position will complement the .5 FTE that CCBC has proposed for the Behavioral Health Community Partner proposal that covers Taunton, Attleboro and Brockton. This person will also oversee the implementation of CCBC's eHana EHR and Mass HIway connection as related to reporting on client activity and quality of care data.

6.4B.4

Staff Position	**Roles and Responsibilities**
CSA Program Director	Responsible for all CSA Program activities, including quality improvement, contracting with MCOs; relationships with ACOs and PCCs; staff development, including training resources inside CCBC; and external training.
Data Analyst/Quality Manager	Develops measures for quality metrics in CSA DSRIP RFR; ensures staff competency in tracking measures; develops reports on measures; and develops reports to PCCs and ACOs on client activities.
Compliance and Quality Management Coordinator	Oversees all CCBC quality of care measurement and reporting.
Chief Operating Officer	Responsible for all day-to-day program operations of CCBC; oversees CCBC training program and allocation of training resources to each CCBC program.
eHana Program Manager	Oversees implementation of eHana across CCBC programs; oversees implementation of CSA EHR , including problem-solving with eHana, training of CSA staff, and developing

	reporting formats on CSA activities related to the CCBC CSA DSRIP Plan; oversees connection of CCBC to Mass HIway; and installation of telehealth technology between CCBC and ACO-affiliated pediatricians.

6.4 B.5 The CSA Program Director will be responsible for managing the Operational Infrastructure project. She will receive support from the eHana Program Manager, the Compliance and Quality Management Coordinator, and the Chief Operating Officer in meeting the goals of the CSA DSRIP Plan as submitted. She will orient the .5 Data Analyst/Quality Manger to the CSA program and work with the Data Analyst/Quality Manager to establish key measures and reports for aligning with the goals of PCCs, ACOs and MCOs. The CSA Program Director will work with the Vice President of Child and Family Services, the COO and the CEO to strengthen relationships with the ACOs. The CSA Director will also oversee development of reports on the Quality Slate in Appendix A.

6.4 A. Project Description:
6.4 A.1 TECHNOLOGY
6.4 A.2 The Technology Project will support the RFR Goals of "Fostering strong integration with ACOs and primary care providers", "Strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC-Engaged Members and their families" and "Improving timely access to ICC services for children eligible to receive ICC and their families". At the same time the Technology Project will support the CSA's Goal #2 in our development plan to increase skill sets of CSA staff to help families transition out of the CSA to community-based natural supports and ongoing outpatient behavioral health services. Additionally the Technology Project has the goal to improve the ability of the CSA to gather and share information with Primary Care Clinicians, ACOs and MCOs to coordinate care, enhance access to primary care and specialty care services and to reduce reliance on more restrictive services such as Emergency Department and Inpatient Services.

In this project, CCBC will work with its electronic health record (EHR) and software developer, eHana and other regional CSAs that use eHana to install customized EHR software to collect important information on the child and family that will inform family-centered, recovery-oriented treatment planning. The installation of the software will also include CCBC's ability to connect with the Mass HIway to facilitate sharing with PCC's for their approval of the treatment plan and to update them when a child or family's circumstances change and additional interventions are needed. Another feature of the software implementation will improve the efficiency of submission of CANS information and CANS reporting by CCBC to MassHealth. The EHR will function on portable electronic devices (laptops, tablets, IPads or Smart Phone) for use by the Intensive Care Coordinators with children and families. This project also includes funding for these devices in Project Year 1. The module will also allow for the collection of data related to the quality metrics in the Quality Slate in Appendix A.

6.4 A.3 Development and implementation of the CSA will commence upon award of the RFR and will conclude at the end of the Budget Preparation period on May 31, with continued

problem-solving and adjustments continuing in Program Year 1, December 31, 2018. CCBC will allocate $$34,000 to this project to pool resources with other CSAs in the Southeast (BAMSI, Bay State Human Services, and JRI) who use eHana EHR for a care management module.

The EHR will be customized for the CSA and ICC programs to enhance the goals of the DSRIP ACO program, ensuring fidelity to principles of the wraparound model. The EHR will allow for family signatures and data entry, highlighting connection to natural community supports, family's choice of members of the care team, identified primary care issues, and a field for approval of the care plan by the PCC or his/her designee. The majority of funds for Year 1 will be used for purchase and installation of mobile devices for ICC staff.

6.4 A.4 The deliverable for this project will be a fully installed EHR that is integrated into CCBC's existing eHana EHR, is connected to the Mass HIway, facilitates information sharing with PCCs, ACOs and MCOs, and has the capacity to improve efficiency of submission and reporting on CANS data and tracking and reporting on the quality metrics that are part of the DSRIP program and Wraparound Fidelity Index. The deliverable includes enhanced capacity for secure information sharing with ACOs and PCCs via the ICC's mobile device. Another deliverable is the capacity to collect information for reporting on the Quality Slate in Appendix A.

6.4 A.5 DSRIP funding of $93,000 over the five year period will be used on the following to execute the Technology project and an explanation of how each investment will support the execution of the project goals is explained below:

1) Provide Funds to utilize an **Electronic Health Record for CSA** clients. CCBC will implement an Electronic Health Record for all clients of CSA. Budget $20,000;
2) Funds for the customization of the required data sets in the EHR to comply with the required **care management reporting.** Budget $10,000.
3) Funds for development of **Care Management Data Sets** installation, implementation and connection to **Mass HIway** in advance of implementation. Budget $11,000;
4) **WRAP Documentation Development** a strengths based documentation module. (shared) Budget $8,000;
5) **CANS Interoperability Project** to enable more efficient date collection and reporting. (shared) Budget $6,000;
6) **CSA Quality/Accountability Measure Reporting** to implement data tracking, dashboarding and reporting necessary to support Quality Measure capture, management and submission. (shared) Budget $5,000;
7) **Professional Services** including Project Management, Business Analysis, Training, Development and Support for our vendor to develop and program the necessary systems as describe above. Working with CCBC to allow for specific needs regarding analysis, training and support. Budget $19,000;
8) **Electronic Devices** IPads, Tablets and Smartphone will be utilized to work in the electronic environment. These devices we will purchase during the prep period to allow for installation before April 1 to allow for training for the new software. Budget $12,000.

The goal is to reduce the administrative burden on CSA staff, provide timely reports to other members of the care planning team for review and approval, develop methods of aggregating and reporting on the CSA population, including the integration of primary care and behavioral health, and identify clinical pathways to recovery for children and families.

*(shared) Categories marked as shared are those items that will be a shared costs by CSAs in the state that utilize the same Electronic Health Care vendor. Our shared vendor is developing systems and the cost will be shared by the participating CSAs.

6.4 A.6 The CCBC eHana Program Manager, the CCBC IT department, the CCBC CFO, and the Director of the CSA will be responsible for the implementation of this project.

6.4 A.7 As described in Section 6.4 A.5 all of the funds for the Technology project will be used in CCBC's Attleboro-Taunton CSA to be able to focus on the CSA Development Plan goals by developing a CSA Electronic Health Record with a Care Management Reporting; access to the EHR through mobile technology for staff and professional support of this technology. All of these initiatives will be designed to increase the competencies of the CSA as discussed in our CSA Development Plan and to support the goals of this RFR.

6.4 A.8 Deliverables and key milestones include:
Installing the final prototype of the Care Management software by 4/1/2018;
Verifying capacity to meet Reporting requirements in software tests by 5/15/2018;
Installation in CCBC EHR format by 5/1/2015;
Testing of the reports for data entry, reporting and data exchange by 5/31/2018;
Training of ICC staff and supervisors between 4/1 and 5/31/2018;
Full implementation of data entry by 6/1/2018;
Information exchange with PCCs, MCOs and ACOs via the Mass HIway as measured by successful test files by 10/1/2018;
Generation of reports related to quality goals and aggregate data on the CSA population measured by acknowledgment by MasHealth of receipt of completed reports by 3/1/2019.

6.4 B.1 Project Team Description for Technology:
6.4 B.1 ATTACHMENT – SEE THE ATTACHED CSA ORGANIZATIONAL CHART
6.4 B.2 List of current Staff Involved with the Project

Title	Job Description	Qualifications
Chief Executive Officer	Directs and manages overall operations of organization, including implementation of new programs.	Programmatic and Fiscal experience in community behavioral health.
Chief Operating Officer	Responsible for operations and implementation.	Experience in program management and project management of community behavioral health.
Chief Financial Officer	Oversees financial operations, budgets, implementation of billing and reimbursements	Accounting, budgeting, billing and revenue collection experience with third parties

	for new programs, ensures integrity of programs.	and state contracts.
eHana Program Manager	Responsible for operations of eHana EHR, training of staff, problem solving with vendor, and implementation of updates to eHana system.	Experience in human services software development and implementation, including EHRs.
CSA Program Director	Directs CSA Program, i.e. recruit and train manage staff, manage contracts with MCOs; report on quality management activities; ensure fiscal stability of CSA and other CBHI programs.	Experience with SED; knowledge of wraparound model of care; independently licensed clinician.

6.4 B.3 CCBC will implement this project with existing staff.

6.4 B.4 The roles and responsibilities of CCBC's Project Team for Software Installation and connection to Mass HIway:

Title	**Roles and Responsibilities for Implementation of eHana Electronic Health Record**
Chief Executive Officer	First point of negotiation with eHana. Final point of approval for eHana contract and program budget.
Chief Operating Officer	Supervises implementation of EHR . Coordinates among CFO, CSA Director, eHana IT Manager, and linkage to ACOs.
Chief Financial Officer	Coordinates implementation of eHana with billing and program management of CSA. Ensures documentation is consistent with billing protocols.
eHana Program Manager	Principle CCBC contact with eHana on implementation of CSA EHR . Oversees training of CSA staff. Initiates problem solving with eHana and installs updates as needed.
CSA Program Director	Organizes staff for implementation of EHR. Provides content expertise to eHana on key components of module, development of reports and information exchange with PCCs, ACOs and MCOs.

6.4 B.5 The CEO, COO, CFO and IT Manager will meet monthly to assess progress on this project. The CSA Director will include project updates on their agenda for regular CSA monitoring meetings with the MCOs, where the CSA Development Plan is reviewed and updated.

6.4 C. Implementation Plan and Timeline (one timeline for all three projects)
Below are key deliverables for EHR **Project:**

	Project 1 –	**Project 2 –**	**Project 3 –**

Time Period	Workforce Development	Operational Infrastructure	Technology
January 2018	Development of training agendas.	Develop job description for Data Analyst/Quality Manager; initiate recruitment activities; develop purchasing specifications for secure video conferencing.	Design and planning for software. Down payment to eHana with contractual deliverables for Installation on April 1, 2018.
February 2018	Development of training agendas.	Post position; conduct initial interviews for data analyst. Complete purchasing specifications for secure video conferencing.	Design and Planning. Develop sharing via Mass HIway
March2018	Design of training agendas; set schedule for trainings.	Conduct second round of interviews; make offer; issue RFR for secure video conferencing	Design and Planning. Develop sharing via Mass HIway
May 2018	Begin internal and external trainings;	Data analyst begins; select bidder for secure video conferencing; and complete contract negotiations.	Design and planning; develop sharing via Mass HIway; and initial meetings with ACOs and pediatricians.
June 2018	Continue internal and external trainings	Data analyst participates in installation of software around quality slate; install secure video conferencing.	Installation of software; training for CSA ICC staff; work with ACOs and affiliated PCCs to share information via Mass HIway; initial purchase of mobile devices for use with the EHR .
August 2018	Begin internal and external trainings	Data analyst oversees collection of data for quality slate.	Second round purchase of IPads/tablets/smart phones for ICC staff; implementation per

			ACO model; problem-solving with eHana; share care plans with pediatricians for approval.
September 2018	Continue trainings.	Data analyst oversees collection of data for quality slate; data analyst reports on initial quality activity to Director of Quality Management and develops reports for ACOs, MCOs and MassHealth.	Generation of aggregated reports related to ICC population; continued implementation; problem-solving with eHana; reporting and information sharing with PCCs, ACOs and MCOs.
October 2018 ongoing	Continue trainings	Data analyst oversees collection of data for quality slate; data analyst reports on quality activity to Compliance and QM Coordinator and reports to ACOs, MCOs and MassHealth on Quality slate.	Continued implementation and problem-solving with eHana; reporting and information sharing with pediatricians, ACOs and MCOs.
January – March 2019	Continue trainings	Data analyst oversees collection of data for quality slate; data analyst reports on quality activity to Compliance and QM Coordinator and reports to ACOs, MCOs and MassHealth on Quality slate.	Purchase of IPads, smartphones and tablets as necessary; implementation of software upgrades as published by eHana; problem solving as needed.
April – June 2019	Continue trainings	Continued collection and reporting.	Implementation of software upgrades as published by eHana; problem solving as needed.
July – September 2019	Continue trainings	Continued collection and reporting.	Implementation of software upgrades as

			published by eHana; problem solving as needed.
October – December 2019	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana; problem solving as needed.
January – March 2020	Continue trainings; publication and distribution of video.	Continued collection and reporting	Implementation of software upgrades as published by eHana; problem solving as needed.
April – June 2020	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana; problem solving as needed.
July – September 2020	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana. Problem solving as needed.
October – December 2020	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana; problem solving as needed.
January – March 2021	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana. Problem solving as needed.
April – June 2021	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana; problem solving as needed.
July – September 2021	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana; problem solving as needed.
October – December 2021	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana;

			problem solving as needed.
January – March 2022	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana; problem solving as needed.
April – June 2022	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana. Problem solving as needed.
July – September 2022	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana; problem solving as needed.
October – December 2022	Continue trainings; publication and distribution of video.	Continued collection and reporting.	Implementation of software upgrades as published by eHana; problem solving as needed.

6.4 D. – Budget Report and Budget Narrative

6.4 E. Sustainability

CCBC recognizes the limit of the DSRIP funding for the CSA and the decreasing reimbursements over the term of the five-year contract. We expect a smooth transition into the ACO model and have designed a number of strategies to sustain these projects and support the ACO model as an active partner:

- Increased volume of referrals will allow for the administrative allocation to cover a broader range of infrastructure, including purchase of equipment and paying for maintenance costs of the EHR Software.
- Moving CSA reimbursement to a Day Rate will allow for efficiencies of documentation and greater retention of CSA staff.
- Improved working relationships with PCCs around care planning, timely information sharing and more effective clinical interventions will lead to improved client outcomes, reduced total cost of care and enhanced value of the CSAs as Care Managers. CCBC will work with the ACOs to contend for a share of the MCO-contracted Care Management resources to be allocated to CCBC based on achievement of improved quality of care, health outcomes, and reduced total cost of care for some of the most costly and vulnerable members of the ACOs that are under 21.

- Gradual implementation of alternative payment mechanisms will reduce administrative burdens on CCBC and allow administrative resources to be shifted to maintenance of the EHR .
- Shifting of some of the resources allocated to training and technical assistance from CCBC to the ACOs with affiliated PCCs engaged in the CSA and SED populations.

Section 6.5 Coordination with ACOs, MCOs, and Primary Care Providers

6.5 A. Bidirectional communication between the Bidder and pediatric practices:
The CCBC CSA has established relationships with over 20 pediatric practices in the Attleboro-Taunton area. On occasion, the ICC has arranged for Care Planning meetings to be held on site at these pediatric offices affording the pediatricians greater ability to participate in Care Planning meetings. While this is a strong foundation, CCBC will implement their DSRIP Participation plan with the goal to improve bidirectional communication with pediatric practices.

First, CCBC CSA will complete the cataloguing of PCC and pediatric practices to determine the type of working relationship and rank pediatric practices by no, low, moderate and strong working relationships. The CSA Director will then reach out to the practices with low and no working relationships to identify their needs and to share the DSRIP Participation Plan with them.

Second, the CSA will work with ACOs to have the ability to share information via the Mass HIway and develop protocols to share information so that pediatricians can approve the Care Plan for their clients on a timely basis once sent to them by the CSA. CCBC already has a commitment from the Steward Health System to collaborate on information sharing and timely approval of care plans for the adult population served by the Behavioral Health Community Partners and to provide real-time notification to CCBC when CCBC clients, including clients of the CSA, are admitted to Steward Emergency Departments or Inpatient Medical units.

Third, CCBC will explore with the pediatric practices and the ACOs the feasibility of installing secure video conferencing capacity for pediatricians or their designees to participate remotely in care planning meetings convened by the ICCs. CCBC has proposed a budget for secure video conferencing as part of the DSRIP participation plan and hopes to work with the ACOs to support a broader installation of secure video conferencing capacity across their networks, including in hospital emergency departments.

A specific outcome of this increased bidirectional communication will be to provide more timely intervention and support to families in crisis, convene on a more timely basis all of the parties with a working knowledge and role in serving the child and his/her family, and share critical information to develop better care plans for children with complex medical and behavioral health conditions.

6.5 B. Referral management protocols for follow-up and informational sharing:
Per CSA performance standards, CCBC works with children and families to sign release of information forms at the time of the initial assessment to allow for sharing of information with the pediatricians. The follow up includes a range of communication based on the individualized

needs of the child and family. They include encouragement of the pediatrician to use MCPAP when prescribing psychotropic medications, invitations to participate in care planning meetings, sharing of clinical assessments and care plans with the pediatrician, requests from the pediatrician for most recent physical, and updates from both parties following any acute episode of primary care or behavioral health such as an inpatient admission or use of the emergency department.

The enhanced electronic communications will include capacity for referrals for timely appointments and requests for specialty referrals, such as a psychopharmacologic evaluation by CCBC, or referral to a specialty medical provider for children with complex medical conditions. CCBC will measure the impact of improved referral management through the quality improvement process.

6.5 C. Team-based treatment planning in collaboration with pediatric practices:
The implementation of secure video conferencing will increase the opportunities of the pediatric practices to participate in care planning meetings convened by the ICCs, in addition to the option of convening the care planning meeting at the offices of the pediatric practice.

The improved communication will allow pediatricians, CSA, CCBC outpatient providers and representatives from the ACO affiliated with the pediatrician to review the child's recent treatment history and service utilization to identify gaps in care, celebrate successes in transitions of care and identify other opportunities to strengthen transitions and improve outcomes – all key tactics to achieve the Triple Aim.

These interventions will be an important resource for children with co-occurring chronic and complex medical conditions such as asthma and diabetes with severe emotional disturbances. These children require more involved care planning and clinical review so that interventions, especially prescribed medications, complement rather than contraindicate each other. The goal of the CSA is to foster a culture that promotes a strength-based and family-centered approach to families in conjunction with the medical model. CCBC has had initial success in convening care planning meetings, but recognizes the challenge to expand care planning to other pediatricians who are less familiar with the Wraparound model of care.

Another strategy to facilitate team-based planning is to involve pediatricians and their designees in the regional training forums proposed in the Workforce Development section of section 6.4. CCBC and other providers will seek to have pediatricians participate in these trainings directly, via secure video conferencing technology or in recorded training videos.

6.5 D. Timely access to ICC services:
CCBC has a documented track record of timely access to care as evidenced in the most recent Development Plan report that showed zero (0) families on the waiting list for ICC services. CCBC does expect the DSRIP Participation Plan to result in greater exposure to PCCs and their affiliated ACOs and MCOs operating in the Attleboro-Taunton area and thus an increase in referrals and overall volume of CSA services. The CSA Director will monitor the increase in referrals and ensure a full complement of staff to provide timely access to services.

6.5 E. Connections to social services:

CCBC has developed a long-standing commitment to developing collaborative relationships with other social service providers in the Attleboro-Taunton area that benefit families served by the CSA. The commitment of CCBC`s CSA to other agencies has developed and strengthened since the onset of ICC services in 2009. The CSA maintains its monthly Systems of Care meetings with a broad range of attendees, including law enforcement, local Department of Children and Families (DCF) representatives, local schools, other behavioral health providers, Department of Mental Health (DMH) Area Office representatives, and pediatric offices. The CSA will extend invitations to ACO representatives and their affiliated hospitals, including Steward Health Care's Morton Hospital and Sturdy Memorial's pediatric service.

The CSA maintains visibility through participation in the interagency collaboration meeting, the DCF Taunton Children's area board, the Bristol County Juvenile Drug Court Advisory Committee, monthly Systems of Care meetings and hosting of an annual resource fair where local social service providers are invited to provide information to CSA families.

CCBC`s organizational culture supports collaboration with social services in the local community and the positive impacts of the activities described above will continue to expand as the CSA develops a stronger role with ACOs.

CSA Budget Report

Child & Family Services, Inc.

Investment Funding	Prep Budget Period	Budget Year 1	Budget Year 2	Budget Year 3	Budget Year 4	Budget Year 5	Total Revenues

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
E H R adaptation/enhancement	$ 3,750.00
Total Development and Adaptation of EHR and Care Management System	$ 3,750.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Our EHR provider, Netsmart,will provide 15 hours of time to work on adaptation/enhancement of our current system to accomodate the requirements of this contract. Currently, our EHR is not designed to collect and report this data. Netsmart will adjust forms to include the quality measures required by this grant, such as prevention and wellness, behavioral health, collection of data from the WIY-EZ, hospital discension/admission and client engagement.

15 hours X $250/hour = $3750

Technology for Service Delivery

Description of Expense	Cost
laptop computers	$ 18,750.00
Ancillary laptop supplies	$ 899.00
2 large screen televisions	$ 3,000.00
secure email	$ 3,300.00
MUMway connection	$ 360.00
Total Technology for Service Delivery	$ 26,309.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Purchase 25 two in one laptop computers for use by 25 CSA staff in the field. 25 X $750 = $ 18,750

Ancillary laptop supplies including a wireless mouse, cases, and cards for each computer

Purchase of 2 large screen televisions to support telehealth conferencing , $1500 each

Secure email for 25 CSA staff, $1100 annually. The annual cost to the agency is $11,000. CSA is allocated 30% of this cost for all staff to have access to secure email.

Mathway connection $360 annually. The annual cost to the agency is $1200. CSA is allocated 30% of this cost for all staff to have access to Mass Hiway.

CSA Budget Report - Indirect Cost/Administrative Overhead- Prep Budget Period

Indirect Cost/Administrative Overhead Rate: 10%

Provide a brief description of how the Indirect Cost/Administrative Overhead rate was determined. Indirect costs/ Administrative overhead is approximatley 10% of the project costs. These costs include: indirect IT, HR, Billing and administrative tasks.

CSA Milestones Report

CSA must have at least one implmentation goal with at least one milestone for each project number. An implmentation goal may have more than one milestone.

Investment Project Number	**Investment Project Name**	**Implementation Goal**	**Goal Start Date**	**Anticipated Goal End Date**	**Investment Category**	**Investment line Item within Category**	**PBP Update - Due to EOHHS March 31, 2018**				**Report on PBP - Due to EOHHS August 31, 2018**			
Ties back to project number or budget report	*Should be same name as on Budget report*	*Describe specific goal (e.g. implement care management software)*	*Dates only between 7/1/17 and 12/31/2022*		*Select from drop down menu*	*Select from drop down menu*	**Anticipated Milestone Target by 3/31/18**	**Evidence of Success**	**Has Milestone been met? (Y/N)**	**If NO, please explain:**	**Anticipated Milestone Target by End of PBP (5/31/18)**	**Evidence of Success**	**Has Milestone been met? (Y/N)**	**If NO, please explain:**
1	**Workforce Development Project**	To enhance the quality and integration of care coordination services	01/01/18	12/31/22	**Workforce Development**	Training Expenses	Project Manager will research 2 advanced trainings in Motivational Interviewing and Integrated Care Management to see what options are available (including timeframes, locations, costs, etc) by 3/31/18	Project Manager will email Charline a description of the trainings researched.			Project manager will develop a training plan that will ensure 17 ICC staff get certified in Integrated Care Management and 29 staff complete advanced training in Motivational Interviewing. Plan will be finalized and approved by Board staff by 5/31/18.	Training plan submitted will be approved by board		
2	**Operational Infrastructure Project**	To improve our overall marketing and collaboration with community partners, specifically Primary Care Practices and ACOs	01/01/18	12/31/22	**Operational Infrastructure**	Operation Staffing including Fringe	Human Resources recruitment staff will advertise the Integrated Care Liaison (ICL) position and have interviewed at least 4 candidates by 3/31/18	Project manager will email Charline the name, offer letter, and credential information of the hired employee.			The Integrated Care Liaison (ICL) will have identified 6 out of 13 ACOs and have attended "meet and greet" sessions with them by 5/31/18.	Project Manager will email Charline the agenda and attendance sheets for each meeting.		
3	**Technological Improvements**	To increase the program use of technological advances; make staff more "tech savvy"	01/01/18	12/31/22	**Technology**	Technology for Service Delivery	IT Director will purchase 25 "2-in-1/Hybrid Laptops" by 3/31/18	Project Manager will email Charline an invoice for completed purchases			IT department will host a training for 25 CSA staff on how to safely and appropriately handle/use this equipment by 5/31/18	Project Manager will submit the attendance sheet and statement that training was completed.		

Section 6.2 Executive Summary (3 Pages)

The Community Service Agency (CSA) at Child & Family Services (CFS) is committed to providing the highest quality of care coordination and collaboration to effectively serve our families. We recognize the need for improvements and are committed to the DSRIP program.

6.2 A: The Bidder's current performance on its Development Plan.

Our Development Plan identifies two major goals:

- Improving fidelity scores by increasing youth attendance and involvement in the care planning process, as well as continuing to collaborate and communicate with other key stakeholders such as school and social service systems.
- Ensuring that all pertinent information is available for review by our MCEs to meet medical record standards. CSA staff diligently work on improving our quality of records and documentation which includes scanning documents such as signed releases or consents, assessments and forms, as well as appropriate and timely documentation of progress notes, creation of thorough CSA Assessments with more depth and breadth, and improving consistency with measurable goals on our ICP documents.

6.2 B: Specific examples of strengths and needs of the Bidder.

The CSA at CFS exhibits the following strengths:

- Staff and management team are very well versed in Wraparound. Our supervisory team has longevity in this field and in working in a Wraparound program, with 4 out of the 5 program managers taking part in the CFFC pilot program which introduced and rolled out the Wraparound model to the local area.
- We have culturally/linguistically diverse staff, and can accommodate the following languages and cultures: English, Spanish, Portuguese, Cape Verdean Creole.
- We have only been at capacity twice in 8 years, therefore we have minimal issues with access to service. We do not have a wait list, which means our families receive services in a timely manner. As an agency, we are conscious of the need to anticipate the demands of the community and hire on to accommodate referrals.
- We have improved our transition planning as a program and we are making strides in preparing families for transition using measurable outcomes.
- Our CSA program incorporates feedback from the MCEs into our practice to remedy any issues. Staff are open to constructive criticism and quick to make changes.
- With a focus on marketing our program to private practice clinicians, Pediatric offices, and families, we have worked diligently to increase our enrollment, servicing approximately 40 additional families this past year.

The CSA at CFS remains focused on addressing the needs identified in our Development Plan, as well as what we anticipate needing to complete the identified projects as follows:

- Continue to train staff on writing comprehensive detailed assessments with depth and breadth
- Increased marketing/advertising of our CSA program to create and foster stronger relationships with the ACOs, PCPs, Pediatric Practices and other community partners
- Comprehensive training for all CSA staff on medically complex youth
- Improve our fidelity scores around team member attendance (specifically youth involvement/attendance)

- Enhancement of our current technology and EHR capabilities to appropriately capture all necessary documentation for review by MCEs, as well as accuracy of reporting all information for required Quality Measures
- Increase both parent and Transition Age Youth participation in our local SOC

6.2 C: The Bidder's plans for improving timely access to ICC services.

Currently, the CSA program of CFS meets and exceeds the timely access to ICC service standards. We receive and process referrals, and offer initial intakes within the targeted time frame.

Our plans to focus on marketing and education, especially among PCPs, will help physicians better understand the resources and tools that the CSA can provide, ultimately cutting down on inappropriate referrals and improving efficiency of services rendered. The ability to send secure emails in lieu of faxing or calling physicians, who are challenging to reach by phone, will also improve information sharing between all partners and timely access to ICC services.

With the proposed enhancements to our current EHR, and the addition of new technology geared towards improving communication between care providers, a more streamlined and resourceful referral process will lead to improved timeliness of access to care. Additionally, in pursuit of program goals, we propose to purchase Translation Software that will improve timely access to ICC services and strengthen fidelity to Wraparound processes.

Bilingual CSA staff working with non-English speaking families must revise all documents currently written in English, and translate and recreate the documents into the family's native language to meet cultural and linguistic competencies. Translation Software would relieve this burden of translation efforts from the bilingual staff and free up additional time. Currently, bilingual staff have a reduced caseload due to the extra time required when working with non-English speaking and bilingual families. This reserve of additional time would essentially allow for an increase in staff caseload, which would ultimately aid in improving timely access to ICC services for the program.

6.2 D: The Bidder's plans for improving care coordination, care planning, and care management for ICC-Engaged Members.

The CSA at CFS carefully selected projects that would directly impact improvements in care coordination, care planning, and care management for ICC engaged members in the following ways:

- Creation of an Integrated Care Liaison position (ICL) whose focus will be on strengthening partnerships with the ACOs, PCPs and Pediatric Practices.
- Enhancing the Quality and Integration of Care Coordination by means of Workforce Development Training and Certification for CSA Staff. Intensive Care Coordination requires highly qualified staff with specialized educational training and professional development on constantly evolving methodologies, strategies and healthcare regulations. Identified training would improve staff's ability to provide better care management and wraparound support to clients.
- Technological improvements - Investing in new 2-in-1 Laptops, Skype for Business, Telehealth Conferencing and Translation Software, and adding enhancements to our EHR will increase the number of intakes completed in the field, allow partners and supports

to join meetings via video conferencing, and increase accuracy and record keeping. Utilizing secure E-Mail and Mass HIway connections will increase timely access to ICC services and improve efficiencies in care coordination and care management by eliminating barriers to successful care planning.

6.2 E: The Bidder's plans to improve performance on quality scores and Development Plan goals.

Fidelity Goal/Scores – We will continue to train supervisory staff to administer the TOMS 2.0 in order to recognize what constitutes an "integral member of the team" and capture data needed to rate these indicators for scoring. We will continue to foster relationships with key stakeholders such as local school representatives, DCF workers, and PCPs to ensure that they are appropriately educated on the care planning process and to stress the importance of their participation and attendance at team meetings. Training of direct staff on the importance of youth attendance at their care plans is a key component in utilizing the "youth-guided" principle of Wraparound process will continue.

We plan to use DSRIP funds to improve accessibility for providers and natural supports by utilizing innovative technology such as Telehealth Conferencing, which will allow for integral team members to be present in the room even when distance or access issues arise.

Documentation goal/scores - We continue to train our staff on writing clinically sound and meaningful comprehensive assessments. Training in Integrated Care Management, Motivational Interviewing, and Chronic Medical Needs will allow us to better encompass all the needs of the client into these assessments. We will ensure that all relative documentation can easily be found in the EHR with advances in technology such as secure email and connections to the Mass HIway. This will allow for quicker access to medical records from PCPs, educational documents from the school system, and treatments plans from other clinical providers.

6.2 F: The Bidder's plans for improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth.

With the creation of a new Integrated Care Liaison (ICL) position, we will foster new and strengthen old relationships with pediatric PCPs. We plan to have a large marketing event to introduce the ACOs, PCPs, and Pediatric Practices to the CSA providers in the area, and to increase networking opportunities with and among collaborative partners. The liaison will also coordinate ongoing education for the PCPs around Wraparound and the Care Coordination Model.

We will also use our advances in technology as noted above to improve coordination with other providers the youth may have on their care planning team. The use of secure email will help us to send privileged information back and forth with ease and not have to wait on "snail mail" or "lost faxes" to share and communicate documents. Telehealth video conferencing will also assist us in bringing team members to the table on a more regular basis especially in instances where distance, time, and access to one another is an issue.

Section 6.3 Populations Served and Community Engagement (3 Pages)

6.3 A: The Community Service Agency (CSA) at Child & Family Services (CFS) provides Intensive Care Coordination services to MassHealth enrolled youth, under the age of 21, with Serious Emotional Disturbances (SED) who meet the medical necessity criteria for this service. Our designated catchment area includes the cities and towns of New Bedford, Dartmouth, Fairhaven, and Acushnet. On occasion, we will provide services to youth and families that live in Wareham, Middleboro, Fall River, Taunton, Mattapoisett, Marion, and Freetown. While our focus is on providing services in our designated region, circumstances may warrant a need to operate outside of the service area. For example, when another CSA in the region is at capacity we will take referrals from other areas so that timely access to ICC services can be afforded to the family.

Intensive Care Coordinators promote and ensure the health and wellbeing of the individuals they serve through a coordinated systematic team based approach. CSA staff ensure that interventions and services are well-coordinated between team members, goals are prioritized, progress is consistently monitored, and gains are demonstrated through improvement in the Child & Adolescent Needs and Strengths (CANS) score. CSA staff use the ten principles of Wraparound to support the health and wellbeing of each youth and their families. The Wraparound principles guide the means by which staff support clients, beginning with the referral process in which staff actively engages with a family and "meets them where they are at".

Referrals are currently received in the form of fax, e-mail, telephone, and in person. CSA staff respond to each inquiry within 24 hours and offer a one-on-one appointment within three calendar days. Actively initiating and maintaining engagement is one of our core principles and each CSA staff member is trained on care coordination and the Wraparound model. CSA staff complete an initial safety plan and a Strengths, Needs and Culture Discovery assessment which helps guide the process and supports decision making and development of an individualized care plan.

Staff work diligently to create strong relationships with youth and families through listening and providing "voice and choice", which recognizes that successful outcomes and continued engagement are a direct result of family ownership of the ICP. Achievement of the care plan goals are increased when the Wraparound process reflects family members' priorities and perspectives. Addressing needs beyond behavioral health through the development of partnerships within the community assist in maintaining engagement with families. These partnerships enable CSA staff to connect families and/or youth to a variety of sustainable supports, such as recreational activities for the child, support groups for the parents/caregivers, faith communities, and community-based social events.

CSA staff are committed to improving communication amongst the providers and teaching parents how to effectively navigate the health system which leads to an increase in the continuity of care. Our proposal aims to improve the services described above by working towards fostering stronger integration with ACOs, PCPs, and Pediatric Practices, strengthening fidelity to Wraparound processes and improving timely access to care. Through specific improvements in technology, infrastructure and workforce development, our CSA program will

develop more efficient time savings practices, which in turn will reduce costs and improve care coordination skills. Technology improvements will better enable our program to promote the health and wellbeing of the individuals we serve.

6.3 B: The CSA at CFS maximizes the chances of accomplishing ICP goals through quality ICC services demonstrated by nurturing formal and informal community resources that support care plan teams. We currently have a thriving Systems of Care (SOC) in our area comprised of representation from the local school departments, DMH, DCF, DYS, the court system, the District Attorney's Office, the Bristol County Sheriff's Office, Parent Advocacy programs such as the Parent Information Network (PIN), multiple other CBHI program representatives from In-Home Therapy, Therapeutic Mentoring, and In-Home Behavioral Services, our local Mobile Crisis Intervention, nurse case managers from the Greater New Bedford Health Clinic, Early Intervention providers, daycare providers, the local Parks and Recreation Department, representative from the Managed Care Entities, the local Family Resource and Development Center, the local housing authority, Immigrants' Assistance Center, our local City Hall and Health Department, and various other mental health and substance related disorder providers in the area. We convene and cultivate the local Systems of Care Committee monthly.

The SOC committee serves as an advisory committee to the CSA and supports the following:

- Quality management processes that address opportunities to improve the delivery of the CSA services including reviewing systemic barriers, and identifying and fostering community resources and relationships to promote sustainability.
- Community resource monitoring and development, including identifying gaps in services, building capacity of resources and supports, and improving linkages with schools and other community based natural supports. These relationships help us to be more effective in assisting families to access different support and/or services offered.
- Issues or themes related to the delivery of ICC services including access and coordination barriers. SOC provides assistance in navigating access to address needs of youth and families served by the CSA Program.

Additionally, our CSA participates in a monthly meeting with the Department of Mental Health (DMH) and Department of Children and Families (DCF), as well as a bi-monthly interagency meeting with representatives from the Department of Elementary and Secondary Education (DESE), Department of Developmental Services (DDS), DMH, DCF, and the Department of Youth Services (DYS).

Both meetings offer an opportunity to present, examine and discuss high risk cases where we can tap into the expertise and collective knowledge of broader community agencies and brainstorm solutions for each case. The partnership meetings encourage robust discussion and problem solving around access to services and resources that the more extensive State agencies may be better equipped to provide. For example, our relationship with our DMH Systems Integration Specialist (SIS) has allowed eligible youth enrolled in the CSA program to access a DMH funded respite program and a DMH funded therapeutic afterschool program. This example demonstrates key Wraparound support opportunities that are crucial to the success of care plans and care coordination.

As demonstrated above we currently have strong and integrated care teams and community partners who contribute valuable expertise and services to the clients we serve. Our proposal is focused on building stronger and more integrated relationships with ACOs, PCPs, and Pediatricians located in our catchment area.

6.3 C: Our proposed investment projects focus on developing new partnerships with ACOs, PCPs, and Pediatric Offices while improving methods of effective efficient communication with current partners. These partnerships will align with our proposed and described projects in the areas of Workforce Development, Infrastructure and Technology as follows:

Workforce Development - Staff training in the areas of Integrated Care Management, Motivational Interviewing and Understanding Chronic Medical Needs will foster more integrated partnerships with both our current and proposed new partners. A deeper understanding of chronic medical needs will enable staff to identify challenges that impact behavioral health and offer care plan recommendations and referrals to appropriate partner organizations. Training in Integrated Care Management will help staff understand how changing from a passive health system that waits for the client/patient to be taken, into an active and engaging health system, is more inclusive and provides better health outcomes in the long term. This understanding is crucial in empowering staff to embrace and encourage the development of more meaningful relationships with ACOs, PCPs, Pediatricians and other community providers.

Operational Infrastructure and Technology - The integration of Care Coordination efforts for both current and planned partnerships will be improved with our proposed operational infrastructure and technology projects. Currently efforts to inform ACOs and PCPs of the services available under the CSA is hindered by an inability to invest the time in building trusting relationships directly with healthcare providers and an archaic system of information sharing and dialogue. The employment of an Integrated Care Liaison (ICL) whose principal focus will be to connect with ACO leadership, PCPs and Pediatric Offices to build enduring relationships, and educate and inform them of service options will achieve our development plan and DSRIP goals. Providers who understand services offered by the CSA will be better equipped to provide appropriate referrals which ultimately empowers each provider to approach their patients in a holistic manner serving the “whole” person instead of individual specific ailments.

Improving technology is a key strategy to cultivating low pressure and accessible relationships with all partners. Enhancements to our current electronic medical health record, Evolv, access to secure e-mail and telehealth services, connections to the Mass HIway, laptops, and translation software will provide smoother, easier access to care coordination and significantly enhance the collaborative, team and outcomes based principles of the Wraparound model. We attribute our growth and success to our significant and growing network of partners. The ability to work collaboratively, engage key stakeholders and expand partnerships is a central component to achieving positive and sustainable outcomes for our youth and families.

Section 6.4 Proposed Projects and Investment Plan (15 Pages)

6.4 A. Project Description #1 - <u>Workforce Development Project</u>

1. Name or title of the specific proposed project: Enhancing the Quality and Integration of Care Coordination by means of Workforce Development Training and Certification for Community Service Agency (CSA) staff

2. The specific goal, as defined in Section 3.4, advanced by the project and plans to address the goal through the proposed project:
The CSA of Child & Family Services' proposed Workforce Development Project will advance the following goals as defined in section 3.4: Fostering strong integration with ACOs and primary care providers for ICC-Engaged Members; Strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC-Engaged Members and their families; Improving timely access to ICC services for children eligible to receive ICC and their families; Improving integration among physical health, behavioral health, long-term services and supports and health-related social services; and to sustainably support safety net providers to ensure continued access to care for Medicaid and low-income, uninsured individuals.

Child & Family Services (CFS) recognizes the ongoing need to improve integrated care management and delivery of services in pursuit of the Delivery System Reform Incentive Program (DSRIP) goals. CFS's CSA Program Director has identified training opportunities that would best improve CSA staff knowledge. Training program selections were aligned with advancing program goals.

Intensive Care Coordination requires CSA staff to facilitate care planning that is driven by the needs of youth characterized as having Serious Emotional Disturbance(s) (SED). Creating a Wraparound integrated youth and family centered care plan involves collaboration and multifaceted partnerships across a variety of settings, including a youth's home, school, community and healthcare locations. Intensive Care Coordination requires highly qualified staff with specialized educational training. Maintaining highly qualified staff requires an investment in professional development where staff can learn about constantly evolving methodologies, strategies and healthcare regulations.

CFS has identified three areas where training would prove beneficial for staff in providing better care coordination and Wraparound support to clients. The three areas include Motivational Interviewing, Integrated Care Management and Understanding Chronic Medical Needs. Training programs/certifications have been identified and will be pursued by staff based upon roles and responsibilities. The descriptions of each type of training and their connections to program goals are as follows:

Motivational Interviewing - *Building One's Knowledge of Motivational Interviewing*: the course is offered at the UMASS Center for Integrative Primary Care and provides a clinical approach that helps people with mental health and substance use disorders and other chronic conditions, to make positive behavioral changes to support better health. Staff training in the field of Motivational Interviewing will improve fidelity of the Wraparound model based on improving

staff skills set in the area of assessment. Motivational interviewing techniques will better assist staff to engage with a client, help them identify their strengths and needs which will improve and support the Wraparound process leading to overall more effective and sustainable outcomes.

Integrated Care Management – The certificate program in Integrated Care Management will develop staff's general skills focused on engaging patients, promoting their motivation to improve their own health, and general medical and behavioral health skills to be able to connect them to appropriate services, address questions, teach healthy living and support patient-centered treatment plans. Staff trained in Integrated Care Management will better understand how care management plays a crucial role in the Patient-Centered Medical Home (PCMH). Staff will understand how changing from a passive health system that waits for the client/patient to be taken, into an active and engaging health system, is more inclusive and provides better health outcomes. This understanding is crucial in empowering staff to embrace and encourage building of strong relationships with ACOs, PCPs and other service providers. Expertise in both the care management tasks of the healthcare system and the mental health system is a necessary skill in a successful care coordination model. While staff know that outreach is required as part of the role as a Care Coordinator, the knowledge and understanding of why outreach and engagement is crucial to success will empower staff to take ownership of their role. Staff who enroll for the Integrated Care Management Certification will enhance their knowledge around medically complex needs and how they can be integrated into the behavioral health model.

Integrated Care Management is particularly important in situations where the engagement between the person and the health system is likely to fail, such as transitions of care, barriers to access, poor fit between the person's social skills and medical understanding and the level of either required to maintain health or to access care. Obtaining a Certification in Integrated Care Management will improve staff's understanding and facilitation of Wraparound support services.

Understanding Chronic Medical Needs – According to publication by The National Academies Press and funded by the National Institute of Health, mental health, substance-use problems and other illnesses rarely occur in isolation. Often, they accompany each other, along with general medical illnesses such as diabetes, and neurological illnesses. Since these conditions are intertwined, coordination of health care is essential to improved health outcomes. [1] The purpose of the CSA Wraparound model is to link families to supports and resources that best meet their individual needs. Research has demonstrated that individuals with co-existing health barriers do not receive the holistic care they need to overcome these barriers because "disconnected care delivery arrangements requires numerous patient interactions with different providers, organizations, and government agencies"[2] To address these issues we propose to train CSA staff on Chronic Medical Needs which will help staff understand conditions that impact behavioral health, thus enabling them to locate resources that best meet client's individual needs. Our expanding partnerships and proposed hiring of an Integrated Care Liaison, discussed later in the proposal, will further improve the coordination of care through an emphasis on effective communication and a clearer sense of shared goals and roles between

Community Service Agencies and Primary Care Providers.

[1] (Series, 2006); [2] (Series, 2006, p. 1)

3. The scope of the project, including duration of time during which the funds received under the Contract shall support the project, and the planned methods and activities that shall be performed to achieve the identified goal.

UMASS Medical online training programs are self-paced and begin in the spring and fall semesters. The bulk of training will take place during the preparatory period and the CSA Program Director will oversee all training related components including enrollment, support, completion and implementation. Training funds will be allocated throughout each budget period to deliver new skills to CSA staff and reinforce current learning and knowledge. The Motivational Interviewing course will be pursued in a team-based approach, where staff will come together during team meetings to watch online modules and then discuss and practice techniques demonstrated and new skills gained. Understanding Chronic Medical Needs training will be delivered throughout the first year.

We are actively developing more well-defined relationships with our local ACOs and intend to work in partnership with them to identify appropriate training on Chronic Medical Needs such as diabetes, cystic fibrosis, ADHD, food allergies and asthma. Working with ACOs to support and advise on necessary training will strengthen our efforts in building trusting and more collaborative relationships. Care providers are more likely to collaborate when they "perceive each other as having the knowledge necessary for good clinical care". [1] Multiple DSRIP goals naturally align with these strategies and we believe care integration through education will improve the fidelity of the wraparound model.

[1] (Series, 2006, p. 2)

4. Proposed deliverables that will result from the project.

Training in the three areas of Motivational Interviewing, Integrated Care Management and Understanding Chronic Medical Needs will have a direct and positive influence on all DSRIP program goals. Specific deliverables will include an upskilling of ICC staff, resulting in strengthening fidelity of Wraparound support services, and fostering strong integration with ACOs and PCPs. More specifically, there will be an increase in certified staff in Integrated Care Management, leading to an increase in collaboration with ACOs and PCPs through shared understanding of roles and responsibilities, and improved access to care for ICC engaged members.

5. Specific use of DSRIP funding the Bidder plans to make in order to execute the project and an explanation of how each investment will support the execution of the project goals.

DSRIP funding will be used to cover the cost of staff certifications and training in the areas of Motivational Interviewing, Integrated Care Management and Understanding Chronic Medical Needs. Investment in staff training and knowledge will support the execution of project goals of Fostering strong integration with ACOs and primary care providers for ICC-Engaged Members; strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC-Engaged Members and their families; improving timely

access to ICC services for children eligible to receive ICC and their families; improving integration among physical health, behavioral health, long-term services and supports and health-related social services; and to sustainably support safety net providers to ensure continued access to care for Medicaid and low-income, uninsured individuals as described in depth in section 6.4 A-2.

6. Existing internal resources (e.g., funding, staff, business site, IT systems, hardware) the Bidder plans to use to implement the project.
Internal resources to be used for the project include staff salaries and IT equipment. Staff will be provided time each week to complete training course modules.

7. An explanation of how funds will be allocated across the Bidder's organization and CSA site(s).
Child & Family Services (CFS) has only one CSA site, therefore, all funds for training will be allocated to the single CSA site.

8. The internal evaluation, measurement or performance management strategies the Bidder will apply to the proposed project to demonstrate effectiveness, including plans to collect quantitative and/or qualitative data regarding program activities, outcome measurements the Bidder proposes to use, and the staff responsible for this task.

a. Measurement Strategy: staff will participate in a survey that will rate their confidence in their skills and abilities both before and after completion of the courses in :
   Integrated Care Management and Motivational Interviewing.
   Program director will design a survey with questions rated on a Likert Scale of 1-7 (1 being not at all confident- 4 Neutral- 7 Extremely Confident) in the following area: (sample questions)
   Integrated Care Management- please rate your comfort level with networking in the medical neighborhood?
   Motivation Interview Skills- please rate your ability to verbalize an understanding of the patient's point of view
   Before taking the course (score) vs. After taking the course (score)
b. Timeframe: We will have all trainings and surveys completed by the end of Budget Period 2
c. Goal: To increase staff competency and confidence on the topics of Integrated Care Management and Motivational Interviewing in order to improve collaboration with Primary Care Providers and improve our ability to capture needed info for assessments and Strength, Needs, and Culture Discoveries.
d. We will collect the data in survey form at the end of each training course
e. The CSAs administrative assistant and program director will compile data for scores.

6.4 A. Project Description #2 - <u>Operational Infrastructure Project</u>

1. Name or title of the specific proposed project. Integrated Care Liaison (ICL)

2. The specific goal, as defined in Section 3.4, advanced by the project and plans to address the goal through the proposed project.

The CSA of Child & Family Services' proposed Operational Infrastructure Project will advance the following goals, as defined in section 3.4: Fostering strong integration with ACOs and primary care providers for ICC-Engaged Members; strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC-Engaged Members and their families; sustainably supporting Safety Net providers to ensure continued access to care for Medicaid and low-income, uninsured individuals; and improving integration among physical health, behavioral health, long-term services and supports and health-related social services.

Our plan(s) to address these goals will include the employment of an Integrated Care Liaison who will focus on marketing and networking strategies.

The employment of a full time Integrated Care Liaison (ICL) will serve a dual role. The success of care plans requires a commitment from all stakeholders including the family, partners and collaterals. The current challenge is engaging and sustaining the attention and commitment of the client's Primary Care Physician (PCP). PCPs often see patients back to back throughout the day and rarely have time for additional meetings with a client's Wraparound Care Coordinator. The ICL's primary focus will be on building relationships with PCPs and bridging the information gap that currently exists between them and the ICC staff. The Integrated Care Liaison would be formally trained in all ICC services and serve in a management role within the program. We anticipate an increase in PCP referrals as a result of focused outreach efforts at PCP and Pediatric offices. Additional referrals will lead to an increase in revenue and provide sustainable resources for the added position.

3. The scope of the project, including duration of time during which the funds received under the Contract shall support the project, and the planned methods and activities that shall be performed to achieve the identified goal.

The CSA Program Director at Child & Family Services will function as the Project Manager for Infrastructure projects and will be responsible for hiring and providing training to the Integrated Care Liaison.

To meet our goals related to improved integrated care, as well as sustainable support for safety net providers and stronger relationships with PCPs, it will be crucial to identify, hire and fully train the appropriate candidate for the new position. We have provided the job description for the new position as an attachment which details the required skills and qualifications.

4. Proposed deliverables that will result from the project.

Deliverables will include the creation of a new Integrated Care Liaison position, new marketing and outreach materials, and a kick-off outreach event intended to bring together the ACOs, PCPs and pediatricians who will partner with the CSA for a networking opportunity to meet and discuss how to improve communication and partnerships in support of clients and patients.

5. Specific use of DSRIP funding the Bidder plans to make in order to execute the project and an explanation of how each investment will support the execution of the project goals.

Funding will be used to employ the Integrated Care Liaison. The ICL will be responsible for engaging and sustaining relationships with PCPs and Pediatric Offices, and will work directly with the Program Director to create an outreach strategy intended to increase ICC referrals and create deeper, more effective collaborative relationships with PCPs and pediatricians.

Additionally, funding will be used to support marketing and event coordination costs for the kick-off event designed to engage, connect and begin to build relationships with ACOs and PCPs. One of our core responsibilities is to foster strong integration between these entities which will in turn strengthen fidelity to the Wraparound processes, improve access to ICC services and advance our quality improvement plan goals.

6. Existing internal resources (e.g., funding, staff, business site, IT systems, hardware) the Bidder plans to use to implement the project.
Existing internal resources include our HR department for recruitment purposes and CSA Program Director, both of whom will serve as project leads for the proposed infrastructure projects.

7. An explanation of how funds will be allocated across the Bidder's organization, and CSA site(s).
Child & Family Services (CFS) has only one CSA site, therefore, all funds for training will be allocated to the single CSA site.

8. The internal evaluation, measurement or performance management strategies the Bidder will apply to the proposed project to demonstrate effectiveness, including plans to collect quantitative and/or qualitative data regarding program activities, outcome measurements the Bidder proposes to use, and the staff responsible for this task.

a. Measurement Strategy: We will see an increase in overall referrals made by PCPs by at least 40%.
b. Timeframe: We anticipate this increase by December 2020
c. Goal: To increase our current enrollment of 115 youth to 130 youth
d. We will collect the data by utilizing the Statewide CSA Monthly Statistics Reports (which captures all referral data and enrollment information on a monthly/yearly basis)
e. The CSA Admin Assistant, the Program Director, and Senior Care Coordinators

6.4 A. Project Description #3 - <u>Technology Project</u>

1. Name or title of the specific proposed project.
Technological Improvements and Innovative Investments

2. The specific goal, as defined in Section 3.4, advanced by the project and plans to address the goal through the proposed project.
The CSA's Technology Project will address the following goals, as defined in section 3.4: Fostering strong integration with ACOs and primary care providers for ICC-Engaged Members; strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC-Engaged Members and their families; and Improving timely access to ICC services for children eligible to receive ICC and their families. Additionally,

the technological investments and improvements align with the DSRIP and CSA Development Plan goals of Implementing payment and delivery system reforms that promote member-driven, integrated coordinated care, and hold providers accountable for the quality and total cost of care; improving integration among physical health, behavioral health, long-term services and supports and health-related social services; sustainably support Safety Net providers to ensure continued access to care for Medicaid and low-income, uninsured individuals; ensuring that all pertinent information is available for MCE record review in order to meet medical record standards; and improving our team member attendance scores (such as youth attendance, key stakeholders, attendance, PCP participation, and natural supports) related to the data from the TOMS in the WPPA report for 2016.

Intensive Care Coordinators (ICC) currently rely primarily on desktop computers for all documentation needs and a limited number of laptops and e-signature pads for completing intake services in the field. The purchase of 2-in-1 laptops and Skype for business accounts for all CSA staff will address the stated goals in the following ways:

2-in-1 Laptops - First, the purchase of 2-in-1 laptops for all CSA staff will strengthen fidelity to Wraparound processes by ensuring all staff and ICC engaged members have instant access to all care coordination documents during care plan meetings. Additionally, the majority of our families do not own a computer, so to access technology, our families are asked to come to the agency or other settings such as a library or career center. The ability to bring technology to our youth and their families will improve access to services and streamline the care coordination process. For example, a Family Partner staff may be working on a storyboard with a family that creates a virtual vision of Strengths, Needs and Cultural Discovery. The ability to work on this project in a comfortable and safe environment for the family is fundamental to strengthening fidelity.

Finally, laptops will allow our staff to complete the necessary paperwork while in the field. This is an efficient approach that will decrease costs, improve collaborative partnerships and free up additional staff hours. Staff could then use this time to attend trainings, provide additional supports to Safety Net providers through relationship building, and document and track down pertinent information to meet medical record standards, which aligns with our Development Plan goals. If a document is requested by the family and the Care Coordinator does not have the specific document, valuable time and resources are lost. Mobile technology will improve access to ICC services through the instant availability of important documents.

Telehealth Capabilities - In addition to the purchase of laptops, CFS proposes to purchase telehealth capabilities through either Skype for Business or Omni-join. Telehealth capabilities will facilitate the process of fostering strong integration with our ACOs, PCPs and pediatricians, allowing other providers to participate in the care planning process and meetings if they cannot be there in person, due either to distance or an inability to break away from work. Many of our PCPs see patients back to back all day long, making it virtually impossible for them to attend an hour and a half care planning meeting. Telehealth capabilities will better aid in bringing members of the Primary Care team to the table during essential meetings with our youth and their families.

Furthermore, Telehealth capabilities will allow for remote access of the youth's natural supports, which, in turn will strengthen fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC-Engaged Members and their families. Often our youth's natural supports are not physically able to be in the location of the care planning meetings, as they may live in another state or not have reliable access to transportation. Natural supports are crucial to the sustainability of active participation and follow through in care coordination planning. Natural supports provide a sense of safety and security to the youth and their families in addition to a team primarily comprised of professionals. Telehealth capabilities will also allow for remote access to other providers on the team who also may not be able to attend in person such as DCF workers, school personnel, psychiatrists, and therapists.

Translation Software - In pursuit of program goals, we propose to purchase translation software that will improve timely access to ICC services and strengthen fidelity to Wraparound processes. Currently, CSA staff working with non-English speaking families create and revise all documents such as the Individual Care Plan, Safety plans, Transition Indicators and Assessments in English. Following the completion of the English version, bilingual staff will then translate the document into the family's native language in order to meet cultural and linguistic competencies.

Translation software would relieve the CSA's bilingual staff of the burden of hand-written translation, freeing up additional time and essentially allowing for an increase in the staff's caseload. Currently, bilingual staff have a reduced caseload due to the extra time required when working with non-English speaking and bilingual families. An increase in Care Coordinator's caseload would improve timely access to ICC services.

Secure E-mail and Connections to the Mass HIway/EHR Enhancements - We propose to address the goals of integration among physical health, behavioral health, long-term services and supports, and health-related social services; sustainably supporting Safety Net providers in order to ensure continued access to care for Medicaid and low-income, uninsured individuals; and fostering strong integration with ACOs and primary care providers for ICC-Engaged Members.

To address these goals, we propose to add 13 additional connections to the Mass HIway portal and purchase secure/encrypted email software for all CSA staff. Connection to the Mass HIway offers a secure connection and the portal offers a way to securely and seamlessly transmit vital data electronically. There are currently 3 ACOs in our designated service area who are using the Mass HIway – Southcoast Hospitals Group, Beth Israel Deaconess Hospital, and the Greater New Bedford Health Center; however not all partners are connected to the HIway. Secure email services will provide CSA staff with a more efficient and effective means of transmitting client-sensitive information, thus allowing staff to send and receive privileged information to Primary Care Physicians, collaterals and other providers on the team who may not be on the Mass HIway, but who we are expected to communicate and collaborate with as part of the care coordination team.

Due to HIPAA regulations, our CSA staff cannot upload any documents with identifying information into our current messaging system. Secure e-mail would allow staff to upload vital

documents that can be shared with each member of the care planning team. Supporting Safety Net providers and strengthening integration among physical health, behavioral health, long-term services and supports and health-related social services would increase with the ability to send secure emails to all partners. Additionally, secure email services would cut agency costs. For example, currently Managed Care Entities (MCEs) require that documentation is delivered to the families and partners within seven days of the care planning meeting. Currently, staff spend an inordinate amount of time making copies, addressing, stamping and mailing documents. Any changes to a care plan require that the updated version is current and shared with all partners. On average, CFS' CSA has 104 ICC engaged members each month. The best practice is one care plan meeting a month. If all staff send out one new care plan a month to four partners, the total number of pages being copied and mailed would amount to more than 300 pages. The time spent on these tasks is more challenging to calculate, however, we can presume that the ability to electronically transmit the new paperwork would be a more efficient and effective practice.
Additional connections to the Mass HIway and secure email services will support stronger integration with ACOs and primary care providers for ICC-Engaged Members, improve integration among physical health, behavioral health, long-term services and supports and health-related social services; and support Safety Net providers to ensure continued access to care for Medicaid and low-income, uninsured individuals.

Enhancements to our EHR system are intended to capture new data required for Quality Measures reporting, build out new reports that will reveal quantitative metrics intended to drive care planning conversations amongst the team, and support the Wraparound process. Enhancements will include, but are not limited to, creating new forms and fields in the EHR to capture the dental appointments, PCP wellness visits, and After Care Outpatient Appointments.

3. The scope of the project, including duration of time during which the funds received under the Contract shall support the project, and the planned methods and activities that shall be performed to achieve the identified goal.
The IT Director at Child & Family Services will function as the Project Manager for IT-related projects. Our Director of Technology has been consistently involved in the RFR planning process and will be responsible for all technology product purchases and associated tasks, training and implementation, and Technology Project goals.

To meet our Technology Project goals, training on appropriate Telehealth practices, translation software, using secure email and accessing the Mass HIway, along with ensuring laptops are equipped with the proper software and operating systems, will be crucial to the success of the project. The purchasing and training for all technology investments will take place during the preparatory budget period.

4. Proposed deliverables that will result from the project.
Proposed deliverables include the purchase of 25 laptops, Telehealth product, Translation Software, Secure Email Licenses and 13 additional connections to the Mass HIway.

5. Specific use of DSRIP funding the Bidder plans to make in order to execute the project and an explanation of how each investment will support the execution of the project goals.
Funding will be used to purchase 25 two-in-one laptops, Telehealth and Secure Email services, translation software, and 13 additional connections to the Mass HIway for all CSA staff. The purchase of mobile technology and telehealth services will enable staff to strengthen fidelity to Wraparound support services through improved participation with natural supports and other collaterals. This technology, along with additional connections to the Mass HIway and secure email services will support stronger collaborative partnerships with ACOs, PCPs and Pediatric Offices and improve access to care, as CSA staff will more efficiently be able to record and access information and data necessary to successful care planning and integrated care coordination. Training is required to ensure that all staff understand the value of the translation software, have the technical skills and an opportunity to use the product.

Additionally, funds will be used to purchase two large screen televisions that will be placed in the two main conference rooms. The televisions will be used for Telehealth conferencing sessions with the care planning team, natural supports, community and primary care partners.

6. Existing internal resources (e.g., funding, staff, business site, IT systems, hardware) the Bidder plans to use to implement the project.
Existing internal resources include the use of our IT Director who will serve as the project lead for the technology component.

7. An explanation of how funds will be allocated across the Bidder's organization, and CSA site(s).
Child & Family Services (CFS) has only one CSA site, therefore, all funds for training will be allocated to the single CSA site.

8. The internal evaluation, measurement or performance management strategies the Bidder will apply to the proposed project to demonstrate effectiveness, including plans to collect quantitative and/or qualitative data regarding program activities, outcome measurements the Bidder proposes to use, and the staff responsible for this task.

a. Measurement Strategy: We would like to see an increase in our TOMS 2.0 and WFI-EZ scores in the categories of Natural Supports and Full Meeting Attendance by utilizing Telehealth Capabilities to virtually bring people into the meetings.
b. Timeframe: We anticipate a significant increase and the results by the end of Budget Period 3 (Dec 2020)
c. Goal: We would like to see an increase in our overall average scores from current average of 66% to 75% for Meeting Attendance and 68.5% to 80% for Natural Supports
d. We will collect the data from the results of the WPPA (Wraparound Provider Practice Analysis) and fidelity assessment scores.
e. The Program Director and Senior Care Coordinators will collect and submit the data.

6.4 B. Project Team description

B1. Child & Family Services CSA Organizational Chart (See Attachment).

B2. Child & Family Services CSA List of Current Staff that will be involved in the projects, including their Job Descriptions and qualifications for the projects.

Current Staff involved in the projects are as follows:

a) Site Director, Jeanne Bissonnette holds a Master's degree in Social Work and is a Licensed Independent Clinical Social Worker. Jean has been with Child & Family Services since 1998. Jean is currently the Site Director for our Acushnet Avenue site and is responsible for seven outreach programs which includes three CBHI programs.

b) IT Department Manager, Mirian Sousa holds a Bachelor's Degree in Business Administration and Computer Technology and coursework towards a Master's Degree in Computer Engineering. Mirian has been with Child & Family Services since October 2015. Mirian is responsible for directing, planning and organizing all activities of the IT department to ensure effective and secure operation of all automated data processing systems.

c) CSA Program Director, Erin McAlonan holds a Master's degree in Expressive Arts Therapy/Counseling. Erin has been a part of the CFS since 2005 and currently serves as the Program Director for the CSA.

d) Finance Manager, Paula Medeiros has a Bachelor's Degree in Accounting and has been with Child and Family Services for 14 years. Paula is currently the Finance Manager for the entire organization and is responsible for maintaining records and systems of accounts for recording the Agency's financial transactions, preparing internal financial statements, preparing monthly and annual financial reports for the Chief Fiscal Officer, designing and maintaining a system on internal checks, and controls for the proper safeguarding of the assets and accurate recording and reporting of accounting transactions.

All CSA staff, including Intensive Care Coordinators and Family Support Partners will participate in the proposed trainings.

Job Descriptions and Qualifications (Credentialing Log) for the Projects (See Attachments).

B3. Any staff the Bidder proposes to hire or engage to be involved in the project(s), including their proposed job descriptions and qualifications for the project(s).

We propose to hire a full time Integrated Care Liaison (ICL). We have created the job description that lists the required qualifications and skills **(See Attachment)**

B4. The roles and responsibilities of each staff of the Bidder's Project Team and how the Bidder will ensure efforts are coordinated among staff and not duplicated.

Each member of the project team has designated roles and responsibilities to ensure that efforts are not duplicated. Each team member has been involved with the development of each project and have worked collaboratively throughout the process. More specifically:

Jean Bissonnette, the Site Director is responsible for supervising all aspects of the CSA Program including fiscal oversight. Jean will be responsible for working with the Program Director, IT Director and Finance Manager to ensure that budgets are allocated and managed appropriately and accurately.

Mirian Sousa, The IT Department Manager will work with senior management and the CSA Program Director to ensure that the implementation of technology purchases and training needs proposed by the RFR is provided in a timely, secure and easy accessible manner.

Erin McAlonan, The CSA Program Director will serve as the lead project manager for the implementation of training and hiring of the Integrated Care Liaison. Erin will work collaboratively with the Site Director and IT Department Manager to ensure technology purchases and implementation proposed by the RFR are adhere to the project plan, proposed timeline and budgetary expenditures.

Paula Medeiros, The Finance Manager will work closely with the Site and Program Directors and the Chief Financial Officer to ensure that the budget is allocated and managed appropriately and accurately.

B5. A description of how the Bidder proposes to manage the project(s).
The projects will be managed by each designated team member as described above based upon the needs and content or technical requirements of each project. The overall project lead will be the Program Director, Erin McAlonan with oversight and support by the Site Director. Erin will be responsible for ensuring that each project is carried out according to the DSRIP participation plan agreement. Erin will partner with the Finance Manager on budget management matters, with the IT Department Manager with all technology investments and project implementation, and with all CSA staff to ensure a smooth implementation process throughout the execution of each project.

6.4 C. Implementation Plan and Timeline

Prep Budget Period (January 2018 - May 2018)

- Hire and provide training for the Integrated Care Liaison
- Continued outreach to ACOs, PCPs and pediatricians
- Research appropriate technology products and purchases.
- Purchase touchscreen laptops, translation software, secure email and telehealth licenses, television monitors, 13 additional accounts for Mass HIway
- Complete upgrades/and quality enhancements to Wi-Fi and EHR to begin capturing required quality metrics
- Provide staff training on new processes for capturing required quality metrics
- Research, development and purchasing of marketing materials for promotions at ACOs, PCPs and Pediatric offices and for the Kick-off Event
- Registration for Integrated Care Management and Motivational Interviewing certification training
- Research trainings for Understanding Chronic Medical Needs i.e.: Diabetes, Asthma, Obesity and Food Allergies
- Prepare semi-annual progress report
- Begin developing policies and procedures for all technology requirements and train staff
- Design and begin implementing staff training for technology enhancements, new technology purchases specifically on the use of confidential and secure information sharing technologies

Budget Period 1 (June 2018 - August 2018)

- Begin planning and preparing for the Kick-off Event
- Coordinate amongst other CSA providers for opportunities to collaborate on the Kick- off event
- Ongoing research on training opportunities and enrolling staff in training/certification programs as appropriate
- Ongoing training on the use of confidential and secure information sharing technologies

Budget Period 1 (September 2018 - October 2018)

- Host the Kick-off Event
- Ongoing research on training opportunities and enrolling staff in training/certification programs as appropriate
- Ongoing training on the use of confidential and secure information sharing technologies

Budget Period 1 (October 2018 - December 2018)

- Prepare and submit EOHHS annual report
- Ongoing research on training opportunities and enrolling staff in training/certification programs as appropriate

Budget Period 2 First Quarter (January 2019 - March 2019)

- Ongoing research on training opportunities and enrolling staff in training/certification programs as appropriate
- Refresher training on the use of confidential and secure information sharing technologies and any updates/upgrades

Budget Period 2 Second Quarter (April 2019 - June 2019)

- Prepare and submit semi-annual progress report
- Ongoing research on training opportunities and enrolling staff in training/certification programs as appropriate
- Refresher Workforce Development Trainings

Budget Period 2 Third Quarter (July 2019 - September 2019)

- Ongoing research on training opportunities and enrolling staff in training/certification programs as appropriate
- Refresher training on the use of confidential and secure information sharing technologies and any updates/upgrades

Budget Period 2 Fourth Quarter (October 2019 - December 2019)

- Prepare and submit EOHHS annual report
- Ongoing research on training opportunities and enrolling staff in training/certification programs as appropriate

Budget Period 3 First Quarter (January 2020 - March 2020)

- Refresher Workforce Development Trainings
- Refresher training on the use of confidential and secure information sharing technologies and any updates/upgrades

Budget Period 3 Second Quarter (April 2020 - June 2020)

- Prepare and submit semi-annual progress report

Budget Period 3 Third Quarter (July 2020 - September 2020)

- Refresher Workforce Development Trainings
- Refresher training on the use of confidential and secure information sharing technologies and any updates/upgrades

Budget Period 3 Fourth Quarter (October 2020 - December 2020)

- Prepare and submit EOHHS annual report

Budget Period 4 First Quarter (January 2021 - March 2021)

- Refresher Workforce Development Trainings
- Refresher training on the use of confidential and secure information sharing technologies and any updates/upgrades

Budget Period 4 Second Quarter (April 2021 - June 2021)

- Prepare and submit semi-annual progress report

Budget Period 4 Third Quarter (July 2021 - September 2021)

- Refresher Workforce Development Trainings
- Refresher training on the use of confidential and secure information sharing technologies and any updates/upgrades

Budget Period 4 Fourth Quarter (October 2021 - December 2021)

- Prepare and submit EOHHS annual report

Budget Period 5 First Quarter (January 2022 - March 2022)

- Refresher Workforce Development Trainings
- Refresher training on the use of confidential and secure information sharing technologies and any updates/upgrades

Budget Period 5 Second Quarter (April 2022 - June 2022)

- Prepare and submit semi-annual progress report

Budget Period 5 Third Quarter (July 2022 - September 2022)

- Refresher Workforce Development Trainings
- Refresher training on the use of confidential and secure information sharing technologies and any updates/upgrades

Budget Period 5 Fourth Quarter (October 2022 - December 2022)

- Prepare and submit EOHHS annual report

6.4 D. Budget Report and Budget Narrative (See Attachments B & C).

6.4 E. Sustainability

Developing sustainable projects once the grant funding has ended was a priority when selecting and determining which capacity and infrastructure projects would be proposed in the RFR. The preparatory budget will be used to purchase the necessary technology.

Workforce Development

Workforce development training in the areas of Integrated Care Management and Motivational Interviewing will be completed during the budget preparatory period. Additional training around will be researched, identified and implemented over the first budget period using

budget period one funds. We anticipate training in these areas will increase access to ICC services, strengthen fidelity to Wraparound processes and build stronger relationships with ACOs, MCOs and PCPs, leading to an increase in referrals and ultimately an increase in program revenue. An increase in program revenue will allow the CSA program to continue investing in additional training/professional development by the end of the grant period.

Additionally, a Train-the-Trainer model will be practiced for sustainability and new hire training objectives. We will utilize Supervisors and Peer Trainers during orientation of new staff to ensure that all staff have the education and knowledge required to meet the needs of our clients. Ongoing trainings on topics as refresher courses will be arranged and presented during staff and individual supervision meetings.

Operational Infrastructure

Employment of the new full time Integrated Care Liaison (ICL) will take place during the budgetary period. The principal responsibility of the ICL will be managing and improving the referral process in coordination with ACOs, MCOs, PCPs and Pediatric Practices. In our experience, when the CSA program begins to receive additional referrals, Intensive Care Coordinator caseloads will grow, thus generating extra revenue to support and sustain additional staff positions. Therefore, as the program continues to grow each year with a steady uptick in the number of referrals received, the need for DSRIP funding will be reduced and the ICL position will be absorbed into the CSA program expenses through a growth in revenue created by the increase in referrals.

Technology

Initial technology purchases will be completed during the preparatory budget period which will be comprised of laptops, secure e-mail and telehealth services, additional Mass HIway connections, translation software and television monitors. There will be minimal ongoing costs that decrease over the course of the grant period as the CSA program begins to absorb the annual upkeep and other costs associated with the proposed technology purposes.

Procurement of these technology investments will enable the CSA program to cut costs through time and cost saving advancements in technology as described in more detail in section 6.4. The proposed technology investments will create a more cost effective and efficient work flow, leading to direct financial savings. Financial savings will be reinvested into the CSA program which is intended to support ongoing upgrades, monthly/yearly subscription costs, repairs and expected expenditures now required by the purchase and investment in new technology.

Section 6.5 Coordination with ACOs, MCOs, and Primary Care Providers (3 pages)

6.5 A. Bidirectional communication between the Bidder and pediatric practices.
Improving bidirectional communication between our CSA program staff and pediatric practices will be addressed and pursued through our proposed projects. We feel the most significant contribution to improving bidirectional communication will be the role of the Integrated Care Liaison (ICL) followed closely by upgrades in technology and an investment in new technology products.

The role of the CSA staff is to facilitate care planning and coordination for youth and their families. The ability to effectively communicate and easily share information with all partners is essential to meet care plan outcomes. The current challenge facing our staff regarding bidirectional communication efforts between ACOs, PCPs and Pediatric Providers is the lack of education and understanding that these entities currently possess about CSA services. The role of the ICL will be to provide outreach and education to all medical sites within our catchment area beginning with ACOs, PCPs and Pediatric Offices. Through educating and fostering relationships built on mutual trust and understanding, we anticipate a greater responsiveness and willingness to participate in care coordination efforts. While new protocols will require primary care practice designees to approve care plans, this will not necessarily support care coordination efforts unless the physician is an active and engaged partner. Another important goal of the ICL will be to better understand the needs of the physicians' offices, and based on these needs, implement strategies that will improve the integration of behavioral and physical health care.

Improvements in technology including the use of secure e-mail services will increase the ease of access to care plan documents that will contribute to improving bidirectional communication. Physicians who can access care plan documents and communicate with ICC staff via e-mail instead of paper documents is a more conducive, time saving method of communication for both the physicians and CSA staff.

6.5 B. Referral management protocols for follow-up and informational sharing.
We currently rely on our senior management staff to successfully triage and manage the referral process, as they are best qualified to discuss the appropriateness of a referral. For example, if a potential client calls the CSA office to discuss program options and their needs, our senior staff are well trained to evaluate the needs, ask the "right" questions and explain what services the CSA program can offer and provide next steps.

We are committed to providing appropriate and responsible referrals as oftentimes families who call may not necessarily be a "good" fit for the CSA program. If a family is not the "right" fit for the CSA program, we refrain from simply explaining that the program is not for them, instead we provide contacts and resources for the services they can take advantage of throughout the community. For example, we have had instances where an individual, directed by their PCP, has called the CSA program to inquire about mental health services. The CSA program was not the "right" fit for their needs but we were able to provide them with the appropriate contact for mental health service supports. Educating the community, especially

pediatric offices, will help physicians better understand resources and tools that the CSA can offer, ultimately cutting down on inappropriate referrals.

In addition to education, the enhancement of current technology and addition of new technology geared towards creating a leaner and resourceful referral processes, will improve communication and timeliness of access to care. The ability to send secure emails in lieu of paper or phone calls to physicians, who are challenging to reach by phone, will improve information sharing between all partners.

Through these targeted improvements, we will better facilitate youth and their families in obtaining services in a timely manner, and ensure that all care plan team members obtain the information they need when they need it. More efficient and time saving practices are important steps toward improving client outcomes and creating a less stressful work environment.

6.5 C. Team-based treatment planning in collaboration with pediatric practices.
Two of our core principles in care coordination and Wraparound principles include collaboration and team based approaches. While each care coordination team makes every effort to engage with PCPs and pediatricians, we are forced to compete with the limited time physicians generally have on any given day. We intend to improve team based treatment planning with pediatric practices through targeted outreach of the ICL staff member and Telehealth services aimed at increasing participation amongst pediatricians, PCPs and other team members whose time is either limited by the scope of their work or who cannot attend care planning meetings for one reason or another. We believe that as pediatricians learn more about the services we offer and can more easily access us through secure email services, Mass HIway connections and telehealth services, the more success we will have creating an appropriate care plan, evaluating and determining goals and initiating effective strategies to achieve DSRIP and development plan goals.

6.5 D. Timely access to ICC services.
Currently, the CSA program meets the timely access to ICC service standards. We receive, process referrals, and offer initial intakes within the targeted timeframe.

6.5 E. Connections to social services.
Coordinated care across multiple life domains is the primary service that CSA staff offer youth and their families. The initial intake and assessments are intended to identify the individualized needs of the youth and their family members. As demonstrated and described in more depth in section 6.3B, the SOC partnership provides access to resources from numerous organizations that provide distinct services to youth and their families. SOC partner organizations include community service nonprofits, youth and law enforcement agencies, school departments, mental and behavioral health facilities, immigration, and city services. These collaborative partnerships provide the tools and information for Wraparound support services that CSA staff use to provide appropriate care planning.

An example of how we utilize connections to social service agencies can be noted in the case of an eighteen year old youth who was displaced from his home and was struggling to find housing resources. The Care Plan team (ICC, Peer Mentor, school representatives) was brought

together to help the youth identify local homeless shelters and programs that assist independent living and housing needs. The youth was referred to the Department of Transitional Assistance, and Catholic Social Services. Additionally, the access line for local homeless shelters was brought in as a resource. Through our social services connections, the team was able to connect the youth to these social supports and services, ultimately finding him safe and affordable housing for the night.

We consistently work towards improving connection to social services and expect our proposed projects to further expand and improve our social service connections through improved and new technology, workforce development training and engagement of the Integrated Care Liaison.

Section 6.2: Executive Summary

A. Bidder's current performance on its Development Plan

The current Community Healthlink CSA Development Plans focus on: (1) increased quality of Safety Planning and Comprehensive Assessments; (2) improved Outcome Based Practice; and (3) improved access to ICC services - especially for Spanish speaking families. The CSAs have made good progress on these development goals. CSA leadership has implemented a new chart review tool to help track the quality of safety plans and assessments. A new Outcome Tool has been developed and is currently being piloted across the three CSAs. We will have our first set of data from this pilot in July 2017.

The access issue has been more of a challenge. Across CHL and LUK's three CSAs, we currently have 5 ICC and 5 Family Partner opening. In our experience, access to ICC services is most dependent on our ability to hire enough staff to meet the demand. Over the past seven years, when we are able to hire enough staff, we offered services within the required timeline, with a first appointment within three days of the family consenting to the program. However, recruitment is an ongoing challenge, especially for Spanish speaking ICC and Family Partners.

B. Bidder's strengths and needs

Community Healthlink utilizes the LEAN approach to Quality Improvement. We are in our second year of implementing LEAN Quality tools and processes across all agency programs. LEAN emphasizes staff empowerment and inclusion, and an approach which seeks to continually examine and improve systems and processes to improve the quality of care given to our clients. The opportunity to receive increased funding at this time to improve quality within the CSA programs fits seamlessly into our ongoing LEAN work.

CHL's CSA programs are overseen by Anthony Irsfeld, Ph.D., a longtime advocate, trainer, and coach of the wraparound process and the core values of CBHI. The leaders within each CSA are skilled practitioners of CBHI Wraparound; each has an average over 5 years of CSA experience. The CHL CSAs also have the added advantage of a sub-contract relationship with LUK, Inc. which gives families choices as to where to receive their CSA services. This has helped us provide greater access to ICC over the years. Both Community Healthlink and LUK, Inc. have long standing, collaborative relationships with the major child serving systems (i.e. schools, DCF, DMH, Juvenile Probation, Health Centers, PCPs) within our communities.

Our most challenging needs are in the areas of recruitment, training, Electronic Health Record and mobile technology. Recruitment and retention is a constant challenge. Our CSAs compete with hospitals, schools and the State which offer higher salaries and benefits. Because we often hire new graduates or individuals who are less experienced, we need an effective, streamlined orientation and pre-service training program. Also challenging is our current medical record which does not allow for easy monitoring of key aspects of quality and is half electronic and half paper. Finally, our staff need access to the Internet in the field to assist families, to access video interpreting and to complete notes and Care Plans while in the community.

C. Bidder's plans for improving timely access to ICC services

Improving timely access to ICC services requires us to have a full staff of ICC and Family Partners and to have the use of video translation services when needed. With this funding **(Project 4)** we will develop additional recruiting materials, increase our internet visibility and conduct more frequent and targeted recruiting events within our community. In particular, we

plan to partner with local organizations that serve the Spanish speaking community to help recruit Spanish speaking staff to the CSA.

We also are requesting funds to increase staff access to mobile devices and to the Internet. In doing so, staff will have access in family's homes and in the community to our Video Interpreter Service which we believe will be more effective than our current telephonic service in engaging families who do not speak English as their primary language in our CSA program.

D. Bidder's plans for improving care coordination, care planning, and care management for ICC-Engaged Members

Our plan for improvement in care coordination, care planning, and care management will focus on four areas: Project 1: A new Electronic Health Record; Project 2: Training; Project 3: Mobile technology for staff to use in the field, and Project 5: Video-conferencing equipment.

Project 1: CHL's current electronic health record is over 15 years old and needs replacement. CHL has selected a new ERH (Qualifacts – CareLogic) which we will be implementing in 2018 . The current CSA record is partially on paper and partially electronic. Tracking whether employees are behind or current with their documentation, and review of the quality of those documents is currently time consuming and cumbersome. The implementation of a new Electronic Health Record will greatly assist with the monitoring of individual staff as well as program performance. With the new EHR, supervisors will receive alerts notifying them about staff who are struggling with quality documentation. Managers will be able to develop and run reports that track program quality goals (such as percentage of youth making progress, which domains families are having the most success with, etc.). The record has tasking and communication features which will improve coordination. The EHR meets Meaningful Use and connects to the Mass HIway The increased efficiency the EHR will free up managers to spend more time coaching and improving staff performance. We propose to use DSRIP funding toward the development of the CareLogic EHR for the CSA work flow and required paperwork.

Project 2: We propose to use DSRIP funding to augment training for staff around working with special populations as well as increasing our effectiveness partnering with medical professionals, especially pediatric primary care. Funds will be used to purchase training materials as well as procure outside trainers to work with CSA managers and staff.

Project 3: CHL/LUK plan proposes to use a portion of the DSRIP funding to increase access to mobile devices for staff to use in the community with families. Staff report that the ability to access the Internet "in the moment" would increase their efficiency with making referrals and accessing information about community resources. For example, a Family Partner with a tablet could assist a family in their home in the moment to research housing options or camperships for their youth—rather than return to the office, do the research, and report back to the family. In addition, the availability of tablets will allow staff to use video translation services when needed, rather than telephonic interpretive services which we believe will enhance the quality of services provided. The new web based EHR is also available on the tablet and staff can complete notes or update Care Plans in the home with the families collaboratively.

Project 5: We propose to purchase some equipment that can be used to assist us in video conferencing and training. Each of our 4 sites would have equipment so that trainings and

meetings could be held using the agency's subscription to Join-Me. This decreases the time staff travels to meetings between sites, thus increasing time available for families.

E. Bidder's plans to improve performance on quality scores and Development Plan goals
The initiatives listed above will each impact the CHL Development Plan goals and quality scores. The CHL CSA Development Plans currently focus on issues of timely access and quality of key processes (safety planning and assessment). Regarding access, we know that our ability to successfully recruit and train CSA staff is the key element to having sufficient capacity to meet the demand. We plan to use funding to help develop improved recruitment materials, and strengthen our community outreach recruitment efforts. In addition, the use of mobile devices and video interpretive services will increase the quality of the experience for families. We believe that use of a more functional EHR will assist managers and supervisors to more easily and efficiently monitor staff performance. They will be able to intervene with extra support, training, and coaching more quickly and it will allow for more efficient and frequent monitoring of program quality goals. Video conferencing will increase the efficiency of internal communication and allow for more frequent and regular meetings of supervisors and managers across sites which will assist with ongoing quality improvement.

F. Bidder's plans for improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth
The CHL Worcester CSA is currently involved in two pilot projects which are helping to improve coordination with pediatric primary care, and increase attention paid to physical health and wellness. One pilot involves the inclusion of a part time nurse-educator on staff at the CSA to assist with increasing staff knowledge and confidence in addressing physical wellness issues with families and as a result has increased our coordination with PCPs. The second pilot involves a formal collaborative agreement with a pediatric practice in Worcester to work more closely together with children under age 6. This pilot is yielding lessons about how the local wraparound process can be adapted to meet the needs of a pediatric practice to improve collaboration with families. The CSA plans to continue both of these projects and to replicate the learning in our North Central CSA. In Project 2, we propose to use DSRIP funds to purchase additional training around these topics to further the goal of improving our coordination with PCPs.

Section 6.3: Populations Served and Community Engagement

A. Member populations and communities Bidder serves
The Community Healthlink CSAs currently serve about 75% of Worcester County. They cover urban, suburban and rural areas. Specifically, the Worcester East and West CSAs serve the cities and towns of Worcester, Auburn, Barre, Berlin, Bolton, Boylston, Brookfield, Clinton, East Brookfield, Grafton, Hardwick, Harvard, Holden, Hubbardston, Lancaster, Leicester, Millbury, New Braintree, North Brookfield, Oakham, Paxton, Princeton, Rutland, Shrewsbury, Spencer, Sterling, Warren, West Boylston, and West Brookfield. The North Central CSA serves the cities and towns of Ashby, Ashburnham, Fitchburg, Gardner, Leominster, Lunenburg, Templeton, Westminster, and Winchendon. The CSAs work with a diverse population in both the North and Worcester. In the greater Worcester area, about 22% of residents are foreign born. The largest ethnicities being Caucasian (59%), Hispanic (21%), African American (12%), and Asian (6%). However, there is a growing African population, and the Worcester public schools are currently

schooling children that speak well over 50 languages. In the North County region, nearly 11% of residents are foreign born, with the largest ethnicities being Caucasian (73%), Hispanic (18%), African American (4%), and Asian (4%).

CHL has several initiatives which assist the CSAs in promoting the health and wellbeing of the individuals we serve. The CSA leadership works closely with our Diversity and Inclusion Initiative and our CLAS (Culturally and Linguistically Appropriate Services) Task Force on creating a welcoming environment and engaging environment for the individuals we serve. These teams monitor track the population in both the Worcester and North Central areas to make sure our CSAs are reaching out to vulnerable populations including new immigrants and those who speak languages other than English. The CLAS task force offers staff trainings in medical interpretation so the agency has in-person translation available when needed. CLAS has recently contracted with a video interpreting service and is completing a pilot study of this initiative. So far, the data indicates that clients highly prefer the video interpreting over telephonic. The plan is to expand this service not only to all CHL sites but also have a mobile version for use in the community. We plan to use some funding for CSA staff to have tablets that can be used for video interpreting so we can better reach and engage individuals whose primary language is not English.

In addition, CHL's Positive Pulse, Wellness Teams and CSA nurse are training staff in holistic views of health and mental health. They are training staff on the ways social determinants of health impact health outcomes. They are also teaching staff skills in how to begin to address prevention of chronic illnesses with families. Currently all clients are encouraged to have at least one wellness goal in the Care Plan. The Worcester CSA has a Quality Improvement Project measuring the impact of the training and wellness goals. We propose to use some of the DSRIP training money to increase staff's knowledge about wellness and health and best practices in communicating and collaborating with PCPs. We believe that good communication with PCPs through electronic record exchange (with proper releases in place) will also impact the health and wellbeing of the youth and families we serve. We are developing materials for ACOs, MCOs and PCPs about the CSAs as a first step in setting forth protocols, points of contact, and ways to exchange information and share treatment goals.

B. Relationships within the community

Community Healthlink's three CSAs have long standing working relationships and contracts with all of the child serving state agencies (DCF, DMH, DPH, Juvenile Courts and Probation, DDS) as well the other behavioral health providers in the area. Leadership meets regularly with DCF and DMH in both areas.

Staff from the CSA continually foster and grow connections within the communities in the Worcester Area and in North Central Massachusetts. CHL and LUK have a long history of working with local collaborations in order to effect change and address health inequities. For example, since 2000, CHL has been the lead agency for the Together For Kids Collaborative (TFK) which consists of thirty providers including child care, mental health, and state agencies; parents and family members; higher education representatives; and funders. Our Worcester CSA is working collaboratively with TFK and Worcester DPH on an integration pilot geared toward youth under age 6. Our agencies' active participation in coalition activities with the CHNAs and Joint Coalition on Health (NC) expands our network of referrals and increases collaboration. In addition, our two Central MA System of Care Committees are well attended by local providers

and state agencies and include representatives from Central MA PPAL and the Autism Resource Center.

Our work with the two Family Resource Centers leads to collaborations as well as our outreach to Centros, South East Asian Coalition and the Spanish American Center in Leominster. Newly hired staff from the communities we serve add their experience and knowledge of resources. Staff attend community events – particularly ones that celebrate diversity and culture – and these add resources to our base of connections. We have close collaborations and shared contracts with both with Family Health Center in Worcester and Community Connections in North Central. We expect through the procurement process to learn more about the services and ways to collaborate with the ACOs and MCOs and the Community Partnerships. In all these ways we will grow the network of community connections to better serve the individuals receiving our service.

We anticipate that our proposed projects will help strengthen our existing partnerships and help forge new ones.

C. How current and planned partnerships align with Bidder's proposed project

Project 1: Electronic Health Record: It is anticipated that a more functional EHR will improve the CSA's ability to track youth and family outcomes. This will enhance our work with our system partners by assisting them to successfully execute their mandates with families. Our experience is that collaboration can be strained when disagreements arise between CSA staff and other system staff. For example, a DCF worker, ICC, and a parent may all disagree as to how a youth is progressing in the program. This tends to occur more frequently when the team is not using good tracking mechanisms to gauge progress and outcomes. We are hopeful that the ability to more rigorously track outcomes through our EHR will increase coordination, and thereby strengthen families' collaboration with all their providers and system partners. In addition, our new EHR will be able to interface through the Mass HIway with PCPs and medical practices which will enhance our care coordination.

Project 2: Staff Training Project: We have proposed to use funding to purchase training for CSA supervisory and front line staff to improve our work with special populations. It is anticipated that this training will build our internal capacity to train future staff in these topics, thereby improving our effectiveness with such groups. Examples include Early Childhood, Transition Aged Youth, LBGTQ youth, Refugee families, and families with returning Veterans. We also expect to provide training which will further our effective collaboration with primary care and medical professionals. Training topics will include professional cultural differences between medical and behavioral health systems, and ways to tailor the CSA Wraparound process so that medical professionals can more fully participate in the process.

Project 3: Mobile Technology Project: We are proposing to use funding to provide CSA staff with better mobile equipment in the field. We plan to train and implement the use of video translation/interpretive services as a means of enhancing the quality of our work with families who require ongoing translation. We believe also that the ability of staff to access the internet in the field will enhance work with families. First, families will be able to play a greater role in their written documents (assessments, care plans) if staff are able to make changes and updates in real time with the family in their home. Second, many tasks that may appear on a Care Plan may involve accessing the internet for information. Staff will now be able to accomplish these tasks with the family in the moment, rather than need to return to the office to access a computer. It is

anticipated that the ability to work with families in real time when we are with them will enhance engagement and accelerate some of the completion of Care Plan tasks.

Project 4: Recruitment: We anticipate that our partnerships with primary care will increase and strengthen over the coming year. With that could come an increase in referrals to the CSA. It is important that the CSA be able to keep up with the increased demand with enough ICC and Family Partners on staff to serve the families who need the program. We are proposing to use some of these funds to enhance the CSA recruiting efforts in an attempt to create new pathways to the CSA for prospective employees. Funds will be used to enhance online visibility for open CSA positions, better advertisement of the benefits of working in a CSA, and the development of recruitment materials.

Project 5: Video Conferencing: We believe that the conferencing capability at our four sites will make it possible for us to share resources, trainings and have case consultation regularly without the travel added. We are also hoping to develop this technology so that PCPs and outpatient clinicians can “attend” team meetings virtually.

Section 6.4 Proposed project(s) and Investment Plan

Project 1: Electronic Health Record

A. Project 1 Description

1. Name or title of project: **Electronic Health Record**

2. Specific goal advanced by the project: Community Healthlink (CHL) proposes to use DSRIP funding to develop and implement a fully electronic health record for the CSAs to strengthen fidelity to Wraparound processes. This new Electronic Record will allow staff to be more closely and efficiently monitored relative to the quality of their work and the timeliness in which ICC and Family Partner services are delivered to families. In addition, the record will connect to the MA HIway and will allow for more effective electronic communication and therefore increase integration with ACOs and PCPs.

3. Scope of project: CHL will have a signed agreement with Qualifacts by the end of July 2017 for the implementation of CareLogic across all CHL behavioral health programs. Planning for implementation has already begun. The goal is for all CSA staff to be trained on the new EHR by 3/31/2018, and all CSA staff using the fully implemented EHR by 5/31/18. Development includes designing work flows, forms, data to be collected, quality management tools, report generation, and billing interface. By May, 2018, the CSA staff should be able to use Qualifacts for all required paperwork. In Period 1, DSRIP funding will be used to connect with the clinical "golden thread" the Assessment, Care Plan and Progress note and develop additional reports on quality measures. During this time, we will also run tests of the Mass HIway functions.

4. Proposed deliverables:

- A complete electronic health record that ICC and Family Partners will use to document all aspects of their work with youth and families including all Assessments, Care Plans, and Transition Plans.
- Systems within the EHR that assist staff to know when required processes and documents are due.
- Systems within the EHR that allow supervisors to easily run regular reports to monitor compliance with required processes and documents.
- Systems within the EHR that improve the quality of supervision of staff by allowing more efficient review of key elements of the record for quality.
- Connection to the MA HIway and communications established with ACOs and PCPs.
- Reports the reflect quality measures and outcomes

5. Specific use of DSRIP funding: The CSAs are approximately 7% of the CHL's revenue. We are proposing to use Preparation Budget DSRIP funding toward the CSA portion of the Qualifacts implementation costs. The estimate of that initial CSA cost is $112,835. In addition, we propose to use an estimated $82,765 in Budget Period 1 for the development of specific CSA required quality tools and reporting.

6. Existing internal resources: Moving to a new EHR requires significant dedicated time from Leadership, IT, Finance, Legal and Compliance. Individuals involved in this projected are listed below. CHL is providing the internal resources to develop and staff the implementation of this project. We are not proposing to charge staff costs to DSRIP funds.

7. How funds will be allocated: In this proposed project the funds requested will be used toward the CSA's portion of CHL's Electronic Medical Record's development. While the contract with Qualifacts does not specify charges per program, we can allocate charges per program based on each program's annual budget. That is what we have done in this proposal. All three CSAs will benefit equally from this initiative. The development will be the same across the sites.

8. Internal evaluation strategies: The Director of the CSA programs at CHL will be responsible for evaluating the effectiveness of this project. This evaluation will include: 1) the assessment of compliance by staff for all required paperwork; 2) The quality of Assessments and Safety Plans; and 3) the development of outcome data for youth enrolled in the CSAs. Currently, compliance by staff for required paperwork is documented by a monthly report. Performance on this report has indicated compliance rates between 70% and 90% over the past year. We anticipate that the EHR will "go live" in March/April of 2018. The first measurement period for overall compliance will be June, 2018. Because the EHR will provide staff with real time reminders and tracking assistance, we hope to achieve 95% compliance by September, 2018. Abby Sallila in the North Central CSA and Mandi Robinson in the Worcester East and Wests CSAs will be trained in how to track compliance, and will report this data to the Director of CSA programs (Dr. Anthony Irsfeld) on monthly basis beginning in June, 2018.

Relative to the quality of Assessments and safety plans, currently the program conducts periodic chart reviews to judge the quality of these two documents. With the new EHR, Assessments and Safety Plans can be electronically reviewed by supervisors in real time. The program does not currently have clear baseline data for how many Assessments and Safety Plan meet our standards, but CSA managers estimate that the current number is likely around 75%. Abby Sallila and Mandi Robinson will work with Anthony Irsfeld to set up program procedures for tracking the percentage of acceptable assessments and safety plans in the new EHR by May, 2018. Baseline data will be collected in June, 2018, with goals for improvement established by July, 2018. The goal will be 100% of Assessments and Safety Plans developed by veteran (not newly hired) staff will meet supervisor expectations.

Finally, the new EHR will have embedded within the record an Outcome Measure, which ICC and Family Partners will be required to administer quarterly to enrolled youth and families. We anticipate that this measure will be the Ohio Scales for Youth. Baseline data will be collected on all families beginning in June 2018. Abby Sallila (for the North Central CSA) and Mandi Robinson (for the Worcester East and West CSAs) will oversee the training of staff in the use of the scales and tracking that data is being collected on all enrolled youth. Once each youth has two measurements, the data will be analyzed by Dr. Anthony Irsfeld. This will represent a baseline outcome score for the programs. Once a baseline is established, the program will set target goals for improving these outcome scores if needed. The first set of target goals will be established by October, 2018.

B. Project Team description

1. Organizational chart: See Attachment A: Organizational Charts.

2. List of current staff: The following staff will be involved in the EHR project. See Attachment B: Job Descriptions, which are included for each staff. Job titles and responsibilities for this project are included after each individual. Qualifications are listed for each staff the first time his/her name appears assigned to a project.

- **Michael Rezkalla**, *Vice President, Operations*: Mr. Rezkalla has more than a decade of experience managing operations systems in healthcare settings. Immediately prior to his employment at CHL, Mr. Rezkalla served as the Division Operations Manager at Upham's Corner Health Center. Mr. Rezkalla oversees the contract with Qualifacts and the technical aspects of this project including issues around security and HIPPA compliance.
- **Michael Blair,** *Director of Information Technology*; Mr. Blair has held progressively responsible jobs in IT at CHL since 1980. He has extensive experience in EHR implementation and development and in data management and reporting. CHL's parent organization, is providing technical assistance in the implementation of the new EHR, including IT consultation. Mr. Blair is assigned to this project to work collaboratively with UMass MIS department and Qualifacts in implementing this new EHR across the agency – including the three CSAs.
- **Carolyn Droser,** LICSW: *Vice President for Children's and Emergency Services:* Ms. Droser has 30 years of experience overseeing adult and child behavioral health programs. Currently she is responsible for CHL's 20 child serving programs, the Emergency Services Teams and the Integrated Care Management Department. Ms. Droser is responsible for the successful implementation of the clinical component of the EHR.
- **Anthony Irsfeld Ph. D.**, *Director of Families and Communities Together* (CHL's CSAs): Dr. Irsfeld has over 25 years' experience in child and family behavioral health. He has experience with Electronic Health records, having helped develop early Wraparound prototypes with the Communities of Care Initiatives at UMAS Medical School. He has been a trainer and coach of the Wraparound model for over 10 years, and has overseen the CHL CSAs since their launch in 2009. Dr. Irsfeld is responsible for the development of the work flow, forms and quality component of the CSA EHR record.
- **Tom Hall**, *Operations Director of LUK, Inc*.: Mr. Hall has been the Chief Operations Officer at LUK, Inc for the past 22 years. In this role, he takes primary responsibility for marketing and development initiatives, contracting, program development and implementation, and oversight of the organization's MIS systems and technology departments. He was part of the original FCT Steering committee and has been a strong community advocate for CSA services since the launch of the program in 2009. Mr. Hall will oversee operational aspects of LUK's use of the new EHR.
- **Tamara Durr**, *Chief of Staff*: Tamara Durr has more than three years' experience as the Chief of Staff/Director of Special Projects at CHL. Immediately before working at CHL, Ms. Durr served as an Administrative Fellow at UMass Memorial Health Care. Ms. Durr has a Master of Health Administration Degree as well as a Master of Social Work degree, both from The Ohio State University. UMass Memorial Health Care (UMMHC), CHL's parent organization, is providing technical assistance in the implementation of the new EHR including project management. Ms. Durr oversees CHL's Project Management department and will be assigned to the project management team for this CSA DSRIP project.
- **Abigail Sallila, LMHC**, *Director of ICC for North Central CSA***;** Ms. Sallila has been working within the CSA for over 5 years, first as an ICC, then as an ICC supervisor, and now as the Director of ICC services for the North Central CSA. She is a strong advocate for high-fidelity Wraparound practice.

- **Mandy Robinson, LMHC**: *Director of ICC for Worcester East and West CSAs*; Ms. Robinson has been working within the CSA for over 6 years, first as an ICC, then as an ICC supervisor, and now as the Director of ICC services for the Worcester East and West CSAs. She is a strong advocate for high-fidelity Wraparound practice.
- **Janice Rose**, *Director of Family Partner and Training for Worcester East and West CSAs*: Janice Rose. Janice has nearly 15 years' experience with the Wraparound model and family partner advocacy. Starting first as a Family Partner with the UMASS Communities of Care Initiatives, she was then hired as one of our first Senior Family Partners when the CSAs launched in 2009. For the past 2 years, she has been the Director for Family Partners for the Worcester East and West CSAs.

  Ms. Sallila, Ms. Robinson, and Ms. Rose will work with Dr. Irsfeld and the Qualifacts' team to develop forms and reports for the CSA.
- **Katrin Sanford, LMFT, CHC**, *Director of Compliance*: Ms. Sanford has been in behavioral healthcare for almost 20 years, and is both a Licensed Marriage and Family Therapist and Certified in Healthcare Compliance, and has experience in both direct care and compliance. Ms. Sanford as the Compliance Officer will ensure that systems are developed that are HIPPA compliant, and that systems are in place to ensure that when bills are produced that the record is compliant in all respects.
- **John Lito**, *Chief Financial Officer*: Mr. Lito has been providing hands-on fiscal management and analysis to organizations for over 15 years, including profit and loss responsibility and the development and implementation and integrated financial management reporting systems and procedures. Mr. Lito will work with the Qualifacts and CHL billing teams to ensure that the new system is able to bill MassHealth and DMH (Caring Together contract) effectively for the CSA services.

3. Any staff Bidder proposes to hire: We are not proposing to hire any staff or charge any staff to this project through DSRIP funds.

4. Roles and responsibilities: The roles and responsibilities of each of the staff involved in this project are defined in #2 above. Each person involved was selected because of his/her qualifications, role within CHL and because they are content experts. There is representation from each major CHL operation related to this project – IT, Finance and Compliance – in addition to Administration and the CSAs.

5. How Bidder will manage project(s): CHL's Project Management Department is under the leadership of Tamara Durr. She will be responsible for the project management of the CSA DSRIP funds. The Department was involved in the development of the project's timeline and will utilize their management resources to track progress in meeting the project goals. Ms. Droser and Dr. Irsfeld will work closely with the project management team so that information is available for the semi-annual and annual Progress Reports to EOHHS.

C. Implementation Plan and Timeline
See Attachment C: Implementation Plan and Timeline.

D. Budget Report and Budget Narrative
See Attachment D: Budget Report, and Attachment E: Budget Narrative.

E. Sustainability

These funds will help develop the EHR's capacity for CSA specific forms, systems, and reports. We expect to utilize DSRIP funds for this project in the Preparation Budget Period and during Budget Period 1. Once developed, Community Healthlink/CSAs will continue to support the EHR after implementation as part of its ongoing operating budget.

Project 2: Staff Training

A. Project 2 Description

1. Name or title of project: **Staff Training**

2. Specific goal advanced by the project: This training project will assist in the integration with ACOs and primary care providers for ICC-Engaged youth and their families. Specifically, through this project we propose to obtain outside consultation and in-service training around specific topics pertaining to better engagement and care coordination with special populations and improved coordination and collaboration with medical professionals—especially pediatric primary care.

3. Scope of project: The CSA plans to develop a list of in-service training topics and a training calendar for each calendar year beginning with 2018. Staff and CSA managers will annually utilize supervision, staff meetings and Idea Boards to develop a list of in-service training topics they feel most affect quality. CSA mangers will construct a training calendar for each year beginning with 2018 address these topics. Included within these topics will be training around working with pediatric practices, and improving collaboration with other medical professionals. When possible, we will use train-the-trainer models and video-tape presentations to aid with ongoing sustainability. We propose to use DSRIP funds toward training each year of DSRIP funding.

4. Proposed deliverables:

- A year-long training calendar (each year 2018-2022) to address topics of special populations and increased coordination with pediatric primary care based on staff and program needs.
- Development of training materials on the above topics for future and ongoing training when funds are no longer available to purchase outside training.

5. Specific use of DSRIP funding:

- Funding will be utilized to support trainings on topics developed by staff and management that will develop skills in working with specific populations and teach Best Practices in coordinating care with ACOs, MCOs and PCPs.

We have allocated $ 4000 to this project in the Preparation Budget and $5000 in Budget Period 1 and 2. In the following years, we have allocated: $3,000 in Budget Period 3; and $2,000 in Budget Periods 4 and 5.

6. Existing internal resources: Dr. Anthony Irsfeld will work with existing CHL and LUK CSA managers using existing LEAN Quality Improvement tools and processes to develop and implement this training plan.

7. How funds will be allocated: We will ensure that each CSA has equal access to in-service programs. The Leadership Team (Directors and Supervisors of the three CSAs – including LUK managers) will collaborate on the in-service training plan for the three CSAs. We will a set-up in-service program to meet unique needs of a CSA (for instance, working with African Refugees

in Worcester) when that is necessary. When trainings scheduled have available slots, other CHL and LUK CBHI providers will be invited to attend.

8. Internal evaluation strategies: Once implemented, the CSA will use its LEAN QI tools to solicit ongoing feedback to CSA managers about the quality and usefulness of in-service training received. Currently, the program is tracking the number of Care Plans that include a health/wellness related goal or task. In North Central (who just began to track this data), approximately 10% of Care Plan contain a health/wellness goal or task. In the Worcester CSAs (who have been working on this data for the past 18 months), 57% of Care Plans contain health/wellness goal or task. We hope that with increased training of staff around improving collaboration skills with pediatric and primary care providers, these data will reach our goal of 85% of Care Plans will contain a health/wellness goal or task. The CSA programs are already tracking this data on a quarterly basis. Dr. Anthony Irsfeld will continue to work with Abby Sallila and Mandi Robinson to monitor this data as an indicator that the training provided is having the intended effect. In addition, with the implementation of an addition Outcome Measure (see above), the program will be able to monitor progress relative to health and wellness.

B. Project Team description

1. Organizational chart: See Attachment A: Organizational Charts.

2. List of current staff: The following staff will be involved in the EHR project. See Attachment B: Job Descriptions, which are included for each staff. Job titles and responsibilities for this project are included after each individual. Qualifications are listed for each staff the first time his/her name appears assigned to a project.

- **Dr. Anthony Irsfeld**, *Director of CSAs*: Dr. Irsfeld will facilitate discussions with the CSA leadership in developing in-service training topics and arranging for trainers.
- **Sarah Loy**, *Director of Development and Communication:* Ms. Loy has more than ten years of experience in the fields of non-profit fundraising, and grant-writing, and communication, including the creation of both external educational materials (brochures, manuals, videos) as well as internal employee communications.
- **Abigail Sallila, LMHC**, *Director of ICC for North Central CSA***; Mandi Robinson, LMHC**: *Director of ICC for Worcester East and West CSAs*; **Janice Rose**, *Director of Family Partner and Training for Worcester East and West CSAs*;
- **Sandra Mangado,** *Senior ICC LUK North Central CSA*; Ms.Mangado, has been with our North Central CSA since 2012, first as an ICC, and now a Senior ICC overseeing the ICC work at our North Central LUK site in Fitchburg.
- **Torrence Phillips,** *Senior ICC LUK Worcester CSA*: Mr. Phillips has been with our CSA since 2014, first as an ICC, and now as a Senior ICC overseeing the ICC work at our Worcester West LUK site.

These five CSA managers under Dr. Irsfeld's leadership will meet with staff in supervision, staff meetings and in Idea Board huddles to gather a list of topics and skills staff wish to learn to improve their ability to best engage referred youth and families and to work with PCPs and ACOs through best practices.

- **Tamara Durr**, *Chief of Staff*: Ms. Durr will be the project manager for this CSA DSRIP project.

3. Any staff Bidder proposes to hire: We are not proposing to use DSRIP funding for any CSA staff time in this project. The funding for in-service training will be for trainers from outside CHL and LUK.

We will contract with individuals and with organizations to provide training. We have reached out, for example, to Fenway Health regarding the LBGTQ training and to the Center For Health Impact for training in ways to impact chronic illness though wellness activities.

4. Roles and responsibilities: The roles and responsibilities of each of the staff involved in this project are defined in #2 above. Each person involved was selected because of his/her qualifications, role within CHL and because they are content experts. Dr. Irsfeld is the lead on this project and will coordinate the work so there is no duplication of efforts.

5. How Bidder will manage project(s): CHL's Project Management Department is under the leadership of Ms. Tamara Durr. She will be responsible for the project management of the CSA DSRIP funds. The Department was involved in the development of the project's timeline and will utilize their management resources to track progress in meeting the project goals. Ms. Droser and Dr. Irsfeld will work closely with the project management team so that information is available for the semi-annual and annual Progress Reports to EOHHS.

C. Implementation Plan and Timeline
See Attachment C: Implementation Plan and Timeline.

D. Budget Report and Budget Narrative
See Attachment D: Budget Report and Attachment E: Budget Narrative.

E. Sustainability:
While these funds will also be used to hire outside training, the CSA will focus on receiving training materials and "train-the-trainer" models of training so that the program can continue to provide training around these important topics after funds are no longer available. When possible we will video the trainings.

Project 3: Mobile Technologies

A. Project 3 Description
1. Name or title of project: **Mobile Technologies**

2. Specific goal advanced by the project: This Mobile Technology project will strengthen fidelity to the Wraparound processes and increase timely access to ICC services. Specifically, through this project we propose:

- To enable staff to access video translation services so as to enhance the quality of the family's experience when staff do not speak the family's preferred language.
- To provide staff access to the new EHR in real time while in the community with youth and families so that families may take an increased role in their Care Planning process.
- To enable staff access to the Internet so as to complete Care Planning tasks with families in the community in real time.

3. Scope of project: The CSA will use funding to purchase mobile devices that staff may use in the field to accomplish the goals listed above. It is still unclear at this time what type of

technology (tablet vs laptop, type of operating system, cloud vs. server based) will work best with the new EHR CHL is implementing. Thus, by March 31, 2018, CHL will have researched and decided on the type of devices CSA staff will use in the field. These purchases will be made by June 1, 2018. The EHR, which is being developed, will have compatibility with the mobile devices which will allow staff to access important CSA documents when they are in the community with families. We plan to use DSRIP funding to purchase the equipment and in Budget Periods 1-5 we propose to utilize decreasing amounts of funding to support the operation expenses of the mobile devices (i.e. Internet connections).

4. Proposed deliverables:

- Mobile devices for all staff to access in the community when needed by June 1, 2018.
- Training for all staff on the use of the mobile technology including how to access and use video translation services using their mobile device by April 30, 2018.
- Training for all staff in the use of the new EHR with the mobile device by June 1, 2018.
- Training for staff in use of portable printers by June 1, 2018.
- Staff to be regularly using mobile technology with families to assist them in accessing resources; to be accessing video interpreting when necessary and; to be updating Care Plans and writing notes collaboratively with families in the community.

5. Specific use of DSRIP funding: We are proposing to spend an estimated $90,000 on mobile technology in the Preparation Budget. That will include Laptops or Tablets and software for each of the CSA staff which includes signature pads or signature capability on the tablet at an average of $1400 per staff at $81,200. There is a cost of $1736 for LoJack for these devices; software which tracks and prevent theft. We will purchase two portable printers per CSA site (two CHL; Two LUK) at a cost of approximately $2064. We propose to purchase 25 cell phones at approximately $200 each for an additional $5000.

We have some smaller equipment purchases allocated for Budget Periods 2 ($16,000) and 3 ($5580) due to expected program expansion given the closer collaboration we expect to have with the ACOs and PCPs.

We are proposing to allocate funds in Budget Periods 1-5 to support the costs of ongoing mobile technology – cell phone charges and Internet access. These new devices will add significant additional costs across the CSAs per year. We propose to allocate $$50,000toward these costs in Budget period 1; $73,300 in Period 2; $49,080in Period 3; $41,000in Period 4 and $15,700in Period 5.

6. Existing internal resources: CSA management will collaborate with CHL IT to choose durable equipment that meets the needs of the program, is compatible with Qualifacts and is effective in the field. IT and CHL's purchasing Department will be responsible for purchasing the equipment. IT is responsible for setting up and encrypting the Laptops/Tablets. IT will also provide necessary training. Project management staff will provide the training on video interpreting.

7. How funds will be allocated: All three CSAs will receive equipment based on the number of staff at each site. All staff will have access to mobile technology. Each site will receive portable printers. Cell phones will be distributed to staff that do not currently have cell phones.

8. Internal evaluation strategies: Once implemented, the CSA will use its LEAN QI tools and processes to solicit ongoing feedback from staff about the effectiveness and usefulness of the mobile devices in providing ICC and Family Partner services. Specifically, Abby Sallila (for the North Central CSA) and Mandi Robinson (for the Worcester CSA) will track staff satisfaction with the mobile devices. The goal will be that by December of 2018, 80% of staff report that the mobile device enhances their work with families in the field. Relative to the use of video translation services, the CSA program will be adding an item to its Client Satisfaction Survey which specifically asks those families who needed and used a translator about their satisfaction with the experience. Abby Sallila and Mandi Robinson will be responsible for ensuring that those staff who use this service administer the Client Satisfaction Surveys to those families. The goal will be that 85% of families report good to very good satisfaction with translation service they received. This data will be collected on an ongoing basis.

B. Project Team description

1. Organizational chart: See Attachment A: Organizational Charts.

2. List of current staff: The following staff will be involved in the EHR project. See Attachment B: Job Descriptions, which are included for each staff. Job titles and responsibilities for this project are included after each individual. Qualifications are listed for each staff the first time his/her name appears assigned to a project.

- **Michael Rezkalla**, *Vice President, Operations*: Mr. Rezkalla will assist in the selection of the Laptops/tablets and portable printers for this project. He is also responsible for the Purchasing Department and will help to develop and track the purchase orders.
- **Michael Blair:** *Director of Information Technology*; Mr. Blair is responsible for the set-up and encryption of each device. He will provide training and orientation as needed to the devices.
- **Carolyn Droser,** LICSW*, Vice President for Children's and Emergency Services*: Ms. Droser will oversee this Mobile Technology initiative and coordinate this project with IT, LUK and CSA management
- **Dr. Anthony Irsfeld**, *Director of CSAs*: Dr. Irsfeld is responsible for the quality measures related to this initiative.
- **Tom Hall,** *Operations Director of LUK, Inc*.: Mr. Hall will be the Operations contact for this project with LUK, Inc.
- **Tamara Durr**, *Chief of Staff*: Ms. Durr will be assigned to the project management team for this CSA DSRIP project. She will ensure that staff are trained in the use of the Video Interpreting technology and that we are able to receive reports on the use of the technology.
- **Abigail Sallila, LMHC**, *Director of ICC for North Central CSA***; Mandi Robinson, LMHC**: *Director of ICC for Worcester East and West CSAs*; **Janice Rose**, *Director of Family Partner and Training for Worcester East and West CSAs*; **Sandra Mangado,** *Senior ICC LUK North Central CSA*; and **Torrence Phillips,** *Senior ICC LUK Worcester CSA*: These five managers will assist staff with the orientation to mobile technology and make certain that all staff are trained in all compliance and HIPPA related aspects of the technology

- **Katrin Sanford, LICSW**, *Director of Compliance*: Ms. Sanford will ensure that the devices are HIPPA compliant and that staff are knowledgeable about all CHL protocols regarding mobile technology.

3. Any staff Bidder proposes to hire: CHL does not propose to hire any staff to implement this project.

4. Roles and responsibilities: The roles and responsibilities of each of the staff involved in this project are defined in #2 above. Each person involved was selected because of his/her qualifications, role within CHL and because they are content experts.

5. How Bidder will manage project(s): CHL's Project Management Department is under the leadership of Ms. Tamara Durr. She will be responsible for the project management of the CSA DSRIP funds. The Department was involved in the development of the project's timeline and will utilize their management resources to track progress in meeting the project goals. Ms. Droser and Dr. Irsfeld will work closely with the project management team so that information is available for the semi-annual and annual Progress Reports to EOHHS.

C. Implementation Plan and Timeline
See Attachment C: Implementation Plan and Timeline.

D. Budget Report and Budget Narrative
See Attachment D: Budget Report and Attachment E: Budget Narrative.

E. Sustainability:
These funds will support the initial purchase of a large number of devices for CSA staff to use when they are in the community. Over time, Community Healthlink and LUK will assume responsibility for the ongoing expense of replacing devises gradually each year as they fail, need updating, etc. as part of the CSA's equipment budget line.

Project 4: Recruitment

A. Project 4 Description

1. Name or title of project: **Recruitment**

2. Specific goal advanced by the project: This Recruitment project will increase timely access to ICC services. Specifically, through this project we propose:

- To increase the volume of qualified candidates for employment at the CSA.
- To increase the diversity—especially as it pertains to languages spoken—of qualified candidates for employment to the CSA.

3.Scope of project: The CSA proposes to use Preparation Budget DSRIP funding to augment current recruitment efforts in three ways. First both LUK and CHL propose to allocate funds to increase online presence on Indeed and Monster.com. Secondly, the CSA will work with the CHL HR and Development Departments department to produce and translate more targeted recruitment materials into Spanish to help with recruitment of Spanish speaking ICC and Family Partners.

Third, funding will be used to support job fairs and recruiting events with a special outreach appeal for bilingual and bicultural candidates. In the Preparation Budget period will hold one event with a NC focus in early December and one with a Worcester area focus in February. We will work collaboratively with CENTRO in Worcester and Spanish American Center in

Leominster so that materials about the job openings are distributed within the communities these agencies serve.

In following Budget Periods we have allocated funds to this recruitment project – both for the costs related to increasing our online presence as well as for Job Fairs. These amounts may increase or decrease depending on CHL/LUK CSA workforce needs are at that time.

4. Proposed deliverables:

- Materials to distribute about jobs in the CSA in English and Spanish by March, 2018
- Increase in qualified applicants for CSA jobs
- More diverse qualified applicants for CSA jobs—especially as it pertains to languages spoken.

5. Specific use of DSRIP funding: Priority postings on Indeed are estimated to be $200/month agency. During Preparation Budget Period the total cost for those postings for CHL and LUK would be $2,000. Monster.com costs are $800/month per agency. During Preparation Budget Period that would total $8,000 for CHL and LUK. Translation of job postings/descriptions into Spanish by Center For Health Impact is estimated to be $1,500. We propose to support the Job Fair costs with DSRIP funding of light refreshments, space and materials. We estimate those costs to be approximately $1,000. There will be two fairs during the Preparation budget period which totals $2,000.

We have allocated funds for this project through all budget periods in order to continue recruitment efforts. We will adjust how the funds are used based on the success of the various initiatives.

6. Existing internal resources: The CSA will work closely with the CHL and LUK HR and Recruiters on this project. HR staff will gather data describing how the candidate became aware of the agency position so that we are able to track the use of both the online enhancements as well as job fairs.

7. How funds will be allocated: Funds will be allocated to the three CSAs and to LUK and CHL. LUK and CHL will receive the same allocations for Monster and Indeed on-line recruitment. The Worcester area and North Central area will each have a job fair located in their region.

8. *Internal evaluation strategies:* The CSAs currently receives approximately 1-3 resumes for open ICC positions. Our goal through these new recruitment efforts will be to increase the number of qualified candidates to 3-5 per open position by August 2018. Mandi Robinson and Abby Sallila will track this data as part of the interviewing and hiring process. They will also track which strategies (materials, recruiting events, job-seeking websites) seem to be most effective in attracting quality applicants.

B. Project Team description

1. Organizational chart: Please see attached Organizational Chart for the Recruitment Project.

2. List of current staff: The following staff will be involved in the EHR project. See Attachment B: Job Descriptions, which are included for each staff. Job titles and responsibilities for this project are included after each individual. Qualifications are listed for each staff the first time his/her name appears assigned to a project.

- **Joe Lavin,** *Vice President for Human Resources*: Joe Lavin has been working in the HR arena since 1996 in various positions. Prior to joining CHL he held the positions of HR Manager, HR Director and Plant Manager in a manufacturing facility that has Union and non-Union members. In August of 2009 he joined CHL as Director of HR and in October of 2014 was promoted to VP of Human Resources. Mr. Lavin will oversee the contracts for CHL with Monster.com and Indeed. He will also supervise the work of Michelle Popp.
- **Michelle Popp,** *Recruiter*: Michelle Popp, Recruiter, has more than 15 years' experience in Human Resources, including more than ten years as a recruiter. Prior to working at CHL, Ms. Popp served as a recruiter at Staples and at several healthcare related staffing firms. Ms. Popp will work with the CSA managers on the development of a plan for the Job Fairs. This includes the development of the recruitment job descriptions and qualifications that we will have translated into Spanish.
- **Sarah Loy**, *Director of Communications and Resource Development*: Ms. Loy will design the materials (graphics and layout) for distribution and work with Center for Health Impact on the translation of the materials.
- **Carolyn Droser,** *LICSW: VP for Children's and Emergency Services*: Ms. Droser will oversee this Recruitment initiative and coordinate this project with LUK, Development, HR and the CSAs.
- **Dr. Anthony Irsfeld**, *Director of CSAs*: Dr. Irsfeld is responsible for the quality measures related to this initiative.
- **Tom Hall,** *Operations Director of LUK , Inc*.: Mr. Hall will be the Operations contact for this project with LUK, Inc.
- **Tamara Durr**, *Chief of Staff:* Ms. Durr oversees CHL's project management department and will be assigned to the project management team for this CSA DSRIP project.
- **Abigail Sallila, LMHC**, *Director of ICC for North Central CSA***; Mandi Robinson, LMHC**: *Director of ICC for Worcester East and West CSAs*; **Janice Rose**, *Director of Family Partner and Training for Worcester East and West CSAs*; **Sandra Mangado,** *Senior ICC LUK North Central CSA*; and **Torrence Phillips,** *Senior ICC LUK Worcester CSA*: These five managers will assist in the development of recruitment materials and in staffing the job fairs.

3. Any staff Bidder proposes to hire: CHL does not propose to hire any staff in this project. We will contract with Center for Heath Impact for translation of materials and with Indeed and Monster.com.

4. Roles and responsibilities: The roles and responsibilities of each of the staff involved in this project are defined in #2 above. Each person involved was selected because of his/her qualifications, role within CHL and because they are content experts.

5. How Bidder will manage project(s): CHL's Project Management Department is under the leadership of Tamara Durr. She will be responsible for the project management of the CSA DSRIP funds. The Department was involved in the development of the project's timeline and will utilize their management resources to track progress in meeting the project goals. Ms. Droser and Dr. Irsfeld will work closely with the project management team so that information is available for the semi-annual and annual Progress Reports to EOHHS.

C. Implementation Plan and Timeline
See Attachment C: Implementation Plan and Timeline.

D. Budget Report and Budget Narrative
See Attachment D: Budget Report and Attachment E: Budget Narrative.

E. Sustainability
These funds will support the development of improved recruiting materials that once created, will continue to be used at relatively little cost. Realizing that once funds are no longer available, we may not be able to continue to support a more expensive on-line presence or frequent recruiting events, we hope to use the funding period to learn which strategies appear most effective, so that going forward are using existing agency resources to maximum benefit.

Project 5: Video Conferencing

A. Project 5 Description
1. Name or title of project: **Video Conferencing Project**

2. Specific goal advanced by the project: We are proposing to develop the capacity for all CHL/LUK CSA supervisors to effectively meet on a regular basis to share best practices, discuss quality initiatives, and develop greater consistency with respect to performance expectations. We are including this project because we believe it will increase communication and lead to greater efficiency of our leadership and thus contributing to strengthening of fidelity to the model. With four scattered sites the ability to gather without traveling is much more efficient.

3. Scope of project: The CSA plans to purchase and install video conferencing equipment by December, 2017. All staff will be trained in its use, and a regular meeting schedule among the CHL-LUK CSA supervisors will be in place by March, 2018.

4. Proposed deliverables:
- A regular meeting schedule among all CHL-LUK CSA supervisors
- Better consistency of supervision across sites
- More consistent performance of CSA staff across sites

5. Specific use of DSRIP funding: We propose to purchase 4 Polycom portable monitor, camera and computer units at $1500 a unit. We would install one at 99 Day Street and 545 Westminster St. for LUK staff and management and one at 100 Erdman Way and one at 199 Chandler St. for CHL sites.

6. Existing internal resources: CHL and LUK IT staff will purchase, install and train staff on the use of this equipment.

7. How funds will be allocated: The funds are being allocated equally to CHL and LUK and the CSA sites.

8. Internal evaluation strategies: The Director of the CSA programs at CHL, Dr. Anthony Irsfeld, will be establishing a process for more reliably tracking youth and family outcomes (see EHR project description). By October, 2018, data from the new outcome measure will have been analyzed. This will serve as our baseline data. Part of this analysis will be to compare outcome scores among the CSA sites. It is expected that with more regular and consistent communication among all CHL-LUK CSA supervisors, outcome data will demonstrate

increasingly consistent performance across the sites. To the extent that the baseline outcome scores differ, the CHL-LUK supervisors will utilize this equipment to meet together to establish performance goals relative to this outcome measure. In addition, Anthony Irsfeld will use the LEAN model of quality improvement to track supervisor satisfaction with the project and their ideas for improvement of the project as it is implemented. The goal will be to have 90% of all supervisors satisfied with the use of the equipment and resulting meetings by December 2018.

B. Project Team description

1. Organizational chart: Please see Organizational Chart for this Video Conferencing Project

2. List of current staff: The following staff will be involved in the EHR project. See Attachment B: Job Descriptions, which are included for each staff. Job titles and responsibilities for this project are included after each individual. Qualifications are listed for each staff the first time his/her name appears assigned to a project.

- **Michael Rezkalla**, *Vice President, Operations*: Mr. Rezkalla will assist in the purchase and supervise the installation of the equipment.
- **Michael Blair,** *Director of Information Technology*; Mr. Blair will be responsible for the installation and set-up of the equipment. He will train the managers at each site in the use of the equipment.
- **Carolyn Droser,** *LICSW: VP for Children's and Emergency Services*: Ms. Droser will oversee this Video Conferencing initiative and coordinate this project with IT, LUK and CSA management.
- **Dr. Anthony Irsfeld**, *Director of CSAs*: Dr. Irsfeld is responsible for the quality measures related to this initiative.
- **Tom Hall:** *Operations Director of LUK, Inc.*: Mr. Hall will be the Operations contact for this project with LUK, Inc.
- **Abigail Sallila, LMHC**, *Director of ICC for North Central CSA***; Mandi Robinson, LMHC**: *Director of ICC for Worcester East and West CSAs*; **Janice Rose**, *Director of Family Partner and Training for Worcester East and West CSAs*; **Sandra Mangado,** *Senior ICC LUK North Central CSA*; and **Torrence Phillips,** *Senior ICC LUK Worcester CSA*: These five managers will be trained in the use of the equipment and will train other managers at sites in the use of the video conferencing equipment.
- **Tamara Durr**, *Chief of Staff*: Ms. Durr will be assigned to the project management team for this CSA DSRIP project.

3. Any staff Bidder proposes to hire: CHL does not propose to hire any staff to implement this project.

4. Roles and responsibilities: The roles and responsibilities of each of the staff involved in this project are defined in #2 above. Each person involved was selected because of his/her qualifications, role within CHL and because they are content experts.

5. How Bidder will manage project(s): CHL's Project Management Department is under the leadership of Ms. Tamara Durr. She will be responsible for the project management of the CSA DSRIP funds. The Department was involved in the development of the project's timeline and will utilize their management resources to track progress in meeting the project goals. Ms.

Droser and Dr. Irsfeld will work closely with the project management team so that information is available for the semi-annual and annual Progress Reports to EOHHS.

C. Implementation Plan and Timeline
See Attachment C: Implementation Plan and Timeline.

D. Budget Report and Budget Narrative
See Attachment D: Budget Report and Attachment E: Budget Narrative.

E. Sustainability:
These funds will help with the initial purchase of the equipment necessary to have functional video conferences. Over time, Community Healthlink will assume responsibility for the ongoing expense of replacing devices gradually as needed as part of the CSA's equipment budget line.

Section 6.5: Coordination with ACOs, MCOs, and Primary Care Providers

A. Bidirectional communication

Communication across disciplines, agencies, geography, and electronic records is complicated and we expect to continually review and improve our information exchange process through our QI processes.

As part of our start-up both for the CSA initiative and CHL's Community Partnership (CP) program (if awarded), CHL will set-up a team of managers from the CSAs and CP focused on establishing communication protocols with the ACOs, MCOs and PCPs. Our goal is to have clear consistent lines of communication for questions, referrals and coordinating care for adults and children. The systems are complicated and it is important to us that the ACOs, MCOs, and PCPs know what services we provide, who is eligible for the service, how to make a referral, and what the expectations are after the referral has been made. Through written materials such as brochures and pamphlets, we will provide attractive, easy-to-understand information about how the ACOs, MCOs and PCPs can benefit from a relationship with CHL.

We also plan to have face-to-face meetings with ACOs, MCOs, and pediatric and family practices with whom we frequently interact. Through face-to-face meetings, we plan to both learn about particular needs as they relate to our CSA services and share with the ACOs and MCOs information about who we are and the ways in which we can help meet the needs of their patients.

As part of this proposal, we also expect to provide all CSA staff training which will further their ability to effectively collaborate with primary care and medical professionals. Training topics will include professional cultural differences between medical and behavioral health systems, and ways to tailor the CSA Wraparound process so that medical professionals can more fully participate in the process. This learning has already begun through our current SAMHSA funded pilot project with the Worcester Plumley Village Family Practice. For example, we are experimenting with good success different ways of maintaining frequent and functional bi-directional communication with the youth's PCP while also honoring the core Wraparound principle of "nothing about us without us."

We currently have good communication with our other partners and Care Planning Team members. Our new EHR will be able to receive and send documents via the MA HIway which should increase that communication not only between the medical professionals and the CSA staff but also with other providers. For community agencies, state agencies, and natural supports, we will also exchange information and updates thorough regular telephone contacts, secure email, and by fax. In all situations, we will ensure that we have in place appropriate and valid ROIs.

Finally, all of CHL will be on the new EHR. The system has "tasking" and "messaging" functions so that the communication between CHL's CSA staff and other programs – In Home Therapy, MCI, outpatient, CBAT etc. – is efficient and in real time. This will improve care coordination and communication significantly.

B. Referral management protocols

Our plan for the CSAs will be to continue what has worked very well to date. The Administrative Assistant at each CSA site will be responsible for taking initial calls from the medical providers. They are trained to answer basic questions about the CSA service and eligibility. For more complex discussions, the AA is able to refer the call—usually immediately-- to a CSA manager.

In the event a medical provider must leave a message, the CSA has a good track record of getting back to referral sources in the same day or next day in the event the call comes in after hours. After a provider makes a referral, the family contact information is forwarded to a CSA manager who contacts the family within 24 hours and in that call describes the program, answers questions, determines eligibility and obtains consent.

The Central Massachusetts Accountable Care Organization with Tufts Health Public Plans which is in our region has already reached out to us about their decision to use Aunt Bertha, Inc. as a platform for a resource for the ACOs and CPs to use to help connect individuals to community resources. Our CSAs will make certain that the information about our services and referral processes are clear and usable so that ACO staff who use the platform will have easy access to our information. Should it be necessary to amend or change any aspect of our CSA referral process to better accommodate PCPs or the ACOs, the CSA leadership will use our quality improvement tools in place to make those changes.

We understand that we will need to engage and collaborate with multiple ACOs and MCOs in the Worcester and Gardner-Fitchburg Service Areas, and we plan to hold introductory meetings with the administrative teams of each of the ACOs and MCOs to learn about their health care services and each organization's distinct needs. In these meetings we will provide information on the CSA services and referral process

C. Team-based treatment planning

We see the ICC as the hub for communication among stakeholders. Regular communication with each member of the youth's Care Planning Team is a primary responsibility of the CSA ICC. One of the challenges to date has been how to develop meaningful participation of the youth's PCP with the CSA Care Planning process. We feel that the training proposed here will help our CSA staff to better understand the needs of primary care physicians, to improve their skill around helping the physicians understand and better appreciate how the CSA process can benefit them, and to help CSA staff better tailor the Care Planning process to make it easier for physicians to have meaningful participation

D. Timely access to ICC services

Our Development Plans and our proposal for DSRIP funding both address the need to successfully recruit and retain ICC and Family Partner staff. We see recruitment as one of our greatest challenges, and expect that with increased online job site visibility and increased presence at job fairs targeted to recruit needed staff we will be able to successfully recruit more staff which will allow us to maintain the needed capacity to be able to offer access to ICC services within three days of family consent.

In addition, the proposal includes the development of a computer based orientation program which we believe will help streamline the on-boarding of new hires and will help ensure consistency in the initial training across all sites at CHL and LUK.

We also are aware, based on the demographics of our communities, that it is essential to have an increased capacity to serve individuals whose primary language is not English. We are, therefore, planning to target Spanish speaking staff through collaborations with CENTRO and Spanish American Center. Recruitment materials will be available in Spanish for those community agencies to distribute. In addition, all staff will have access to tablets and to our video translation service. We believe that this will more easily engage families in the CSA process than our previous telephone translation service.

E. Connections to social services

One of CHL and LUK's strengths is in effectively connecting youth and families to community and social services. Staff are recruited from our service communities, they are orientated and updated about resources, they make personnel connections within the provider communities, they have experiences which they report back to the team and then use that information to assist in future connections. The team has a regularly reviewed an updated service directory. Staff receive emails from various coalitions which list upcoming events and new services. They will be trained to use the Aunt Bertha, Inc. platform which will be the Central Massachusetts Accountable Care Organization's information and referral system. Weekly team meetings include an agenda item to share any new resources or connections. New staff training includes visits to community agencies with seasoned staff to learn about the service and meet individuals at the agency.

We expect that the new EHR will improve our collaboration with social services. With the necessary releases in place, we will have the capacity to print Care Plans while in the community using our mobile technology as well as send them electronically to individuals on the Care Planning Teams

BH

CSA Budget Report

Community Healthlink, Inc.

Investment Funding	Prep Budget Period	Budget Year 1	Budget Year 2	Budget Year 3	Budget Year 4	Budget Year 5	Total Revenues

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Electronic Health Record Project	$ 112,835
Total Development and Adaptation of EHR and Care Management System	$ 112,835

Electronic Health Record Project: will strengthen fidelity to Wraparound processes and will allow for more effective electronic communication and therefore increase integration with ACOs and PCPs. The goals are to have a system that:
ICC and Family Partners will use to document all aspects of their work with youth and families including all Assessments, Care Plans, and Transition Plans.
Assists staff to know when required processes and documents are due.
Allows supervisors to easily run regular reports to monitor compliance with required processes and documents.
Improves the quality of supervision of staff by allowing more efficient review of key elements of the record for quality.
Connects to the MA Hiway and communicates with ACOs and PCPs.
Produces reports the reflect quality measures and outcomes
If awarded the Community Partnership contract in Central MA we will receive DSRIP funds to assist in the development of Qualifacts CareLogic for the programs involved in the CP initiative. There is no overlap with the DSRIP funds we are requesting for the CP initiative. These are costs allocated to the CSAs for the development of CSA specific documents, reports and billing.

We have allocated $112,835 toward the development of the EHR for the CSAs during the Prep period. This allocation will assist all three CSAs. CSAs will utilize all the same Qualifacts forms which are being tailored to the CSAs' paperwork requirements. The $112,835 is the CSA's percentage of the initial start up cost of Qualifacts based on the CSA's percent in CHL's budget. We expect to have the EHR developed and staff trained by the end of the Pre Budget Period.

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Technology for Service Delivery

Description of Expense	Cost
Mobile Technology	$ 90,000.00
Total Technology for Service Delivery	$ 90,000.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:
Mobile Technology Project: This project will strengthen fidelity to the Wraparound processes and increase timely access to ICC services. The goals are:
To enable staff to access video translation services so as to enhance the quality of the family's experience when staff do not speak the family's preferred language.
To provide staff access to the new EHR in real time while in the community with youth and families so that families may take an increased role in their Care Planning process.
To enable staff access to the internet so as to complete Care Planning tasks with families in the community in real time.
We have allocated $90,000 for mobile devices including a combination of laptops and tablets, signature pads, cell phones and mobile printers for the staff of both LUK and CHL in all three CSAs. These devices will be able to connect with the EHR securely in the field and there will be tablets that can be used to connect to the video translation service.
The Laptops or Tablets and software for each of the CSA staff which includes signature pads or signature capability on the tablet at an average of $1400 per staff at $81,200. (Software has not been ordered. A current price of HP laptop and software is $1300 and the signature pads are $100. The Ipad are similar in cost and need a license for the mobile AP for the EHR.) We will order toward the end of the development of our EHR to make sure all devices are compatible with the record. There is a cost of $1736 for Lolack for these devices; software which tracks and prevent theft. We will purchase two portable printers per CSA site (two CHL; Two LUK) at a cost of approximately $2064. We propose to purchase 25 cell phones at approximately $200 each for an additional $5000.

North Central: currently 26 FTE. Projected for training 30.5 FTE
Worcester East: currently 16 FTE. Projected for training = 17 FTE

Description of Expense	Cost
Video conferencing equipment	$ 6,000.00
Total Other Technology Expenses	$ 6,000.00

Video Conferencing Project: will increase communication and lead to greater efficiency of our leadership and thus strengthen fidelity to the model. The goal is to:
Develop the capacity for all CHL/LUK CSA supervisors to efficiently "virtually meet" on a regular basis to share best practices, discuss quality initiatives, and develop greater consistency with respect to performance expectations.
To achieve this goal, we are proposing to purchase 4 Polycom portable monitor, camera and computer units at $1500 a unit. We will install one at 99 Day Street and 545 Westminster St. for LUK staff and management and one at 100 Erdman Way and one at 199 Chandler St. for CHL sites. The total cost of this initiative is $6000 and it will be completed within the Prep Budget Period.

Provide a description of each recruitment expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Training Expenses

Description of Expense	Cost
Inservice training	$ 4,000.00
Total Training Expenses	$ 4,000.00

Training project will strengthen fidelity to the Wraparound processes and assist in the integration with ACOs and primary care providers for ICC-Engaged youth and their families. The goals are to:
To obtain outside consultation and in-service training around specific topics pertaining to work with special populations and coordination with pediatric primary care.
In the Prep Budget we have allocated $4000 for the outside consultation and trainings. The plan is to have the CSA staff and managers plan annually for the training based on the needs of the programs and the recommendations of the Development Plans over the five years.

All staff in all 3 CSAs including the two LUK subcontracted sites will benefit from this training. The details of the specific trainings we will provide are being developed. We expect the trainers - since many will be medical professionals - to charge approximately $200/hour based on our initial overtures to potential trainers. This $4000 will provide approximately 20 hours of training from outside consultants. Our expectation is that all staff from all sites - both Family Partner staff and Care Coordinators - will receive training.

North Central: currently 26 FTE. Projected for training 30.5 FTE
Worcester East: currently 16 FTE. Projected for training = 17 FTE
Worcester West: currently 16 FTE. Projected for training = 20.5 FTE

Recruitment Expenses

Description of Expense	Cost
Online recruitment enhancements	$ 8,000.00
Develop recruitment materials	$ 1,500.00
Job Fair expenditures	$ 2,000.00
Total Recruitment Expenses	$ 11,500.00

In the Prep Budget we have allocated $8000 for costs related to advertising on Monster.com and to have ads prioritized on Indeed.com for both CHL and LUK. The estimated cost for increasing our advertising is $800/per month per agency (LUK and CHL). We plan to enhanse the ads for 5 months to attract staff - particularly bilingual staff.

We have $1500 for the development of recruitment materials to be used at Job Fairs and to have the material translated into Spanish. $2000 is allocated for Job Fair expenses including space and refreshments. We plan to hold two Job Fairs for the CSAs during the prep period one in Worcester and one in NC.

CSA Budget Report			
Revision Requested	**CSA Budget Report Line**	**Description of Revision**	**Comments**
N/A	Estimated Funds	Original budget only summed BP 1-5, missing the PBP. As a fix, I adjusted Column I, line 8, to make sure it includes the PBP: It should read =SUM(C8:H8) in yellow highlight for review	
N/A	Indirect Costs	Changed cell formatting to allow for two decimal places	
Please Review	Investments project total	This value cannot be greater than the total maximum funds available per C11 calculation. Please adjust.	Adjusted cost of Credible integration to $73312

CSA Budget Narrative			
Revision Requested	**CSA Budget Narrative Line**	**Description of Revision**	**Comments**
Complete	Workforce Development: Project 1 Name	Incomplete, please include name	Project removed
Complete	Workforce Development: Project 1 Staffing Narrative	Explain what types of training activities will be prioritized under ICC Director/Trainer	Project removed
Complete	Workforce Development: Project 1 Staffing Narrative	DSRIP funding cannot be used as salary replacement; Please remove or explain how this is not salary replacement	Project removed
Complete	Workforce Development: Project 1 Training Expenses	Explain assumptions behind expected costs; in narrative explain how costs were calculated (i.e. expected costs per FTE, identify expected quantities of materials)	Project removed
Complete	Technology: Project 2 Technology for Service Delivery	Explain calculation used to determine total costs of expenses/ write out calculation that resulted in costs for each expense (i.e. 15 FTE x $600 cost of 2 in 1 laptops)

6.1 INSTRUCTIONS FOR SUBMITTING THE PROGRAMMATIC RESPONSE
A. Goals

RFR Goals	CSA Development Plan Goal	DSRIP Project Activities
Improving timely access to ICC services for children eligible to receive ICC and their families.	Increase referrals to Family Support and Training (family partner services)	Outreach by Sr. Family Partner; Staff Training
Strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC participants	Increase Family Voice and choice and use of natural supports	Staff Training; Technological Innovation (PCP integration)
Fostering strong integration with ACOs and primary care providers for ICC participants.	Increase attendance of community members at Care Plan meetings	Technological Innovation; Outreach by Sr. Family Partner CANS Integration with EHR and CCD transmission of information to PCP practices; Use of smart boards to support PCP remote participation in Care Plan Team meetings
Strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC participants.	Improve quality of Comprehensive Assessment Wraparound certification for CSA staff	Staff Training; Technological Innovation

B. CSO DSRIP Projects:

CSO CSA Sites and Locations: Hampshire/Franklin/North Quabbin Area
Hampshire: 8 Atwood Drive, Northampton, MA 01060
Franklin: 1 Arch Place, Greenfield, MA 01013
North Quabbin: 491 Main Street, Athol, MA 01331

CSO has focused this last year on planning to build crucial infrastructure that will support CSA functions and responsibilities. CSO has positioned itself to take advantage of DSRIP funding opportunities to prioritize infrastructure building over initiatives with a short-term payoff. A strong and nimble human resources department has a plan to initiate cross-program staffing and cross training. Our Business Team has supported major technology advances to weave them into current operations. CSO priority goals for the CSA program and DSRIP projects that address them are as follows:

<u>Workforce Development – Training, Recruitment, Retention</u>

- Training/Tier 1 Wraparound Certification for Care Coordination. This will enhance adherence to model and will support connections to PCPs. This will also improve staff retention.
- ~~Recruitment: enhanced posting on Indeed.com, which significantly increases the number of "hits" and resumes/applicants for job openings; targeting Masters level Care Coordinators~~

~~Operational Infrastructure - Outreach~~

- ~~0.25 FTE of CSA's Senior Family Partner to do community outreach and education~~

Technology Innovations:

- Purchase/Upgrade of laptops for CSA staff
- ~~Purchase/upgrade of PCs for CSA staff~~
- ~~Smart phones with data plan for Care Coordinators~~
- Smart boards to support Care Planning team meetings and participation by PCP's
- Training materials for Tier 1 wraparound certification/manuals
- Projectors/roller cases to support mobile/community based care planning
- Upgrades to EHR (Credible) to include Credible Connect and integration of CANS directly with Credible, improving ability to track and share client outcomes and CCD data points with PCP's.

6.2 EXECUTIVE SUMMARY

A. The Bidder's current performance on its Development Plan

From the latest update of our CSA development Plan (April 2017), accomplishments include the following:

- All 3 sites have increased ICC referrals
- All ICC staff have attended or are scheduled to attend the 4 modules of the ARC orientation.
- All 3 sites hosted the Family Voice Forums,
- STAY Grant will be ending June 30th and the 2 Peer Mentors will continue to provide TM and Peer Mentor support.
- All 3 sites are in the process of hiring; we are hiring for a new Senior Partner

Strategies for Improvement: The following initiatives are being undertaken over the next six months to a year:

- Data indicates families could be more connected to community and youth need higher attendance at CPT meetings. During weekly supervision, supervisors will discuss and review team attendance and natural supports on the CPT and attendance sheets.
- Meeting with staff reviewing the goals and WEPA data and set goals
- Group supervision focusing on Community /Natural Supports topics
- Marketing to community and hubs for FS&T service to increase referral.
- Meet with local schools and DCF; DCF Supervisor planning meeting: ensure an increase in referrals; Triage/Referral Team meeting
- Presentation at all Staff Site meetings
- Start using ecomap/genogram
- Remind parents they can choose which meetings to have their supports attend.
- Natural supports can call in to the meetings, offer transportation, flexible times.
- Offer parents to invite natural supports to meetings other then Care Plan meetings.
- Meet with our EHR team to create the chosen action plan for FS&T - Action Plan will be created in EHR

B. Specific examples of strengths and needs of the Bidder;

Strengths: We serve over 2,000 youth with SED in our Outpatient programs at CSO, and have provide CBHI services to over 1,025 youth in the region and MCI/ESP services for more than 1,020 youth and their families. We have clinicians, psychologists, child certified NP's and board certified child psychiatrists with broad background and extensive experience with these youth, who both treat and may be called upon for consultation. Our core competencies lend themselves to the development of a "one-stop" wraparound model of comprehensive, holistic services to families with multiple and complex issues. CSO provides

Outpatient mental health and substance abuse treatment; school based consultation and treatment; case management; child and adult psychiatry; psychological testing and assessment; advocacy; parent skills training; a full range of Children's Behavioral Health (CBHI) programming; Intensive Care Coordination for youth and Community Support Program for youth and adults; Wellness programming; and crisis prevention planning, assessment and intervention for children, youth and adults. CSO has a well-developed Peer Services component, including Peers within our Crisis programs and Family partners at our Crisis services, CSA, and Family Resource Centers. Our status as the Emergency Services Provider throughout the Hampshire and Franklin/North Quabbin region means that we have the capacity for child and youth mobile crisis response. CSO has a current 4-year certification from the Council on Accreditation.

Training capacity: CSO has robust training capacity, which has been a key factor in our ability to offer region-wide Youth Mental Health First Aid under the federal "Now is the Time" program and Integrated Health Treatment Education and Training through a Commonwealth Corporation Workforce grant. Other training activities at CSO include a monthly Child Clinical Seminar Series, which focuses on developmental and trauma-related topics. We operate the SAMHSA-funded Trauma Training and Treatment Institute, which can lead to CSO certification in basic or advanced practice Trauma Informed Care. A multi-disciplinary steering committee ensures that ongoing training and quality supervision is available to all program staff. CSO's CSA Director, Mary-Jo Crowley, is a certified trainer and coach in Wraparound.

Sophisticated EHR: Credible Behavioral Health is CSO's electronic health record (EHR). It supports all statutory and regulatory requirements and is used for collecting, recording, storing and maintaining all data (live and historical) including client demographic information and insurance status. Credible enables engagement with external providers, past BH and medical records, comprehensive assessments and person-centered Care Plans and service delivery. It allows for collaboration with external providers to create an integrated care model and provides an Individualized Action Planning Module that allows for care planning and documentation. It is a fully configurable reporting tool to create custom reports, custom dashboards, and graphical reporting functionality for distribution. used for collecting and maintaining all data; Provider Portal, Client Portal, Direct Messaging, Summary of Care, eFax, collaboration with external providers to support consumers in navigating BAH system of care; and with appropriate releases, allows direct exchange of data and forms within the portal.

Needs: We experience a high level of severity and intensity of the mental, emotional, and behavioral problems of children and youth who are referred to the CSA program. One outcome of this intensity is that we experience difficulties in recruitment and retention of CSA staff. Staff have requested certification in Tier 1 Wraparound as a way to enhance their abilities and improve their confidence delivering services to this population. Training and support, and assuring the time available to train staff, is a critical need for this program.

In terms of service delivery, we believe that treatment must be accessible across the spectrum of CSO clinical services and that a very close collaboration with others (agencies, school and individual practitioners) who treat the child or youth is critical.

C. The Bidder's plans for improving timely access to ICC services

Improvement of timeliness of access to ICC services will focus on two aspects of services delivery: 1) enhancement of the ease of referral to CBHI services by other providers, and 2)

increased knowledge of the service, especially by pediatricians ~~and intensified outreach by a Senior Family Partner.~~ Plans are detailed in subsequent sections.

D. The Bidder's plans for improving care coordination, care planning, and care management for ICC-Engaged Members

C*SO's service goal* is to effect greater collaboration and coordination across the spectrum of healthcare providers—inpatient medical and BH, primary and specialty medical, outpatient and community-based BH, residential, LTSS and emergency care. *CSO's operational goal* is to implement the CSA program efficiently, expeditiously, and sustainably. We will approach enhancement of operations with a clear plan and model, with the flexibility and agility to adapt our plans and process in response to changing conditions, consumer feedback, and feedback from ACOs, MCOs and our healthcare partners. Our broader plans are to:

- Enhance centralized electronic files/electronic medical records with ready, universal access by staff.
- Encourage parent/guardian access to youth records, Care Plans, service delivery and communication through the client portal of Credible.
- Orient other providers/partnering health care organizations to Credible Provider Portal.
- Enable electronic data sharing of CCD data points, and outcome measures related to CANS data, between CSA and Primary Care providers.
- Train staff in use of Care Plan/Comprehensive Assessment module and processes, Integrated Health Management, evidence based practice
- Use of smart-board technology in Care Plan Team meetings to enable mobile care plan meetings and virtual participation by members who are unable to physically attend the meeting in the same location.

E. Plans to improve performance on quality scores and Development Plan goals

Goals that are part of our CSA Development Plan are to:

- Increase referrals to Family Support and Training (family partner services)
- Increase Family Voice and choice and use of natural supports
- Increase attendance of community members at Care Plan meetings
- Improve quality of Comprehensive Assessment

The current priority for action in the CSO Development Plan is to improve our Comprehensive Assessment process, in order to improve ready access to ICC services. One aspect of addressing this priority is staff training and better recruitment, leading to better retention. This will result in highly qualified staff conducting timely and comprehensive assessments in collaborative planning processes. Technological support funded by DSRIP funds will improve the quality of the Comprehensive Assessment. ~~Senior Family Partner Outreach will result in increased referrals as well as identifying greater opportunities for family partner recruitment.~~

F. Plans for improving coordination with pediatric PCPs & other care providers

CSO is the convener or participating member of five county-level System of Care Committees in Franklin, North Quabbin, Hampshire, and Berkshire Counties and the city of Springfield. Members include all major child-serving organizations for each catchment area. CSO sees a high volume of referrals from private practices, pediatricians' offices and other health organizations. We have referral relationships with 86 physicians in Greenfield, Northampton, Turner's Fall, and South Deerfield. North Quabbin Family Physicians, West River Health Clinic and Athol Memorial PCPs are all primary care resources with whom we have close working relationships and systems of mutual referrals in the North Quabbin area. We also have close working relationship with Baystate Primary Care practices; Valley Medical Practices; and the Cooley-Dickinson Primary Care practices. Orientation and

training for primary care staff to use of the Credible provider portal will allow electronic exchange of client information. Outreach by the Senior Family Partner will fortify CCS relationship with pediatric practices.

In addition, CSO has a training and certification program, Integrated Health Management, to train CSO staff to integrate health concerns with behavioral health planning. The program supports staff in working with primary care providers, including pediatricians. The further integration of the CSA program will be enhanced through cross training and sharing of staff using the following strategies: 1) Integrate CBHI services including ICC, family partners, peer mentors, behavior management, in-home behavioral therapy, behavior monitoring with additional Wraparound programming and evidence-based practices. 2) Strengthen the collaborations that already exist among OP, CBHI, CSP and Crisis to increase fluidity of staffing, flexible programming and economies of scale to support families.

6.3 POPULATIONS SERVED AND COMMUNITY ENGAGEMENT

A. Member populations and communities, the regions or service areas covered; plans to promote the health and wellbeing of the individuals it serves & maintain engagement

Geography and Demographics: Residents in CSO's identified service areas for the CSA program—Franklin and Hampshire Counties and the North Quabbin region—are predominantly Caucasian and English-speaking. The demographics of the Franklin-North Quabbin service area are 98% white, 0.8% African American, 0.6% Asian, and 1.7% Hispanic. In over 95% of households, English is the first language. Hampshire County demographics are 91.10% White, 1.96% Black or African American and 3.40% Asian; 3.42% of the population were Hispanic of any race. Made up of these service areas, this is a rural region: Hampshire is 80% rural and Franklin County and North Quabbin/northwestern Worcester County are 96.3% rural.

The rural population of focus for the project is a historically underserved population from a behavioral health care perspective. In general, the situation can be attributed to three converging regional characteristics: low socioeconomic status reflecting low education levels and the lack of quality employment; low health literacy; and limited access to treatment and support, reflecting the economics and rural geography of the area. Many residents of the service area have a lack of knowledge about available resources, are not well-informed about benefits they are eligible for and experience physical and psychological barriers to obtaining health care. Breakdown of access within the service system, inappropriate use of the emergency room and unnecessary hospitalizations are major costs in places with a lack of access to less restrictive, less expensive and more effective community services. CSO has developed expertise in working with the rural population, with a keen understanding of unique needs of individuals and families in the rural tri-county area, and a vested role in providing coordination of health, behavioral health and social services systems.

Stigma is particularly intense in rural communities, where anonymity is difficult to maintain.[1] The negative attitudes attached to having a mental disorder in a rural area can lead to under-diagnosis and under-treatment of mental disorders among rural residents. At CSO we believe that addressing the stigmatization of people with behavioral health challenges is one of our most important responsibilities.

Engagement: The foundation of family engagement is the development of relationships with our families. Building relationships between families and staff requires a well-trained and prepared workforce that can demonstrate and communicate respect and offer families trustworthiness. One aspect of the Family Team that its staff members must grapple with is

[1] Report of the President's New Freedom Commission on Mental Health

their accountability to the family, who is their client. This is "unconditional", according to wraparound principles, and involves evaluating and re-evaluating treatment modalities, making continual adjustments to the plan, and re-examining the goals of the plan and its definition of success, when necessary. Training funded by DSRIP will reinforce these strategies.

Health and Well Being: CSO's overarching goal is a system of care that fully integrates community outreach, wellness support and care coordination—and supports operational redesigns (e.g. maximum co-location of health and behavioral health, new care coordination protocols) to advance that goal. The purpose is to eliminate health disparities and the physical toll of preventable diseases in children and youth with SED and their families. CSO has maintained a long-term commitment to integrating wellness programming into our services. We want to employ any and all strategies in creating a seamless continuum of health promotion and wellness that increases the access and availability of prevention, outreach and treatment of the common conditions that prevent our mentally ill clients from attaining an optimal quality of life. This encompasses families of our child and youth clients. Wellness include coordination of community collaborations for wellness programming; wellness solutions specifically designed to enhance client health and well being; and integration of comprehensive wellness activities into behavioral health programs for clients, through education and outreach initiatives. Activities include yoga, acupuncture, mindfulness training, smoking cessation support, exercise equipment and classes, partnerships with local health providers for dental and health screenings, nutrition classes, walking classes and recreational activities and outings.

B. Describe relationships within the community to improve the quality of ICC services, including current and planned collaborations and partnerships

Local Schools: CSO has close working relationships with all the schools throughout Franklin County and the North Quabbin region. We are the subcontracted school-based clinical provider for the Athol Hospital CHART program, providing clinician's on site at three Athol schools; provide clinical consultation from our Child Psychiatrist via a telehealth grant to the Narragansett School District; and are leading a grant funded trauma informed school culture process with the Pioneer Valley Regional School District, Gill Montague Regional School District, and Mohawk Trail Regional School District. As the contracted Community Service Agency providing Intensive Care Coordination services, and the largest child outpatient behavioral health and CBHI provider in the Franklin/N. Quabbin region, we collaborate daily on identified cases and take referrals from all schools within our catchment area. Part of our Development Plan is to increase contacts with local schools to increase referrals and to further integrate services to children with school personnel.

Community Action: CA co-hosts Communities that Care (CTC) in Franklin County/North Quabbin with Partnership for Youth, a program of the Franklin Regional Council of Governments. CTC brings together youth, parents, schools, community agencies, and local governments to promote the health and well being of young people in Franklin County and the North Quabbin region. CTC is supported by the Regional School Health Task Force, composed of representatives from nine school districts: Athol/Royalston, Four Rivers Public Charter School, Franklin County Technical School, Frontier, Gill-Montague, Greenfield, Mohawk Trail, and Pioneer Valley, and Ralph C. Mahar Middle/High Schools. We will work closely with CA and CTC to access available resources for the TDS program.

WMTC: Western Mass. Training Consortium and the Recovery Learning Community runs on-line discussions and an announcement/bulletin board page. The Consortium also houses

the Western Mass. chapter of the Parent/Professional Advocacy League (PAL). These organizations have many strong advocates for community-based services.

Baystate Medical Center Partial Hospital Program (for adults and children): Regular meetings and primary referral source for aftercare planning and step-down services.

Brattleboro Retreat: CSO was instrumental on development of BR as a badly needed resource for MassHealth children in the region; we have regular meetings with BR Central Intake.

Cutchins Programs for Children & Families: residential, outpatient, and special education services provide children and families struggling with the effects of trauma and mental illness.

The North Quabbin Community Coalition is a community-wide alliance committed to improving the quality of life for all those living and working in the North Quabbin (Franklin and northern Worcester Counties) region. NQCC partners with local schools to identify resources to support programs, and offers the Enough Abuse campaign to end child abuse in the region.

Northampton Pediatrics, Athol Memorial/Heywood Physician Group, Valley Medical and Baystate Franklin Pediatric Practices: CSO is developing enhanced relationships with key primary care practices utilizing consultation with our Child Psychiatrists and planned outreach by a Sr. Family Partner to ensure knowledge of CSA services. Outreach and collaboration will improve access to services including streamlined referrals and knowledge of CSA services; and participation in Care Plan team meetings and sharing of information.

CSO staff will also identify the appropriate community providers and school personnel to be involved with the youth and family throughout the assessment and care planning process.

C. Describe how the current and planned partnerships described in response to Section 6.3.B align with the Bidder's proposed project(s) described in response to Section 6.4.A.

The purpose of enhanced and strengthened partnerships is to increase referrals and provide ready access to CSA services. It is also intended to strengthen the wraparound process. CSO's wraparound vision combines the development of family strengths and resources while maximizing the resources of CSO and the community. We have specific procedures for communication between levels of care, implementation of crisis plans, emergency psychopharmacology, and access to information across programs utilizing electronic medical records, voicemail and fax. Our partners, too, have extensive experience in wraparound; we share a common perspective and underlying philosophy about service delivery.

Developmental, social, educational and vocational needs will be addressed collaboratively. Youth expertise from the community is incorporated into the Comprehensive Assessment using programs such as CBFS-TAY, Dial-Self, YMCA, and the youth programs at the Clubhouses for youth and with schools, after-school and other programming for children. Families will be encouraged to include other providers, natural supports, and school staff on treatment team reviews and planning meetings. CSA staff will strengthen communication with community providers by ensuring that regular contact with these identified community providers and school feedback is initiated.

In addition to reaching out to families the Senior Family Partner will make contact with providers (e.g. pediatricians) and community organizations who have not yet been part of our Systems of Care groups and will offer orientation to CSO's CSA programming. Providers will be oriented to and trained in using the Credible Provider portal to share specific health record information, which will include consent and HIPAA protocols. Additional training on

Comprehensive Assessment will be provided, including Tier 1 Certification in the Wraparound process. This will enhance the Comprehensive Assessment planning process as well as the monitoring of Care Plan goals and child/family progress.

6.4 PROPOSED PROJECT(S) AND INVESTMENT PLAN

A. Project description

Project 1: Workforce Development: Upgrading the CSA Team : Tier 1 Wraparound Certification

The CSA workforce is comprised of graduate trained professionals, direct care staff with a BA degree or with on the job training and experience, and family partners who have parented a child with serious emotional disturbance.

Better leverage of the rural CSA core workforce will lead to more comprehensive, higher quality services including a higher level of health and behavioral health integration, more ready access to services and higher rates of recruitment and retention..

In order for CSO to move toward a more credentialed, licensed, and professional workforce, there must be enough professional development and advancement opportunities that incorporate core competencies and provide credibility to the field. In turn this helps us create well-defined career paths to support retention efforts by helping individuals progress into more senior and leadership positions. Staff most commonly need training in EBPs and behavioral management of clients, as well as certification in Wraparound.

To support clinical best practice and innovation, one of CSO's priorities is on developing an infrastructure to support staff in providing high fidelity evidence-based, best and promising practices. Our approach is to provide quality training that offers the opportunity to acquire and practice the skills necessary to successfully implement these practices. In addition, CSO has extensive training capacity, which has been a key factor in our ability to expand and enhance our ability to serve children and families.

CSO is eager to accelerate the collective learning curve in the enhancement of CSA. Our approach to staff training and professional development is key to transforming practice and programming in the agency. We will implement the broadest application of and access to training resources across the agency, deploying our capacity to reach across a large geographic area to train all CSA staff. We will identify specific opportunities and curricula for training staff to achieve Tier 1 Certification. Wraparound certification courses will be offered ~~as well as certification in Integrated Health Management.~~ We believe that better trained staff will have increased sense of mastery over position, and therefore stay longer in the job.

~~1. b. Operational Infrastructure: Targeted initiatives to increase referrals and ready access to CBHI services~~

~~Almost all CSA program staff are non-master's professionals delivering community-based outreach services across alls sectors of the community. The breadth of experience, views, skills, advocacy and values that paraprofessional staff bring to the table and share has led to an overall stronger treatment team and more responsive service delivery system within CSO.~~

~~We will allocate 25% of a Senior Family Partner's time to conduct and extensive outreach effort focused on current partners who serve families who are likely to need services for their children, as well as direct outreach to parents. The Sr. FP will also conduct intensive outreach to area pediatrician offices, targeting the PCP's to educate them on CSA services and the value of participation in the Care Planning team process. The FP will provide information, training, support, advocacy and related services. The point is to effectively represent and advocate in support of families.~~

Project 2: Technology Enhancement~~Support: Facilitating referrals, assessments and team communications~~

This project will provide new hardware and training support for an enhanced Comprehensive Assessment process and CANS integration and outcome reporting, along with CCD data transmission, that supports teams in conducting mobile and site based Care Planning Team assessments and improves participation and collaboration with Primary Care and ACO teams on ICC Care Plan teams. Training/orientation support will be offered to current and new partners in use of the Credible provider portal to share client information. Credible will be enhanced to fully integrate CANS into the EHR, including outcome reporting and CCD data transmission.

2. The specific goal, as defined in Section 3.4, advanced by the project and plans to address the goal through the proposed project

a. Workforce Development Goal: Broaden and deepen CSA staff skills to provide high quality services.

Our goal is to improve recruitment and retention of CSA staff by providing ongoing training (i.e., direct care staff, supervisors, management) and offering on-going licensing and credentialing opportunities for the CSA workforce especially in areas of measurement and data analysis, health behavior models, evidence-based practices, HIT, specific treatment modalities, and treatment plan development.

Skill Sets that new training curricula will address:

- The ability to conduct brief, evidence-based and developmentally appropriate screening and to conduct or arrange for more detailed assessments when indicated.
- The ability to create and implement integrated care plans, ensuring access to an array of linked services, and the exchange of information among consumers, family members, and providers.
- ~~The ability to deliver evidence-based, integrated approaches to the treatment of health conditions, adapting them to the population, treatment setting, and local system of care.~~

~~**b. Operational Infrastructure Goal**~~

~~The goal of the Senior Family Partner outreach is to effectively represent and advocate in support of families and to orient and educate all stakeholders, families and providers alike, to the CSA system. This will make services more readily available to those who need them, will increase referrals to the program and will provide greater recruitment of new Family Partners.~~

Project 2: Technology ~~Innovation~~ Enhancements Goal:

CSA will embrace HIT and support its implementation in order to survive in the more integrated healthcare system emerging through healthcare reform. Objectives are to:

- Through the care plans, link multiple services, healthcare providers, and community resources to meet the healthcare consumers' needs.
- Ensure the flow and exchange of information among the healthcare consumer, family members, and linked providers.
- Screen, assess and provide services to clients using computer-based and web-based tools.
- Employ telehealth applications to ensure consumer access to appropriate care and to deliver health care.
- Facilitate collaborative care by actively sharing relevant information with others through communications that are authorized by the healthcare consumer and are permissible under HIPAA and related laws, regulations and policies.
- Communicate with healthcare consumers and family members using secure online, mobile, and "smart" technology and devices.

3. The scope of the project, including duration of time during which the funds received under the Contract shall support the project, and the planned methods and activities that shall be performed to achieve the identified goal

Project 1: Tier 1 Certification:

a Workforce Development

Increase the hours of training offered to CSA staff. This entails allocating time of a Master Trainer to provide wrap certification training, and allocating time for Care Coordinators to achieve Tier 1 certification. The training program will span the five years of the grant, albeit at a diminishing level of training each year.

~~**b. Operational Infrastructure**~~

~~The outreach project will allocate 0.25 FTE of Senior Family Partner time for outreach in the Prep Period only.~~

Project 2: Technology Enhancement:

The predominant expenditure for this project will be enhancements to our electronic health record, Credible. We will purchase/implement Credible Connect to ensure ability to translate CCD data points, as well as build in CANS integration to improve outcomes reporting and sharing of CANS data with PCP's. ~~occur in through~~ CSO will also purchase hardware and adjunct equipment in the Prep Period as well as ongoing funding of software licenses and ongoing maintenance fees ~~and data plans~~ through Years 2-5.

4. Proposed deliverables that will result from the project

a. Workforce Development

The purpose of Wraparound certification to ensure caregivers and youth have access to the people and processes in which decisions are made as well as access to needed resources and services; to ensure family's voices are heard and they are full decision makers in charge of their own lives; and to ensure the family has ownership of the planning process in partnership with the team and is in agreement and committed to carry out the plan. Research has shown that consistent use of high fidelity wraparound processes leads to improved outcomes for children with complex needs and their families.

Certification courses provide a standard curriculum and training hours in core requirements. It is a multi-modal training with materials that can be flexibly provided for individuals, small groups or larger trainings. The training can be individualized to the learning styles of the staff and to the nuances of the population served.

As a follow-up, coaching will involve following front-line staff as they partner with families utilizing the wraparound practice model and moving through the phases of wraparound. Thus, coaching will focus on supporting all staff to move toward high-fidelity and quality wraparound practice during each phase.

~~CSO has implemented an innovative staff training program for all CSO staff. *Integrated Health Treatment Education and Training* (IHTET) is a program of education and training to develop general skills for mental health practitioners/professionals in engaging patients, promoting their self-efficacy to improve their own health, using general medical knowledge to be able to connect them to appropriate services, to address questions and to support client-directed integrated treatment planning that include physical health and wellness goals. BH DSRIP staff will be required to attend all of the IHTET modules, described below, as part of their orientation and ongoing training.~~

~~The training program enables CSO staff to (1) support people who are coping with chronic illnesses that put their health and/or social functioning at risk; and (2) use an integrated approach to addressing health problems and finding solutions. The course offers~~

~~certification at two levels: basic, for all CSO staff; and advanced practice, for those who have care coordination or care management responsibilities.~~

~~Through IHTET, CSO staff are trained to offer:~~

- ~~Development of hierarchy of client needs, physical and mental, to help clients to make a plan that they can follow through to address these needs;~~
- ~~Support for clients in "buying in" to their own self-care;~~
- ~~Help for clients to overcome fears concerning meds, procedures, surgeries, etc., helping them attain a healthy point of view about their bodies and medical conditions and understanding the relationship between physical and mental health;~~
- ~~Client education on how to talk to their doctors and feel heard, to be aware of their medical conditions and to be proactive in preventive care;~~
- ~~Encouragement to use their PCP and not the ER for routine health care needs;~~
- ~~Documentation of Client medical profile fields and ensure medical/wellness goals are addressed in an Integrated treatment plan.~~

~~All CSA staff will go through an comprehensive training that includes program specifications and requirements; Credible orientation and utilization; conducting Comprehensive Assessments; Care Plan and the role of the Care Team; Risk Management and safety planning; area specific community resources; Peer Support; Engagement, Building Relationships & Boundaries; Cultural competency and serving linguistic minority populations (including Deaf/Hard of hearing); and the four CSO Integrated Care Modules (see below), and Nonviolent Crisis Intervention using CPI (Crisis Prevention Institute). CSA staff will also be encouraged to attend EBP trainings such as Motivational Interviewing, Seeking Safety, SBIRT administration and interpretation, and others as offered.~~

~~b. Operational Infrastructure~~

~~CSO will work with other service providers, the consumer advisory board, and community stakeholders to identify areas to strengthen relationships and expand connections to the community. The CSO Program Director and Senior Family Partner will engage in community outreach activities and be charged with following through with linkages to needed resources. CSA staff will participate in regular staff meetings, of which community resources and connections to stakeholders will be regularly reviewed and shared. The Program Director also hold the responsibility of reviewing community needs and collaborators. Resource guides will be made available to CSA staff, and web based search libraries will be encouraged as resources.~~

c. Technology Innovation

Deliverables include the hardware and software enhancements described below in subsection (5)

5. Specific use of DSRIP funding the Bidder plans to make in order to execute the project and an explanation of how each investment will support the execution of the project goals;

Preparation budget period: $99,140

Goal 1: Training and Workforce Development

Cost of Trainer: $9,225

Cost of care coordinators: $8,610

Training supplies: $1,000

~~b. Operational Support~~

~~Outreach worker: $6,150~~

~~New recruitment strategies: $9,000~~

Goal 2: Technology

Technology purchases: $70,000

- ~~Desktop PC~~
- 2-1 notebooks for 15 staff $9,000
- Smart boards - 1 per site $6,000
- Enhancements to Credible to include CANS integration - $55,000
- ~~Smart phones with data plan~~

~~**Budget period 1: $88,030**~~
~~Goal 1: Training: $35,670~~
~~Cost of Trainer: $18,450~~
~~Cost of care coordinators: $17,220~~
~~Training supplies: $2,400~~
~~b. Operational Support~~
~~Outreach worker: $6,150~~
~~New recruitment strategies: $9,000~~

~~Budget period 2: 32,100~~
~~a. Training~~
~~Cost of Trainer: $8,160~~
~~Cost of care coordinators: $8,160~~
~~Training supplies: $2,400~~
~~b. Operational Support~~
~~Outreach worker: $6,150~~
~~New recruitment strategies: $9,000~~
~~c. Technology~~
~~Budget period 3: 19,260~~
~~Budget period 4: 12,840~~
~~Budget period 5: 6,420~~

~~All technology hardware purchase is in the prep period, along with some recruitment, outreach and training.~~

~~There is a focus on training in Years 1 – 5 - to enhance integration; improve retention; and increase quality (including Comprehensive Assessment quality).~~
~~Technology funds for years 1 – 5 mostly recurring license fees and Credible maintenance fees to support Credible connect and CANS integration data plan for cell phones, etc – which agency will start to absorb and "sustain" as project goes forth.~~

6. Existing internal resources (e.g., funding, staff, business site, IT systems, hardware) the Bidder plans to use to implement the project

a. Workforce Development

Our extensive training program facilitates the acquisition of new skills and certifications in order that staff may seek higher levels of professional attainment. Cross training is one means of creating flexible staffing resources. Our staff can move from program to program and have found it an excellent strategy for professional development. Through the development of a multi-disciplinary and multi-level staff Training Committee, CSO continues to invest significant labor and financial resources to an agency-wide training and professional development series. Trainings are targeted to both management development and multi-level direct care staff (including professional, clinical level as well as non-professional, case manager and direct service level), with a focus on improving quality of services. CEUs from NASW and NBCC are offered when applicable for agency staff, free of

charge. In-house trainings have been well attended and well received, and have significantly contributed to quality initiatives over the past year. CSO also offers $200 per employee available for the support of outside professional development opportunities, or for the purpose of encouraging licensing.

The training committee meets on a monthly basis to continue to evaluate trainings within the agency, as well as assess needs and plan for future events. Direct service staff are surveyed annually to provide feedback on training needs, suggestions and requests for further training. Training requirements from specific programs and funding agencies are integrated into training calendars. We have a video conferencing system with classrooms across our five outpatient sites that allow us to do virtual training for all staff, regardless of location.

~~**b. Operational Infrastructure**~~

~~We have been operating the CSA program since 2009 and have recruited trained and deployed many family partners to function in peer programming roles. We also have excellent working relationships with pediatricians, schools, family support providers, recreational providers and other community resources upon which we can build an enhanced and targeted outreach initiative.~~

c. Technology Innovation

CSO's EHR, Credible, supports care coordination with its integrated platform (primary care/medical profiles; mental health and substance abuse; e-labs; e-prescribing; client portal and provider portal, and a designated "case manager" role within the system that allows for case management across service levels/types). The new "Credible Plan," which is a truly integrated treatment plan that pulls goals and outcomes from all programs into a single, coordinated Care plan, is scheduled for release by September 2017 and will be used by all CSO programs. Upgrades to Credible will allow for CCD information and Credible Plan to be shared across PCP/ACO networks, as well as sharing of CANS outcome data and enhanced reporting capacity on such data.

As an EHR Credible creates an environment that facilitates internal care coordination and care management through use of single client record across enrolled programs. It also:

- Allows for collaboration with external providers- Integrated care model; Care management platform; provider portal and client portals with access determined by the client.
- Treatment Planning Module- Allows for care planning and documentation across multiple programs
- Employee Messaging, Client Warnings, Administrative Notes, Notification Triggers, "To Do" List- Multiple tools to support care coordination between multiple levels of care and across agency
- Mobile Care App (IOS/Android) – Credible's mobile app is a tool that integrates with the web-based version of Credible that allows providers to securely access encrypted clinical data while providing services in the community, either on- or off-line.
- Provider Portal, Client Portal, Direct Messaging, Summary of Care, eFax, collaboration with external providers to support consumers in navigating BH system of care. With appropriate releases, allows for direct exchange of data and forms within the portal.
- Business Intelligence (BI)- Fully configurable reporting tool to create custom reports, custom dashboards, and graphical reporting functionality for distribution. BI is a powerful tool for reporting with regard to identifying patterns and trends and assessing the needs of the communities we serve, including ability to identify medically complex individuals and patterns and trends. BI has the capacity to pull internal AND external feeds of data to create reports, analysis and population management capacity.
- Dashboards- Present targeted data in consumable format for day-to-day operations. Empowers staff with the ability to access, analyze, and report on data in a streamlined, efficient manner.
- eRx- ePrescribing (SureScripts certified): Credible eRx provides: a fully integrated drug database; reduced medication errors; monographs, contraindications, drug/drug interactions; drug/allergy interactions; generic equivalents, recommended dosage, and prescriber favorites; electronic submission to pharmacies; and identity proofing for prescribers.

7. An explanation of how funds will be allocated across the organization, and CSA site(s)

The CSA program is considered one "site" and the training and technology systems are centralized so there need not be any allocation of funds across sites. The training funds will be spent on one trainer and associated cost items. Our technology support investments are, by their nature, centralized with information and functions distributed across all internal users, with some functions available to external uses.

8. The internal evaluation, measurement or performance management strategies

CSO holds that its mission can be realized through the delivery of high quality programs and services in combination with advocacy efforts within a multi-level systematic approach. Quality Assurance and Continuous Quality Improvements are essential elements of CSO's operations. To support clinical best practice and innovation, CSO has established structures and processes that cultivate continuous learning. We support an organization-wide climate where feedback is freely exchanged. Employees have a clear, shared vision of the organization's goals and values. Staff get time to inquire and reflect about what they are doing and why, as well as having access to a broad range of training and professional development options.

CSO has the capacity to collect, report, and track encounter, outcome, and quality data, including but not limited to data capturing: (1) Enrollee characteristics; (2) staffing; (3) access to services; (4) use of services; (5) screening, prevention, and treatment; (6) care coordination; (7) other processes of care; (8) costs; and (9) individual outcomes. Our internal Quality Improvement process begins with the data and information we collect related to our outcome measures and targets. We perform reviews of regulatory compliance and compliance with clinical standards and develop corrective measures if needed. We administer consumer satisfaction surveys annually by program to help identify issues coming out of consumer experience. Adherence to program policy and regulatory compliance are part of ongoing monitoring of quality. Treatment plans are reviewed regularly and charts reviewed during weekly Care Plan Team meetings. Systems to identify high-risk clients have been developed and implemented that trigger a high-risk case review, associated safety plan and updated treatment plan. We use weekly executive team meetings and department head meetings, and monthly reports to the Board of Directors meetings, consumer/staff planning committees and consumer program evaluations to evaluate our progress toward established benchmarks.

We will gather and analyze the data starting Q1 and ongoing to establish regular quality initiatives and establish measures of success:

- Tracking of critical client/consumer information
- Consumer outcomes, including CANS, medical and BH metrics
- Seamlessly view documentation, treatment plans, ISPs, and demographic data
- Set up to prioritize integrated care, with medical history, medical records, problem lists and medication information
- Data captured is both live and historical for key factors needed to support needs of medically complex individual
- Reporting on access benchmarks, utilization benchmarks, and clinical quality indicators (e.g.; ER utilization; cost utilization; time between intake and assessment; risk assessment; risk analysis; etc).

To evaluate training, attendance logs with trainee contact information will be collected, collated and logged. This data will be forwarded to the Master Trainer who will aggregate the information and forward it to the QA director for analysis and reporting. Increases in staff skills, knowledge and expertise will be measured using pre- and post-test questionnaires.

To evaluate enhanced job performance of trained staff, the CSO supervision process includes assessment, individual and group sessions, live coaching, documentation review, grand rounds participation, and performance reviews. Performance Improvement coaching is a tool that may be used to identify performance deficiencies and specify corrective procedures to facilitate that employee's improvement and, hopefully, his or her ultimate success within the organization. Performance reviews are utilized as a step in performance evaluation, and to jointly create performance goals and professional development plans.

Improved performance related to collaborative Comprehensive Assessments and Care Planning related to technology support will be measured by the Quality Management Director. Monitoring tools help to insure fidelity to the proven wraparound systems. CSO designs and re-designs program based on evidence-based models, evaluation studies and program outcome data. Peer observation and feedback, reflective practice and debriefing, and feedback loops based on data will help ensure quality and fidelity to practice as well.

To measure aspects of increased coordination with external providers in increase referrals and provide a timely access to ICC services, we will monitor communication among team members as documented in the medical record. We are able to evaluate random samples of patient charts over a specified period to verify that documentation of communication in the medical record is accurate, complete, clear, and concise. We will review and assess the effectiveness of communication within the care team and with outside providers.

B. Project Team description

For the proposed project(s), the Bidder shall describe its organization's level of readiness and proposed Project Team for implementing the proposed project(s), including:

*1. An organizational chart of the Bidder (as an attachment) that identifies personnel, senior managers, and other staff by titl*e

See attachment – Organizational Chart

2. A list of current staff that the Bidder proposes will be involved in the project(s), including their job descriptions and qualifications for the project(s)

The DSRIP Team consists of Sandi Walters, Associate Vice President of Community and Family Services, Joanne Jackson, Associate VP of Administrative Operations, and Mary Jo Crowley, CSA Director and Master Trainer.

See attachment immediately following this section – Job descriptions and resumes.

ATTACHMENT: JOB DESCRIPTIONS AND RESUMES:

JOB DESCRIPTION – Sandi Walters, LICSW

TITLE: ASSOCIATE VICE PRESIDENT, COMMUNITY AND FAMILY SERVICES

LINE OF RESPONSIBILITY: The Associate Vice President of Community and Family Services is directly responsible to the VP of Outpatient Services. The Care Coordination Directors, Family Resource Center Directors, and other related program directors report to the Associate Vice President of Community and Family Services.

PTO- past member Erving Elementary School 2004-2009

JOB DESCRIPTION – Joanne Jackson

TITLE: ASSOCIATE VICE PRESIDENT, ADMINISTRATIVE OPERATIONS

PURPOSE: To oversee the agency's IT, Business systems, purchasing, and facilities departments and ensure maximum efficiency of administrative operations. The Associate Vice President of Administrative Operations is responsible for interfacing with technical consultants and vendors on behalf of the agency, manage the agency banking operations, and providing statistical reports to management on a scheduled and ad-hoc basis. The Associate Vice President of Administrative Operations also assists the CFO in ensuring setup of proper internal controls related to administrative and technological operations, and alerts management to potential problems.

LINE OF RESPONSIBILITY: The Associate Vice President of Administrative Operations reports to the Chief Financial Officer. The Facilities Manager, IT Manager and Purchasing staff report directly to the Associate Vice President of Administrative Operations.

ESSENTIAL RESPONSIBILITIES:

1. Supervise and oversee agency's day-to-day operations related to purchasing, facilities and IT functions.
2. Oversee and supervise network administration to control access to computer systems and to maintain security and compliance with technology usage policy; make recommendations to CFO and CEO on agency's technology needs and related benefits, options and cost analyses.
3. Oversee maintenance of all computer systems, hardware, and software for the agency.
4. Oversee facility maintenance at all agency worksites.
5. Work with software vendors to resolve problems and to develop new reports as needed.
6. Negotiate and oversee leasing and service agreements for all organizational electronic devices, office equipment, telecommunication hardware and software or other items as requested by CFO.
7. Possess working knowledge of all agency software including billing, EHR, accounting and payroll systems, and ensure staff have appropriate training and supervision to utilize such software/systems with maximum efficiency.
8. Ensure proper creation and maintenance of reports as required to satisfy needs of organization.
9. Work on special projects related to department as requested by CFO or CEO.
10. Conduct interviews for vacant positions within the departments; work with HR to recommend personnel actions as required, including hiring, transfers, promotions, discipline, or dismissal.
11. Provide ongoing supervision to administrative staff and ensure regular departmental supervision meetings occur.
12. Attend staff and Senior/Agency Management meetings as directed/scheduled.
13. Adhere to the philosophy of "customer satisfaction" and consistently follow the same by providing reliable, responsive, consistent and high quality service in a timely manner to staff and external customers.

14. Support and maintain a high performance environment characterized by positive leadership and a strong team orientation as an added value member of the Senior/Agency Management team; support CEO-approved goals and philosophies, sharing a fundamental philosophy that enhances the agency's global reputation within the community.
15. Communicate regularly with staff on progress toward defined goals of Senior/Agency Management team; complete and conduct annual performance evaluations in a timely fashion, providing specific feedback and work with HR to initiate corrective action when defined goals and/or required results are not met.
16. Motivate staff to embrace the philosophies and goals of the Senior Management team.
17. Perform other duties as assigned by supervisor.

QUALIFICATIONS: College degree in a related area of study or equivalent experience, and three years' management and supervisory experience in MIS and billing, preferably in behavioral health or related field. Working knowledge of electronic billing and payroll software/systems in addition to the ability to work with email and word processing software. Excellent oral and written communication skills. Ability to work independently and follow through with projects. Ability to perform multiple tasks and assignments over an extended period of time; understand and relate ideas and concepts; and identify and prioritize issues in a responsible manner. Ability to function effectively as a member of the Senior/Agency Management team with demonstrated collaborative, cooperative, supportive and flexible attitude. Must possess valid driver's license and reliable transportation.

A.S., Computer Information Systems

Certifications 2016 - Certified Youth Mental Health First Aid Trainer (Active)

JOB DESCRIPTION – Mary-Jo Crowley-Bowdish, LICSW

TITLE: CSA DIRECTOR/TRAINING COORDINATOR OF INTENSIVE CARE COORDINATION

PURPOSE: To provide daily administrative and programmatic oversight of the Intensive Care Coordination Program including program leadership, integration with other CBHI Services, and supervision of the Greenfield ICC Team. Additionally, the Assistant Director/Training Coordinator is responsible for the design and implementation of orientation and training of ICC Program Staff. The ICC Assistant Director Training Coordinator is knowledgeable of Systems of Care philosophy and the Wraparound planning process informing partnerships with families and skilled coordination of services. The ICC Assistant Director/Training Coordinator also oversees Family Support and Training services, both within ICC and standalone FS&T. This includes collaborating closely with CSO's subcontracted FS&T providers.

LINE OF RESPONSIBILITY: The Assistant Director/Training Coordinator of Intensive Care Coordination reports to the Family Support Services Director.

ESSENTIAL RESPONSIBILITIES:

1. Provide regular administrative, clinical, and care coordination supervision to intensive care coordination staff including Family Partners.
2. Provide education and direction for successful implementation of Wraparound services.
3. Work collaboratively to coordinate program development and teambuilding with all ICC staff, including Family Partners.
4. Provide clinical consultation and guidance to ICC staff, ensuring clinically informed care plans for children and families.
5. Facilitate care planning team (CPT) meetings as necessary and educate staff on the facilitation of meetings.
6. Oversee supervision of Care Coordinators at all three sites in order to provide consistent, quality and informed services throughout the CSA.
7. To oversee orientation of new staff to Wraparound in the first four weeks of employment and to work closely with site ICC supervisors to train and credential new ICC and FP staff within 6-9 months of employment.
8. To supervise and monitor the STAY together grant from DMH.
9. Assist ICC Supervisors and Senior Family Partners in learning the training/credentialing process to develop a team of trainers.
10. Provide direct delivery of intensive care coordination services as needed, including comprehensive home-based assessment inclusive of the CANS, family-driven identification of appropriate members of the care planning team (CPT), collaboration with a Family Partner who provides family support and training, development and implementation of a youth- and family-centered intensive care plan (ICP), and development of a risk management/safety plans.
11. Provide assistance to staff and community participants with systems navigation and coordination.

12. Provide community education regarding Wraparound services, intensive care coordination and the CSA.
13. Be available to work flexible schedule which may include evening and weekend work and availability by phone or pager to supervise and assist with plan implementation, as required by the needs of the program.
14. Utilize clinical and training expertise to provide leadership and guidance to staff, families and care planning teams for complex family presentations requiring advanced clinical management skills.
15. Act as a resource to ICC Supervisors during the CSA credentialing process.
16. Maintain complete, accurate and timely records.
17. Maintain regular communication with MCE's (managed care entities) and third party providers.
18. Meet expected productivity level when direct service is required.
19. Attend staff and Agency Management meetings as directed.
20. Adhere to the philosophy of "customer satisfaction" and consistently follow the same by providing reliable, responsive, consistent and high quality service in a timely manner to staff and external customers.
21. Support and maintain a high performance environment characterized by positive leadership and a strong team orientation as an added value member of the Agency Management team; support CEO-approved goals and philosophies, sharing a fundamental philosophy that enhances the agency's global reputation within the community.
22. Communicate regularly with staff on progress toward defined goals of Agency Management team; if required, complete and conduct annual performance evaluations in a timely fashion, providing specific feedback and work with HR to initiate corrective action when defined goals and/or required results are not met.
23. Motivate staff to embrace the philosophies and goals of the Agency Management team.
24. Attend all scheduled individual and group supervision.
25. Follow all agency policies and procedures.
26. Perform other duties as assigned by supervisor.

QUALIFICATIONS: Masters Degree in Psychology, Counseling, or closely related field from an accredited program. The care coordinator is skilled in providing education and planning regarding treatment access and service needs, parenting skills, conflict resolution mediation, risk management/safety planning, family advocacy and support. Demonstrated experience working with children, adolescents and families, including experience navigating children's systems and supports within the community. Knowledge of and training in child development and children's mental health experience. Good listening skills, nonjudgmental ability to foster self-sufficiency; desire to work in natural family and youth settings. Ability to establish trusting relationships through compassion, empathy and insight. Be an effective member of a Team. Demonstrated sensitivity to the needs of families from diverse cultural or linguistic backgrounds. Computer proficiency required including ability to work with email, electronic health record and word processing software.

Resume: Mary-Jo Crowley-Bowdish, MSW, LICSW

PROFILE

- Experienced and skilled clinical supervisor.
- Dedicated to respectful, collaborative, trauma informed, strength based practice.
- Strong background in clinical intervention with diverse populations.

Licensed Independent Clinical Social Worker # 113778 MA

EXPERIENCE

ASSISTANT DIRECTOR/TRAINING COORDINATOR FOR THE CSA 2009-Present
Clinical & Support Options, Massachusetts

- Provide regular administrative, clinical, and care coordination supervision to all CSA staff.
- Train CSA staff to be Tier 1 certified.
- Provide ongoing education, training and direction to ensure high fidelity wraparound.
- Provide assistance to staff and community members with systems navigation and coordination.
- Provide individual supervision to the CSA supervisory team.
- Review Individual Comprehensive Assessments including Child and Adolescent Needs and Strengths (CANS**),** Individual Care Plans, and Strength Needs Culture Discovery Assessments.
- Provide presentations of the Wraparound Process to community providers including schools, clinics, police departments, crisis teams, primary care physicians and state agencies.
- Provide individual, dyad, and team supervision for CSA staff.

CLINICAL THERAPIST 2008-2009
Maple Valley School, Wendell, Massachusetts 01379
Victory House Behavioral Therapeutic Residence**,** Greenfield, Massachusetts, 01301

- Provided individual, family and DBT group therapy.
- Provided treatment for youth with sexualized and fire setting behavior.
- Collaborated with providers within the milieu, and in the community.
- Attended IEP meetings and worked closely with the public schools.
- Completed client assessments, including diagnostic and clinical formulations.
- Developed strength based treatment plans and behavioral incentive plans.
- Provided consultation to all direct care staff.
- Supervised Masters level student interns.

FAMILY STABILIZATION CLINICIAN 2003-2008
Massachusetts Society for the Prevention of Cruelty to Children, Greenfield, Massachusetts, 01301

- Provided individual and family therapy for high risk children and their families.
- Collaborated with providers within the agency and in the community.
- Developed individual treatment plans, behavioral incentive plans, and crisis plans for each child.
- Supported children and parents in their schools by attending IEP meetings and providing recommendations for school based interventions.

INTAKE CLINICIAN

- Provided individual and family therapy for individuals of all ages.
- Completed diagnostic assessments and comprehensive treatment plans.
- Monitored client progress using the Treatment Outcome Package (TOP), and the Child and Adolescent Functional Assessment Scale (CAFAS).

CERTIFICATIONS

- Credentialed as a Tier One and Tier Two Wraparound Facilitator, Vroon VDB, LLC.
- Credentialed as a National Wraparound Coach, Vroon VDB, LLC.
- Child and Adolescent Needs and Strengths (CANS**)** certified.

3. Any staff the Bidder proposes to hire or engage to be involved in the project(s), including their proposed job descriptions and qualifications for the project(s)
Not applicable
4. The roles and responsibilities of each staff of the Bidder's Project Team and how the Bidder will ensure efforts are coordinated among staff and not duplicated
- As Team leader, Sandi Walters will oversee the entire DSRIP implementation process in terms of timelines and deliverables and will directly supervise the outreach effort of the Senior Family Partner.
- Mary-Jo Crowley will oversee the planning and implementation of the full training curriculum and will serve as the Master Trainer.
- Joanne Jackson will over the specification, purchase and installation of technology hardware and will coordinate with Mary-Jo Crowley on training initiatives so that staff will be able to make optimal use of technology in enhancing the Comprehensive Assessment process.
5. A description of how the Bidder proposes to manage the project(s)
Project Team: We will have well established executive level communication channels, and well developed policies and procedures for the program, designed to minimize and prevent conflict. The Team will be supervised by CSO Associate Vice President Sandi Walters, LICSW. During the implementation of the DSRIP projects, the Team Leader will convene a meeting of the managers on a monthly basis, to discuss progress of the program, confer about issues—whether recruitment, technical, clinical, inter-agency, or other—share ideas about corrections or improvements and generally develop a team identity and culture that will support these projects. Ms. Walters will be easily accessible to the Team by cell phone, text and email.

C. Implementation Plan and Timeline

Preparation Period			
Month One	***Key Action Steps***	***Person Responsible***	***Timeframe***
Convene DSRIP Project Team (DPT)	At initial meeting, DPT will review implementation plan and revise if needed	Sandi Walters (SW) (VP co-leading DPT)	Within 3 business days of award announcement DPT will meet bi-weekly during planning period
Review Credible (EHR) plan for status with regard to DSRIP projects	Identify status of necessary system enhancements & refinements	SW & Business Systems team	Complete w/in 30 days
Establish Policies/Procedures for new communication and collaborations	Identify P/Ps needed for DSRIP in addition to established P/Ps;	Karin Jeffers (KJ) (CEO), SW and appointees TBD by CEO	Appointed w/in 14 days of award
Develop Training Plan	Develop course offering and training schedule	Mary Jo Crowley (MJC) and SW	By end of month one
Month Two	***Key Action Steps***	***Person Responsible***	***Timeframe***
Identify and prep Family	Develop cross-section of	SW and Family Partner	Beginning of

Partner	existing and potential partners to contact		month two
Identify organizations targeted for outreach	Develop contacts list	SW and Family Partner	Beginning of month two
Identify hardware needs	Develop inventory of needed Smartboard and other technology equipment, order and purchase.	Joanna Jackson (JJ)	Mid-month two
Identify training participants	Recruit and notify staff who will be attending each set of trainings.	MJC	Beginning of month two
Test Credible processes for care coordination and provider portals	Per plan	JJ	ongoing
Convene CQI Exec Committee	Review QI requirements for project; develop program-specific plan	Ariane Krumholz (AK), QI Director	By end of month two
Develop informational materials customized for different stakeholders (e.g., members, referral partners)	Identify all products needed Design & produce them	Dir of Marketing with review by KJ, SW and DPT members	By end of month two
Contact ACO/MCOs	Identify ongoing contacts for various functions and collaborations; orient to DSRIP projects	KJ, SW	By end of month two
DPT reviews status of all prep sub-systems and activities	Revise or take corrective action as necessary DPT reviews revisions of P/Ps	SW, DE, DSRIP Dir convene	Mid-month two By end of month two
Month Three	***Key Action Steps***	***Person Responsible***	***Timeframe***
Begin outreach to ACOs/MCOs	Meet with designated leaders of ACOs/MCOs in CSA service area	SW and Family Partner	ongoing
Implement equipment installation at sites	Per plan	JJ & operations team	ongoing
Finalize training plan	Review all curricula, identify instructors Establish training schedule	Melody Arsenault (MA) (VP-HR), SW, MJC	By mid-month three
Review site set-ups	All space for staff made fully functional	JJ & operations team	By end of month three
Review QI plan for DSRIP	Develop data collection, monitoring & reporting workflows	AK & SW	By end of month three
Test Credible revisions	Per plan	DSRIP Project Team	ongoing
Reviews status of all prep activities	Revise or take corrective action as necessary	DSRIP Project Team	Mid-month three
Month Four	***Key Action Steps***	***Person Responsible***	***Timeframe***
DPT reviews status of all prep sub-systems and activities	Revise or take corrective action as necessary	DSRIP Team convenes	Beginning month four
Conduct in-service training	Deliver training per plan	MJC	ongoing

for all staff (on all topics identified in this proposal)			
Begin training	Initiate training session	MaASW and MJC	By end of month four
Outreach to community referral partners	Provide information about CSA services, contacts Ensure our understanding of their services, availability, eligibility red's, referral process	SW, Family Partner	ongoing
Finalize Credible p/p	Test with users	JJ & Business Systems team	By end of month four
Month Five	***Key Action Steps***	***Person Responsible***	***Timeframe***
Orient community partners	Provide orientation and schedule training sessions with providers	MJC and SW	By mid-month five
Complete initial round of training for all DSRIP staff (on all topics identified in proposal)	Deliver training per plan	Managed by HR team & MJC	By end of month five
Enhance Comprehensive Assessment and Care Planning	Conduct a prototype collaborative sessions with Smartboard and other technology	SW, CPT and ICC staff	by end of month five.
Continue outreach to referral partners	Provide information about CSA services, contacts Ensure mutual understanding of services, availability, eligibility req'ts, referral process	SW, Family Partner	ongoing
DPT reviews status of all prep sub-systems and activities	Revise or take corrective action as necessary	SW, DE, DSRIP Dir convene	Mid-month five
Year Two – Year Five	***Key Action Steps***	***Person Responsible***	***Timeframe***
	Support new technology with licenses for SmartBoards and data plans for smart phones.	JJ	ongoing
Training	Continue training sessions	MJC	ongoing
CQI/Quality Assurance	Annual evaluation of DSRIP training and technology projects	DPT and SW with Dir. of Quality Mgmt	ongoing

D. Budget Report and Budget Narrative

See Attachment B and C for Budget Report and Budget Narrative, immediately following this page.

E. Sustainability

While sustainability is a challenge for any non-profit organization that is highly dependent on public funding, CSO has some advantages in place:

- Our cloud-based Electronic Health Record does not require high on-going maintenance fees. We have already completed the substantial initial investment and expect that future investments, beyond the term of the DSRIP contract, will be small enough to be covered by ongoing program revenue.
- Our administrative infrastructure, currently undergoing improvement to state-of-the-art technology for financial and HR management, is stable and sized to sustain reasonable growth in capacity.
- Our DSRIP projects all have the overall goals of capacity building and do not entail ongoing operations, rather, one-time investments.

CSO's executive management has demonstrated its strategic agility to grow and adapt services with the changing healthcare landscape, growing the organization from a budget of $5 million in 2005 to $35 million in FY 2017. This growth can be attributed:

- to having sights set on the future;
- cultivating and sustaining relationships with key organizational stakeholders locally and at the state level;
- having both the framework of a strategic plan and the flexibility to quickly move on strategic opportunities that arise unexpectedly; while
- continuously, vigorously attending to the quality and continual development of services; and
- cultivating and sustaining a high quality administrative management team and infrastructure.

Sustainability is further enhanced through our 2015 Strategic Plan which focused on updating and enhancing our administrative operations. This has been important, not only for improved efficiency and greater capacity, but also was critical to securing COA accreditation. COA scrutinizes many functional sectors: HR, training, IT, contract management, staffing and written policies and procedures for all programs. In the process, we redesigned workflows in HR, IT and finance department, added positions to assure appropriate separation of duties and to have sufficient resources to (1) assure regulatory compliance; (2) perform in accordance with our quality standards for timely responsiveness and adequate documentation; and (3) strengthen our capacity to manage operating risk.

We anticipate that these infrastructure improvements will continue to serve CSO in the next five years in the implementation of CSA DSRIP projects. CSO has established itself as a core provider for all the Mass Health MCOs and BH carve-out companies in western Mass. We expect to maintain our excellent reputation for service quality and responsiveness through the delivery system reform. Over the course of the 5-year DSRIP program, we will work with ACO/MCO, health care organizations and other organizations in the region to implement DSRIP projects.

We expect that efforts at relationship building and achieving shared understanding will serve CSO well over the course of CSA DSRIP implementation. We will work together with other System of Care stakeholders, as we all approach the end of the 5-year project, to develop new protocols, procedures and communications as well as conducting CQI on all the DSRIP initiatives. We will encourage our local system partners (ACOs, MCOs, CBOs,

schools, health providers, other behavioral health providers and consumer organizations) to meet with us (individually or collectively) regularly to work on meeting project goals.

6.5 COORDINATION WITH ACOS, MCOS, AND PRIMARY CARE PROVIDERS

A. Bidirectional communication between the Bidder and pediatric practices

~~CSO was fortunate in 2014 to secure a Workforce Training grant from the Commonwealth Corporation to enhance the skills of our workforce in providing integrated primary and behavioral health care. This undertaking has had the biggest impact on the agency in the realm of care coordination capacity. Two hundred members of our staff have participated in *Integrated Health Treatment Education and Training* (IHTET), a customized five-module training program to develop general skills for mental health practitioners/ professionals in engaging patients, promoting their self-efficacy to improve their own health, enhancing general medical/primary health knowledge to be able to connect clients to appropriate services, to address questions and to support client-directed integrated treatment planning that includes physical health and wellness goals. The most important aspect of this training program with regard to our CSA role is the coaching for our staff in communicating with primary care providers and pediatricians.~~

CSO will be working with ACO partners to set up notification systems between CSA staff and ACOs for ER visits, hospitalizations/ admissions to residential programs, discharge and follow-up as part of CBHI services. In the service areas where CSO is the ESP, we can track and notify any client hospitalized for psychiatric reasons. The CSO Business Systems team is working on an electronic notification exchange system that will include other facilities in addition to hospitals. Enhancements made to Credible will allow for CCD transmission, direct messaging of Credible Care Integrated plans and other CSA specific documents, and enhanced reporting on and sharing of CANS outcome data.

B. Referral management protocols for follow-up and informational sharing

CSO has a long history of engaging and collaborating with multiple MCOs and MCEs, and are confident that this success will apply to engagement with multiple ACOs as well if we are designated as a Community Partner. In additions wee will work with all CSA stakeholders as represented in Systems of Care, ACOs/MCOs and the State to help standardize processes as much as possible. We will assign referrals right away and notify the referring entity of the status of the referral and when and where intake will occur.

We will mutually develop conflict resolution strategies before any potential conflict arises, to assist in working through potential differences. We have well established executive level communication channels and well developed policies and procedures for referrals, designed to minimize and prevent conflict. We will have explicit and shared policies around updating Care Plans to that all team members and partners are aware of the child's and families' progress and further needs that are documented in Plan updates. As part of CQI, we will establish a process to analyze referral flow/caseload lists/productivity.

C. Team-based treatment planning in collaboration with pediatric practices

CPT team members are aware of the health history, status, and unique needs of the youth and family, and are assigned different responsibilities, which together are designed to result in continuous, comprehensive, coordinated care. As a result, all members of the team feel engaged in their key role of providing wraparound services. Communication between team members and pediatricians may be managed through the Credible Provider Portal\electronic messages, e-mails, or electronic notes in the health record.

We will document a policy and procedure for structured preparation and response to family issues by the Team in conjunction with the family's pediatrician and other providers. Based on the evaluation of communication between staff, we will develop a quality improvement process to address identified gaps and flaws in how communication is

exchanged. We will support all staff to work as a group to help develop action plans that will be implemented to improve communication processes in the practice.

D. Timely access to ICC services

~~Outreach by the Senior Family Partners (operational infrastructure project) with community providers will increase community awareness of ICC services and how to access them so that providers may make referrals with ease and with maximum communication and, where possible, by using CAO HER technology.~~ We will document a policy and procedure for structured preparation and response to family issues by the Team in conjunction with the family's pediatrician, other providers and ACOs. Based on the evaluation of communication between staff, we will develop a quality improvement process to address identified gaps and flaws in how communication is exchanged. We will support all staff to work as a group to help develop specific processes that will be implemented to improve communication processes in the program.

E. Connections to social services

Through our convening and/or participating in System of Care Committees, CSO has an extensive network of community organizations that we meet with regularly and whom are invited to participate in Care Planning Teams when involved with a family. This collaboration will be enhanced by the wraparound training of CSA staff (workforce development initiative) and support for collaborative Comprehensive Assessment and Care Planning processes (technology initiative.)

CSA Budget Report

Eliot Community Human Services, Inc.

Investment Funding	Prep Budget Period	Budget Year 1	Budget Year 2	Budget Year 3	Budget Year 4	Budget Year 5	Total Revenues

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Purchase of Care Management Platform	$ 20,000.00
Total Development and Adaptation of EHR and Care Management System	$ 20,000.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined: Eliot will invest $20,000 of CSA DISRP funds , in tandem with approximately $80,000 of Community Partner DISRP funds, during the preparation budget period toward the purchase of the eHana Care Management Platform. The Care Management Platform is essential to the successful integrated care and will ensure data exchanges with ACO, MCOs, PCO's, the CSA, and EOHHS. The eHana system will focus on real time coordination between the CSA and PCPs, other providers, and enrolled children and families.

The budget prep period includes the bulk of the funding for software development. Decreasing levels of funding will be dedicated to EHR enhahncements in subsequent years.

Technology for Service Delivery

Description of Expense	Cost
Chromebooks x 8 units x $500 each	$ 4,000.00
Smartphones and Service x 8 units x $500	$ 4,000.00
Total Technology for Service Delivery	$ 8,000.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined: An additional $8,000 of DISRP funds will be used to purchase and deplot enhanced hardware for CSA staff, including smartphones and tablets to improve efficiency and effectiveness of care coordination efforts. These are one time purchases, and related expenses will not be covered through DISRP funds in subsequent years.

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in executing activities related to the project.

Recruitment Expenses

Description of Expense	Cost
Recruitment	$ 5,000.00
Total Recruitment Expenses	$ 5,000.00

Provide a description of each recruitment expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined: During the budget prep period, ecruitment efforts supported by DISRP funds will include targeting advertising, marketing, promotional and informational material development, and other recruitment strategies in collaboration with Eliot's Workforce Development and Human Resources Departments. Targeted recruitment efforts will focus on BA and MA level ICC's , ideally with some experience with integrated health care; and Family Partners with experiencing navigating healthcare systems. Funding will support the development and printing of marketing materials to be sent via targeted direct mailing, social media marketing materials and enhance recruitment efforts through social media (LinkedIn, Facebook, Glassdoor, etc), and expansion of traditionally behavior helth focused in-person recruiting (ie: graduate schools of social work and psychology) to include new venues (general healthcare events, etc).

During subsequent years of DISRP funding, recruitment costs will no longer be included in this project.

Training Expenses

Description of Expense	Cost
Core training for new Eliot staff	$ 3,000.00
EBP Training for Eliot staff	$ 3,000.00
YMHFA and Enough Abuse Training for ACO/MCO	$ 6,000.00
Total Training Expenses	$ 12,000.00

Provide a description of each training expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined: During the prep period, Eliot will invest an estimated $12,000 of DISRP funds in training and consultation. Training and consultation will include training for Eliot CSA workforce to increase staff knowledge and skill in effective care coordination and support in conjunction with ACO, MCO and PCO entities, targeted training for the Project Leadership Team, and for Eliot to provide trainings to ACO, MCO and PCO entities. Approximately $3000 will support enhanced new staff orientation and professional development trainings for CSA staff (includes 8 days of new staff orientation and monthly in service development traiings). Approximately $3000 will be dedicated to evidence based practice training including Youth Mental Health First Aid, Enough Abuse, evidence based practice models,. Approximately $6000 will support Eliot staff providing training to ACO, MCO, and PCO staff in Youth Mental Health First Aid and Enough Abuse curricula. (trainng cost per person for YMHFA is approximately $100, with a goal of training 50 staff at ACO/PCO/MCO practices; Enough Abuse cost is limited to Eliot staff time at a rate of approximately $200 per training , with a goal of facilitating 5 trainings).

During subsequent years of DISRP funding, a small portion of funding (approximately $5000 per year) will continue to be allocated to training and consultation with a focus on continued professional development and integration.

Retention Expenses

Description of Expense	Cost
Incentives	$ 2,000.00
Teambilding	$ 2,000.00
Development	$ 1,000.00
Total Retention Expenses	$ 5,000.00

Provide a description of each retention expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined: Based on the recognition that increased employee retention is directly correlated to enhanced quality of care, a portion of DISRP funds will be dedicated to efforts to increase retention of ICC's and Family Partners through performance based incentives, teambuilding, and professional development initiatives. Incentives include employee referral bonuses of $500 per new hire (estimated for 4 hires). Teambuilding initiatives will include 2 staff "retreats" with a focus on enhanced collaborations , both internal (ICC and FS&T partnerships, accessing expertise related to enhanced care coordination) and external (engaging staff at ACO/PCO/MCO entities through open houses , etc). The Development expense will include productivity adjustment for CSA staff to allow for non-billable activities such as attending meetings (staff meetings, in-services, and other non-client related activities) and events hosted by ACO/MCO/PCO entities, etc . In addition to the efforts of the Community integration and Outreach Coordinator, this will provide Cadditional CSA staff the opportunity to develop enhanced relationships with providers at ACO/MCO/PCO sites, and will enhance the professional development of the CSA staff.

Retention will remain a priority beyond the budget prep periond, but will not be supported by DISRP funds.

				$ -
Total Salary		1.45		$ 43,479.17
	Fringe rate	23.7%	Total Fringe	$ 10,312.82
Total Program Staffing including Fringe				$ 53,791.99

For each position listed above, provide a brief statement of the position's responsibilities, how each will assist in accomplishing the goals of the project: Eliot has identified a Project Team comprised of existing key staff connected to the CSA and Community Based Services. During the prep period, Eliot will dedicate a portion of DISRP funds to the offset a prorated portion of the salary of the Director of Clinical Services, and the Project Lead, Mederic McLaughlin. Eliot will hire a Community Integration Outreach Coordinator at an estimated salary of $63,100.00 , and use DISRP funds to fully cover prorated salary and fringe, allowing the position to focus exclusively on non-billable outreach and coordination efforts with ACO, MCO and PCO entities. During the prep period, these positions/portions of FTE's will target outreach to develop and foster collaborative relationships with ACO, MCO and PCO entities and begin to establish systems for enhanced screening and determination of eligibility for CSA services, referrals, and expedited follow up.
During subsequent years, the Project Lead will no longer be funded through DISRP, and the Community Integration/Outreach Liaison will be funded at continuously lower level each year as the position begins to generate revenue through billable services and can sustain itself.

CSA Budget Report - Indirect Cost/Administrative Overhead- Prep Budget Period

Indirect Cost/Administrative Overhead Rate: ~~$ 11,936.08~~

Provide a brief description of how the Indirect Cost/Administrative Overhead rate was determined:
The Agency's current allocation of indirect costs at 11.5% which is a calculation based on an analysis of our last 3 years of agency administrative expense as well as our projections for agency administration costs for the fiscal year. These costs include those non-program specific reimbursable resources necessary for policy making, management, oversight and administration of Eliot as a whole. In this category are general agency administrative expenses such as HR, Finance, Executive Management, and general infrastructure.

Section 6.2 Executive Summary

A. Current performance on Development Plan

Eliot Community Human Services, Inc. (Eliot) is an agency that prides itself on educating, connecting and coordinating with, and supporting families, community partners and natural supports in combined efforts to improve the quality of life for those we serve. Eliot is committed to growing and learning to keep pace with new initiatives and models and the increasing complexity of those we serve in diverse cities and towns in the CSA's catchment area. The Agency is passionate about Intensive Care Coordination and Family Support and Training and understands the role its services have in ensuring children, youth and families have supports and resources that promote sustained success. Eliot is eager and excited to expand its partnerships with pediatric primary care physicians through this proposal. With a clear and exhaustive road map, Eliot is well positioned to further increase its footprint throughout the Northeast.

Constantly striving to improve, Eliot's Community Service Agency (CSA) efforts toward meeting goals established in its Development Plan have been proven successful. Since January 2017 the CSA has met the two goals of increasing youth voice on care plan teams and demonstrating increased effective teamwork. Although much progress has been made on the Development Plan's goals, there is more to be done in areas critical to solidifying a full complement of staff that will ensure timely access to all services for all youth. Eliot has developed a proposal which clearly outlines those areas which need to be addressed, identified aggressive timelines for completion over the next five years, created strong measures and outcomes for success and presented a sustainable model that will remain in place far beyond the length of the contract. Eliot firmly believes that funding to increase infrastructure and capacity building within the CSA will further advance these efforts and build upon a strong foundation of services.

B. Strengths and needs of Eliot

Eliot's strengths lie in its evidence based practice models and trainings that are recognized as best practices in the field, comprehensive and diverse infrastructure, and quality assurance systems that dictate a system for risk management and quality improvement.

Rooted in a deep commitment to individualized, strength based and trauma informed service delivery, Eliot has developed a comprehensive strategy for training and implementation of evidence based practices. Eliot has a network of clinicians trained in evidence based treatment models including, but not limited to, Trauma Focused Cognitive Behavioral Therapy (TFCBT), Attachment, Regulation and Competency (ARC), Alternatives for Families Cognitive Behavioral Therapy (AFCBT), Child Parent Psychotherapy (CPP) and Dialectical Behavior Therapy (DBT).

Youth Mental Health First Aid (YMHFA) training has been provided to all program administrators and staff by Eliot's eight certified YMHFA trainers. This nationally recognized training was developed to increase program staff's awareness of common adolescent mental health challenges such as anxiety, emotional and behavioral dysregulation and depression.

Eliot has recently partnered with MassKids to bring the Enough Abuse Campaign into our network of training resources and prevention. The curriculum addresses the recognition, prevention and intervention of child sexual abuse. Through a Train the Trainer Model Eliot has created a self-sustained network to ensure that every staff has initial and ongoing training relative to child abuse. In addition to training our internal workforce, trainers will facilitate trainings for community partners, including pediatric providers and ACO/MCOs.

Eliot is committed to Continuous Quality Improvement throughout all services, and has developed policies, procedures, and implemented infrastructure to support quality assurance initiatives including complex case reviews and multidisciplinary review teams. Eliot meets and exceeds standards for quality and outcome measurement set forth through contracts and funders.

Eliot's Children, Youth and Families Division has addressed its needs through a comprehensive Strategic Plan that formally identifies areas of growth, while highlighting responsibilities and aggressive timeframes for completion through tiered one, three and five year models. Current, short-term and long-term goals of Eliot's Strategic Plan include the recruitment of bicultural and bilingual staff, the development of additional IT systems to support outcomes of ICC services and collaboration with pediatric primary care providers and the sustainable implementation of additional evidence-based practices through several Intensive Learning Communities. To support these goals Eliot has created two new support positions; Quality Assurance Coordinator and Director of Evidence Based Practices and Clinical Training. Eliot's CBHI Leadership Team has worked diligently to ensure objectives are being managed and goals being met. All goals align with Eliot's mission of improving the quality of life for its engaged members.

C. Eliot's plans for improving timely access to ICC services

Eliot is constantly striving to ensure that each youth and family has timely access to services. Through this initiative Eliot intends to capitalize on the opportunity to secure additional resources in order to support several initiatives, including the need for a Community Integration and Outreach Coordinator which will enhance workforce development activities. This staff member is charged with connecting with non-traditional sources to recruit and expedite hiring of qualified candidates. A key deliverable during the first year of the grant will be to close the gap in Eliot's CSA staff vacancy rate and improve the retention of existing staff. Eliot will also review other factors that may be impacting access to care that are not staff vacancy driven including review length of service by program and objective measures and data currently being utilized to determine if leveraging existing community resources, affiliations and systems will enhance Eliot's ability to correspondingly serve more youth.

D. Eliot's plans for improving care coordination, care planning, and care management for ICC-Engaged Members

Eliot strongly believes that in order to respond to and meet the ever changing needs of the families and industry, continuous learning and quality improvement systems are crucial. From the onset of CBHI implementation Eliot committed to the Wraparound Principles. Currently, 100% of Eliot's ICCs and Family Partners hold Tier 1 Wraparound Certification, further strengthening its workforce, and supporting its commitment to improving services delivered using the Wraparound Principles as the foundation to the work. Always striving to build on its success and commitment to a continuous learning model, Eliot recently registered its CBHI Leadership Team for the 2017 National Wraparound Implementation Academy. At least one Eliot administrator will be attending one of the following modules, ensuring that information is shared and best practices are incorporated. The modules are as follows: Advancing Wraparound Practice for Care Coordination Supervisors; Strengthening Youth & Young Adult Engagement & Leadership; Enhancing Parent Peer-to-Peer Support & Leadership; Strengthening Evaluation, Research, & Outcomes Management and Advancing Organizational Executive Leadership Management. Through these modules, Eliot will implement those proven interventions and techniques, ensuring promising results for improving care coordination, planning and management for ICC engaged members.

E. Eliot's plans to improve performance on quality scores and Development Plan goals

Within this proposal Eliot has developed a comprehensive plan to address deficits as determined by the quality scores and Development Plan. The Agency is eager to continue to meet its goals of timely access and the creation and maintenance of a full complement of staff. These identified needs are connected, as without a stable and competent workforce timely access is compromised, and needs can be left unmet. Through this RFR Eliot intends to connect and collaborate with pediatric primary care providers and meet the goals of the RFR, through the addition of a Community Integration and Outreach Specialist that will focus on recruitment of staff, timely and seamless access of youth referred by pediatric PCP and a sustainable strategy for continued growth.

F. Eliot's plans for improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth

In a calendar year Eliot receives an average of 363 referrals for its CBHI services. Eight of those referrals, 2.2%, were from pediatric primary care physicians. Recognizing the important role PCPs serve not only from a medical perspective, but also a behavioral health lens, the Agency has chosen to address this issue within this RFR. Caretakers often utilize a child's physician as an assessor of needs, by bringing concerns related to symptoms of Serious Emotional Disturbance (SED) to the pediatrician. Eliot is excited to offer the enclosed proposal which will significantly increase its coordination with pediatric primary care providers.

Section 6.3 Populations Served and Community Engagement

A. Member populations, Communities served, promoting the health and wellbeing of individuals and actively initiating and maintaining engagement with individuals

The Malden Area CSA is the fourth largest in the state, providing Intensive Care Coordination with Family Support and Training services to a monthly average of 172 engaged youth in eight cities and towns in the Northeast. Towns and cities served by the CSA include Malden, Everett, Medford, Stoneham, Melrose, North Reading, Reading, and Wakefield. Eliot has the ability to meet the needs, and build on the strengths of diverse families and eclectic communities. The Eliot CSA employs a diverse team of bilingual and bicultural staff, reflective of the population served.

Understanding that in order to treat the many complex needs of the youth and families, a holistic approach must include a balance of all life's domains: educational, medical, recreational, spiritual, and mental health. When a youth is able to self-regulate, attach to positive caregivers and natural supports and experience competency in key skill areas he or she is more likely to experience sustained success. Eliot's ICC services ensure that all life domains are addressed, intensively coordinates services that meet each of those areas and, as the locus of the youth's care coordination, expects accountability from the youth, family and providers on tasks and assigned responsibilities.

Eliot seeks to have youth achieve success in all life domains including commitment to health, community and environment. Eliot has conducted workshops and events that encourage healthy relationships such as a youth-led workshop on consent and relationship violence, a cooking workshop with Whole Foods Market to support healthy and affordable family meals and Work Readiness Workshops to help youth build the skills needed to attain and maintain a job. Twice a year the popular Expression Show is held that allows youth the opportunity to showcase their talents, build self-confidence and support their peers.

In collaboration with the System of Care, Everett Youth Network, Malden Promise, local public schools and the SAMHSA funded, Healthy M.E. initiative, Eliot seeks to identity the individual needs of the youth in the community and provide supportive services to help meet those needs. From the very first contact, youth are encouraged to participate in every aspect of service delivery, advocate for their needs and to be active members of the community. At Eliot, youth are not only recipients of services, but active participants in their care planning teams, as well as, members of advisory boards that help to guide service provision. Youth are valued members of the Eliot team, his or her family and the entire community. Youth engagement is at the core of Eliot's behavioral health programming. Eliot believes that youth have a voice that should be heard. By promoting social and self-awareness, Eliot helps youth with behavioral health challenges to live to their potential, create positive outlooks for their futures and become active

participants in their community.

B. Relationships, collaborations and partnerships

The CSA serves as the "hub" for community collaborations through our work as host and chair of the Greater Malden System of Care (SOC). The SOC responds to the needs of families and system partners in the CSA catchment area. The SOC committee supports innovation in, and coordination of, community resources for children and families. The SOC committee is currently addressing issues that have been identified as barriers to current children's mental health policy and successful service implementation.

The SOC is currently involved in several community based projects and initiatives that support the vision and mission of the committee. For example, through an informal community needs assessment the Committee has identified that bullying is a critical issue relevant to the population served. In response, we have forged a relationship with the Boston vs Bullies program at the Sports Museum. In May, the SOC hosted Boston vs Bullies at Memorial Hall in Melrose for a parent training program.

The Eliot CSA is committed to the development of collaborations with our neighboring social services agencies, schools, medical providers, religious organizations, law enforcement and courts, after-school programs and youth centers. Eliot has forged relationships which have directly benefited its engaged members by providing them education in, and access to, services. The CSA has worked tirelessly to engage in projects, initiatives and events with agencies of likeminded missions and philosophies. These relationships have created the forum and platform for safety nets and natural supports and mitigated risk factors that could significantly impact sustained success.

Eliot's CSA Collaboration Chart is attached.

C. Alignment of partnerships with proposed projects

Eliot's CSA has developed deep roots in the communities served, and has fostered partnerships that will support continued innovation and collaboration in the interest of children, youth and families served. Eliot and numerous other human service agencies who use eHana, Eliot's Electronic Medical Health Record (EMR) are working together to enhance tools and interoperability to enhance existing systems which drive positive outcomes, reduce risk and increase communication of pertinent information.

Eliot has an established relationship with two recently selected ACO's, Cambridge Health Alliance Health Alliance and Children's Hospital Integrated Care Organization, both with Tufts Health Public Plan, and will work with each to guide the implementation of effective tools and

strategies to continually improve behavioral health services for children and families. Eliot will partner with these organizations to bring training to CSA staff to increase knowledge and understanding of healthcare systems, and "medical language".

Eliot understands the importance of overall physical, emotional and mental health for our children, youth and families. Pediatric primary care providers and centers are often the first point of contact for families when struggling with understanding their youth's behavior, physical or psychosomatic issues and possible mental health crises. Through this project Eliot will align with identified pediatric primary care practices to provide medical personnel and families the tools needed to screen for Serious Emotional Disturbances (SED), and connect quickly to appropriate care coordination and other behavioral health services.

Section 6.4 Proposed Projects and Investment Plan

A. Project Description

Eliot's proposal entitled **Eliot's Health Care Integration Project** addresses multiple needs while supporting the DSRIP program's objectives of providing innovative service delivery that promotes and enhances care coordination and integration. Currently, the majority of Eliot's referrals for ICC Services through Eliot's CSA come from the following groups: schools, hospitals, therapists in the community, and DCF. Although one of the first points of identifying behavioral health issues in children includes the pediatrician's office, Eliot historically does not receive a significant amount of referrals from this group.

During the preparation period and in year one the fully funded Community Integration Outreach Coordinator will focus on developing and fostering collaborative and reciprocal relationships with primary care pediatric practices, including smaller practices and ACO/MCO and other larger organizations throughout the CSA catchment area. This will include providing pediatric practitioners with screening, assessment and referral tools, and on-site support to offer real time assessment and intake for eligible individuals. In subsequent years, as collaborative relationships are firmly established, the role will take on additional responsibilities including billable intake coordination to support the salary with decreased DSRIP funds.

Eliot is committed to the continuous enhancement of service delivery through enhanced technology. As noted in Eliot's Behavioral Health Community Partner RFR, in collaboration with eHana, Eliot intends to invest substantially in the development of an innovative Care Management Platform and enhance linkages to the Mass HIway. Through DSRIP funds for CSA Infrastructure, Eliot, in collaboration with eHana, will develop and implement evidence based screening tools to assess youth for Serious Emotional Disturbances, determine eligibility for ICC services and link them to the CSA's Community Integration Outreach Coordinator for triaging and assignment of most appropriate service level. Additional funds will be allocated to collaborative projects with other eHana customers, including Wraparound/Strengths-Based Documentation, CANS Interoperability, Quality/Accountability Measures, System Security and Access Controls.

The targeted communities will include: Malden, Medford, Melrose, Everett, Stoneham, Wakefield, Reading and North Reading. Eliot's CSA will identify one pediatric group from each of the eight referenced towns. Designated criteria will include negotiating a successful referral affiliation agreement, historical data on referrals, and analysis of unmet need in the community.

*This section has been updated from the original submission to include additional details specific to the Project Prep Period

Eliot Community Human Services, Inc. ***July 7, 2017***

Infrastructure and Capacity Building Funding for Community Service Agencies

RFR Document #: 17LCEHSCHAICBRFR

The RFR program goals/investments that Eliot's grant proposal supports align with the goals of DSRIP funding and are as follows:

- Integration (Eliot CSA Services – Pediatric Care Organization [PCO]). Eliot, through affiliation agreements with PCOs and in conjunction with partnered ACOs and MCOs, will operationalize community based Primary Integration by deploying at PCO sites, evidenced based screening tools and improved access to CBHI services.
- Youth Mental Health First Aid (YMHFA) is a nationally recognized training tool for both administrative and front line staff. YMHFA goal is to increase awareness of common adolescent behavioral health challenges such as: anxiety, emotional and behavioral dysregulation and depression. Eliot has already trained both its front line and administrative staff on this nationally recognized best practice evaluation tool. Eliot's certified YMHFA trainers will provide YMHFA training to PCO staff with the goal of increasing awareness at the pediatrician's office of the warning signs in youth that may require further behavioral health screening and CBHI services.
- Electronic Medical Record- Eliot will provide training on the utilization of evidenced based screening tools to affiliated PCO staff, including improving referral procedures between pediatricians' offices and Eliot's CSA Services. Eliot currently uses eHana EHR for Care Management in our CSA program. Although it is anticipated that a new Care Management Platform will be developed, Eliot will be able to leverage the eHana EHR application as needed.
- Enhanced Technology-Eliot's IT department will provide supportive operational infrastructure including IT management and data storage. Eliot and eHana already have the capacity to query complete relational Care Management Platform datasets and expect to be able to meet any data reporting and interoperability requirements defined by EOHHS, ACOs and MCOs. Eliot anticipates working closely with ACO and MCO partners to determine mutually-agreeable datasets for information exchange with the goal of improving care coordination, management and implementation.
- Eliot intends to leverage standardized technology frameworks to facilitate data exchange with EOHHS, ACOs, MCOs, and other stakeholders including, Pediatric Care Organizations. eHana's Meaningful Use-certified EHR provides validated support for healthcare interoperability standards and standardized transaction formats.
- Eliot currently has a web only account to the Mass HIway. eHana plans to increase capacity to connect to the Mass HIway and expects that its use of the Mass HIway will greatly increase to include appropriate provider to provider communication, manual and automatic sharing of youth's information for the purpose of coordination of care. Eliot's Grant Objectives and Outcome Measures are attached.

*This section has been updated from the original submission to include additional details specific to the Project Prep Period

Prep Budget Period Project Focus

During the Prep Budget Period, as described in the updated budget and budget narrative, there are three sub-projects aligned with the over-arching project described above that will be addressed. Each project will have specific associated milestones and indicators for achievement.

1. *Training, Consultation, Recruitment and Retention Project*
   In order to ensure expeditious access to the highest quality services at the CSA for members, effective recruitment to ensure sufficient staffing capacity to accept cases quickly, enhanced professional development through collaborative training, and investment in long term staff retention are a priority through the prep period.
   Measures:
   a) *A Community Outreach and Integration Coordinator will be hired, trained and oriented by 1/31/18*
   b) *There will be an additional 4 ICC staff and 2 Family Partners hired, trained and oriented by 5/31/18.*
   c) *There are 20 Trained CSA workforce in Youth Mental Health First Aid and Enough Abuse by 5/31/18*
   d) *There will be approximately 50 ACO/PCO/MCO staff and/or affiliates trained in Youth Mental Health First Aid and/or Enough Abuse by Eliot Staff*
   e) *2 Staff Retreats focused on teambuilding and/or enhanced training will be held for CSA staff by 5/31/18*

2. *Community Outreach and Integration Project*
   With administrative guidance, support and oversight from the Project Lead and Director of Clinical Services, a newly developed position will focus on the development, enhancement, and maintenance of effective collaborations between the CSA and ACO/MCO/PCO entities, including expedited screening, eligibility determination and access to services.
   Measures:
   a) *A Community Outreach and Integration Coordinator will be hired, trained and oriented by 1/31/18*
   b) *Identify one ACO, MCO, or PCO site from each city/town in CSA catchment are by 3/31/18 to be evidenced by established contact*
   c) *Negotiate and execute MOU/Affiliation Agreement with the above selected ACO, MCO, PCO sites by 5/31/18*

3. *Software Development and Hardware Deployment Project*
   Efficient and effective technology is essential to the success to the over-arching DISRP

*This section has been updated from the original submission to include additional details specific to the Project Prep Period

funded project. Prep period investment in software development, in concert with Eliot's Community Partner initiatives, with ensure interoperability and secure data exchange. Deployment of enhance hardware technology will provide staff with the right tools to support enhanced software utilization in the field.

Measures:

a) *Purchase and install eHana software by 3/31/18 to be evidenced by a signed contract and specifications*
b) *Deploy enhanced hardware technology to CSA staff by 5/31/18 as evidenced by 8 clinicians effectively using the hardware to enhance productivity, communication, and member engagement in the community*

The updated CSA milestones report articulates specific indicators for achievement of the identified. In addition to these milestones, Eliot will utilize additional quality and outcome measures to track and evaluate project progress and impact. In addition to existing CSA-specific tools (TOMS and WIFI), Eliot has invested in Continuous Quality Improvement initiatives, which will support the evaluation of prep period projects. The Quality Assurance and Support Coordinator and Project lead will be responsible for the deployment of four standardized quality assurance and outcome surveys, beginning at the start of the prep period in January 2018 (to generate a baseline), and in June 2018 (to evaluate the impact of DISRP funded projects). The goal for improvement across these identified measures for the prep period is 10%. The surveys tools are as follows:

- Child/Youth Satisfaction Survey
- Caregiver/Guardian Satisfaction Survey
- Stakeholder/Referrer Satisfaction Survey
- Staff Satisfaction Survey

B. ***Project Team Description***

Eliot firmly believes that "it takes a village to raise a child". In support of this, the Project Team will be comprised of administrators and direct care staff from Eliot's CSA and Executive Staff Teams. The Project Lead will be Mederic McLaughlin, Regional Director of Wraparound Services for Eliot's Northeast Region. He will bring his extensive experience working in state government and hospital settings to the project, ensuring full compliance with financial, operational and reporting systems. The remainder of the Team will consist of Eliot's Chief Information Officer, Director of Community Based Services, Director of Clinical Services,

*This section has been updated from the original submission to include additional details specific to the Project Prep Period

Director of Family Support and Training, Director of the CSA, CBHI Intake Coordinator, Quality Assurance and Support Coordinator, Director of EBT and Clinical Training,' and Community Integration Outreach Coordinator.

Eliot's Youth Programming Organizational Chart, Project Organizational Chart, Project Management Team Duties and Responsibilities, Job Descriptions and Resumes are attached.

C. *Implementation Plan and Timeline*

Eliot's Implementation Plan and Timeline are attached.

D. *Budget Report and Budget Narrative*

Eliot's Budget Report and Budget Narrative are attached.

E. *Sustainability*

Eliot has committed to this project with the firm belief that coordination between ICC and FS&T services and pediatric primary care providers is critical to the physical, mental and behavioral health of the children and youth served by Eliot's CSA. Eliot not only believes that the project is sustainable for the involved practices, but will serve as a model for all pediatric care providers and practices, and CSAs, across the Commonwealth. Although the proposal speaks to five years, the Agency is confident that by meeting all the goals outlined in the project, its implementation will far exceed the targets.

Eliot is committed to partnering with ACOs, MCOs, PCOs, and EOHHS to achieve behavioral health integration between primary care pediatric providers and Eliot's CSA. Eliot possesses the capability, both operationally and through its continued investment in IT infrastructure, to ensure quick ramp up of CSA grant deliverables and continued sustainability beyond the grant period. Eliot will, with CSA grant funds, continue to develop additional IT capacity through enhancements to its EMR (eHana) improved connectivity and integration with Mass HIway, CANS interoperability, enhanced wraparound service documentation and fulfilling ACO, MCO, and EOHHS data requirements. The proposal uses key administrators from Eliot's expansive infrastructure, ensuring the project is fully supported by existing staff in position to make decisions, allocate resources and commit to a long-term plan. A crucial component of Eliot's plan for sustainability will be to develop allowable revenue enhancement billing protocols to support and sustain both the grant funded Community Integration and Outreach Coordinator position and increased CSA staffing. This will further support timely access to Eliot's services.

*This section has been updated from the original submission to include additional details specific to the Project Prep Period

Eliot expects that investments made in business startup and operational infrastructure will be fully absorbed within its existing operational budget and Eliot's administrative overhead budget, by the end of Year 5 of the grant and beyond.

*This section has been updated from the original submission to include additional details specific to the Project Prep Period

Section 6.4 Proposed Projects and Investment Plan

F. Project Description

Eliot's proposal entitled **Eliot's Health Care Integration Project** addresses multiple needs while supporting the DSRIP program's objectives of providing innovative service delivery that promotes and enhances care coordination and integration. Currently, the majority of Eliot's referrals for ICC Services through Eliot's CSA come from the following groups: schools, hospitals, therapists in the community, and DCF. Although one of the first points of identifying behavioral health issues in children includes the pediatrician's office, Eliot historically does not receive a significant amount of referrals from this group.

During the preparation period and in year one the fully funded Community Integration Outreach Coordinator will focus on developing and fostering collaborative and reciprocal relationships with primary care pediatric practices, including smaller practices and ACO/MCO and other larger organizations throughout the CSA catchment area. This will include providing pediatric practitioners with screening, assessment and referral tools, and on-site support to offer real time assessment and intake for eligible individuals. In subsequent years, as collaborative relationships are firmly established, the role will take on additional responsibilities including billable intake coordination to support the salary with decreased DSRIP funds.

Eliot is committed to the continuous enhancement of service delivery through enhanced technology. As noted in Eliot's Behavioral Health Community Partner RFR, in collaboration with eHana, Eliot intends to invest substantially in the development of an innovative Care Management Platform and enhance linkages to the Mass HIway. Through DSRIP funds for CSA Infrastructure, Eliot, in collaboration with eHana, will develop and implement evidence based screening tools to assess youth for Serious Emotional Disturbances, determine eligibility for ICC services and link them to the CSA's Community Integration Outreach Coordinator for triaging and assignment of most appropriate service level. Additional funds will be allocated to collaborative projects with other eHana customers, including Wraparound/Strengths-Based Documentation, CANS Interoperability, Quality/Accountability Measures, System Security and Access Controls.

The targeted communities will include: Malden, Medford, Melrose, Everett, Stoneham, Wakefield, Reading and North Reading. Eliot's CSA will identify one pediatric group from each of the eight referenced towns. Designated criteria will include negotiating a successful referral affiliation agreement, historical data on referrals, and analysis of unmet need in the community.

IT Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
IT Manager	$ 62,662.60	0.3	5	$ 7,833
SQL Report Writer	$ 42,848.00	0.4	5	$ 7,141
IT Assistant	$ 41,808.00	0.06	5	$ 1,045
				$ -
				$ -
				$ -
	Total Salary	0.76		$ 16,019
	Fringe rate	24.4%	Total Fringe	$ 3,909
			Total IT Staffing including Fringe	**$ 19,928**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in executing activities related to the project.

IT Manager will be responsible for collaborating with consultants to provide oversight of the implementation plan. The IT Manager will serve as chairperson for Implementation Team meetings and participate in comprehensive individualized training on the development, testing and deployment of configurable forms and specialized report writing.

SQL Report Writer will assist in developing configurable forms and write reports needed to ensure quality metrics are readily accessed.

IT Assistant will perfrom hardware and user configuration, and technical support to users as needed.

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
IT Consultants	$ 22,500.00
ITConsultant/Programmers	$ 23,100.00
Qualifact Project Manager	$ 9,000.00
Qualifacts Consultant	$ 4,500.00
Total Development and Adaptation of EHR and Care Management System	$ 59,100.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

The goal of this project is to create a fully functioning, comprehensive electronic health record that will provide consistent

and timely reporting and support achievement of quality measures. The EHR will support secure communication with other providers and full functionality with the Mass HIway. Furthermore, the EHR will support integration of care, care planning and care coordination by being fully accessible to all registered users from any community location, putting the electronic health record at the worker's fingertips whenever and wherever it is needed.

IT Consultants/ will analyze current paper process, develop electronic workflow and work collaboratively with internal FSA resources. 150 hours @ $150/hr. **Total: $22,500.00**

IT Consultants/Programmers to draft EHR configurable forms, test and edit drafts and implement final versions of all forms required to support CSA services. 154 hours @ $150/hr. **Total: $23,100.00**

Qualifacts Project Manager: Responsible for designing EHR Implementation Plan and overseeing initial phase of project implementation. 60 hours @ $150.00 per hour (2 day kickoff session, then 2 hrs/wk for 22 weeks.) includes estimated expenses. **Total: $9,000.00**

Qualifacts Consultants: Responsible for creating specialized reports and complex configurable forms to support comprehensive data collection and seamless customization of EHR. 30 hours @ $150.00/hr. **Total: $4,500.00**

Technology for Service Delivery

Description of Expense	Cost
Hardware	$ 6,000.00
Total Technology for Service Delivery	**$ 6,000.00**

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Hardware Investments: Provide all ICC's with updated laptops, which will improve program's ability to be mobile allow real time to access EHR, improve documentation standards, and support compliance. 10 laptops @ $600.00 each. **Total: $ 6,000.00**

Other Technology Expenses

Description of Expense	Cost

Total Other Technology Expenses	**$ -**

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

CSA Milestones Report

CSA must have at least one implmentation goal with at least one milestone for each project number. An implmentation goal may have more than one milestone.

SECTION 6.2 EXECUTIVE SUMMARY

Family Service Association (FSA) understands the State's DSRIP program and goals and enthusiastically responds to this Request for Responses (RFR). Our proposed projects support the goals described in the RFR. We are confident our organization has the experience, resources and capacity to succeed in supporting the state's DSRIP goals and delivering effective Community Service Agency (CSA) services.

6.2 A. Performance on Development Plan: Our CSA is a well-established, high performing program that operates with a solid knowledge of the performance specifications. Historically, FSA has met or exceeded the performance threshold on all domains; and the program continues to evolve and improve in response to feedback. Development plans have been well-received by the program's leadership and progress has consistently been made.

In January of 2017 two new goals were established. The first goal was to increase the effectiveness of the team process for CSA enrolled families. Due to attrition within provider agencies, FSA was experiencing an increase in the number of team members working with CSA families who had little to no working knowledge of the principles of Wraparound. The need for additional education about Wraparound and more intensive efforts toward team building became apparent. In response, the CSA is using the following interventions:

- Group and individual coaching to focus on effective team process
- Wraparound orientation for team members
- Application of best practices to build and maintain effective teams
- Documenting team building and team process
- Communicating the value of team attendance to persons served, and
- Highlighting the important role of tem member participation during the care planning process

Progress towards this goal will be measured using the TOMS, WFI and care plan review and approval by Senior Care Coordinators (SCC). Group coaching for CSA staff was completed in March. SCCs will continue to review and assist staff to overcome barriers to best practice. Internal clinical reviews, de-briefings, group coaching and supervision will remain focused on best practices for building and sustaining effective teams for CSA enrolled families.

A second goal was to include a Mental Status Examination (MSE) in all ICC assessments conducted on enrolled youth. This goal has been met by including the MSE in the standardized assessment. The assessment is reviewed and signed by a SCC who is also an independently licensed Masters-level behavioral health clinician. Internal record review processes ensure this requirement is consistently implemented. In addition, FSA provides record review through a peer review process that includes evaluation of the assessment and evidence of SCC review and signature. This two phase review process ensures that the changes made to the assessment to include the MSE are consistently implemented.

6.2 B Strengths and Needs: The CSA has many strengths. The first is strong leadership provided by an independently licensed Masters-level clinician with extensive clinical experience. This Leader is further supported by two additional independently licensed clinicians who serve as SCCs. This strong leadership team facilitates formulation of a behavioral health diagnosis (when needed), and provides clinical supervision to the ICCs. Another strength is the internal multi-disciplinary team that has been formed. This strong clinical approach ensures the diagnosis takes center stage and that Wraparound services are clinically informed. Another strength is that the CSA staff includes three credentialed Wraparound coaches from the original cohort trained by Vroon VanDenBerg when CSAs were first formed across the state. This strong knowledge base in the principles of Wraparound ensures that as new staff are hired, they too can be well informed and prepared to serve their role in this strength-based model. The CSA also has a strong

language capacity to provide culturally and linguistically responsive services, mirroring the community we serve. Currently the program employs five Spanish-speaking ICCs and four Spanish-speaking Family Partners (FP). In addition to Spanish language capacity, the program employs one Portuguese-speaking ICC, one Khmer-speaking ICC, two Portuguese-speaking FPs and one Creole speaking FP. The CSA has worked very hard at maintaining language capacity and ensuring responsiveness to referral trends. The CSA has never had a development plan for access to CSA services. The FSA CSA has a strong team comprised of flexible, cooperative and collaborative staff and even in times of intense referral rates the CSA has consistently met performance standards for offering an initial appointment. The CSA has also added an Intake Coordinator position to support responsiveness to referrals.

The strength of the CSA can be seen in the staff. From the extensive clinical experience to the language capacity and solid knowledge and implementation of Wraparound, what makes the CSA great is the people we employ. But, that can quickly become a need for the program. At the time of this application, the program is fully staffed with extensive language capacity and many tenured employees that include credentialed Wraparound coaches. In order for the CSA to remain responsive to community demands, staff retention needs to be a high priority. Also, a pool of qualified candidates needs to be available to fill positions as they are vacated or when a new position is added. When new staff are hired, there is a significant learning curve which takes time for training and coaching. Ensuring FSA has the capacity to quickly respond to staffing needs with timely turnaround from vacancy to filled position is essential.

Another need within the CSA lies in technology. Currently the CSA only has digital capacity for progress notes. To maximize efficiency, the program needs a fully functional and integrated Electronic Health Record (EHR). The program also needs to strengthen its capacity to gather, analyze and respond to data. Currently, the program has short term and anecdotal data and operations are more reactive than proactive. With stronger technology, the program will be better equipped to evaluate outputs and outcomes and take a more proactive approach to program management and development. Expanded digital capacity will also support better communication, coordination and integration of care.

Finally, the program has a need for more training specific to CSA, the role of ICCs and FPs and community-based interventions. Program staff recently participated in a six-hour workforce development workshop on trauma-informed care. While useful, the program focused on direct work with trauma victims and site-based work. Further training is needed specific to community-based work and how to facilitate recovery for trauma victims when not treating the trauma directly. A better understanding of medical and psychiatric conditions is also needed with an emphasis on how diagnosis may impact behavior.

6.2 C Plans for Improving Timely Access to ICC Services: From the start of CSA service provision, the FSA program has excelled in providing timely access. This has been the direct result of efficient, effective and responsive recruitment and hiring, training and coaching, and attention to referral rates and trends. The strong clinical background of the leadership team helps to ensure caseload assignments are realistic and reasonable in relation to the presenting needs of the family. From the outset, the CSA experienced a referral rate that was much more intense than originally predicted. Armed with that experience, the CSA is now favorably positioned to respond to changes in referral rates related to the DSRIP program and to improve integration across different settings of care.

FSA plans to further improve access to ICC services by supporting the recently added position of Intake Coordinator. The Intake Coordinator manages all referrals; maintains referral logs, triages referrals and

consults with program Leadership for staff assignments. She also does initial screening for medical necessity criteria and home safety, maintains communication with referral sources on the status of the referral and provides parents/caretakers with information on program services. This ensures a consistent referral-screening-intake experience for every family and referral source. The CSA has never had a waitlist for referrals and maintaining these proven effective strategies will help to ensure we maintain that level of success. In the event the CSA experiences a dramatic increase in referrals, FSA will evaluate the need for additional support services. To further support timely access to services, FSA will apply investment funds to accelerate the Human Resource Department's capacity to recruit and hire in a timely manner.

6.2 D Plans for Improving Care Coordination, Care Planning and Care Management for ICC-Engaged Members: FSA believes the most important step to improving care coordination, care planning and case management is to ensure staff have the knowledge and skills needed to effectively implement Wraparound and build an effective team. In support of this philosophy, FSA will create a structured Workforce Development Plan. The Plan will recognize training and proficiency on related skills, offering staff an opportunity to advance their skill set within the program. FSA is fortunate to have many staff that started with the CSA and have achieved five years in the program. A Workforce Development Plan offers an incentive to continually work at proficiency as a way to retain experienced workers. It also builds a pool of talent to help educate, coach and mentor new staff as they enter the program. The Workforce Development Plan will make use of the Tier 1 and Tier 2 Wraparound credentialing in the early years of funding, making credentialing available to all staff. In future years, the Workforce Development Plan will evolve to include credentialing/certification in other critical areas such collaborative problem solving, motivational interviewing and integration/coordination of care. Only evidence-based models will be used for the Workforce Development Plan and it will be built on achieving established benchmarks and concrete measures to confirm skill development and proficiency.

6.2 E Plans to Improve Performance on Quality Scores and Development Plan Goals: The CSA will use advancements in technology to support improved performance on quality scores and to meet development plan goals. The current EHR in use in FSA is fully customizable. That allows FSA to build service documents that include modules with required fields. In short, we can make the desired action the default action. We can also customize the EHR to gather the data points that will support monitoring progress towards performance goals, both for the program as a whole and by individual practitioner. The system will also create reminders to track key activities and alerts for SCCs to monitor performance. In addition workforce development on Wraparound, building effective teams, collaborative problem-solving and motivational interviewing will help support achievement of performance measures.

6.2 F Plans for Improving Coordination with Providers Across the Continuum: FSA intends to apply the advances made through the technology project that is part of this application to improve coordination with providers across the continuum. FSA plans to expand our digital capacity, using telecommunications to promote health and integration of care. The addition of mobile resources will allow providers to share information in real time and to participate in care plan meetings. FSA will also continue to be an active participate on the Southcoast interagency team, a collaborative of CSAs and state agencies, to promote coordination of care. FSA will leverage the success of the current Systems of Care committee to welcome new providers and build relationships to facilitate care coordination. FSA will also apply lessons learned from current work with the Steward Health Care Network on pilot ACO projects to improve coordination with other providers.

SECTION 6.3 POPULATION SERVED AND COMMUNITY ENGAGEMENT

6.3 A. Member Population and Communities: The Community Service Agency (CSA) serves families who have a child/children with mental health needs; or youth with developmental disorders with co-occurring mental health needs. The program serves children up to the day of the 21st birthday. The geographic region served is Greater Fall River, which includes Fall River, Westport, Swansea, Somerset, Westport and Freetown. Family choice is an honored principle in Wraparound services and thus, FSA serves children/families in other geographic locations when it is the family choice to have FSA as the provider. FSA has served families in New Bedford, Seekonk, Taunton, Raynham and Dartmouth. Over the past year, the population served has been 63% male and 37% female. The primary language spoken has been English, with 24% speaking Spanish and 5% speaking other languages including Portuguese, Khmer and French. The largest age group served is 10-14 year olds at 45%, followed by 5-9 year olds at 34% and15-19 year olds at 17%. The racial/ethnic composition of youth served is 50% white, 10% Black/African American, 31% Hispanic/Latino and 8% multi-racial. The majority did not affiliate with any specific religion.

FSA plans to promote the health and well-being of the diverse group of youth and families served through a holistic and comprehensive approach. The program aims to strengthen the family by strengthening parental capacity. This is achieved through Family Partner (FP) services. Interventions for parents include education, modeling, mentoring and coaching to build skills to better manage not only the parent's health and well-being, but that of the family as well. CSA staff recognize that parents need to be strong and healthy themselves to parent effectively. Parents also need to be engaged in order for services to be effective.

The CSA uses a number of engagement strategies. Program staff are vigilant with weekly contacts by the ICCs as well as the FP. There is consistent follow-up for missed calls and appointments. Staff work to "meet parents where they are" in the process. ICCs and FPs help to identify and define challenges and obstacles; and work with families to prioritize needs based on criticality. For example, when a family is experiencing housing insecurity or homelessness, that must be resolved before behavior management or truancy can be addressed. Once priorities are established, parents can develop a clearer view of what's in front of them and what needs to be done. To be effective with any of these activities, ICCs and FPs establish mutually respectful relationships that are built on trust. ICCs and FPs respond to calls, follow-through with actions, and are responsive to families. They are truthful and realistic in their work with parents. In short, they are clear on what they can and cannot d; and they do what they say they are going to do when they say they are going to do it. This helps to build trust with families and instill confidence; key elements to fostering and sustaining engagement.

Another strong factor in fostering and maintaining engagement is fidelity to the ten principles of Wraparound. This includes family voice and choice. Care planning and service coordination is built upon the family's perceived priorities and not the worker's. The CSA builds and utilizes a team of providers that constitute an individualized system of care for each family. Together, families and CSA staff identify resources that will support achievement of goals and then staff facilitate and support families to access what they need in order to succeed. Fidelity to the strength-based principle also promotes success. A thorough assessment identifies where the parent/child/family are or have been strong and successful in the past. They then leverage identified strengths and achievements to address current challenges. As families achieve additional successes, they begin to build the confidence to achieve and sustain future success.

To support the future success of the CSA, FSA will dedicate capacity funding to expanding our technological capacity and to workforce development. By advancing technology we can promote mobile,

community-based services and facilitating access to real-time information. Putting contemporary digital tools in the hands of our talented and dedicated staff will support communication, promote coordination of care and advance integration. Ongoing education, support and coaching, will support fidelity to the model which has proven successful thus far. Resources will also be allocated to expand staff knowledge of medical and behavioral health diagnoses that impact family functioning. The better equipped, informed and educated the staff are, the better the more effective they will be at promoting health and well-being.

6.3 B. Community Relationships: FSA enjoys a strong community reputation and has cultivated meaningful partnerships and collaborations in support of our mission to build individual and family strengths. One example is the Southcoast Interagency Team with the Department of Children and Families, the Department of Mental Health, the Department of Developmental Services and the Department of Youth Services. Regular meetings of this team have supported relationship building on the organizational and personal level. It has provided education, a forum to identify and communicate challenges, a place for the provider voice to be heard and a means to identify service gaps and address access to care concerns. The CSA's strong Systems of Care Committee (SOC) is another valuable relationship. The SOC has a favorable reputation in the community and has helped to build strong bonds with other providers. FSA hosts monthly meetings which have become a forum to exchange ideas and introduce new providers and practitioners. Representatives from various providers share access challenges and service availability. When the CSA has faced challenges in meeting quality measures, the SOC has also been a productive forum to problem-solve and brainstorm interventions.

The CSA has solid relationships with other CBHI providers in the region; including In-Home Therapy, Therapeutic Mentoring, Mobile Crisis Intervention and In-Home Behavioral Therapy. Two of FSA's strongest allies are Child and Family Services and St. Vincent's. Working together with other CBHI providers allows FSA to find the organization/provider that is the best fit for the family. Other providers with whom FSA has strong collaborations are Arbor Counseling Services, the Institute for Health and Recovery, the Castle Program and the Family Nurturing Center. These organizations support and promote the CSA through service provision, collaborative work with children/families and as resources for staff development.

For integration and coordination of care and services, the CSA enjoys productive and collaborative relationships with all of the area pediatric practices. We work frequently with the Boys and Girls Club and the YMCA to connect youth to the community. The partnership between FSA and Greater Fall River Re-Creation has resulted in scholarships for youth/families and Re-Creation's outreach program for gang involved youth has supported families facing this challenge. The CSA also works well with the Fall River Police Department. Through this collaboration we have ensured worker and community safety in high risk neighborhoods. We have also increased police understanding of the needs of involved youth. When police intervention is needed in a crisis, they recognize the role of the CSA. They listen to worker's input and together we have made police intervention less confrontational and more effective.

The CSA Leadership is part of an organizational team that includes the Leaders of the other FSA services. This promotes timely access to services to support engaged youth and families. Whether it be child care, services for aged or chronically disabled adults or mentorship, the vast array of FSA services are available to CSA families. The FSA Family Resource Center has also evolved into an important support for CSA families, offering evidence-based parenting education programs, support groups and recreational activities.

Finally, FSA has, for the past three years, cultivated a partnership with the Steward Health Care Network (SHCN). Through a series of projects, FSA and SHCN have explored the concept of shared governance and data sharing from both the technology and service delivery perspectives. Currently, SHCN and FSA are working on an Emergency Department Case Management project to explore and address avoidable use of Emergency Departments and drivers of total cost of care. This preliminary work with SHCN lays the foundation for meaningful work with SHCN as one of the ACOs for Greater Fall River. An old proverb says "*it takes a village to raise a child".* FSA is proud to be part of a talented and dedicated village of child-serving providers and organizations working together to promote the health of our community's children.

6.3 C. Aligning Partnerships in Support of Capacity Funded Projects: FSA is proposing two projects to advance the aims of the DSRIP program; Technology Advancement and Workforce Development. The Technology Advancement project will expand the CSA's capacity to serve families by promoting mobility and the effective delivery of services; facilitating access to digital data and resources while working in the community. Technology Advancement will promote care management and coordination within the CSA, FSA and with identified partners through a fully operational EHR. It will also promote mobile digital communication. The better our capacity to securely share data, the more timely, efficient and effective we can be. It is our goal to ultimately be equipped to offer providers and distant family members a virtual seat at the table, even if physical presence at meetings and consultations is not possible. FSA will also aim to improve integrated health and pursue the capacity for telemedicine with participating providers. Expanded mobile and digital capacity will also foster stronger connections with partners, schools and primary care providers. These cost effective, contemporary advancements will expand options for children and families.

Through the Workforce Development project, FSA strives to strengthen and sustain fidelity to Wraparound processes. This includes not only the ten principles of Wraparound but also care planning, care management and care coordination. FSA will rely upon feedback from community partners to inform and guide educational initiatives. For example, FSA will promote Tier 1 and Tier 2 Wraparound certification for ICCs and FPs. While the curriculum and proficiency thresholds for certification are established, FSA will emphasize areas where a development need has been identified based on feedback, identified gaps and challenges related to the delivery of CSA services. The building of strong teams is currently a focus within the CSA and is achievable because of the existing partnerships that lay the groundwork for further advancements. Findings from TOMS and WFI will also help to guide educational interventions. We will also regularly seek feedback from community partners via anonymous surveys to measure our effectiveness in executing Wraparound processes.

The CSA works collaboratively with the other CSAs in the Southeast region. Directors communicate regularly, share insights and strategize responses to challenges. FSA will align this partnership in support of capacity funded projects by working together to apply resources for regional training. FSA's proposed Workforce Development Plan will include the shared training coordinated among the participating providers. Together the Southeast region CSAs have identified key clinical areas in which to develop an evidence-based training program for ICCs that will build and maintain skills while also facilitating improved outcomes for the programs. The identified areas include Motivational Interviewing; Diagnostic Formulation and Treatment Planning, Collaborative Problem Solving; ARC, Coordination of Care for Medically Complex Youth, and Wraparound Certification. Each CSA will contribute to the development of the training content. Collectively, every CSA in the Southeast region will benefit from the efforts and families served will benefit from a more informed team delivering CSA services.

6.4 A. Project Description and 6.4 B Project Team Description: Family Service Association (FSA) proposes a two-pronged approach to infrastructure and capacity building to aid in advancing the goals of the state's DSRIP program within our organization. The first arm of the plan is a technology advancement strategy and the second arm is a workforce development initiative. Both aspects of this bifurcated approach are aimed at putting the tools needed to deliver effective services in the hands of the staff working face-to-face with youth and families. Access to efficient and contemporary technology is the first important step. To that end, it is FSA's intent to expand our digital and technological capacity to foster community outreach, promote strong integration with ACOs, MCOs and primary care providers and facilitate timely access to ICC services. The second important step in giving staff the tools they need to get the job done includes training, coaching and modeling. Through this initiative we can strengthen fidelity to Wraparound processes, including care planning, care management and care coordination. To remain a viable provider, FSA needs to ensure we have a readily available pool of skilled practitioners who are prepared to respond to referrals and deliver Wraparound services. To achieve this we must retain our talented and dedicated staff by ensuring the roles of Intensive Care Coordination (ICC) and Family Partner (FP) are challenging and rewarding. The workforce development strategy we propose will support this goal. Details of each of the two projects follows.

Project One - Technology Advancement: The first goal of this project is to create a fully functioning electronic health record (EHR). This will allow secure and timely access to client level information to ease the delivery of ICC services. It will also support improved coordination of care and strong integration with ACOs and primary care providers. FSA already has an EHR, Qualifacts Carelogic; but, it is only minimally implemented in the CSA program. Carelogic is specifically designed for behavioral health centers and human service providers and it allows for complete customization. Currently, the CSA programs uses Carelogic for progress notes and billing. This results in a hybrid client record with information in multiple formats and locations, and requires substantial manual work to ensure good communication to providers. In order to best support the Wraparound process, the full implementation of the EHR for CSA will include:

- Customization to ensure strong workflow processes
- A singular comprehensive client record
- Secure information sharing with other providers
- Accurate, seamless and consistent reporting

Successful implementation will be completed in two phases over the five year period. The first phase will be a partial implementation, which will focus on the care plan and the primary data necessary to ensure the Quality Measures can be inputted, tracked, monitored and extracted for reporting. The second phase will be full implementation, which will include transition to a completely paperless system that can be fully used while in the community.

The overall project will be guided by an Implementation Specialist from Carelogic, who will initially serve as the EHR Implementation Project Developer. With many years of experience doing implementation in like agencies, Qualifacts is uniquely qualified to oversee the development of an implementation plan, and will ensure that all decisions regarding customization will result in the most effective outcomes, such as ease of use, efficient operations, comprehensive reporting and the like. Once a concrete, well-defined implementation plan is established, FSA's Information Technology (IT) Manager will take over primary responsibility for overseeing the implementation. Qualifacts will continue to serve as a consultant and

provide high level oversight throughout implementation. The implementation team will include key employees from CSA and FSA, including the following:

- CSA Director
- Two CSA supervisors
- Director of Client Financial Services
- Director of Continuous Quality Improvement
- IT Manager

It is anticipated that the implementation team will evolve as the project progresses, and participation of some members will be determined based on the current process being implemented. While the EHR will be customized for the CSA, it is essential that components are consistent with those in place for other FSA programs utilizing the EHR. This includes billing functionality and Quality Improvement features for measuring service delivery outcomes. Thus, various staff from FSA support departments will be engaged in the implementation as appropriate to the stage of the project.

EHR Implementation will be moved forward and coordinated through the use of regularly occurring Implementation Team Meetings. The Implementation Team will be comprised of core members, with other FSA staff engaged depending on the stage of implementation. Implementation Team meetings will occur weekly, with the schedule modified based on tasks and the stage of the implementation, but the core Implementation Team will meet no less than bi-weekly. The Risks, Assumptions/Actions, Issues and Decisions (RAID) project management tool will be applied to this project to ensure all members are held accountable for their designated parts of the Implementation Plan. The Chief Administration Officer will provide executive level oversight of the project.

The members of the implementation team from CSA will be particularly valuable in providing important work flow information and feedback. These supervisors will also be highly involved in developing EHR usage training materials, evolving into the system “experts”. They will be involved from the start in creating how the EHR will function for CSA and help to establish the plan for training staff on the day-to-day use of the system. This Train-the-Trainer model is recommended by Qualifacts, and will be used to ensure successful EHR implementation with CSA staff. One CSA Supervisor will be designated the EHR Implementation “champion” and will be charged with ensuring a smooth transition by CSA staff users and promote consistent use of the EHR and digital resources. With the supervisors developed as system experts, they will have the capacity to train and coach existing CSA staff and all newly hired individuals.

Another aspect of the full implementation of the EHR that will support achievement of program goals and the performance expectations of this RFR, is the capacity to build modules within the EHR to ensure compliance with quality measures. The existing paper care plan will be recreated within the EHR, but it will be designed to include required quality measures, such as physical and dental care appointments. Since Carelogic can be mapped to ensure key information is included in service documents, fields for quality measures will mandate data entry, thus ensuring required data is captured. For example, the existing CSA Care Plan has a field for date of last physical. When the Care Plan module is created for the EHR, the field for date of last physical will be programmed so that the Care Plan cannot be completed, signed and saved until that date field is completed. With that date entered onto the Care Plan and into the EHR, reminder

alerts can be programmed so that workers are notified 90 days, 60 days and/or 30 days before the next appointment is due. To further support compliance, alerts can be programmed for supervisors so they are automatically notified through the EHR when physical dates lapse beyond a pre-determined threshold. FSA has complete control over mandated fields, how performance thresholds are set and when reminders and warning alerts are set. This system, of making the required element a default element, will go a long way to support achievement of performance and quality measures. This same system of mandatary fields, warning and alerts has supported successful compliance with Centers for Medicaid and Medicare (CMS) mandatory reporting in other FSA programs. Thus, FSA is confident the system can be mapped to support CSA as well. Mapping and creating customized configured forms and beta testing of reporting will be part of the role of the Qualifacts consultant, the IT Manager and other members of the Implementation Team.

During the EHR implementation process, encrypted e-mail will be integrated into FSA's IT capacity to ensure secure communication with external providers. Following successful implementation, Carelogic's ability to meet meaningful use will be evaluated, and the method of connection to the Mass HIway will be identified and implemented. Part of the Implementation Plan will also include establishing policies and procedures related to EHR use, establishing workflow process for training employees and developing strong audit trails for tracking system access and activity.

The timeframe for the Technology Advancement Project will run throughout the five year budget period, with consultant services, form development, workflow creation and report writing titrating downward as funding decreases and EHR capacity increases. In the preparation budget period, the Carelogic Implementation Project Developer will be required to complete a structured, written Implementation Plan that includes timeframes for achieving various milestones and assigns responsibility for key tasks. The development of the Implementation Plan will begin with a thorough assessment of current capacity, obtained by reviewing existing system set-up and evaluating current manual and electronic workflow processes. Regular meetings of the Implementation Team will ensure Implementation Plan developers have a thorough understanding of program needs. The aim is not to restructure the CSA, but to mold the EHR to support the program. To fully operationalize the EHR, IT consultants will convert multiple paper documents that are currently in use to electronic configurable forms and service documents. These electronic resources will then be mapped to the CSA digital workflow and linked in a way that will support data extraction for reporting. The system must also be configured to accept paper documents (such as physical exams, IEPs etc.) that will be scanned into the EHR. These documents also need to be mapped to the EHR, much the way paper documents are filed in a hard-copy record. Finally, program specific reports need to be created or "written" within the system so that data can be extracted in a user-friendly and meaningful manner. All of these activities will be prioritized for deployment in the Implementation Plan.

Budget period one will be the first phase of actual implementation. FSA anticipates this will be the deployment of the electronic Care Plan. This will be a "soft" implementation, comprised only of entering existing Care Plans into the EHR. This will familiarize staff with the new care plan format and lay the groundwork for gradually transitioning to actually creating electronic care plans and eliminating paper versions in the record. Since the CSA is a large program, clerical support will be provided to assist with data entry. As the program prepares for the digital care plan transition, remote MiFi devices will be deployed to support creation of care plans in the community in the presence of clients. The remainder of

budget period one will be used to continue deployment of the Implementation Plan; including developing and testing other workflows, configurable forms, reports, and training tools in keeping with the written work plan.

It is anticipated that budget period two will be the "go live" phase for full EHR implementation. Ongoing assessment of EHR functionality will be completed, with modifications made as necessary. Upon completion of this phase, all data that is currently maintained in paper records will be transitioned to Carelogic, with full digital recordkeeping for all new clients admitted after the "go live" date. Access to the full EHR from community locations will be available to ensure all staff have access at all times.

Much of the FSA workflow changes and advancement of technology align with innovations currently underway by Qualifacts. By the third budget period, Qualifacts will have deployed a mobile application (App) to support EHR use. Thus, it is in the third budget period that FSA will deploy *Carelogic Mobile,* Qualifacts' App for mobile access to Carelogic. For this initiative to be successful, service documents for mobile platforms will need to be re-installed to align with the system's requirements for *Carelogic Mobile*.

Budget period four will see the development of FSA access to the Mass HIway. We will apply for participant status, evaluate and determine type of access, and develop policies and procedures and monitoring systems for Mass HIway use. Additionally, we will also be enhancing the capacity for communication with providers through the use of other mobile Apps. Finally, in budget period five, FSA will complete a final analysis of the EHR implementation, care coordination and integration and make any needed modifications. We will ensure full functionality with Mass HIway and other communication and platform deployments and operate with a fully functional completely digital EHR for CSA consumers.

The deliverable for this proposed project is a fully functioning, comprehensive electronic health record that will provide consistent and timely reporting and support achievement of quality measures. The EHR will support secure communication with other providers and full functionality with the Mass HIway. Furthermore, the EHR will support integration of care, care planning and care coordination by being fully accessible to all registered users from any community location by putting the electronic health record at the worker's fingertips whenever and wherever it is needed.

The largest percentage of DSRIP funds will be used for consultative services, for both project development and implementation. This includes the Implementation Project Development consultant and additional consultants to support the creation of fully functional EHR modules and configurable forms to replace the entire paper CSA record. This includes, but is not limited to, intake documents, assessment tools, safety plans, care plans, discharge plans and the like. Consultants will also be engaged to support report writing that will be key to measure program performance and to accurately report quality measures. Funds will support temporary IT technicians, if needed, to assist with the development, testing, editing and deployment of configurable forms and reporting features. Funds will also be used to upgrade, configure and deploy laptops used by ICCs for community-based services and to provide internet based access to the EHR from all community locations.

DSRIP funds will also be allocated to the FSA IT Manager for the additional responsibilities of overseeing the development, customization, testing, and implementation of all features of the EHR system; ensuring the sustainability of the EHR investments beyond the funding period. During the preparation budget period only, a small portion of DSRIP funds will be allocated to support other members of the Implementation Team. This will include the Director of Client Financial Services who will be engaged to ensure that the billing interface for CSA is consistent with billing requirements. The Director of Quality will participate on the Implementation Team to ensure that the mapping of quality measures will meet various standards including EEOHS, Medicaid, accreditation and organizational requirements for program monitoring and reporting. This will ensure the Implementation Plan that is developed is comprehensive, considers all operational issues and can be seamlessly integrated into the organization's infrastructure. Additionally, a small portion of funds will be used to provide clerical support to CSA staff during the EHR transition.

Internal support services and departments will provide strong internal resources in support of this project. The Chief Administration Officer will work closely with the IT Manager and oversee the project, and ensure that any barriers to completion are quickly resolved. The Director of Children's Behavioral Health Services, along with designated staff, will serve as members of the Implementation Team to offer insight, aid in decision-making, test EHR modules as they are developed, and assist with training and deployment of the system to the full staff. The Director of Client Financial Services will also participate in planning, decision-making, testing, training, and deployment as appropriate for billing functionalities. The Human Resources Department will provide assistance with screening, recruitment and on-boarding of new employees. The IT Department will provide day-to-day support for all equipment and services. The Department of Continuous Quality Improvement will provide input on data and reporting needs, supporting data collection, aggregation, analysis and reporting decision-making for design, testing and deployment.

FSA has a strong and well-established system for internal evaluation of improvement activities that is an integral part of the organization's Quality Management (QM) Plan. The plan calls for a systemized process to:

- Identify areas for improvement
- Set realistic and measurable goals
- Establish objectives to meet goals, and
- Continually monitor progress

This same system will be applied to the capacity building projects proposed. The existence of an established QM Plan demonstrates FSA's commitment to continuous quality improvement. The QM Plan uses Performance Improvement Targets (specific goals) and Performance Improvement Teams to foster continual change. In some programs and for some goals, specific teams work on the stated objectives; while in other cases, an entire program or department is involved in the improvement activity. Currently, every FSA program and department is required to establish at least one Performance Improvement Target (PIT) each year. The PITs for the CSA will become the capacity funding projects, with these new initiatives flowing seamlessly into the existing QM infrastructure. Once PITs are created and approved by Senior (Executive) Leadership they are monitored by the Department of Continuous Quality Improvement (CQI). PITs must include a stated goal, a rationale for the goal, the measurement activities that will evidence progress toward the goal and quarterly activities that will support goal attainment. Progress toward goals is

monitored through program level staff meetings and QM meetings are required. Minutes of the QM meetings are submitted to CQI along with quarterly PIT progress reports. Quarterly summaries on the progress of the various program's PITs is provided to Senior Leadership. An annual summary of progress toward PITs is provided by CQI to the Chief Executive Officer and the Board of Directors as part of the annual Quality Management and Risk Management report. The application of this system to the capacity funding projects will support continual progress, reporting through the chain of command, and goal achievement in the same way the QM Plan has fostered change for other programs and within the organization.

The project will be evaluated as follows;

1. The Electronic Health Record will be fully implemented by 12/31/2018, with completed evaluation and resulting modifications made by 6/31/2019.
    a. The care plan will developed in the EHR and tested by at least one program staff by 3/31/18.
        i. Evaluation of the care plan will include comprehensive reporting using internal data to test configuration and ensure reporting functionality. This evaluation will be completed by the IT Manager, with assistance from consultants as needed. Evaluation will also include staff feedback regarding the user experience, including reporting. This evaluation will completed no later than 6/30/2018.
    b. The remaining record will be configured by 12/31/2018. This includes evaluation of functionality completed by programs staff, and resulting modifications made by 6/31/2019 by the IT Manager, with assistance from consultants as needed.

Project Two - Workforce Development Plan: The second goal of this project is to strengthen fidelity to Wraparound processes including care planning, care management, and care coordination by cultivating and retaining a highly qualified workforce. This will be achieved through a number of objectives.

The first objective is to sustain the existing workforce by stimulating ongoing skill advancement and nurturing employee talent and expertise. The CSA is fortunate to have a number of workers who have been with the organization since the early days of the program. Our existing philosophy is to value employee expertise and celebrate worker achievements. The Workforce Development Plan builds upon this philosophy demonstrating FSA's profound respect for our greatest resource, our employees. The role of ICC and FP is very specific to CSA. Thus, when staff are hired for the program they may be highly qualified to work with children with Serious Emotional Disturbances and meet the performance expectations for CBHI staffing; but they may not be experienced in Wraparound or the role of ICC. Significant resources are dedicated to cultivating knowledge of Wraparound processes and promoting fidelity to the model. It is essential that FSA has a means to retain qualified individuals and enhance skill development of the two roles. To that end, we propose an initiative to recognize worker expertise, evidenced by advanced training and demonstrated proficiency in established domains, through the Workforce Development Plan. Once designed and deployed, the Workforce Development Plan will serve not only as an employee retention strategy but a strong tool for the recruitment of new employees.

Through an established training plan, staff will be offered opportunities to strengthen their skills, advance

their practice and demonstrate expertise that goes beyond satisfactory job performance. A tiered system will be created that staff can progress through to achieve designation as an advanced practitioner. There is a small number of current CSA staff who, through their own initiative, sought and achieved Wraparound Credentialing in the early years of the program. Building upon what we already have, we will extend this model and make it available to all staff with a goal of eventually having everyone credentialed. The first activity will focus on Tier 1 and Tier 2 Wraparound Credentialing for each of the two CSA roles, ICC and FP. FSA has three individuals who are Certified Wraparound Coaches so much of the work that needs to be done to increase the number of credentialed staff can be made available through these internal resources. Staff seeking to be credentialed will be required to meet set learning and performance thresholds. Each Tier achieved by an employee further advances their practice and expertise while supporting the overarching goal to strengthen fidelity to Wraparound processes.

The Workforce Development Plan will begin in the budget preparation period. The roll-out and achievement of Tier 1 and Tier 2 credentialing for most, if not all, CSA staff will occur in the first two years of funding. In the third year, the CSA will introduce additional ways to advance Wraparound practice. The additional steps will relate to further education and proficiency thresholds built from other evidence-based models such as Models for Collaborative Problem Solving, Trauma Focused Cognitive Behavioral Therapy

and Motivational Interviewing. FSA believes that this structured plan with tiers of achievement and standardized credentialing for reaching education and proficiency thresholds, will serve as a strong retention strategy and support fidelity to Wraparound as well as advance worker's skills in care planning, care management, care coordination and team building. Ultimately, access to services is predicated upon having sufficient well-qualified staff to meet the needs of the program. FSA is fortunate to have a strong core of well-qualified and experienced staff. It is essential that we strive to retain these individuals in a meaningful way that promotes professional growth. It is also critical that we develop a means to offer this same learning trajectory to employees who joined the CSA after the initial ramp-up and those who will join the program in future years.

Another strategy for recruiting and retaining highly qualified staff aligns with the organization's existing philosophies for Human Resource management. Overall, FSA has an extremely good rate of retention. We believe that as an organization, if we treat people well, provide ample opportunities for growth and ensure workers have the tools they need to get the job done, they will remain engaged, productive and enjoy a meaningful employment experience. This formula for retaining staff has also made FSA a desirable employer for many of the fields for which we recruit. Employees are valued and this sentiment is communicated regularly and echoed by the Executive Leadership team. The development and deployed of the Workforce Development Plan further supports this philosophy.

It is anticipated that the Workforce Development Plan will extend throughout the DSRIP funding period and will be fully sustainable by the end of the funding period as detailed in the sustainability response (See 6.5 Sustainability). It is recognized that individuals will be at different levels on the Plan at any given time. Certified Wraparound Coaches are prepared to start immediately to foster credentialing for additional staff. As new initiatives are built, we will expand the training capacity within the CSA, using a train-the-trainer model whenever possible. We will continually seek to strengthen the leadership team to serve as educators and coaches for newly hired staff, making the Workforce Development Plan cost-effective and sustainable. The resources for training will continue to be evaluated for inclusion in the budgetary process.

DSRIP funding will be used by FSA to pay for external educators to provide specific trainings and workshops that will promote fidelity to Wraparound processes. Funds will also be provided to recognize internal staff who will serve as coaches for Wraparound credentialing in addition to their primary role. The additional work required of the staff to become Tier 1 and Tier 2 credentialed will also be recognized using DSRIP funds. FSA has existing staff qualified to provide Wraparound credentialing. We also have sufficient space to offering group and individual education sessions. Equipment to support educational initiatives is available in the form of laptops, projectors, wall mounted flat screen monitors, etc. The supervision and coaching structure already exists within the CSA creating fertile ground to support these efforts. Access to contemporary technology that will be available through the Technology Advancement project will further support these goals.

By the end of the funding period, it is anticipated that all staff employed longer than six months will be credentialed for both Tier 1 and all staff employed longer that one year will achieve Tier 2 credentialing aligned with the National Wraparound Implementation Academy model. In addition, a minimum of two supervisors will be certified for Tier 2 and will prepared to train and coach staff on an ongoing basis. Additionally, all staff will have completed training for Motivational Interviewing and demonstrate proficiency and fidelity to the model. All staff will have completed Collaborative Problem Solving and will have attended one workshops/trainings on the delivery of trauma-informed care. Finally, by the end of the

funding period, at least five staff will have completed certification for the advanced level of Collaborative Problem Solving. This comprehensive train-the-trainer model further strengthens our ability to sustain a higher level of expertise in the fidelity of the Wraparound model in the future.

As explained earlier, the CSA already has staff that can serve as Wraparound coaches. The CSA also has Tier 1 and Tier 2 credentialed staff who can serve as mentors and role models for those staff seeking to achieve credentialing. The use of these current internal resources along with the program's supervisory team makes this initiative cost-effective and sustainable.

The second goal of the Workforce Development Plan involves collaboration with the other CSAs in the Southeast region. Together, the CSAs will create a shared learning library. All of the CSAs in the region will supply content for the library. The content will be intended to support education in Wraparound processes, fidelity to the ten principles of Wraparound, Care Planning, Care Coordination and Integration of Care.

Together, the Directors from the CSAs in the Southeast region have identified focal areas that address key skills for successful delivery of Wraparound services. These areas include:

- Motivational Interviewing
- Diagnostic Formulation and Treatment Planning
- Collaborative Problem Solving
- Attachment, Regulation and Competency Framework
- Coordination of Care for Medically Complex Youth, and
- Wraparound Certification

Collectively, every CSA in the Southeast region will benefit from the efforts and families served will benefit from a more informed team delivering CSA services. The specifics of the content, the format for storing the content and the protocol for access will be decided by representative from the CSAs who will collaborate on the project. This shared resource will strengthen collaboration between CSAs. It makes training more cost-effective by pooling resources instead of replicating training efforts in each individual CSA. It also helps to make CSA services consistent in the region since most, if not all CSA staff, will be educated from the same uniform content. A small percentage of DSRIP funds will be reserved for the development of the training resource library.

The final goal of the Workforce Development Plan involves strengthening the Human Resources (HR) Department's recruitment, screening and hiring practices to ensure vacant positions are filled in a timely manner and with qualified individuals. FSA already has a fully functional HR Department that provides recruitment, screening and hiring. This objective will support the need to fill CSA positions more quickly to maintain our capacity to offer timely access to services. A small amount of capacity funding will be applied to enhance recruitment.

FSA follows a comprehensive recruitment plan to ensure that employees for CSA adequately represent the communities served. Through this funding, we will look to further advance the language capacity of the program in response to referral trends. A multifaceted approach will include on-line targeted advertising, college networking, sustaining relationships with local career centers, and word-of mouth referrals. FSA routinely uses an Applicant Tracking System, which provides an efficient and cost effective way to increase our on-line presence. The applicant tracking system connects FSA to Indeed, a world-wide employment-related search engine for job listings. Indeed reaches a large and diverse population and has historically

provided a good pool of candidates. Indeed will be the primary on-line resource and will be enhanced through focused advertising to reach diverse populations. We will also use O Jornal, which is the ethnic division of The Herald News, the newspaper distributed in the CSA catchment area. In the past, FSA has had success with posting on other boards, such as Craig's List and Linked In, and will include that in our on-line resources to advertise and network. Additionally, FSA's Facebook presence and corporate website will highlight new opportunities.

FSA already works with several area colleges and universities to recruit culturally and linguistically diverse candidates with Associates, Bachelors and Masters level degrees. We work with Bristol Community College in Fall River, UMASS Dartmouth, Bridgewater State University, Rhode Island College, University of Rhode Island, and Community College of RI. FSA fosters close relationships with the local colleges, in an effort to increase internship placements, thereby increasing referrals and potential hires. In many cases we can connect to a target population (e.g. Spanish or Portuguese speaking) through affiliations with campus groups. Networking with Department Deans, posting on job boards, and attending Job Fairs have all been productive components of the college recruitment plans. Specialized training in CBHI services is beginning to evolve in Massachusetts' colleges and universities and FSA will apply capacity funding to support the development of strong affiliations with these institutes of higher learning to recruit qualified candidates.

We also utilize the Career Center in Fall River that networks to the surrounding areas by posting FSA positions on their state website Job Quest. This too reaches a broad and diverse population. On-going relationships with career counselors are helpful in identifying possible candidates. The applicants from these locations are an excellent representation of the local community. Additionally, we are well connected to many different community organizations and have found success with word-of-mouth referrals. Through this funding, current employees will be incentivized to spread the word about job openings through an Employee Referral Incentive Program.

The evaluation and measurement strategy tor the Workforce Development Plan will include the following:

Employee readiness to perform and meet job expectations will be measured by a pre-training employee survey, focused on staff training opportunities, skill development and job satisfaction. The Continuous Quality Improvement department will distribute survey via survey monkey to 15 CSA staff prior to the tier 1 wraparound credentialing training. 10 CSA employees will complete tier one training by 12/31/2018. Surveys will be re-distributed no later than 3 months following the completion of each tier.

Member satisfaction surveys will be distributed by the Continuous Quality Improvement department to all enrolled caretakers annually, the first of which will be completed by June 1, 2019. Specific questions will be added to the surveys each year to glean information regarding the impact of the enhanced training on the member's experience in wraparound.
Survey results will be shared with program leadership by 9/1/2019. Goals for development plan will be added if evidenced in data.

The Human Resource Department will monitor CSA staff retention annually and share the results with program leadership by January of 2019. The goal for CSA staff retention is 85 %.

FSA is confident that the strong governance structure of our organization, our solid fiscal status and our demonstrated ability to offer high quality human services favorably positions us to succeed in the proposed

projects. We have a solid understanding of the State's DSRIP program and goals. We have made significant progress in fostering a meaningful relationship with one of the state's 18 designated ACOs, the Steward Health Care Network. We believe the proposed projects are realistic will support achievement of the goals described in the RFR. The FSA CSA is one of the largest programs in the State, with families from neighboring communities requesting to be serviced through our program The FSA CSA is a strong program with proven effectiveness and demonstrated fidelity to Wraparound processes. The Implementation Plan and Timeline, Budget Report and Narrative and Sustainability modules that follow provides further evidence of our understanding and capacity to meet the stated objectives.

SECTION 6.4 PROPOSED PROJECT AND INVESTMENT PLAN
B. PROJECT TEAMS

WORKFORCE DEVELOPMENT PLAN

The following individuals will provide primary support to the proposed Workforce Development Plan:

- Chief Program Officer – Sharon E. Ford
- Director of Children's Behavioral Health Services – Sharon LaFleur
- Senior Care Coordinator – Katherine Kasheeta
- Senior Care Coordinator – Emily Kelleher

Job descriptions and resumes for each of these primary project team members are provided. In additional, internal FSA resources will be applied to this project through the following positions:

- Director of Human Resources – Sheila Muise

Job Description

Position: Chief Program Officer

Program: Administration

FLSA Status: Exempt

WCC Code: (8810)

Accountability: Chief Executive Officer

Job Summary:

The Chief Program Officer plans, organizes, and oversees all activities of the organization's programs and collaborates with the President/Chief Executive Officer for the overall administration of the agency. The Chief Program Officer is directly responsible for the development, management, and quality improvement activities of all programs: Specialized Adult, Youth, and Clinical. Functions as an integral member of the Senior Leadership team, and is responsible for all agency activity in the President's absence. S/he is responsible for the management of organizational activities that ensure a high level of quality commensurate with the mission of the organization and interests of the Board of Directors, clients, employees, and other stakeholders. S/he is required to clearly communicate current information regarding community needs, industry trends, and changes in the regulatory environment to the Chief Executive Officer.

Duties and Responsibilities:

1. Direct and participate in the planning process for future development and growth of the agency. Market and expand existing programs while developing new initiatives in order to strengthen the Agency's funding base.
2. Develop programs and services consistent with agency purpose and the needs of the community, and ensure programs are responsive to the needs of the community, client, referral and funding sources.
3. Keep informed of national, regional and local developments and trends the impact operations and facilitate organizational adaptive changed as needed.
4. Delegate authority to provide program direction to subordinate personnel and hold them accountable for the performance of their programs and/or departments, ensuring full organizational alignment with its mission, vision and values. Participate in the development and monitoring of service and financial targets, ensuring targets are met.
5. Provide individual and team supervision to Program Leaders as warranted and appropriate according to the Agency supervisory structure. Participate in the hiring, training, and timely performance evaluation of all staff.
6. Ensure coordination and integration of programs so that services are as seamless as possible in order to flexibly respond to the changing needs of clients.
7. Utilize program evaluation methodology, MIS, and financial data to monitor service and financial goals, and adjust service delivery as indicated.
8. Oversee program compliance with agency, licensure, funding source and accreditation regulations, standards, policy and procedures.
9. Participate in committees and assigned Quality Improvement activities.
10. Perform additional duties and responsibilities as directed by the CEO, up to and including the oversight and leadership of additional departments.

Revised 3/2012, 3/2013, 06/2017
Reviewed 3/2014, 4/2106

Education and Experience:
Master's Degree in human services and a minimum of ten years' experience in program administration. Demonstrated competence in planning, designing, and implementing programs, leadership, and team building.

I have read, understand and accept the responsibilities outlined in this job description.

Job Description

Position: Director of Children's Behavioral Health Services

Program: Community Service Agency / Therapeutic Mentoring/ Family Resource Center

FLSA Status: Exempt

WCC Code: (8810)

Accountability: Chief Program Officer

Job Summary:

To provide administrative support and clinical supervision for the personnel involved at the Community Service Agency(CSA), consisting of two main components: Intensive Care Coordination (ICC) and Caregiver Peer to Peer Support (Family Partner). To provide for needed care coordination for each child and family admitted to the program and to assure that such service is delivered in a timely and regular fashion. To coordinate all reporting functions between the agency's CSA team and the referring Managed Care Entity. The Program Director will supervise the Senior Care Coordinators and Senior Family Partners. The Director must also lead a local systems of care committee consisting of local providers and state agencies.

Duties and Responsibilities:

1. The Program Director develops and manages the intensive care coordination services in a manner that is consistent with *Systems of Care* philosophy and *Wraparound* planning principles and adheres to the four phases of *Wraparound* for the consumers of the Community Service Agency .
2. The Program Director addresses a variety of complex treatment and system issues. S/he ensures that staff are skilled in providing education and planning regarding treatment access and service needs, parenting skills, conflict resolution, mediation, risk management/safety planning and intervention, and family advocacy and support.
3. The Program Director ensures that the CSA assists the youth to access medical, educational, social, therapeutic, and other services identified in his/her ICP, and is responsible for developing a plan to initiate and guide those service interventions.
4. Assure the UR and UM activity is carried out in a timely fashion.
5. Prepare productivity reports and liaison with the agency's billing department.
6. Perform any duties needed for the efficient running of the program.
7. Respond to reasonable expectations of the Agency and/or supervisor.
8. The Director ensures that a licensed, master's level senior care coordinator provides adequate supervision to each Intensive Care Coordinator and family partner on a weekly basis. The Director ensures that each family partner is also supervised weekly by a Senior Family Partner.
9. The Program Director participates in all network management, utilization management, and quality management initiatives and meetings.
10. Program Director participates in all fidelity-monitoring activities required by MHBP and the five MCE payers'. Program Director will adhere to a standard Operations Manual (and all subsequent revisions), that includes requirements related to successful completion of skill- and competency-based training, care management provision and supervision requirements, care planning requirements, including a process for resolving disputes between team members, reporting of adverse incidents, and consent requirements. The Operations Manual will incorporate statewide interagency agreements concerning the role and responsibilities of representatives of each child-serving agency.
11. The Program Director must comply with all requirements and standards in the ICC Operations Manual
12. The Program Director develops and maintains policies and procedures relating to all components of the ICC service that are consistent with the guidelines and standards in the ICC Operations Manual.
13. The Program Director ensures all new and existing staff will be trained according to the guidelines and standards identified in the ICC Operations Manual.
14. The Program Director ensures that all services are provided in a professional manner, ensuring privacy, safety and respecting the youth and family's dignity and right to choose.

Education and Experience:
A Masters Degree with a license from an accredited School of Social Work or Counseling; LICSW or LMHC with a minimum of five (5) years of experience working with the target population; experience in navigating any of the child/family-serving systems; and experience advocating for family members who are involved with behavioral health systems.

I have read, understand and accept the responsibilities outlined in this job description.

Job Description

Position: Senior Care Coordinator

Program: Community Service Agency

FLSA Status: Exempt

WCC Code: (8742)

Accountability: CSA Program Director

Job Summary:

The Senior Care Coordinator (SCC) provides intensive care coordination services to children referred by the five MassHealth Managed Care Entities (MCE's) – Boston Medical Center, HealthNet Plan, Fallon Community Health Plan, the Massachusetts Behavioral Health Partnership, Neighborhood Health Plan, and Network Health. Under the supervision of the CSA Program Director, the Senior Care Coordinator (SCC) serves as a supervisor on the Community Service Agency team. The Senior Care Coordinator (SCC) co-supervises Family Partners on a weekly basis along with a Senior Family Partner. The SCC also supervises the ICC's on a weekly basis. The SCC, while implementing the wraparound process facilitates the development of the Care Planning Team, who utilizes multiple tools, including strength-based assessments, inclusive of CANS in conjunction with a comprehensive assessment and other clinical information to organize and guide the development of an Individual Care Plan and a risk management/safety plan to improve the lives of families who have children with mental health needs

Duties and Responsibilities:

1. Supervise care coordinators and family partners on a weekly basis in group and individual settings.
2. See children and families as assigned for ICC intake and/or care coordination while adhering to the principles of wraparound.
3. Should be knowledgeable and experienced in the use of several of the following treatment modalities: individuals, family, child, and group. Should understand the concepts of wraparound services and strength-based approached to providing supports.
4. Have a willingness and ability to work with SED, DMH and DCF populations.
5. Willingness and ability to work flexible hours, including evenings to meet the clinical needs of the child and family.
6. Provide consultation and education to families.
7. Participate in 24 hour on call emergency pager coverage on rotating basis to address urgent child or family crises.
8. Triage referrals and provide referral resource with accurate and timely availability of needed resources.
9. Maintain paperwork requirements and timeframes of MBHP, the five MassHealth Managed Care Entities (MCE's) – Boston Medical Center, HealthNet Plan, Fallon Community Health Plan and the agency.
10. Respond to reasonable expectations of the Agency and/or supervisor.
11. . Assist in maintaining all policies and procedures related to all components of the community service agency. Senior care coordinators assist in ensuring all new and existing staff will be trained on these policies and procedures.
12. Provide orientation, coaching and training to newly hired staff.
13. Learn billing and insurance systems that interface with ICC. Complete authorizations when needed. Assist staff with insurance authorization problems and contact MCE's as needed.
14. Understand and demonstrate commitment to agency mission, values and philosophy in performing skill specific to role.
15. Maintain all ethical and legal requirements of the Agency.
16. Assume responsibility for meeting and maintaining all licensing, COA or agency requirements for personal health, training or other certifications.

Revised 4/2011, 3/2012,3/2013
Reviewed 3/2014, 04/2016

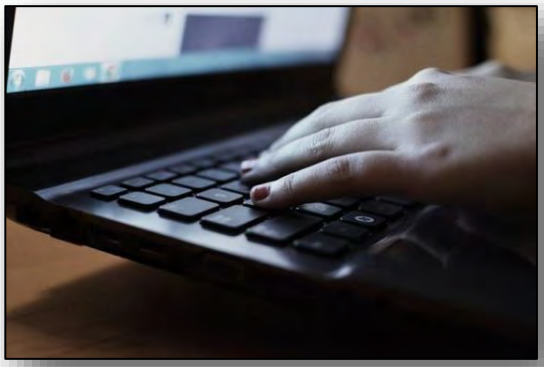
Thank you for choosing Qualifacts (QSI) as your new electronic health records partner. The Qualifacts Implementation Team would like to welcome you to the CareLogic community.

Over the course of the next few months, your Qualifacts project manager (PM) and implementation specialist (IS) will guide you through the configuration, testing, and deployment of CareLogic to best meet the needs of your agency. This process will consist of understanding your current business processes (workflows) and assisting you in the translation of these into a best practice future business processes (workflows) setup within CareLogic in order to maximize efficiencies in both consumer care and revenue lifecycles.



Your dedicated Implementation Specialist is the CareLogic software subject matter expert assigned to the project. The IS will be responsible for system training and configuration guidance on how to setup CareLogic to best meet the agency's business needs.

The Implementation Specialist has an in-depth knowledge of the product and industry standards. The primary goal is to establish successful relationships with the customer and their use of the product presents opportunities beyond standard customer support. Some of these areas include assessments, recommendations on best-use cases, and more complex needs of the product. Responsibilities of the IS include:

- Establishing stronger relationships with Executive CareLogic sponsors at the agency
- Measuring customer satisfaction, reference ability, and effective use of the system
- Project meeting facilitation
- Project plan maintenance
- Manage staff to task completion per timeliness in customer project plan
- Status meeting agendas/minutes and other project controls
- Liaison between customer project team and QSI project team – handling logistics and communication
- Issues resolution
- Identifies and manages trainers for the project
- Oversees issue management for the project

Lori JB Mahoney

Professional Experience

Chief Administration Officer, 2016-present
Family Service Association, Fall River, Massachusetts
Oversight of all activities of agency support services and collaboration with the President/Chief Executive Officer for the overall administration of these departments. Development, management, and quality improvement activities of Human Resources, Information Technology, Marketing, Quality Improvement, and Facilities.

- Oversaw redesign for IT department structure to hybrid model, including impetration of plan to improve infrastructure to mitigate operational and security risk.

Director, Human Resources, 2014 – 2016
Family Service Association, Fall River, Massachusetts
As a collaborative member of the Leadership Team, provide HR guidance and consultation to a mission-drive family service agency with 350 employees. Oversee all areas of Human Resources, including employment, performance management, employee relations, compensation and benefits, and safety.

- Improved recruitment process by implementing automated Applicant Tracking System and increasing professional recruitment assistance to hiring managers.
- Working cooperatively with leadership to restructure several departments, eliminating unnecessary positions with relatively low unemployment
- As Safety Committee chairperson, modified employee injury reporting to include incident follow-up procedure and near-miss reporting. In 2015, lost work days claims cost decreased by over 50%, partially due to robust modified duty program.

Director, Human Resources, 2004 – 2014
Southcoast Hospitals Group, Southcoast Physicians Group, New Bedford, Massachusetts
As an active leadership partner, continuously enhance HR contributions to multi-service, acute care hospitals and physician practices with over 6,500 employees.

- Partner with Care Center Division leaders workforce planning, performance improvements, and employee engagement strategies.
- Oversee and deliver high quality HR services, including employment, employee relations, performance management, training, and program implementation.
- Lead HR team of eight professional and administrative staff toward various operational improvements to improve quality and increase efficiency of HR services.
- Lead Employment Process Automation Team, resulting in improved service, efficiency, and customer satisfaction.

- Resolved highly complex employee relations issues with tact and respect while minimizing legal exposure. Despite high volume and complexity of issues, 100% of cases were resolved internally in four consecutive years.
- Source, recruit, interview, and hire various "hard-to-find" professionals, and develop interviewing and selection skills of client partners.
- Actively contribute to several cross functional HR teams e.g., turnover, performance improvement, policy revision, HRIS, and cultural initiative program
- Design and administer various training programs. (eg. performance management, new employee orientation, leadership, etc.).
- Successfully use of the Predictive Index tool in recruitment, on-boarding, and individual and group leadership development.

Corporate Human Resource Manager, 1998 - 2004
Diocesan Health Facilities, Fall River, Massachusetts
As a member of the corporate management team, worked cooperatively to establish progressive HR function to assist the organization in providing innovative, comprehensive long-term health care.

- Managed all HR programs in 1200 employee, multi-facility organization.
- Provided coaching to HR staff of 11, in 5 locations, and cooperatively establish and implement HR development plan.
- Managed HR/payroll/attendance software conversion on citrix network for multiple locations, including overseeing vendor selection process, set-up, training, and implementation across all departments, including policy and procedure development and implementation.
- Oversaw wage and salary administration, and train managers regarding strategy and implementation.
- Provided guidance and consultation to facilities in all issues regarding safety management, including monitoring worker's compensation claims and OSHA compliance.
- Provided system-wide managerial training in various HR issues, including employee screening and selection, performance management, sexual harassment, incident investigation, and compliance.

Human Resource Director 1994-1998
Madonna Manor (a Diocesan Health Facility), North Attleboro, MA

- Responsible for all functions of Human Resource Department in 180 employee facility.
- Screened, selected, and provided orientation training for all new employees.
- Consulted with department managers on all employee relations matters
- Responsible for compliance with state and federal law, as well as various other state long-term care regulations.
- Oversaw payroll and benefits administration, including unemployment and disability claims management.
- Managed conversion of employee benefit to Paid Time Off system.

- As Safety Committee Chairperson, oversaw all aspects of Safety Management Program, including aggressively managing all workers compensation claims and OSHA compliance.
- Provided training to employees in various human resource issues, including sexual harassment and safety awareness.

Education

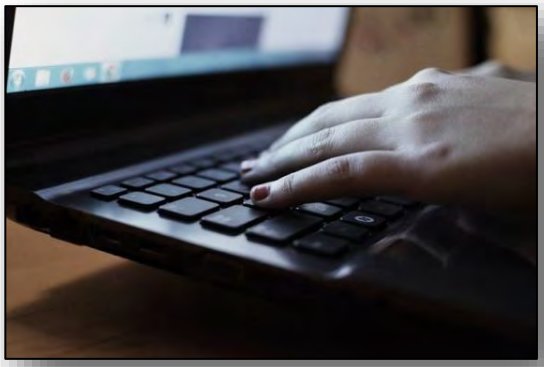
Master of Business Administration - Salve Regina University	HR Concentration
Bachelor of Science - University of Massachusetts at Amherst	Major - Psychology
Professional in Human Resources Certification (PHR)	1993 - 2011

Skills/Attributes

- Strong verbal and written communication skills
- Trained CQI facilitator with solid negotiation skills
- Proficient in MS Office, and several s applicant tracking and payroll systems
- Strong presentation skills. Experienced HR/Management skills trainer
- Member of the Society of Human Resource Management and Northeast Human Resource Association

Thank you for choosing Qualifacts (QSI) as your new electronic health records partner. The Qualifacts Implementation Team would like to welcome you to the CareLogic community.

Over the course of the next few months, your Qualifacts project manager (PM) and implementation specialist (IS) will guide you through the configuration, testing, and deployment of CareLogic to best meet the needs of your agency. This process will consist of understanding your current business processes (workflows) and assisting you in the translation of these into a best practice future business processes (workflows) setup within CareLogic in order to maximize efficiencies in both consumer care and revenue lifecycles.



Your dedicated Implementation Specialist is the CareLogic software subject matter expert assigned to the project. The IS will be responsible for system training and configuration guidance on how to setup CareLogic to best meet the agency's business needs.

The Implementation Specialist has an in-depth knowledge of the product and industry standards. The primary goal is to establish successful relationships with the customer and their use of the product presents opportunities beyond standard customer support. Some of these areas include assessments, recommendations on best-use cases, and more complex needs of the product. Responsibilities of the IS include:

- Establishing stronger relationships with Executive CareLogic sponsors at the agency
- Measuring customer satisfaction, reference ability, and effective use of the system
- Project meeting facilitation
- Project plan maintenance
- Manage staff to task completion per timeliness in customer project plan
- Status meeting agendas/minutes and other project controls
- Liaison between customer project team and QSI project team – handling logistics and communication
- Issues resolution
- Identifies and manages trainers for the project
- Oversees issue management for the project

TINA KIRKPATRICK – Information Specialist

PROFESSIONAL EXPERIENCE:

Customer Success Manager/Implementation Specialist
Qualifacts Systems Inc - Jan 2015 to Present

Manager of Implementation
Qualifacts Systems Inc - Aug 2013 to Dec 2014

Project Manager
Qualifacts Systems Inc - June 2009 to Aug 2013

Director of Implementation and Training
CRC Health Group - Sep 2004 to June 2009

Billing Manager
Genesis HealthCare - November 1996 to September 2004

EDUCATION:

AIU (American InterContinental University)
BA, Business Management, Healthcare Administration

1/2000 – Present, Family Service Association of Greater Fall River, Inc., Fall River, MA

2017 – Present
Manager of Information Technology

- Provide leadership to IT Staff
- Design, organize, maintain and support all matter of information management, application of technology, and connectivity for all FSA locations.
- Responsible for the oversight of the EMR, including full implementation, planning, design, training, support and maintenance.
- Manage staff, equipment and expense associated with FSA's IT functions.
- Collaborate with consultants to identify areas where change, use or increased use of automated systems would provide increase speed, accuracy or efficiency in agency operations.
- Provide technical expertise to Senior and Program Leadership.
- Develop business case justifications and cost/benefit analyses for Information Technology spending and initiatives. Lead acquisition of technology inclusive of computers, phones, copiers and other technological systems.
- Manage technology inventory (hardware and software) to include procurement, installation, configuration, recordkeeping and disposal.
- Establish service level agreements with internal and external customers and service providers and monitor service delivery to ensure the agreed targets and standards are met.
- Assist with all aspects of the implementation of new applications and modules as it relates to Electronic Medical Records. Lead all aspects of new program implementation. Development, implementation and maintenance of new forms by program into the system.
- Assist with EMR training and education of software upgrades, new features and new functionality. Responsible for troubleshooting and completing application issues and trouble tickets (Soffront and CLHelp), and reporting to the software vendor.
- Act as Chairperson of the Carelogic Improvement Team, as well as a liaison to the all users and leadership in order to ensure that all issues are resolved in a timely manner. Provide consultant level support and on the job coaching and mentoring for all users as needed
- Assist with the advancement of clinical applications, interfaces, data migration and reporting of the EMR software. Provide administrative reports as requested by Leadership.
- Assist with the creation of policies and procedures for all IT areas, including EMR processes and workflows.

2015 – 2017
EMR Project Manager

- Lead all aspects of new program implementation, continuing development and enhancement of EMR system.
- Develop and maintain a training curriculum, schedule and instruct clinical and non-clinical staff on the appropriate use of EMR system.

- Schedule and assist with training and education of software upgrades, new features and new functionality.
- Act as a liaison between staff and EMR vendor in order to ensure that all issues are resolved appropriately.
- Provide support, coaching and mentoring for all users as needed.
- Responsible for troubleshooting application issues and handling internal trouble tickets.
- Assist with the advancement of clinical applications, user interfaces, data migration and reporting in the EMR software.
- Create policies and procedures for EMR processes and workflows.
- Provide administrative reports as required, including regular reporting of key performance indicators to leadership using SQL based tools and software.
- Perform all duties related to the management and supervision of the Information Technology Department and its staff.

2001 – 2015
M.I.S. Supervisor/HIPAA Security Officer

- Developed and documented policies and procedures for all MIS/IT related functions.
- Ensured the security and confidentiality of all electronically stored client information in accordance with the Health Insurance Portability and Accountability Act of 1996 (HIPAA).
- Performed all duties related to the administration of an enterprise level network serving over 400 users across 19 locations.
- Served on the HIPAA Implementation Team as Technology and Security Officer.
- Supervised MIS Technicians and Assistants.
- Purchased, installed and maintained all IT related equipment (hardware/software/accessories)
- Negotiated contracts for all IT and telephone related services.
- Administered telecommunications services and equipment for all sites.
- Worked closely with all agency staff, including managers, senior leadership and board of directors.

Education:
9/1987 Massasoit Community College, Brockton, MA
Liberal Arts - Science Option
6/1995 Kinyon and Campbell Business School, Brockton, MA
Vocational - Legal Support Worker
6/1997 Computer Training Specialists, II, Fall River, MA
Certification

Attachment C: CSA Budget Narrative

Budget Expenses:

(Investment narrative should only include investments listed in the Budget Report provided on Attachment B. Please provide separate descriptions of budget allocations for each project)

Workforce Development **Total:** $ 63,139.55

In the box below, please provide a description of all items within the Workforce Development investment category (e.g. recruitment support, training and coaching programs and certifications). Please be sure to specify the goals and project(s) this investment will support, as described in **Section 3.4** and **Section 6** of the RFR and how these investments will assist in meeting the terms of the Contract.

Prep Budget Workforce Development Plan Investments:

The activities in the Prep Budget period for the Workforce Development Plan investments support the goal of strengthening fidelity to Wraparound processes, including care planning, care coordination and care management. These activities will improve the CSA's capacity to provide quality services, promote member engagement while adhering to the ten principles of Wraparound and ensure timely access to services.

National Wraparound Model Credentialing:

- Develop team for training project
- Assess current staff knowledge of Wraparound processes
- Design training modules for Tier 1 and Tier 2 including creation of all required training materials

Total of 125 hours - $4116.75
Fringe – FICA, Unemployment, Workers Compensation, Pension and Health Insurance for all staff- $ 1,059.80

Training Resource Library:
Family Service Association's CSA will reserve $5,000.00 to participate in the development of a Training Resource Library that will be shared by the CSAs in the Southeast region. Preliminary conversations have occurred to foster this regional collaboration. The project will develop further with the support of capacity funding which will support staff time, travel and resources needed to create library content. If the regional collaboration with other does not occur we will apply the funds to the creation of an FSA Training Resource Library. Materials will ongoing support, education and training on CBHI and CSA services, strength-based practice models that foster fidelity to Wraparound processes and member engagement. Materials will be used to train FSA staff and to promote team building and collaboration with community entities such as other providers, ACOs, MCOs and primary care providers.

Year 1 Budget Workforce Development Investments:

The activities in the Year 1 Budget Period for the Workforce Development Plan continue to support the goal of strengthening fidelity to Wraparound processes by building and further advancing the skills of the CSA staff.

Wraparound Credentialing Implementation: Wraparound credentialing will begin for Tier 1 and Tier 2 for all staff employed longer than 6 months. Certified Wraparound Coaches will train staff on each module, followed by modeling and coaching as needed. Every staff member will complete Tier 1 Wraparound credentialing by the end of this budget period. Staff who have already achieved Tier 1 Wraparound credentialing will complete Tier 2 credentialing.
Tier 1: 24 staff @ $300 = $7,200.00
Tier 2: 8 staff at @ $600 = $4,800.00
Total: $12,000

Years 2-5 Budget Workforce Development Investments:

The activities in budget years 2-5 of the Workforce Development Plan continue to support the goal of strengthening fidelity to Wraparound processes. As staff complete training and achieve credentialing and/or certification in key areas, they become eligible to serve as educators, further advancing their expertise and ensuring the sustainability of these investments.

Additional Wraparound Credentialing (2019): Staff completing Tier 1 credentialing in budget year one will complete Tier 2 Wraparound credentialing in year two.
2019 - 24 staff achieve Tier 2 @ $600 = $14,400.00

Motivational Interviewing (2019): Certification in Motivational Interviewing (MI) will be provided through the University of Massachusetts Medical School Center of Integrated Primary Care on-line certification program. All staff will complete the introduction to Motivational Interviewing. Five additional staff with complete the Intensive Training in Motivational Interviewing; which includes Healthcare Behavior Change and Motivational Interviewing, Defining Motivational Interviewing, Spirit of Motivational Interviewing, Complex Reflections and Empathy, Change Talk and Sustain Talk, Responding to Sustain Talk and Discord, The Four Processes of Motivational Interviewing, Change Planning and Motivational Interviewing Theory and Evidence.
Introduction to MI @ a cost of $2,500.00
Intensive Training in MI Certificate Course: 5 staff @ $600 = $3,000.00
Total: $5,500.00

Trauma Informed Care (2020): Training will be provided by Clinical & Support Options. Topics covered in the the Trauma Informed Care training include Positive Parenting and Behavior Management, Parenting Your Traumatized child and Attention Deficit Hyperactivity Disorder.
$200 per hour x 4 hours with an additional four hours for travel
Total: $1,600.00

National Wraparound Implementation Academy: FSA will send two staff to the annual conference at the National Wraparound Implementation Academy to build knowledge, develop skills and advance expertise in Wraparound. The Academy will include new sessions focused on system and practice issues facing Wraparound initiatives and practitioners.
2 staff @ $1500
Total: $ 3,000.00

Collaborative Problem Solving (2020): Coaching in Collaborative Problem Solving will be offered by Think:Kids and the Department of Psychiatry at Massachusetts General Hospital. The introductory training will provide a means to understand and help children who struggle with behavioral challenges. Five additional staff will complete Intensive Training in this evidence-based approach to aiding adolescents with behavior challenges.
Introductory Training: 34 staff @ $149 = $5,066
Intensive Training: 5 staff @ $625 = $3,125
Total: $8,191.00

Collaborative Problem Solving (2021): Three additional staff will complete the introductory training, two additional staff will complete the Intensive Training and two staff will complete Advanced Training.
Total: $5,572.00

Additional Wraparound Credentialing (2020-2021): New staff will begin Tier 1 in their first year of employment and advance to Tier 2 of Wraparound credentialing in the second year of employment

2020 – additional credentialing for new staff = $1,200.00
2021 – additional credentialing for new staff = $1,500.00
Total: $2,700.00

Operational Infrastructure **Total:** $ 206,272.45

In the box below, please provide a description of all items within the Operational Infrastructure investment category (e.g. system change resources, performance management capabilities and additional operational support). Please be sure to specify the goals and project(s) this investment will support, as described in **Section 3.4** and **Section 6** of the RFR and document how these investments will assist in meeting the terms of the contract.

Prep Budget-Operational Infrastructure Investments:

The goal of Operational Infrastructure Investments is to improve organizational capacity to access real-time data to support data-driven decision-making to improve the quality of CSA delivered services. Armed with contemporary information, the program can continually respond to data changes and trends, ensure timely access to services and foster member engagement. These investments will also improve options for family, providers and primary care providers to have a virtual presence at care plan and team meetings using mobile communications.

IT Manager will be responsible for collaborating with consultants to provide oversight of the implementation plan. The IT Manage will chair Implementation Team meetings and participate in comprehensive individualized training on the development, testing and deployment of configurable forms and specialized report writing.
880 hours @ 33.43
Total: $14,709.20

IT Consultants will analyze current paper process, develop electronic workflow and work collaboratively with internal FSA resources
560 hours @ $50
Total: $28,000.00

IT Consultants to draft EHR configurable forms, test and edit drafts and implement final versions of all forms required to support CSA services.
560 @ $50
Total: $28,000.00

Clerical Staff will provide support to CSA during EHR transition; collect data in preparation for data entry, complete some data entry to transition paper records to complete electronic record
462 hours @ $14.10
Total: $ 6,514.20.

CSA Supervisor to take on additional role as EHR Champion; charged with coaching CSA staff on EHR workflow and use, coordinating training, and troubleshooting with IT Manager and Consultant.
82 hours @ 28.66
Total: $2,350.12

Director of Children's Behavioral Health Services to assume additional responsibilities for oversite of the EHR implementation and resultant changes in work flow
19 hours @ 52.71
Total: $1,001.49

Director of Quality Improvement will consult with Implementation Team to ensure the quality measures meet FSA QM standards and practice.
22 hours @ $42.00
Total: $924.00

Director of Client Financial Services will consult with Implementation Team to ensure the billable interfaces align with existing workflows
20 hours @ $39.00
Total: $78.00

Fringe: FICA, Unemployment, Workers Compensation, Pension and Health Insurance for all staff
Total: $7,366.44

Consultant: Qualifacts Consultant Project Manager will provide training in advanced report writing for IT Manager
16 hours @ $150. 00 per hour
Total: $2,400.00

Year 1 Budget-Operational Infrastructure Investments:

The goal of these Operational Infrastructure Investments is to further improve organizational capacity to access information and support data-driven decision-making to improve the quality of CSA delivered services. These investments ensure appropriate staffing levels with the least possible disruption of services during the EHR transition.

Clerical Staff: Clerical staff will provide support to the program; collect data in preparation for data entry, complete some data entry to establish complete electronic records for existing enrolled families.
640 hours @$14.10
Total: $9,024.00

CSA Supervisor: One CSA Supervisor will take on additional role as EHR champion in support of implementation, workflow changes, staff training and troubleshooting with IT Manager and Consultants.
123 hours @$29.52
Total: $3,630.96

Human Resources: Recruitment costs for posting sponsored positions on Indeed.com to ensure the highest visibility to accelerate recruitment.
Total: $ 450.00

IT Manager: The IT Manager will be responsible for overseeing first phase implementation, including serving as the Chairperson for the Implementation Team, monitoring all aspects of plan progress, care plan development and implementation, quality measures, reporting, and developing training materials. IT Manage will also work with consultants to develop configurable forms and specialized reports.
429 hours @$35.46
Total: $ 15,212.34

IT Consultants: The IT Consultants will analyze current paper process, develop electronic workflow, create electronic configurable forms
119 hours @ $50
Total: $ 5,950.00

Fringe: FICA, Unemployment, Workers Compensation, Pension and Health Insurance
Total: $ 7,522.70

Years 2-5 Budget-Operational Infrastructure Investments:

IT Manager
2019: Responsible for overseeing the second phase of implementation, including ensuring all aspects of record have been designed and tested in Carelogic, and developing training resources.
2019: 584 hours @ 36.53
Total: $21,333.52

2020: Responsible for continuing oversight of the second phase of implementation, including ensuring all aspects of mobile access are established and tested in Carelogic. This will improve ability to effectively work with families in community locations.
2020: 286 hours @$37.62
Total: $10,759.32

2021: Responsible for research and planning for FSA to use the MassHIway to securely share data and communicate with other providers. This includes ensuring the proper technology is utilized, updating security policies and developing and deploying employee training.
260 hours @ $38.75
Total: $10,075.00

2022: Responsible for completing connection and ensuring FSA can use the MassHIway to securely share data and communicate with other providers.
160 hours @ $39.92
Total: $6,385.60

IT Consultants: Analyze current paper process, develop electronic workflow, create electronic configurable forms, test and edit forms and complete final deployment.
100 hours @ $50
Total: $ 5000.00

CSA Supervisor: Continue role as EHR champion in support of implementation, workflow changes, staff training and troubleshooting with IT Manager and Consultants
44 hours @ $29.52
Total: $1,298.88

Human Resources: Recruitment costs for posting sponsored positions on Indeed.com to ensure the highest visibility to accelerate recruitment.
2020: $500.00
2021: $500.00
2022: $250
Total: $ 1,250.00

Fringe: FICA, Unemployment, Workers Compensation, Pension and Health Insurance for budget periods 2-5
Total: $ 16,334.68

Technology **Total:** $ 54,285.00

In the box below, please provide a description of all line items within the Technology investment category (e.g. Health Information Technology and care management software, IT project management resources, data analytics capabilities, ICC service delivery technology). Please specify the goals and project(s) this investment will support, as described in Section 3.4 and Section 6 of the RFR and explain how these investments will support the Contractor's performance of the Contract.

Prep Budget-Technology Advancement Investments:

The goal of this project is to create a fully functioning, comprehensive electronic health record that will provide consistent and timely reporting and support achievement of quality measures. The EHR will support secure communication with other providers and full functionality with the Mass HIway. Furthermore, the EHR will support integration of care, care planning and care coordination by being fully accessible to all registered users from any community location, putting the electronic health record at the worker's fingertips whenever and wherever it is needed.

Hardware Investments: Provide all ICC's with updated laptops. This will improve program's ability to be mobile allow real time to access EHR, improve documentation standards, and support compliance.
18 laptops @ $600.00
Total: $10,800.00

Qualifacts Consultant Project Manager: Responsible for designing EHR Implementation Plan and overseeing initial phase of project implementation
55 hours @ $150.00 per hour
Total: $8,250.00

Qualifacts Consultants: Responsible for creating specialized reports and complex configurable forms to support comprehensive data collection and seamless customization of EHR
30 hours @ $150.00
Total: $4,500.00

Year 1 Budget-Technology Advancement Investments:

The goal of this project is to create a fully functioning, comprehensive electronic health record that will provide consistent and timely reporting and support achievement of quality measures. The EHR will support secure communication with other providers and full functionality with the Mass HIway. Furthermore, the EHR will support integration of care, care planning and care coordination by being fully accessible to all registered users from any community location, putting the electronic health record at the worker's fingertips whenever and wherever it is needed.

Qualifacts Consultant Project Manager: Responsible for aiding in the deployment of the Implementation Plan and consult with IT Manager to troubleshoot implementation challenges
10 hours @ $150.00
Total: $1,875.00

Qualifacts Consultants: Continue report writing and creation of configurable forms as EHR Implementation unfolds.
36 hours @ $150.00
Total: $5,400.00

Remote Access: MiFy subscription to support mobile internet access
8 users @ $30 per month plus base account
Total: $2,880.00.

Years 2-5 Budget-Technology Advancement Investments:

The goal of this project is to create a fully functioning, comprehensive electronic health record that will provide consistent and timely reporting and support achievement of quality measures. The EHR will support secure communication with other providers and full functionality with the Mass HIway. Furthermore, the EHR will support integration of care, care planning and care coordination by being fully accessible to all registered users from any community location, putting the electronic health record at the worker's fingertips whenever and wherever it is needed.

Remote Access: MiFy subscription to support mobile internet access
8 users @ $30 per month plus base account
Total: $2,880.00

Qualifacts Consultants: (2020) Assist in reconfiguring service documents in the EHR to support interface with Carelogic Mobile Application. Once fully implemented, this App will eliminate the need for MiFys.
48 hours @ $150.00
Total: $7,200.00

Carelogic Mobile: Estimated fees for Carelogic Mobile Application in 2020, 2021 and 2022
3 years @ $3,500 annually
Total: $10,500.00

Family Service Association (FSA) has submitted a bid for other programs that may receive funding under the DSRIP program. Specifically, FSA has submitted a bid for the Long Term Services and Supports (LTSS) Community Partners program. FSA will ensure that projects supported with funding received under this Contract will not also be funded with other DSRIP related finding by virtue of the fact that these funds will be applied solely to the Community Service Agency. The FSA application for the Long Term Services and Supports applies only to elder service programs. Additionally, this bid addresses workforce development that is specific to Wraparound which is not used in the LTSS services. Finally, the Technology Advancement project targets customization of the EHR that is specific to CSA operations which has not applicability or relevance to FSA's LTSS programs.

6.4 E. Sustainability: The sustainability of infrastructure and capacity building investments beyond the funding period is contingent upon the rate of referral and engagement, and the capacity of staff to meet quota and performance expectations. Given that the CSA is well-established and already handles a significant volume of referrals, and recognizing that the CSA has a longstanding reputation for the delivery of high quality, effective Wraparound services; FSA is confident that the infrastructure and capacity building efforts can be sustained with ongoing program revenues.

A system of checks and balances exists within FSA to monitor program performance, outputs, outcomes and compliance with deliverables. That same system will be applied to these infrastructure and capacity building projects. A solid process exists within the organization for monitoring revenue through monthly Profit and Loss statements which are compared to program budgets. This ongoing monitoring, tracking and analysis involves the Chief Financial Officer, the Chief Program Officer and program Directors; and enables the leadership team to respond quickly with appropriate strategies to revenue or expenses that are not aligned with the projected budget.

The Technology Advancement project will rely heavily on the configurable features of the current EHR to further support the CSA, evolving to a complete electronic record which is fully sustainable. FSA will make significant investment of DSRIP funds to the programming of the EHR's customizable features to design data entry, documentation, tracking and reporting modules. While this is a substantial investment; once completed, it will be fully operational using only resources within FSA's existing Information Technology department to sustain the EHR's functioning. This makes good use of infrastructure and capacity building investments to produce deliverables for the program that have no incurred cost once in production. The investment will also support achievement of quality measures. As the electronic workflow is built, the required, compliant choice will be the default choice. For example, the date of the last physical and dental exam can be programmed as required fields in service documents. Workers will not be able to sign or submit these documents unless the date field is completed. An alert system can then be assigned to the date fields, providing automatic notice to staff when the next physical or dental exam should be scheduled and a warning alert to supervisors when the date exceeds a given threshold, such as one year. In this way, the Technology Advancement project also supports achievement of quality measures. Creating these types of safeguards within the electronic record are one-time costs that are fully sustainable beyond the funding period. Throughout the funding period, the allocation for EHR consultant time titrates down; allowing for any additional modules that may be needed. It also allows for any modifications that may be needed to facilitate communication with ACOs and primary care providers, to improve our capacity to share and access information.

FSA has a keen understanding of material costs and what it will take to keep the program operational. This understanding is built from having provided human services for so long. It also is built from having operationalized a number of new and highly effective programs including the Community Service Agency, Therapeutic Mentoring, In-Home Therapy and the Family Resource Center over the last five years. In terms of material investments, such as computers, monitors, telephones and the like, FSA has a budgeting format that dedicates a percentage of revenues each year to program needs to upgrade and/or replace material goods as needed. FSA has a strong approach to sustainability in its existing system for budget management.

The second part of the infrastructure and capacity building investment is the Workforce Development Plan that includes training, skill development, demonstrating proficiency and recognition of advanced practice for

those staff who achieve established education and performance metrics. FSA believes this project is also fully sustainable beyond the investment period. We historically have extremely good retention. We still have staff on board in the CSA that started with the program. Other staff have been with the organization even longer than the program, transitioning into the CSA from other programs. FSA will employ a train-the-trainer model for the education components. This will create a pool of staff with the knowledge and experience to help build the skills of new staff as they are hired to replace staff lost to attrition or if/when new positions are created. We also plan to invest funds in a regional, shared resource library which will provide training resources outside of the investment period. Additionally, each year, as part of the employee evaluation process, workers are afforded an opportunity to identify any training needs they may have. Training requests and recommendations are then included in budget planning for the next fiscal year. The capacity building investment in the first two years will support Wraparound certification. The investment in future years will include topics detailed in the project narrative and the suggestions or recommendations received from worker feedback. Finally, but probably most important in the sustainability of these investments is FSA's strong fiscal standing.

6.5 COORDINATION WITH ACOS, MCOS, AND PRIMARY CARE PROVIDERS

In fiscal year 2015, FSA began work with the Steward Medicaid Care Network (SMCN) on a pilot project related to an Executive Office of Health and Human Services Infrastructure and Capacity Building Grant. The first successful pilot explored shared governance and enhanced organizational integration. The second pilot, which ran concurrently with the first, tested data integration, clinical informatics, and population-based analytics. This work has progressed and FSA is currently working with SMCN on a clinical integration project that addresses avoidable emergency department (ED) use. A sub-project within this pilot is to trial advanced integration of care with two CSA enrolled families, looking to help define what future integration may look like and identify what steps will be needed to advance care coordination between the CSA and primary care providers within the SMCN. This final pilot is in the early stages but is already showing promise and has made great progress in opening communication between the CSA, FSA and SMCN. The announcement in early June that SMCN was one of 18 health care organizations across the state selected to participate in MassHealth's Accountable Care Organization (ACO) program confirmed that the efforts on the pilot projects were valuable investments in time and resources. These projects have laid the groundwork for future meaningful collaboration. The progress made with SMCN demonstrates FSA's ability to work with ACOs productively toward common goals. FSA can now apply lessons learned from these pilot projects to advance our work with SMCN and to guide future work with other ACOs and primary care providers. The skills and expertise of the CSA staff is widely recognized and staff already coordinate care for enrolled youth with areas hospitals, other CBHI providers, social service providers and state agencies. Extending that reach to further collaboration and coordination of care with other ACOs, MCOs and primary care providers is a natural progression of what the program already does and what FSA has already achieved with SMCN.

Essential to continuing the progress made thus far is effective communication. Capacity funding will be used to promote bidirectional communication through technology advancement. Initial work with the SMCN has helped to inform the direction FSA needs to head to extend our digital capacity. The Workforce Development, with an emphasis on Wraparound processes, including team building, will also help to promote the care coordination that will be required to achieve the state's DSRIP goals. Enhancing FSA's capacity for secure digital communication will ensure that interdisciplinary care plans can be shared with all members of the team serving the youth/family. Ensuring a secure platform for the digital exchange of data will also serve to further communication from providers to FSA. Representatives from ACOs and primary care providers will be invited to participate in Systems of Care meetings and multi-disciplinary team meetings to further promote coordination and collaboration. Extending our digital capacity to include virtual meeting attendance will allow family, community providers and other team members the opportunity to consult and participate in team meetings when actual attendance cannot be achieved. This time saving and cost effective measure extends the reach of providers and facilitates communication. Furthering the concept of telemedicine will also foster effective communication and open service delivery options for persons served.

The current CSA structure that utilizes an Intake Coordinator supports efficient referral management. To date, the CSA has never had a development plan related to timely access to services. This is due in part to the programs strong leadership, the establishment of reasonable caseload assignments, careful oversight of referral and intake activity and the development and deployment of the Intake Coordinator position. The Intake Coordinator works closely with the CSA Director and SCCs to triage and prioritize referrals and ensure appropriate case assignment. All referrals go directly to the Intake Coordinator, who gathers required information to complete the intake, conducts initial screenings for medical eligibility and community safety, and provides information to families on the CSA program and the intake process. The Intake

6.5 COORDINATION WITH ACOS, MCOS, AND PRIMARY CARE PROVIDERS

Coordinator serves as the point of contact for families during Intake. Centralizing intake with one full-time individual allows families in the referral stage, and referring providers, a single contact point to keep the intake/process moving forward. It also allows for the development of relationships between frequent referral sources and the CSA. As soon as a referral/intake is completed, the Intake Coordinator triages the referral and makes a tentative assignment considering staff availability, the urgency and complexity of the case, and the linguistic needs of the family. At least one member of the CSA Leadership Team (Director and SCCs) are on-site during program hours and readily available to consult with Intake Coordinator to confirm assignments when needed. Using this system makes the best use of resources, ensuring that referrals assigned to an ICC or FP are ready for immediate contact and intervention. This organized, efficient and effective process helps ensure there is consistent and timely access to services.

The well-structured staffing and supervision plan within the CSA supports performance beyond the intake and referral phase of engagement. CSA staff demonstrate fidelity to Wraparound processes; including team building. The program is currently working to build upon past success to further enhance team building skills. This includes team-based treatment planning and collaboration with pediatric providers. The CSA staff have strong connections with the pediatric providers in the Greater Fall River and they continually strive to maintain open communication. The CSA utilizes service delivery teams comprised of an ICC, and when clinically indicated, a FP. This care delivery team extends the capacity of the program to meet all of the needs of the youth served and his/her family. The Technology Advancement project proposed will extend existing capacity, deploying additional mobile devices and applications to foster communication with family, informal supports, other involved community members, behavioral health staff and primary care providers.

Linkage to appropriate community resources and social services is another strong component of the CSA. The FSA Family Resource Center is an excellent option for up-to-date resources and opportunities for families. Both the Resource Center and the CSA continually build reference libraries of available resources within the Greater Fall River area, and materials are continually updated. The technology advancement proposed for this funding will facilitate the use of digital resources in the homes of service recipients and during outreach work for rapid access to information. The Technology Advancement project proposed for capacity funding will put real-time information at the fingertips of ICCs and FPs. Rather than telling families they will research options and get back to them, they can research with families, in the moment when the information is needed. This can also serve as a teachable moment, demonstrating to families how they can seek information. While many families may not have access to the internet, it publically available through the Family Resource Center, various community entities, other service providers and public libraries, but families need to be taught how to use this valuable resource. As the FSA EHR evolves and becomes a singular integrated record, staff will have access to that record anywhere they serve families with the aid of technology deployed as part of this funding. This will further support timely follow-up, information sharing and collaboration with primary care providers. The Workforce Development strategies will contribute to building strong and effective care delivery teams comprised of multiple community providers. The strong Systems of Care Committee that currently exists will further promote timely access and connections to social services. The Interagency Team is yet another tool available to coordinate care, avoid duplication and promote favorable outcomes for CSA enrolled families.

FSA will also apply capacity building investments to improve our ability to use the MassHiWay in year's four and five of the investment. Physician practices were introduced to the MassHiWay as part of meaningful use. We will work towards accessing and implementing this platform as part of the Technology

advancement project to support integration of care and health promotion. Since physicians are already familiar with, and using this platform on a regular basis, aligning FSA with the MassHiWay will further support secure communication and promote coordination with ACOs, MCOs and Primary Care Providers.

CSA Budget Report

Gandara Mental Health Center, Inc.

Investment Funding		Prep Budget Period	Budget Year 1	Budget Year 2	Budget Year 3	Budget Year 4	Budget Year 5	Total Revenues

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Total Development and Adaptation of EHR and Care Management System	$ -

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Technology for Service Delivery

Description of Expense	Cost
PVIX	$ 6,705.00
Total Technology for Service Delivery	$ 6,705.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

The PVIX Health Information Exchange is a clinical portal that connects 16 of the largest Primary Care providers in the region with eachother. It allows for health information sharing and coordination. The costs are for our current EHR provider to engineer the connection to the PVIX system/ portal @$188/per labor hour to Remarkable Health to make the modifications. $6705 represents a small percentage of the total cost of impolementation, which will not be more than $20,0000. The exact cost quote is not expected from Remarkable Health until 12/18/17. Speifically, Remarkable Health will be: - Creating connectivity to PVIX Server via Mirth appliance, Managing and sending A03, A04, and A08 messages in response to system events, Testing and validation of the message form to PVIX's connection profile, Alterations to message assembly to conform to PVIX connection profile as needed, and Monitoring and general operational oversight of the message transfer.

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Ehana care management system	$ 23,676.00
Total Development and Adaptation of EHR and Care Management System	$ 23,676.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:
Expansion of current EMR System (Remarkable Health) with a new "front end" system (Ehana) to expand and enhance care management capabilities and EMR capabilities related to ICPs'. Costs are based on the development of the system and the implementation. This system will be utilized only for the CSA DSRIP Progam. It will be developed seprately from the BH CP's eHana platform, under seprate contract, with outcomes and timelines specific to the CSA. The estimated amount to develop the CSA eHana care management platform is $23,676. The eHana system will improve the delivery of ICC services by increase the capacity of the program to share and coordinate information with PCPs, streamline quality measure collection and tracking, and assist in the devlopment of QI paractices.

Technology for Service Delivery

Description of Expense	Cost
~~Mobile Offices~~	
5 Laptops ($1500 each)	$ 7,500.00
14 Printers ($280 each)	$ 3,920.00
14 Signature Pads ($350 each)	$ 4,900.00
Total Technology for Service Delivery	$ 16,320.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Purchase of Mobile offices which includes 5 laptops ($1,500 a piece), for 5 -FTE staff memberss(all staff have laptops, however some of them need to be upgraded to run the additional hardware), 14 mobile printers ($280 a piece) for 14 FTE staff , and 14 signature pads for 14 FTE staff ($350 a piece).

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
PERFORMANCE MGT CAPABILITIES: Develop the capability to track outcomes and deadlines electronically (Back-end reporting)	$ 21,125.00
Total Development and Adaptation of EHR and Care Management System	$ 21,125.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Remarkable Health EHR enhancements. Gandara utilizes Remarkable Heath (RT) Electronic Health Record, which is certified Meaningful Use Complete by Drummond Group and is deployed in two large community-based provider organizations within Massachusetts. **$21,125** is estimated to be utilized to make modifications and additions to Remarkable Health. which reflects the costs of Remarkable Health labor hours to create the Individual Care PLan, Safety PLan , and SNCD within the system, which are currently either tracked on paper or are currently insufficient to gather information needed for the quality measures.
Remarkable Health charges a flat $188 per hour for any additions and modifications to the system. At this point we have rough estimates from RH on how many hours each of the forms will take to get into the system.
The Individual Care Plan will be a minimum of 15 hours, the Safety Plan and SNDC forms are estimated at 10 hours each. We anticipate as we get further into the process additional modifications will need to be made to our existing forms in order to better track data and outcomes (for example we may need to change a field from a text box to a dropdown menu to better report certain information, these types of changes would have a cost associated)

Provide a brief description of how the Indirect Cost/Administrative Overhead rate was determined: We are not charging an Indirect Cost to the Prep Budget period.

CSA Milestones Report

CSA must have at least one implmentation goal with at least one milestone for each project number. An implmentation goal may have more than one milestone.

Investment Project Number	**Investment Project Name**	**Implementation Goal**	**Goal Start Date**	**Anticipated Goal End Date**	**Investment Category**	**Investment line Item within Category**	**PBP Update - Due to EOHHS March 31, 2018**				**Report on PBP - Due to EOHHS August 31, 2018**			
Ties back to project number or budget report	*Should be same name as on Budget report*	*Describe specific goal (e.g. implement care management software)*	*Dates only between 7/1/17 and 12/31/2022*		*Select from drop down menu*	*Select from drop down menu*	**Anticipated Milestone Target by 3/31/18**	**Evidence of Success**	**Has Milestone been met? (Y/N)**	**If NO, please explain:**	**Anticipated Milestone Target by End of PBP (5/31/18)**	**Evidence of Success**	**Has Milestone been met? (Y/N)**	**If NO, please explain:**
1	Create and Implement a Marketing, Education and Shared Communication Plan with ACO/PC Providers	Implement the PVIX Health Information System	11/01/17	01/01/18	**Technology**	Technology for Service Delivery	The IT Director will complete the PVIX set-up by January 1, 2018	Demonstrated by documentation on the system						
1	Create and Implement a Marketing, Education and Shared Communication Plan with ACO/PC Providers	PCP provider that are connected to GC participants will be educated on goals, requirements, and communication practices of CSA integrated care.	12/01/17	03/30/18	**Workforce Development**	Training Expenses	1. CSA/CBHI Division Director is responsible for developing informational packets for PC providers by December 1, 2017 '2. COO and ED are responsible for the development of the MOU by December 1, 2017 '3. By MARCH 30, 2018, 100% of Ped providers who see GC CSA participants in Hampden county will be contacted	1. Completed informational packets 2. Completed MOU 3. Executed (signed) MOUs with PCPs who work with GC participants						
2	Technology improvements that support cross-system communication and service outcomes.	Implementation of eHana Care Management Platform	11/01/17	03/15/18	**Technology**	Development Adaptation of EHR and/or Care Management System	COO & ED are responsible for ensuring that the eHana sytem is ready for staff use by March 15, 2018	All appropriate staff will have access to they system and be trained to utilize it.						
2	Technology improvements that support cross-system communication and service outcomes.	Deployment of 'Mobile office" hardware	01/30/18	02/15/18	**Technology**	Technology for Service Delivery	1. COO is responsible for purchasing mobile office equipment and by Jan.30, 2018. 2. IT Associate is responsible for training staff on the functionality of mobile office hardware by Feb. 15, 2018	Staff will be utilizing mobile office suites and will increase efficiency as demonstrated by data being entered remotely.						
3	Staff Capacity building	Staff recruiter on-board to focus on Florida, Texas, amd Puerto Rico	12/01/17	01/15/18	**Workforce Development**	Recruitment Expenses	1. COO/HR is responsible for posting the job listing by Dec. 1, 2017. 2. COO/HR are responsible for completing the hire by Jan. 15, 2018	GC's recruiter will increase the number of qualified, bi-lingual candidates, who stay with GC for at least (2 years), to 10 per year over the next 4 years.						
3	Staff Capacity building	GC's ICC staff will participate in the **advanced level trainings provided including: ARC, MI, Tier 1 & 2**	01/01/18	07/31/18	**Workforce Development**	Training Expenses	By (January 2018), (20) providers will begin participation in the advanced level trainings provided including: ARC, MI, Tier 1 & 2	Registration completed for all trainings with participant lists						

Section 6.2 Executive Summary: **5- Year Development Plan and strategies for improvement:**

A. **Current performance on Development Plan:**
The Gandara SCSA development plan was updated in April/May, 2017. It addresses the five core goals as follows.
Reduction in Wait Times: The SCSA recruits qualified bi-lingual/cultural CC staff from Puerto Rico and has a well- established relationship with a university in PR. Retention data indicates that CC staff average turnover rate, over a 2-year period is 25% and FC turnover is 38%. QI processes indicate that form many staff, their skills and preferences do not lie in community based outreach and wraparound care coordination model. One new ICC team has been hired since April, 2017. New ones are hired as a team's caseload is nearly full.
Timely Completion Rates of CANS: The team has identified that reducing staff turnover and improving the tracking of CANS during transfers of cases to new ICC staff, and CANS completion monitoring during individual supervision improves this performance area.
Improving the TOMs' weakest principle–Natural Support Plans-specific 8. B.* The FS&T Director is creating a best practice list improve participation of natural supports that represents a balance of formal services and informal supports.
Improve score for WIFI weakest principle - B23.* The ICC Sr. Coordinator and QM Manager have developed and are administering a survey for families to help identify their areas of concern around transition prior to actual transition plans being developed.
Improve documentation in medical records and discharge from ICC services. The SCSA team identified five new concrete steps to improve chart audits, weekly reviews in supervision, and forms that will help to monitor and improve complete and timely documentation.

B. **Examples of strengths and needs;**
Gandara's organizational strength is based on its core mission to provide an array of prevention, behavioral health, residential and community support services, to adults, families, children, adolescents, and young adults, that are provided by staff who are majority bi-lingual/cultural at all levels of the organization. Nearly all participants face severe social and economic disparities, and are supported by staff who frequently have experienced similar challenges and disparities. Over the past 40 years, our capacity expanded to include minority populations other than Hispanic, including; Nepalese, Portuguese, and African American.

These skills have lead the organization to be responsive to the CBHI needs of many communities across the state with high concentrations of minorities. In the past two years, the SCSA has added to Nepalese care coordination teams for the Springfield region. This capacity for "relatability" results in high engagement scores for full CPT meeting attendance, effective teamwork, use of natural and community supports and strengths-driven services. Our WIFI data also demonstrates high rates of where the family and youth acquire a high understanding and capacity to manage/respond effectively to crises and utilize culturally receptive services and supports.

Similar to many other organizations, Gandara's CSA faces challenges with full participation of representatives from other systems within a youth's life (schools, child welfare/justice), and ensuring that team members follow through on priorities and action steps at the CPT meetings. The region has two SOC's meetings (one Hispanic focused and the other all community) which

has evolved to a bi-monthly combined SOC meeting with the individuals CSA's meeting the alternate month. Representatives across community systems *do* attend these meetings, but it does not translate down to CPT meeting attendance.

Gandara's CSA faces challenges with staff recruitment and retention, which creates a constant need for new and on-going training, from a culturally informed lens, and impacts several areas identified through the TOM's and WIFI evaluation. Needs themes include the capacity to fully implement the Wraparound model, that constantly reaffirms family/youth needs at each meeting, prioritizing and follow trough of action steps, addressing the needs of all family members, constant review of progress, and readiness for discharge. Based on these needs, DSRIP funds have been targeted for recruitment and retention, training, enhanced EHR and Case Management tools that will support self and supervisory review of records, required timelines, client progress, and better developed outcomes and evaluation monitoring and activities.

C. Plans for improving timely access to ICC services: Gandara's SCSA plan to improve timely access to ICC services includes strategies to ensure capacity to enroll referrals into ICC services within the required time frames. Current ICC wait time standards (as of 12/11) require that youth/families, upon consent for services, should not wait more than 10 days for an intake and should be offered an appointment within three working calendar days of a referral to services. Strategies will include: ***hiring a dedicated HR staff person*** to recruit bi-lingual/cultural Hispanic clinical staff from Puerto Rico for positions in the agency which require bi-lingual capacity. (Gandara is also targeting Florida and Texas as recruitment sites due to the recent migration from PR). Only a portion of the cost of the position (approximately 10%) will be assigned to the DSRIP budget. Our target goal is to hire 30 bi-lingual clinicians through this new position. Additionally, the SCSA & Senior Leadership team are ***modifying staff recruitment practices to better access a candidate's viability for successful re-location.*** These practices will include retooling the interview questionnaire test alignment/capacity to work in a community outreach vs. an outpatient clinic site, understanding and capacity to apply an integrated care/wraparound practice, and provide more transition supports (e.g. 1st month's rent, relocation stipend, and assigning an experienced staff to work as a mentor with the new staff person). The SCSA has developed ***an enhanced training and supervision practice*** designed to improve timely completion of required SCSA practices and times-lines and addressed the unique on-going training needs comprehensive weekly group supervision and topical training schedule for the entire year. This also includes a new standard agenda and template for ICC supervisors, and new Intake Coordinators review case-loads, wait list and triage clients with supervisors. This is being achieved through existing resources. New certificate focused training (Project 3) funded through DSRIP, described below in section C and in section 6.4 a, will support staff retention and maintaining the level of care coordination teams sufficient to meet referrals.

D. Plans to improve ICC members engaged in care coordination, planning, management: Staff and administrators from ICC and FP department meet weekly to provide updates, conduct trainings and problem solve. A comprehensive 2017 training schedule includes trainings on our process and its implementation with clients, specific to cultural competency and the mandatory trainings provided to us by the Managed Care Entities(MCEs). Trainings include pre/post-tests to evaluate staff understanding of the subject area. Competency evaluations, developed by the agency QI/QA Director and ICC Supervisors, will be used to improve trainings, determine

individual staff who may need additional individual support/ training and provide measurable data to determine the overall strengths and weaknesses of our departments, and adapt practices to meet the cultural needs of participants. This is provided through existing internal resources (ICC & FP supervisors). New tracking tools and policies and practices are in the process of being developed and integrated into our Remarkable Health (RH) EHR ScoreTrak to aggregate and evaluate data.

New agency-wide training in the Attachment, Regulation & Competency (*ARC*) framework, is scheduled in 2018 for Gandara clinical staff, including CC supervisors and CC's. Also planned is all-staff training to apply culturally based *Motivational Interviewing* by job type and role of each staff. This interactive approach will improve the ICC team to better engage participants in accurate family information sharing and will help supervisors engage staff in performance improvement. Twenty (20) staff will participate in these trainings; Two supervisory staff will attend and obtain certificates for Vroon Vandenberg Tier 1 and Tier 2 (Integrated PC/BH Wraparound practices) certification. Trainings will be completed by 7/1/18.

E. Plans to improve performance on quality scores and Development Plan goals: Plans to improve both the quality scores and Development Plan goals include: New technology, funded through DSRIP (Project 2) will purchase "mobile office" products (laptops, mobile printers, and signature pads) and associated training that will support care planning, management and coordination for ICC engaged members/families (by January 30, 2018). A Care Coordination/ Care Management software platform (eHANA) will be created by April 1, 2018, to support PC/MH integration and support a QI process. (Staff capacity building (Project 3), will include adding on-line assessment tools into our EHR that will enhance monitoring and capacity to aggregate and review staff/program performance through chart audits and new QI processes including formal monthly reviews of data to monitor quality, and compliance with benchmarks; the new staff training practices described above. (by April 1, 2018). The Division/Project Director (C. Ezzo) along with the IT (DiVito, EHR (Dones), and QI Director (Murphy).

F. Plans for improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth. The SCSA will implement a three-tiered process to improve coordination with PPC and other physical/BH providers. General presentations are being prepared for key PPC practices that serve a large number of our engaged enrollees. These will be followed up with an information packet and draft MOU to outline information sharing, notifications/communication practices and CMT input/ participation. When possible, specific teams will be assigned to a PPC practice to promote coordination. SCSA staff will participate in a half day training on culturally focused PC/BH Integration, and the inclusion of Wellness goals in each care plan. The SCSA has well established relationships with other physical and BH care providers across the care continuum that is supported through integrated System of Care meetings (with both local CSA's) that help to identify barriers and solutions to care. Enhanced supervisory and file review practices will support the monitoring care plans, promote accountability and identify areas in which there are coordination lapses.

Section 6.3 Populations Served and Community Engagement
Description of populations and communities served, plans to promote health and wellbeing, and plans for engagement;
GC was established to provide outpatient mental health and substance abuse treatment to Springfield's large, underserved Hispanic community. It has been a licensed outpatient clinic since 1977. As a State Office of Minority Business Assistance (SOMBA)-certified minority agency, GC's mission is to promote the well-being of Hispanic, African-American, and other culturally diverse populations through innovative, culturally competent health, prevention, education and treatment services. Our goals are two-fold: 1) to address disparities in access to quality BH treatment among Hispanics and other minorities through culturally nuanced services provided by highly trained staff who respect participants' beliefs, attitudes and service choices. 2) create a culture of recovery and well-being that focuses on building and sustaining participants' physical, mental and spiritual health, their engagement in supportive relationships, and promotes productive participation in the community.

GC served 13,492 clients through four service divisions in FY16, including Clinical Services, Adolescent & Family Services (AFS), Residential & Community Services, and Prevention & Community Outreach. Among the combined programs, 58% were male, 41% female and 1% transgender. 69% were Hispanic (including 40% Puerto Rican). In terms of race, 49% White; 21% Black; 23% Other; & 7% Bi-Racial. 17% expressed a language preference other than English. Age characteristics: 9% aged 6 or less, 18% aged 7-13, 14% aged 14-17, 17% aged 18-30, 25% aged 31- 50, 16% aged 51-70, and 1% aged 70+.

GC is the only Hispanic focused SCSA in the state, with Western regional sites in Springfield and Holyoke. Springfield and Holyoke are both majority, minority communities with high rates of emigration from Puerto Rico. Within the Hispanic population these communities have some of the highest rates of health disparities and primary and behavioral health capacity gaps. In FY16, 92% of the families served represented minority populations with 75% Hispanic, 9% Nepali, 8% African-American and 8% Caucasian. 60% of the youth are male and 40% female. 25% of the youth are age 0-6; 50% are 7-13; 20% are 14-17; and 5% are 18-20.

Plans to promote health & wellbeing are informed by the individuals served and tailored to youth and family needs. ***Existing activities include***: *An annual nutrition group – the last time the group was offered 6 families attended *Bi-annual family voice forum—engaged families are invited to a facilitated forum to express their ideas, concerns, and successes. *The ICP process and planning frequently includes recreation activities based on youth interest, strengths and needs. Any wellness related activity is tied to the overall care plan. ***New strategy:*** The program will develop a strategy to carefully monitor CANS assessments and scores with an eye for health and wellness needs. Both the caregiver and youth sections include wellness related measures i.e. family stress and around life domains. ICC supervisors, through increased monitoring and training will ensure that scores of 3-4 in any of the health & wellness area is included in the ICP.

Plans for engagement are predicated on the knowledge that engagement is an on-going process and best achieved through a strength-based, trauma-informed approach. The program employs the following strategies with enrolled families: *Visual/family friendly tools to explain program

services; *ICC staff work with a family to address immediate needs first. For example, if staff notice during the initial meeting the family doesn't have enough food they will complete the minimum required paperwork (consent/releases/safety plan). Then work with them to secure food that day. This strategy builds trust and demonstrates staff to be responsive to family needs, increasing the likelihood of ongoing engagement. *Flexible meeting times and places—families can meet with ICC staff wherever they are comfortable, at a time that works for them. *Staff educate families on the principles of Wraparound including persistence, voice and choice and model behaviors that empower families and give them control over the process, further supporting engagement. *Staff utilize Motivational Interviewing to better understand the family's motivation for seeking services and work from that foundational understanding. *Celebrate accomplishments – CCs call other members of the care team to share family successes; accomplishments are always the first item discussed at care team meetings, and CCs plan frequent gatherings to celebrate milestones like graduation, and transitions.

B. Description of community relationships:

GC-SCSA services are embedded in the community since 2009, and has well- established relationships with providers across a broad domain of services, that include service level relationships. New staff are trained in all SCSA linkages and introduced to all community partner staff. The chart below outlines key partners in each service area.

Care/services	Name of organization	Description of Relationship
Family Organizations	Gandara's Family Resource Center	Evidence based parenting classes, group support, and family engagement/ community/ recreational events; educational liaison and other family support
	Spg. Parent & Community Engagement Center	Attend events hosted by the center, refer families, communicate regarding parent/children's needs
Schools	Holyoke Community College	Developing a sustainable Workforce Development program for staff and community member
	All elementary and High Schools including alternative, & charter schools in Springfield & Holyoke.	Engaged as part of care planning team
Childcare Providers	New England Farm Workers	Child care resource and referral/voucher child care program, serves families in Hampden, Berkshire, Hampshire and Franklin counties.
Community Based Organizations	Enlace de Familias	Parenting programming and resources to families; food, housing, and public school system referrals.
Youth Service Organizations	YMCA of Greater Springfield	Physical Health and Fitness (all ages); water safety and babysitting; Pre-school, Daycare and afterschool care offered, Diabetes/diabetes prevention programs
	MLK, Jr Family Services	Family support, shelter/housing, child/family services
Advocacy Groups	Federation for Children with Special Needs	Provides information, support, and assistance to parents of children with disabilities, their professional partners, and their communities.
	Parent/Professional Advocacy League (P/PAL)	family-run organization, with multicultural staff, helps families understand/navigate services.
Behavioral Health Providers	Holyoke Medical Center	agreement to provide recovery coaching services in the emergency room, integrate HMC primary care service providers into outpatient mental health clinic.

	Behavioral Health Network (BHN),	Cross-referrals; crisis/brief intervention & extended services as part of a follow-up and aftercare plan;
Child serving state agencies	DCF Springfield & Holyoke	Collaborate on a staff and administrative level. Working together on the Caring Together Grant
Trial courts	CHD- DYS Juvenile Justice Programs	Information sharing/cross-referrals, collaboration on shared participants
	SPRINGFIELD DISTRICT COURT	Coordinate and collaborate on referrals; regular communication on shared participants
Housing/ Shelter Programs	HAP Housing	Referrals for housing services including: RAFT, emergency housing, rapid re-housing, transitional housing, and landlord/tenant support and advocacy.
	Springfield Housing Authority	Referrals for housing services
	Friends of the Homeless	Emergency shelter, case management & support
Social Serv.	New North Citizens	Referrals, outreach assistance with detox
	Puerto Rican Cultural Center	increase education and cultural arts opportunities to the Puerto Rican/Spanish-speaking communities
	Main St Open Pantry	Provides an emergency food pantry, daily prepared meals, clothing, household goods.
Other:	Baystate Brightwood Health Center,	Provide cooperative service delivery in communities serviced by both parties.

C. Description of how the current & planned partnerships align with the proposed project.

GC has demonstrated capacity to integrate Behavioral Health services and Primary Care. GC has an established partnership with Holyoke Medical Center and its affiliated Western MA Physicians Association, to provide on-site primary and behavioral health services at GC's Outpatient Clinic, through a SAMHSA grant, including on-site medical and lab services, and a health and wellness program. Additionally, GC and Baystate's Brightwood CHC has a long-standing partnership where by a GC BH clinician is embedded in the health center 3 days/week. The clinician is part of the care management team and attends care coordination meetings. Additionally, clinicians are embedded in two Springfield and one Holyoke school.

These existing relationships will be leveraged to strengthen care coordination, and support ***integration*** with ICC and FS&T services. As outlined in Section 6.4.A, a key task during the implementation phase will be to meet with and establish referral, communication and collaboration practices with nine ACO's and over 15 different Primary Care partners to: cross-educate on services provided; build a shared understanding of the needs and capabilities of each partner i.e. what shared information would be beneficial to each, identify the communication channels; determine what resources will be needed; and develop formal care coordination protocols. GC has established formal relationships with many agencies/organizations/ providers including, but not limited to, those outlined. The principles of collaboration, cultural competence, strengths based, outcome based care coordination and planning, are actualized through the team process with members working cooperatively and sharing responsibility for a single care plan. A significant component of the proposed project is enhanced training to staff around effective coordination of care teams (see Sec. 6.4.A Project 2. pg 8-9). Technology improvements (Mobile offices, changes in the EHR, and the eHana care management platform) will create efficiencies around communication with other members of the youth/family care team. GC's existing bi-monthly SCSA Systems of Care meetings, and bi-monthly joint GC/BHN's Systems of Care meetings, further support fidelity to the Wraparound process by

creating "community teams", with shared goals, and effective referral mechanisms, along with new QI review practices.

Section 6.4 Proposed Project and Investment Plan

A. **Project description:** The Gandara SCSA has identified four projects in which DSRIP funds will be invested, as follows:

1. 1.***Project 1*:** Create and Implement a Marketing, Education and Shared Communication Plan with ACO/PC Providers.

***1. 2. DSRIP Goals Addressed*:** Foster Integration with ACO's and PC Providers for ICC-Engaged Members/Families.

***1. 3. Project Scope and Activities*:** By **MARCH 30, 2018,** 100% of the pediatric providers who see GC CSA participants in Hampden county will be contacted and educated on goals, requirements, and communication practices of CSA integrated care. To support this goal, by March 30th, 2018, GC's IT staff will test readiness of the PVIX Health Information Exchange system integration which allows for electronic communication with participating pediatric practices/FQHC's. By May 30th, CSA staff will be utilizing the PVIX system to monitor, and track PC visits, and care plans, and communication.

Duration of time funds will support this project: This project is planned to take place between November 15, 2017 and March 30, 2018.

Specific activities to achieve the goal are as follows: CSA staff, under the director of the Director of CSA/CBHI Services, will meet to design the information packet, and outreach materials, to be utilized during introductory meetings with ACOs, Pediatric Providers, and/or Practice Mangers (as appropriate) Packets will include: communication protocols, overview of CSA, referral flow chart. *Completed by December 1, 2017*.

Within the same timeframe, the project team will finalize and prioritize PCP/ACO contacts to be c*ompleted by November 30, 2017.*

GC's Executive Director and COO will develop an MOU to be used as a template for working with PCPs. This MOU will facilitate in the development and identification of shared priorities with GC and Pediatric Providers. The MOU will be c*ompleted by December 1, 2017.*

Upon completion of the previously described activities the project will begin a Relationship Building Phase with the identified Pediatric Providers and/or the ACOs. A list of all pediatric providers currently used by SCSA enrollees has been developed and visits will be prioritized based on the quantity of members who utilize a practice. The Gandara Executive Director and CSA/CBHI Division Director will schedule meetings with ACOs and/or Practice Managers as appropriate to develop a shared understanding of what we do, identify priorities and what they are required to do (in relation to integrated services), and a timeline to be driven by the MOU. *Meetings will begin December 1, 2017, and are expected to be completed by March 30, 2018.*

Next steps will be determined by the results of the "higher-level" meetings with ACOs. It is anticipated that contacts within the ACO will facilitate the connection/ relationship at the practice level. With this understanding, it is expected that practice level meetings will be *completed by Jan. 30, 2018, w*ith Practice Manager/Care Coordination level meetings *initiated by March 1, 2018*

Upon completion of a fully executed MOU, the Division/Project Director (Chris Ezzo) will develop staff training on the established communication protocols, deliverables (or desired outcomes/focus of efforts i.e. reduced ER visits), methods of communication, and tools identified to be used for cross-communication.

Additionally, as part of this project, IT staff will complete the PVIX Health Information Exchange system set-up, by following up with our RH EHR on interface integration. PVIX is designed to monitor, and track PC visits, and care plans, and communication, further supporting the goal of Integration. It is estimated that this system will be completed by January 1, 2018

1.4. Project 1 deliverables include a completed MOU for use with Primary Pediatric Providers (described above), a complete informational packet to facilitate introduction on the GC CSA program to ACOs, Practice Managers and/or Pediatric Providers, the completing of the PVIX system integration, and the development and completion of a meeting schedule. All deadlines for the delivery of these items are outlined above.

1.5. Specific Use of Funding: It is anticipated that $7,705 will be used to support the execution of this projects goals. Costs associated with the PVIX system are $6,705 and include a portion of the IT Director's time, $1,000 will be spent on printing and materials costs for the informational packets to be utilized to educated Primary Care Pediatricians on the programs goals and objectives.

1. 6. Existing Internal Resources will be utilized to support the Project will include the agency's EHR/Remarkable Health; IT staff time and expertise, SCSA and Senior Leadership time associated with the development of outreach materials, outreach visits, and MOU's.
Partnerships/Collaborations: Several key partnerships support the growth of care coordination and collaboration building and serve as a foundation for expanding connections with PCP's and BH providers.

- At the inception of the CSA in 2009, Gandara established a Hispanic focused System of Care meeting for Springfield/Holyoke, a monthly meeting which representatives of key systems (state agencies, BH crisis services, schools, emergency responders (police) and community based agencies). The meetings provide a key forum for education on the Wraparound Approach, Care Coordination, Family Partners, the ICP meetings and other CBHI resources, and the development of protocols that supported cross-agency safety plan responses. About a year ago, the organizations asked if the Gandara and BHN SOC meetings could occur jointly. Subsequently, the joint meeting occurs bi-monthly and on the alternate months the two CSA's have their own SOC meeting. Approximately, 20-25 organizations are represented at the SOC meetings.

- Gandara is one of 5 agencies that was approved to join the Western MA Pediatric ACO (PACO) which has nine practices will select which BH partners they want to work with. Gandara is the only Hispanic focused CBHI/SCSA service provider among the five.
- Gandara Center is part of a ACO-Community Partner application for Western MA submitted under an LCC Innovative Care Partners which includes the Center for Human Development, ServiceNet and Gandara Center. This will provide a platform and structure that will be mirrored in many aspects with our PCP relationships.
- Gandara Center has an established partnership with Holyoke Medical Center and its affiliated Western MA Physicians Association, to provide on-site primary and behavioral health services at Gandara's Springfield outpatient clinic (Main Street). The project is funded through a SAMHSA grant and in addition to on-site medical and lab services, it also provides a health and wellness program to participants.
- Gandara Center and Baystate's Brightwood Community Health Center has a long-standing partnership where by a Gandara BH clinician is embedded in the health center three days/week. The clinician is part of the integrated P/PH care management team and attends weekly care coordination meetings at the health center. This serves as a model for other potential collaboration with pediatric care practices partnerships that will be explored as part of the PACO partnerships.

Allocation: Resources will be allocated to Gandara's single Springfield/Holyoke based SCSA and applies to all project descriptions as outlined on **page 15** at the end of the descriptions.

Gandara's SCSA/DSRIP specific Evaluation Process applies to all projects outlined is this section and may be found on **page 16** at the end of the project descriptions.

1.7. Evaluation: The performance measure for this project will be to increase the number of referrals to ICC services. The goal will be to increase referrals from partner PCPs (those with which we have a signed MOU) by 5% by BP 2. Referral information is collected and tracked in Remarkable Health. Staff evaluating the performance will include: Chris Ezzo, Division Director, Freddy DeJesus, Executive/QA Manager; Heather Murphy, Agency Quality Manager. A referral report will be pulled by Heather Murphy and analyzed monthly by the project evaluation team.

Project 2

***2.1 Project Title*:** Technology improvements that support cross-system communication and service outcomes.

***2.2 DSRIP Goals Addressed*:** Strengthen fidelity to Wraparound processes (care planning, management and coordination for ICC Engaged Members/Families

***2.3 Project Scope and Activities*:** In an effort to build program capacity around communication with PCPs and enhance ICC staff ability to monitor service outcomes, by (November 30, 2017), the project team will initiate a process whereby a Care Coordination/ Care Management Software Platform (eHANA) will be created. This system supports communication across

stakeholders (i.e. EOHHS, ACO, MCO, PCP), including support for the exchange of documentation, alerts, reminders and prompts for the Care Team actions. By (April 1, 2018), the eHANA platform will be functional and (20) ICC staff will increase their ability to monitor key aspects of CC/CM including frequency of youth engagement with PCP, BH and other ICP supports.

Gandara's EHR & QI Directors will identify and develop a training curriculum for all new areas of technology tools. And ensure that by (April 1, 2018), (20) ICC staff will be utilizing new tools and increase timely service delivery and data entry efficiency and timeliness.

Additionally, hardware that will facilitate the creation of "mobile offices" will be in place to increase timely service delivery and data entry efficiency and timeliness. By (Jan. 30, 2018), (COO) will order components of mobile office suite to be utilized by ICC staff in the field. By (Feb. 29, 2018), (10) of ICC staff will be fully utilizing mobile offices.

Duration of time funds will support this project: November 1, 2017 – April 1, 2018

Specific activities to achieve the goals of this project include: the completion and execution of a contract with eHana to expand/enhance CM capabilities. It is expected that this will be completed by April 1, 2018. Modifications and development to GC's current EHR system and to eHana are required to ensure that both systems work together and provide GC with the intended results. These modifications will be completed by the respective system company. GC's COO and Executive Director are responsible for ensuring that the Overlay/coupling of the systems is completed by March 15, 2018.

The purchase and set-up of the hardware required for the mobile office suites including; new laptops, mobile scanners, and a signature pad will be completed by Jan.30, 2018. The COO will monitor completion.

To support the successful implementation of these new tools, the QI and EHR Directors will work together to design a training curriculum on all new technology tools. This training curriculum will be completed and deployed by April 1, 2018. The Division/project manager will monitor completion.

Additionally, it will be essential that the new systems are being utilized effectively. To that end, the Director of QI will develop a QI process to evaluate the accuracy and completeness of information being collected through the use of new tools (mobile office, PVIX, eHana). This will include the design and execution of a monthly report that will facilitate the monitoring of data entry through new systems. This will be monitored and reviewed by the Project Director, and the review team will include the S-CSA Director, ICC & FP supervisors, and the QI/QA director.

2.4 Project 2 deliverables will include: a contract with eHana for the Care coordination platform, and the completion of that system development; the completed purchase and deployment of mobile offices; the completion of a training plan and curriculum for the new tools; and the development of a QI process to ensure the effective use of the tools. All deadlines for the delivery of these items are outlined above.

2.5 Specific Use of Funding includes: **$16, 320** for mobile offices comprised of 5 laptops ($1,500 each), 14 mobile printers ($280 each), and 14 signature pads ($350 each). **$23,631** for the development and use of the eHana platform.

2.6 Existing Internal Resources will be utilized to support the project including existing staff time and expertise in the set-up and training on the new platforms, as well as the on-going monitoring activities associated with effectively deploying and utilizing the new systems, including the COO, SCSA Division Director, ICC supervisors, and EHR and QI/QA director.

2.7 **. Evaluation**: Fidelity Measures used will include increasing the CANS entry rate by 15% (83%) by BP-1; and 30% (98%) by BP2. Additionally, the team will review CC contact with PCP with the goal of achieving 95% communication rate between CC and PCP practice regarding ICP meetings, and updates on critical events that occur for families within 3 days of event. (BP-1). Data will be collected through reports available through both the Remarkable Health system and eHana. Reports will be pulled weekly for CANS entry and monthly for PCP communication.
Staff involved in the evaluation will include CC team supervisors, Freddy DeJesus (Ex./QA Manager and Chris Ezzo, Division Director, Heather Murphy, agency QA director will meet with the team monthly during the Prep Budget period and 1st half of BP1 and quarterly thereafter. BP1-5).

Project 3

***3.1 Project Title*:** Staff Capacity building (recruitment, retention, training)

***3.2 DSRIP Goals Addressed*:** Strengthen fidelity to Wraparound processes (care planning, management and coordination for ICC Engaged Members/Families

***3.3 Project Scope and Activities*:** To achieve the goal of this project GC will focus efforts on staff capacity building including enhanced training and recruitment activities. ***Training*:** By (July 31, 2018), (20) providers will increase their knowledge and fidelity to (Wraparound, MI, Care Coordination) concepts as demonstrated by completion certificates and/or post-tests, designed to test concept mastery by participating in the following advanced level trainings: ARC, Motivational Interviewing, and Vroon Vandenberg TIER 1 and Tier 2 trainings**.** *Recruitment:* GC's recruiter will increase the number of qualified, bi-lingual candidates, who stay with GC for at least (2 years), to 10 per year over the next 4 years. *Licensing Support:* Gandara typically may hire masters level clinicians who have not completed their licensing requirements which inhibits their capacity to supervise CC teams, and it is sometimes more challenging to achieve this due to language/adjustment challenges. The agency will allocate funds and support to pay for testing fees, workbooks, preparation supervision and the cost of paying for a clinical supervisor to meet licensing requirements. Four clinicians will be identified and supported for this support. The timeline to achieve this will be on-going, based on clinician readiness level, and the testing schedules.

Duration of time funds will support this project: December 1, 2017- July 31, 2018

Specific activities to achieve the goals of this project include; By (January 2018), (20) providers will begin participation in the advanced level trainings provided including: ARC, MI, Tier 1 & 2. The CSA/CBHI Division is responsible for documenting (certificates and/or test results) the completion of the Tier 1 training by May 31, 2018; Tier 2 by July 31, 2018; ARC by (TBD) and MI by (TBD). The CSA/CBHI Division Director will identify 4 staff members who are appropriate for Licensing support and document their passing of the test by May 31, 2018. The CSA/CBHI Division Director will identify a consultant, product and timeline for the coaching program by June 1, 2018.

Gandara's HR department will develop the job description and posting for the recruiter by Dec. 1, 2017. HR, in coordination with the project team, will screen and hire a staff recruiter, completing the hire by Jan. 15, 2018

3.4 Project 3 deliverables include the completion of all advanced level trainings as demonstrated by completion certificates and/or post-tests; completed contract with consultant to reinforce training topics; 4 newly licensed staff supervisors; and a fully on-boarded staff recruiter. All deadlines for the delivery of these items are outlined above.

3.5 Specific Use of Funding includes ARC training for 50 staff at **$8,000** (E), 3-day intensive Motivational Interviewing for 2 staff at **$1300 (E);** Vroon (TIER 1 & 2) at **$6,650 (E);** costs associated with licensing fees and supervision at **$9,**180 for 4 staff; and **$4,602** for approximately .10 FTE Recruiter.

3.6 Existing Internal Resources will be utilized to support the project include Retention bonuses— including a $500 referral incentive, $1500 at start date for non-licensed clinicians, $500 retention incentive at 6 months, $1000 for bilingual capacity and $1000 licensed clinicians. As well as the existing training opportunities and structure. GC's SCSA has received funding through the Technical Assistance Collaborative for the past year. This funding has been renewed and increased for FY18, and will be utilized to subcontract with Dr. Anne Thalheimer, who has designed and led multiple team building, writing workshops and cultural competency working with LGBTQ youth and families, for Gandara Center staff as part of their weekly meetings. TAC assistance, along with Sheree Greenwood and Omar Irizarry, helped core team leaders conceptualize, design, and hold a team retreat and training that was held for all staff members to reinforce Gandara's work and develop skills needed by CCs and FPs.
The scope of the training offered under this funding is as follows: In order to provide training for care coordinators, and in-home providers with a broader skill set for interviewing families with an eye toward more effective and comprehensive documentation for CANS, comp assessments, and other required documentation that requires minimal supervisor-initiated review. The consultant and CSA leadership staff will work in in concert to develop and hold a series of workshops and create training materials.

Additionally, Gandara has initiated and piloted a **Family Partner/Community Health Worker** training initiative through funding from the Commonwealth Corporation and in collaboration with Springfield Technical Community College and CBH Workforce Collaborative a network of 14 minority focused BH providers with the goal of strengthen culturally responsive patient care

for bilingual and racially diverse families. In Western MA, this initiative has been embedded as a 9-hour credit course sequence for a behavioral health focused Community Health Work certificate. Course material will include working with Pediatric ACO's, basic medical terminology, effective communication skills, and introduction to EHR requirements. This will offer a platform for the ICC team that will support the Capacity Building initiative.

3.7 Evaluation: Specific Measures to evaluate the impact of the activities will include: Current turnover rates of CC's is 25% within 2 years; the goal is to reduce this rate to 15% by BP 2; and for Family partners from 38% to 25% by the end of BP-1.The specific measure for Recruitment will be to increase access to ICC services and reduce waitlist times. The goal will be to be in compliance with current ICC wait time standards (as of12/11) that require that youth/families, upon consent for services, should not wait more than 10 days for an intake and should be offered an appointment within three working calendar days of a referral to services. Data will be collected on-going and tracked through Remarkable Health. The evaluation team: CC supervisors, Executive Mgr., Div. Director and HR Director will monitor on a quarterly basis the recruitment and retention rates, and the waitlist times and status on a weekly basis.

Project 4

4.1 Project Title: Development of Comprehensive Evaluation Process
4.2 DSRIP Goals Addressed: Strengthen fidelity to Wraparound processes (care planning, management and coordination for ICC Engaged Members/Families; Foster Integration with ACO's and PC Providers for ICC-Engaged Members/Families; and Improving timely access to ICC services for children eligible to receive ICC and their families.

***4.3 Project Scope and Activities*:**
Gandara plans to implement functionality within its Electronic Health Record to manage and track services delivered, referred, and coordinated within its SCSA and associated programs. Implementation projects include project management, training, and support. Gandara has already deployed its EHR technology (via vendor Remarkable) in all its sites and has a strong record of success with technology adoption in similar programs. Gandara's EHR vendor, will modify our EHR platform to include the SCSA ICP and the SNCD tools so that data from these documents can be aggregated through the ScoreTrak or by our data analyst through the back end and supplement our data tracking system, sufficient to track the new Outcome Quality Measures for the DISRP or in some cases replace elements of its existing data-tracking system. Screenings, assessments, plans, and service documentation will be reviewed and potentially updated based on best-practices and fidelity to a strengths-based model.

Duration of time funds will support this project: November 2017 – May 2018

Specific activities to achieve the goals of this project include; By (November 15, 2017), (EHR, QI & CSA/CBHI Division Directors) will begin development of enhanced back-end reporting in our existing EHR including a plan to transfer key EHR data into a SQL server, to allow for more advanced reporting by Data Analyst. The EHR, QI & CSA/CBHI Directors will meet to identify key areas of need in current system and plan for modifications and additions. EHR & QI Directors are responsible for coordinating and completing all modifications to the current EHR system and by March 1, 2018. Training: By (April 30, 2018), (EHR & QI Directors) will develop

a training plan and schedule on all new data collection, CM, and CC tools including the: ICP, SNCD, Safety Plan, and eHANA platform. EHR & QI Directors are responsible for completing staff training by April 30, 2018. By (May 1, 2018), the project team and GC's Quality Improvement department will develop a comprehensive Evaluation Plan to encompass the following areas: progress and effectiveness of each DSRIP project, increases program effectiveness in each of the required Quality Measures, and case management/care coordination effectiveness/fidelity. The goal of this plan will be to ensure that data that is key to monitoring and improving care coordination, case management, and timely access to services will be available to supervisors on a (MONTHLY) basis. By (June 1, 2018), monitoring and evaluation practices will be in place. By (October 15, 2018), the first quarterly comprehensive report will be produced covering the period of July 1- September 30, 2018.

4.4 Project 4 deliverables include: the completion of the Remarkable Health modifications as demonstrated by the additional forms on the system, a completed Evaluation Plan, and a comprehensive, monthly data report that includes all elements of the Evaluation plan.

4.5 Specific Use of Funding includes Gandara utilizes Remarkable Heath (RT) Electronic Health Record, which is certified Meaningful Use Complete by Drummond Group and is deployed in two large community-based provider organizations within Massachusetts. The EHR includes features and functionality intended to support integrated and collaborative models of care, including: Patient Portal functionality; Standardized data exchange formats (including Clinical Document Architecture (CDA) support); Transmission via DIRECT Health Information Service Provider (HISP) to the Mass HIway or other partners; Clinical Quality Measure and Automated Measure reporting; and Patient Educational Resource sharing and tracking.

These features support EOHHS's goal of developing secure mechanisms to support data exchange not only with EOHHS and payers, but with the ICC-Engaged Members themselves. By way of example, comprehensive assessments, Individual Care Plans, and other information intended to support transitions of care can be shared via the Patient Portal or transmitted electronically via the Mass HIway. **$21,125** will be utilized to make the above described modifications to Remarkable Health.

4.6 ***Existing Internal Resources will be utilized to support the project*** including existing staff time and expertise in the set-up and training on the new platforms, as well as the on-going monitoring activities associated with effectively deploying and utilizing the new systems, including the COO, SCSA Division Director, ICC supervisors, and EHR and QI/QA director. Additionally, the EHR Remarkable Health is an existing resource to be enhanced to meet the project goals.

4.7. **Evaluation:** Specific Measures to evaluation the completion and impact of the activities will include: Monthly evaluation meetings by the CC supervisors, Freddy DeJesus (Ex/QI Manager and C. Ezzo/Div. Director), and Heather Murphy, agency Evaluation Director. While the agency meets or exceeds the state TOMs and WIFI principles, our goal is to increase the agency's weakest principles (Natural Support Plans and WIFI B-25 by 2 percentage points each by the beginning of BP2. .

Details provided below reflect all above projects.

7. Description of how funds will be allocated across the organization, and SCSA site(s);
Funds will largely be focused on strengthening capacity for effective care coordination within the Springfield/Holyoke CSA. However, many elements will enhance capacity for all CBHI services and also serve to support the goals of the becoming an ACO-CP and LTSS partner. Funding allocation across categories is as follows: *Workforce Development* largely including training contains 19% of DSRIP funds. Both culturally nuanced MI across all levels of consumer contact, and the ARC training are part of an agency-wide initiative that is also supported by other internal funding, and will be open to other clinical/case management staff in other programs as slots are available. *Operational Infrastructure* will support improvements that will largely fund the improvements to the 'front end" through an eHana developed case management package that will sit on our EHR platform contains approximately 69% of DSRIP funds. Technology Improvements including components that will support a "mobile office". This will function as a pilot and it is anticipated that it will provide a model for all of our CBHI services in the future contains approximately 12% of DSRIP funds.

8. Internal evaluation, measurement or performance management strategies:
The program has begun to develop a comprehensive Performance Measurement Plan, informed by the methodologies outlined in Appendix A, and best practices around Wraparound services. A key activity of the Implementation phase will be the finalization of the plan to minimally include the following elements: data collection plan, plan to measure fidelity to the Wraparound model, plan to measure fidelity to CSA policies and procedures (i.e. case notes entered timely, waitlist/ appointments made timely, training and supervision requirements), a quality measurement plan, and a plan to demonstrate effectiveness in the areas outlined in Attachment A of the RFR – Model Contract: relationships with other entities involved with ICC engaged members, relationships with ACOs/MCOs, and contract compliance.

Preliminary planning and existing strategies include the following:
Collection of quantitative and qualitative data: The ***key strategy*** that will be employed to achieve the plan outlined below is the addition of the technology tools and systems defined on pgs.7-8. The addition of the Individual Care Plan into Remarkable Health (RH) EHR will allow for the collection, monitoring, and analysis of the Quality measures described below; enhanced CT reporting including electronic supervision tools will allow supervisors to more easily and efficiently monitor care plan progress, and fidelity to the Wraparound model; and mobile offices will allow direct care staff to complete notes, releases, and safety planning more efficiently. These tools create efficiencies in care coordination, planning and monitoring further ensuring effective service delivery.

The chart below outlines the strategies that will be used to track the additional quality measures found in Appendix A:

Quality Measure	Strategy/method
Prevention and Wellness	**Questions added to ICP:** When was the last PCP well child/adolescent visit? When is the next PCP well child/ adolescent visit? **Excel tracking** of CANS to ensure wellness goals incorporated.
Chronic Disease Management	**Questions added to ICP:** Dropdown menu to identify medical conditions as well as questions to identify when/if follow up is happening regarding these conditions.
Behavioral	**Questions added to ICP:** Current diagnosis/What are the behavioral health goals and

Health/Substance Use Disorder	interventions? Progress on goals from last team meeting. Are there any substance use concerns?
Integration—special emphasis on PCP coordination	**Modification to EHR:** Currently contact notes only have one label, "contact note". The system will be modified to add more descriptive labels including: missed appointment, contact made, PCP visit etc. Additionally, the ability to list care team members will be added to the ICP with category/service sector labels including: PCP, school/educational representative, family member etc. With this in the EHR supervisors will be able to easily pull a report and monitor whether Primary Care Providers are listed as part of the team. The program also notes who is present at each care team meeting.
Avoidable Utilization	**Questions added to ICP**: Were there any emergency department visits/hospitalizations since the last meeting? What was the reason for the visit? What is the plan to address the reason for the visit/hospitalization.
Engagement	The program will undergo an initial baseline assessment of discharge dates compared to intake dates to analyze when people transition out of services i.e. is it during the initial engagement phase? Based on the results the program will develop additional engagement strategies. Additionally, the modification of contact note labels will allow the program to report on missed appointment rates. CC supervisors will monitor these data points ongoing

Enhanced "back-end" reporting from the EHR will be designed by the Quality Improvement Director, and EHR Director working with the Project Team to produce reports on all measures discussed above. The team will identify key report elements and establish regular timelines for pulling reports, and analyzing results.

Member Experience will continue to be measured through the WIFI. As well as a client experience survey designed by GC's Quality Improvement Department. This additional survey includes the following: *Did the Care Coordinator prepare you well for understanding the wraparound process? Did the Care Coordinator both monitor updates relating to your family and keep all team members aware of those issues throughout the ICC process? Do you think that your Discharge Plan will be effective and useful? Do you feel that team members are working well together on behalf of your child and family? In your CPT/TP meetings do you feel that your rights to make decisions as a parent/caregiver are respected? Do you have any suggestions for the program that you would like to share that you think would be helpful?*

Results from the survey will be entered into GC's Intranet system which allows for the aggregation of data collected.

Additionally, the program utilizes the Team Observation Measure (TOMs). The TOMs is administered by any certified observer who has been trained in how to administer the TOM and who has a strong *Wraparound* foundation. Results are entered into the University of Washington Sdata base. Reports are distributed to team annually for review: generated and used: ***1.*** In programmatic development and training with observed staff to promote skill-based supervision; and ***2.*** Aggregate data across all observations are used in planning trainings and identifying and prioritizing group supervision needs. These instruments gather information regarding the programs fidelity to the *Wraparound* model and assess the quality of individualized care planning and care coordination. The results from these instruments are used for program management, training, and coaching to improve the fidelity to the *Wraparound* model.

Staff Responsible:

The Project Manager, in concert with the Director of QI and the project team will be responsible for the overall development and monitoring of the Performance Measure Plan and all elements included therein.

Specific staff responsible for the entry/collection, and validation of data include:
Data Entry:
Intake Coordinators – enter demographic and basic information for client and family at intake.
CCs – enter Individual Care Plan, and Comprehensive assessments with addendums if needed into Remarkable Health EHR; CANS into Virtual Gateway; FT's enter SNCD.
Validation:
CC and FS&T Directors are responsible for reviewing and monitoring all data entered by direct care staff and reporting back to Project Manager.
Executive Manager will be responsible for reviewing and monitoring all data entered by Intake Coordinators and reporting back to Project Manager.

B. Project Team Description:

1. Organizations Chart: (Attachment A) -Gandara Center Organizational Chart and CBHI/CSA Organizational Chart

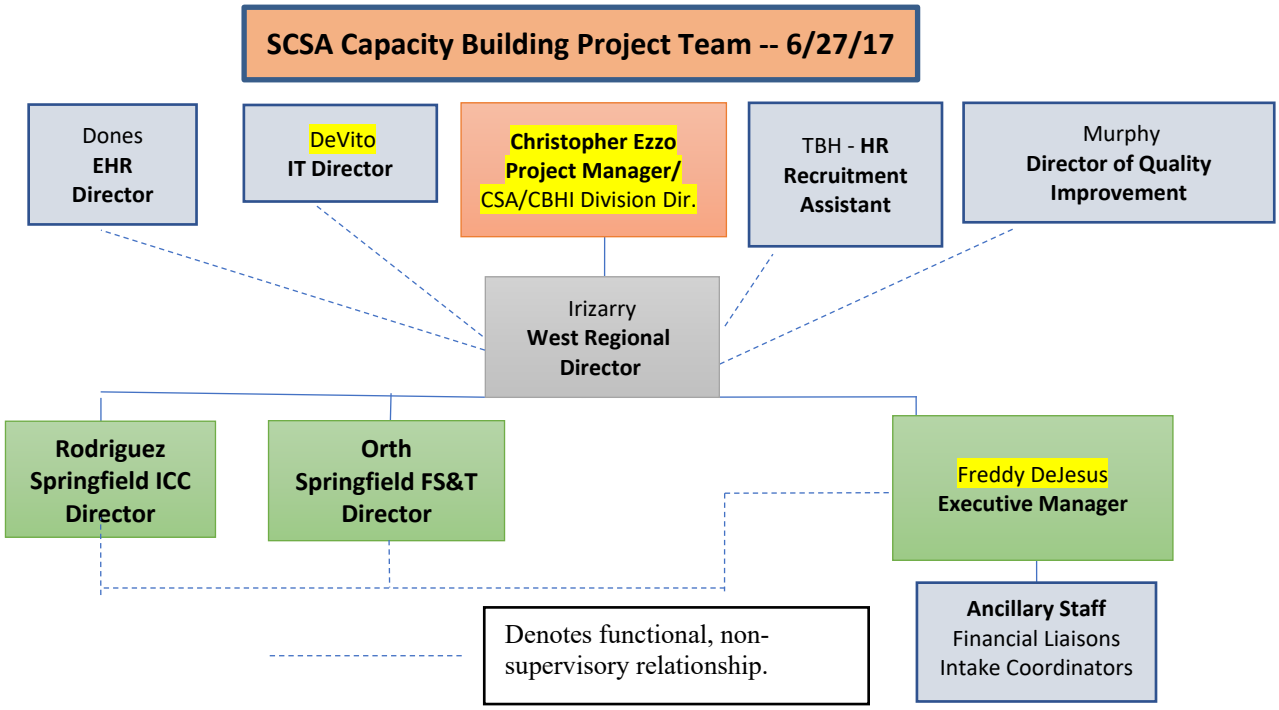
2. Current staff involved in the project: Job descriptions and resumes for the following staff can be found in Attachment B: **Project Manager** Chris Ezzo; **West Regional CBHI/SCSA Director** – Omar Irizarry; **CC Program Director** – Debbie Rodriguez; **Family Support and Training Director** – Abrah Orth; **Executive Manager** – Freddy DeJesus ~~(Job Description only including qualifications);~~ **EHR Director** – Patricia Dones

Ancillary, existing staff that will be involved in implementing the systems-level changes designed by the Project Team. Will not be regular members of the core team. **Financial Liaisons** – Maribel Valentin, Director of Billing & Joannay Torrales, Insurance Specialist **Intake Coordinators** -- Jen Ramos & Kristina Dillon; **Director of Information Technology –** ~~Matt Pasquale~~ Robert DeVito.

3. New staff to be hired or engaged: Approximately 10% of a dedicated ***HR Recruitment Assistant*** will be funded through DSRIP will be located in Puerto Rico (and will recruit in FL & TX), whose role will be to understand the work role and job responsibilities of site based and community outreach outpatient clinicians, CSA clinical supervisors and BA level clinicians, and other mid-level positions for which bi-lingual staff are essential and recruit up to 30 staff annually agency-wide for all clinical/FP positions that require bi-lingual/cultural staff. The assistant will build relationships with Universities and organizations from whom qualified individuals may be recruited, including the development and implementation of a marketing and outreach plan.

4. Staff Roles and Responsibilities: The chart below outlines all members of the project team including their roles and responsibilities as they relate to this project. The Project Manager will

hold primary responsibility for ensuring all efforts are coordinated and not duplicative. This will be achieved through senior administrative support, frequent project team meetings, and on-going monitoring strategies. **(Yellow indicates staff changes since 1st submission)**



Core Project Team Members	Role/Responsibilities – REVISED 11/17
Chris Ezzo – CSA/CBHI Division Director	Primary responsibility for coordination of all activities related to the implementation and day-to-day operations of funding received under this award. Including: Organizing/facilitating project team meetings, set priorities with project team, establish more detailed milestones, benchmarks, policies, protocols and tools sufficient to ensure efforts are coordinated and not duplicative and supportive of the output and outcome measures. Assure submission of all EOHHS reports in accordance with their timelines.
Omar Irizarry – Western Regional CBHI/CSA Director	Responsible for ensuring overall accountability of SCSA project team members. Provides administrative supervision and oversight of capacity building activities.
Heather Murphy – Director of Quality Management	Primary responsibility for developing strategies to measure and track all quality measures as outlined in Appendix A. Interfaces with EHR Director and Project Manager on implementation of measurement strategies. Provides training and TA to staff. Provides Project Manager with regular reports for the purpose of monitoring quality and progress in outlined goals, sufficient to ensure timely submission of all required reports.
Patricia Dones – EHR Director	Oversees and implements all modifications/ additions and enhancements to EHR system, Remarkable Health (RH), in accordance with the timeline. Interfaces with RH developers, GC's Systems Engineer, and QM Director to produce front end user reports for tracking, and data validation. Provides training to staff on CT data entry and TA/ problem resolution for EHR system. Provide documentation of tasks sufficient to ensure timely submission of reports.

Debbie Rodriguez—ICC Program Director	Supervises all Senor Care Coordinators and clinically supervises the Senior Family Partner. Coordinates Systems of care meetings. Responsible for implementing and supporting staff level changes including: changes to data collection/entry, supporting training requirements, works with and provides feedback to the Project Manager around Care Coordination staff level changes as they relate to this project. i.e. enhanced PCP communication protocols.
Abrah Orth – Family Support & Training Director	Responsible for implementing and supporting staff level changes including: changes to data collection/entry, supporting training requirements, works with and provides feedback to the Project Manager around Family Partner staff level changes as they relate to this project. i.e. enhanced PCP communication protocols, additional training requirements.
Executive Manager – Freddy DeJesus	Supervises Intake Coordinators, Billing Systems Administrators, and Training & Systems Coordinator. Responsible for working with EHR, PM to develop Policies and Procedures for all new forms in RH including the ICP and SNCD. Oversees Training Coordinator to ensure training requirements are documented, tracked, and met by all CSA staff. Reports status back to PM. Responsible for working with Intake Coordinators to ensure data entry protocols are met. Provides data validation reports back to PM.
Ancillary Team Memb.	**Role/ Responsibilities**
Fiscal Liaisons: Maribel Valentin –**Director of Billing** Joannay Torrales **-Insurance Specialist**	Will be responsible for implementing any systems level changes as they relate to billing. Will not be a regular part of project team. Support submission of data sufficient to document performance accountability through an at-risk payment model.
Intake Coordinators: Jen Ramos Alizivette Davala	Will be responsible for implementing any systems level changes as they relate to changes in intake data entry, waitlist tracking, or demographic data collection. Will not be a regular part of project team.
Director of IT Robert DeVito	Oversee infrastructure and equipment instillation. Supports interface with external partners.
Staff Recruiter located In Puerto Rico	Recruiter in Puerto Rico to support goal of recruitment of qualified, representative, bi-lingual and bi-cultural staff.

5. Description of project management plan: Chris Ezzo, CBHI Division Director will be the project manager for the project. Key leadership staff (Executive Director, CBHI Services Division Director and Western MA SCSA/CBHI director will attend the project planning team meetings and quarterly meetings thereafter. The project manager will be responsible for convening meetings, setting the agenda, and establishing and tracking and compliance with timelines, including meeting all reporting requirements and deadlines, and follow up tasks sufficient to finalizing and achieve the goals of the Budget plan during the 5-month planning phase, and throughout the 5-year period.

A regular monthly meeting schedule with an established agenda will be set, and based on the Agenda the Project Manager will be responsible for inviting and ensuring that key ancillary team members and the appropriate administrative staff are in attendance based on the specific focus of a meeting and that meeting notes a taken and shared with the team. Workgroup meetings will be established and occur in-between and minimally include: Evaluation, data tracking and QM and Benchmark Accountability Group; Communication Improvement Group: (Network Platform, secure communications and EHR/Case Management platform improvements), and PCP outreach, engagement and education group. Workforce development will occur in the weekly CSA supervisors' meetings and the weekly Group supervision/training meetings. Groups will report back to the team on a monthly basis.

C. Implementation Plan and Timeline: The Activity chart and timeline listed below, outlines the plan for implementing the plan based on the information that we have on hand.

TEAM MEMBERS: Project Manager **(PM):** Chris Ezzo **;** CSA Director **(DD):** Omar Irizarry; Dir. Of Quality Mgmt**(QM):** Heather Murphy**;** Fiscal **(FI);** Dir. EHR **(EHR):** Patty Dones; ICC & FS&T Directors (**PDs**): Abrah Orth & Debbie Rodriguez; Executive Manager (**EM**): Freddie DeJesus	
Preparation Budget Period Timeline (Monthly)	
Time Period	**Activity**
Prep BUDGET PERIOD (1/187-5/18)	
January 2018	COMPLETE Planning phase, tools (protocols & policies, information packets, detailed PCP outreach plan and new data tracking/outcomes policies and tools), EHR modifications and Case Management Platform, Detailed training plan, purchase, train and test mobile "office" equipment. Convene Project Team w/in 2 wks – on-going; Begin Ehana testing Development of Informational Packets for PCP meetings completed Development of the MOU completed Outreach to Pediatric Primary Care Development of relationships with ACO/MCO points of contact Hold initial meetings with PCPs PVIX set-up complete Training Calendar Finalized HR recruiter in place;
February 2018	Purchase and train on mobile office tools
March 2018	Remarkable Health/Ehana modifications finalized Performance Management Plan Finalized
April 2018	
May 2018	Evaluation of Prep. period activities; Planning for Year 1 CQI initiatives and activities; **Submit EOHHS Annual Report of budget period**
Years 1 – 5 Implementation Plan (Quarterly)	
Time Period	**Activity**
Year 1 (6/1/18-5/19)	
Q1	Quarterly Project Team Meeting
Q2	Director of QI and Project Manager produce Evaluation report for Project Management Team and Senior Managers **Submit EOHHS Semi-Annual Report of budget period (date to be specified)**
Q3	Project Team develops plan to collect feedback from PCPs regarding care coordination efforts.
Q4	Project Team conducts planning for Year 2 CQI Initiative and activities.
	W/in 60 days **Submit EOHHS Annual Report of budget period**
Year 2 (6/19-5/20)	
Q1	Quarterly Project Team Meeting
Q2	Director of QI and Project Manager produce year 1 report for Project Management Team and Senior Managers **Submit EOHHS Semi-Annual Report of budget period (date to be specified)**
Q3	Ongoing technology training on the Operational Infrastructure activities of the Prep Budget period. Project Team conducts planning for Year 3 CQI Initiative and activities.
Q4	Additional training on RH as identified through evaluation process
	W/in 60 days **Submit EOHHS Annual Report of budget period**
Year 3 (6/20-5/21)	
Q1	Quarterly Project Team Meeting
Q2	Project Team conducts planning for Year 4 CQI Initiative

	Submit EOHHS Semi-Annual Report of budget period (date to be specified)
Q3	Continuing education and expansion of Care Coordinators knowledge and abilities.
Q4	W/in 60 days **Submit EOHHS Annual Report of budget period**
Year 4 (6/21-5/22)	
Q1	Quarterly Project Team Meeting
Q2	**Submit EOHHS Semi-Annual Report of budget period (date to be specified)**
Q3	Project Team conducts planning for Year 5 CQI Initiative and activities.
Q4	Project Team finalizes sustainability planning for period beyond Year 5 of the project. W/in 60 days **Submit EOHHS Annual Report of budget period**
Year 5 (6/22-5/23)	
Q1	Quarterly Project Team Meeting
Q2	**Submit EOHHS Semi-Annual Report of budget period (date to be specified)**
Q3	Implement Sustainability Plan activities
Q4	W/in 60 days **Submit EOHHS Annual Report of budget period**

D. Budget Report and Budget Narrative (attached) See Attachment C.

E. Sustainability Plan: Gandara Center has developed budgets, (Attachment C) that demonstrate the use of the DISRP funds to build infrastructure and capacity, as described in Section 6.4 - #5 DISRP participation plan. This plan will effectively serve Specialized CSAs (SCSA) current 119 service enrollees, during the DISRP Budget preparation and Year 1, and Years 2-5 of implementation, through the following initiatives that will be incorporated into the SCSA program practices and sustainable thereafter.

Tools/practices developed during the contract term that will support sustainability will include: *Wraparound/Strength-Based Documentation* tools will be embedded into Remarkable Health (RH) EHR platform. This initiative will involve a onetime initial investment. *Care Coordination/Care Management Software Platform: eHana* in collaboration with RH, will create an integrated technology platform to support communication across stakeholders (i.e. EOHHS, ACO, MCO, PCP), including support for the exchange of documentation, as outlined on pgs.8-9. This platform will provide alerts, reminders and prompts for the Care Team actions. This will be developed through the Innovative Care Partners, LLC, which submitted a BH/LTSS Community Partner application, of which Gandara is a partner. This application will involve an initial investment during the budget prep/year one. Only the SCSA portion is included in the budget. *Performance Management Capabilities:* Gandara will develop capacity with its EHR to improve capturing and reporting through daily "data dumps". The Gandara Systems Engineer will develop SQL tools and electronic supervisory tools to aggregate supervision level and event data reporting capacity of all the necessary data tracking for Quality Measures to EOHHS, & MCOs. The two applications will involve an initial involvement for the preparation year and year one. All changes through the DSRIP funding will be sustained by being fully implemented and practices being fully institutionalized by the end of the project period. *Pioneer Valley Information Exchange (PVIX*): Gandara and Baystate Medical Center have signed an MOU to allow the exchange of information between the hospital's information exchange entity, and Gandara. This MOU will provide real time access utilization information/ ER notifications/ inpatient admissions for clients being seen at both organizations. Mobile Office equipment will be a one-time purchase during the Budget preparation period and year one. Gandara assures that

cost allocation of capacity building components will be proportional to SCAS staff, in the event that resources serve other agency programs/projects.

Workforce Development activities such as the clinical staff recruiter of bi-lingual/bi-cultural staff, licensing support and enhanced staff training practices will be sustainable by using a 'train the trainer" approach particularly in the areas of ARC, MI, and the Vroon Vandenberg Tier 1 and 2 integrated Wraparound certifications. The enhanced workforce development activities during the 5 year project period are anticipated to fully meet the referral/ service needs.

Section 6.5 Coordination with ACOs, MCOs, and Primary Care Providers

A. **Plan to improve bi-directional communication with pediatric practices:**
Capacity building funds will support bi-directional community with pediatric practices using the following methods. The Executive Manager will send out an information packet to each area pediatric practice that will introduce the Gandara SCSA and its bi-lingual resources, an overview of the Wraparound process, information on the Intensive Care Coordination and Family Partner option and benefits, eligibility criteria, referral processes, team-based/family driven treatment planning, and Systems of Care meetings/participation. Care Coordinators will identify key practice management staff at each site and schedule informational visits to establish cross-communication practices that will be outlined in an MOU that will be developed for each practice. These will address cross-team critical event information sharing requirements/needs (new client, emergency room visits, mobile crisis, mental health hospitalizations, etc. In pediatric practices in which there is a high volume of Hispanic clients, Gandara will offer the option of embedding an ICC team(s) assigned to the practice to support ease of Care Coordination. New Chart review/supervision, and monthly QI team meetings will support and monitor whether information is being exchanged in a timely manner. The QI/QA team will undergo a NIATX process to ensure that this system is in place. Tools that will support timely exchange of information include the mobile offices; participation in PVIX/secure information exchange, secure email, and upload agreements for key documentation; internal staff training on PCP environments, basic medical terminology, psychiatric medications; and embedding ICC teams in pediatric practices with large numbers of Hispanic clients.

B. Referral management protocols for follow-up and informational sharing;
eHana will develop a Case Management platform to facilitate data exchange with EOHHS, ACO's, MCO's and other stakeholders. Technologies to be used to support case management will include: standards based transactions including ICP over the Mass HIway/DIRECT project; Importing eligibility files and enrollment rosters from EOHHS and ACO's; Bespoke reporting and data extracts in formats specified by EOHHS and ACO partners; Standardized HIPAA billing transactions of Qualifying Activities to EOHHS and Future use of EOHHS Event Notification System of event data integration directly with healthcare stakeholders.

Gandara and eHana will be able to query the complete relational Care Management platform dataset and expect to be able to meet any data reporting/interoperability requirement defined by EOHHS and the ACOs. Gandara will work closely with the ACO partners and its Remarkable Health EHR and eHana throughout the Preparation Budget and year one periods to determine mutually-agreeable datasets for information exchange to improve care coordination efforts.

C. Plan for team-based treatment planning in collaboration with pediatric practices; includes the following 3 steps*: introduction/training* on client driven Individual Care Planning meetings, frequency, expectations, and to establish a process and goals. The Project Manager and ICC Supervisor will identify staff liaisons from pediatric practices to participate in individual care plans planning and best-participation/communication practices and agreements based on individual practice needs/considerations. ICC supervisors will develop tools for staff to fill out and submit in lieu of in-person participation; or option of on-site care coordination meetings at the pediatric site and/or new participation practices; call-in meetings/skype. Additionally, ICC supervisors will provide monthly check in calls with PC practice managers for the first 6 months to identify and discuss challenges, barriers and strategies and at 6 month intervals thereafter.

D. Plan to improve timely access to ICC services: Based on the barriers and challenges identified in Section 6.2.A-B, the Gandara SCSA has identified the following plan to improve timely access to ICC Services. The project team will re-evaluate current access practices (e.g. order of referral), including evaluating criteria and processes for prioritizing access to youth/families for services. The latter will be critical in the event that the ACO/MCO "dumps" a cluster of referrals simultaneously. Recruitment and Retention of bi-lingual/bi-cultural staff continues to be the key barrier to timely access to ICC services. Gandara has initiated an aggressive multilayered plan to address this as follows. Review, modify and implement new interview, screening, hiring, transition support, and training practices for new ICC clinicians recruited from Puerto Rico, Florida or Texas and hiring a recruiter who lives in Puerto Rico. The SCSA will continued implementation and review of retention bonuses for reaching case load milestone, and lengths of stay. The SCSA will initiate a process of anticipatory hiring of new ICC teams as caseloads reach 8-10 families.

E. Plan to improve/increase connections to social services.

Connections to social services and natural community supports is a high area of accomplishment within the Gandara SCSA, as demonstrate by the collaborations chart in Section 6.3.B. However, improvements will be made to outreach, tracking, monitoring and evaluating completeness and follow through among ICC and FP staff. As described above this will include: developing a "back end" mechanism to track and aggregate data by enrollee connections to social services, the addition of consistent individual and group supervision reviews of these connections. Additionally, the ICP has been edited to track all of the quality measure in Appendix A.

Gandara is exploring leveraging social networking tools, such as Facebook Messenger to engage with enrollees. Techniques could include leveraging Facebook's Messenger Platform Application Program Interface to supply enrollee/representative with the Contractor's chat name as well as a unique code, which would automatically associate their Facebook Messenger account with their Care Management record. Enrollees/representative would then outreach to the Care Team at any time via the Messenger app already installed on their phone, notifying their team and prompting real time engagement, providing consents were in place and with necessary checks to ensure no Personal Health Information was exchanged.

Section 6.2 Executive Summary

A. The Bidder's current performance on its Development Plan

All four of JRI's CSAs use the Development Plan as a tool to track both successes and goals for improvement. Current performance across the board is positive with goals reflecting needs relating to increased engagement and team participation, access, care coordination, and quality of documentation. Two of JRI's four CSAs have little to no wait for services, while the other two in the Northeast have clear action plans for increasing access. With the recent merge of the two CSAs from the Northeast's Children's Friend and Family Services Division, JRI's best practices around review and approval of all progress notes and regular chart audits via the electronic medical record system, eHana, lend to continued progress on documentation related goals. Statewide, the area of assessment has been one given recent focus. JRI's assessments are strong per self-audits and review through the Massachusetts Practice Review (MPR). Development Plans detail a Child and Adolescent Needs and Strengths (CANS) completion rate average of 94.5% initially and three-month reassessment rate average of 80.75%. Another trend is that all sites are reporting an increase in "stand alone" Family Support and Training with an average of 10 enrollees each at three of the sites and one of the CSAs, Lynn, reporting 35 families enrolled. Development Plans highlight both needs and strengths and offer opportunities for the four JRI programs to learn best practices from one another.

B. Specific examples of strengths and needs of Bidder

Two clear strengths of JRI's CSAs include ongoing, trauma-informed training for staff and a focus on cultural responsiveness. JRI trains all of its community based teams, including CSAs, in a model called ARC – Attachment, Regulation, and Competency. ARC is a framework for intervention with youth and families who have experienced multiple and/or prolonged traumatic stress, which is characteristic of many of our families served. In addition, staff actively work on achieving Tier I and Tier II Wraparound Certification. Two of the state's three certified trainers in the evidence based model Achieve My Plan (AMP) work for JRI. Additional areas of expertise and training are shared via both live trainings and webinars on JRI's Learning Management System (LMS). Training is both an area of strength and need in that due to the geographic distribution of our programs, increased technology and infrastructure would support enhanced training and additional opportunities for staff and families served.

With regards to cultural competence, JRI can provide services in multiple languages including Albanian, Arabic, Cantonese, French, Haitian Creole, Khmer, Spanish, Vietnamese, Russian, Portuguese, and Bulgarian. Eighty-two percent of our Lawrence CSA staff are bilingual. Two of the CSAs participated in learning communities with Dr. Ken Hardy, who supports supervisors to work with diverse populations and to elicit open conversations about race and culture. This relates to two other JRI initiatives, the first of which is a focus on reflective supervision across programs and the second is a Cultural Responsiveness initiative with representation from CSAs on its task force. Exploration of health disparities, enhanced training, and support for career advancement of diverse staff are amongst the issues being discussed.

In terms of needs, technology rises to the top of the list and would support enhanced training as mentioned above, as well as increased communication and inclusion of medical providers in the wraparound process, and improved assessment and ongoing documentation. For example, equipping all CSA team members with mobile devices such as tablets would allow for concurrent documentation and access to on-line assessment tools and our Client Assessment

Tracking System (CATS) which gathers clinical outcomes for youth over time and supports improved care.

C. The Bidder's plans for improving timely access to ICC services

The key to timely access is recruiting and retaining high quality staff who meet the diverse needs of our communities served. With the workforce challenges facing the state, JRI is focusing on developing and enhancing relationships with local colleges and universities to expand its workforce. Whenever possible, qualified second year Masters of Social Work or Counseling Psychology students are brought in for their internships. This provides a nine month runway to possible employment following their graduation. During this period, these candidates receive intensive training, shadowing, coaching and supervision which prepares them well for employment upon receiving their degree. Our relationships also create opportunities for our team members to go back to receive their masters degrees at a reduced tuition. JRI has active cost-sharing partnerships with the Simmons School of Social Work and William James College and is exploring additional opportunities for courses with college credit for staff. In addition, each CSA has relationships with colleges and universities in their respective communities which lend to field placements and guest teaching opportunities that expose students to the Children's Behavioral Health Initiative and may pique interest in employment at a CSA. JRI's CFFS/CSA sites have had waitlists for services that will be addressed through the opportunity of adding a full time recruiter position to focus on hiring culturally competent ICC and Family Partner staff to both address waitlist issues and meet the needs of the people we serve in the community.

D. The Bidder's plans for improving care coordination, care planning, and care management for ICC-Engaged Members

Improving care coordination and care planning requires adherence to the roots of high fidelity wraparound and a vigilant focus on the four phases and ten principles. JRI is fortunate to have five master Wraparound coaches who support continued training and coaching of all staff. Active work groups meet regularly for Tier certification in addition to ongoing individual and group supervision. We also have twenty-one Tier II-certified Wraparound specialists.

To improve care coordination and care planning/care management, there are some tangible changes that can be made. Specifically, JRI aims to prepare sites to be accredited as Health Homes via the Joint Commission, improve access to technology for more real-time comprehensive assessment and documentation, and provide additional training opportunities to support an ongoing culture of learning. In the context of health care reform, these steps will align us with the industry and support electronic communication and sharing of health information with ACOs and other community partners as well as equip staff with the knowledge necessary to meet health indicators beyond those that present as purely behavioral.

E. Bidder's plans to improve performance on quality scores and Development Plan goals

While all four of JRI's CSAs score above the national mean per the 2016 Massachusetts Team Observation Measure (TOM 2.0), several strategies are being employed to promote continuous improvement. Per the most recent Massachusetts Wraparound Provider Practice Analysis conducted in 2016, the area of natural supports falls short of the national and state means of 47% at two of our programs. The other two programs, while surpassing this percentage, reach only 54% and 62%. Engaging natural supports in new and creative ways will be key in supporting families in the development of sustainable plans. Strategies such as incorporating the use of ecomaps during all four phases of wraparound, utilizing Absent Partner

Wraparound Participation documents with those who cannot attend meetings, and increasing the use of technology to support participation through phone conferencing, FaceTime or Skype will also be explored. In addition, JRI will use the expertise of our own family partners to coach fellow staff in the incorporation of natural supports based on their own lived experience. This will yield more comprehensive assessments and engagement strategies. A better job at assessment leads to a better job overall.

The CSAs are also actively engaging families in discussions regarding outcome based measures and how they relate to transition planning. Specifically, the Transition Readiness Tool is being incorporated as early in the process as possible and is used as a measure of skills that will be important past the engagement with the CSA, as well as a means for empowering youth and families to watch their progress. This information will be paired with clinical data from JRI's CATS system as well as data gathered through JRI's long-term outcomes project through which outcomes are gathered at designated intervals, months and years following completion of services. Information gleaned from this collective data will be analyzed to inform best practices, highlight training needs, and indicate areas in which quality improvement projects may be targeted. Rapid cycle quality improvement projects utilizing the Plan-Do-Study-Act (PDSA) method are employed to test and apply strategies to support ongoing improvement.

F. The Bidder's plans for improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth

Technological advancements, training, and access to nursing consultation will be key to our success in improving coordination with pediatric primary care and other health care providers for youth. Our CSAs share strong relationships with local hospitals and community health centers; however, enhancing our ability to communicate with them in a way that is easy, secure, and manageable for staff will be critical. Our System of Care meetings have been instrumental in building relationships with community partners and can be leveraged as we expand our knowledge of and interaction with health care providers. Many of our local practices are beginning to employ navigators or family care coordinators. Individuals such as these will be targeted for outreach and invited to System of Care meetings and ongoing conversations. Similarly, we will work closely with the Mass. Child Psychiatry Access Project (MCPAP), as this is already a stakeholder with ties to both the behavioral and physical health care provider networks in our communities.

Our psychiatric consultants can assist with "doc to doc" communication which supports the development of new relationships. In addition, funding will be sought to expand consultation to include nursing. This level of expertise will support an expansion of the knowledge base of our staff, development of new training curricula, and establishment of new community partners.

JRI will strive to develop inclusive care planning teams, using technology when necessary to bring healthcare providers "to the table," whether this is in person or via telephone or video conferencing.

Finally, JRI's CSAs will incorporate screening tools which align with other community partners for the early detection of common medical issues as well as substance use. By creating common language that is based on reliable assessment tools, we can more easily communicate concrete concerns to our medical partners. Establishing an ongoing menu of webinars on these topics and assessment tools will further support CSA teams in sustaining enhanced communication and partnerships into the future as well as open up doors for families and youth to access training materials and empower participation in the wraparound process.

Section 6.3 Populations Served and Community Engagement

A. Member populations, service areas and plans to promote health and wellbeing/initiate and maintain engagement

JRI operates four Community Service Agencies (CSAs) that annually help hundreds of families whose children, aged under 21, have been diagnosed with a serious emotional, behavioral or psychiatric condition meeting the federal definitions of serious emotional disturbance and determined through a mental health evaluation to need home-based services. The following table outlines the communities they serve and the service areas covered:

CSA Site	Catchment Area	Community Characteristics
Cape and Islands	Falmouth, Sandwich, Bourne, Mashpee, Barnstable, Hyannis, Yarmouth, Dennis, Brewster, Harwich, Chatham, Orleans, Eastham, Wellfleet, Truro, Provincetown, Nantucket, Martha's Vineyard	Cape Cod and the Islands are largely White communities, over 93%, with a small percentage of Latino, Portuguese and Native American ethnic and cultural minorities. More recently the Cape/Islands CSA has received increasing referrals for Portuguese and Spanish speaking families.
Dimock	The Dimock CSA is located in a historic and dynamic neighborhood of Jamaica Plain. The CSA currently serves youth and families from Allston, Brighton, Brookline, Jamaica Plain, Mission Hill/Roxbury and surrounding towns.	The ethnic make-up of our service population, based on the 2010 Census, includes 38% non-Hispanic Whites, 33% Hispanic/Latino, 20% Blacks, 6% Asians and 3% Other. In addition to English, staff members speak Arabic, Cantonese, French, Haitian Creole, Khmer, Spanish, and Vietnamese.
Lawrence	Lawrence, Andover, North Andover, Methuen	The ethnic make up of the Lawrence CSA service area is as follows: Lawrence is 79% Hispanic Methuen is 89% White Andover is 91% White N. Andover is 94% White. Eighty-two percent of the Lawrence CSA staff are bilingual/bicultural.
Lynn	The Lynn CSA serves Lynn and the surrounding towns of Nahant, Swampscott, Lynnfield, and Saugus. Notable of Lynn staff is their diversity including linguistic and cultural representation of populations served in this gateway city, a home to many new immigrants.	Lynn has a rich industrial history and continues to be a large manufacturing and commercial center. The population of Lynn is 90,329 making it the 9th largest city in Massachusetts. The ethnic make-up of the Lynn community is approximately 57% White, 32% Hispanic, 12% Black, 7% Asian (2010 Census). Lynn is a refugee settlement city and we have new immigrants and refugees arriving frequently.

JRI recognizes the importance of developing positive relationships with a variety of community organizations in order to enrich the lives of and services for people we support, as well as building relationships with organizations that can assist with meeting the needs related to the social determinants of health. Each CSA is deeply rooted in their communities and has a wealth of experience in networking with community resources for services and supports as well as organizing and facilitating community System of Care (SOC) Committees. Through our CSAs and other JRI community based services and programs, JRI staff partners with community programs that serve thousands of youth and families coping with serious and complex medical, behavioral, developmental and mental health needs. JRI's extensive network of community

programs provides us with unique resources to promote the health and well being of the individuals and families we serve. This includes expertise in assessments, screening, case management and referrals; peer support and education groups; evidenced based curricula; mentoring supports; and cultural, social, and recreational activities. JRI programs apply evidenced-based, trauma-informed practices to build family skills and yield measurable outcomes. Intensive Care Coordination (ICC) services use the national High Fidelity wraparound model and Wraparound Fidelity Index (WFI-4) as the primary framework to initiate and engage families in ICC and Family Partner Services, as well as measure satisfaction. JRI is committed to using the evidence-based, trauma-informed ARC (Attachment, Regulation and Competency) framework to help youth and families develop strength and resiliency based competencies that promote their health and well being. The Child and Adolescent Needs and Strengths (CANS) assessment supports JRI's wraparound approach and informs treatment planning to assess life domains in areas of strengths and potential social determinants of health and well being. JRI's Continuous Quality Improvement (CQI) processes, satisfaction surveys, and data tracking systems measure outcomes and enhance service quality and measure health and well being of the people we serve. JRI puts family and peer involvement at the forefront of these processes. Using these, as well as statewide, regional and local partnerships, JRI will continue to support family health and well being through use of our expertise and evidence based practices in care coordination settings, as well as enhancements to our current model described throughout this RFR, including embracing a Health Home Care Model for our CSAs.

B. Relationships within the community to improve the quality of ICC services, including current and planned collaborations and partnerships

JRI CSAs operate local SOC Committees which engage community stakeholders, community providers, business owners, and family representatives to identify community needs and develop plans and systems for resolution. Through this work, and our extensive services and programs across the state, JRI has established strong community connections, all of which provide formal and informal community based supports to the people we serve. Connections through the existing CSA sites and various JRI programs will be integrated, developed and sustained to match MassHealth reform goals to improve the member's experience of care, address population health, and increase efficiency in service delivery. As part of their care coordination role, and through eight years of developing local community relationships, each CSA maintains partnerships with local community health centers, psychiatric and medical facilities, counseling services, crisis teams, and substance use and self-help and advocacy groups. Through JRI programming and the current CSAs, strong partnerships provide families access to public service agencies, including DPH, DHCD, MassHealth, Social Security, TANF, WIC, SNAP, among others in which staff help families to navigate these systems for acquiring benefits and services. JRI also maintains partnerships with educational, vocational and transitional resources, including DTA, local housing authorities, job training and job readiness programs, local educational authorities, educational institutions, and ESL and GED service providers. JRI collaborates with parent and child focused organizations, for assessment and screening, after school activities, day care, mentoring and peer support, and family activities and events. JRI also has an MOU with the Parents/Professionals Advocacy League (PPAL) for training and technical assistance to improve youth guided and family endorsed programming. JRI is also a member of trade organizations including the Association for Behavioral Healthcare, the Children's League and MAPPS which also provides opportunities for sharing resources and information. These existing connections will be used to enhance and explore

resources, network with other community resources and forge new partnerships based on current and anticipated needs of CSA families served, and in conjunction with MassHealth reform. JRI will create new partnerships with ACOs, MCOs, BHCPs, hospitals, community health centers and PCPs, creating a model of facilitated referral and coordination with providers and entities responsible for Total Cost of Care and overall health related outcomes for MassHealth members served.

C. How the current and planned partnerships will align with proposed project(s) described in response to Section 6.4.A.

JRI welcomes the opportunity to strengthen its CSA Services to both maintain fidelity to the Wraparound approach, and advance CSA programming to become a health home model of care. In implementing these initiatives, JRI will develop infrastructures and capacities that will sustain the program over the Contract term and beyond. These structures include Information Technology systems, a Quality Management oversight, a workforce trained in CSA coordination based on a Health Home model, and an organizational governance structure that facilitates the collaboration with ACOs/MCOs BHCPs, LTSSCPs and pediatric practitioners.

JRI recognizes that to best serve Enrollees, CSA CP services must be provided in close partnerships with ACO/MCOs, the entities at risk for Total Cost of Care in the new delivery system. As a result, JRI will build on existing relationships and methods for collaboration with ACO/MCOs, pediatric practices, hospitals and community health centers and invest additional staff resources to further establish current partnerships and develop additional collaborations to newly awarded ACO/MCOs and Community Partners. JRI has extensive experience participating on interdisciplinary care teams and coordinating with a range of providers.

In addition, JRI is prepared to share its specialized CSA service knowledge and other agency expertise with medical providers and care managers within ACO/MCOs and Community Partner Programs. Some examples of this expertise include: ***Trauma Informed Approach***: For 30 years, the Trauma Center at JRI has advanced the field of posttraumatic stress therapy through its leadership role in development, implementation, evaluation, training and educational programs for individuals, families and communities. Each JRI CSA develops a specific trauma plan with oversight from the Trauma Center. JRI also offers comprehensive services and expertise for individuals living with/at risk for HIV/AIDS, mental illness and other disabilities. Services include transitional and permanent housing, mental health and substance abuse counseling, case management, peer support, legal services as well as a center for LGBTQ+ youth. ***Achieve My Plan (AMP):*** JRI has two of the state's three trainers in this evidence based model focused on empowering transition age youth to take the lead in their own care. ***The Positive Parenting Program (Triple P):*** JRI has over 50 staff trained in this evidence based model of parent education and support, which as initiated in Massachusetts by MCPAP. Two staff have been trained in the level called "Primary Care Triple P" designed to interface with medical providers and coach families via four focused sessions. JRI's ***My Life My Choice*** program is a nationally recognized, groundbreaking initiative reaching the adolescents most vulnerable to commercial sexual exploitation. We offer provider training, intervention and prevention services to staff, youth and families, police, and the community at large. In addition, JRI provides training and capacity-building services to non-profits statewide in the areas of strategic planning, diversity initiatives, supervision skills, clinical support and cultural competency. Through our CSA project plans of furthering our IT infrastructure and building staff resources, JRI will be better equipped to offer training and capacity building resources and increase communication and partnership opportunities to system partners including ACOs/MCOs and pediatric practitioners.

6.4 Proposed project(s) and Investment Plan (response not to exceed 15 pages)

Revised 12/20/17

Project 1: Information Technology Services and Capacity Improvement

DSRIP Project Goal(s):

(1) Fostering strong integration with ACOs and primary care providers for ICC-Engaged Members

(2) Strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC-Engaged Members and their families

(3) Improving timely access to ICC services for children eligible to receive ICC and their families

JRI has substantial demonstrated experience successfully managing implementation, deployment, and support of Electronic Health Records (EHR) and other complex technology initiatives to support the ever changing landscape of performance specifications, quality assurance initiatives, purchaser requirements and changing client needs.

The overarching goals of our IT project plans outlined below supports JRI's practice commitment and research on evidence-based models through data-driven outcomes. This includes assessing the progressive approaches of therapeutic sports and trauma-informed yoga, theater, equine therapy and other arts to approach preventative health and wellness care to the traumatized youth we serve; and use of the ARC framework as a mechanism to improve emotion regulation in youth with severe emotional and behavioral problems associated with trauma histories. For example, JRI has implemented a clinical and behavioral database using a battery of assessment measures to track long and short term outcomes based on service and interventions. Overall the data collected by JRI's internal mechanisms, along with the use of EHRs, guides quality improvement efforts, and helps identify specific risk and projective trajectories for vulnerable youth populations.

Each feature outlined in this plan support EOHHS's goal of developing secure mechanisms to support data exchange not only with EOHHS and payers, but also with the ICC-Engaged Members themselves. JRI's technology goals in each project are related to our commitment to make investments in the areas of interoperability and data exchange to assist CSA's in working with new MassHealth ACOs and other health care practitioners. Each portion of the DSRIP funds allocated to each project outlined below will support enrollment and integration of the CSA programs with the Mass HIway and allow the CSA to interoperate with EOHHS, ACOs, primary care providers, and increase communication and resource sharing with clients and their families. The scope of the IT Infrastructure Strategic Roadmap project comprise of 3 key components/phases that is expected to take 3-5 years to get fully implemented. The components are:

1. CSA DSRIP IT Manager and support staff

2. Development/Adaptation of EHR and/or Care Management System, which includes a) the HyperConverge solution with Fail-Over, Replication and Storage and b) eHana upgrades
3. Upgrading 150 + CSA end user clients including site video conference installation

Project 1/Component 1: IT Staffing -- CSA DSRIP Implementation IT Manager/Specialist

The IT Manager is responsible for the oversight of timelines and for the overall execution of the Information Technology Services and Capacity Improvement project. The IT Manager position has been in place with a 0.60 FTE dedicated to this project since 11/1/17, in order to assess the needs of each CSA site, create a plan for implementation of upgrades, and begin to develop a system for adaptability tests and integration of all related components. The IT Specialist position will be responsible for assisting in the planning, implementation, and outcomes of all projects. The IT Specialist will be dedicated to the CSAs and will assist in execution of data analytics capabilities at the CSA sites and will support the implementation of mobile technology for CSA employees and the installation and operationalization of telecommunications equipment at the 4 CSA sites. The goal of the IT Specialist position is to assist in the planning, implementation and outcomes of above projects. The scope of each project and deliverable is outlined in overall IT plan and individual project plans outlined below.

JRI's deliverables will include development of secure Health Information Technology implementation and development of EHR and agency integration and management of information, allocation of IT project management resources, assistance in execution of data analytics capabilities, secure communication, and mobile technology including tablets, laptops and telecommunication hardware and reporting software for CSA sites.

Use of DSRIP funding: $336,586 over the course of the Prep year and subsequent 5 years. The allocation of funds to the CSA sites will be proportionate to site enrollment.

Evaluation, measurement/performance management strategies: Evaluation of position will be measured by activities outlined in the Technology portion of project plan and implementation plan /timeline outlined in 6.3C

Project 1/Component 2: Development/Adaptation of EHR/Care Navigation System – Implementation of HyperConverge Solution and eHana Upgrades

a) Implementation of HyperConverge Solution

One of the key components of this multi-phase project is to move JRI IT environment to the next generation of technology by migrating to a SimpliVity HyperConverge infrastructure.

The SimpliVity hyperconverged infrastructure is designed from the ground up to meet the increased efficiency, management and data protection demands of today's data-intensive, highly-virtualized IT environments. The SimpliVity solution provides a scalable, modular, 2U building block of x86 resources that offers all the functionality of traditional IT infrastructure—in one device. It assimilates storage; compute; hypervisor; real-time deduplication, compression, and

optimization; along with comprehensive data management, data protection, and disaster recovery capabilities.

Designed to work with any hypervisor or industry-standard x86 server platform, the SimpliVity solution provides a single, shared resource pool across the entire IT stack, eliminating point products and inefficient siloed IT architectures. JRI has chosen the Cisco as its server platform in order to leverage the investment it has already mad on Cisco products for its core network backbone.

The SimpliVity solution is distinguished from other converged infrastructure solutions by three unique attributes: guaranteed data efficiency; built-in resiliency, backup, and disaster recovery; and global VM-centric management and mobility. Three components that are fundamental to JRI's IT Infrastructure Strategic Roadmap for enhancing secure, reliable HIPPA compliant communication with the HIWAY and .interact with the potential of multiple platforms used by ACO/MCO and BHCP/LTSS partners.

The following activities will be performed in completing this component/phase of the project:

1. Planning and Pre-Engagement Preparation
2. Engagement Kickoff meeting
3. Measurement Definition
4. Environment Specification and Build-Out
5. User Acceptance Testing
6. Project Wrap-Up, Findings and Recommendation
7. Project Sign Off

The deliverables for this phase of the project include:

1- VMware vCenter Server for management
2- Network virtual switch installation
3- *Build* document – Documentation for the infrastructure build.
4- Plan and design of a logical architecture for JRI's production implementation of VMware vSphere.
5- Implementation of JRI's production VMware vSphere environment

There is a one-time purchase fee of $233,487 to migrate to a SimpliVity HyperConverge infrastructure. JRI CSAs have been allocated 10% of this total cost, as an appropriate proportion of CSA-related FTEs to total FTEs across the Agency (23,348.70). The goal of this purchase is to provide comprehensive data management, data protection, and disaster recovery capabilities, which will to move the JRI IT environment to the next generation of technology.

b) Electronic Health Record upgrades (eHANA)

JRI utilizes eHana's software-as-a-service (SaaS) Electronic Health Record, which is certified Meaningful Use Complete by Drummond Group (Certification Number 14.04.04.2594.eHan.16.0.1.160728) and is deployed in community-based provider organizations throughout Massachusetts.

The ONC-Certified version of the eHana EHR includes features and functionality intended to support integrated and collaborative models of care, including:

- Patient Portal functionality
- Standardized data exchange formats (including Clinical Document Architecture (CDA) support)
- Transmission via DIRECT Health Information Service Provider (HISP) to the Mass HIway or other partners
- Clinical Quality Measure and Automated Measure reporting
- Patient Educational Resource sharing and tracking

Deliverables: JRI will leverage current and future tools based on eHana's technology platform to support effective communication across all stakeholders, including support for the exchange of essential documentation. eHana's Meaningful Use-certified EHR provides validated support for healthcare interoperability standards and standardized transactions formats. JRI plans to use DSRIP funding to include specific EHR infrastructure and technology investments to fully support the information sharing requirements of EOHHS and ACOs, include custom extracts and integrations from our EHR.

Use of DSRIP Funding: 18,821.60

In kind internal resources include the Director of Quality Management oversight. This includes bi-weekly meetings with eHana, EHR development oversight, training and consultation to 4 CSA sites. Funds will be allocated to CSA sites proportional to the needs and size of the site.

Evaluation, measurement/performance management strategies: JRI has longstanding experience utilizing eHana tools (such as eHana Secure Care Team Messaging, enrollee tagging, QuickNotes, Notifications, and chart exports) and anticipates adopting other technologies (Patient Portal, Real-Time Care Team Chat, advanced interoperability) as necessary to effectively coordinate care. JRI intends to leverage standardized technology frameworks to facilitate data exchange with EOHHS, ACOs, MCOs, and other stakeholders, performance management will be measured based on use and interoperability of both existing tools and new technologies with system partners and funder requirements developed in the future.

Project 1/Component 3: Technology for Service Delivery

In order to upgrade the CSA end user clients, videoconferencing capability will be installed at all 4 CSAs sites. The cost to install videoconferencing capability at one CSA site is approximately $20,000, so it will cost a total of $80,000 for all 4 sites.

To consolidate its end user client computing environment under one robust and portable platform, CSA staff will receive Lenovo computing devices ($1,200 per device). During the prep year, devices will be provided to 75 CSA staff ($1,200 per device * 75 end users totaling $90,000), with the remaining staff receiving devices in subsequent years. All technology upgrades will position the CSAs to interoperate with EOHHS, ACOs, primary care providers, as well as youth and families. In the PBP, the Cape CSA has been allocated approximately $56,666 of the Technology for Service Delivery expense for technology services and capacity improvement, while the Lawrence, Lynn and Dimock CSAs have each been allocated approximately $37,778 totaling the amount referenced above.

Project 2: Nursing Consultation

The goal of the nursing consultation is to foster strong integration among ACOs, primary care providers (PCPs), and ICC engaged members and to strengthen fidelity to the Wraparound process.

Scope: The nurse consultant will assist JRI CSAs in: 1.) communication and collaboration opportunities with primary care practitioners; 2.) developing health and wellness coaching and preventative care curriculum; 3.) providing case consultation ICC care coordinators who have youth enrolled that have complex medical issues, and 4.) assisting in the community mapping process to locate uncaptured local community based programs offering health and wellness initiatives for prevention and chronic disease management as well as other support and self-advocacy groups. The Health and Wellness/preventative care curricula developed will be based on JRI's trauma informed evidence based practices and resourced through professional training literature. It will be a co-training model developed for both staff and enrollees. The curricula will be shared as a provider best practice with other CSAs and with other MassHealth providers as requested.

Deliverables: Given that health and wellness coaching and information regarding symptom management to enable the youth and families we serve to be knowledgeable in the prevention and/or management of chronic medical conditions is so essential, this will be a particular training focus of CSA Care Coordinators in the wraparound framework, and BHH Certification process. Through training, curriculum development, community mapping and consultation, the nurse consultant will help provide ICCs education on how to reduce high risk behaviors and health risk factors such as smoking, substance use, inadequate nutrition and infrequent exercise as well as providing the assistance in accessing parallel health promotion activities. In addition the consultant will assist Care Coordinators in better integrating care particularly for youth struggling with chronic conditions such as asthma, diabetes and obesity. The nurse consultant will help establish better facilitation of both consistent and event based communication among health care entities such as the PCP and staff and the rest of the Care Planning Team.

Use of DSRIP funding: The nurse consultant will be funded part-time at for all 4 CSA sites, totaling $166,108 over the 5 year period.

Internal Resources: In-kind internal resources will include staff training, which will include a 3 day training in year 1 and a one day refresher training during years 2 through 5. Also, internal resources will support supervision of the nurse consultant from the JRI Medical Director, Dr.

Tony Joseph. Should integration of this position be successful in CSAs, JRI will sustain the position for CSAs and as an agency wide resource. Allocation of funds to CSA sites will be distributed evenly throughout the project. As DSRIP funding decreases for the position, the nurse will be allocated to other cost centers for similar training and coordination needs.

Efficacy and performance management will be evaluated by the Wraparound Fidelity Index (WFI-4), Massachusetts Practice Review (MPR), Team Observation Measure (TOM). Both National and statewide statistics from TOM data show >1% participation of medical care providers in Family Team meetings for programs using a High Fidelity Wraparound framework. JRI 's long term outcomes of the integration of a nurse consultant position align with DSRIP fund quality measures including the reduction of unnecessary use of emergency room visits and hospitalizations, increased participation in health and wellness activities, and successful integration of medical providers in family team meetings, as well as increased use of health and wellness and disease management goals and activities in care plans.

The nurse will establish better facilitation of both consistent and event based communication among health care entities, such as the PCP and staff and Care Planning Team. The nurse will dedicate a 0.60 FTE to fostering strong integration among ACOs, PCPs, and ICC engaged members and to strengthen fidelity to the Wraparound process. The nurse will also help JRI CSAs improve resource directories and networks of community-based pediatric practitioners and medical care facilities and will help to build on existing community-based networks to maximize physical/mental health care coordination opportunities. The inclusion of the nurse is essential to creating the systems needed to certify JRI's CSAs to be Joint Commission Accredited community health homes under Behavioral Health Home standards.

Project 3: Human Resources Investment

Goal 1: Fostering strong integration with ACOs and primary care providers for ICC-Engaged Members

Goal 2: Strengthening fidelity to Wraparound processes, including the care planning, care management, and care coordination processes for ICC-Engaged Members and their families

Goal 3: Improving timely access to ICC services for children eligible to receive ICC and their families

Use of DSRIP Funds: Workforce Investment of 3 positions totaling 1.4 FTE for prep period. Total amount over 5 year period $283, 313

Positions and Deliverables

Position 1-- CSA Recruiter: JRI/CFFS has a current employee who is designated as the CSA Recruiter for the 4 CSAs. The recruiter is bilingual and will focus on the demanding need for Spanish speaking ICC and Family Partner staff to support the needs of the diverse CSA communities served. This position has been in place with a 0.8 FTE dedicated to hiring for the CSAs since 9/1/17, with a focus on expedited hiring at each CSA site, in particular the Lawrence and Lynn sites, which have had a history of waitlists.

Position 2 -- Director of Clinical Support and Training: The Director of Training and Clinical Support will develop and implement a training curriculum for the CSA staff that will focus on . the context of health care reform Training curriculum development and refresher will align us with the changing industry trends and equip staff with the knowledge necessary to meet health indicators associated with social determinants of health. In addition training will support electronic communication and sharing of health information with ACOs and other community partners as well as prepare CSA staff to meet Quality Measures outlined in DSRIP funding expectations (Attachment A). The position will also be responsible for directly providing the trainings and will be available for clinical and training-related support as skills are implemented

Position 3 -- Training Coordinator: The Training Coordinator, who has been working on relevant online modules since 11/1/17, will continue to devote a 0.4 FTE to direct training and will also be responsible for learning modules which will allow staff to access online trainings remotely and take refresher courses from any location when needed. JRI's fringe rate of 34.5% is comprised of 12% tax and 22.5% fringes.

Project 4: Quality Management Operational Support

The goal of this project is to provide overall project management, quality management, and oversight for DSRIP funding distribution.

Scope: The scope of work allocated to the Director of Program Development has been in place at a 0.6 FTE since 11/1/17 and will continue to manage overall project deliverables, integrate IT and clinical management of Quality Assurance measures for DSRIP funding and Joint Commission BHH certification, report details of CSA DSRIP plan progress and outcomes to senior executive staff and project management team and coordinate relationship building meetings and activities with ACO's, MCO's, BHCP's, LTSSCP's, community health centers, hospitals and primary care practices. JRI anticipates that ongoing monitoring of systems, goals and relationships will begin to shift to managers and staff of CSA sites, such that the time allocated by the Director of Program Development will decrease each project year Funds will be evenly allocated to CSA sites throughout proposal period.

Deliverables will include CSA program development plans that include successful management and integration of Quality Assurance goals outlined in this RFR, alignment of IT development, system and clinical outcome monitoring, oversight of use of DSRIP funding in meeting and reporting on goals outlined in this project plan. Specifically this will include:

- Assisting CSAs in developing child/family advisory board for each CSA for feedback on improvements and BHH certification
- Identify and integrate required data elements for Quality Assessment in terms of BHH Certification and Wraparound Fidelity.
- Work with EHR vendor to build out data elements and reports in EHR to capture required data for Ql Plan and Performance Measures
- Collaborate with EOHHS, ACO/MCOs to determine reporting of QI/PM and other processes for facilitated referral.
- Assist programs consultants and EHR management to produce internal reports for quality monitoring

- Work with ACO/MCO, MAHealth representatives to create report structures for external reporting QI/QM in relation to Attachment A in RFR.

Internal resources include senior management oversight of the Director of Program Development position; CSA director and supervisor time spent on project, in kind includes lost productivity for supervisory staff implementing project goals. Efficacy and performance management will be evaluated by the Wraparound Fidelity Index (WFI-4), Massachusetts Practice Review (MPR), Team Observation Measure (TOM). National and statewide statistics from TOM data show >1% participation of medical care providers in Family Team meetings for programs using a High Fidelity Wraparound framework. JRI 's long term outcomes of the integration of a nurse consultant position align with DSRIP fund quality measures including the reduction of unnecessary use of emergency room visits and hospitalizations, increased participation in health and wellness activities, and successful integration of medical providers in family team meetings, as well as increased use of health and wellness and disease management goals and activities in care plans. This position will be critical for implementation, operationalization and oversight management of CSA Quality Measures outlined in Attachment A.

b. Project Team description

The four JRI CSA sites have a wealth of experience participating on interdisciplinary care teams and coordinating with a range of providers in their roles providing ICC and Family Partner services, as well as being responsible for community SOC facilitation and coordination. In addition, JRI is prepared to share both their specialized CSA service knowledge and clinical expertise in specialty areas outlined in section 6.3 C, with medical providers and care managers within ACO/MCOs. JRI's Project Management team will be responsible for overall performance and contract management with EOHHS, ACO/MCOs and Members. This team will be responsible for developing operational, qualitative and programmatic elements of the CSA infrastructure and capacity building project plan. As outlined in this proposal these structures and capacities include Information Technology systems, a Quality Management program, CSA sites trained and actively implementing health home models of care coordination that enhance Wraparound fidelity, and an oversight structure that both facilitates the collaboration and strengthened relationships with ACO and MCOs, as well as investments that are sustainable and built into agency infrastructure over time.

An organizational chart is attached. A list of current staff that the Bidder proposes will be involved in the project(s), including their job descriptions and qualifications for the project(s);

Senior Leadership:

Jennifer L. Miguel, LICSW, Senior Vice President

Roody Herold, MA, Chief Information Officer

Stephanie Sladen, LICSW Executive Director of Children's Friends and Service Division of JRI

Deb Oliveira, LMHC, Vice President, JRI

Catherine Mc Dermott, PhD, Director of Quality Assurance

Project Team (Project Team Job Descriptions and Org Chart attached)

Tiffany Naste, LICSW, Director of Clinical Support and Training

Amy Sypher, MA, Program Development Specialist/Project Manager

Binh Tran, LICSW- Director of Dimock CSA

Kristen Bono, LICSW- Director of Cape and Islands CSA

Amy Ackroyd, LICSW- Director of Lawrence CSA

Joy Richmond Smith, LICSW- Director of Lynn CSA

Proposed Positions:

Nurse Consultant

IT Specialist

IT/EHR Manager

Recruitment Specialist

Note: See Attached Project Team Job Descriptions

Section 6.5 Coordination with ACOs, MCOs and Primary Care Providers

Bidder's specific plans to improve collaboration and coordination with ACOs, MCOs, and primary care providers, particularly pediatric providers, in accordance with ICC performance specifications and in keeping with the goal of improving integration of behavioral and physical health care.

JRI recognizes that to best meet the ICC needs of the children and families we serve, CSA services must be enhanced to work closely with ACO/MCOs and physical health practitioners and both engage and align goals that address social determinants of health with the entities at risk for Total Cost of Care. As a result, and as explained through project plan initiatives, JRI will build on existing relationships and methods for collaboration with ACO/MCOs and Primary Care Providers and invest in additional staff organizational and structural resources as outlined in this proposal to develop deeper associations dedicated to integrating behavioral and physical health care plans, and targeting limited resources toward improved long term outcomes with our system partners.

A. Bidirectional communication between the Bidder and pediatric practices

A recent analysis of the over 6,000 annual encounters between pediatric practices and the Massachusetts Child Psychiatry Access Project (MCPAP) indicates that nearly 30% are requests for care coordination. The CSAs have been designed to deliver this service, yet silos persist between behavioral health and primary care providers and we need to continuously provide community education and raise awareness about the CSAs and other CBHI services.

Bidirectional communication will rely upon overall improved communication and integration to better educate CSAs about primary care needs of youth and educate PCPs about behavioral health needs and resources in the community. With limited time with patients, PCPs must have information at their fingertips that is easy to access and for families to understand. JRI has taken various steps to create a more easily navigable continuum of services and will build upon these initial steps to further improve communication: Concise one-page pamphlets regarding various levels of care; an updated website with a multimedia approach to educating communities about services available; developing opportunities for shared training with ACOs/MCOs/PCPs; better integration of PCPs and new opportunities for ACO/MCO participation in System of Care meetings; the creation of a specific position to assist families in accessing care, a Director of Service Coordination and Navigation; and the development of a Family Advisory Board, which can provide ongoing feedback about ways to improve communication and integration.

With pediatric practices specifically, JRI CSAs will seek mutually agreeable ways to increase communication and integration. This will include an exploration of ways to expedite referral pathways, easy and reliable ways to ensure ongoing communication and sharing of information, and ongoing education.

Per the Program Descriptions and Operations Manual developed for CSAs at the beginning of CBHI, signed releases will be obtained and the PCP will be invited to participate in all CPT meetings. The manual clearly stated that coordinating care with the PCP is required and must be documented. With consent and in collaboration with the family, the care coordinator is encouraged to utilize the Combined MCE Behavioral Health Provider/Primary Care Provider Communication Form.

While this form is used consistently, it generally provides a static, point in time retrieval of information and records. JRI's CSAs and other community based services will seek to enhance this process with actual discussion and shared treatment planning. To do this, our electronic medical records will be upgraded to communicate with other providers and share information

easily. In addition, our staff must have the understanding of common comorbid medical conditions for children and know how they may impact or be impacted by complex behavioral health challenges or multi-stressed family systems. Finally, the issue of travel will need to be negated by the introduction and increased application of telephone and video conferencing. Equipment to support this communication will be needed.

Building upon its culture of learning, JRI will utilize training modules to support increased knowledge of staff to better equip them in initiating informed discussions with primary care providers. We will use our Learning Management System (LMS) to build training modules on relevant topics. Employment of a Nurse Consultant will support this task and also provide the opportunity for nurse-to-nurse or -doctor communication, which will be crucial for families in which there are significant medical needs or information about behavioral health that may be useful in the treatment of that individual and family.

B. Referral management protocols for follow-up and informational sharing

All of our CSAs accept referrals and provide referral resources to/from local pediatricians, schools, behavioral and physical healthcare clinics and providers, EOHHS agencies, courts, police, faith and community based agencies and self referral from families. JRI has the experience to manage high volume referrals from any family community partner. Joint Commission BHH certification requirements in this proposal align with the "Facilitated Referral" Behavioral Health Home recognized by the Substance Abuse and Mental Health Services Administration (SAMHSA). Coordination and integration are essential in the facilitated referral model, requiring that JRI has processes to ensure a high level of coordination of primary physical health care and health promotion activities provided off site. Referral management protocols will continue to be aligned with CSA performance standards, and will continue to be individual-centered, comprehensive, coordinated and integrated, accessible, and performance-based. JRI will develop, in collaboration with each ACO/MCO and health care providers, specific protocols, workflows, policies and procedures, to address the various aspects of collaboration including: referral management; notification of admissions, discharges and ED visits, hospitalizations, and incidents; care planning processes and activities; EHR data sharing; service coordination and support; authorization protocols; and transitions of care.

C. Team-based treatment planning in collaboration with pediatric practices

Challenges in ensuring team-based treatment planning in collaboration with pediatric practices include the time crunch on both disciplines, managing full schedules, multiple appointments, and the need for travel. With improved technology, our hope would be to establish improved opportunities for shared treatment planning. Examples may include use of technology such as FaceTime or phone conferencing. While we will continue to ensure PCPs are invited to the table, whether in person or virtually, JRI's CSAs will also maximize other mechanisms for enhancing team-based treatment planning. Steps as simple as ensuring calls before and after CPT meetings will be bolstered by use of Absent Partner Wraparound Participation Documents. Thorough documentation will be shared across electronic medical record platforms and our nurse consultant will assist in highlighting areas with significant need for collaboration with pediatric practices.

D. Timely access to ICC Services

One indicator of our success is that our four CSAs have had minimal waitlists, and often no waitlist at our Cape and Boston sites. We believe "access delayed is access denied" and make every attempt to immediately provide CSA services, and bridge services if necessary to assure

safety and continuity. JRI conducts regular utilization reviews of all services to determine caseloads, evaluate the medical necessity of services, and respond to changing youth and family needs. We have a task force of senior managers, leaders and QA support staff to support a plan for growth should access become an issue. We are readying infrastructure (IT, financial, maintenance, legal, HR), supervision, clinical resources, and external relationships in preparation. We are known for hiring the best and the brightest. JRI strives to attract highly competent staff with competitive salaries, a top rate benefit package, and a commitment to making the work a career, and not just a job. JRI management is focused on fostering cultural responsiveness and promotes workplace diversity to build a workforce that culturally resembles communities that we serve. This enables our community based service programs to maintain an above industry average of a 60% retention rate.

E. Connections to Social Services

JRI will supplement existing CSA performance expectations that build on its existing connections and partnerships with the local community; focusing specifically on health promotion, specialty care providers for youth managing chronic conditions and primary care practices. As mentioned, these connections are numerous given that JRI is one of the largest non-profits in the state, and our CSAs are deeply rooted in the communities we serve. For example, in Lawrence we have become the lead on a project to address youth homelessness through the Merrimack Valley Consortium and in Lynn, we provide leadership for the local Post-Partum Help Task Force, which includes the creation of a diaper bank, linkage to OB/GYN providers and hospitals, as well as ongoing training. JRI also has over fifteen years of Lead Agency experience in the Southern Region, coordinating care for thousands of youth and families, and working with hundreds of providers and community organizations across the region and the state. Across JRI we have experience with various support and stabilization contracts to assist families with access to social services and a significant strength lies with our family partners and peer mentors, who have lived experience accessing local social services and who provide a uniquely informed perspective in supporting families in establishing connections to address their family's needs. We will leverage our experience with our SOC Framework to engage families and community partners in the CSA model. JRI's outreach plan would expand our scope of social service connections to better integrate health care, wellness and preventative needs for the youth and families we serve.

CSA Budget Report

IT Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
IT Manager	$ 80,000.00	0.60	7	$ 28,000
IT Implementation Specialist	$ 55,000.00	1.00	5	$ 22,917
				$ -
				$ -
				$ -
				$ -
Total Salary	1.6			$ 50,917
Fringe rate 34.5%		Total Fringe		$ 17,566
Total IT Staffing including Fringe				**$ 68,483**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in executing activities related to the project.

The IT Manager is responsible for the oversight of timelines and for the overall execution of the Information Technology Services and Capacity Improvement project. The IT Manager position has been in place with a 0.60 FTE dedicated to this project since 11/1/17, in order to assess the needs of each CSA site, create a plan for implementation of upgrades, and begin to develop a system for adaptability tests and integration of all related components.

The IT Specialist position will be responsible for assisting in the planning, implementation, and outcomes of all projects. The IT Specialist will be dedicated to the CSAs and will assist in execution of data analytics capabilities at the CSA sites and will support the implementation of mobile technology for CSA employees and the installation and operalization of telecommunications equipment at the 4 CSA sites.

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Implementation of HyperConverge Solution	$ 23,348.70
erteva upgrades	$ 18,821.60
Total Development and Adaptation of EHR and Care Management System	$ 42,170.30

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

There is a one-time purchase fee of $233,487 to migrate to a SimpliVity HyperConverge infrastructure. JRI CSAs have been allocated 10% of this total cost, as an appropriate proportion of CSA-related FTEs to total FTEs across the Agency. The goal of this purchase is to provide comprehensive data management, data protection, and disaster recovery capabilities, which will to move the JRI IT environment to the next generation of technology.

The purpose of the erteva upgrades is to improve the electronic health records infrastructure and technology to fully support the information sharing requirements of ECHRS and ACOs, including custom extracts and integrations. The total cost of these upgrades for the CSAs is projected to be *tbd*, with $18,821.60 allocated to the DSRIP award. This upgrade will enhance effective communication across all stakeholders, including support for the exchange of essential documentation in standardized transaction formats.

Technology for Service Delivery

Description of Expense	Cost
Videoconferencing for 4 CSA sites	$ 80,000.00
Laptops for 75 CSA employees	$ 90,000.00
Total Technology for Service Delivery	$ 170,000.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

In order to upgrade the CSA end user clients, videoconferencing capability will be installed at all 4 CSAs sites. The cost to install videoconferencing capability at one CSA site is approximately $20,000, so it will cost a total of $80,000 for all 4 sites.

To consolidate its end user client computing environment under one robust and portable platform, CSA staff will receive Lenovo computing devices ($1,200 per device). During the prep year, devices will be provided to 75 CSA staff ($1,200 per device * 75 end users totaling $90,000), with the remaining staff receiving devices in subsequent years. All technology upgrades will position the CSAs to interoperate with ECHRS, ACOs, primary care providers, as well as youth and families.

				$ -
Total Salary	0.41			$ 16,250
Fringe rate 34.5%		Total Fringe		$ 5,606
Total Workforce Development Staffing including Fringe				**$ 21,856**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in executing activities related to the project.

The nurse will establish better facilitation of both consistent and event based communication among health care entities, such as the PCP and staff and Care Planning Team. The nurse will dedicate a 0.60 FTE to fostering strong integration among ACOs, PCPs, and ICC engaged members and to strengthen fidelity to the Wraparound process. The nurse will also help JRI CSAs improve resource directories and networks of community-based pediatric practitioners and medical care facilities and will help to build on existing community-based networks to maximize physical/mental health care coordination opportunities. The inclusion of the nurse is essential to creating the systems needed to certify JRI's CSAs to be community health homes under Behavioral Health Home standards.

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in executing activities related to the project.

The recruiter's responsibilities are recruitment of staff for the CSAs. The recruiter is bilingual so as to best support the needs of the CSA community. This position has been in place with a 0.8 FTE dedicated to hiring for the CSAs since 9/1/17, with a focus on expedited hiring at each CSA site.

The Director of Training and Clinical Support will develop and implement a training curriculum for the CSA staff. The position will also be responsible for directly providing the trainings and will be available for clinical and training-related support as skills are implemented. The Training Coordinator, who has been working on relevant online modules since 11/1/17, will continue to devote a 0.4 FTE to direct training and will also be responsible for learning modules which will allow staff to access online trainings remotely and take refresher courses from any location when needed.

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Total Development and Adaptation of EHR and Care Management System	$ -

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Technology for Service Delivery

Description of Expense	Cost
Laptops for 50 employees	$ 60,000.00
Portable, electronic signature pads	$ 8,000.00
Care extender applications for smartphones	$ 500.00
Total Technology for Service Delivery	$ 68,500.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:
Laptops for staff will allow more community linkages since the workforce will be mobile. Cost for 50 laptops is $1,200 each for a total cost of $60,000 ($1,200 x 50).

Portable, electronic signature pads for staff in the community allows consent agreements to be signed immediately by family members/guardians and supports quicker access to services. Cost for 40 devices is $200 each for a total cost of $8,000 ($200 x 40).

Care extender applications for smartphones will allow staff to become familiar with the tool to enable clients to use technology to better assist in care management. Cost for 50 applications/downloads at $10 each is $500 ($10 x 50).

Other Technology Expenses

Description of Expense	Cost
Smartphone connectivity for ICC staff	$ 12,500.00
Total Other Technology Expenses	$ 12,500.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:
Smartphone connectivity for ICC staff provides mobile access to workfiles and fosters greater community linkages. Cost for 25 ICC staff is $100 per month for 5 months for 25 devicess ($100 x 5 x 25), or $12,500.

Training Expenses

Description of Expense	Cost
Risking Connections training/certification	$ 40,000.00
3 day's salaries, wages, taxes & benefits	$ 12,000.00
Total Training Expenses	$ 52,000.00

Provide a description of each training expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:
Using the train-the -trainer model, LHBS will egnage Risking Connections to provide trauma-informed instruction and certification of an LHBS trainer at a cost of $40,000. This training supports providing ICC using dedicated care coordinators training in Wraparound principles and practices. This training is provided by 2 trainers over 3 full days. The trainers will be available on a consultative basis during the following 12 months to support the trainers who will become certified as a result of the training. This 3 day training will be provided to 47 FTEs within the two CSAs that Northeast Behavioral Health employs. As a result of this training, one FTE will become certified as a trainer of the Risking Connections model.

Three days' salaries , wagess, taxes and benefits for Haverhill CSA staff to attend Trauma Informed Care Model "Risking Connections" Training. This training support providing ICC using dedicated care coordinators trainin in Wraparound principles and practices.

			Total Program Staffing including Fringe	$ 1,600.00

For each position listed above, provide a brief statement of the position's responsibilities, how each will assist in accomplishing the goals of the project:
Director of Communications creates messaging for use in publications and marketing materials to be used to promote CSA programs with ACO partners, PCPs and the population within the communities that are served by the CSA programs. Estimated time is 5 hours per month.

Other Operational Expenses

Description of Expense	Cost
Printed brochures/collateral mtls	$ 6,040.00
Website redesign consultant	$ 4,500.00
E-mail blasting service	$ 3,960.00
Total Other Operational Expenses	$ 14,500.00

Provide a description of each operational expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:
Marketing and communication materials may nclude pamphlets, and other collateral materials as well as social media campaigns and other investments to communicate and promote the activities of the CSA programs within the communities that the CSA programs serve. Costs are estimated based upon need to create and stock materials for use to promote the CSA programs as well as to educate ACO and PCP colleauges regarding the CSA programs. The materials will be translated and printed in various languages representative of the population within the cachement area. The cost will include brochure design, printing and dissemination.

The website resdesign consultant will be engaged to provide enhancements and revisions to the current CSA pages as well as to provide abilty to refer to CSA directly from the website. It is estimated that the cost will be $225per hour for 20 hours of the consultant's time.

The e-mail blasting service will be used to communicate to ACOs and MCOs and other referral partners to develop and maintain strong relationships and partnerships as well as to communicate ongoing programmatic information related to the two CSAs.at $495 per month for 8 months.

Description of Expense	Cost
Total Other Operational Expenses	$ -

Provide a description of each operational expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

CSA Budget Report - Indirect Cost/Administrative Overhead- Prep Budget Period

Indirect Cost/Administrative Overhead Rate: 15%

Provide a brief description of how the Indirect Cost/Administrative Overhead rate was determined:
The indirect cost/administrative overhead rate is at 15% and includes costs of Human Resources, Finance, Executive Management, Facilities, Purchasing, Information Technology, Compliance & Quality and other administrative employees. LHBS allocates the total pool of its general and administrative costs over the pro-rata incurrence of direct costs by all of its programs (excluding any of the general and administrative departments). The actual experience rate is higher than 15%, but the 15% rate is used since that is the highest rate allowed by Commonwealth of Massachusetts state agencies.

CSA Milestones Report

CSA must have at least one implmentation goal with at least one milestone for each project number. An implmentation goal may have more than one milestone.

Investment Project Number	**Investment Project Name**	**Implementation Goal**	**Goal Start Date**	**Anticipated Goal End Date**	**Investment Category**	**Investment line Item within Category**	**PBP Update - Due to EOHHS March 31, 2018**				**Report on PBP - Due to EOHHS August 31, 2018**			
Ties back to project number or budget report	*Should be same name as on Budget report*	*Describe specific goal (e.g. implement care management software)*	*Dates only between 7/1/17 and 12/31/2022*		*Select from drop down menu*	*Select from drop down menu*	**Anticipated Milestone Target by 3/31/18**	**Evidence of Success**	**Has Milestone been met? (Y/N)**	**If NO, please explain:**	**Anticipated Milestone Target by End of PBP (5/31/18)**	**Evidence of Success**	**Has Milestone been met? (Y/N)**	**If NO, please explain:**
1	Trauma Informed Care Model	Workforce Development through training & certification of CSA staff	12/01/17	12/31/22	**Workforce Development**	Training Expenses	Schedule 3 TIC training for CSAs	Signed agreement with facilitors on scope of work and dates of trainings			Facilitation of 3 day TIC training	Staff attend training, increased awareness of signs/symptoms of trauma		
							Meet with CSA to identify train the trainer	Train the Trainer identified			Train the trainer completes certification	Train the Trainer is prepared to provide trainings to new hire CSA staff		
2	Technological Upgrades and Smartphone Connectivity	Improve technology infrastructure	12/01/17	12/31/22	**Technology**	Technology for Service Delivery	Meet with IT to solidify plan to purchase hardware	Invoice prepared for requested hardware			Hardware purchased	Hardware is ready for dissemenation to staff		
											Creation of training plan for new hardware	Staff are famimliar with new hardware and how to use in wraparound process.		
3	Integration, Coordination & Consultation	Improve operational infrastructure by improving communucation between ICC-engaged members and medical providers.	12/01/17	12/31/22	**Operational Infrastructure**	Operation Staffing including Fringe	Clarify job description and post position for consultant	Position posted on agency website as well as			Candidates interviewed for positions	Selection and hiring of 1 candidate		

PROGRAMMATIC RESPONSE

A Proposal for:
INFRASTRUCTURE AND CAPACITY BUILDING FUNDING FOR COMMUNITY SERVICE AGENCIES

Prepared for:
Commonwealth of Massachusetts
Executive Office of Health and Human Services
One Ashburton Place
Boston, MA 02108

In Response to:
RFR Document #: 17LCEHSCSAICBRFR
Bid #: BD-17-1039-EHS01-EHS01-16727

Submitted by:

Lahey Health
Behavioral Services

TABLE OF CONTENTS

SECTION 6.2. EXECUTIVE SUMMARY 4

6.2.A. The Bidder's current performance on its Development Plan; 4

6.2.B. Specific examples of strengths and needs of the Bidder; 4

6.2.C. The Bidder's plans for improving timely access to ICC services; 5

6.2.D. The Bidder's plans for improving care coordination, care planning, and care management for ICC-Engaged Members; 5

6.2.E. The Bidder's plans to improve performance on quality scores and Development Plan goals; and 5

6.2.F. The Bidder's plans for improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth. 7

SECTION 6.3. Populations Served and Community Engagement 8

6.3.A. Describe the Member populations and communities it serves, the regions or service areas covered (as applicable), and how it plans to promote the health and wellbeing of the individuals it serves and actively initiate and maintain engagement with them; 8

6.3.B. Describe relationships within the community it will leverage to improve the quality of ICC services, including current and planned collaborations and partnerships with family organizations, schools, child-care providers, community-based organizations, youth service organizations, advocacy groups, behavioral health service providers (including providers of other CBHI services), child-serving state agencies, trial courts (including probation, court clinics, and juvenile diversion programs), housing/shelter providers, and social service organizations; and 9

6.3.C. Describe how the current and planned partnerships described in response to Section 6.3.B align with the Bidder's proposed project(s) described in response to Section 6.4.A. 10

SECTION 6.4. PROPOSED PROJECT(S) AND INVESTMENT PLAN 12

6.4.A. Project description (program narrative) 12

3. Project Scope, Method and Activities: 12

4. Deliverables- Project 1 Integration, Coorindation & Consultation 14

5. Use of DSRP Funding: 15

6. Existing Internal Resources – Project 1. Integration, Coordination & Consultation: 15

3. Project Scope, Method and Activities: 15

4. Deliverables- Project 2 Trauma Informed Care Model Training 17

5. Use of DSRP Funding- Project 2 Trauma Informed Care Model Training 17
6. Existing Internal Resources: 17
3. Project Scope, Method and Activities: 18
4. Deliverables- Project 3Technological Updates and Smartphone Connectivity 19
5. Use of DSRP Funding- Project 3Technological Updates and Smartphone Connectivity 19
6. Existing Internal Resources- Project 3 Technological Updates and Smartphone Connectivity 20
3. Project Scope, Method and Activities: 20
4. Deliverables Project 4 Marketing to ACOs, PCPs, and Communities at Large 21
5. Use of DSRP Funding- Project 4 Marketing to ACOs, PCPs, and Communities at Large 21
6. Existing Internal Resources- Project 4 Marketing to ACOs, PCPs, and Communities at Large 21
3. Project Scope, Method and Activities: 22
4. Deliverables Project 5 Workforce Retention & Recruitment 22
5. Use of DSRP Funding- Project 5 Workforce Retention & Recruitment 22
6. Existing Internal Resources- Project 5 Workforce Retention & Recruitment 22
6. Existing Internal Resources – All Projects: 23
6.4.B. Project Team description 24
(1) An organizational chart of the Bidder (as an attachment) that identifies personnel, senior managers, and other staff by title (not counted toward page limit); 24
(2) A list of current staff that the Bidder proposes will be involved in the project(s), including their job descriptions and qualifications for the project(s); 24
(3) Any staff the Bidder proposes to hire or engage to be involved in the project(s), including their proposed job descriptions and qualifications for the project(s); 25
(4) The roles and responsibilities of each staff of the Bidder's Project Team and how the Bidder will ensure efforts are coordinated among staff and not duplicated; and 26
(5) A description of how the Bidder proposes to manage the project(s). 26
6.4.C. Implementation Plan and Timeline 26
6.4.D. Budget Report and Budget Narrative 26
6.4.E. Sustainability 26
SECTION 6.5. Coordination with ACOs, MCOs, and Primary Care Providers 43
6.5.A. Bidirectional communication between the Bidder and pediatric practices; 43
6.5.B. Referral management protocols for follow-up and informational sharing; 44

6.5.C. Team-based treatment planning in collaboration with pediatric practices; 44
6.5.D. Timely access to ICC services; and 44
6.5.E. Connections to social services. 45

SECTION 6.2. EXECUTIVE SUMMARY

(response not to exceed 3 pages)

THE BIDDER SHALL DESCRIBE ITS DEVELOPMENT PLAN AND STRATEGIES FOR IMPROVEMENT OVER THE NEXT FIVE (5) YEARS, INCLUDING:

6.2.A. THE BIDDER'S CURRENT PERFORMANCE ON ITS DEVELOPMENT PLAN;

LHBS has a development plan for each Community Service Agency (CSA), and have displayed ability to complete tasks and goals by identified timelines. Currently the Cape Ann/Salem CSA is focusing on preparing families for transition and increasing the inclusion of natural supports in care plan team meetings and care plans. This CSA is on the alternative payment methodology pilot. The Haverhill CSA is also working on increasing natural support involvement as well as promoting timely access to ICC and increasing instances of community based activities and services on care plans. Of note, Haverhill recently accomplished goals relating to timely completion of CANS and adherence to TOM observations.

6.2.B. SPECIFIC EXAMPLES OF STRENGTHS AND NEEDS OF THE BIDDER;

The Cape Ann/Salem and Haverhill CSA's have proven an ability to dive into psychosocial experiences and how they have changed the story and the needs for a family. This has been a strength highlighted through the Mass Practice Review (MPR) process, where records have indicated the efforts taken to understand a family in their environment, with a culturally sensitive lens. With a total of 4 MPRs completed last year, assessments and cultural awareness were consistently mentioned as areas of strength. While team formation/engagement has been noted as a need for both CSA, we have specific ICC staff who excel in this area which has been noted in MPR report in the following fashion, "The ICC made herculean efforts to engage all three potential family caregivers (with neutrality despite custody battles) as well as the foster family", which can be leveraged to share best practices with fellow CSA staff. Cape Ann/Salem has recently been invited to share their best practice around timely access to ICC at the next CBHI Level of Care Meeting. ICCs have made observable integration efforts. An example of this is evidenced below:

A persistent ICC volunteers to attend a PCP appointment after being unsuccessful in reaching by phone for care coordination efforts. The identified youth, a 9 year-old female with a trauma history and diagnosed mood disorder has chronic medical issues related to a rigid diet that does not allow for proper nutrition. After hearing the behavioral health concerns the youth and family are currently managing and the extent of the youth's diet the PCP actively engaged in the care coordination process resulting in a proposed planned 30 day admission 24 LOC facility to address the restrictive eating habits. ***With strong collaboration, the team facilitated a planned admission that reduced interruption in education and other sustainable community connections and allowed time to create a clear admission, treatment and transition plan home.***

6.2.C. THE BIDDER'S PLANS FOR IMPROVING TIMELY ACCESS TO ICC SERVICES;

LHBS recognizes that timely access to ICC services is highly reliant on retaining and recruiting the right people in a highly competitive market. We also recognize that retaining the best and the brightest means acknowledging the stress, fears, and worries that can accompany such intense, community based work. We will strengthen current retention strategies with the adoption of a Trauma Informed Care (TIC) model which along with direct benefits to ICC-engaged members aims to prevent and identify early warning signs of vicarious trauma and burnout. Retention will support consistent timely access to services for eligible members. We will leverage our current HR systems along with additional DSRIP funding to support strong recruitment strategies for CSA related vacancies.

In addition to our efforts to retain and recruit highly qualified staff, we will ensure the workforce closely monitors medical necessity through a trauma informed lens to guarantee that the right member is enrolled in the right level of care at the right time. Lastly, by addressing a major underlying need such as trauma, we hope to reduce the number of re-admits by creating the most sustainable plans for ICC-enrolled members.

6.2.D. THE BIDDER'S PLANS FOR IMPROVING CARE COORDINATION, CARE PLANNING, AND CARE MANAGEMENT FOR ICC-ENGAGED MEMBERS;

The CSA's will leverage current Google Suite (G-SUITE) applications and upgraded hardware for live care planning with increased remote participation possibilities during critical moments of care such as ED visits, avoidance of and admissions to higher levels of care and transitions in care. When considering the example mentioned above in 6.2.b, G-SUITE and updated hardware would have allowed that process to be more proactive and efficient with real time care planning with care plan team members who may not have been able to participate in person with such short notice, or those struggle to attend meetings offsite. With a simple invite from their Google Calendar, an ICC creates the opportunity of remote video participation for care plan team members. Members need only to click a link included on the invite for the video participation to begin through Google Meet. Care coordination and management will be further enhanced by offering members the use of a health and wellness application, or "care extender app", on their smartphones to improve outcomes relating to preventative care, such as wellness appointments through the primary care physician and the dentist. Given the prevalence of families who have smart phones or tablets, the "care extender app" will also support follow through of assigned CPT tasks for youth and families such as those related to overall health and wellbeing like keeping a log of daily moods or partaking in recommended chronic medical care treatment. This app also aims to support youth and families focus on their goals as listed on their Care Plan.

6.2.E. THE BIDDER'S PLANS TO IMPROVE PERFORMANCE ON QUALITY SCORES AND DEVELOPMENT PLAN GOALS; AND

All efforts funded through DSRIP funding aim to improve performance on quality scores and development plan goals. Please see below for a description of plans for each quality measure:

Quality Measure	Need addressed	Plan
Prevention and Wellness	• Timely communication with PCP's and other medical systems • Increase outreach to medical providers	• Communication with PCPs to ensure members are up to date with preventative and wellness screenings/services • Provide reminders to engaged members and troubleshoot any barriers to follow through. Explore the use of a "care extender app" to

		assist in this strategy • Medical consultant will participate in marketing plans to ACOs and other medical providers relevant to youth served in order to increase awareness of preventative appointments and interventions.
Chronic Disease Management	• Awareness of member's chronic medical conditions • Understanding of diagnosed chronic diseases and potential for care planning around said needs. • PCP awareness of how care planning can support management of chronic diseases and overall member wellness	• Engage in increased bi-directional communication with PCPs and ACOs to include medical needs on ICP • Leverage project medical consultant to participate in marketing plan to further education PCPs and ACOs on CSA's ability address medical needs in care planning process. • Build on current secure messaging and upcoming EHR rollout to support communication.
Behavioral Health/Substance Use Disorder	• Low attendance for urgent care plan team meetings. • Difficulties reaching Care Plan Team members by phone during moments of high acuity.	• Notify care plan teams through secure messaging when a youth has been admitted to a higher level of care for a BH/SUD need. • Leverage "G-SUITE" application allowing for care plan team member remote participation during emergency CPT meetings with improved hardware and mobile connectivity through Google Meet video participation.
Member Experience	• High prevalence of youth and families experiencing chronic trauma or stress with potential for trauma re-enactment. • Achieving high fidelity to model with new staff • Barriers to follow through with assigned tasks or goals. • Impacts of vicarious trauma and burnout on the overall Warparound experience.	• Adopt a sustainable TIC Model to ensure consistent universal precautions are taken with all ICC-enrolled members. Ensure the underlying need of trauma is identified early on in care planning process. • Maintain opportunities for staff to gain Tier 1 Wraparound certification without use of DSRIP funds to ensure high fidelity Wraparound • Increase opportunities for "customer satisfaction surveys" that allows for feedback on technology enhancements as well as identification of barriers to engagement. • Create action plans to address needs identified in surveys
Integration	• PCP Responsiveness to CSA communication • Integration of medical needs into ICP	• Leverage a medical consultant to improve integration and overall communication. • Incorporate use of "Care-extender" application to support attendance of preventative appointments and other tasks related to routine

		medical and/or behavioral healthcare as well as follow through on potential ICP assigned tasks. • Establish lines of communication with ACO's and pediatrician offices to increase engagement of PCP in care plan teams.
Avoidable Utilization	• Logistical struggles around scheduling urgent care plan team meetings due to CPT member availability. • Lack of mobile connectivity for flexibility of meeting location.	• Build on current proactive safety planning to increase utilization of remote participation for care planning during urgent moments where short notice is provided. • Continue meetings with MCI to avoid admissions to higher levels of care when possible. • Work with ACOs and PCPs to identify and monitor high ED utilizers who are eligible for ICC.
Engagement	• Consistent updating and dissemination of Care Plans	• Revise current record review tools and leverage the EHR to ensure adherence to an updated care plan at least quarterly that has been viewed by a PCP or other medical provider. • Increased frequency of customer satisfaction surveys. • Collaborate with PCP offices and ACO's to plan face to face visits at medical appointments when ICC may be clinically indicated.

6.2.F. THE BIDDER'S PLANS FOR IMPROVING COORDINATION WITH PEDIATRIC PRIMARY CARE AND OTHER PHYSICAL AND BEHAVIORAL HEALTH CARE PROVIDERS ACROSS THE CARE CONTINUUM FOR YOUTH.

Improving coordination with pediatric primary care and other physical and behavioral health providers across the continuum of care for youth will be achieved through actions at a variety of levels within the organization:

Level	Action
Community	Involvement of System of Care Meetings to ensure strong collaboration and increased awareness of integration. Continued attendance at community stakeholder meetings.
Systems	Regular meetings with leadership from ACOs and other physical & behavioral health care providers to proactively discuss coordination. Targeted marketing to PCP and other Physical and Behavioral Health Care Providers to increase awareness of services provided.
Individual members	Bi-directional communication with providers through the use of secure data sharing that meets the needs of the model contract Meetings with program leadership and offices when challenges in collaboration are identified that are not solved by the ICC and care plan team.

SECTION 6.3. POPULATIONS SERVED AND COMMUNITY ENGAGEMENT

(response not to exceed 3 pages)

The Bidder shall:

6.3.A. DESCRIBE THE MEMBER POPULATIONS AND COMMUNITIES IT SERVES, THE REGIONS OR SERVICE AREAS COVERED (AS APPLICABLE), AND HOW IT PLANS TO PROMOTE THE HEALTH AND WELLBEING OF THE INDIVIDUALS IT SERVES AND ACTIVELY INITIATE AND MAINTAIN ENGAGEMENT WITH THEM;

In alignment with ICC specifications, the CSA's engage members age 0-21 who meet the criteria for Serious Emotional Disturbance from a variety of backgrounds including but not limited to: socioeconomic level, race/ethnicity, sexual orientation, gender identity, and family make up. The CSA's have displayed an average capacity of over 200 members. This engagement will be maintained and enhanced by a trauma informed approach with a clear commitment to cultural awareness for a youth and family to ensure that service delivery is in alignment with their principles and values. Engagement will be maintained by using and leveraging current efforts:

- Frequent solicitation of feedback through formal surveys and informal discussions,
- Ongoing weekly contact with the member at minimum
- Enhanced training efforts to bolster engagement skill with our most challenging to engage members.

LHBS is committed to supporting and coordinating services with and on behalf of members with high behavioral health needs through collaboration and in partnership with clinicians, providers, ACO and MCOs. Our model is designed to integrate all services and achieve the triple aim: improve the quality of life for members, improve their health outcomes and reduce cost.

LHBS has a strong foothold in the Northeast Region with two Community Service Agencies that are each co-located with a variety of other youth related community based services. The CSA programs serve the following communities which include other LHBS programs that are co-located to further support members:

CSA NAME	COMMUNITIES	CO-LOCATED PROGRAMS
Cape Ann/Salem	Beverly, Salem, Hamilton, Wenham, Essex, Gloucester, Rockport, Peabody, Danvers, Middleton, Marblehead	Outpatient, Psychiatry, In Home Therapy, Therapeutic Mentoring, Student Assistance Program, Team 14 (A-CRA), Individual & Family Flexible Support Services (DMH), Mobile Crisis Intervention (MCI), FIRSTeam (DCF)
Haverhill	Amesbury, Boxford, Georgetown, Groveland, Haverhill, Ipswich, Merrimac, Newbury, Newburyport, Rowley, Salisbury, Topsfield, West Newbury	Outreach Outpatient, Individual & Family Flexible Support Services, In Home Therapy, Therapeutic Mentoring, Team 14 (A-CRA) Mobile Crisis Intervention (MCI)

Both CSA's experience similarities relating to the level of diversity in the communities served. Our CSA staff recognizes the unique culture of each town served. In Cape Ann/Salem, ICCs recognize that Gloucester, for example, is known for its "fisherman" culture. This prompts CSA staff to use creativity to maintain engagement with caregivers or natural supports that may be gone for weeks at a time for work. Those residing in town consider it an, "Island", where some of its residents have never crossed over the bridge to the "mainland". This speaks to the closed culture that presents in

Gloucester who is heavily impacted by substance use. Communities such as Marblehead, Wenham, Hamilton and Middleton present as more middle class communities where a common challenge is engaging members to identify a substance use or mental health concern. Once that barrier is addressed, another common barrier is the stigma that prevents families from wanting to openly discuss their needs with teams and more specifically natural supports. This CSA is accustomed to avoiding Salem during the month of October, but recognizes how this piece of the culture resonates with its residents. Staff has become better versed in topics such as Wiccan. This community is more urban with youth who may have more court involvement and potential for gang involvement. Culturally, we identify that this region tends to have more youth involved in probation versus DYS. This differs from the Haverhill CSA, where parents are hesitant to seek Child Requiring Assistance (CRA's) due to the potential for youth to become DYS involved. Per the Haverhill DCF Area Director, this area is "disproportionately impacted" by the opiate crisis with its caregivers and youth. Due to this, and the dramatic increase of 51-A's in for this area, we see higher risk needs presented in homes. This has prompted the CSA and DCF office to more intentionally collaborate proactively recognizing the level of stress and risk that both teams see in the community. Similar to Cape Ann/Salem, there are more affluent communities served such as Boxford, Newburyport and Newbury, where a major barrier is acknowledging the existence of mental health and substance use needs. For youth who do present with significant needs, they must also manage the stigma in a community that may be not be accepting of mental health and substance use needs. While this is a need across the state, Haverhill CSA feels a greater need for child prescribers and outpatient therapists recognizing that waiting for such referrals to be assigned has impacts on the transition process for families.

6.3.B. DESCRIBE RELATIONSHIPS WITHIN THE COMMUNITY IT WILL LEVERAGE TO IMPROVE THE QUALITY OF ICC SERVICES, INCLUDING CURRENT AND PLANNED COLLABORATIONS AND PARTNERSHIPS WITH FAMILY ORGANIZATIONS, SCHOOLS, CHILD-CARE PROVIDERS, COMMUNITY-BASED ORGANIZATIONS, YOUTH SERVICE ORGANIZATIONS, ADVOCACY GROUPS, BEHAVIORAL HEALTH SERVICE PROVIDERS (INCLUDING PROVIDERS OF OTHER CBHI SERVICES), CHILD-SERVING STATE AGENCIES, TRIAL COURTS (INCLUDING PROBATION, COURT CLINICS, AND JUVENILE DIVERSION PROGRAMS), HOUSING/SHELTER PROVIDERS, AND SOCIAL SERVICE ORGANIZATIONS; AND

For 60 years, LHBS has been a community provider of a robust continuum of BH services in the northern region in the communities and service areas in which we operate our two CSAs. As such, LHBS is well positioned to leverage community relationships to improve the quality of ICC service. Please see below for current collaborations:

Category	Name
Recreational	YMCA, Project Adventure, Recreational Department, Boys & Girls Clubs, BCLC, after school programs, summer camps, sports leagues
State Agencies	Department of Children and Families (DCF); Department of Mental Health (DMH); Department of Youth Services (DYS), Department of Developmental Services (DDS), Department of Early and Secondary Education (DESE); Department of Transitional Assistance (DTA)
Education	Public School systems, Therapeutic Day Schools, Private schools, Headstart
Health care	PCPs, community hospitals, ACO's
Behavioral Health	Outpatient clinics, Other CBHI services, Inpatient facilities, CBAT Facilities, Partial Hospitalizations, Residential facilities, Adolescent IOPS

Housing	Shelters, housing support programs, local public housing entities
Community-based organizations	Local chapters of NAMI, PPAL, faith based groups, food pantries
Law Enforcement	Local police departments, juvenile courts, court clinics, JDAI
Advocacy Groups	Children's Law Center of Massachusetts, Disability Law Center, Federation for Children with Special Needs, Special Needs Advocacy Network, North Shore ARC

As evidenced by the table above, LHBS believes in the importance of engaging and maintaining collaboration with agencies and other community partners where our members spend their time and where they receive their care. An example of this is a recent collaboration with the North Shore YMCA- a facility where many of our youth and families visit for recreational activities. We will provide education to their staff to ensure awareness of the signs and symptoms of youth mental health, substance use and trauma. LHBS will leverage its two current Systems of Care and associated relationships to improve the quality of ICC services including the attendance of medical professionals at least quarterly to promote the overall health and wellbeing of the community and its members. To continue to collaboratively identify and strategize ways to meet the needs of the members and the communities, the Committee will take time to identify and address gaps in community resources that impact the overall health and well-being of the youth and families we serve.

LHBS will continue strong collaborations with the DCF, DYS and DMH. Having state contracts has supported these relationships and provided members with seamless transitions to and from insurance and state funded services. The CSAs have standing monthly meetings with the DMH and the DCF to discuss mutual youth and families. LHBS and the CSAs are committed to continuous quality improvement and evolution of services to meet the needs of the population we serve. We hope to show key stakeholders and community partners that we are committed to this with plans to initiate similar meetings with other state agencies and foster a relationship that supports consistent attendance at our System of Care.

We will leverage our extensive history of collaboration with the MCO's and hospitals operating in MassHealth's northern region. As an Emergency Services Provider for over 20 years, we have provided emergency services to 10 Emergency Departments in the Northeast. Over the last three years, LHBS has partnered closely with Lowell General under the CHART Grant Program to reduce 30-day ED "re-visits" by providing care coordination to members. LHBS has gained additional experience coordinating with hospital systems through the Hear For You Program with NHP that lead to better outcomes with members. We will build on these successes by increasing communication to sustain awareness of our capacity to provide high-quality care coordination to youth in the northeast region. LHBS will hold in person meetings with ACO leaders to support the goals of the ACO and LHBS.

6.3.C. DESCRIBE HOW THE CURRENT AND PLANNED PARTNERSHIPS DESCRIBED IN RESPONSE TO SECTION 6.3.B ALIGN WITH THE BIDDER'S PROPOSED PROJECT(S) DESCRIBED IN RESPONSE TO SECTION 6.4.A.

Current and planned partnerships demonstrate our commitment to taking a holistic approach to treating the whole person. By incorporating a medical provider as a consultant with DSRIP funds in the System of Care meetings, we will have ensured integration at a macro level with a community impact. Strengthening our existing relationships with medical providers will support our efforts in increasing integration and care coordination. With the training of ICC staff through a yearlong

curriculum on chronic diseases and integration supplied by MassHealth, the workforce will be prepared to provide strong integrated care coordination.

Our long standing relationships with state agencies provide an understanding of the needs of the populations they serve. Specifically, our relationship with DCF and DMH and our existing internal contracts supports our members who need additional support outside of insurance based services including the ability to access afterschool, weekend, and summer programming to avoid higher levels of care. This allows for seamless transitions and face to face handoffs between state contract and insurance funded services. Being under the umbrella of LHBS and being co-located allows for strong coordination of care and close communication that will be further enhanced by technology improvements. One consistent theme across child serving agencies is the prevalence of chronic stress and trauma. With the adoption of a TIC model, LHBS will continue to enhance the treatment of our most complex members as well as improve retention of our best and brightest through the reduction of secondary or vicarious trauma and burnout.

SECTION 6.4. PROPOSED PROJECT(S) AND INVESTMENT PLAN

(response not to exceed 15 pages)

6.4.A. PROJECT DESCRIPTION (PROGRAM NARRATIVE)

For each project the Bidder proposes to implement with funding received under the Contract, the Bidder shall provide the information requested in Sections 6.4.A below. The Bidder shall provide an abstract for each proposed project, including:

LHBS intends to engage in 5 projects with the use of DSRIP funds to improve the member experience and quality of service delivery. We propose to improve our operational infrastructure by (1) strengthening integration at a variety of levels from individual members to the communities we serve with the support of a consultant from the medical field. In order to do this, we recognize that we must invest in our workforce by allowing for (2) training and certification of a TIC model to enhance the member experience, and prevent burnout and vicarious trauma with CSA staff. To further enhance the overall member experience and the coordination of care LHBS proposes to invest in (3) hardware and connectivity updates as well as the potential member use of "care extenders" to ensure that members are thinking of their overall health well-being outside of the presence of providers. These upgrades also aim to improve the care planning process, specifically removing barriers to team members with inflexible schedules or inabilities to attend offsite meetings, such as doctors. We will use a (4) targeted marketing plan to further engage ACOs and PCPs and communities at large to ensure familiarity with CSA services as well as how medical needs can be addressed through the care planning process. Lastly, LHBS will invest in (5) recruitment and retention activities to ensure timely access to ICC with high fidelity Wraparound by retaining our best and brightest staff.

A project abstract for each of the 5 proposed projects is provided below.

1. Project 1 Name: Integration, Coordination & Consultation	
2. Project Goal & Plan to Meet Goals:	
Improve Operational Infrastructure by improving communication between ICC-engaged members and Medical providers.	Hire a medical consultant to improve procedures and workflows to enhance integration of care Participate multidisciplinary reviews of our most complex ICC-engaged members Strengthening relationships with medical providers Increase medical professional attendance at System of Care Meetings for community impact

3. Project Scope, Method and Activities:

The goal of the Integration project is to address needs relating to communication between behavioral health providers and medical providers and integration of medical needs into the care planning process. This project aims to ensure that care plans promote behavioral and medical well-being in alignment with a youth's specific behavioral and medical health providers. LHBS recognizes the immense need for integrated, whole person care for individuals with SMI, SUD and chronic medical issues. We aim to enhance our workforce knowledge of integration and develop systems and workflows of structured communication and a multi-disciplinary team approach to care. This will be achieved through the efforts listed below:

- Protocols that identify planned points of contact throughout treatment with identified ACO's and/or primary care offices.
- Highlighting medical needs into Care Plans
- Implement a standard wellness tool with guidelines for appropriate next steps in coordination
- Identify a "Care Extender" application to support follow through with preventative appointments as well maintenance of chronic medical and behavioral health needs.
- Medical staff present for consultations, multidisciplinary reviews of care plans, support in troubleshoot communication challenges with medical providers
- ICC to engage in more activity around notification/management of medical and behavioral health appointments including ED notifications

The CSA's will demonstrate targeted enhanced integration by hiring a medical provider as a consultant and member of the project team throughout the 5-year project duration. This medical consultant will be most heavily involved during the prep and year 1 budget periods tapering off each year thereafter. Please see the proposed methods and activities listed below:

Budget Period	Use of Funds received	Methods/Activities
Prep	Medical Consultant Care extender App Marketing plan and materials	• Identification of a health & wellness screening tool to use with ICC-enrolled members at prescribed times during service delivery. This will include development of procedure and workflow for when communication with PCP and/or ACO is indicated. • Identification of a "care extender" application that supports the strengths and needs of the community to enhance the member experience (actual roll out is noted in "Technological Upgrades"). • • Targeted marketing to ACO/PCPs • Support increased communication between PCPs and ICCs
Year 1	Medical consultant	• Strengthening relationships with current medical providers to improve care coordination and develop a network of medical providers who will attend System of Care Meetings. • Development of quarterly training and/or discussion topics for System of Care Meetings with potential to leverage G-SUITE for remote attendance/participation of SOC attendees. • Roll out of health & wellness screening tool to workforce with protocol sign off relating to frequency of use and scores that indicate action steps that must be documented in the medical record • Project Team will revise internal record review tools to assess for integration efforts. • Medical consultant to attend the agency's "Cross Divisional High Risk Meetings" to provide insight to our most medically complex ICC-

		engaged members.
Year 2	Medical consultant	• Medical consultant will collaborate with Director of BHCP for improved communication and breakdown of silos to ensure that the care of ICC-engaged members and their families have improved coordinated care. • Quarterly presentations at System of Care meetings • Initiate quarterly multidisciplinary reviews of medical records and Intensive Care Plans with medical consultant. • Available for consultation with workforce for our most medically complex youth. • Ongoing attendance at the agency's "Cross Divisional High Risk Meetings" to provide medical insight to our most complex ICC-engaged members.
Year 3	Medical consultant	• Ongoing collaboration with ACOs and pediatrician practices • Ongoing participation in quarterly multidisciplinary record and Intensive Care Plan reviews in CSA's to assess progress • Ongoing availability for consultation with workforce for our most medically complex youth and attendance at the agency's "Cross Divisional High Risk Meetings" to provide medical insight to our most complex ICC-engaged members. • Quarterly attendance at System of Care meetings, identification of "co-facilitators" for medical presentations
Year 4	Medical Consultant	• Previously listed ongoing tasks • Assess any needs relating to sustainability
Year 5	Medical consultant	• Address any needs relating to sustainability including communication with ACOs and PCP • Previously listed ongoing tasks • Identify current existing medical professional to attend the agency's "Cross Divisional High Risk Meetings"

4. Deliverables- Project 1 Integration, Coorindation & Consultation

- Hiring and onboarding of a medical consultant
- Institution of a health/wellness screening tool with associated protocols
- Updated internal record review tool that assess integration efforts
- Established lines of communication with ACO's and PCPs

Increased integration at System of Care meetings

5. Use of DSRP Funding:	
$89,000	LHBS will invest this money in hiring a medical professional consultant for involvement over the course of the funding period to: • Participate on the identified project team • Develop 4 presentations for the System of Care • Strengthen relationships with medical providers to increase attendance at SOC and overall collaboration and coordination of care with ICC-enrolled members. • Assist in identification of care extender application for ICC-enrolled members

6. Existing Internal Resources – Project 1. Integration, Coordination & Consultation:

The Project team will leverage our affiliation with Lahey Health and our current embedded integrated clinicians to strengthen relationships with medical providers. We will also draw from the lessons learned from other Integrated Care Management Services such as Here For You and CHART. As noted previously, the current System of Care meeting is a context by which we will further our integration goals for a larger community impact. Members of the Senior Leadership Team and Medical Directors will also be consulted and offer insights to addressing barriers or challenges. We will also leverage our current consulting psychiatrists for each CSA. Integration efforts will live on after the phase out of the DSRIP funded Medical Consultant with these current medical members of LHBS.

7. Distribution of Funds – Project 1. Integration, Coordination & Consultation	
$97,600 proposed funds used for Medical consultant	Average number of ICC-engaged members

---

1. Project 2 Name: Trauma Informed Care Model Training	
2. Project Goal & Plan to Meet Goals	
Workforce Development through Training and Certification of CSA Staff	Training/Certification of a TIC Model, "Risking Connections"

3. Project Scope, Method and Activities:

Many of our families identify through the assessment period needs relating to trauma or the experience of chronic stress. Through previous and current integration efforts, LHBS understands how complex stress and trauma impact the whole person including the evident impact on diagnoses such as asthma, obesity and diabetes and other medical conditions. LHBS will adopt a sustainable TIC model that will be meaningful to all CSA staff from those who answer the phones and accept referrals to our on call ICC staff supporting families with urgent care needs. This will ensure a consistent approach to families across roles and teams that will provide the lens in which ICCs and Family Partners see behavior and impacts of trauma. If successful over the course of DSRIP funding, LHBS will consider expanding this model organization wide independent of DSRIP funds.
The proposed model, "Risking Connections", is aimed at mental health, public health, and substance

use workforces. This model was identified due to its focus on concepts of empowerment, connection and collaboration. This model is appropriate for ICC use due to its fostering of "RICH" relationships (acronym for Respect, Information Sharing, Connection and Hope) which resonates with the Wraparound principals.

The use of this model aims to improve the overall experience for members due to CSA staff's deeper understanding of trauma and how trauma re-enactment can impact the wraparound process. With this knowledge care plan teams will have improved interactions amongst members. Understanding of trauma re-enactment supports a team's safety planning process thus reducing moments of crisis for families. This project also aims to ensure families and CSA staff recognizes the connection between adverse experiences and chronic medical conditions. With a deeper knowledge of a common underlying need through an evidenced based model, LHBS is positioned to improve overall sustainability of care plans and therefor outcomes for youth and families served. Please see below for a list of activities:

Budget Period	Use of Funds received	Methods/Activities
Prep	3 day training scheduled Consultation with "Risking Connections"	• Project team to consult with "Risking Connections" training team to schedule 3 day training for both CSA's. Ensure training team is aware of integration efforts • Identification of at least one "train the trainer" to ensure sustainability of the model • CSA workforce to attend 3 day training to achieve certification in the mode
Year 1	Efforts to sustain training internally	• Ongoing consultation and support by Risking Connecting Training Team to ensure sustainability of the model • Annual training webinar for Train the Trainer(s) (ongoing task) • Train the Trainer to conduct training for CSA new hires (ongoing task)
Year 2	"Risking Connections" Efforts to sustain training internally	• Final formal consultation with "Risking Connections" Training team to ensure sustainability of the model • Biannual full day training for the Train the Trainer(s) to maintain certification (ongoing task) • Annual Webinar for Train the Trainer (ongoing task) • Train the Trainer to conduct training for any new hires (ongoing task)
Year 3	"Risking Connections"	• Ongoing tasks
Year 4	"Risking Connections"	• Ongoing tasks • Assess any needs relating to sustainability

Year 5	"Risking Connections"	• Ongoing tasks • Project team to include Train the Trainer expenses in next fiscal year budget.

4. Deliverables- Project 2 Trauma Informed Care Model Training

- Certification in Trauma Informed Care for all CSA staff
- At least 1 LHBS employee to achieve a "train the trainer" certification status for the Trauma informed Care Model.
- Retention of highly skilled CSA workforce
- Reduction of burnout or vicarious trauma

5. Use of DSRP Funding- Project 2 Trauma Informed Care Model Training

$58,625	Trauma Informed Care Model and workforce costs while participating in the 3full day training sessions.

6. Existing Internal Resources:

LHBS has an established and robust HR Department that will be leveraged to focus on retention strategies to reduce training needs related to turnover. Some of these current strategies include the use of a "Collectivist Culture" to reduce isolation, depression and frustration, and remunerative benefits including competitive salaries and benefits including tuition assistance and other incentives. Moreover, LHBS intends to leverage our current training and orientation programs. Current internal resources include our capacity to send CSA workforce to Tier 1 Wraparound certification. We will continue these efforts without the use of DSRIP dollars to ensure high fidelity Wraparound for the best outcomes for our ICC-engaged members. We will use current HR and training systems to roll out training plans in a way that feels supportive to staff and allow the project team to monitor training efforts and to hold CSA workforce accountable to achieving the training goals. Specifically, we will use our employee platform, PeopleSoft to track and monitor completion of trainings.

7. Distribution of Funds- Project 2 Trauma Informed Care Model Training

$58,625 for "Risking Connections" trauma informed care training	Total number of staff *12,000 dedicated to fund Haverhill Staff time while participating in the 3-day training

---

1. Project 3 Name: Technological Updates and Smartphone Connectivity

2. Project Goal & Plan to Meet Goals

Improve Technology Infrastructure.	Improve communication amongst care plan team members, ACOs and PCPs through secure messaging, increased ICC mobile connectivity and potential for remote care plan participation. Strengthen connection to Mass HIway and other forms of secure communication and data sharing. Roll out of "Care Extender App" to workforce for pilot and to

	families at time of initial care plan if indicated.

3. Project Scope, Method and Activities:

LHBS has displayed a commitment to using technology to achieve state-of-the-art solutions to challenges of communication, coordination of services and to improve outcomes for our members across clinical settings. To achieve this goal, we will leverage our current experience and relationship with Lahey Health System and invest independently in additional software to perform core functions in our ICC program. Further supporting the vision of the DSRIP funding, LHBS is preparing to serve as a Behavioral Health Community Partner (BHCP) in the ACO model of care delivery. Currently, the CSAs are 1:1 laptop and smart phone communities to support care coordination and real-time communication amongst team members. This has improved operational efficiency as it enables our staff to mobilize a team during critical moments in care. The CSAs will use technology to enhance care coordination and the overall ICC-engaged member experience. This will be accomplished through updated hardware to ensure the CSAs are positioned to leverage our current G-SUITE applications for care planning purposes. Through investing in mobile connectivity, we aim to improve participation of care plan team meetings for urgent meetings that do not provide ample notice as well as increased opportunity of medical team member CPT participation. We will use projectors, screens in our conference rooms as well as tethering capability with smartphones to accomplish these tasks. We will leverage G-SUITE's Google meet to accomplish this.

The CSAs will adopt a "care extender" application that support interventions and efforts in overall health and wellness with its ICC-engaged members. This will be piloted with staff prior to rollout and then with ICC-engaged members. With the planned implementation of Netsmart Evolv ® across LHBS, we look forward to further leveraging all solutions to achieve fully automated interoperability requirements including connecting our industry standard tolls to the Mass HIway and other exchanges.

In this project, we will assess current technology and enhance hardware. This includes an inventory assessment of laptops and smartphones that are outdated and will prohibit the progress of projects included in this proposal. Other enhancements include the introduction of signature pads for added ease for the member for signing critical documents as well as tethering capability via ICC smart phones for remote access. This will allow for increased transparency for our ICC-engaged members with the capability to collaboratively document encounters with members.

Please see below for a list of activities by funding period:

Budget Period	Use of Funds received*	Methods/Activities
Prep	Upgrade hardware Signature pads Care extender apps Cell phone fees for remote connection Additional hardware to support remote care plan	• Engage IT department to assess technology needs and purchase laptops and signature pads • IT to train ICC staff start on tethering capability to pilot to ensure efficient use when present with ICC-engaged members • Roll out care extender app to CSA staff to gain familiarity • Initiate conversations with medical providers about methods for sharing clinical information

	participation	
Year 1	Care extender apps cell phone fees for remote connection	• Roll out use of signature pads • Engage IT department to troubleshoot any connectivity or hardware issues impacting staff use of software (ongoing) • Establish communication protocols with ACO's and care plan team members. Train CSA workforce • Roll out of care extender app to ICC-engaged members and their family (ongoing task)
Year 2	Care extender apps cell phone fees for remote connection	• Ongoing tasks • Work with HR to incorporate new technology enhancements into CSA New Hire orientation and onboarding
Year 3	Care extender apps cell phone fees for remote connection	• Ongoing tasks
Year 4	Care extender apps cell phone fees for remote connection	• Ongoing tasks • Project team to discuss plan for sustainability for cell phone fees for remote connection
Year 5	Care extender apps cell phone fees for remote connection	• Ongoing tasks • Project team to plan for incorporation of "care extender" application and cell phone fees into the next fiscal year budget.

.

4. Deliverables- Project 3Technological Updates and Smartphone Connectivity

- Updating equipment and/or replacing irreparable equipment including rollout of signature pads and tethering capacity with smart phones.
- Adoption of "care extender" application in collaboration with other integrated care models within LHBS.
- Incorporate training needs related to "care extender" application and hardware improvements into CSA New Hire Orientation.

5. Use of DSRP Funding- Project 3Technological Updates and Smartphone Connectivity

$229,650	• Updating laptops and cell phones • Purchase signature pads • Purchase care extender apps for staff piloting and ICC-engaged member use on smart phones

	• Purchase projectors and screens to provide option of remote CPT participation

6. Existing Internal Resources- Project 3 Technological Updates and Smartphone Connectivity

This project would not be feasible without the investment made by LHBS to ensure1:1 laptop and smartphone communities at both CSA's as well as the current IT servers. With some updating of our most out of date or irreparable equipment, CSAs will be positioned to leverage our G-SUITE platform to allow for remote video conference participation of care plan team meetings through a simple google invite. LHBS currently runs the NetSmart Evolv ® EHR as part of its integrated care management HFY program and is in the final stages of planning to roll out the EHR to all service units in 2018. Evolv will serve as the comprehensive enrollee record and will be populated by clinical information and documentation of member information from all LHBS services and providers. Lastly, the agency has committed to maintaining smartphones for CSA workforce and will continue to replace phones that no longer meet the system requirements for remote connection and the care extender applications.

7. Distribution of Funds- Project 3 Technological Updates and Smartphone Connectivity	
$229,650 for hardware enhancements, care management software and care extender apps	-Laptop funds will be distributed based on needs -Other hardware enhancements will be distributed based on staffing totals -Care extender apps will be based on total number of ICC-engaged members.

1. Project 4 Name: Marketing to ACOs, PCPs, and Communities at Large	
2. Project Goal & Plan to Meet Goals	
Improve Operational Infrastructure by improving communication between ICC-engaged members and Medical providers.	Increase awareness of CSA and services provided to ACOs, and PCPs with specific marketing on how wraparound can address medical well-being. Marketing to communities at large

3. Project Scope, Method and Activities:

Lahey will use DSRIP funding to revamp current marketing material for the community at large and disseminate. During this time, ACO & PCP specific marketing will be created to increase awareness as well as identify ways in which the wraparound process can support medical needs.

LHBS has maintained a website for providers and the community to learn more about what is provided and how to contact/make referrals to service provided. DSRIP funding will be used to make updates to the CSA portions of the website including the ability to send inquiries directly to the program from the website.

Budget Period	Use of Funds received*	Methods/Activities

Prep	Communication Director Marketing Materials Web design	• Engage Communications Director and project team to develop a marketing plan for ACO's and PCPs • Create web redesign for CSA related pages • Purchase marketing materials • Roll out marketing plans and proposed web changes
Year 1	Communication Director Marketing Materials	• Regular meetings with Communications Director to maintain and adjust marketing plan as necessary • Purchase marketing materials as needed for dissemination.
Year 2/Year 3	Communication Director Marketing Materials	• Ongoing tasks
Year 4	Communication Director Marketing Materials	Ongoing tasks • Project team to discuss plan for sustainability current marketing strategies
Year 5	Communication Director Marketing Materials	• Ongoing tasks • Project team to plan for incorporation of marketing plans and materials into next fiscal year budget

4. Deliverables Project 4 Marketing to ACOs, PCPs, and Communities at Large

- Marketing strategy and yearly plans
- Marketing material ready for dissemination
- Changes in web design for CSA specific pages of the LHBS website.

5. Use of DSRP Funding- Project 4 Marketing to ACOs, PCPs, and Communities at Large

$81,997	• Marketing materials (including but not limited to fliers, pamphlets and postcares) • Updated web design for CSA specific pages of LHBS website.

6. Existing Internal Resources- Project 4 Marketing to ACOs, PCPs, and Communities at Large

LHBS will leverage current marketing material and efforts to make revisions and refinements with DSRIP funds. We will utilize our current Communications Department and website for this project.

7. Distribution of Funds- Project 4 Marketing to ACOs, PCPs, and Communities at Large

$15,866- Communication Department	Proposed funds will be used for operation staff of communication department as well as marketing material and

$66,064- Marketing material and web design	web design.
1. Project 5 Name: Workforce Retention & Recruitment	
2. Project Goal & Plan to Meet Goals	
Address vacant CSA positions in timely manner and create retention strategies to ensure timely access to care	Use recruitment efforts to fill vacant CSA positions Develop retention strategies to ensure CSAs retain their best and brightest staff.

3. Project Scope, Method and Activities:

LHBS will energize current recruitment activities with the use of DSRIP funds by identifying dedicated recruitment time and strategies specific for CSAs. This will entail close communication with the assigned project team and HR around hiring needs and criteria. In a similar light, a retention plan will be created with the project team and HR to pilot. Both of these activities will occur in year 1. Outcomes relate to extending the average length of employment of CSA staff whose current averages aligns with state averages of approximately 18 months of employment. Retention strategies will be determined through HR and CSA staff feedback and will include individual and site based incentives.

4. Deliverables Project 5 Workforce Retention & Recruitment

From this project, the CSAs will have a clear recruitment plan resulting in timely access to ICC. CSAs will also pilot a retention strategy to determine overall impact to increase the average length of employment from 18 months.

5. Use of DSRP Funding- Project 5 Workforce Retention & Recruitment

$35,500	• Retention activities • Recruitment activities

6. Existing Internal Resources- Project 5 Workforce Retention & Recruitment

LHBS Human resources department will be vital to the success of this project. We will leverage current hiring and retention strategies while looking for areas of improvement specific to the CSA's. This also includes using our current employee portal, PeopleSoft to collect data and disseminate information to CSA staff

7. Distribution of Funds- Project 5 Workforce Retention & Recruitment

$10,500 **$25,000**	• Recruitment expenses • Retention expenses

6. Existing Internal Resources – All Projects:

LHBS will maximize and leverage a variety of internal resources to ensure a smooth implementation of the identified projects. From a big picture lens, supporting all projects proposed for use of DSRIP funding LHBS will continue to rely upon internal structures. LHBS uses Advantage Healthcare Solutions as a billing vendor including coding support and revenue cycle management. We intend to work with this vendor to ensure data is available as needed. LHBS also has the ability to collaborate with Lahey Health System data analytics departments as needed to complete specific data requirements.

With regard to community engagement, LHBS will leverage its current business sites and services to identify potential ICC members and know how to connect these members to the CSAs. Funds allocated to marketing activities will target ACOs and PCPs to increase awareness of how the care planning can support maintenance of chronic medical diagnoses and overall awareness of services provided by the CSA.

For the overall success of the DSRIP projects, LHBS will leverage key staff for ongoing oversight and management including the Vice President of Ambulatory and CBHI Services, the Director of Operations for CBHI services, the Vice President of Information Technology and the Director of Communications. At the CSA program levels, the administrative coordinators will be responsible for data tracking of benchmarks and outcomes. CSA program directors will be pivotal in the implementation of projects as well.

Both Community Services Agencies have taken efforts to create program wide tracking to ensure timely completion of clinical documentation and to ensure that Care Plans are completed every 90 days at minimum. We will continue these efforts and leverage our EHR aplatform to further streamline this process.

8. Internal Evaluation, Measurement & Performance Evaluation – All projects

LHBS is committed to meeting all contract requirements related to quality management and performance monitoring by maintaining a strong Development Plan. A culture of quality is something that this organization takes pride in, where it is the focus of its workforce every day. Quality is not an, “add on”, to the job, but it is woven into the fabric of the whole organization. LHBS is committed to innovation and to continuous quality improvement at all levels of the organization and in all programs.

Each proposed project will have a dedicated Project Team. Each project team member will have assigned tasks outlined on a work plan. The project team along with the medical consultant will meet at minimum, on a monthly basis to assess progress towards activities and tasks within projects. For activities and tasks that are not met by identified timeframes, the team will determine barriers and revise the remaining project timelines to ensure future deadlines and benchmarks are met. The CBHI Operations Director will be responsible for oversight of the projects to ensure that efforts are coordinated among staff and not duplicated.

With the revised internal record review tool, we will assess our integration efforts on at least a quarterly basis through multidisciplinary reviews with the medical consultant and CSA leadership team. We will continue efforts to track paperwork completion with reporting capacities within our EHR to ensure that all ICC-engaged members have documented care plans that are approved by the

clinician and member and/or member's legal guardian. This data will be shared at regular project team meetings.

Training and certification will be monitored through training attendance taken by PD's and tracked in collaboration with HR. Effectiveness of the TIC model will be measured by pre and post trainings results of surveys that are chosen in collaboration with the Risking Connections training team. We will also measure this with retention rates over the 5 years of the project.

Within LHBS, we often turn to the people that we serve and their families as one of the most important metrics of quality. We will continue this important task by increasing the instances of completion of customer satisfaction surveys. Each quarter, the CSA's will strive to survey at least half of its current population served. These surveys will also assess the members overall satisfaction with the care management software and "care extender" applications. This will be facilitated by the program director and managers. The administrative coordinators will collect this data for review with the program director for submission to the project team.

6.4.B. PROJECT TEAM DESCRIPTION

For the proposed project(s), the Bidder shall describe its organization's level of readiness and proposed Project Team for implementing the proposed project(s), including:

(1) An organizational chart of the Bidder (as an attachment) that identifies personnel, senior managers, and other staff by title (not counted toward page limit);

Please see attachment 6.4.B.1 for an overview of LHBS from executive leadership highlighting internal resources we will leverage, to senior leadership and program level organization of the Community Service Agencies.

(2) A list of current staff that the Bidder proposes will be involved in the project(s), including their job descriptions and qualifications for the project(s);

The table below shows the identified project team members including their qualification and job descriptions for the project

Name/ Title	Qualifications	Project Team responsibilities
Catherine Pietrzak ***Vice President of Ambulatory and CBHI Services***	• MBA • 20 years of behavioral health management • Experience with project management • Led Outpatient Clinics through transition to open access	Provide updates to senior leadership team, quarterly data review; support implementation process and team as needed; working to help identify barriers and/or successes.
Sangita Mallick, M.D. ***Child Psychiatrist*** ***Current consultant to CSA;s***	• Current consultant to CSAs with awareness of trends presenting in the community in terms of behavioral health need • Experienced psychiatrist working in various settings: inpatient,	Content expert for psychiatric needs, including assessment of medication referral/recommendations - including weekly coordination with the Project team, offering recommendations on tools, measures and best practice

	community health center, outpatient, emergency services and CBHI	
Jessica Caron, LICSW ***Director of Operations- CHBI Services***	• Strong knowledge of all CBHI services including CSAs. • 10 years of experience working with youth & families and CBHI • Former ICC	Oversight of project, including data collection review and achieving benchmarks; supporting the directors as needed in quality assurance, clinical decision making. Direct coordination with MD and other training oversight
Brad Eardley, LMFT ***Director- Cape Ann/Beverly CSA*** **Colleen McKenna, LMHC** ***Director- Haverhill CSA***	• Strong knowledge of all CBHI services including CSAs. • Passion and strong experience in working with youth and families including program management • Program level insight	Coordinating enhancement and changes; holding staff accountable to attendance at trainings, ensuring integration efforts are followed through at the direct care level; identifying areas of need and successful - creating action plans to ensure benchmarks are achieved
Donna Lemelin ***Administrative Coordinator- Cape Ann/Beverly CSA*** **Alyssa Landry** ***Administrative Coordinator- Haverhill***	• 10 years of combined administrative support to the CSA's • Program level insight	Data input and collection; reporting as needed; other administrative functions as needed.

(3) Any staff the Bidder proposes to hire or engage to be involved in the project(s), including their proposed job descriptions and qualifications for the project(s);

TBA ***Medical Consultant***	• **MD or RN** • **Experience in pediatric field of medicine and integration** • **Passion for work with youth and families**	• **Review and identify areas for opportunity in integrating medical components of care.** • **Provide clinical leadership in integration for project team** • **Analyze and utilize data for quality improvement** • **Design and participate in medical curriculum**

(4) The roles and responsibilities of each staff of the Bidder's Project Team and how the Bidder will ensure efforts are coordinated among staff and not duplicated; and

Please see the table above for a list of responsibilities for each staff of the Project Team. Efforts will be coordinated by monthly meetings of the project team to assess progress towards assigned tasks and goals.

(5) A description of how the Bidder proposes to manage the project(s).

The Operations Director will be responsible for oversight of the project to ensure that efforts are coordinated among staff and not duplicated. Each project team member will have assigned tasks on a work plan that will be reviewed monthly. Barriers to completion of tasks will be addressed and timelines adjusted to ensure future benchmarks are met.

Note: Job descriptions may be submitted as attachments and will not count toward the page limit.

6.4.C. IMPLEMENTATION PLAN AND TIMELINE

For the proposed project(s), the Bidder shall submit one timeline that displays the Bidder's monthly implementation plans, including a timeline for the Preparation Budget Period, and quarterly implementation plans for each subsequent Budget Period. The timeline shall include all necessary operational and project activities to accomplish the project(s).

The implementation Plan provided on the following pages is structured to reflect the three projects and uses a Gantt view to display activities by month for the preparation budget period and by quarter for subsequent budget periods. This plan will be expanded to include additional details in the fall as implementation activities begin.

6.4.D. BUDGET REPORT AND BUDGET NARRATIVE

The Bidder shall submit one Budget Report and one Budget Narrative, using Attachments B and C, to estimate the amount and types of costs associated with implementing the Bidder's proposed project(s).

6.4.E. SUSTAINABILITY

The Bidder shall describe its plan to sustainably fund the proposed project(s) over the Contract term and after the end of the Contract term. Such description shall include a description of any tools, resources, or processes the Bidder intends to develop as part of the project or investment funded under the Contract that the Bidder would continue to use after the end of the Contract term.

As indicated in section 6.4.A.3 Sustainability was at the forefront in the planning of identified projects to ensure that all DSRIP funded efforts continue after the funding life cycle. Steps are noted in the implementation plan to ensure sustainability. Specifically, tools created and revised by the medical consultant and project team will continued be used, and adherence will be monitored through quality assurance such as record reviews. The relationships strengthened and/or built with PCP offices and ACOs will continue through ongoing bi-directional communication, involvement in the Systems of Care and regularly scheduled meetings that will occur in collaboration with the BHCP.

By leveraging our current IT infrastructure, LHBS will continue to fund software to sustain efforts relating to collaboration and information sharing. LHBS intentionally chose a TIC model with a train-the-trainer option to allow for sustainability using the model at cost the agency can sustain and will leverage current resources such as the Director of Training, our HR department and Peoplesoft to sustain training and workforce investment efforts

JOB DESCRIPTION

Job Title: VP of Ambulatory and CBHI	Approval Date: Click here to enter text.
Division: Ambulatory	Dept./Program/Location: General & Administrative
Reports to: Medical Director	FLSA Status: ☒Exempt ☐Non-Exempt

POSITION SUMMARY:

In 3-5 sentences, summarize the purpose of this job. Your text should answer the question: "Why does this position exist?" The position purpose and level in the organization should be concisely stated here.

The Vice President of Ambulatory and CBHI oversees and manages the programs within this division, maintaining the quality of treatment, assuring compliance with programmatic regulatory and licensing requirements, maintaining staffing and productivity levels, ensuring customer satisfaction and cost effective service delivery, implementing continuous quality improvement initiatives, and developing and ensuring compliance with managed care contracts, State Contracts. The VP participates in and serves as a conduit for information and direction from the Senior Leadership Team of the organization, ensuring consistency of operational oversight in keeping with the organization's mission.

ESSENTIAL FUNCTIONS & RESPONSIBILITIES:

In this section, please clarify the tasks and deliverables of each essential function and responsibility of this job. Please provide in a list formant with bullets and identify the 5-7 responsibilities/functions of this job in order of importance.

Essential Functions/Key Responsibilities:

1. Program leadership and development, including oversight of clinical integrity and sustainability of the programs within the division.

2. Budget development and monitoring including revenue and expense tracking and adjustment.

3. Provide leadership to a multidisciplinary team, building cohesiveness within programs and between programs located in multiple physical locations through regular staff meetings and visitations to programs.

4. Ensure ongoing quality improvement including outcome measurement, quality management activities, satisfaction surveys, and quality record reviews.

5. Build programs and respond to needed changes in existing services based on key stakeholder feedback.

6. Develop, update/revise policies and procedures as needed.

7. Participate in the Senior Leadership Team; assist in strategic decision making and planning to help the organization to meet its mission and needs of population served.

8. Collaborate with leadership and staff from other Divisions and programs within the organization to assist in integration and efforts to provide seamless, coordinated care for populations served.

9. Develop and maintain positive, ongoing relationships with key stakeholders; including, but not limited

JOB DESCRIPTION

Job Title: Staff Psychiatrist	Approval Date: Click here to enter text.
Division: Ambulatory & CBHI	Dept./Program/Location: General & Administrative
Reports to: Medical Director	FLSA Status: ☒Exempt ☐Non-Exempt

POSITION SUMMARY:

In 3-5 sentences, summarize the purpose of this job. Your text should answer the question: "Why does this position exist?" The position purpose and level in the organization should be concisely stated here.

The staff psychiatrist is responsible for providing medical evaluation, ongoing psychiatric assessments and treatments, prescriptive services, urgent care appointments, ordering and review of laps and tests and may provide some off hour on call coverage. The Staff psychiatrist also acts as a consultant to CBHI services

ESSENTIAL FUNCTIONS & RESPONSIBILITIES:

In this section, please clarify the tasks and deliverables of each essential function and responsibility of this job. Please provide in a list formant with bullets and identify the 5-7 responsibilities/functions of this job in order of importance.

Essential Functions/Key Responsibilities:

1. Psychiatric Evaluation, direct diagnostic, prevention and treatment services to children, adolescent and their families

2. Ongoing psychiatric service and staff consultation to Outpatient and CBHI services.

3. Provide leadership to a multidisciplinary team, building cohesiveness within programs and between programs located in multiple physical locations through regular monthly meetings.

4. Treat children, adolescents and adults within the context of recognizable and sound medical standards.

6. Develop, update/revise policies and procedures as needed.

7. Provide training to staff

8. Collaborate with leadership and staff from other Divisions and programs within the organization to assist in integration and efforts to provide seamless, coordinated care for populations served.

9. Develop and maintain positive, ongoing relationships with key stakeholders; including, but not limited to, Department of Children and Families, Department of Mental Health, Massachusetts Behavioral Health Partnership, local schools, community groups, and funders and represent organization on community and trade association committees as requested.

10. Provide emergency and crisis intervention services

11. Participate in monthly multidisciplinary meetings.

Behavioral Services

JOB DESCRIPTION

Job Title: Operations Director - CBHI	Approval Date: March 17,2017
Division: Ambulatory	Dept./Program/Location: Ambulatory Division
Reports to: VP of Ambulatory Division	

POSITION SUMMARY:

In 3-5 sentences, summarize the purpose of this job. Your text should answer the question: "Why does this position exist?" The position purpose and level in the organization should be concisely stated here.

Responsible for overseeing the operations of the residential and community-based programs for children and youth. Under general supervision of the VP of Ambulatory Services, works within general methods and procedures and exercises considerable independent judgment to adapt and apply the guidelines to specific situations as needed. The work requires knowledge of the policies, procedures, and regulations of community based programs, and supervisory techniques, personnel policies, and procedures. This individual will be responsible for ensuring and monitoring all tracking systems to meet all regulatory and funder guidelines.

ESSENTIAL FUNCTIONS & RESPONSIBILITIES:

Essential Functions/Key Responsibilities:

1) Assess administrative and management needs of the CBHI and youth services ; develop, implement, evaluate and manage all clinical and non-clinical program elements, provide consultation, administrative support and resource development and allocation.
2) Review current tracking systems and determine most effective ways to streamline and to meet regulatory mandates MCEs performance specs for CBHI programs.
3) Create and/or maintain all necessary training and tracking systems.
4) Set up, monitor and maintain master tracking system to ensure that all staff remains up to date on trainings required by EEC, BSAS and DOE for all programs licensed by these entities within the Division.
4) Working with PD's and Office Managers to motivate, assist, and evaluate administrative support and clerical personnel, including performance challenges. Implement discipline and/or utilize termination procedures as necessary.
8) Assist VP of Ambulatory Services in establishing policies and procedures, including participation in budget preparation, monitoring contracts and productivity.
10) Maintain confidentiality regarding privileged administrative and child/youth information in a professional manner.
11) Provide trainings to staff as needed around operations related issues
12) Work collaboratively with facilities and IT to ensure the daily operations of the programs run as smooth as possible.
14) Work with Division VP to create or revise current policies and procedures as needed
15) Other duties as assigned.

Leadership positions should describe the type and level of supervision exercised over specific job titles.

Lahey Health
Behavioral Services

JOB DESCRIPTION

Job Title: Director	Approval Date: April 3,2017
Division: CBHI	Dept./Program/Location: Various CBHI Programs
Reports to: VP of Ambulatory Services	

POSITION SUMMARY:

In 3-5 sentences, summarize the purpose of this job. Your text should answer the question: "Why does this position exist?" The position purpose and level in the organization should be concisely stated here.

The Program Director will oversee the adequacy, appropriateness, fiscal viability, and quality of clinical and operational programming as well as implement orientation, supervision, and staff performance activities to ensure high standards of client and organization results. He/she will also monitor workers' productivity, implement multidisciplinary team meetings, high risk case reviews, supervision and staff evaluations. Develops and introduces approved standards and guidelines for CBHI programs.

ESSENTIAL FUNCTIONS & RESPONSIBILITIES:

In this section, please clarify the tasks and deliverables of each essential function and responsibility of this job. Please provide in a list formant with bullets and identify the 5-7 responsibilities/functions of this job in order of importance.

Essential Functions/Key Responsibilities:

1. Develops, implements, monitors and reviews operating budget. Ensures that internal reports are produced and reviewed in a timely fashion.

2. Ensures that clinical supervision is received by all clinical staff appropriate to individual's level of education and expertise, either via phone or in person.

3. Responsible for the oversight of clinical programming and continuously evaluates the effectiveness of the programming, making recommendations and changes when needed.

4. Maintain statistics on the activities of the program, recommend strategies for improvement in performance, productivity, and profitability. Continuous quality improvement for CBHI services through development of procedures, manuals, training materials, participation in trainings, best practices, using staff and the research literature as resources.

5. In collaboration with the VP of Ambulatory Services ensure adherence to quality assurance policies and procedures. Assist in assurance of site compliance with regulatory and other accreditation agencies.

6. Build and maintain effective working relationships with internal, external providers, as well as other regulatory bodies.

7. Serve as a key liaison for the program and direct the resolution of inquiries, problems, complaints, or emergencies affecting availability or quality of services; respond to sensitive or complex inquiries, service complaints, or grievances filed.

JOB DESCRIPTION

Job Title: Administrative Coordinator	Approval Date: Click here to enter text.
Division: CBHI	Dept./Program/Location: Various CBHI Programs
Reports to: Program Director	FLSA Status: ☒Exempt ☐Non-Exempt

POSITION SUMMARY:

In 3-5 sentences, summarize the purpose of this job. Your text should answer the question: "Why does this position exist?" The position purpose and level in the organization should be concisely stated here.

The Administrative Coordinator will contribute to the smooth operation of the program(s) by performing, coordinating and overseeing administrative functions and projects within a program or group of programs within the Children's Behavioral Health Services division.

ESSENTIAL FUNCTIONS & RESPONSIBILITIES:

In this section, please clarify the tasks and deliverables of each essential function and responsibility of this job. Please provide in a list formant with bullets and identify the 5-7 responsibilities/functions of this job in order of importance.

Essential Functions/Key Responsibilities:

1. Oversees and ensures that the office administrative functions assigned are effectively carried out.

2. Provides professional assistance to management staff with the implementation of changes within the program/division to enhance the admission process and overall client experience

3. Performs difficult, complex, technical, and/or specialized office support work, which requires independent judgment, the application of technical skills, and a detailed knowledge of the activities and procedures specific to the program/division assigned.

4. Supervises staff, including determining workloads and schedules, evaluating staff performance, providing training and making hiring, promotion and disciplinary recommendations.

5. Provides technical assistance to program staff on operational issues such as personnel policies, payroll, travel expense, check request, purchasing, record keeping and training.

6. Tracks and maintains prior and upcoming authorization for services by communicating with insurance companies and service providers. Coordinates with staff to support and remedy any eligibility issues when necessary.

7. Interfaces with families of whom we receive referrals and provides frequent updates with families regarding wait times, etc.

8. Orientates new employees to program including but not limited to safety procedures, IT needs, voicemail, office space assignment, access codes, etc.

Attachment C: CSA Budget Narrative

Budget Expenses:

(Investment narrative should only include investments listed in the Budget Report provided on Attachment B. Please provide separate descriptions of budget allocations for each project)

Workforce Development **Total:** $58,625

In the box below, please provide a description of all items within the Workforce Development investment category (e.g. recruitment support, training and coaching programs and certifications). Please be sure to specify the goals and project(s) this investment will support, as described in **Section 3.4** and **Section 6** of the RFR and how these investments will assist in meeting the terms of the Contract.

Prep Budget Workforce Development Investments:

Using the train-the-trainer model, LHBS will engage Risking Connections to provide trauma-informed instruction and certification at a cost of $40,000.
Using an average hourly rate for the staff of $20.00 per hour plus a 25% fringe benefit factor, it is estimated that the cost for Haverhill CSA staff to attend the training to be $25.00 per hour x 20 employees x 24 hours of training = $12,000. This training supports providing ICC using dedicated care coordinators trained in Wraparound principles and practices.

Year 1 Budget Workforce Development Investments:

Annual webinar will provide access to the Risking Connections webinars for all staff at a cost of $125. The webinar training supports providing ICC using dedicated care coordinators trained in Wraparound principles and practices.

Years 2-5 Budget Workforce Development Investments:

Year 2 Annual webinar will provide access to the Risking Connections webinars for all staff at a cost of $125. The webinar training supports providing ICC using dedicated care coordinators trained in Wraparound principles and practices.
Year 3 Annual webinar will provide access to the Risking Connections webinars for all staff at a cost of $125. Year 3 Recertification for Risking Connections is an on-site training that provides additional train-the-trainer training and renewal of prior certification at a cost of $3,000. The webinar training and recertification supports providing ICC using dedicated care coordinators trained in Wraparound principles and practices.
Year 4 Annual webinar will provide access to the Risking Connections webinars for all staff at a cost of $125. The webinar training supports providing ICC using dedicated care coordinators trained in Wraparound principles and practices.
Year 5 Annual webinar will provide access to the Risking Connections webinars for all staff at a cost of $125. Year 5 Recertification for Risking Connections is an on-site training that provides additional train-the-trainer training and renewal of prior certification at a cost of $3,000. The webinar training and recertification supports providing ICC using dedicated care coordinators trained in Wraparound principles and practices.

Operational Infrastructure **Total:** $129,386

In the box below, please provide a description of all items within the Operational Infrastructure investment category (e.g. system change resources, performance management capabilities and additional operational support). Please be sure to specify the goals and project(s) this investment will support, as described in **Section 3.4** and **Section 6** of the RFR and document how these investments will assist in meeting the terms of the contract.

Prep Budget-Operational Infrastructure Investments:

The medical consultant is estimated at 225 hours at a rate of $200.00 per hour to review, revise and define clinical

quality measures, to review processes and to train ICC and Family Support and Training staff on integration with medical providers providing infrastructure support for ICC and Family Support and Training services at a cost of $45,000.
Director of Training is estimated at 2 hours per week for 20 weeks at a rate of $36.06 plus 25% for fringe benefits at a total cost of $45.07 x 52.38 hours = $2,361 providing infrastructure support for ICC and Family Support and Training services.

Year 1 Budget-Operational Infrastructure Investments:

The medical consultant is estimated at 4 hours per week at a rate of $200.00 per hour ($200.00 x 4 hours x 39 weeks) at a total cost of $31,200.
Director of Training is estimated at $36.78 plus 25% for fringe benefits at a total cost of $45.97 x 2 hours per week x 39 weeks = $3,586.

Years 2-5 Budget-Operational Infrastructure Investments:

Year 2 Medical consultant is estimated at 2 hours per week at a rate of $200.00 per hour ($200.00 x 2 hours x 52 weeks) at a total cost of $20,800.
Year 2 Director of Training is estimated at $37.51 plus 25% for fringe benefits at a total cost of $46.89 x 1 hour per week x 52 weeks = $2,439.
Year 3 Medical consultant is estimated at 6 hours per month at a rate of $200.00 per hour ($200.00 x 6 hours x 12 months) at a total cost of $14,400.
Year 4 Medical consultant is estimated at 4 hours per month at a rate of $200.00 per hour ($200.00 x 4 hours x 12 months) at a total cost of $4,800.
Year 5 Medical consultant is estimated at 4 hours per month at a rate of $200.00 per hour ($200.00 x 4 hours x 12 months) at a total cost of $4,800.

Technology **Total:** $221,666

In the box below, please provide a description of all line items within the Technology investment category (e.g. Health Information Technology and care management software, IT project management resources, data analytics capabilities, ICC service delivery technology). Please specify the goals and project(s) this investment will support, as described in Section 3.4 and Section 6 of the RFR and explain how these investments will support the Contractor's performance of the Contract.

Prep Budget-Technology Investments:

Laptops for staff will allow more community linkages since the workforce will be mobile. Cost for 50 laptops is $1,200 each for a total cost of $60,000.
ICC staff smartphone connectivity provides mobile access to workfiles and supports greater community linkages. Cost for 25 ICC staff is $100 per month x 25 devices x 5 months = $12,500.
Signature pads for staff in the community allows consent agreements to be signed immediately by family members/guardians and supports faster access to services at a cost of $200 per device x 40 devices = $8,000.
Behavioral health/medical application care extender for 50 staff at a cost of $5 per app download/instance at a total cost of $250 allows staff to become familiar with a tool to enable clients to use technology to assist in care management.
Connection to MA HIway integrates care among medical and other service providers to better manage client care at a cost of $2,141.
Care management software supports the goal of supporting referrals to other behavioral health resources and services by interfacing directly with other providers at an estimated cost of $2,000 per month x 5 months = $10,000.

Year 1 Budget-Technology Investments:

Behavioral health/medical application care extender for 223 clients at a cost of $5 per app download/instance at a total cost of $1,115 enables clients to use technology to assist in care management.
Connection to MA HIway integrates care among medical and other service providers to better manage client care at a cost of $1,840.
Care management software supports the goal of supporting referrals to other behavioral health resources and services

by interfacing directly with other providers at an estimated cost of $2,000 per month x 9 months = $18,000.

Years 2-5 Budget-Technology Investments:

Year 2 Behavioral health/medical application care extender for 223 clients at a cost of $5 per app download/instance at a total cost of $1,115 enables clients to use technology to assist in care management.
Year 2 Connection to MA HIway integrates care among medical and other service providers to better manage client care at a cost of $1,840.
Year 2 Care management software supports the goal of supporting referrals to other behavioral health resources and services by interfacing directly with other providers at an estimated cost of $2,000 per month x 12 months= $24,000.
Year 3 Behavioral health/medical application care extender for 223 clients at a cost of $5 per app download/instance at a total cost of $1,115 enables clients to use technology to assist in care management.
Year 3 Connection to MA HIway integrates care among medical and other service providers to better manage client care at a cost of $1,840.
Year 3 Care management software supports the goal of supporting referrals to other behavioral health resources and services by interfacing directly with other providers at an estimated cost of $2,000 per month x 12 months = $24,000.
Year 4 Behavioral health/medical application care extender for 223 clients at a cost of $5 per app download/instance at a total cost of $1,115 enables clients to use technology to assist in care management.
Year 4 Connection to MA HIway integrates care among medical and other service providers to better manage client care at a cost of $1,840.
Year 4 Care management software supports the goal of supporting referrals to other behavioral health resources and services by interfacing directly with other providers at an estimated cost of $2,000 per month x 12 months = $24,000.
Year 5 Behavioral health/medical application care extender for 223 clients at a cost of $5 per app download/instance at a total cost of $1,115 enables clients to use technology to assist in care management.
Year 5 Connection to MA HIway integrates care among medical and other service providers to better manage client care at a cost of $1,840.
Year 5 Care management software supports the goal of supporting referrals to other behavioral health resources and services by interfacing directly with other providers at an estimated cost of $2,000 per month x 12 months = $24,000.

SECTION 6.5. COORDINATION WITH ACOS, MCOS, AND PRIMARY CARE PROVIDERS

(response not to exceed 3 pages)

The Bidder shall describe the Bidder's specific plans to improve collaboration and coordination with ACOs, MCOs, and primary care providers, particularly pediatric providers, in accordance with ICC performance specifications and in keeping with the goal of improving integration of behavioral and physical health care. In particular, the Bidder shall describe how it intends to improve:

6.5.A. BIDIRECTIONAL COMMUNICATION BETWEEN THE BIDDER AND PEDIATRIC PRACTICES;

We will continue to communicate our skills, expertise and value to ACO's, MCO's and PCP (most specifically pediatric practices), many of whom we have long standing relationships with. The LHBS Leadership Team, Program Directors, and marketing and communication experts will work collaboratively to increase and sustain awareness of our capacity to provide high-fidelity ICC services. We will ensure that we capitalize on other LHBS efforts to represent the ICC service to ICC eligible members during opportunities to inform them of our capacity, expertise and the role that behavioral health plays in that community's overall population.

For member specific bidirectional communication, we will continue current practices of sending welcome letters for enrolled ICC-members with the MCE Combined communication form as a way of providing education of the services we provide. LHBS is well positioned to improve upon our efforts related to integration. Some of these efforts include:

- Here For You (HFY) case management program. Members in the HFY program are, by definition, medically complex members who have high utilization of services. Our care managers intervene with members to provide care coordination services working closely with the member's PCP, specialty providers, BH clinicians and family members to ensure a cohesive and comprehensive treatment plan is in place. The success of this program in the first year has pushed LHBS to develop processes and protocols to communicate and engage with a variety of community-based PCPs, health systems and community providers that touch the members in order to coordinate care plans.
- ***CHART***: *(Community Hospital Acceleration, Revitalization & Transformation)* Over the past 3 years, LHBS has collaborated with community hospitals in the Lahey and Lowell General Hospital networks to provide care coordination services to members who frequently use the emergency departments. Defining frequent ED visits as a trigger for additional support, the CHART care managers work closely with the ED teams at these facilities including sharing clinical information and receiving automatic, electronic notifications when engaged members enter the ED.
- Integration with Primary Care. LHBS has demonstrated integration with Primary Care as LHBS has imbedded BH clinicians in 12 practices to collaborate with the PCP teams. In this context, the LHBS BH clinicians share a medical record with the PCP teams and participate in team discussions about high-risk members

We will expand on BHCP efforts for secure electronic communication including establishing interoperability of record systems. We will leverage the identified Health and Wellness tool to trigger more active and persistent communication with pediatric practices when medical needs arise. This will be monitored through quality assurance efforts.

During the funding period, LHBS will utilize the medical consultant to identify communication successes and gaps that can be addressed through proactive efforts. We will rely on our existing relationships with ACO's and pediatrician offices that located in the communities we serve including parent organization-Lahey Health, Lawrence General Hospital, Northshore Medical Center, Holy Family Hospital and Lowell General Hospitals.

6.5.B. REFERRAL MANAGEMENT PROTOCOLS FOR FOLLOW-UP AND INFORMATIONAL SHARING;

LHBS will continue referral management protocols in meeting the requirements for ICC-referred members. Through efforts to increase collaboration with ACO's, MCO's and primary care providers we will ensure that referral processes are clear and as streamlined as possible. We will enhance this by allowing for the receipt of referrals through secure messaging.

Through our experience of providing ICC, we understand that engagement and contact with our more vulnerable or complex members can be challenging. To increase engagement with these members, we will leverage our current process of using an online calendar to identify when our workforce has availability for intakes to offer to meet potential ICC-engaged members at their pediatricians' offices or ACO's to enroll in ICC. We will use signature pads to further streamline this process and ensure authorization is received at that time for information sharing.

6.5.C. TEAM-BASED TREATMENT PLANNING IN COLLABORATION WITH PEDIATRIC PRACTICES;

In conjunction with the MCE combined communication form and the identified health and wellness tool, LHBS will increase the inclusion of medical needs in care plans. This will be done through communication efforts that will include the invitation of the PCP to attend in person or via teleconference to care plan team meetings. If not medically indicated, or if in person/teleconference attendance is not possible ICC staff, with the training of the medical consultant, will ensure the PCP's identified strengths, needs, and brainstormed options and recommendations for the ICC-engaged member are noted in the meetings. We will leverage care management software for electronic care planning with teams and seek PCP approval of the care plan once finalized and approved by the ICC-engaged member and/or legal guardian.

LHBS will leverage current relationships; program level leadership and the medical consultant when barriers in collaboration present that are not resolved by the Care Plan Team.

6.5.D. TIMELY ACCESS TO ICC SERVICES; AND

LHBS will continue and enhance efforts to ensure timely access to ICC services. This requires a multifaceted approach including adequate staff, high fidelity wraparound, ongoing monitoring of medical necessity and identification of sustainable community resources that support seamless transitions from ICC level of care. LHBS recognize that seasonality plays a part in referral trends. With this data, we will work to better anticipate these seasons of increased and decreased referrals to ensure timely access.

Find and Retaining the Best and the Brightest: LHBS will continue close communication with HR and the Finance Department for creation of new positions when indicated by waitlist needs and recruitment strategies. Staff retention will be fostered through ongoing training efforts to ensure that ICCs feel confident in the skills required to serve youth and their families who meet the criteria for SED in high fidelity wraparound and trauma informed way. Further fostering retention the adoption of a TIC model strengthen prevention and early signs of vicarious trauma and burnout.

Medical Necessity: The CSAs have continued to emphasize the importance of providing service to the right members at the right time and with the right level of care. These continued efforts will support timely access to and transition from ICC level of care. Program directors and managers will

continue efforts to ensure that the ICC service is described accurately and that discharge is discussed at intake. This includes increasing our Family Support & Training capacity when care coordination needs have been met.

Sustainable Community Resources: The CSAs will continue efforts to ensure awareness of community resources to more quickly meet care coordination needs in sustainable ways. LHBS will ensure other programs with care coordination capacity are aware of their care coordination role, and ensure seamless transitions through on going education of the ICC service and their potential HUB role after a member transitions from ICC level of care. We will utilize our Systems of Care to continue to identify these resources and gaps in resources that the system can plan around.

6.5.E. CONNECTIONS TO SOCIAL SERVICES.

Through our experience of providing care coordination, the CSAs have observed how social determinants of health impact our members. We have and will continue to build strong collaborative relationships to expand our abilities to connect ICC-engaged members to appropriate social services to ensure that care plan teams are address the needs and strength of the ICC-engaged member in a holistic way.

These relationships will be fostered through our Systems of Care on a more macro level, and will be addressed on more mezzo and micro levels through meetings with program leadership. LHBS understands that these relationships are crucial to the overall well-being of ICC-engaged members and that unmet needs in any life domain have impacts on medical and behavioral health. An example of how we foster these relationships is the current efforts underway in our Haverhill CSA to develop stronger communication with DCF. In collaboration with the Area Director a collaborative plan was created to include:

- Cross training for both workforces
- Increased attendance at System of Care meetings by DCF
- LHBS attendance at a quarterly provide meeting at DCF
- Monthly standing office hours at DCF for ICC staff and managers to discuss any areas of concern for members

Through our Individual and Family Flexible Support Services contract we have improved communication with DMH through monthly meetings to discuss ICC-engaged youth who are “single service eligible”. We currently engage in secure messaging with DMH for improved communication and coordination of care.

Program leadership will continue and enhance efforts to ensure that the CSA workforce are aware of the available social services in the communities served including their role in an ICC-engaged members treatment and well-being and how to initiate involvement when indicated to ensure sustained improvement in member overall health and well-being. This will be accomplished through presentations and information in staff meetings and the inclusion of additional social service entities in our System of Care meetings including DTA and DDS.

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
CANS Interoperability projects	$ 3,000.00
Wraparound documentation development	$ 5,000.00
Professional service hours	$ 10,000.00
E.H.R. Licenses	$ 9,000.00
Total Development and Adaptation of EHR and Care Management System	$ 27,000.00

CANS Interoperability projects ($3,000) - upgrading our current EHR system to ensure we have interoperability use of the CANS assessment. This will provide our agency the ability to complete the CANS eval and interface the info onto the vertual gateway. This will also enable more efficient data collection and reporting, with a small support overhead since the CANS will be completed within NSMHA EHR. This project will include software licensing, project management, and training.

Wraparound documentation development ($5,000) - NSMHA and its EHR vendor will collaborate on development of a best-practice Wraparound/Strengths-Based documentation module, which will supplement or in some cases replace elements of its existing data-tracking system. Screenings, assessments, plans, and service documentation will be reviewed and potentially updated based on best-practices and fidelity to a strengths-based model. This project is anticipated to include consulting/business analysis, project management, technical development, training, and support.

Professional Services ($10,0000) - funds encompasses our EHR vendors 's projected expenses for their manpower for the expenses listed above.

E.H.R Licenses ($9, 000) - These costs are associated in purchasing further licenses to cover the onboarding of new staff. Current licensing costs are $100 per month, per concurrent user. These funds will allow us to purchase another 8 licenses for the new staff coming onboard.

Technology for Service Delivery

Description of Expense	Cost
Mobile Devices	$ 25,950.00
Total Technology for Service Delivery	**$ 25,950.00**

Mobile devices:
Purchase mobile devices as listed below.
30 iPhone for Family Partners and Care Coordinators(at $50/month each) $1,500/month x 5 months = $7,500
15 laptops for Care Coordinators at $1,230 each = $18,450
Mobile devices will increase the staff meember's ability to input data real time data input

Other Technology Expenses

Description of Expense	Cost
Total Other Technology Expenses	**$ -**

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Other Technology Expenses

Description of Expense	Cost
Mass HiWay Integration	$ 5,000.00
Total Other Technology Expenses	**$ 5,000.00**

Mass Hiway integration $5,000 to support enrollment and integration of the CSA program with the Mass HIway. Such a project will allow the CSA to interoperate with EOHHS, ACOs, primary care providers, and potentially clients and their families. This project is supported by NSMH's EHR vendor and its Health Information Service Provider (HISP), and will include technical onboarding, project management, and training.

2	OPERATIONAL INFRASTRUCTURE	Maintain at least 70% participation in the Engaged Enrollee Experience Survey	01/01/18	12/31/18	**Operational Infrastructure**	Other Operational Expenses	An Informational sheet for the Engaged Enrollee Experience Survey will have been created and past out to all youth/families enrolled in ICC services.	All families enrolled from 1/1/18 to 3/31/18 will have received the info sheet.			Family Partners will have assisted at least 20% of ICC enrolled families from 1/1/18 to 5/31/18 to complete the Engaged Enrollee Experience Survey	There will be at least 20% of Engaged Enrollee Experience Survey completed by 5/31/18		
2	OPERATIONAL INFRASTRUCTURE	ICC will offer "Date of Initial Appointment" no more than 3 days after initial call at least 90% of the time.	01/01/18	12/31/18	**Operational Infrastructure**	Other Operational Expenses	Families enrolled from 1/1/18 to 3/31/18 will have been offered an initial appointment no more than 3 business days past the the first contact with ICC	RPT update scores from 1/1/18 to 3/31/18 will reflect at least 50% of the time			Families enrolled from 1/1/18 to 5/31/18 will have been offered an initial appointment no more than 3 days past the the first contact with ICC	RPT Update scores from 1/1/18 to 5/31/18 will reflect at least 65% of the time		
2	OPERATIONAL INFRASTRUCTURE	ICC will strive to enroll families into service no more than 7 days after initial phone call at least 85%	01/01/18	12/31/18	**Operational Infrastructure**	Other Operational Expenses	Qualifying youth and families from 1/1/18 to 3/31/18 will have been enrolled into wraparound services no more than 7 business days from the first contact with ICC.	RPT update scores from 1/1/18 to 3/31/18 will reflect at least 40% of the time			Qualifying youth and families from 1/1/18 to 5/31/18 will have been enrolled to wraparound services no more than 7 business days from the first contact with ICC.	RPT Update scores from 1/1/18 to 5/31/18 will reflect at least 65% of the time		

North Suffolk Mental Health Association, Inc.
Proposal for Infrastructure and Capacity Building Funding for CSA
RFR#: 17LCEHSCSAICBFUNDING

6.2 Executive Summary

A. The Bidder's current performance on its Development Plan

North Suffolk Mental Association (NSMHA) is pleased to submit a proposal to MassHealth to strengthen our Community Service Agency (CSA) and support MassHealth's integration efforts through DSRIP funding and ACO implementation. As a long standing community provider of child and family community-based services, North Suffolk is positioned to engage children and their families in a strength-based, child and family-centered, culturally appropriate and trauma-informed approach to the management and integration of behavioral health and primary care.

NSMHA's current Development Plan outlines two goals that seek to improve and enhance our CSA's performance. The first goal focuses on expanding the capacity of our Intensive Care Coordinators (ICC) to integrate and synthesize cultural aspects into their clinical formulations. This goal was developed with Managed Care Entities (MCEs) during the CSA statewide trainings as well as in regional trainings. Our action plan has a specific focus on training staff to capture cultural information and understand its significance in the member's presentation. Staff will be more knowledgeable about the cultures that exist within our catchment area and will be able to translate that knowledge into the Wrap Around and care planning processes. Efforts toward this goal were launched in June of 2017. The second goal in our Development Plan emphasizes increasing timely access to Intensive Care Coordination (ICC) services. To achieve this goal, we must hire new staff in an increasingly competitive employment market. Our Human Resource Department staff partner with managers in the application, vetting, hiring and training processes for new employees and will engage in additional targeted recruitment efforts. In addition, the CSA Program Manager will accompany the Human Resource Recruitment Officer to college/university job fairs to promote the ICC position. In recent months, the CSA has been able to hire five (5) ICC candidates, improving our capacity for timely response to the demands and needs for services.

B. Specific examples of strengths and needs of the Bidder

Our CSA's strength is its connections with our community partners. We often are able to use these connections to provide support to members awaiting ICC services. For example, NSMHA is an active member on the Chelsea Hub, participating weekly in Hub roundtables. Chelsea Hub is an evidence-based, citywide effort to assist at-risk families and/or individuals to connect with services to reduce their immediate risk. The Hub is composed of 30 agencies and serves the citizens of Chelsea. Organizations represented, in addition to North Suffolk, include entities such as the Department of Children and Families (DCF) Harbor Area, Chelsea Police Department, Chelsea Public Schools, Metropolitan Boston Housing Partnership, and the Chelsea District Probation Office. Also working as partners on the Hub are risk-specific agencies such as Community Action Programs Inter-City, Inc., Rosie's Place, Kids in Need of Defense, ROCA, and Chelsea Community Connects. Through the Hub, our CSA connects members with agencies that can assist immediately in reducing a specific risk factor such as eviction, immigration issues, or a law enforcement concern. These connections often stabilize the member so that they no longer need care coordination or result in reducing the immediate risk factor, making the situation safer to allow the member and family to wait for ICC services.

One area of critical need is to increase our current staffing. We have 9 FTE ICCs. To meet the expected service and integration demand, NSMHA estimates needing to increase our team to at least 15 FTE Care Coordinators. Because of the unique cultural make up of our service area and the large number of Spanish speaking youth and families, it is necessary that a majority of our staff be bilingual, more specifically Spanish speakers.

The Bidder's plans for improving timely access to ICC services

Accessibility to services is one of the guiding principles of our organization and we believe that access must be timely, that is, readily available when the individual/family seeks the service. North Suffolk's outpatient behavioral health clinics offer an open access model in which individuals and families are afforded a same day clinical evaluation without the need for an appointment. Our plan for improving timely access to ICC services includes increasing our current staffing numbers, enhancing our Family Partners role in engagement of families and striving for open access and same day availability. DSRIP funding will assist us in implementing marketing and recruiting strategies to hire the staff necessary to accomplish access. This includes partnering with companies like Bayard that develop web-based products that will connect viable candidates to available jobs and careers. We also plan to invest in an MBTA advertising campaign. Many university students in the Boston Metro area use the public transit system and an MBTA campaign would target this population.

The Bidder's plans for improving care coordination, care planning and care management for ICC-Engaged Members

North Suffolk is committed to continuing to improve care coordination, care planning and care management for our ICC-engaged members. We will build our available technology to interface effectively with our ACO partners as well as build operational infrastructure to support this technology. Our capacity to communicate and interface is crucial to effective care coordination to meet the complex needs of our youth and families. It will be important for Care Coordinators to have technology, including video technology, that provides a direct connection with the member's ACO and other care planning team members. This also includes technology such as the Mass HIway where comprehensive assessments, Individual Care Plans, and other information intended to support transitions of care could be transmitted electronically to the ACOs. Additional support tools such as laptops, smartphones and other mobile technology will provide essential connectivity necessary to interface in a timely way from the office, the community or other locations.

A core element to improving the overall care planning experience is ensuring that all parties that provide care to an ICC-Engaged Member are present (physically or virtually) at the meeting for the development of the Individual Care Plan (ICP). This participation not only incorporates providers into the treatment of the member but it also increases their level of accountability. We will accomplish this by utilizing the software that allows several providers to be linked during the process. Improving care coordination includes investing in software such as Microsoft Office 365 that will allow Care Coordinators access to various providers at the same time during a care planning meeting thus improving the treatment planning process. This approach

streamlines the care planning process but saves valuable time as it includes providers who might be unable to be physically present. Time and schedule constraints are a common reason of lack of attendance, particularly for Primary Care Providers (PCP), pediatric personnel, and other personnel from the physical health sector. The identified technology would assist in eliminating that barrier.

E. Bidder's plans to improve performance on quality scores and Development Plan goals

We will improve performance on quality scores and our Development Plan by adding goals that are consistent with MCO requirements and EOHHS's vision. Our CSA Development Plan highlights improved integration between physical, behavioral health, long term services and supports and health related services. To achieve this goal, we will ensure timely access to ICC services by increasing our staffing to meet the demand. Additional goals include focusing on staff training and development, specifically targeting improved quality and responsiveness by strengthening an ICC's abilities to coordinate effectively with ACOs and fine tuning an ICC's ability to collaborate and coordinate with pediatric and behavioral health practices.

Our plans to further improve our quality scores include using the results collected from the Wraparound Fidelity Assessment System Wraparound Provider Practice Analysis (WIPPA), developed by MBHP in collaboration with the Wraparound Evaluation and Research Team in the Department of Psychiatry at the University of Washington. As outlined in the WIPPA the analysis "was developed as a tool for providers to gauge the degree to which their CSAs exhibit wraparound fidelity and to identify strengths and areas for improvement." We will use this analysis, which is completed on a yearly basis, to provide a clear indication as to what areas require further improvement in our implementation of care coordination and collaboration.

F. The Bidder's plans for improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth

NSMHA will support enrollment and integration of our CSA into the Mass HIway to assist in improving coordination with pediatric primary care and other physical and behavioral health care providers. This will allow our CSA to connect with EOHHS, ACOs, and primary care providers. This venture will be supported by collaboration with NSMHA's Electronic Health Record (EHR) vendor, eHana, which also has the capability to support scanning, uploading, and securing the exchange of files that can be embedded directly within a member's document history. For smaller pediatric practices or other behavioral health care providers not connected to the Mass HIway, NSMHA will provide members of a consumer's Care Team not employed by NSMHA or other external community providers, controlled access to the enrollee's electronic Care Management record. Such access will be restricted to the minimum necessary level based on demonstrated need for information, documented via Business Associates Agreements and appropriate Disclosures/Releases of Information, and monitored via audit reporting and other means. NSMHA intends to follow industry-standard best practice to comply with HIPAA "Minimum Necessary" requirements restricting unnecessary access to or disclosure of protected health information. Users with appropriate roles and access rights may be granted access to the enrollee's complete record, while others will be restricted to a more limited information set.

6.3 Populations Served and Community Engagement

A. Populations and Communities served

NSMHA CSA's catchment area includes Winthrop, Chelsea, Revere, East Boston, Charlestown and various locations within the Downtown Boston region (eligible zip codes: 02108, 02109, 02110, 02111, 02113, 02114, 02115, 02116 , 02215). Due to NSMHA CSA's current diverse language capacity (i.e. Spanish, Chinese, Portuguese), we frequently receive service requests for youth living in the Malden and Everett areas. We have formed a strong collaboration with the CSA for that specific region and have been able to provide linguistic capacity to youth in need of care coordination within that area. The majority of the families we service are from the Chelsea and East Boston geography and a large percentage of the population we serve represents immigrant families.

NSMHA CSA's plans to promote the health and wellbeing of the individuals it serves and actively initiate and maintain our engagement with them by achieving the following:

1. Adhere to and fully implement Wraparound principles to ensure quality of care to all the families served by our CSA;
2. Provide additional monthly all staff training on care coordination, pediatric medical conditions and community mental health related topics to enhance and maintain the professionalism and expertise of the workforce;
3. Foster and support meaningful integration of behavioral health with primary care;
4. Enhance implementation of the Referral Response Process to ensure all families receive immediate first contact response upon referral being made to the CSA;
5. Participate and engage in community events and conferences to highlight CSA's presence in the community;
6. Advocate for the underprivileged, low-income, immigrant and non-immigrant families we serve;
7. Continue collaborating with local community organizations, schools, child-care providers, youth service organizations, advocacy groups, and state agencies to ensure collaboration progress and explore systemic barriers in order to provide streamlined, consistent, timely quality of care.

B. Community Relationships

The NSMHA CSA long has been embedded in various networking alliances. These alliances not only provide us the inroads to educate the community about our care coordination services but also help us to leverage those relationships to provide assistance to ICC-Engaged youth and their families waiting for ICC services by supporting them to find a solution or alleviate a need. The following list details some of our most successful networking alliances and is not inclusive of all of our community relationships.

- The Education Sector. NSMHA is contracted to provide outpatient school based therapy to the Mario Umana Academy's Middle and Elementary sectors, the Donald McKay, the Phoenix Charter Academy, Abraham Lincoln Elementary and the Susan B. Anthony.

These connections allow us to obtain ready informational access to a youth's overall performance at school, upon consent from caregivers. It also provides leverage for our CSA to guide the family through the educational system as well as strengthen the wraparound fidelity by expediting the coordination process with school. NSMHA CSA is also an ongoing member of the Chelsea High School Community monthly meetings, an avenue utilized by the Chelsea High School to build networking alliances with behavioral health providers within the community. NSMHA leverages Chelsea High School Community meetings to keep their members abreast of any updates within the CSA such as availability of services, language capacity, etc.

- Local Pediatric Clinics. NSMHA meets monthly with the East Boston Neighborhood Health Center (EBNHC) who provides pediatric care to a large percentage of our CSA families. With this established connection, we are able to communicate efficiently and collaboratively with an ICC-Engaged Member's PCP. These meetings provide the opportunity for the mutual sharing of relevant information about a youth's current needs. We have identified a contact person for each department within the EBNHC network of services, streamlining conversations between our CSA and their behavioral and pediatric departments. In addition, NSMHA has partnered with EBNHC to create a Rapid Response Team for the East Boston area. The Rapid Response Team works closely with the East Boston Police Department to provide immediate therapeutic response to individuals involved in a crisis situation. This provides an extra layer of support for our East Boston ICC-Engaged Members involved in crisis situations that require an immediate therapeutic response.
- Department of Children and Family (DCF) Harbor Area. In March 2016, our CSA established monthly meetings with the DCF Harbor Area Office. These meetings have further strengthened the relationship between our CSA and Harbor Area DCF, providing an avenue where NSMHA can discuss active DCF families that are receiving CBHI services. The Program Manager from the CSA and the Program Manger from the In Home Therapy Department meet with the DCF social workers of identified CBHI active clients to provide clinical support and recommendations on any current problems or concerns. This collaboration strengthens the ties between our CSA and DCF and allows our CSA an opportunity to continue to educate DCF on the Wraparound process and how to work with our CSA to make it an effective experience for the CBHI-Engaged member.
- Department of Mental Health (DMH) Metro Boston. As of January 2017, the CSA has been meeting monthly with our DMH Metro Boston Liaison. The DMH Metro Boston Liaison meets with the entire ICC team during the Care Coordinator's one hour group supervision. This provides Care Coordinators the opportunity to discuss and develop action plans for ICC-Engaged Members that require therapeutic support that can only be provided by DMH.
- Chelsea Hub. As described in Section 6.2, the Chelsea HUB is a citywide effort to assist at-risk families and or individuals in connecting with services to reduce their immediate risk. It is comprised of 30 agencies within NSMHA's catchment area and provides services to the citizens of Chelsea. In addition to North Suffolk, the Hub includes entities such as the DCF Harbor Area, Chelsea Police Department, Chelsea Public Schools, Metropolitan Boston Housing Partnership, and the Chelsea District Probation Office. Also represented are risk-specific agencies such as Community Action Programs Inter-

City, Inc., Rosie's Place, Kids in Need of Defense, ROCA, and Chelsea Community Connects. Our CSA utilizes these relationships to connect families with agencies that can assist immediately in reducing a specific risk factor such as eviction, immigration issues, or law enforcement concerns that requires immediate action. NSMHA's CSA has been able to utilize the Chelsea Hub to assist youth currently waiting for ICC services by either stabilizing the situation so that they no longer need care coordination and can be removed from a waitlist for ICC services or the Chelsea HUB has been able to reduce the immediate risk factor making the situation safer to allow the family to wait for ICC services.

- Action for Boston Community Development (ABCD). As described in their website, "ABCD is a non-profit human services organization that provides low-income residents in the Greater Boston region with the tools and resources needed to transition from poverty to stability..." NSMHA, through our CBHI sector, provides on-site therapeutic support to the children attending ABCD's afterschool program. We have allocated a Masters level clinician to attend the school setting to observe and then create action plans to address behaviors exhibited by the children attending the afterschool. The NSMHA clinician meets with the ABCD staff on a weekly basis to provide ongoing clinical support on how to best manage these behaviors. Our clinician also meets with the child to provide individual clinical support. We also provide ABCD with a Care Coordinator who conducts weekly parent support groups for the fathers of the children. We utilize this relationship to establish an internal bridge with ABCD. We are aware that ABCD is one of the largest non-profit human services organizations within East Boston whose resources are invaluable for our ICC-Engaged Members.
- Emergency Services. North Suffolk subcontracts with Boston Medical Center to provide emergency services for the metropolitan Boston area (BEST) and the Cambridge and Somerville geography. North Suffolk provides the mobile crisis and other emergency services for youth and their families.

C. Relevance of Partnerships to Projects

North Suffolk's DSRIP plan includes expanded and holistic training on the complex nature of the conditions in which the members and their families often exist. Our community partnerships and collaborations provide a foundation to improve the overall health of the populations through better integrated interventions and an improved understanding of factors related to health. Increasing the number of ICCs available to work with families and partners and improving their knowledge base, as well as improving the sharing of clinical information will support the improvement in health outcomes for individuals and for the population as a whole. Increasing our ICC staff will also improve the overall care coordination experience of our ICC-Engaged Members. Mobile and video technology will provide Care Coordinators with the immediate capacity to connect with individuals and families, health providers, schools, community-based organizations, advocacy groups, trial courts and other entities that may not be connected to the Mass HIway. With the ability to access our community partners immediately without constraints in location, fidelity to the Wraparound process is strengthened in the aspects of care planning, management and coordination.

6.4. Proposed Project(s) and Investment Plan

North Suffolk proposes projects under each of the identified areas: Workforce Development; Operational Infrastructure; Technology. Through our projects, we will foster strong and meaningful integration with ACOs and primary care providers, continue to strengthen fidelity to the Wraparound process, and provide ready access to the CSA supports provided by our teams of Intensive Care Coordinators and Family Partners.

Workforce Development Project

.

Workforce development initiative will include increasing the overall understanding of our staff's ability to use the projected technology projects. Part of providing effective wraparound to families includes the need for staff to understand how to use the available tools that will help them achieve a successful wraparound experience for the families. This means staff needs to be able to understand how to use the Mass HIway and our internal EHR system out in the community to increase the overall care coordination. However understanding and respecting the confidentiality mandates that must be followed.

Staff training efforts will focus on strengthening fidelity to the Wraparound process and enhancing meaningful integration with primary care providers to improve the child and family care experience and the health outcomes of the children engaged in the process. To further strengthen fidelity to Wraparound processes and enhance integration and health outcomes, we will invest time in developing training components that will fortify an ICC's ability to provide high quality care. Onsite training components will include resources designed to teach ICCs about pediatric medical conditions, how to establish a strong working link with an ICC-Engaged Member's ACO and how to promote active participation by the PCP and/or other medical health providers in the member's care planning process. t

As an ongoing effort to improve timely access to ICC services, we will invest some of the funds to retaining our ICC staff that have been trained and are meeting the highest stndards of Wraparound service. The focal point of these funds is to stimulate the *quality* of service an ICC staff member provides to the ICC-Engaged member. This is completely by providing the opportunity for a ICC to earn bonus after their 6 month probation/training period timeslot. In order to qualify for the bonus the ICC staff member must be able to reach a score of 95% on their TOMS rating scales. The Team Observation Measure Version2.0 sheet (TOM 2.0). the TOM 2.0 is an instrument developed by MBHP used to measure the ICC's fidelity to the Wraparound Model. A new ICC will review at least four Tom 2.0 per year. Once the ICC completes the year, they receive two TOM 2.0 per year. The bonus serve a dual process: to stimulate quality of service and encourage ICC to remain with the agency thus improving timely access to service. This is achieved due to the reality that the more ICC staff an agency has on board, the less waitlist times.

A part of our ongoing steps to ensure fidelity to the Wraparound process, we will be providing families annual satisfaction surveys that measure a families overall satisfaction. These markers will be used to tailor training components for Care Coordinators and Family Partners for the purpose of providing feedback to further assist their development.

Phase 1 (Month 1 - 3):

- Develop scoring sheet to be able t measure ICC and FP understanding of available technology (EHR, Mass HiWay, mobile technology)
- k. Begin conversations with union in regards to staff bonuses for quality of care
- Gather first rounds of TOM 2.0
- Finalize interviews with expectation of 3 staff to board by end of month 3

Phase 2 (Month 4 - 7):

- .
- Further strengthen Care Coordinators' ability to integrate with larger entities such as ACOs by developing training and coaching work groups.
- ..
- .

Phase 3 (Month 8 - 10):

- .
- .

Phase 4 (Month 11-12):

- Reconvene Care Coordinator coaching work groups to discuss progress, lessons learned via . training modules to strengthen the interfacing outcomes.

Phase 5 (Years 2-5)

- Assess effectiveness of specific elements of project
- Continue targeted recruitment, as needed, to recruit new staff
- .
- Expand and enhance training .

A4. The proposed outcomes of the project are:

- Hire a total of 6 staff (3ICC/# FP) by the end of prep period 5/31/18 and remain at no less than 70% of budgeted staff capacity for the remainder of the project thus improving timely access to ICC services for children eligible to review ICC services.
- Annual satisfaction surveys collected from consumer, as of launch date 1/2/18, will not dip below 90% of the total satisfaction in our agency's ability to deliver care coordination during the prep period and throughout the remainder of the project.

- Demonstrate a 50% increase in ICC and FPs posttest scotres of understanding how to effectively use the available technology to further strengthen the overall care planning experience for ICC-Engaged Members (i.e. EHR, Mass HIway and mobile technology)
- Retain a minimum of 77% of total budgeted ICC staff by providing ICC, past their 6 month probationary/training period, a monetary bonus for successfully maintaining a 95% score on all TOM 2.0 completed for the year.

A.5. NSMHA's specific use of DSRIP funding is as follows:

- .. Retention bonuses for ICC past their 6 month probationary period who successfully maintaining a 95% score on all TOM 2.0 completed for the year.
- .
- ..

A6. Existing internal resources Bidder plans to use:

North Suffolk will allocate existing staff and build on existing relationships to implement this project. We are prepared to utilize our internal operational infrastructure to support the development, launch and training of staff. Our Information Technology (IT) Department is fully staffed and has expertise in network development and maintenance, IT security management, mobile and desktop devices, hardware and software. We will enlist the assistance of staff with specific expertise based on the element of the project we are implementing. Specifically, our IT staff will train ICCs on how to use the Mass HIway as well as our other proposed projects, including Microsoft Office 365 or comparable software, . and the use of mobile technology. NSMHA will partner with our EHR vendor to support the integration of the Mass HIway into our already existing EHR system.

A7. Explanation of how funds will be allocated across the Bidder's organization and the CSA:

North Suffolk has one CSA site/program. Funds will be allocated to the CSA and all associated revenues will be accounted for within the CSA cost center.

A8. Internal Evaluation, measurement and performance management strategies to demonstrate effectiveness, including plans to collect quantitative and/or qualitative date regarding program activities.

NSMHA will collect and analyze data in the following areas to measure progress and demonstrate effectiveness of the efforts related to this project. Other measures will be added as necessary and appropriate.

- .
- .
- . . Percentage amount of ICC staff that remain past their annual
- Number of ICC hires accomplished.

- Knowledge tests for ICC training .
- Member/family experience satisfaction ratings

Operational Infrastructure Project

North Suffolk will improve and expand our capacity for quality reporting and data analytics and our expertise in using data to drive decision-making and quality improvement initiatives. As part of the DSRIP application, North Suffolk will work closely with our EHR vendor, eHana, to implement data tracking, dashboarding and reporting necessary to support Quality Measure capture, management and submission in a manner consistent with EOHHS requirements. This work may include business analysis, EHR modifications, reporting enhancements and data export integrations for reporting quality measures in a structured format. We will also implement interoperability of the CANS assessment.

Phase 1 (Month 1 -3):

- Review with eHana current capabilities and status of quality measure capture.

Phase 2 (Month 3 - 6):

- Develop measures for tracking, dashboarding and reporting.

Phase 3 (Month 6 -9):

- Identify data elements
- Refine measures
- Develop reports and reporting tools

Phase 4 (Month 10-12):

- Implement
- Review and refine measures, reporting tools, and reports

Phase 5 (Years 2-5)

- Assess effectiveness of specific elements of project
- Continue to develop reports and reporting tools
- Continue to develop quality measures demonstrating effectiveness

A4. The proposed outcome of the project

The proposed outcome of this project is a robust capacity to capture quality measures and the management and submission of reports of those measures consistent with EOHHS requirements.

- Increase our MA WFI-4 Principal 10:Outcome based score from 64% to the State Mean 5 of 69
- Maintain at least 70% participation in the Engaged Enrollee Experience Survey
- ICC will offer "date of Initial Appointment" no more than 3 days after initial call of at least 90% of the time
- ICC will enroll families into service no more than 7 days after the initial phone call of at least 855 of the time.

A.5. NSMHA's specific use of DSRIP funding is as follows:

- Upgrade our current EHR system and other data systems to ensure the capacity to capture and report on relevant measures. Implementation of this project may include technology licensing, project management, training, and support. Connection to the Mass HIway (part of the Technology Project) will provide our CSA the capacity to prepare and share information and reports internally and also to share securely with ACOs, MCOs and EOHHS and other pediatric and/or behavioral health practices connected to the Mass HIway.
- Purchase mobile devices for Care Coordinators and Family Partners for real time data input. This will provide Care Coordinators immediate access to the Mass HIway while in the community as well as access to their secured Microsoft Outlook email accounts and will result in improved integrity of data, enhanced integration efforts and stronger fidelity to the Wraparound process.
- Implement interoperability of the CANS assessment with our EHR vendor, eHana. North Suffolk anticipates utilizing functionality when it is deployed. This will enable more efficient data collection and reporting, with a small support overhead since the CANS will be completed within our EHR. This part of the project will include software licensing, project management and training.

A6. Existing internal resources Bidder plans to use:

North Suffolk will allocate existing staff and build on existing relationships to implement this project. We are prepared to utilize our internal operational infrastructure (i.e. IT workforce) to support the development, launch and training of staff on how to use the Mass HIway as well as our other proposed projects, including Microsoft Office 365, the web-based library and the use of mobile technology. NSMHA will partner with our EHR vendor to support the integration of the Mass HIway into our already existing EHR system.

A7. Explanation of how funds will be allocated across the Bidder's organization and the CSA:

North Suffolk has one CSA site/program. Funds will be allocated to the CSA and all associated revenues will be accounted for within the CSA cost center.

A8. Internal Evaluation, measurement and performance management strategies to demonstrate effectiveness, including plans to collect quantitative and/or qualitative date regarding program activities.

Quality and accountability measures technology will support:

- Claims/Encounter Only Measures. North Suffolk will work with eHana to automate, where possible, the import/collection of quality data (including, for example, data supplied by EOHHS). Where possible, North Suffolk will work with EOHHS, ACOs, MCOs, other health care providers, and community stakeholders to build data interchanges to support real-time quality analytics.
- Chart Review Measures. North Suffolk will use existing tools and technologies such as login audits, encrypted PDF exports, and data analytics to support submission of the Quality Measures Report to EOHHS and to provide access to additional data or information necessary to audit or validate submitted data.
- Engaged Enrollees Experience Survey. North Suffolk will support EOHHS in the implementation of the Engaged Enrollee Experience Survey and will actively encourage members and families to participate.

Technology Project

To develop and enhance integration with ACOs and primary care providers, we will utilize DSRIP funding to build upon our already existing technology. By purchasing laptops, tablets and smartphones for Care Coordinators, we will increase the Care Coordinators' capacity to interface immediately with ACOs and primary care providers while out in the community.

We also will utilize DSRIP funds to connect to the Mass HIway in order to share information securely. This endeavor is supported by our EHR vendor, eHana, and will include technical onboarding, project management, and training. We will expand our use of Microsoft Office 365 to provide Care Coordinators the capacity to access various providers at the same time during a care planning meeting thus targeting not only integration with ACOs but also strengthening fidelity to Wraparound processes specifically during the care planning process.

A3. The startup scope of the project is as outlined:

Phase 1 (Month 1 - 4):

- Invest in technology supports to support the increased integration demanded of the project by upgrading our current EHR system to connect to the Mass HIway. This will include technical onboarding, project management, and training.
- Invest in mobile technology to increase Care Coordinators ability to interface efficiently. Purchase smart phones and laptops for all current and budgeted Care Coordinators and

provide training on how to effectively utilize the mobile technology to support the interfacing endeavor.

Phase 2 (Month 5 - 8):

- Invest in Microsoft Office 365 or comparable software.
- Train staff on how to utilize system.

Phase 3 (Month 9 - 12):

- Continue to work with our EHR vendor to problem solve any issues concerning the integration to the Mass HIway.

Phase 4 (Years 2-5)

- Assess effectiveness of specific elements of project
- Explore additional technology advancements and enhancements to improve coordination, integration and outcomes

A4. The proposed outcomes of the project are:

- Our score for Principal 2: team based withih the MA Wraparound Fideltity Assessment (TOM 2.0) for year 2018 will increase from 71% to 83%
- Increase PCP or designee participation at actual care plan meetings to at least 50% via use of video/mobile devices
- . Foste stronger intergration with our ACOs by conducting 1x per month reviews with ACOs via use of video/mobile devices
- . Purchase mobile devices (30 I-phones, 15 laptops) for Care Coordaintor and family Partners for real time data imput (Mass HiWay, EHR)

A.5. NSMHA's specific use of DSRIP funding is as follows:

- Upgrade our current EHR system to connect to Mass HIway. Implementation of this project includes technology licensing, project management, training, and support. Connection to the Mass HIway will provide our CSA the ability to share information securely with an ICC-Engaged Member's ACOs and other pediatric and/or behavioral health practices connected to the Mass HIway. Thus this particular use of funding will foster a stronger integration with said providers.
- Purchase mobile devices for Care Coordinators and Family Partners, providing Care Coordinators immediate access to the Mass HIway while in the community as well as access to their secured Microsoft Outlook email accounts. This real time capacity to connect will support integration efforts and will strengthen fidelity to the Wraparound process as Care Coordinators will have the available avenues to connect with providers to ensure they are integrated into the planning and care of the ICC member and their family.

- Purchase smartphones for Care Coordinators and Family Partners which will allow a Care Coordinator to immediately respond to a crisis, improving the care management, care coordination and care experience process for an ICC-Engaged Member.
- Purchase Microsoft Office 365 or comparable software that will ensure the virtual (video) presence of providers during the care planning process thus improving integration and Wraparound processes.

A6. Existing internal resources Bidder plans to use:

North Suffolk will allocate existing staff and build on existing relationships to implement this project. We are prepared to utilize our internal operational infrastructure (i.e. IT workforce) to support the development, launch and training of staff on how to use the Mass HIway as well as our other proposed projects, including Microsoft Office 365, the web-based library and the use of mobile technology. NSMHA will partner with our EHR vendor to support the integration of the Mass HIway into our already existing EHR system.

A7. Explanation of how funds will be allocated across the Bidder's organization and the CSA:

North Suffolk has one CSA site/program. Funds will be allocated to the CSA and all associated revenues will be accounted for within the CSA cost center.

A8. Internal Evaluation, measurement and performance management strategies to demonstrate effectiveness, including plans to collect quantitative and/or qualitative date regarding program activities.

NSMHA has substantial demonstrated experience successfully managing implementation, deployment, and support of electronic health records and other electronic means of tracking and using data to guide decision making and quality improvement. Our EHR vendor, eHana's Software-as-a-Service (SaaS) EHR, which is certified Meaningful Use Complete by Drummond Group (Certification Number 14.04.04.2594.eHan.16.0.1.160728) has been deployed in community-based provider organizations throughout Massachusetts. Our CSA implemented the electronic record in 2016. As part of this project, we will implement additional functionality within our EHR to manage and track services delivered, referred, and coordinated within our CSA and associated programs. We have already deployed our EHR technology in multiple sites and we have a strong record of success with technology adoption in similar programs. The ONC-Certified version of the eHana EHR includes features and functionality intended to support integrated and collaborative models of care, including Patient Portal functionality, Standardized data exchange formats (including Clinical Document Architecture (CDA) support), Transmission via DIRECT Health Information Service Provider (HISP) to the Mass HIway or other partners, Clinical Quality Measure and Automated Measure reporting and Patient Educational Resource sharing and tracking. These features support EOHHS's goal of developing secure mechanisms to support data exchange not only with EOHHS and payers, but with the ICC-Engaged Members themselves. By way of example, comprehensive assessments, Individual Care Plans, and other information intended to support transitions of care could be shared via the Patient Portal or transmitted electronically via the Mass HIway. As part of the DSRIP application, we will work

closely with our EHR vendor, eHana, to implement data tracking, dashboarding, and reporting necessary to support Quality Measure capture, management, and submission in a manner consistent with EOHHS requirements. This work may include business process analysis, EHR modifications, reporting enhancements, and data export integrations (for reporting quality measures in a structure format). NSMHA will work with eHana EHR to automate, where possible, the import/collection of quality data (including, for example, data supplied by EOHHS). Where possible, we will work with EOHHS, ACOs, MCOs, other health care providers, and community stakeholders to build data interchanges to support real-time quality analytics.

B1. An organizational chart of the Bidder (as attachment).

NSMHA's current organizational chart is located in Attachment A.

B2. The following is a list of staff that will be involved in the execution of the proposed projects. This will be the core team for the planning, implementation and management of each of the proposed projects is highlighted with all others working on each project as their talents and expertise and project needs dictate. Ms. Lemoine has the authority to approve project plans, assign elements of the projects, and allocate resources, including additional resources, as needed.

Judi Lemoine, RN BSN – Chief Operating Officer - As the COO, Ms. Lemoine is responsible for all administrative and related activities including management of the human, fiscal, physical, and community resources necessary to ensure that service programs are planned and managed to the highest standards of the industry. Ms. Lemoine has worked for North Suffolk for more than 25 years.

Esmeralda Porto, LICSW - Director of Community Based Services - Ms. Porto was the Director of the NSMHA CSA for three (3) years prior to assuming her current role in June 2017. Prior to assuming the role of Director of CSA, Ms. Porto worked in the field as a Care Coordinator for four (4) years.

Hanying Pu, LMHC - Director of the Community Service Agency - Ms. Pu was employed as a Care Coordinator for five (5) years before assuming the Director of the CSA role.

Julio Vazquez – Chief Information Officer - Mr. Vazquez has coordinated all technology infrastructure projects for NSMHA since joining North Suffolk in 2000.

Yovanny Reinoso – Director of Applications & Data Management – Mr. Reinoso has managed various operational infrastructure and implementation projects such as the implementation of our electronic records and the implementation of our electronic timekeeping system, Kronos.

Kang Zheng – EHR Application Support Specialist – Under the direction of the Director of Applications & Data Management, Mr. Zheng is the liaison for our current EHR system. He is responsible for providing solutions to all problem-based issues staff experience that involves our EHR system, eHana.

Edward Ojeikere - IT Support Specialist - Currently Mr. Ojeikere is responsible for the day-to-day operations of all of NSMHA telephone access and connectivity.

Jason Romero – Director of Human Resources – Mr. Romero coordinates various marketing projects for NSMHA to increase recruitment efforts.

Deb Snow, CHC - Director of Compliance and Quality Management – Ms. Snow and her team ensure compliance with HIPAA and other applicable privacy and security laws and regulations, oversee the organization's Human Rights program, work with all departments on quality measures, data analysis and quality improvement efforts, and manage the organization's risk data base.

B3. Any staff the Bidder proposes to hire or engage to be involved in the project.

At this point, North Suffolk plans to allocate existing staff to the management and implementation of these projects.

B4. The following is list of the roles and responsibility of NSMHA Project Team:

Judi Lemoine – Chief Operating Officer. The Chief Operating Officer will provide management oversight of the required accountability to ensure that goals outlined by MassHealth and EOHHS for application of the DSRIP funding are met.

Esmeralda Porto, LICSW - Director of Community Based Services. Under the leadership of the Chief Operating Officer, the Director of Community Based Services will be responsible for ensuring that the proposed outcomes outlined in Section 6.4-A.4. are achieved. Under the direction of the Chief Operating Officer, the Director of Community Based Services will also drive the implementation of the project within the CSA department via the Director of the Community Service Agency.

Hanying Pu, LMHC - Director of the Community Service Agency. Under the direction of the Director of Community Based Services, Ms. Pu will oversee the direct training of the Care Coordinators to further strengthen and develop their ability to interface with physical health, behavioral health, long–term services and supports and health-related social services. She will work closely with the Director of Community Based Services and NSMHA's IT workforce involved in the project to learn the new technology and software being launched in order to support the CSA with their development.

Julio Vazquez – Chief Information Officer. Mr. Vazquez' responsibility will include organizing NSMHA's IT workforce to be able to meet the timelines outlined within the scope of the project.

Yovanny Reinoso – Director of Applications & Data Management. Under the direction of the Chief Information Officer, Mr. Reinoso will be responsible for the creation and execution of the web-based library and collaborating with our current EHR vendor for connections to the Mass HIway.

Kang Zheng – EHR Application Support Specialist. Under the direction of Director of Applications & Data Management, Mr. Zheng will be responsible for staff trainings on the use of the Mass HIway via our EHR system.

Edward Ojeikere - IT Support Specialist. Under the director of the Chief Information Officer, Mr. Ojeikere will be responsible for the execution of Microsoft Office 365 or comparable system as well as training the Director of Community Based Services and the Director of the Community Service Agency on how to use the system so they in turn are able to train the CSA staff.

Jason Romero – Director of Human Resources. As director of our Human Resources Department, Mr. Romero will be responsible for connecting with Bayard for the creation and execution of the purposed landing page and overseeing the MBTA campaign launch as outlined in the project description.

Deb Snow, CHC - Director of Compliance and Quality Management. The Director of Compliance and Quality Management will work closely with our IT department and our EHR vendor, eHana, to ensure data sharing between NSMHA CSA and ICC-Engaged Member's ACOs, primary care, physical, behavioral health providers meet compliance standards according to HIPAA and other applicable privacy and security laws and regulations. In addition, Ms. Snow and her staff will assist with the development of quality and outcome measures and reporting.

The Project Team will meet on a monthly basis to ensure that efforts are coordinated among the staff and not duplicated. NSMHA will use these monthly meetings to strategize next steps, review progress and accountability on tasks created and problem solve any barriers faced during the process.

B5. Under the direction of the Chief Operating Officer, the Director of Community Based Services will oversee the management of this project. The Director of Community Based Services will ensure the tasks assigned during internal monthly meetings are being met and that target dates are being achieved as planned. The Director of Community Based Services will also coordinate with the Project Team members to strategize the momentum towards the EOHHS's vision of use of the DSRIP funds.

C. **Implementation Plan and Timeline**.

August, 2017

- Award notification.
- Develop necessary agreements.
- Notify and initiate meetings with ACOs.

September – November 2017. Design and planning

December, 2017 – February, 2018.

- Design and planning.
- Develop sharing via Mass HIway

March 2018.

- Installation
- Training for CSA ICC staff
- Work with ACOs and affiliated PCCs to share information via Mass HIway
- Initial purchase of mobile devices

April – June 2018

- Second round of purchase of mobile devices.
- Share care plans with PCCs

July 2018

- Generate aggregated reports

August – December 2018 (and beyond)

- Continued implementation
- Problem-solving
- Reporting and information sharing with PCCs, ACOs and MCOs

D. Budget Report and Budget Narrative:

The budget documents can be found at Attachment B (Budget) and Attachment C (Budget Narrative).

E. Sustainability:

North Suffolk understands that the DSRIP funding for the CSA is designed decrease over the course of the five year contract. We intend to work actively and diligently with our ACO partners to ensure a transition that sustains and supports the infrastructure, the model of integrated care coordination and care planning, and the positive health outcomes we expect to achieve.

We anticipate that the state will complete its move to an alternative payment methodology for all CSAs resulting in increased efficiencies of documentation, enhanced effectiveness of staff and improved retention of care coordination staff. To the extent other alternative payment

methodologies are implemented, the administrative burden associated with current mechanisms may be reduced and allow for redirection to support sustainability.

We anticipate that we will be serving a larger number of children and families as a result of increased communication, connection and integration with primary care practitioners. An increase in our volume (presuming a sufficient reimbursement rate) will result in increased internal resources and administrative allocation to support maintenance costs associated with any software and devices purchased.

The Behavioral Health Community Partner concept is built on the assumption that Community Partners will be able to demonstrate their value to their ACO partners by integrating into the service system in such a way that its members experience accessible, seamless and competent care that results in improved health and reduced overall cost. As we are able to participate more fully as partners in the goal of improved population health and reduced overall cost and demonstrate the effectiveness of our part of the integration effort, it would be our goal to also participate in the risk sharing and incentives built into the system long term.

6.5 Coordination with ACOs, MCOs and Primary Care Providers

A. Bi-directional communication. Currently, our CSA relies heavily on fax, voicemail and secured emails to remain connected with pediatric practices. In our experience, the most reliable form of communication has been the fax. This may be due in part to pediatric practices' use of their frontline office personnel to cover communication and in part to the minimal amount of time it takes to use. For example, the return rate for the Combined MCE Behavioral Health Provider/Primary Care Provider Communication Form, a communication form created by the MCEs to facilitate communication between an ICC and an ICC-Engaged Member's PCP, is much higher than the response rate for a PCP's attendance to a care plan meeting. Communication via fax is not the most effective mechanism when dealing with time sensitive information. The overall vision is to move away from the current archaic standard to a more effective and innovative system. The implementation of the Mass HIway will move our CSA closer to this vision. The timely sharing of information can be achieved using this tool and Care Coordinators will also having immediate access to health care providers to share relevant information in regards to the ICC-Engaged Member's treatment planning. This will increase bidirectional communication between the ICC and health care providers and will also assist encouraging the integration of healthcare providers into the care planning process for the ICC-Engaged Member.

For smaller pediatric practices that may not be connected to the MassHIway, NSMHA will work with these practices to build practical methods to support interfacing efforts. As outlined in Section 6.2, NSMHA is prepared to provide members of an ICC-Engaged Member's Care Team not employed by NSMHA or other external community providers, limited access to the enrollee's electronic care management record. This access will be restricted to the minimum necessary level based on demonstrated need for information. We will continue to comply with HIPAA "Minimum Necessary" requirements that restrict the release of unnecessary access to, or disclosure of, protected health information. When interfacing with smaller pediatric and behavioral health practices, NSMHA will evaluate each individual and their roles to determine who requires access to the record and the parameters of that access. Care Plan Team members with appropriate roles and access rights may be granted access to the enrollee's complete record, while others may be restricted to a more limited information set. Creative use of our current EHR will not only increase bidirectional communication between the CSA and smaller pediatric practices but will meet the EOHHS's vision of creating stronger and more meaningful integration between providers for ICC-Engaged Members.

Other standardized practices include building a direct face-to-face relationship with the smaller pediatric practices. Smaller pediatric practices typically have fewer office personnel so that it is often effective to develop a relationship with that one person and/or frontline office staff that has a direct link with that pediatric provider. Establishing a working relationship with those key personnel and creating monthly meetings with them, is another useful tool in streamlining this endeavor with smaller pediatric practices not connected to the Mass HIway.

B. Referral management. The CSA Program Manager will ensure the development of and adherence to referral management protocols and will oversee follow-up and information sharing

practices. NSMHA will work closely with our current EHR vendor, eHana, to develop forms, workflows, processes, reports, and data extracts that will assist in reporting, collaboration and coordination with ACOs, MCOs, and primary and pediatric care practitioners. Currently eHana EHR is able to provide centralized tracking and reporting of enrollment and admissions as well as inpatient admissions, incarceration, homelessness events, and other life events. eHana EHR also features a built-in-library of reports that can be accessed to provide advanced analytics. This option can be utilized to isolate numbers to assist the CSA in identifying which pediatric practices are commonly used by NSMHA's ICC-Engaged Members. NSMHA can then use these data to invest time and resources to establishing stronger links with those specific pediatric practices.

With regard to information sharing among ACOs, MCOs, and primary and pediatric care practices, NSMHA is committed to the secure exchange of data and compliance with HIPAA and other applicable privacy and security laws and regulations. Approaches to supporting secure exchange of data include:

(a) **Authentication**. NSMHA uses industry-standard best practices to ensure authentication of both Care Management/EHR system access (via username and password, with required complexity rules, reset timelines, and auto-logoff) and automated data exchange (using certificate-managed XDR/SMTP, trust anchors, and other mechanisms as appropriate).

(b) **Encryption**. NSMHA currently leverages robust encryption technology to secure all transmissions of Protected Health Information, including both symmetric and asymmetric Public Key Infrastructure techniques such as Secure Sockets Layer.

(c) **Integrity**. Where possible, NSMHA utilizes hashing and other technologies to ensure message integrity in transit. The Direct Project standard, for example, with which eHana EHR complies, mandates that message integrity be protected using industry-standard SHA hashing techniques.

C. Team-based treatment planning. NSMHA will utilize technology and software outline in Section 6.4 - A.5. to improve Team-based treatment planning in collaboration with pediatric practices as follows:

1. NSMHA will utilize Microsoft Office 365 (or comparable software) technology with video capability to increase the likelihood of pediatric provider's ability to attend a care planning meeting virtually, if not in person. With this software NSMHA can provide a PCP an opportunity to engage in the care planning process without having to leave their offices thus increasing the possibility of pediatric provider involvement in the care planning process. We will also strive to schedule care planning meetings at times most convenient for provider partners.

2. NSMHA will use the Mass HIway as a secure avenue of information exchange between the CSA and pediatric practices. For smaller pediatric practices not connected to the Mass HIway, NSMHA is prepared to provide ICC-Engaged Member's PCP limited access to the enrollee's electronic care management record. This access will be restricted

to the minimum necessary level based on demonstrated need for information for the sole purpose of improving ICC-Engaged Member's PCP ability to collaborate fully in the care planning process.

3. NSMHA will utilize eHana EHR built-in-library feature to identify commonly utilized pediatric care providers by NSMHA ICC-Engaged Members. NSMHA will then invest resources to establish stronger links with the identified pediatric providers to improve Team-based treatment planning.

D. Timely access to ICC services. We are committed to improving timely access to ICC services by substantially increasing the size of our current CSA workforce. Timely access to ICC services is directly related to the CSA's ability to meet the demand of the service. NSMHA will continue to utilize its current use of its external advertising sources (i.e. Monster, Indeed, etc.) and will invest in innovative marketing strategies such as landing pages and MBTA advertising campaigns that will target qualified candidates.

E. Connections to social services. NSMHA will continue to rely on our CSA's well-established relationships within our community to maintain connections to social services. This includes:

1. Continued support for the monthly on-site visits by Metro Boston DMH Liaison. NSMHA will leverage these meetings to connect ICC-Engaged Members to DMH services, if needed.

2. Continued support for the CSA's monthly consultation with the Harbor Area DCF office. The monthly consultation has created a direct pipeline of communication between NSMHA CSA and the Harbor Area DCF office where ICC-Engaged Members involved with DCF can be discussed.

3. Continued support of the CSA's System of Care Committee (SOCC) meeting. NSMHA will utilize the SOCC meetings as an avenue to remain connected with the community's various social services who regularly attend. As outlined in the CSA Program Description and Operations Manual the SOCC is a "cross-system, coordinated network of services and supports organized to address the complex and changing needs of youth and families." The SOCC is hosted by the Director of the CSA and is held on a monthly basis. Active social service participants include the Chelsea District Probation Office, Harbor Area DCF, DMH Metro Boston and Department of Youth Services.

CSA Budget Report

Riverside Community Care, Inc.

Investment Funding	Prep Budget Period - 1/2/18-5/31/18	Budget Year 1 - 6/1/18-12/31/18	Budget Year 2 - 1/1/19-12/31/19	Budget Year 3 - 1/1/20-12/31/20	Budget Year 4 - 1/1/21-12/31/21	Budget Year 5 - 1/1/22-12/31/22	Total Revenues

CSA Budget Report - Budget Narrative Prep Budget Period

CSA Budget Report - Technology - Prep Budget Period

Only complete this Infrastructure Budget Narrative using amounts anticipated for PBP.
Lines may be added to the Infrastructure Budget Narrative tables as necessary

Project 1 Name: Information Technology

DSRIP Project Goal(s):
1 *(1) Fostering strong integration with ACOs and primary care providers for ICC-E*
2 *(2) Strengthening fidelity to Wraparound processes, including the care planning*
3 *Optional*

IT Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
CIO	$ 174,990.40	0.1268772	5	$ 9,251
				$ -
				$ -
				$ -
				$ -
				$ -
	Total Salary	0.1268772		$ 9,251
	Fringe rate	21.0%	Total Fringe	$ 1,939
			Total IT Staffing including Fringe	**$ 11,190**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in executing activities related to the project.
Riverside's CIO, Charley O'Neill will be responsible for overseeing project and for hiring/overseeing consultant. Included in this amount is 24 hours/month of his time. Charley has 35 years of experience developing Enterprise Application Systems both as a user and a vendor. He brings 9 years of direct experience in the development and deployment of the MDMI data exchange Standard. His experience coupled with the expertise of a consultant will assist in the successful implementation of care management software applicable to the CSA and/or development of electronic exchange with non-ACO based providers such as independent PCPs, other Behavioral Health agencies, and other key providers, and establishing the client consent methodologies required. The implementing of care management software and establishing exchange connections is critical in providing high fidelity wraparound services and allows for strong integration with ACO's, primary care providers and other providers for ICC-engaged members.

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
IT Project management consultation	$ 69,152.00
Total Development and Adaptation of EHR and Care Management System	**$ 69,152.00**

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:
A consultant hired by our CIO will have expertise that will assist in the successful implementation of care management software applicable to the CSA and/or development of electronic exchange with non-ACO based providers such as independent PCPs, other Behavioral Health agencies, and other key providers, and establishing the client consent methodologies required. The implementing of care management software and establishing exchange connections is critical in providing high fidelity wraparound services and allows for strong integration with ACO's, primary care providers and other providers for ICC-engaged members. The $69,152 allocation will be distributed equally between each CSA and will be utilized in one of two ways: for extended integration of Providers (beyond those who we will integrate through our BH CP project) and/or for establishing an electronic care management record for use by our two CSA programs. We are likely to utilize some of this funding for each of these projects.
The cost of extending integration to Providers relevant for the CSA would be achieved as follows:
Each EMR integration will require 50 hours of planning, development, and testing by the consultant company. At $90.00 per hour, each integration will cost $4,500.
The $69k will cover the addition of 15 additional EMR types. Note that each type might be used by multiple providers, meaning that the total connectivity obtained will be greater than the 15.
As noted above, we are also considering using some of this money to capture CSA programs within an electronic care management solution, either *Evolv* or *Care Navigator*. Funding of Care Navigator or for adapting Evolv for CSA specific requirements will reduce the number of EMR

Technology for Service Delivery

Description of Expense	Cost
Computer equipment for 35 Staff	$ 75,250.00
5 printers	$ 500.00
Total Technology for Service Delivery	**$ 75,750.00**

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:
$75,250.00 is budgeted for investment in computer equipment to allow us to supply 35 (17 to our Cambridge CSA and 18 to our Arlington CSA)of our CSA employees with state of the art mobile technology, equipped with our cloud-hosted EHR, MyEvolv from Netsmart Technologies or other software as may be determined. At approximately $2,150 per equipment set-up with currently available pricing, it will include a Dell Latitude E5470, Hotspot, antenna, signature pad, printer for printing in field sites, wireless keyboard and remote mouse, and carrying bag, as well as desktop monitors, docking stations, access to the MyEvolv EHR, access to a common networked shared drive and access to all standard Riverside employee related administrative applications.

Another $500 will purchase 5 small wireless printers that will alllow staff to print documentation in the field for families and providers. This will be particulary useful for staff to have the ability to print materials during Care Planning Meetings. 2 printers will be purchased for our Cambridge CSA and 3 printers will be purchased for our larger Arlington CSA program. Having the appropritate technology available is critical in providing high fidelity Wraparound services. Having quicker means of connection with providers and immediate access to documentation is vital and meets both goals for this project.

Dr. Tyrone Williams will be providing consultation to both CSA sites. This consultation will be different from what our current psychiatry consultation entails. It will focus specifically on medical issues such as interactions between chronic medical conditions and psychiatric conditions, chronic pain management, eating disorders, and coaching and assisting staff to better coordinate with pediatricians and medical specialists etc. During this prep period, the psychiatrist will utilize some of the consultation time for meeting with managers for planning purposes for the ongoing program consultation. Estimated 29 hours during a five month period at $100/hr
Dr. Williams will meet with each CSA for 14.5 hours during the prep period.
2.5 hours will be dedicated to each CSA in month one for Dr. Williams to meet with Program Directors and management staff to determine the needs of the individual teams. 3 hours of consultation will be dedicated in months 2-5 for each CSA (12 hours each).

CSA Budget Report - Indirect Cost/Administrative Overhead- Prep Budget Period

Indirect Cost/Administrative Overhead Rate: **$ 17,060.00**

Provide a brief description of how the Indirect Cost/Administrative Overhead rate was determined:

The rate is Riverside's FY18 budgeted general and administrative overhead/indirect cost rate applied consistently across all Riverside programs*:*

Attachment C: CSA Budget Narrative

Budget Expenses:

(Investment narrative should only include investments listed in the Budget Report provided on Attachment B. Please provide separate descriptions of budget allocations for each project)

Workforce Development **Total:** $161,087

In the box below, please provide a description of all items within the Workforce Development investment category (e.g. recruitment support, training and coaching programs and certifications). Please be sure to specify the goals and project(s) this investment will support, as described in **Section 3.4** and **Section 6** of the RFR and how these investments will assist in meeting the terms of the Contract.

Prep Budget Workforce Development Investments:

N/A

Year 1 Budget Workforce Development Investments: $44,409

In budget year 1, we plan to utilize $37,989 to support the workforce in both of our CSAs to achieve High Fidelity Wrap Around Certification. We intend to provide a $500 stipend for staff who complete Tier I Certification (estimated to be 14 staff in our Somerville based CSA and 19 in our Needham based CSA) and $1000 stipend for staff who complete both Tier I and Tier II (estimated to be 5 staff per site). To accomplish this we have budgeted $6,000 as stipend for a Riverside employee who is a State Wraparound Coach and Certified Trainer and $1,000 stipends to support 3 staff becoming certified coaches to support sustainability of training into future periods. We have budgeted $2,988 to cover payroll tax on these payments to staff.

We will use $531.50 to purchase 2 copies each of VVDB's The Foundations of High Fidelity Wraparound: The Wraparound Facilitator Textbook and the Family Support Partner Textbook and $156.30 for 2 copies of VVDB's Coaching High Fidelity Wraparound: The Wraparound Coach and Trainer Textbook. Each CSA already has a copy of VVDB's training DVD, High Fidelity Wraparound: Mariam's Family, which accompanies the workbooks. However, in order for 2 groups to train simultaneously, each CSA will need to purchase an additional set at a total cost of $1500. An additional $32 is set aside for any shipping costs attached to ordering the training materials.

We also have budgeted $4200 to enable a total of 3 program managers/supervisors chosen from each CSA to attend the annual Wraparound Initiative Implementation Academy Conference.

Years 2-5 Budget Workforce Development Investments: $116,678

In budget period 2 we plan to continue providing stipends for additional staff to complete Tier I and Tier II Wraparound Certifications as explained in budget period 1 above and have budgeted $24,955 for this use, including $23,000 in stipends and $1,955 in payroll taxes. In budget period 3 this amount is $4,000 for stipends and $342 in taxes. Budget 4 is $5,500 for stipends and $468 in taxes, and in budget period 5 they are $3,000 for stipends and $255 in taxes. We assume that by this time both CSAs will have all staff trained and certified.

Additionally in budget period 2, $8400 is budgeted for three program managers/supervisors from each CSA to attend the annual National Wraparound Initiative Implementation Academy Conference to strengthen our ability to support fidelity to the model. $5600 is budgeted to support one staff from each CSA to complete the UMASS intensive online Motivational Interviewing course. An additional $5,854 is budgeted in budget period 2 for other training purposes that may include Trauma Informed Care, Mindfulness, conflict resolution and/or Supervision techniques.

In budget period 3 $4,054 is budgeted for other training purposes as described, $7,000 is budgeted to enable a total of 5 program managers/supervisors chosen from each CSA to attend the annual Wraparound Initiative Implementation Academy Conference to strengthen our ability to support fidelity to the model, and $22,400 is budgeted to support 4 staff from each CSA to complete the UMASS intensive online Motivational Interviewing course.

In budget year 4, $1051 is budgeted for additional training as described and $7,000 is budgeted to enable a total of 5

program managers/supervisors chosen from each CSA to attend the annual Wraparound Initiative Implementation Academy Conference. Additionally, $11,200 is budgeted to support 2 staff from each CSA to complete the UMASS intensive online Motivational Interviewing course.

In budget year 5, $5,600 is budgeted for two program managers/supervisors from each CSA to attend the annual Wraparound Initiative Implementation Academy conference.

Operational Infrastructure **Total: $** 48,858

In the box below, please provide a description of all items within the Operational Infrastructure investment category (e.g. system change resources, performance management capabilities and additional operational support). Please be sure to specify the goals and project(s) this investment will support, as described in **Section 3.4** and **Section 6** of the RFR and document how these investments will assist in meeting the terms of the contract.

Prep Budget-Operational Infrastructure Investments: $2,900

Beginning in this period, $2,900 is dedicated to adding additional consultation from a child psychiatrist to work with both of Riverside's CSAs (currently at the rate of $100/hour and to be negotiated in future years). This consultation will be different from what our current psychiatry consultation entails. It will focus specifically on medical issues such as interactions between chronic medical conditions and psychiatric conditions, chronic pain management, eating disorders, and coaching and assisting staff to better coordinate with pediatricians and medical specialists etc. During this prep period, the psychiatrist will utilize some of the consultation time for meeting with managers for planning purposes for the ongoing program consultation. This consultation is in addition to and differs from the psychiatric medication consultation that already occurs at both CSAs.

Year 1 Budget-Operational Infrastructure Investments: $4,100

As noted above, $4,100 will be dedicated to consultation time from a child psychiatrist to focus on existing chronic medical conditions and how they my impact the mental health of clients and their families. This consultation will focus on the comorbidity of medical conditions and mental health disorders and how the team can support the family with issues of medication adjustments, compliance, etc. The consultant will also be able to answer specific questions related to these topics. Additionally, the consultant will support improved coordination with pediatricians and medical specialists by answering any specific questions that are related to the healthcare system. While staff will be trained in this area, having ongoing, in the moment support will be critical. This consultation is in addition to and differs from the psychiatric medication consultation that already occurs at both CSA's. Additionally, there will be an estimated 3% escalation per budget year reflected to cover potential increase in cost per hour in upcoming budget periods.

Years 2-5 Budget-Operational Infrastructure Investments:$36,858

The following amounts will be dedicated to consultation time from a child psychiatrist as described in budget year one. Each year includes a 3% escalation from previous budget period to reflect potential increase in cost per hour.
budget period 2, $7210
budget period 3, $7,426
budget period 4, $7,649
budget period 5, $7,878

Beginning in budget period 2 we intend to add a nurse/nutrition consultant to provide consultation for staff to learn more about the mind/body/nutrition connection and its relationship to mental health and chronic disease and how to talk to families about these issues when coordinating care. This is budgeted at $1,600 per year allowing for approximately two 2 hour consultations per quarter at each of our two CSAs. There will be an estimated 3% escalation per budget year reflected to cover potential increase in cost per hour in upcoming budget periods.

Technology **Total:** $232,398

In the box below, please provide a description of all line items within the Technology investment category (e.g. Health Information Technology and care management software, IT project management resources, data analytics capabilities, ICC

service delivery technology). Please specify the goals and project(s) this investment will support, as described in Section 3.4 and Section 6 of the RFR and explain how these investments will support the Contractor's performance of the Contract.

Prep Budget-Technology Investments: $156,092

$75,750 is budgeted for investment in computer equipment to allow us to supply 35 of our CSA employees in our two CSAs with state of the art mobile technology, equipped with our cloud-hosted EHR, MyEvolv from Netsmart Technologies or other software as may be determined. At approximately $2,150 per equipment set-up with currently available pricing, it will include a Dell Latitude E5470, Hotspot, antenna, signature pad, printer for printing in field sites, wireless keyboard and remote mouse, and carrying bag, as well as desktop monitors, docking stations, access to the MyEvolv EHR, access to a common networked shared drive and access to all standard Riverside employee related administrative applications.

We are budgeting a total of $80,342 in the prep budget period for IT project management to help us develop the ability to electronically exchange client information with other providers with whom the children/families are involved. This CSA project will be able to leverage external exchange capabilities with Massachusetts Accountable Care Organizations (ACO's) which is partially funded by Riverside's BHCP to establish data flows between Riverside and non-ACO providers involved with CSA families. The Prep Period funding will be spent on implementing care management software applicable to the CSA and/or developing electronic exchange with non-ACO based providers such as independent PCPs, other Behavioral Health agencies, and other key providers, and establishing the client consent methodologies required. Money will be spent creating MDMI links and managing their testing and implementation. $69,152 of this money will be dedicated to the cost of hiring a consultant and the cost of implementing these data exchange connections and/or care management software suitable for the CSA. The consultant will be responsible for building on work we expect to do to connect our proposed BH CP to the ACOs, and will focus on enabling our CSAs to electronically exchange data with non-ACO entities such as PCPs, other BH providers, etc. and to develop programming that will be uniquely required for the CSAs. We expect that some portion of this consultation funding may be subcontracted to MDIX, Inc. who are MDMI (Model Driven Message Interoperability open data exchange) experts. SAMHSA is leading a coordinated effort to deploy MDMI as part of their comprehensive Omnibus Care Coordination (OCC) package and Riverside is collaborating with SAMHSA to ensure that OCC meets the data exchange requirements of the BH community. Ultimately, this may be a lower cost means of electronically connecting between entities than is currently available through vendors. We expect that consultants will establish some initial "maps" between our CSAs and non-ACO entities and will begin to teach our IT Department how to do this so that we can eventually complete additions in-house. Additionally, $11,190 is budgeted for a portion of our CIO's salary. This includes 24 hours/month of his time to oversee project/consultant. Please note we plan to utilize partial funding available through our BHCP and partial funding available through the CSA to offset some of the costs of technology investments needed by both programs and it will not be duplicative.

Funds requested here will not duplicate funds we may receive from the BH CP.

Year 1 Budget-Technology Investments: $60,856

$48,350 is budgeted for investment in computer equipment to allow us to supply 35 of our CSA employees in our two CSAs with state of the art mobile technology, equipped with our cloud-hosted EHR, MyEvolv from Netsmart Technologies or another application. At approximately $2,150 per equipment set-up with currently available pricing, it will include a Dell Latitude E5470, Hotspot, antenna, signature pad, printer for printing in field sites, wireless keyboard and remote mouse, and carrying bag, as well as desktop monitors, docking stations, access to the MyEvolv EHR, access to a common networked shared drive and access to all standard Riverside employee related administrative applications. The equipment is expected to serve for a 7 year period before replacement is desired.

$9,506 is budgeted in this period to support adding MDMI exchange links to new providers that are engaged over time and/or for any modifications that may be required for the CSAs. This money will be utilized either with an external consultant or for additional internal IT staffing.

We intend to utilize $3,000 to equip each CSA with a monitor/web camera to enable use of Go To Meetings to facilitate

consultation/coaching as a group.

Years 2-5 Budget-Technology Investments: $18,450

In budget period 2 an additional $12,000 will be utilized again to continue to add new exchange links and/or for modifications as described above.

In budget period 4 we will use $6450 for additional laptops for staff.

Section 6.4 Proposed Projects and Investment Plan

A. Project Description

Project One, Information Technology

In order to create the technical infrastructure required to meet the project's stated goals, Riverside plans to spend the majority of the Preparation funding on building a sustainable data collection and exchange environment for our CSA programs. This includes spending for personal laptop computers for CSA personnel as well as on the design and implementation of comprehensive data exchange capability with non-Riverside personnel (ACOs, PCPs, and other external care providers). Please note that we have already made a substantial investment in an electronic health record which is being customized for the CSAs.

a. Computers for CSA personnel:

The investment in computer equipment will allow us to upgrade 54 of our CSA employees to state of the art computers. Each will be equipped to provide access to our cloud-hosted EHR, MyEvolv from Netsmart Technologies. While computer configurations will defer depending on employee function, the fully loaded configuration will consist of:

Dell Latitude E5470 (w/SSD)
Hotspot – for remote access where client-supplied networking is not available
Antenna - for remote access in areas with weak MiFi coverage
Signature pad with eSignature software, for client signature capture on consent forms, etc.
HP LaserJet Pro MFP M225dw Printer for printing in field sites
Wireless keyboard & remote mouse
Carrying Bag
Desktop Monitor and Docking station for office production
Standard riverside OS, including secure remote desktop
Access to the Evolv EHR
Access to a common networked shared drive.
Access to all standard Riverside employee related administration applications.

Our plan is to purchase and deploy 35 devices during the Preparation period of this project and 19 in Budget period 1 (original plan had all devices being purchased in Prep Period). Purchase, configuration, training, and deployment of the computer equipment will be managed by Eamon McDaniel, Riverside's IT Technical Services Manager. Each device will have a 5-year warranty.

At the end of Project one, all staff from both CSA's will be fully equipped with updated technology necessary to manage workflows. Using these devices, Riverside CSA personnel will be able to perform all of the tasks required to achieve the other stated goals of this initiative.

b. Data Exchange Infrastructure:

The electronic exchange of client records and information is a critical element in reaching our stated goals. As evidenced by providers across the country, this is not an easy task to achieve. Riverside is currently working with SAMHSA and external vendors to implement a comprehensive data exchange capability across Riverside, based upon new technology.

Our approach will utilize the Object Management Group's (OMG) recent Model Driven Message Interoperability (MDMI) open data exchange standard. OMG is an independent open standards group with a 40+ year track record of successful technical innovations. MDMI is an open standard aimed at facilitating abstracted electronic data sharing between disparate entities within any common industry. SAMHSA is leading a coordinated effort to deploy MDMI as part of their comprehensive Omnibus Care Coordination (OCC) package. Riverside is collaborating with SAMHSA to ensure that OCC meets the data exchange requirements of the behavioral health community. Building on the work we expect to do to connect our proposed BH CP to the ACO's, we will focus on enabling our CSA's to electronically exchange data with non-ACO entities such as PCPs, other BH providers, etc… and to develop programming that will be uniquely required for the CSA's. The Preparation funding allocated for integration will be spent developing theses electronic exchanges and establishing the client consent methodologies required. The money will be spent creating MDMI links and managing their testing and implementation. (no change from intent of original plan- clarification only) In all of these exchanges, Riverside will establish the ability to translate the data formats provided by the ACO and other providers into a format that can be absorbed within Riverside's Evolv EHR. Appropriate client consents will be stored within Evolv, and will dictate the extent to which CSA personnel send or receive client information.

The electronic exchange component of this initiative will be managed by Charles O'Neill, Riverside's Chief Information Officer. We will also subcontract some of this effort to MDIX, Inc. who are MDMI experts.

Subsequent IT spending in Budget period 1 and Budget Period 2 will be spent adding MDMI exchange links to new providers that are engaged over time.

The implementing of care management software and establishing exchange connections is critical in providing high fidelity wraparound services and allows for strong integration with ACO's, primary care providers and other providers for ICC -engaged members. By the end of project one, our two CSA programs will be operating within an electronic care management solution, either Evolv or Care Navigator, that will more adequately capture provided services. These updates will have significantly improved our ability to communicate electronically with ACO's and other providers involved with enrolled families.

Project 2, High Fidelity Wraparound (Workforce Development)

Beginning in Budget period One, Riverside Community Care will utilize DSRIP funding to strengthen our commitment to providing every CSA enrolled youth and family with High Fidelity Wraparound. Since the inception of our CSA programs, we have placed a strong emphasis on program development, training and supervision to support the goals of Wraparound, and we are excited to use this opportunity to both enhance and create sustainability in our practice. Specifically, funding will be used to create a training framework that will incentivize all CSA staff to become Wraparound Certified using the Vroon Vandenberg curriculum, spanning budget periods in decreasing amounts.

We will utilize funding to directly impact our practice of High Fidelity Wraparound by utilizing one of our existing managers to provide training and certifications across both of our CSA sites. Joanne Flatley is our Assistant Program Director at our Needham location, who first began working at the program in 2009 as a Family Partner. Joanne has been a Statewide Family Partner coach for the past 4 years and is Coach Certified for Family Partners, Coach Certified for Wraparound Facilitators and is also Wrap Process Mentor Trained. In Budget Period One Joanne will certify two Coaches in Somerville and one additional Coach in Needham. These coaches will be in supervisory roles in both programs, and their certification will enhance their ability to train, supervise and oversee the Intensive Care Coordinators and Family Partners. Having leadership of each site deepen their High Fidelity Wraparound skill sets will have a direct impact on the quality of services provided to each youth and family. It takes approximately 6 months for a Coach to complete this certification process once they have completed Tier One and Tier Two Certifications (an additional 32 hours). We will compensate Joanne for the additional work hours put towards certifying these three coaches with a one-time stipend. With four Coaches in place across the agency, we will ensure sustainability in our effort to certify all existing and incoming ICC and FP staff. Having more than one per site will also account for potential turnover in our supervisory team.

Riverside will utilize funding to provide monetary incentives for ICCs and Family Partners to enhance their individual skills by becoming Tier One and Tier Two certified. From the beginning of the implementation of CSA programs and training provided, obtaining Wraparound Certification was encouraged but not mandated across the state. From the Vroon Vandenberg Website: "Wraparound Certification is one component of the Vroon VDB Wraparound Coaching and Certification system (WCC), a multi-method approach to training, coaching, and assessing the quality of wraparound process planning and implementation for children and youth with complex needs and their families. The WCC includes separate certification processes for wraparound facilitators, family and youth support partners, wraparound coaches for wraparound facilitators, wraparound coaches for family support partners, wraparound supervisors, wraparound trainers and wraparound process mentors. The Certification system is a performance based monitoring process that evaluates the wraparound staff's ability to provide and document high fidelity wraparound. The WCC is a performance-based system in which each wraparound staff function is defined in a series of action steps. The action steps are the foundation for communicating job expectations for initial training and ongoing coaching for each staff function. The action steps have been organized into certification tools that are used to monitor performance. These tools are used during initial training and coaching to communicate expectations, provide ongoing feedback and establish a threshold for being certified as a wraparound staff practitioner. Once the wraparound staff has demonstrated competency through these certification reviews, ongoing fidelity is monitored with the Vroon VDB wraparound fidelity tools." We will funding to purchase Vroon VDB training materials including two copies each of VVDB's The Foundations of High Fidelity Wraparound: The Wraparound Facilitator Textbook and the Family Support Partner Textbook and two copies of VVDB's Coaching High Fidelity Wraparound: The Wraparound Coach and Trainer Textbook. Each CSA already has a copy of VVDB's training DVD, High Fidelity Wraparound: Mariam's Family, which

accompanies the workbooks. However, in order for 2 groups to train simultaneously, each CSA will need to purchase an additional set. (purchase of training materials not in original plan).

At one time, in our Needham program, we had 3 Leadership staff who were trained as Coaches, and had implemented Tier One Certification into the training for all new hires, which happens in the first 2-4 weeks of employment. We have been able to continue the practice of having new staff Tier One certified and currently have twenty four staff in Needham who have completed the Certification. We will use funding to incentivize them for this training and to complete additional training. With Coaches trained in Somerville, we would implement the same training for all staff, both current and then new staff as hired.

We would then add the expectation of staff working towards Tier Two Certification, with an additional incentive awarded at the time of completion. Tier Two coaching/certification is completed by working with families under close supervision until the wraparound staff demonstrates competencies in the components of wraparound. This is completed through a mix of observation, demonstration and writing. It starts with a Learning Style inventory of the staff member. Family Partner skills are observed thru two intakes, two Strength Need Culture Discovery meetings, two care plan meetings, one agenda prep and two home visits. Documents are completed around Self- efficacy, Natural Supports and "Do For, Do with and Cheer On" theories (typically focused on the same families as the observations). Finally a document review of the two family's wraparound documentation and an evaluation by supervisor.

The ICC skills are observed in much the same way- two intakes, two care plan meetings, one assessment, one agenda prep, one debrief, one crisis planning meeting. Written documentation reviewed are FBA, safety plan, care plan documents, transition plan as well as documents on Self Efficacy, Working with a Team Member and Working with families on strengthening natural supports. Vroon VVB has identified specific skills for each role (102 for FPs, 105 for ICCs), all of which should be observed within the process of completing the Tier Two Certification.

In addition, in Budget Periods 1, 2, 3, 4 and 5 we will utilize funding to send supervisors/managers (clarification on staff and would like to send staff for all budget periods rather than just 3) from each site and one senior leader to the National Wraparound Implementation (NWI) Academy, a once yearly conference put on by the National Wraparound Initiative .Participants share learning opportunities with the field's foremost experts in Wraparound and systems of care. This opportunity helps management keep a pulse on Wraparound trends/ networking events/ trainings, etc., and has been incredibly informative and valuable for Joanne Flatley, who attended last year and will attend again in September.

The measurable outcome of this project is the improved delivery of High Fidelity Wraparound in our ICC and FS&T services to youth and families. This will be measured through the TOM and WFI quality measures in place, as well as in weekly supervision and Riverside's annual internal performance evaluation process and Client Satisfaction Survey process. Improving quality of services delivered will also improve timely access to ICC services. Enhancing the skill sets of staff directly impact transition planning, safety planning and team coordination, all of which could result in sustainable change and a more timely discharge from services, thus allowing the enrollment of other youth and families.

This project will be implemented by the Allison Clark, LICSW, Program Director our Cambridge/Somerville program and Meritt Smith, LICSW, Program Director of our Needham program, who will monitor progress towards goals. Kim Conley, LMFT, Assistant Vice President of Child and Family Services is the direct supervisor of both Program Directors and will support their implementation and ensure project completion. Kim will review all outcome data collected with Program Directors and report results to Shannon Sorensen, LICSW, Vice President of Child and Family Services.

Project 3, Training and Consultation (Workforce Development)

Riverside will utilize DSRIP funding to directly train our CSA workforce in both of our sites. Specifically, we will train in the following areas: (highlighted below are added/changed trainings)

- Pediatric medical conditions and chronic disease management
- Improving Wraparound Supervisor skill sets
- Trauma Informed Care
- Motivational Interviewing
- Nutrition/Wellness/Mind body connection
- Mindfulness
- Conflict Management- How to have Difficult Conversations

Throughout the five budget periods, we will ensure that funding goes directly to impacting the knowledge and skills needed for our staff to be prepared to provide the highest quality of services and stay current with changing ACO climate. This will be accomplished through consultation, internal and external trainings.

A key facet of fostering strong integrations with ACO's and Primary Care Providers is to understand how the medical system works and how chronic medicals conditions impact mental health. Our intent is to use funding throughout the Prep and five budget periods to increase access for both of our teams to Tyrone Williams, M.D., Child and Adolescent Psychiatrist, who has served as our psychiatric consultant for our CSA program in Somerville since the opening of the program. Dr. Williams is a natural choice to consult to our teams in this subject as he has an excellent working knowledge of the CSA services, and the roles our ICCs and FPs play in the delivery of High Fidelity Wraparound. Dr. Williams is a consultant to us through the Cambridge Health Alliance (CHA), where he is employed in their Child and Adolescent Psychiatry Department. Housed within the greater CHA hospital system, Dr. Williams has a unique perspective on how psychiatry and medical care are integrated in treating the whole child and family. He has direct access to an array of PCPs within the hospital system, many of whom work with our enrolled youth in Somerville. Our plan would be to increase his time in Somerville, and add time to Needham, to consult to staff. Increased hours would allow Dr. Williams consultation time with program leadership around needs of each team. His consultation time with teams would be in addition to the psychiatry consultation time that currently exists in both programs, and focus specifically on the comorbidity of medical conditions and mental health disorders and how the team can support the family with issues of medication adjustments, compliance, etc.…It would also focus on issues such as interactions between chronic medical conditions and psychiatric conditions, chronic pain management, eating disorders, etc.… Dr. Williams will also

be able to answer specific questions related to these topics. Additionally, he will be able to support improved coordination with pediatricians and medical specialists by answering any specific questions that are related to the healthcare system. While staff will be trained in this area, having ongoing, in the moment support will be critical. This consultation is in addition to and differs from the psychiatric medication consultation that already occurs at both CSA's After project year 5 we believe that staff will have developed adequate skills in these areas and we would no longer need additional, separate consultation. We would be able to incorporate these topic areas into the existing time for psychiatry training and consultation. (highlights provide clarification regarding role of psychiatric consulted as requested).

In order to facilitate these consultations, we have included the purchase of equipment to allow for the flexibility of "meeting" remotely. We will purchase a large Monitor (initial plan indicated a TV) for both sites, equipped with a camera, so that Dr. Williams, or other consultants, could video conference into a site other than where they are located. This will allow greater access for the whole team to consultants without losing the time of driving which increasingly makes for more efficient use of everyone's time.

To enhance our team's understanding of how to support both medical and mental health needs of our youth, we intend to use funding to hire outside consultants in a variety of health and wellness fields. Our goal would be to have a quarterly training/consultation period for each team with experts in our communities that could inform our staff of best practices in the fields of nutrition, nursing, mindfulness, child development, alternative healings, yoga etc. As each of our sites varies in the unique populations of families we serve, we envision being flexible in finding experts who meet the needs of the youth we have enrolled. Utilizing experts in our communities will help ensure ongoing resources are available for both our staff and our families, who may benefit from directly accessing services as appropriate and available. We would expand our Systems of Care to include these community professionals as appropriate as well.

It has long been known that exposure to trauma in childhood negatively impacts both mental and physical health, with far reaching impacts into adulthood. We believe that providing best practices in Trauma Informed Care across our entire system delivery improves the experience and the outcomes of our services. We will utilize funding to ensure CSA staff have access to ongoing best practices in the field of trauma. This will include trainings and consultation provided by our Riverside Trauma Center, as well as external trainings in the community and online resources such as Relias Learning. Riverside is committed to enhancing our online training as a way to offer flexible trainings to reach more staff who are hindered by geography or time constraints in their schedules.

At project end, staff at both CSA sites will be equipped with the skills necessary to be able to identify and support both the medical and mental health needs of youth served. They will have gained skills around conflict management, how to implement mindfulness activities with families, and how nutrition relates to overall health. Additionally, staff will have enhanced knowledge of relevant topics such as of how trauma impacts the medical and mental health of youth.

Additionally, we will use funding to train staff in Motivational Interviewing; a best practice which can be used by both ICC's and FP's to help motivate lasting change in our clients. This evidence-based model aligns well with the Wraparound model. As we know, research has

demonstrated that motivational interviewing can improve client engagement, help to resolve client ambivalence, and promote client involvement in activities that lead to better health outcomes. At the end of this project, our staff will be trained in this practice, enhancing their work with families served. They will use gained knowledge in this model to help families identify areas of need and to brainstorm options to meet identified goals. In budget year 2 we would fund one supervisor per site to complete the "Evidence-Based Program to Build MI Knowledge and Skills" program offered through UMASS Medical School which is designed for individuals in health care fields. We would be able to fund 3 additional staff per site in Budget Period 3. The Certificate of Intensive Training in Motivational Interviewing is a semester-long course that is founded on the principles detailed in Miller & Rollnicks, *Motivational Interviewing, 3rd ed.* These eight staff would bring this knowledge back to the program and help infuse these techniques into training for all employees. The principles of MI can be used with people of all ages, so would benefit the work done with youth as well as their families.

All DSRIP funding used to fund this project would directly improve the quality of work provided to our clients. Offering the opportunity to increase their knowledge and skills improves staff satisfaction and positively impacts staff retention. As the job market in the Commonwealth has improved overall, the mental health system has collectively been impacted as hiring as become more difficult and more much competitive. As a result, the trend is to hire less experienced clinical staff who often need significantly more training and supervision than in years past. An investment in their skill building directly impacts the quality of care provided and a decrease in turnover means less disruptions in services for families. For Family Partners, many have never worked in the human service field prior to their employment at the CSA, so many of these trainings are critical for their job development. In addition, Family Partners have fewer career advancement opportunities, so providing ongoing training and skill building is essential for our many employees who have worked in this role for many years. Outcomes will be measured in ongoing Client Satisfaction Surveys and with Discharge outcome data that is analyzed by our Quality Management Department. As well, we will use Employee Engagement Survey results to gauge employee satisfaction as well as Performance Evaluation tools to monitor career advancement goals.

This project will be implemented by the Allison Clark, LICSW, Program Director our Cambridge/Somerville program and Meritt Smith, LICSW, Program Director of our Needham program, who will monitor progress towards goals. Kim Conley, LMFT, Assistant Vice President of Child and Family Services is the direct supervisor of both Program Directors and will support their implementation and ensure project completion. Kim will review all outcome data collected with Program Directors and report results to Shannon Sorensen, LICSW, Vice President of Child and Family Services.

B. Project Team Description

Project One, Information Technology

Chief Information Officer – Charley O'Neill

- Responsible for overseeing all of the activities of the Technology Services Manager and the Director of Integration Services under this proposal

- Responsible for business level relationships with all non-Riverside partner providers (ACOs, PCPs, etc.).
- Responsible for adhering to all HIPAA requirements in the use and exchange of client records.
- Responsible for the budgeting, spending, and tracking of all IT spending under this proposal.
- 35 years experience developing Enterprise Application Systems, as both user and vendor (Prime, FireStar, Semantx)
- 9 years direct involvement in the development and deployment of the MDMI data exchange Standard.
- Proven ability to build solutions based upon emerging technologies

Technology Services Manager – Eamon McDaniel

- Responsible for the definition of all computer equipment under this proposal.
- Responsible for the timely purchase and configuration of all computer equipment.
- Responsible for end-user IT training associated with the new computer equipment.
- 20 years experience managing Information Technology functions and assets (IBM, Lotus, others).
- Proven ability to ensure that technology architecture, capacity, availability, and resources are aligned with the strategic directives.
- Proven ability to oversee information technology policies, procedures, processes and operations to provide maximum value for the organization.
- Proven capacity to ensure that Information Technology assets promote effective and efficient operations

Director of Integration Services – TBD

- Half-time position – directly funded by monies budgeted within this proposal
- Responsible for the coordination of the technology integration work effort performed by SAMHSA and MDIX (SAMHSA subcontractor), as that work effort is leveraged under this proposal. Note, as stated elsewhere, the SAMHSA and MDIX work is <u>not</u> funded as part of this proposal, but that work is used to leverage the goals set herein.
- Responsible for the detailed formulation of electronic message exchange between Riverside and all non-Riverside provider partners under this proposal.
- 5 years+ experience with the MDMI data exchange Standard and various implementations.
- Proven extensive Program and Project management skills
- Proven comprehensive quality assurance and testing skills.

Projects 2 and 3, High Fidelity Wraparound and Training/Consultation

Vice President of Child and Family Services- Shannon Sorensen, LICSW

- Senior Leader of the Division who will be responsible for the oversight of overall implementation of both projects through the supervision of Kim Conley, AVP
- 18 years clinical and managerial experience with youth and families

- Four years of Senior Leadership experience at Riverside Community Care
- Started at Riverside as the Program Director for the CSA in Needham at the start-up of the program in 2009, was in that role for four years; trained and supervised ICC's and FP's.
- Trained by Vroon Vandenberg, Certified Wraparound Facilitator
- Trained in Psychological First Aid, responder for the Riverside Trauma Center

Assistant Vice President of Child and Family Services, Kim Conley, LMFT

- Senior Leader of the Division who will be responsible for the oversight of overall implementation of both projects through the supervision of Allison Clark and Meritt Smith, Program Directors of the CSA programs
- Has worked at Riverside in the CSA at the start-up of the program in 2009, including as a Senior ICC and then as the Program Director for 3 years; trained and supervised ICC's and FP's.
- Trained by Vroon Vandenberg, Certified Wraparound Facilitator
- Trained in Psychological First Aid, responder for the Riverside Trauma Center
- CHA/Harvard Medical School Teaching Faculty for four years.

Program Director, Somerville CSA- Allison Clark, LICSW

- Leader of the CSA Program with direct responsibility for overseeing training, supervision and evaluation of all employees.
- Will be responsible for ensuring certifications, trainings and consultations are arranged and completed.
- Will ensure outcome data is collected, analyzed and used to modify practice
- CSA Program Director and CHA/Harvard Medical School teaching faculty for one year, was the Senior ICC prior to promotion into current role.
- Completed the Ackerman Institute for the Family "Foundations in Family Therapy" core training program and the Dr. Kenneth Hardy reflective supervision certification course.

Program Director, Needham CSA-Meritt Smith, LICSW

- Leader of the CSA Program with direct responsibility for overseeing training, supervision and evaluation of all employees.
- Will be responsible for ensuring certifications, trainings and consultations are arranged and completed.
- Will ensure outcome data is collected, analyzed and used to modify practice
- CSA Program Director for one year was the Senior ICC prior to promotion into current role.
- High Fidelity Wraparound Training- Tier I certified, Tier II eligible
- Completed Multicultural Supervision Group with Dr. Ken Hardy

Assistant Program Director, Needham-Joanne Flatley

- Will oversee Wraparound Certification for both sites, including direct training of 3 Coaches to ensure sustainability and ongoing coaching expertise, and Tier 2 training in

Budget period one

- Tier 1 and Tier 2 Family Partner Certification
- Tier 1 and Tier 2 Wraparound Facilitator Certification
- Coach Certified for Family Partner
- Coach Certified for Wraparound Facilitator
- Wrap Process Mentor Trained
- Statewide Family Partner coach for the past 4 years, responsible for running a Learning Collaborative on High Fidelity Transition, Southeast Regional meetings and Senior Family Partner Leadership forums bi-monthly each year. Individual CSA coaching with numerous CSAs around Theory of Change, Support Systems, The Parent Journey and Preventing Drift. Presented yearly at one of the Statewide Meetings a relevant topic to the management teams from all CSAs.

C. Implementation Plan and Timeline

Project One, IT

Preparation Budget Period:

Month one:

- Order Equipment
- Identify specific CSA message types and data content requirement

Month two:

- Stage and configure equipment
- Apply CSA message types to ACO exchange infrastructure

Month three:

Deploy equipment and train users

- Extend exchange infrastructure to non-ACO based providers

Month four:

- Extend exchange infrastructure to non-ACO based providers

Month five:

- Extend exchange infrastructure to non-ACO based providers

Budget Period One:

Quarter one: Order and deploy equipment, Extend exchange infrastructure to non-ACO based providers (per indicated plan revision).

Quarter two: Extend exchange infrastructure to non-ACO based providers

Quarter three: Extend exchange infrastructure to non-ACO based providers

Budget Period Two:

Quarter one: Extend exchange infrastructure to non-ACO based providers

Quarter two: Extend exchange infrastructure to non-ACO based providers

Quarter three: Extend exchange infrastructure to non-ACO based providers

Quarter four: Extend exchange infrastructure to non-ACO based providers

Project Two, High Fidelity Wraparound

Budget Period One:

Quarter one: Programs identify the 3 staff who will be trained as certified Wraparound Coaches. Joanne Flatley, Assistant Program Director, begins the training, which will take roughly 6 months to complete.

Quarter two: Training of 3 Coaches continues. Tier One Coaching and Certification begins and incentives granted as completed.

Quarter three: Training of 3 Coaches is completed. Tier One Coaching is completed and Tier Two Coaching is implemented. Incentives granted as completed.

Staff attends National Wraparound Initiative Implementation Academy (per indicated plan revision- added in all budget periods).

Budget Period Two:

Quarter one: Tier One Coaching continues; Tier Two Coaching begins for the employees who completed Tier One certification in Budget Period One.

Quarter two: Tier Two coaching continues.

Quarter three: Tier Two Coaching continues.

Quarter four: Tier Two Coaching is completed and incentives granted.

Staff attends National Wraparound Initiative Implementation Academy

Budget Period Three:

Quarter one-four: Tier One and Tier Two Coaching is completed for all new employees hired and incentives granted. Send one manager from each Program to the National Wraparound conference.

Quarter four: Staff attends National Wraparound Initiative Implementation Academy

Budget Period Four:

Quarters one-four: Tier One and Tier Two Coaching is completed for all new employees hired and incentives granted.

Budget Period Five:

Quarters one-four: Tier One and Tier Two Coaching are completed for all new employees hired and incentives granted.

Quarter four: Staff attends National Wraparound Initiative Implementation Academy

Budget Period Five:

Quarters one-four: Tier One and Tier Two Coaching is completed for all new employees hired and incentives granted

Quarter four: Staff attends National Wraparound Initiative Implementation Academy

Project Three, Training and Consultation

Preparation Budget Period: (Clarification-Dr. Williams will not be providing training on integration with ACO's and Primary Care Physicians as outlined in original proposal. Adjustments are highlighted in Project Three summary and any reference to him providing training is removed from below implementation timeline).

Month one: Vice President, Assistant Vice President, Program Directors and Tyrone Williams, MD meet to assess needs and formulate plan for how consultation will be implemented in each program to meet the identified goals.

Month Two: Dr. Williams will prepare and schedule first consultation time with each program.

Month Three: Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.

Month Three: Dr. Williams will meet with each program and provide consultation tailored to the needs of each program

Month Four: Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.

Month Five: Dr. Williams will meet with each program and provide consultation tailored to the needs of each program. Dr. Williams will meet with each Program Director and Assistant Vice President to assess progress towards identified goals.

Budget Period One:

Quarter one: Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.

Quarter two: Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.

Quarter three: Dr. Williams will meet with each program and provide consultation tailored to the needs of each program. Dr. Williams will meet with each Program Director and Assistant Vice President to assess progress towards identified goals.

Budget Period Two:

Quarter one:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- One large Monitor and web camera per site will be purchased, configured and set up (this equipment will not be purchased in Budget Period one).
- Kim Conley will meet with each Program director to assess specialty consultation needs; feedback will be gathered from teams.
- Kim Conley and Program Directors will locate and hire consultants.
- Consultations will be set up at each site (to occur quarterly).
- Identify one supervisor per program to attend Motivational Interviewing Course; enroll in program.
- Program Directors identify relevant trainings for staff (Trauma Informed Care, mindfulness, etc...) and enroll employees as appropriate.

Quarter two:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Consultations will occur in each program.
- Staff attend identified trainings

Quarter three:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Consultations will occur in each program.
- Staff attend identified trainings

Quarter four:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Dr. Williams will meet with each Program Director and Assistant Vice President to assess progress towards identified goals.
- Consultations will occur in each program.
- Staff attend identified trainings

Budget Period Three:

Quarter one:

- Kim Conley will meet with each Program director to assess specialty consultation needs; feedback will be gathered from teams.
- Kim Conley and Program Directors will locate and hire consultants.
- Consultations will be set up at each site (to occur quarterly).
- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Identify four (added additional 2) staff per program to attend Motivational Interviewing Course; enroll in program.
- Program Directors identify relevant trainings for staff (Trauma Informed Care Etc.) and enroll employees as appropriate.

Quarter two:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Consultations will occur in each program.
- Staff attend identified trainings.

Quarter three:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program
- Consultations will occur in each program.
- Staff attend identified trainings.

Quarter four:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Dr. Williams will meet with each Program Director and Assistant Vice President to assess progress towards identified goals.
- Consultations will occur in each program.
- Staff attend identified trainings.

Budget Period Four:

Quarter one:

- Kim Conley will meet with each Program director to assess specialty consultation needs; feedback will be gathered from teams.
- Kim Conley and Program Directors will locate and hire consultants.
- Consultations will be set up at each site (to occur quarterly).
- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Identify two staff per program to attend Motivational Interviewing Course; enroll in program.(added staff)
- Program Directors identify relevant trainings for staff (Trauma Informed Care Etc.) and enroll employees as appropriate.

Quarter two:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Consultations will occur in each program.
- Staff attend identified trainings.

Quarter three:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program
- Consultations will occur in each program.
- Staff attend identified trainings.

Quarter four:

- Dr. Williams will meet with each program and provide training and consultation tailored to the needs of each program.
- Dr. Williams will meet with each Program Director and Assistant Vice President to assess progress towards identified goals.
- Consultations will occur in each program.
- Staff attend identified trainings.

Budget Period Five:

Quarter one:

- Kim Conley will meet with each Program director to assess specialty consultation needs; feedback will be gathered from teams.
- Kim Conley and Program Directors will locate and hire consultants.
- Consultations will be set up at each site (to occur quarterly).
- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Identify two staff per program to attend Motivational Interviewing Course; enroll in program.
- Program Directors identify relevant trainings for staff (Trauma Informed Care Etc.) and enroll employees as appropriate.

Quarter two:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Consultations will occur in each program.
- Staff attend identified trainings.

Quarter three:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program
- Consultations will occur in each program.
- Staff attend identified trainings.

Quarter four:

- Dr. Williams will meet with each program and provide consultation tailored to the needs of each program.
- Dr. Williams will meet with each Program Director and Assistant Vice President to assess progress towards identified goals.
- Consultations will occur in each program.
- Staff attend identified trainings.

Budget Report and Budget Narrative (see Attachments B and C)

D. Sustainability

Our plan has been designed with structures in place to allow for the sustainability of each project. For IT, each device purchased will have a 5-year warranty. The equipment is expected to serve for a 7 year period before replacement is desired. We have existing infrastructure in place to repair and replace hardware as needed.

We hope, over the span of this funded period, to have added MDMI exchange links to the majority of providers that are connected with the youth we serve. We will be able to sustain these linkages through infrastructure built over this time period.

As described above, our plan to certify 3 managers across the Riverside as Coaches, in addition to the existing Coach we have, will allow us to maintain our ability to certify staff in both programs. Over the course of this funding, we will have been able to use funds to incentivize the large majority of staff, including new hires. Following this time period, we will be able to absorb the incentive payments into our ongoing budgets as the numbers will be limited only to turnover each year.

Training and consultation over the period of funding will allow the programs to build skills and knowledge that can inform and be carried forward. As specific knowledge is gained, it will become the foundation that will be used going forward for new and incoming staff. Supervisors will train new staff and resource libraries will be created to house all materials gathered to ensure sustainability.

Section 6.2: Executive Summary *(3 pages)*

A. Current performance on Development Plan

CSR CSA's Development Plan goals are focused on three main areas:

- **Comprehensive Assessments**: Comprehensive Assessments need more detail. Due to the constant shortage of clinicians and clinical supervisors and the high demand for services, the CSA struggles to ensure that documented Comprehensive Assessments are as thorough as they need to be. The CSA has retooled and intensified training and supervision related to comprehensive assessments, progress in this area is under regular monitor and review.
- **Safety Plans**: Better recognition for and utilization of safety plans; specifically supporting families in developing safety plans with specified action steps. Increased training and supervision have led to significant progress in this area; management reports reveal more than 70% of safety plans are being reviewed monthly with families and updated when circumstances change or crises arise.
- **Role Maintenance:** Avoiding role confusion and ensuring clarity in role specifications. Due to inexperienced field staff and/or large wraparound teams serving complex family needs, role clarity may be impacted. The CSR CSA Senior Team addressed concerns during department staff meetings resulting in the development of a supplemental document to aid staff in identifying "grey areas" and role overlap.
- **Although not in our Development Plan,** CSR CSA has its own goal to improve its WFI score in team member participation at care planning team meetings.

All these goals will be supported by projects described in this proposal.

B. Specific Strengths and Needs

<u>Infrastructure and Capacity to Monitor Quality</u>

Need - Limited Capacity to Generate Reports to Monitor Quality: Although the CSA's data systems have improved since Credible Electronic Health Records were installed in 2016, senior management still struggle to efficiently generate reports needed to monitor quality and support performance improvement efforts. CSR has not had the resources to purchase a supplemental EHR Reporting Software module. Reporting is cumbersome and managers waste precious time exporting data into spread sheets, limiting the range of metrics that can realistically be monitored.

Need - Staff Technology Challenges: While CSA staff all received basic training and extensive coaching on EHR, many staff need advanced training to increase speed, efficiency, improve data collection and increase understanding of performance improvement goals. 2 out of 3 CSA staff members reported that they would benefit from additional EHR training in a recent survey.

Strength - Successful Recent Implementation of EHR: CSR Behavioral Health's successful implementation of the Credible EHR in 2015-2016 is an excellent foundation for performance improvement efforts. It was an enormous transformational undertaking for a small organization. The unusually smooth implementation can be credited to the meticulous planning on the part of a skilled MIS/IT Coordinator and an active Behavioral Health EHR Implementation

Team who met weekly for over a year. The team continues to meet twice a month to guide EHR improvements and related staff training.
Strength - Data-Focused, Learning Organization: CSR's Behavioral Health Department is an active, learning organization whose senior leadership is energized by their new EHR system's capacity to generate data and support management systems.

Pediatric Partnerships & CSA Capacity for Health Care integration:
Need - Relationships with Pediatric Providers: The CSA needs to strengthen its focus on pediatric/behavioral health integration, develop strong partnerships with interested pediatric providers and expand access to ICC referrals from pediatric practices and hospitals.
Need - Health/Behavioral Health Integration Practice Protocols and Data Elements: The CSA needs to develop protocols and supervisor capacity to support health/behavioral health integration around prevention and wellness, avoidable utilization, follow-up after mental illness hospitalization, and strengthened care coordination. The CSA needs to develop protocols for communicating with pediatricians, including using the Mass Hi-way to support written information-sharing. The CSA needs to identify new EHR data elements that allow management to monitor practice change.
Need - Training & Coaching Needs: The CSA needs to train and coach CSA staff on the motives, the expectations and the benefits for delivering integrated care, including reinforcement of understanding in the ways in which chronic conditions such as asthma, diabetes and obesity are known to exacerbate mental health conditions. Additionally, staff require training in best practices for communicating with pediatricians.
Strength - Culturally Attuned, Responsive and Trusted Staff: CSR staff comes largely from the same communities as the families served, supporting culturally attuned and responsive care to families with a wide array of beliefs, cultures, languages and experiences. ACOs and pediatric providers may view this as a significant asset in considering partnering with CSR CSA.
Strength - Collaborative, Relationship-building Expertise: CSR Behavioral Health Department's experience at developing partnerships with the Boston Public Schools (described below), among other care providers and organizations, will inform relationship-building plans for strengthening collaboration, integration and referrals.

Pipeline of Licensed Masters-level Clinicians:
Need - Severe shortage of CSR clinicians for both ICC and IHT: The shortage of Masters level clinicians in Boston is more severe in home-based behavioral health services and felt most acutely in Greater Boston neighborhoods, where safety concerns, real and perceived, deter many clinicians. The CSR CSA has compensated for this shortage of MA-level clinicians by hiring a proportionately high number of BA-level ICCs. While many of these BA-level ICCs have years of experience providing care coordination, the staffing pattern places a disproportionate burden on CSA supervisors to conduct ICC clinical assessments which detracts from supervisor time focused on clinical supervision and coaching of ICCs. CSR's IHT service remains much smaller than desired by either CSR or the MCEs, and are marked by significant wait lists.
Need - Severe shortage of licensed clinicians to take on supervisory roles: The shortage of licensed supervisors adds to CSR CSA's workforce challenges. A disproportionately high number of experienced, practicing CSR clinicians have not taken their licensure exam, due to test-taking

anxiety possessed by many clinicians of color related to concerns regarding cultural bias of the licensure exam questions. Additionally, the CSA has a specific shortage of LICSWs, the only licensure able to provide supervision hours for all types of licensure. Our CSA Director is our only LICSW. This creates unique challenges in attracting new CSWs seeking clinical supervision.
Strength - Clinical Pipeline Planning and Pilot Project: In FY 2016, CSR Behavioral Health launched a planning process to design a formal clinical internship program. Previous informal efforts did not gain traction due to the added burden to a small cadre of overextended, licensed clinical supervisors at CSR. Consultant Yolanda Cuentro (former Director of IHT & Internship Program for The Home) worked with CSR Behavioral Health Senior Team to identify all the elements for a successful Clinical Internship program. An internship pilot was launched in FY 2017 and "Lessons Learned" inform our proposed design for the Clinical Pipeline project.
Strength - Interest from university Clinical Masters programs, including Social Work programs in a CSR Partnership: Thirteen clinical programs committed to partner with CSR CSA in 2018 to launch ongoing internship relationships.

C. Plans for improving timely access to ICC Services
Current BPS Partnership: CSR CSA's partnerships with 17 Boston Public Schools in Greater Roxbury continues to improve timely access to ICC Services. Our School-Based Program is a free service to BPS to increase access to CBHI services. School-based Coordinators provide support to Administrative Teams in identifying children in need of ICC and other CBHI services, and support to teachers in developing classroom strategies for youth with behavioral health needs. The program also runs a free Parent Café that rotates from school to school, providing information on children's behavioral health services to parents. The program also places Outpatient Clinicians in each school for individual counseling and groups.
Two Proposed Projects will improve timely access to ICC services**. Project 2, Pediatric Partnerships**, the CSA will actively reach out to engage pediatric providers most frequently serving our ICC-engaged youth. Using PDSA cycle, the CSA and its partners will test and develop the best ways to partner with each institution to expand access and integrate care. **Project 3, Clinical Pipeline** will support the launch of a robust clinical internship program in partnership with university MSW and other clinical master's degree programs. The Clinical Pipeline Project will provide intensive clinical training and coaching to Masters-level interns, with a focus on strengthening culturally responsive practice in communities of color. The program will support future clinicians to gain comfort in providing home and community-based services in Roxbury, which is currently a barrier to expanding our workforce. The program will also provide a Licensure Testing Support Group to both interns and employees seeking to pass their licensure exam. This project will grow its clinical workforce and clinical supervisory workforce, supporting CSR CSA and IHT to improve timely access to both ICC and IHT services.
D. Plans for improving care coordination, care planning, and care management
Project 1, Quality Monitoring will build the CSA's capacity to support quality monitoring and performance improvement efforts through increased reporting and analysis capability, upgraded mobile technology and strengthened management and staff skills.
Project 2, Pediatric Partnerships will improve care coordination in two ways. First, the CSA will develop strategic partnerships with pediatric providers to foster bidirectional communication.

It will link to the Mass Hi-way, develop Integrated Care Protocols and train CSA staff on these protocols including utilization of the Mass Hi-way for communication with pediatric providers.

E. Plan to improve performance on quality scores and Development Plan goals

Project 1, Quality Monitoring and **Project 2, Pediatric Partners** are focused on improving performance in quality scores and development plan goals.

F. Plans for improving coordination with pediatric primary care

Project 1, Pediatric Partnerships will improve coordination with pediatric primary care through partnerships and CSA protocols.

Section 6.3: Populations Served and Community Engagement *(3 pages)*

A. Member populations and Strategies to initiate and Maintain Engagement

Children's Services of Roxbury is a 50-year old minority-operated nonprofit dedicated to meeting the needs of youth and families of color across Massachusetts through an array of services including foster care and adoption services, affordable childcare, transitional housing for homeless families and children's behavioral health services.

As the Black Specialized CSA, Children's Services of Roxbury specializes in serving youth and families of color without regard to geographic boundary. Geographically, the majority (~ 85%) of Members currently come from Greater Roxbury (Roxbury, Dorchester, Mattapan), with a substantial minority (~14%) from other Boston neighborhoods, and approximately 0.5% from outside Boston, mostly drawing from Quincy, Brockton, Randolph and Dedham. Our Members reflect the diversity of the communities we serve, and include significant populations of African, African American, Latino, Cape Verdean and Haitian. We serve a large immigrant and refugee population as well as families of Islamic faith who are facing increased vulnerability in the current period. Many family members speak a first language other than English, including Spanish, Haitian Creole and Cape Verdean Creole.

Our capacity to initiate and maintain family engagement comes from the decades of trusting relationships built between Children's Services of Roxbury and the community we serve. All our decisions and management practices are informed by our core values: Dignity, Respect, Compassion, Humility, Integrity, Patience, and Excellence. The CSR CSA actively engages in outreach and promotes the value and accessibility of care via involvement in participation in various events and activities, and utilizes several community partnerships as vehicles for ongoing engagement.

Community Relationships to improve ICC services

System of Care: The CSA hosts monthly Systems of Care meetings, open forums for providers, business leaders, policymakers and community members to connect, network, collaborate and review industry news and best practices.

Schools: CSR has formal partnerships with 17 Boston Public Schools, including elementary, middle and high schools through its School-Based Behavioral Health Program.

Boston Public School Behavioral Health Partnerships		
Charles H. Taylor Elementary	*Madison Park Technical High School*	*Holmes Elementary School*
Curley K-8	*Epiphany School*	*Snowden International School*
Match Community Day Charter	*Mattahunt Elementary School*	*City on the Hill (Dudley)*
Dudley Street Neighborhood Charter	*Higginson Lewis K-8*	*Succeed Boston*
Greater Egleston Community High	*Young Achievers Science and Math Pilot*	*Higginson Elementary School*
Haynes Early Education Center	*James W. Hennigan K-8*	

Our School-based Partnership Program was borne out of BPS's struggle to serve thousands of children with significant, untreated behavioral health needs that are often mislabeled as "behavior problems" in the classroom, fueling dropout rates, worsening the achievement gap, and perpetuating the "school-to-prison" pipeline. CSR CSA provides non-billable resources to each partner school in the form of School-based Behavioral Health Coordinators. These School-based Coordinators work with administrative and academic teams to recognize and identify children with behavioral health needs, facilitate referrals to CBHI services and offer teachers coaching and classroom strategies in support of student IEP and 504 Plans. Our School-based Partnership Program also provides on-site Outpatient clinicians who provide individual and group counseling to students, and facilitating access to ICC FT&T or Therapeutic Mentoring services as needed. The CSA also runs a monthly **Parent Café** rotated among our BPS school partners. This community engagement series fosters dialogue and interaction on children's behavioral health and related themes through CSR presentations and guest speakers. It is open to all parents, while the CSA does targeted outreach to parents of children receiving our services. A Family Partner is on-hand to build relationships with parents. Our BPS partnerships expand access to youth in need of ICC services and support more effective advocacy for academic support, special education, after school programs and other needs.

Childcare: CSR operates an early childcare center serving 191 infants and children plus 40 family-based childcare sites with additional services for homeless children and children receiving DCF services. ICC engaged members are referred to these services as appropriate. Additionally, CSR is a member of the Boston Public Health Commission Trauma Informed Collaborative for Families with Young Children (TICFYC), dedicated to upholding trauma-informed childcare service delivery. The collaborative's mission is to cultivate sustainable relationships across agencies, equitable systems and resources to empower and support families and their young children. It includes Martha Eliot Health Center, Greater Boston YMCA, College Bound, Excel Academy Daycare Center, ABCD, and The Home For Little Wanderers.

Child-Serving State Agencies: DMH provides flex funds and camperships to our youth, providing essential resources to ensure progress in treatment. Each month CSR hosts a DMH representative on site to meet individually with our Intensive Care Coordinators and Family Partners regarding new policy in the Department, eligibility for specific services, the application process and services available through and/or outside of DMH. CSR has a strong relationship with **DCF**, and provides an array of foster care, visitation and adoption services. CSR Behavioral Health and Foster Care Programs would like to build a stronger collaboration to serve foster care youth, especially those aging out of care. Increasing CSR Children's Behavioral Health's clinical capacity is key to launching such an initiative**. DYS and Courts:** The CSA maintains a presence in the court system via support and advocacy as needed for families undergoing legal

matters. We also conduct outreach and offer presentations to DYS administrators about CSA services.

Youth Programs: The CSA organizes presentations from organizations providing resources to transition-aged youth, such as **Year Up, More Than Words and Boston Youth Sanctuary**. CSR partners with the **Boston Children's Museum** and their POP (Providing Opportunities to Play) program providing Museum passes at no cost to the families. These passes can be used to encourage parent/child attachment and healthy child development, as incentives or rewards for families meeting care plan goals, or as an activity with a Therapeutic Mentor. POP also affords an opportunity share resources with the other organizations involved including: Brookview House, EMPath (Economic Mobility Pathways), Family Nurturing Center, Father's Uplift, LUK, Inc., Ronald MacDonald House, Shriners Hospital for Children, St. Mary's Center for Women and Children and Thom Child and Family Services. **KROC Center** hosts CSA-sponsored holiday events for families in need annually.

Homeless and Transitional Housing: CSR provides homeless and transitional housing services for families, and is active in a network of housing-related providers. The CSA accesses these services for families as needed.

Colleges and Universities: The CSA has been actively working to form partnerships with clinical Masters degree programs to create a robust internship program and clinical pipeline for CSR. These partnerships enable expansion of quality behavioral health service delivery in 3 key domains: in-home, outpatient & school-based. The following programs are current and potential partners:

Clinical Program	Current Partner	Potential Partner
Boston College School of Social Work	x	
Gordon Conwell	x	
Bridgewater State School of Social Work	x	
Salem State School of Social Work	x	
Simmons School of Social Work	x	
Cambridge College	x	
Springfield (Chelsea)School of Social Work	x	
Eastern Nazerene	x	
Boston University School of Social Work	x	
Rutgers (online)		x
Wheelock School of Social Work	x	
Lesley	x	
Northeastern University	x	
Suffolk University	x	
William James College		X
Smith School of Social Work		X

How partnerships in Section 6.3.B align with the Bidder's proposed project(s) in Section 6.4.A.
The CSA will develop an entirely new set of formal relationships for the **Pediatric Partnerships** project, leveraging the many informal connections between CSR staff and community health centers, MCOs and ACO leaders. The lessons of our **BPS School-based Partnerships** will inform our approach to Pediatric Partnerships, focusing on building one-on-one relationships and emphasizing the value and potential benefit to the institution of accessing the CSA's resources.

Our existing College/University relationships that have been actively cultivated over the past year will serve as the the foundation of the **Clinical Workforce Pipeline project.**

Section 6.4. Proposed Projects and Investment plan

A. Project Description

CSR CSA is proposing 3 projects, described below.

- Project 1: Quality Monitoring
- Project 2: Pediatric Partnerships
- Project 3: Clinical Pipeline

1. Project 1 Name: Quality Monitoring

2. Project 1 Goal and Plan

Specific goal that will be advanced by the project:

- Strengthen fidelity to Wraparound processes, including the care planning, care management and care coordination processes for ICC-Engaged Members and their families

Project Plan: Build the CSA's capacity to support quality monitoring and performance improvement efforts through increased reporting and analysis capability, upgraded mobile technology and strengthened management and staff skills.

3. Project 1 Scope, Duration, Planned Methods & Activities

Project Scope:

CSR will significantly strengthen its capacity to generate standardized quality-focused reports with the installation of EHR Reporting Software. This will allow the CSA leadership and the entire Children's Behavioral Health Senior Team to strengthen its capacity to monitor quality and support performance improvement. Children's Behavioral Health Senior Team will work to define a shared set of standard reports needed to strengthen performance monitoring, focused both on those measures identified by MassHealth and the MCEs, and additional internally generated quality metrics. Some standard reports will be created specifically for the CSA and others will be used across the Children's Behavioral Health department. Managers will receive training on using the Reporting Software to generate their own tailored reports as needed. CSA staff will receive advanced EHR training as well as a Windows-based software suite for use on the new tablets to address gaps in technology skills.

Project Duration:

The duration of the project extends from the Preparation Budget Period through Budget Period 5, with several phases of work described below. The project will take place over all Budget Periods, with the most intensive work in the first three periods.

Project Methods and Activities:

- **Reporting Software Acquisition & Installation:** Project Manager attends intensive two-day training on Reporting Software module in Baltimore MD. CSR purchases and installs Reporting Software module, with coaching support from Credible.
- **Quality Measures, Reports & Dashboard Development:** The Children's Behavioral Health Senior Team and the CSA defines priority Quality Measures that will be tracked and monitored, including MassHealth quality measures, MCE Development Plan goals and internally generated quality metrics. Project Manager convenes & leads Children's Behavioral Health EHR Team to define Report specifications and review/revise drafted Standard Report Templates. EHR data elements are modified if needed to capture additional data. A Quality Dashboard is developed to summarize and monitor key Quality Indicators. Management Team uses reports and makes modifications or requests additional revisions to improve usability.
- **Technology Training:**
  - **Advanced Credible EHR Intensive:** In Budget Period 1, the CSA will develop and deliver a 2-part advanced EHR intensive, designed to strengthen the quality of data entry, increase understanding of why certain data is important, and teach staff how data is used at CSR to monitor quality and support performance improvement. Trainings will be delivered in small groups to support employee learning and content uptake. This training will take place during Budget Period 1 for all CSA staff, and then again in Budget Period 3 for new staff or any staff who needs additional training to strengthen their data collection accuracy or efficiency. To the extent that resources are available, other Children's Behavioral Health staff will also participate in this training.
  - **Windows-based Software**: In Budget Period 2, CSA staff will participate in training on Tablets and Windows-based Software. This training will be delivered in small groups at different levels (i.e. Refresher and Advanced) to support employee learning and content uptake.

4. Proposed Deliverables

- EHR is modified so staff are required to input key data for quality metrics.
- CSA Managers & Supervisors receive regular Reports & Dashboards that allow them to monitor key quality metrics.
- Staff skills are strengthened in use of EHR and Window's suite on tablets.
- CSA staff have upgraded tablets.

5. Specific use of DSRIP funding & how investment will support execution of project goals

Technology Funds (Reporting Software)

- Purchase and install Credible EHR Reporting Software module.

Operational Infrastructure Funds (IT project management, systems performance management capabilities)

- The IT Coordinator will oversee all aspects of this project. He will installation the Reporting module, convene and lead planning meetings the EHR Work Group to define standard

report specifications, produce standard report templates, train CBH supervisors to generate their own additional reports, develop advanced EHR training for staff.

Workforce Development Funds (Training & coaching)

- All CSA staff will receive Advanced EHR Intensive training on Credible and Windows-based Software training.

6. Existing internal resources (e.g. funding, staff, business site, IT systems, hardware)

- Children's Behavioral Health Senior Team, led by the Vice President of Behavioral Health and the CSA Director, will develop the specifications for quality metrics.
- CSR has already made a major investment in Credible Electronic Health Records with mobile capability which will serve as the backbone of this project.
- Electronic Health Records Work Group will invest extensive time developing a system for defining, tracking and monitoring quality metrics.
- Behavioral Health Training Department will provide logistical support for the trainings.
- Basic EHR training & coaching for all staff are already provided by the CSA. The trainings described here are in addition to basic EHR training and coaching.

7. How funds will be allocated across the Bidder's organization and CSA site(s):

CSR CSA only has one site, located in Roxbury. CSR's other Children's Behavioral Health services will indirectly benefit from this investment as well.

8. Internal evaluation, measurement or performance management strategies to demonstrate effectiveness

Quantitative and/or Qualitative Data on Program Activities.

- CSR CSA will track project implementation against its timeline.
- Quality Dashboard will be shared with CSR's CEO, CFO and Board leadership. Feedback on value of Quality Dashboard and Standard Reports in supporting performance monitoring and improvement will be gathered from CBH Senior Team, CEO, CFO and Board leadership. This feedback will be documented in an internal report and used to refine the performance management tools.

Outcome measurements:

- **Specific Measure:** To measure impact CSA will develop/utilize a Quality Dashboard & Quality Reports from Credible Business Intelligence software
- **Goal/Time Point:** By end of BP2, CSA has a quarterly Quality Dashboard summarizing Quality Reports on 7 CSA Quality Measures.
- **Plan:** Internal data collection method.
- **Responsible Staff:** Amos Andrews, Director of Data Analytics and Jessica Bedney, CSA Director

1. Project 2 Name: Pediatric Partnerships

2. Project 2 Goal and Plan

Specific goals will be advanced by the project:

- Foster strong integration with ACOs and primary care providers for ICC-Engaged Members;
- Improving timely access to ICC services for children eligible to receive ICC and their families.

Project Plan: The CSA will strengthen its focus on pediatric/behavioral health integration, develop strong partnerships with interested pediatric providers and expand access to ICC referrals from pediatric practices and hospitals. It will initiate and foster ongoing communication with at least five of the pediatric providers most frequently utilized by our ICC-engaged members and their ACO parent organizations, and develop active partnerships with at least two pediatric providers. Based on lessons learned, assess and implement opportunities for replication and expansion. The CSA will strengthen its own capacity to collaborate with pediatric providers. It will develop protocols and supervisor capacity to support health/behavioral health integration around prevention and wellness, avoidable utilization, follow-up after mental illness hospitalization, and strengthened care coordination. The CSA will develop protocols for communicating with pediatricians, including using the Mass Hi-way to support written information-sharing. The CSA will identify new EHR data elements that allow management to monitor practice change. The CSA will train and coach CSA staff on the new expectations for delivering integrated care, the reasons behind it including the ways in which chronic conditions such as asthma, diabetes and obesity which are known to exacerbate mental health conditions, and best practices for communicating with pediatricians.

3. Project 2 Scope, Duration, Planned Methods & Activities

Project Scope:

Over 87.5% of pediatricians seen by ICC-engaged members are concentrated in 12 provider organizations, all within 5 miles of the CSA's office. will take place in phases.

Pediatric Provider	Approximate % of ICC-Enrolled Youth Served
Children's Hospital	20%
Boston Medical Center	10%
Codman Square Health Center	10%
Harvard Vanguard	7.5%
Dimock Community Health Center	5%
Uphams Community Health Center	5%
Whittier Street Health Center	5%
Harvard Street Health Center	5%
Dorchester House	5%
Martha Elliot Health Center	5%
Mattapan Community Health Center	5%
South End Community Health Center	5%
Other	12.5%

The project will begin with Engagement and Assessment period, and then follow with two Plan, Do, Study, Act (PDSA) cycles. Our PDSA timeline is informed by experience of our colleague CSAs who shared their experiences forging partnerships with health providers. The final phase includes an assessment of potential for replication, based on resource availability.

Simultaneous with pediatric outreach and engagement efforts, CSR CSA will begin to build its internal capacity to collaborate with pediatric providers. This work will take place through a series of steps, including joining the Mass Hi-way, developing CSA basic protocols and expectations for ICC pediatric communication, building new data elements into the EHR, developing reports for monitoring, training CSA staff on the relationship between common childhood chronic conditions and behavioral health, and coaching staff toward practice improvement on pediatric communication.

Project Duration:
The duration of the project extends from the Preparation Budget Period through Budget Period 5, with several phases of work described below.

Methods and Activities:

- **Engagement:** During the Engagement phase, the CSA will reach out to five providers from this list, based on a combination of factors including % of ICC-enrolled youth served, proximity, ease of access and known partnerships with other CSAs. Engagement will involve reaching out to multiple individuals at different levels of the organization, such as the CEO, Pediatrics and Outpatient Behavioral Health services. The CSA will also reach out to the ACO leadership of these same providers, particularly Children's Hospital ACO, BMC ACO and Community Care Cooperative ACO.
- **Assessment:** The CSA will assess the interest of each provider, and identify two Pediatric Providers who are most responsive to the CSA's outreach efforts. The Assessment will include documentation of ideas generated with the provider for increased collaboration, including potential strategies to strengthen cross-training, bi-directional communication, referrals and care coordination. The CSA will identify the leaders at each organization who will serve as the Point of Contact in collaborative planning with the CSA.
- **Partnership Plan, Do, Study, Act Cycles:**
  Plan: The Partners will involve identifying a shared goal, formulating a theory of change, defining success metrics and putting a plan into action. The CSA and the providers will develop a pilot Plan for increased collaboration, with agreed-upon modest, measurable benchmarks to assess progress in at least two of following areas: cross-training, bi-directional communication, referrals and care coordination. The CSA will draw on its successful experiences building collaborations with Boston Public Schools which as highlighted the importance of relationship building through a single point of contact and a regular onsite presence. Although the specific plan will be developed with each provider, the CSA anticipates that relationship-building will be central to the success of this project. A CSA Clinic Coordinator will serve as a single point of contact, and specific Intensive Care Coordinators and Family Partners may develop a regular presence at the provider site, to the extent possible. The CSA with each partner will implement a Pilot to test the plan and

track success against benchmarks. The CSA and each partner will identify and document both successes and barriers to increased collaboration. The CSA and its partners will make mid-course adjustments, and then repeat the PDSA cycle with the same Pediatric Partners, moving forward to deepening the collaboration.

- **Assess Replication Opportunities:** Based on lessons learned, the CSR CSA will assess it capacity to take on additional partners and opportunities to replicate the process, as resources allow.
- **Join Mass Hi-way:** CSR CSA will join Mass Hi-way's email system to strengthen its capacity for secure communication with pediatricians. Initially supervisors will initially be trained to use the Mass Hi-way email system. As part of its integrated care training, CSA staff will learn to use the Mass Hi-way for pediatric communication.
- **CSA Integrated Care Protocols:** Develop, test, revise & implement CSA Integrated Care Protocols, informed by its engagement and assessment activities with pediatric providers (see above) and analysis of new CSA Quality Measures.
- **New Data Elements & Reports:** Build relevant new data elements into EHR & monitoring implementation.
- **Train Staff:** Introductory Integrated Care training for CSA supervisors, then for CSA staff, as well as Advanced CSA integrated care cross-training with Provider Partners. Training content includes: a) The link between chronic childhood conditions and behavioral health b) Realistic strategies for coordinating with pediatric practices c) CSA Protocols and Expectations, including new EHR elements and use of Mass Hi-way.
- **Identify any additional capacity-building needs**, based on lessons learned.

4. Proposed Deliverables

- CSR CSA has active strategic partnerships with at least 2 key providers of pediatric primary care to our ICC-engaged members.
- CSR CSA has standard baseline protocols for ensuring well visits, monitoring hospital & pediatric communication.
- CSR CSA meets health metrics.
- CSR CSA is on the Mass Hi-Way.

5. Specific use of DSRIP funding & how investment will support execution of project goals.

Operational Infrastructure Funds (Systems change resources, operational support)

- **Pediatric Partners Project Manager**, reporting to the CSA Director, will oversee all aspects of this project, including Pediatric provider engagement, assessment, partnership development, protocol development and staff training. **An adjustment to the budget has been proposed ($25,848 to $25,000).*

Technology Funds (Mass Hi-way)

- Connect to **Mass Hi-Way.**

Workforce Development (Training & coaching)

- **Introductory and Advanced Training on Integrated Care** will be provided to CSA supervisors and staff.

6. Existing internal resources (e.g., funding, staff, business site, IT systems, hardware)
Internal resources include Behavioral Health Senior Team leadership, Credible Electronic Health Records, Behavioral Health Electronic Health Records Work Group, informal relationships with several Greater Roxbury community health centers, relevant lessons from BPS partnership, BH Training Department.

7. How funds will be allocated across the Bidder's organization, and CSA site(s):
CSR CSA only has one site, located in Roxbury.

8. Internal evaluation, measurement or performance management strategies to demonstrate effectiveness

- **Quantitative and/or Qualitative Data on Program Activities.**
  - Qualitative data will be kept on provider engagement and on PDSA lessons learned with Pediatric Partners.
  - Benchmark metrics for tracking and measuring success will be developed with Pediatric Partners.
- **Outcome measurements:**
  - **Specific Measure:** To measure impact CSA utilize referral report generated by Credible EHR.
  - **Goal/Time Point:** By end of BP 5, CSA receives at least 24 referrals from Pediatric Partners (average 1/month/partner).
  - **Plan:** Internal data collection method.
  - **Responsible Staff:** Harry Harding, Vice President, Innovation & Strategic Partnerships and Jessica Bedney, CSA Director

1. Project 3 Name: Clinical Workforce Pipeline

2. Project 3 Goal & Plan

Specific goal that will be advanced by the project:

- Strengthening fidelity to wraparound processes including care planning, care management and care coordination.

Project Plan: This project seeks to increase the pipeline of Masters level clinicians who provide home and community-based ICC services in Greater Roxbury. Clinical Workforce Pipeline Project will support the launch and development of a robust internship program in partnership with university MSW and other clinical master's degree programs, and the transition from internship to CBHI employment at CSR.

3. Project 3 Scope, Duration, Planned Methods & Activities

Scope:

The Clinical Pipeline Project starts with intensive relationship-building with clinical programs in Greater Boston. The foundation for these relationships has been laid, but much work remains in developing detailed plans to partner with each university or college. The project includes individualized outreach strategies for each university. It involves curriculum development to provide intensive clinical training for our interns, with a focus on strengthening culturally responsive practice in communities of color. The project will actively assist interns to gain comfort in providing home and community-based services in Roxbury, currently a barrier to expanding our workforce. Through individualized transition planning, the project will also actively support the transition from internship to employment in CSR CSA and IHT. The program will also provide a Licensure Testing Support Group to both interns and employees seeking to pass their licensure exam.

Duration:

The duration of the project is Preparation Budget Period through Budget Period 3, with the potential to extend the project if additional resources become available through ICC service expansion.

Methods and Activities:

The following steps will be taken to establish a Clinical Workforce Pipeline:

- **Strengthen, Expand and Formalize Each College Partnership:** The Project Manager will cultivate and develop relationships with each Department chair, field placement administrator and Field Instructor. He will gather specific department requirements and expectations, attend Intern Supervisor trainings and maintain quarterly contact with Field Instructor, including review of requirement, progress and evaluation.
- **Develop, test and revise weekly Intern Study Group curriculum:** CSR CSA seeks to be known as an organization who invests in and supports its interns in their growth and

development as clinicians. Interns will attend a weekly Intern Study Group facilitated by the Project Manager that includes a mix of case reflection, clinical skill development and information on community resources presented by internal and outside speakers.

- **Develop and Implement Recruitment Plan:** The Project Manager will develop and implement an individualized plan with each college or university, attending Open Houses, job fairs, speaking in classes and other recruitment activities. He will cultivate, interview & select MSW, LMHC and LMFT interns. As the program grows, he will engage current interns to share information with their peers about CSR CSA's internship program.
- **Individualized Support and Transition Planning:** Beyond the standard clinical coaching provided to all ICCs and IHTs, the Project Manager will provide individualized support to interns, helping interns navigate their new environment, facilitating emergency School and agency meetings for students in crisis, and writing Intern semester evaluations.
- **Transitioning to Employment:** For interns who are graduating from their clinical programs, the Project Manager will provide individualized information and support on transitioning to employment at the CSR CSA.
- **Licensure Exam Study & Support Group:** In 2016-2017, CSR CSA received funding from Commonwealth Corporation to pilot a Licensure Testing Support Group. CSR CSA had noticed that many experienced and knowledgeable clinicians of color avoided taking their licensure exams or froze during the exam and didn't pass. The shortage of licensed clinicians seriously hampers the potential for expanding access to CBHI services. The pilot successfully supported several CSR clinicians to pass their licensure exams. The Licensure Exam Study & Support Group will be re-instated as part of this project, providing access to test-taking practice resources, technical coaching on exam questions from licensed clinicians, skill-building around testing anxiety and peer support.

4. Proposed Deliverables

- At least 8 sustained university partnerships.
- Intensive outreach to universities, resulting in 24 clinical interns/year by Year 3.
- Internship Training and Support Program enhancing standard clinical supervision and training with weekly Intern Study Group, intensive individualized coaching and supports, and transition to CSR CSA or CBHI employment.
- Licensure Exam Study & Support Group

5. Specific use of DSRIP funding & how investment will support execution of project goals.

1. Workforce Development (recruitment supports, training, coaching programs, and certifications)

- Project Manager for recruitment, training, coaching and licensure
- Intern training & development resources

6. Existing internal resources (e.g., funding, staff, business site, IT systems, hardware)

- To support a strong program launch, CSR will provide initial funding for the Project Manager in Summer/Fall 2017 until the grant begins.
- Clinical onboarding, supervision will be adapted to support interns.

- EHR training and coaching will be provided to interns.
- CSR CSA training will be provided to all interns.

7. How funds will be allocated across the Bidder's organization, and CSA site(s):

CSR CSA only has one site, located in Roxbury. CSR's other Children's Behavioral Health services will indirectly benefit from this investment as well.

8. Internal evaluation, measurement or performance management strategies to demonstrate effectiveness

Quantitative and/or Qualitative Data On Program Activities.

- The project will collect and monitor the following data:
  - # of universities participating in the project.
  - # of participating interns from each university/college
  - # of interns who become CSR clinicians, including the # of LICSWs
  - # of interns who become CSR supervisors over the project's duration
  - # of CSR clinicians who pass their licensure exam after participating in CSR Licensure Coaching and Support Group.
- The project will use a survey monkey to gather feedback from:
  - Field instructors
  - Interns
  - Other university contacts as appropriate.

Outcome measurements:

- **Specific Measure:** To measure impact CSA will develop Clinician Pipeline Recruitment/Retention Report generated by Credible EHR.
- **Goal/Time Point:** 25% of second year clinical interns become employed as CSR clinicians who serve CSA-engaged members.
- **Plan:** Internal data collection method.
- **Responsible Staff:** Darryl Huggins, Outpatient Program Manager and Jessica Bedney, CSA Director

B. Project Team description

CSR CSA is poised and eager to begin this project. Organization's level of readiness and proposed Project Team for implementing the proposed project(s), including:

B. An BH Dept. organizational chart is attached.

1. 2. The Project Team consists of:

- Salesia Hughes, Vice President of Behavioral Health
- Jessica Bedney, CSA Director
- Harry Harding, Vice President, Innovation & Strategic Partnerships
- Amos Andrews, Director of Data Analytics
- Darryl Huggins, Outpatient Program Manager

Roles, Job Descriptions and Qualifications

Team Leadership: Vice President of Behavioral Health, Salesia Hughes and CSA Director, Jessica Bedney will provide leadership, oversight and evaluation of all projects. Their time is funded as an in-kind resource from CSR. Salesia Hughes has been the Vice President of Behavioral Health at CSR for 3 years after serving as CSR CSA Director since its founding in 2008. Jessica Bedney has served as CSA Director for 4 years, after having started the Behavioral Health Training Department and previously serving as a Senior ICC. She also served as a statewide CSA Coach for 5 years.

Project Management: Overall contract and project management will be provided by **Harry Harding, Vice President, Innovation & Strategic Partnerships**. Contract management time is funded as an in-kind resource from CSR. Harry Harding served on the Behavioral Health Senior Team and led training and quality improvement initiatives for the CSR CSA. Harry leads various outreach efforts, consults on multiple internal projects and has previously managed a large training and quality improvement grant for CSR CSA. With a graduate degree in organizational development, Harry brings extensive experience in large project management.

2. Quality Monitoring Project Manager: Amos Andrews, Director of Data Analytics will manage all aspects of the Quality Monitoring project. Amos managed all aspects of CSR Behavioral Health's conversion to Credible Electronic Health Records, including project planning, management and implementation. He will also convene and lead the CSR EHR team to define new EHR data elements the development Quality Report templates.

Pediatric Partnerships Project Manager: Harry Harding will manage all aspects of the Pediatric Partnership Project, in addition to his in-kind overall grant management role. Harry's relationship-building expertise will guide this strategic partnership endeavor. His role as Vice President of Innovation & Strategic Partnerships will enable him to spearhead the change process at CSR CSA toward improved practice in integrated care coordination and care management, and to support the development of CBHI training for pediatric providers, ACOs and MCOs.

Clinical Workforce Pipeline Project Manager: Darryl Huggins, Outpatient Program Manager, will manage all aspects of the Clinical Workforce Pipeline project. Darryl Huggins leads the programmatic development of the Outpatient program including managing partnerships with Boston Public Schools and college/universities. Darryl has significant experience working in behavioral health including several years working as an ICC for the CSR CSA.

Project Management and Coordination Among Staff:

Harry Harding will oversee all aspects of Project Management, serving as the single point of contact, convene the Project Team, oversee the implementation plan, ensure deliverables, coordinate among the various projects and support effective evaluation.

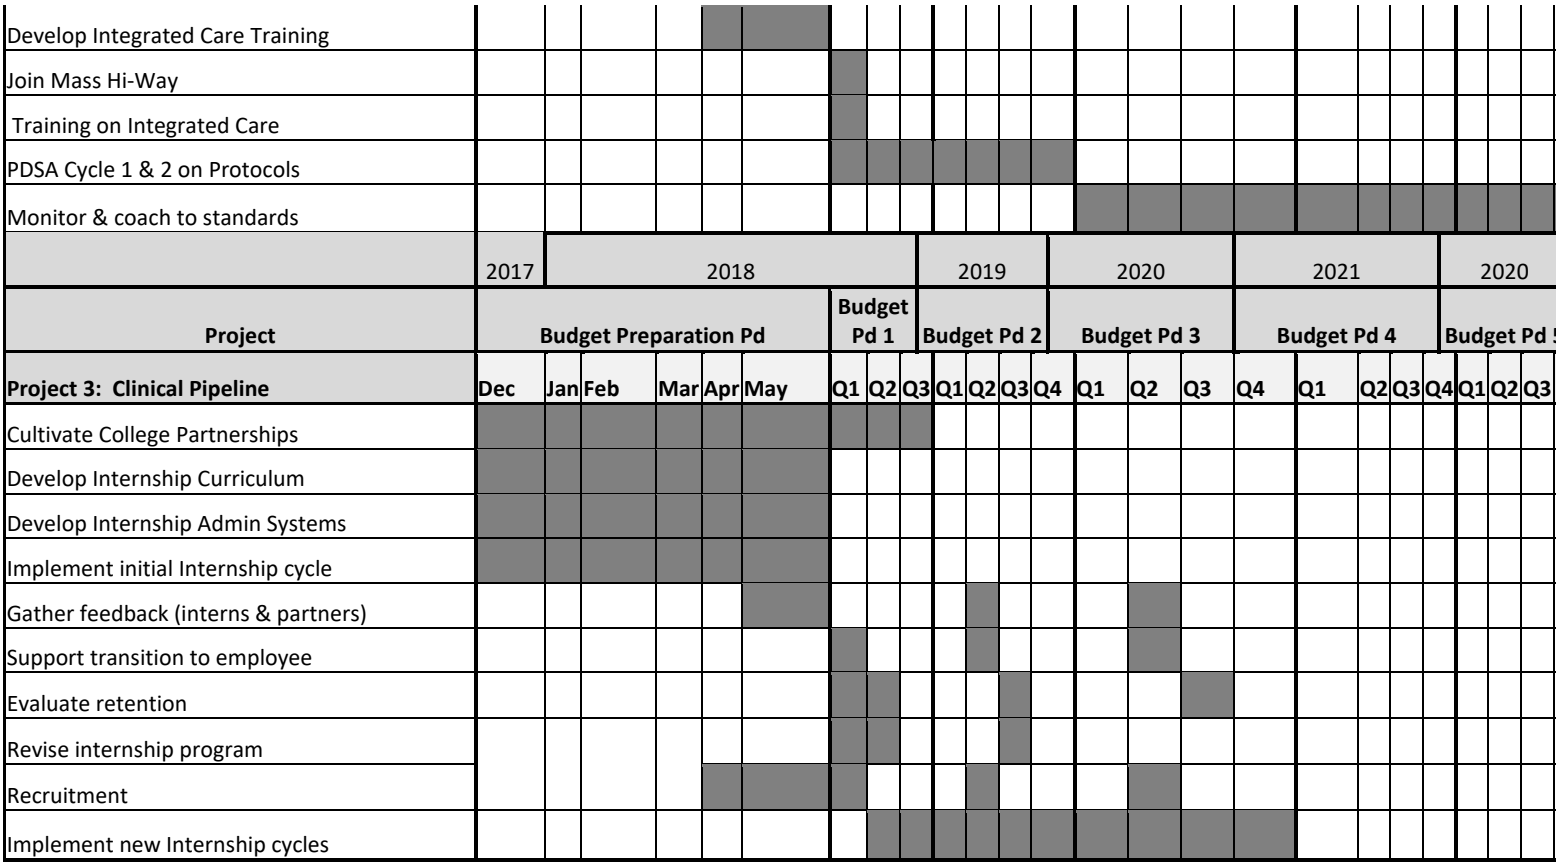
Engage new Pediatric Providers																								
Replicate as resources allow																								
Develop Integrated Care Protocols																								
Train Supervisors on Protocols																								



D. Budget Report and Budget Narrative

See Attachments B and C.

E. Sustainability

The Quality Monitoring project is building permanent management capacity and practice in monitor program quality. It will foster sustainable practices in using data to manage performance improvement efforts, creating standard templates and increasing manager skill and creating their own reports. CSR management is highly invested in sustaining the work after the project ends. Financially, it plans to continue the relatively small annual fee for the EHR Reporting software use after the project is completed.

The Pediatric Partnership project will be designed with sustainability in mind. While the initial partnership-building and coordination efforts will be infused with staff-intensive resources, the goal of the project is to institutionalize coordination, communication and referral processes that do not require sustained investment. As CSR CSA builds its own capacity to engage pediatric providers, it will continue to build relationships that expand beyond the original partners in the grant.

The Clinical Workforce Pipeline project is intended to generate lasting partnerships with universities and colleges. The project will establish foundational systems and relationships,

with the goal of establishing a reputation for CSR CSA as a valuable and desirable place for internships and employment. The project's success will pave the way for its sustainability. If the project is successful in cultivating future clinical employees, CSR CSA will continue to invest in the staffing required to sustain the Clinical Workforce Pipeline.

Section 6.5 Coordination with ACOs, MCOs, and Primary Care Providers (3 pages)

Bidirectional communication between the Bidder and pediatric practices

1. As part of its Pediatric Partnership project, the CSA will work to develop bidirectional communication with pediatric practices. The CSA will work at multiple levels to achieve bidirectional communication.
2.
3. **At the Care Team level,** the CSA will establish Integrated Care Protocols and train ICCs to use the Mass Hi-way to share Care Plans with the child's pediatrician for all ICC-engaged members. ICCs will reach out to the pediatrician through the Mass Hi-way system, inviting communication and engagement around the youth's Care Plan.
4.
5. **At the institutional level,** the CSA will seek to engage leaders of priority ACOs, community health centers and other pediatric providers to support more intentional and consistent communication. The CSA will offer to assign a Clinic Coordinator as a point of contact for the provider, coming onsite on a regular schedule for the duration of the project to facilitate referrals, coordinate medical team trainings on CBHI services, or otherwise facilitate bidirectional communication as required.

Referral management protocols for follow-up and informational sharing

As part of the Pediatric Partnership project, the CSA and its partners will develop referral management protocols including expectations for consistent follow-up and information-sharing for pediatric referrals. As described earlier, the PDSA cycle will be used to test and adjust to ensure ease of use.

Team-based treatment planning in collaboration with pediatric practices

6. The CSA and its partners will experiment with various options for Team-based treatment planning in collaboration with pediatric practices. Recognizing the context of time pressures on pediatric providers, options for skype participation, phone communication and written input via email into the team planning will be considered. The CSA will also explore the option, at the parent's request of a Family Partner joining the parent at pediatric well visit to bridge communication with the pediatrician.

Timely access to ICC services; and

A key goal of the Pediatric Partnership project is to increase timely access to ICC services. The ICC service needs to be top of mind for pediatricians, which is supported by a regular point of contact, increased information about ICC and other CBHI services, an easy-to-find referral process and regular pediatric updates about families receiving the ICC service.

Connections to social services.

The Pediatric Partnership project will open the doors to providing pediatricians with additional social service resources for youth in need of Intensive Care Coordination. Through ICC, pediatricians support families with complex needs to access expanded social service supports to address food instability, housing instability, school services or other social service needs.

CSA Budget Report

Children's Services of Roxbury

Investment Funding	Prep Budget Period	Budget Year 1	Budget Year 2	Budget Year 3	Budget Year 4	Budget Year 5	Total Revenues

Project 1 Name: Quality Monitoring

DSRIP Project Goal(s):
1 *(2) Strengthening fidelity to Wraparound processes, including the care planning,*
2 *Optional*
3 *Optional*

IT Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
Project Manager	$ 75,000.00	0.55	5	$ 17,188
				$ -
				$ -
				$ -
				$ -
				$ -
	Total Salary	0.55		$ 17,188
	Fringe rate	17.0%	Total Fringe	$ 2,812
Total IT Staffing including Fringe				$ 20,000

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in executing activities related to the project. Quality Monitoring Project Manager: Amos Andrews, Internal Projects Manager/EHR Administrator, will manage all aspects of the Quality Monitoring project. Amos managed all aspects of CSR Behavioral Health's conversion to Credible Electronic Health Records, including project planning, management and implementation. He will also convene and lead the CSR EHR team to define new EHR data elements the development Quality Report templates. He will install the reporting module, convene and lead planning meetings with the EHR work group to define standard report specifications, produce standard report templates, train CSA supervisors, develop advanced EHR training for staff.

Reporting Software

Description of Expense	
Purchase of Electronic Health Record	$ 57,856.00
reporting software for CSA	
Total Development and Adaptation of EHR and Care Management System	$ 57,856.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined: As a result of the project's prep budget the management team along with the Project Manager will be able to design reports along with dashboards to facilitate in assisting in timely access to ICC services. By tracking encounters, face to face visits, know how much time is being delivered to ICC engaged members each week. CSA managers will have all this information and much more at the push of a button to ensure the quality of care for each member and how each clinician is meeting standards of care. The cost was determined by Electronic Healthcare Record software vendor, CREDIBLE. The Credible Business Intelligence Module is an enhancement to the current EHR system.

Total Workforce Development Staffing including Fringe				$ 19,500

The Clinical Workforce Pipeline Project Manager's goal is to expand the workforce of Masters level clinicians and licensed Supervisors prepared to work in homes and neighborhoods in Greater Roxbury communities of color. To create this clinical pipeline, the Project Manager will develop a robust internship program in partnership with university Social Work Schools and other clinical masters-level degree programs. The Project Manager will establish, strengthen and formalize at least 8 university partnerships, cultivating relationships with each Department chair, field placement administrator and field instructor. He will gather specific department requirements and expectations, attend Intern Supervisor trainings and maintain quarterly contact with Field Instructor, including review of requirements, progress and evaluation. The Project Manager will develop and implement recruitment, screening and selection of appropriate MSW, LMHC and LMFT interns. The Project Manager will coordinate one or more Intern Study Groups designed to enhance standard clinical supervision and training. For interns who are graduating from their clinical programs, the Project Manager will provide individualized information and support on transitioning to employment at Children's Services of Roxbury CSA.

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Electronic Health Record Enhancements	$ 11,160.00
Total Development and Adaptation of EHR and Care Management System	$ 11,160.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

These funds will be utilized to contract with NetSmart to work on the PCP information fields and imbedding ICC care plans in Evolv as well as creating custom fields for ICC staff to enter information into the electronic health record so that they have seamless access to cleint information on Evolv coupled with tablet technology.
Rate is based on previous similar contracting rates with the same vendor. Anticipated rate of contracting with NetSmart is $120/ hour ; we anticipate 93 contracting hours to do form script updates, custom form development, form updates and testing in Evolv.

Technology for Service Delivery

Description of Expense	Cost
Total Technology for Service Delivery	$ -

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Other Technology Expenses

Description of Expense	Cost
Microsoft Surface Book (256 GB, 8 GB RAM, Intel Core i5)	$ 39,200.00
Case Logic 15-Inch Laptop and Tablet Briefcase, Black (dlc-115)	$ 946.00
Sophos Hard Drive Encryption Software	$ 4,800.00
Imaging & Deployment by Winxnet	$ 14,400.00
Project Management by Winxnet	$ 3,000.00
Total Other Technology Expenses	$ 62,346.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:
40 Microsoft Surface Book (256 GB, 8 GB Ram, Intel Core i5) at $980 per tablet.
40 Case Logic 15-Inch Laptop and Tablet Briefcase, Black (DLC-115) at $23.68 per case.
40 Sophos Hard Drive Encryption Software at $120 per tablet
Imaging & Deployment by Winxnet at $360 per tabletfor 40 tablets: Loading the tablets with the encryption software, MS Office Software and delivery & installment of the tablets to the end use.
Project Management by Winxnet at $75 per tablet for 40 tablets: Vendor manages the resources needed to accomplish tablet set up and roll out.
The projected break down of distribution of Microsoft Tablets and Tablet Briefcases is as follows:
Hyde Park : Program Director: 1,
Senior ICC current:0, Senior ICC open position: 1,
ICC current: 7, ICC open position: 2,
Interns current :3, Interns open position 1.

Park Street: Program Director: 1,
Supervising Program Director:1,

Project 2 Name:

Workforce Development Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
Wraparound Trainer	$ 72,000.00	1	5	$ 30,000
Recruiter	$ 60,000.00	1	5	$ 25,000
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
	Total Salary	2		$ 55,000
	Fringe rate	25.0%	Total Fringe	$ 13,750
			Total Workforce Development Staffing including Fringe	$ 68,750

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in executing activities related to the project.
The salaries are based on mid-points in HFLW existing pay scale for comparable positions
The Trainer will be primarily responsible for the internal training, tracking, and scheduling of Wraparound for our CSAs. Esssential Functions include, but not limited to
--Deliver Wraparound Tier 1 and 2 trainings for Intensive Care coordinators and Family Partners at our CSA programs upon hire and annually to ensure and maintain our high fidelity wraparound practice
--Provide IHT and OP staff basic wraparound training to enhance skills for when they are the clinical hub to CBHI services
--Conduct training in both large group and individual forums
The Recruiter will be responsible for achieving the agency's staffing objectives by recruiting and evaluating job candidates and partnering with CBHI hiring managers to complete the vacancy fulfillment process.This individual will Source, screen and/or interview candidates for a variety of positions and building a proactive pipeline of qualified candidates for CSA and other CBHI programs priority roles.

The Home For Little Wanderers

Section 6.2 Executive Summary

Table of Contents

A. HFLW's current performance on its Development Plan 1

B. Specific examples of strengths and needs of HFLW 2

C. HFLW's plans for improving timely access to ICC services 3

D. HFLW's plans for improving care coordination, care planning, and care management for ... 3

E. HFLW's plans to improve performance on quality scores and Development Plan goals 3

F. HFLW's plans for improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth 4

A. HFLW's current performance on its Development Plan

The Home for Little Wanderers (HFLW) operates two Community Service Agencies (CSAs) in Boston. Our CSA Development Plans are composed of multiple goals and objectives to guide our programs in achieving excellence in the delivery of intensive care coordination (ICC) and family partner (FP) services. These goals and objectives fall under two major categories: 1) continuous quality improvement and 2) work flows and communication both internally within our programs and externally with our stakeholders and Managed Care Entities (MCEs).

Continuous Quality Improvement: Our workforce is the essential strength of our services. To maintain an effective workforce it is critical that we continuously identify areas for which our staff may need additional training and support. Workforce development has always been a priority in regards to quality improvement efforts at HFLW. Significant resources are dedicated to our Workforce Learning and Development Department which provides excellent support and training to our staff. Specific to our CSA development plans, CSA staff are currently receiving training on documentation techniques to ensure that the proper hub paperwork is completed for stand-alone FP services as well as training for ensuring that our progress notes properly capture the extent of the care coordination services that are actually being provided. The goals and objectives within these training efforts have all been met or they are in progress of being met. The completion of standardized assessments and quality improvement tools are also included on our development plans. Multiple tracking strategies have been developed to assist our staff in monitoring the successful completion of these tools. Our CSAs continuously meet and document the successful completion of at least 80 percent of the required initial and reassessment of the CANS tool. Additionally, in our efforts to ensure the quality of our care planning teams, HFLW has successfully completed all required TOMs assessments. HFLW values the TOMs assessment as a quality improvement tool for our Wraparound services and we will continue to meet our target goals every year.

Work Flows and Communication: As with any strong partnership, communication is a key factor for success. HFLW leadership, program directors and program management staff are strongly supervised on this concept and it will continue to be a goal on our own CSA development plans for the future. In fact, our Senior Director of Community and Behavioral Health Services has arranged weekly, and now monthly "check ins" with our MBHP partners.

This monthly meeting is designed to improve communications by setting aside designated time to proactively identify and problem solve the inevitable challenges and barriers that present themselves in the daily operations of two CSAs. Multiple MBHP staff participates in the check in, including the Regional Director, who shares the same commitment to strong and transparent communication. In addition, and specific to our CSA development plans, our goals and objectives include our commitment to submitting a draft development plan 10 days before our scheduled meeting with the MCEs as well as goals for timely and accurate MABHA Access reporting. These goals are ongoing.

In addition to ensuring successful communication and work flows with our external stakeholders, HFLW also has goals and objectives for improving internal communication to help us problem solve critical components of program management. These goals include timely access to our services, development of a robust system of care (SOC), and the management of our efforts to not have a wait list for services. Our CSAs have instituted successful workflows and protocols in our development plans to achieve these objectives including 1) contact with families referred within 24 hours and then weekly contact until assignment 2) dedicating a staff person in each program to manage referrals and ensure timely access to our services, 3) regular outreach and solicitation for attendance at our SOC meetings, and last but not least 4) ensuring that intakes, discharges, and all development plan objectives and deliverables are standing agenda items in our weekly program leadership meetings.

B. Specific examples of strengths and needs of HFLW

Both Community Service Agencies have significant language capacity that reflects the composition of communities we serve. The families that our CSAs work with speak numerous languages and come from cultures that are not familiar to many outside of the communities that they live in. It has been and will continue to be a high priority to recruit and retain employees who represent the culture and the communities that we are working with. To accomplish this we utilize specific recruitment protocols and give a higher pay differential for experience and language. Our CSA language capacity currently includes Haitian Creole, Vietnamese and Spanish.

HFLW's commitment to training and supporting our CSA workforce results in significant strengths around specialty among the CSA staff. Specific examples of this include specialty training in early childhood mental health, specific training for Wraparound services for transitional age youth, and trauma informed training in specialty practices such as ARC and GROW.

With the proposed additions to our staff in recruitment and training we believe we will be able to recruit, train and retain our workforce with a more concerted effort.

Lastly, our existing successful partnerships with other providers in our communities are a noteworthy strength of our service provision model. Our CSAs have established referral protocols with Community Health Centers, such as Codman Square Health Center and Dorchester House, as well as specialized partnerships working with incarcerated fathers soon to return to their communities from the Suffolk County House of Corrections.

Communication, relationships and a willingness to partner with our community stakeholders are the cornerstones of our CSAs' strengths. One area of need is the funding to support the technology infrastructure necessary to make our work more efficient and accessible for our families. We believe that using the DSRIP dollars to equip our workforce with state of the art technology will build on our existing strengths and improve the quality and access to care

coordination services for our families. The existing gap in technological infrastructure often slows down our work and makes us less efficient. The business of effective and timely care coordination is now largely based in an organization's ability to leverage technology to perform services in one day that otherwise would have taken 5 days in the past. HFLW needs the proposed technology in this response to build on our strengths and continue to be a leader in effective and timely care coordination services.

C. HFLW's plans for improving timely access to ICC services

With the help of a dedicated recruiter we believe that we will be able to reduce the time to fill staff vacancies which will allow for our CSAs to work with more ICC involved families in a timely manner. The technology enhancements that we are proposing to implement will result in to time saving efficiencies and better access to services. The ultimate outcome from these efficiencies won't be limited to time savings, but that it will significantly reduce the amount of time cases stay open due to stronger client engagement. In the spirit of the Wraparound philosophy, up to date technology utilization will make it exponentially easier for a family to manage their own provider team, thus limiting the need for an ICC. Once families have been familiarized with how to use the technology such as the client portal they will eventually become their own care coordinator. Creating a tool that makes care coordination simpler not only empowers families but will reduce the amount of time cases are open allowing increased capacity for our CSAs to take more cases and creating increased capacity for families on wait lists which will result in lesser cost to the Commonwealth.

D. HFLW's plans for improving care coordination, care planning, and care management for ICC-Engaged Members

Our CSAs are experienced in wrapping around families to plan, coordinate and manage their care within HFLW network of services and among the providers involved in the children and their families' care. We intend to tackle the technological and logistical challenges that surround effective care coordination. The proposed technology enhancements including but not limited to purchasing of hardware and software and boosting functionality in our electronic health record will significantly increase efficiencies and will allow all members of the care team to communicate, cooperate, and coordinate care for each ICC-enrolled Member to deliver the best care possible. The dedicated training staff resource will support both CSA programs in ensuring that our workforce is receiving the proper training and on the job coaching to deliver High Fidelity Wraparound to improve care coordination, care planning, and care management for ICC-engaged members.

E. HFLW's plans to improve performance on quality scores and Development Plan goals

We anticipate that the updated technology available to our workforce will contribute to improvements in performance quality score and CSA development plans. Both continuous quality improvement and work flows and communication domains in our development plans will be addressed even further as we equip our workforce with user friendly, state of the art technology that will enable our workforce to complete their documentation in a timely and efficient manner. The dedicated training staff person will play a significant role in performance on quality scores and Development plan goals; working closely with the CSA leadership. The

trainer will evaluate current practices with the program leadership, make recommendations and will work with the program leadership to put the necessary trainings and supports in place.

F. HFLW's plans for improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth

HFLW is committed to improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth. Our CSAs formed a number of strategic working relationships with community providers in the recent years in anticipation of the changing healthcare environment. The technology enhancements proposed in this response will strengthen already existing relationships and will foster efficient working relationships with other providers.

Section 6.3 Populations Served and Community Engagement

Table of Contents

A. Member populations and communities it serves 5

B. Relationships within the community it will leverage to improve the quality of ICC services 5

C. How the current and planned partnerships align with the proposed project(s) 7

G. Member populations and communities it serves

HFLW Community Service Agencies (CSAs) provide Intensive Care Coordination to children and their families in the greater Boston area who live in the neighborhoods of Dorchester, South Boston, Hyde Park, Roslindale, Jamaica Plain and other surrounding towns. Children who are eligible for this service either currently have a Serious Emotional Disorder (SED) or have had one within the past year of their life. Typically the SED contributes largely to functional impairment in the home, school or community. Functional impairment is defined as difficulties that substantially interfere with or limit the youth in achieving or maintaining developmentally appropriate social, behavioral, cognitive, communicative, or adaptive skills.

The children who qualify for ICC services typically receive multiple services from private and or public community providers such as outpatient behavioral health clinics, community health centers, primary care centers, the Department of Public Health, special education services facilitated by the Department of Elementary and Secondary Education, Department of Children and Families and or Family Resource Centers and thus need a care coordination team to ensure timely, non-duplicative , and effective services.

Referrals for ICC services come from a large continuum of community partnerships that we have established over the last several years. HFLW has a centralized intake system as the primary access point for all of our community based services including ICC. Intake coordinators and other supervisory staff within the CSA respond to the referral source and family within 24 hours. Our partners value our service and rely on us to be responsive and organized in our communications with them about a referral.

B. Relationships within the community it will leverage to improve the quality of ICC services

For the last three years HFLW has made targeted efforts to improve referral and engagement practices to ensure the ease of access, in some cases same day, to our intensive care coordination services. These efforts have occurred in the context of continuous development of partnerships and collaborations with community providers as we have worked together to meet the principal characteristics of successful integration and coordination of services for children, including a) improving client experience and b) ensuring successful engagement upon referral by breaking down barriers to obtaining services.

The number of important working relationships formed over the years with our community partners are too many to mention here. They range in concept from formal memorandum of understandings with Community Health Centers and Behavioral Health Organizations to access our services, to consultations to public health agencies on developing best practices for creating an effective, trauma informed system of care for young children.
Specific examples of the existing partnerships that we will leverage to continue to improve Care Coordination services are as follows:

Codman Square Health Center and Dorchester House: HFLW has partnered with the Codman Square Health Center for the last two years to enhance access to ICC services for patients who present in the primary care setting with physical ailments and also have a serious emotional disturbance that is causing functional impairment. The partnership allows our CSA to have an exclusive relationship with the behavioral health department at the health center to support integrated care and service delivery. In addition, our CSAs are replicating this model with the Dorchester House Multi-Service agency where we are currently hiring Intensive Care Coordinators and Family Partners who will work exclusively with their Health Center. HFLW anticipates being able to leverage these existing relationships with Codman Square Health Center and Dorchester House to expand this model to other Health Centers in an environment of Accountable Care.

Boston Public Health Commission: Both the Early Childhood and Trauma Response divisions within the Boston Public Health Commission have collaborated, and continue to collaborate, with our CSAs to train our staff and jointly develop best practices of care for the populations we serve. HFLW will continue to nurture this relationship as we further our shared vision of providing trauma informed care coordination to our vulnerable population.

Department of Education and Boston Public Schools: Members of our CSA leadership participate in the Boston Public School Behavioral Health Collaborative. This is a high level, monthly meeting of providers, DMH, and BPS administrators aimed at developing best practices and therapeutic interventions that generate measurable outcomes in the Boston Public School System. Additionally, our CSA staff provides regular consultation to multiple schools within the BPS system including the Dever-McCormick K-8 School and at all three sites of the McKinley Schools. These consults facilitate improved access to our intensive care coordination services for students as well as referral to other community providers to address the complex needs of these students.

Family Matters: HFLW has a unique partnership with the Suffolk County House of Corrections. In this model our CSA co-locates an intensive care coordinator inside the prison once a week to begin the process of engaging men who are fathers and are preparing to return to the community. This model is designed to engage fathers as soon as possible and ideally before they are released from prison, so that our care coordinators can begin the process of building a team around the child as their father prepares to return home. This is an excellent example of creative and targeted efforts that HFLW has made to increase access to a vulnerable and underserved population.

Specialty programming and culturally competent care coordination services: Our CSAs have significant language capacity and cultural competency to serve the Vietnamese community in Boston. The Boston Chinatown Neighborhood Center, the largest social service provider for Asian families in Boston attends our monthly system of care (SOC) meetings where we discuss system integration and challenges. We make and receive referrals to/from this organization. We also have a unique referral relationship with the Federation of Children with Special Needs that support families with navigating special education process within Boston Public Schools. Vietnamese-speaking staff from the Federation refers exclusively to HFLW because of the language and cultural competency within our CSAs.

System of Care (SOC): To ensure that we are successful in our efforts to improve the quality of care through collaboration with providers, we will continue to recruit for and facilitate monthly system of care meetings in the community. These meetings allow us to access and understand the needs and strength of the system integration efforts in the communities we serve. Current membership in our SOC meetings is robust with representatives from the following agencies:

- Departments of Mental Health and Children and Families
- Caring Together
- Department of Youth Services (Clinical Director)
- Private provider community including Bay Cove Human Services, Mass Mentors, Adoption Journeys, South Bay Mental Health, Silver Lining Mentoring, Lena Park Center, Best team, Clergy
- The Institute for Health and Recovery

C. How the current and planned partnerships align with the proposed project(s)

The existing partnerships and community collaborations outlined above demonstrate our CSAs' commitment to excellent care coordination for all children and families. We believe that the existing partnerships we have with the aforementioned community health centers will enable us to pilot the proposed EHR enhancements with these partners. , our collaborative working relationships with providers with specific population focus such as The Boston Chinatown Neighborhood Center will afford us unique opportunities to pilot and receive feedback on how utilization of certain technologies meet the needs of the diverse populations we serve. We will build upon lessons learned from these small pilots to refine the scope of our work with larger ACOs to coordinate care in the most efficient manner possible. Our long term vision is to be able to communicate and coordinate care with all partners involved in a client's care via most up to date technology that will enable the child's care team community to see "the whole child" rather than focusing on a particular aspect of their treatment (i.e.: Individualized Education Plan, Occupational Therapy, medication management, etc.).

A. Project description (program narrative)

Abstract
The Home for Little Wanderers (HFLW) is proposing a technology upgrade project to be carried out in both Community Service Agencies it operates: Hyde Park and Park Street. The main goal of this project is to implement technology improvements to strengthen integration with all providers involved in ICC enrolled members' care. We anticipate that these proposed enhancements will also strengthen fidelity to the Wraparound model and improve member engagement. The project will result in enhancements in HFLW's existing electronic health record, purchasing and setting up tablets for ICC staff to use in the field,. HFLW anticipates purchasing the tablets and investing a significant amount of staff time to coordinate internally during the prep period outlined in this RFR. The consequent years will be spent making improvements in the electronic health record and ongoing implementation and support of the enhancements established by a multidisciplinary team at HFLW. The proposed deliverables are utilization of tablets by the CSA staff to aid in high fidelity Wraparound service provision, providing all ICC enrolled clients and caregivers with a Client Portal, and Care Plans embedded in HFLW electronic health record. DSRIP funding will be used to purchase tablets and pay for enhancements to our EHR. The project team will consist of Director of Health Information Systems, Senior Director of Behavioral Health, and the CSA program leadership. The funds will be distributed between the two CSAs based on the program size, both staff and enrolled members. HFLW plans to track time between referral and enrollment, hospitalizations and ER visits during ICC enrollment, and change in caregiver skills over time.

The Home for Little Wanderers Community Service Agencies Client Centered Care Coordination Project
HFLW is proposing technology enhancements focusing on client centered care to accomplish strong integration with ACOs and primary care providers. Over the course of the next 5 years, HFLW is aiming to a) equip our workforce with the state of the art technology to effectively manage and coordinate care with a team of community partners composed of all providers involved in a client's care, b) improve member engagement by leveraging technology to empower clients and caregivers to manage their own care plan c) imbed ICC care plans in HFLW's electronic health record, and d) improve member engagement including strengthening fidelity to Wraparound via a client portal.

HFLW believes that the changing landscape of healthcare in the Commonwealth make it a necessity for providers to find efficient cost saving ways to manage and coordinate care. Within this context, leveraging technology to improve care management and care coordination efficiencies has been a priority for HFLW CSAs in the recent years. HFLW made significant strides in advancing our technological infrastructure to adapt to the new ways of providing and coordinating care. We applied for, and was selected to, participate in the eQuality Incentive Program (eQuip) sponsored by the Massachusetts eHealth Institute (MeHI). The most significant accomplishment of this project was HFLW's successful bidirectional connection to the Mass HIway (HIway). Through the DSRIP funding, our main goals are to maximize the utility of Mass HIway, make enhancements in our electronic health record system (NetSmart's Evolv), and equip our workforce with the most up-to-date software and technology that will allow them

to serve the children and families enrolled in ICC services. These major improvements will have a positive impact on HFLW CSAs' Development Plans, as well as the goals outlined in this RFR.

HFLW anticipates engaging in a series of activities to accomplish the goals described above. We anticipate that some of the activities outlined in this section will be carried out simultaneously and others will be sequential, building upon the execution of other activities described. The technology improvement activities are as follows:

- Capturing primary care provider in HFLW electronic health record: Primary care provider information recorded in HFLW Evolv system is the first necessary step for the capability to exchange information with ACOs and primary care providers. This initial effort will set up the stage for exchanging information and coordinating care.
- Making enhancements and changes in Evolv to allow for seamless electronic communication and collection of additional data points: In line with the quality measures described in Attachment A of this RFR, HFLW desires to capture ICC member hospitalization and ER visit (as related to a behavioral health matter) information in Evolv in a format that easily allows for program leadership and senior leadership to run reports to help inform our practice.
- Equipping the CSA workforce with Microsoft Surface Pro Tablets: HFLW intends to purchase and set up tablets for all CSA ICC staff to use in the field. Equipping our workforce with this mobile and highly efficient technology will enable HFLW to accomplish several goals. First, the live electronic signature capability in the tablets will allow for staff to gather necessary signatures from parents/guardians and other providers during meetings, increasing the fidelity to Wraparound practices around family-driven practice. Another benefit of the tablets in strengthening family-driven practice will be through the utilization of assessments. The tablets will facilitate more efficient administration of the Caregiver Skills Assessment that is currently a part of the electronic health record. This assessment allows our staff to focus on each caregiver's unique strengths and needs.
- Care Plan built into electronic health record: The CSA Care Plan is a specific, standardized, document utilized in all CSAs in the Commonwealth. As a unique document, the form itself does not exist in generic medical records such as Evolv. The CSA Care Plan will be embedded into Evolv by our IT department which will enhance our ability document and pull important aggregate data from the health record.

The anticipated deliverables of the proposed project are as follows:

- Primary care provider information for all ICC members enrolled after put after the budget period will be recorded in Evolv.
- Each CSA staff will have an agency-issued Microsoft Surface Pro tablet.
- Care Plans will be embedded in Evolv.

The DSRIP funding will be used to enhance our use of technology to improve the quality of care coordination services and member experience. Specifically, the funds will allow HFLW to 1) purchase tablets and design technology, 2) improve our EHR functionality through system enhancements

HFLW has robust IT and electronic health record departments that continuously support both Hyde Park and Park Street CSAs. Members of these departments will be engaged on the proposed project. We will rely heavily on our IT and electronic health record experts specifically

our Director of Health Information Systems who will invest their time, knowledge and skills. Additionally, our Senior Director of Community Services and Behavioral Health has extensive experience and knowledge of developing accountable care systems and structures in the State of Maine where he participated on multiple provider- and state-lead committees tasked with developing a new system of care under the Affordable Care Act between 2010 and 2013. Furthermore, CSA program directors and the supervising program director for Park Street CSA will oversee the day to day implementation of the aforementioned enhancements at the program level, ensuring the optimal utilization of the hardware and software to make this project a success.

The available funds will be allocated based on staff size and number of enrolled clients. CSA staff size will determine the number of tablets purchased. Total number of ICC enrolled clients in each site will determine the funds distributed since the payments are structured by number of ICC enrolled members.

HFLW is committed to ongoing program evaluation and outcomes measurement. HFLW has a dedicated Risk Management, Evaluation and Outcomes (RMEO) department that organizes, analyzes and reports on many programmatic activities at the organizational and program level. Throughout the year, the RMEO department provides support, monitors processes and outcomes, and analyzes data gathered at the program level. For the CSAs, RMEO currently tracks, analyzes and reports on the characteristics of families served, discharge outcomes, Caregiver Skills Assessment results, satisfaction survey feedback, and the results from The Home's post-discharge follow-up interviews. Additionally, CSA leadership and RMEO senior staff discuss WIFI and TOM results as they are published every year to identify areas of strong Wraparound practice and areas that may require quality improvement activities. Program leadership and RMEO staff will continue to collaborate on measurement to ensure that program activities and process outcomes are leading to the desired client and programmatic outcomes.

Over the course of the project, the CSAs will continue to utilize TOM to assess fidelity to high quality wraparound practice. We anticipate that the technology enhancements will enable the following:

- Tablets will give greater access to complete assessments (such as CANS, caregiver skills assessment, etc.) during the course of home visits
- Families will be able to sign off on assessments and plans during home visits, thus ensuring staff are integrating family voice and choice
- Tablets and custom fields in the electronic health record will make it easier to review progress by looking at assessments and plans in real time
- Levering technology will assist with the ongoing use of outcomes data to inform decision making, which is part of evidence-based practice
- Imbedding ICC care plans will enable individualized care planning

When the above changes in practice are implemented, and based on our most recently available TOM scores, we anticipate that by Budget Period 3 both CSAs will show 25% improvement on the "Based on Priority Needs" and 20% improvement on the "Outcomes Based Processes" domain scores.

"Based on Priority Needs" domain measures to what extent the needs of the child and family are prioritized and how the needs are addressed. The items in this domain include

- Before beginning to brainstorm strategies, the team explicitly articulated, prioritized, and/or reviewed and confirmed the youth's and family's needs to plan for/address during the meeting.
- Every need that was planned for/addressed during the meeting was articulated as the underlying reason(s) why a problematic situation or behavior was occurring, and was not simply stated as a deficit, problematic behavior, or service need.
- Planning focused on the underlying needs of other family members, not just the identified youth.
- For every need that was planned for/ adressed during the meeting, the team brainstormed more than one strategy to meet the need before deciding on next steps.
- The team discussed how they will know the youth and family's needs have been sufficiently met to warrant a transition out of formal Wraparound services.

"Outcomes Based Processes" domain measures whether the Wraparound practice is goal oriented and includes measurable goals. The items that measure this domain include

- The team reviewed how close the youth and family are to achieving their vision, mission, or Wraparound team goal.
- The team reviewed the status of task/action step completion since the last meeting.
- The team monitored progress toward meeting needs and achieving outcomes/goals since the last meeting.
- Progress toward meeting needs and achieving outcomes/goals since the last meeting was evaluated using objective and verifiable measures, not just general or subjective feedback.
- For any new outcome or goal developed during the meeting, the team discussed and agreed upon as specific and measurable way to evaluate progress.

In Budget Year 1 TOM will be conducted by the Program Directors then the responsibility will gradually shift to the Wraparound Trainer. By Budget Year 3, data collection will be completed by the Wraparound Trainer. Program leadership, the Wraparound Trainer, and RMEO will work collaboratively to analyze report and summarize the results.

• B. Project Team Description

1. Organizational chart

Please see Attachment 6.4B-1.

2. A list of current staff that the Bidder proposes will be involved in the project(s), including their job descriptions and qualifications for the project(s)

The project team will consist of the following HFLW staff: Andrew Massey, Director of Health Information Systems; Matthew Small, Senior Director of Community and Behavioral Health Services; Natalie Sheehan-Dias, Supervising Program Director; Raechelle Joyner, Program Director of CSA Hyde Park; Kathleen Irving, Program Director of CSA Park Street.

Resumés and Job Descriptions are enclosed in Attachment 6.4B-2.

Andrew Massey has over ten years of experience in the human services informational technology field. Since starting his current position at HFLW, Andrew made significant enhancements in HFLW electronic health record possible (i.e.: conversion from ICD9 to ICD10 and implementation of electronic treatment plans). He will bring technical expertise and network & system administration skills to the project team and will act as the key staff in exploring and implementing care coordination software.

Matthew Small, an Independently Licensed Clinical Social Worker, has over twenty years of experience in child welfare and behavioral health fields. Since 2013, he has overseen the operations and administration of a large scale continuum of behavioral services, including CBHI services. Matt provides oversight, leadership and supervision to 11 program directors with more than 20 million dollar operating budget. As aforementioned, he is experienced in service delivery systems change and will serve as the implementation team leader on the programmatic side.

Natalie Sheehan Dias is an Independently Licensed Clinical Social Worker with over twenty five years of experience dedicated to working with children and families in the Greater Boston area. For the past seven years, Natalie has been intricately involved in the acquisition, development, and implementation of services through the Children's Behavioral Health Initiative. She currently serves as the Supervising Program Director of the Dorchester/South Boston Community Service Agency and Boston Safe-at-Home program of HFLW. In this role and with the support of The Home, Natalie has established partnerships with other agencies and institutions, working to make significant, effective changes in the community through integrated, comprehensive service delivery systems.

Raechelle Joyner is an Independently Licensed Clinical Social Worker who has worked with underserved populations and communities for over twenty-three years. Throughout her twenty years of service at HFLW, she has worked in Nursing, Foster Care and Adoption, Family Stabilization, Community Support, and Outpatient Therapy. She currently serves as the Program Director of the Hyde Park Community Service Agency, overseeing the day-to-day operations and administration of all aspects of programming including the CSA development plan implementation. Raechelle holds a certificate from the Eikenberg Institute for Relationships in Multicultural Supervision and has graduated from the Institute for Nonprofit Practice at Tufts University. She simultaneously works as an Adjunct Professor at Wheelock College and teaches three core bachelor level courses. She was given the Outstanding Field Instructor Award by Wheelock College for her work in promoting human rights and social justice.

Kathleen Irving is an Independently Licensed Clinical Social Worker with ten years of experience working with children, families and adults in a multitude of mental health settings. Kathleen's focus has been in community based mental health, beginning as a family therapist and moving into supervisory, training and program leadership roles at HFLW. She currently serves as the Program Director of the Park Street CSA overseeing the day-to-day operations and

administration of all aspects of programming including the CSA development plan implementation. She is experienced in health care innovation and care integration with behavioral health and Emergency Room services.

3. Any staff the Bidder proposes to hire or engage to be involved in the project(s), including their proposed job descriptions and qualifications for the project(s)

HFLW does not plan to hire additional staff for this project.

4. The roles and responsibilities of each staff of the Bidder's Project Team and how the Bidder will ensure efforts are coordinated among staff and not duplicated

Since the inception of Children's Behavioral Health Services, HFLW has made significant efforts to work collaboratively with internal and external stakeholders to integrate CSA and in home therapy (IHT) services with larger initiatives in the city of Boston. These collaborations have included projects designed to integrate and co-locate ICC and FP services within Community Health Centers, consultation with The Boston Public Health Commission Project Launch and Early Childhood System of Care initiatives, and embedding Intensive Care Coordination within the Suffolk County House of Corrections to facilitate immediate access to services for men being released from prison and returning to their families.

The efforts mentioned above are just a few examples of the leadership role that HFLW has played within the larger system of care in Boston over the past several years. In that light, to ensure targeted communication and to minimize duplication of efforts, the following team has been assembled.

The Senior Director of Community and Behavioral Health, in addition to the defined responsibilities in his job description will:

- Chair the monthly DSRIP implementation meetings
- Define the project teams action plan and be responsible for ensuring each members deliverables
- Attend statewide MassHealth conferences and information sessions
- Be the lead liaison to MassHealth and other payor entities

Supervising Program Director's responsibilities will include:

- Act as the lead CSA liaison to the project team
- Ensure uniform implementation of Care Planning across HFLW programs
- Participation in monthly EHR Committee meetings
- Participation in monthly DSRIP implementation meeting
- Attendance at the Children's Services Association of Behavioral Health meetings
- Conduct trainings at CSA staff meetings on updated workflow procedures for ICCs needed.

CSA Program Directors, in addition to their programmatic roles, will:

- Participate in monthly DSRIP implementation meetings

- Coordinate and lead test groups within their programs designed to pilot changes to practice procedures and the EHR before full implementation
- Report findings of the pilot/test groups to the project team
- Attend EHR Committee meetings as needed

Director of Health Information Systems, in addition to his current role and responsibilities, will:

- Participate in monthly DSRIP implementation meetings
- Chair the EHR Committee and invite project team members as needed
- Design electronic workflows that achieve the objectives of the project
- Upload existing State mandated CSA documentation into our EHR
- Attend Conferences and Trainings on ACO and MCO negotiation

5. A description of how the Bidder proposes to manage the project(s).

HFLW Client Centered Care Coordination Project will be lead and managed by our Senior Director of Community and Behavioral Health Services. The Senior Director is responsible for the operations of all our community based programming at HFLW, including both of our CSAs involved in this project. In this capacity, supervisions and operational workflows have been established that allow for the successful completion of multiple projects at any given time. Specific to the DSRIP project, the Senior Director will convene an additional monthly project team meeting where timeline and the corresponding deliverables will be assigned, reviewed and updated. The Senior Director will also work closely with the Director of Health Information Systems to ensure efficient workflows during roll out of new technology.

C. Implementation Plan and Timeline

Time Period	Anticipated Implementation
January 2018	Finalize contracts with EOHHS
February 2018	Establish data fields in our EHR for PCP information and process for staff to record PCP information (name, organization, phone/fax/email, ACO affiliation, connection to MassHIway, their EHR product); Explore purchase of care planning software
March 2018	Purchase and set up tablets; start collection of PCP information in EHR
March 2018	Create training for ICCs on use of tablets and test electronic signature capabilities; continue PCP information collection
March 2018	Implement training for ICCs on use of tablets and electronic signature capabilities; continue PCP information collection
April 2018	Implement training for ICCs on use of tablets and electronic signature capabilities; continue PCP information collection
May-July 2018	Imbed ICC care plans in our EHR record; Determine health information wanted from PCP (diagnosis, treatment plan, meds, etc.)
August-Nov. 2018	Imbed ICC care plans in our EHR record; Imbed medial health information from PCP into our medical record;

1Q Year 2	Imbed ICC care plans in our EHR record; Imbed medical health information from PCP into our medical record; train staff on using the care plans in EHR
2Q Year 2	Train staff on entering PCP information into the EHR; continue to train using the care plans in the EHR ; modify the forms in EHR as necessary.
3Q Year 2	Create electronic referral form for PCPs that will include basic information (demographic, diagnosis, health insurance) and reason for referral. Create an electronic PCP feedback form to include information on whether the patient scheduled and kept the appointment, and the results of the appointment (e.g. initial diagnosis /diagnostic impression, tests ordered, next steps, etc.);
4Q Year 2	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
1Q Year 3	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
2Q Year 3	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
3Q Year 3	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
4Q Year 3	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
1Q Year 4	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
2Q Year 4	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
3Q Year 4	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
4Q Year 4	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
1Q Year 5	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
2Q Year 5	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
3Q Year 5	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.
4Q Year 5	Provide ongoing quality control of data input/output and processes and make adjustments accordingly.

- **D. Budget Report and Budget Narrative**

Please see Attachment 6.4D.

- **E. Sustainability**

As aforementioned, HFLW has robust administrative departments that support our behavioral health programming. As one of the largest behavioral health providers in the Commonwealth, generating more than 50 million dollars in claims annually, HFLW has an existing sustainable administrative infrastructure to guide us through every stage of complex project implementation.

Specifically, HFLW will utilize existing meeting structures as tools for a) determining capital expenditures and b) determining and resourcing strategic initiatives. Membership at these meetings consist of executive level leadership and key project leaders who report directly to the CEO and ultimately the Board of Directors. The DSRIP contract, and the associated strategic decisions and capital expenditures that will be developed further, evaluated and fully vetted by these groups. It is thru this process, as well as our newly developed monthly project meetings, that a sustainable financial plan will be established to ensure that our staff have access to state of the art tools, both in the now and in the future, to help us achieve our mission

- **Our plan to leverage the DSRIP funding to continue the enhancement of our technological infrastructure by purchasing items such as tablets, paying for administrative staff time to roll out the devices to program staff will be invaluable as we prepare to do business in an accountable care environment.**

Section 6.4 Proposed project(s) and Investment Plan

Abstract

The Home for Little Wanderers (HFLW) is planning on adding two additional FTEs to support our CSAs' workforce development. The two main goals of this project are to a) ensure and support the delivery of high quality High Fidelity Wraparound services via a designated training resource and b) ensuring timely access to services for ICC enrolled members by having a designated recruiter to work with our CSAs to fill open staff positions. The project will result in coordinated and centralized efforts in supporting how our CSAs deliver ICC services and recruit and retain a highly qualified workforce. HFLW anticipates hiring and onboarding the two new resource staff members during the prep period. During the first budget year these resource positions will start working with the CSA and operations leadership to develop and implement plans for workforce development. The consequent years will be spent developing, delivering and modifying training plans and continuous recruitment efforts. The proposed deliverables are a HFLW High Fidelity Wraparound Curriculum for new ICC employees, an onboarding plan for new ICC staff as well as an in-service training plan for ICC staff as part of continuing on the job coaching and training. On the recruitment side, the deliverables will be decreased length of open positions and increased number of high quality applicant pool. DSRIP funding will be used to support the salaries of these two FTEs during the prep and budget year 1 periods as well as sign on bonuses for ICC staff. In consequent years, HFLW will start absorbing the salary cost gradually with the understanding that a strong workforce yields cost savings to the agency by decreasing turnover. In addition to the two staff proposed, the project team will consist of Senior Director of Behavioral Health and the CSA program leadership. The funds will be distributed between the two CSAs based on the program size, both staff and enrolled members. HFLW plans to track duration for open positions, time between hire date and completion of onboarding and number of staff completing in-service trainings.

The Home for Little Wanderers Community Service Agency Workforce Development Project

The Home for Little Wanderers fully acknowledges that better care coordination and integration with ACOs hinge on the delivery of High Fidelity Wraparound by qualified and trained staff. In order to bolster our workforce, HFLW is proposing to add two full time staff to support our CSAs' workforce development: One recruiter as a staffing resource and one trainer as Wraparound practice support.

Given the current employment environment in the Commonwealth, we recognize that we must have a targeted strategic recruitment plan to keep both of our CSAs fully staffed so that we can provide timely access to ICC services for eligible children and their families. Attracting and hiring the top talent is the first step in developing a workforce who is able to deliver high quality services. Currently we have several open positions in our CSAs; some of which have been waiting to be filled since May. Two major factors have strained HFLW's recruitment and staffing resources: Current low unemployment rates in the Commonwealth and generational turnover in the workforce in the United States. With Baby Boomers retiring at high rates and more and more millennials entering the job force every day; we are looking into ways in which

we need to adapt to the changing landscape of talent management. Given these challenges and our existing resources, the workforce development aspect of the DSRIP funding is very timely. These funds will allow us to hire a full time recruiter who will work closely with our CSA program leadership to fulfill the programs' needs.

Efficient recruitment is only the beginning phase of building a healthy and strong workforce. We fully recognize that recruitment goes only so far without the appropriate training, support and coaching that happens upon hire and during an employee's tenure at HFLW. Continuous in-service training and on the job coaching are among the most commonly cited factors for keeping a healthy workforce as well as reducing turnover. HFLW's Workforce Learning & Development department delivers a comprehensive two day new employee orientation to all new hires. When staff starts their employment in their respective programs, the program specific training and on boarding is handled by the program leadership. Currently, the CSA program directors deliver these trainings which take them away from their responsibilities of day-to-day management of the programs. A dedicated High Fidelity Wraparound training support staff is needed to standardize the training and support staff receives both upon hire and on an ongoing basis..

Project Scope

The workforce development project proposed in this application will be a comprehensive team effort on streamlining and strengthening efforts to build and maintain a robust workforce that delivers High Fidelity Wraparound services to children and families. Two main pillars of this effort are recruitment and training. As aforementioned, HFLW as an agency has the structure in place to recruit, hire, and train staff; however the current employment market and the changing landscape of talent management has strained our existing resources. We are finding that we need to add additional resources to our structure to support our CSAs.

Recruitment

The recruiter will initially be responsible for creating a comprehensive staffing strategic plan that is specific to the CSA workforce. Upon hire, the recruiter will work with the project team that includes Senior Director of Behavioral Health and the CSA program leadership to review the current practice and procedures, including job descriptions, the screening and interview process and will review CSA turnover data. Upon completion of the plan, the recruiter will take the lead in implementing the staffing strategic plan with short and long term recommendations that will arise from the plan. In addition to the planning activities, the recruiter will simultaneously review resumes and screen candidates; gradually taking over the responsibilities for the full process. Currently, the Program Directors interview the candidates. Another crucial aspect of sustainable high quality candidate pool is relationship building and marketing the exciting roles and responsibilities of the open positions on an ongoing basis. During periods of high vacancy/high number of candidates, the Program Directors do not always have the resources to be able to keep candidates engaged. The recruiter will also be responsible for keeping a list of contacts and establish a professional network where HFLW can utilize as a sustainable candidate pool. The recruiter will attend key events such as conferences and school events to cultivate strategic relationships. We envision our newly created CSA recruiter position to be filled by an individual either knowledgeable of Wraparound practices or have the skill sets to learn and understand the spirit behind High Fidelity Wraparound overall to be able to market the open positions properly.

Training and Support
As aforementioned, the Wraparound specific training currently occurs at the program level, delivered by mainly program leadership. Our CSA program directors have taken the initiative to develop trainings derived from Wraparound manuals. In addition, program leadership TOM staff and provide coaching at a minimum twice a year. The vision for this new trainer position is to take over the program training responsibilities, develop additional trainings, ensure proper utilization of the training resources Mass Health is announcing to make available, and serve as a coach to the program staff to increase the frequency of coaching staff receive both upon hire and as ongoing regular in-service support. The trainer will be responsible for ensuring staff complete the trainings provided by MassHealth and develop more advanced training modules. Please note that this is a new position that is being created through the DSRIP grant. Upon hire, the trainer will work with the project team to assess current training practices and develop a comprehensive training plan for both CSAs. The expectation is that the trainer will develop a plan and a curriculum. The trainer will work with Mass Health to determine the specific training modules integrated into our curriculum. The trainings developed will include advanced topics such as Managing to Quality (for supervisors) and Engagement with Specialty populations (i.e.: aging out, incarcerated parents)

The Wraparound trainer will also be expected to take over the completion of TOMS. This will ensure we are *evaluating our staff without the bias that can occur when done by a supervisor within the program. This is a significant task as they would need to do about 4 per month for both programs; including 2 hours per TOM observation meeting, and then another hour post of debrief and coaching to that staff and their supervisor.*
Currently, on the job coaching is a significant challenge for our CSAs to provide. Having a dedicated resource for this function will ensure that every staff has access to coaching resources as needed. In addition to one on one coaching, the trainer will be tasked to support supervisors in supervision and coaching aspects of their role so that our CSAs can build capacity to support the workforce they are tasked to manage.

Proposed deliverables The initial major deliverable for the recruiter will be the staffing strategic plan that outlines recruitment and retention strategies and benchmarks. Implementation of milestones within that plan will be monitored by the Senior Director of Behavioral Health. Additional deliverables for the recruiter will be regular participation and presentations at recruitment events and conferences, establishing and maintaining a high quality candidate pool. On the training side, the major deliverable will be the comprehensive training curriculum. Additional deliverables are regular completion of TOMS, implementation of a regular coaching schedule, and a training series for supervisors on supporting their direct reports specifically around Wraparound practices. .

Use of DSRIP funding

The DSRIP funds will allow HFLW to build capacity in the workforce development domain. The funds will support the salary, tax and fringe of these two new hires in the first full year of their employment. After the first year, the DSRIP funds will be allocated gradually less over time and the HFLW agency budget will absorb these costs. Supporting the salaries of two new positions will directly help HFLW accomplish goals 2 and 3 under 3.4 of this RFR. In addition, we are proposing to spend a portion of the funds on sign on bonuses. Currently, HFLW offers sign on

bonuses to highly qualified candidates to attract best talent while keeping our salary structure intact. Funds in the proposed budget will be utilized to support the recruitment efforts.

Existing internal resources

Our existing Program Operations team, CSA leadership, HR and the new positions created through DSRIP funds will work collaboratively to make this a success. Last year, HFLW engaged a multidisciplinary internal turnover workgroup to analyze HFLW data on turnover trends and human resources needs. The team set forth a number of recommendations to the Executive Management Team. HFLW, at the agency at large level, is in the process of implementing a turnover plan. The proposed Workforce Development plan will benefit from these larger agency efforts. In addition, HFLW has a dedicated Risk Management, Evaluation and Outcomes (RMEO) department that organizes, analyzes and reports on many programmatic activities at the organizational and program level. Throughout the year, RMEO department provides support, monitors processes and outcomes, and analyzes data gathered at the program level to support quality improvement activities. For CSAs, RMEO currently tracks, analyzes and reports on discharge outcomes, Caregiver Skills Assessment results, and satisfaction survey results. CSA leadership and RMEO senior staff will continue to collaborate on tracking and reporting processes and outcomes.

Allocation of funds

Workforce development portion of the funds will be allocated according to the pay scale HFLW utilizes. These two positions will support the two CSAs in proportion to program size. Likewise, sign on bonuses will be distributed between the two programs depending on program size and the number of new hires.

Evaluation, measurement or performance management strategies

HFLW's Human Resources Department collects and analyzes data related to open positions, recruitment, staff training and turnover. The trainer and the recruiter, along with the project team will review the current data for these metrics and determine benchmarks and SMART goals on each of these domains. The goals are to a) decrease the time it takes to fill open positions by 25% by Budget Year 3, b) increase the number of hours staff receive on the job coaching by 50% by Budget year 3 c) increase the number of staff attending in-service trainings by 40% by Budget year 2 d) decrease turnover by 25% in ICC workforce by Budget Year 3. As aforementioned, the baseline and benchmarks will be established upon review of current data and establishment of work plans the trainer and the recruiter will be tasked with. The Trainer and the Recruiter will work with the Project team to track, analyze and discuss the evaluation data.

Project Team description

The project team will consist of the following HFLW staff: Matthew Small, Senior Director of Community and Behavioral Health Services; Natalie Sheehan-Dias, Supervising Program Director; Raechelle Joyner, Program Director of CSA Hyde Park; Kathleen Irving, Program Director of CSA Park Street. The Wraparound trainer position will initially sit under Program Operations and will report to the Senior Director of Community and Behavioral Health Services. The recruiter will also be a member of this project team and will engage the team in a strategic recruitment planning process. The recruiter will report to the Director of Employment services under Human Resources Department at HFLW. The resumes and job descriptions are attached. Job descriptions for the new proposed positions are attached. Matthew Small, an Independently

Licensed Clinical Social Worker, has over twenty years of experience in child welfare and behavioral health fields. Since 2013, he has overseen the operations and administration of a large scale continuum of behavioral services, including CBHI services. Matt provides oversight, leadership and supervision to 11 program directors with more than 20 million dollar operating budget. As aforementioned, he is experienced in service delivery systems change and will serve as the implementation team leader on the programmatic side.

Natalie Sheehan Dias is an Independently Licensed Clinical Social Worker with over twenty five years of experience dedicated to working with children and families in the Greater Boston area. For the past seven years, Natalie has been intricately involved in the acquisition, development, and implementation of services through the Children's Behavioral Health Initiative. She currently serves as the Supervising Program Director of the Dorchester/South Boston Community Service Agency and Boston Safe-at-Home program of HFLW. In this role and with the support of The Home, Natalie has established partnerships with other agencies and institutions, working to make significant, effective changes in the community through integrated, comprehensive service delivery systems.

Raechelle Joyner is an Independently Licensed Clinical Social Worker who has worked with underserved populations and communities for over twenty-three years. Throughout her twenty years of service at HFLW, she has worked in Nursing, Foster Care and Adoption, Family Stabilization, Community Support, and Outpatient Therapy. She currently serves as the Program Director of the Hyde Park Community Service Agency, overseeing the day-to-day operations and administration of all aspects of programming including the CSA development plan implementation. Raechelle holds a certificate from the Eikenberg Institute for Relationships in Multicultural Supervision and has graduated from the Institute for Nonprofit Practice at Tufts University. She simultaneously works as an Adjunct Professor at Wheelock College and teaches three core bachelor level courses. She was given the Outstanding Field Instructor Award by Wheelock College for her work in promoting human rights and social justice.

Kathleen Irving is an Independently Licensed Clinical Social Worker with ten years of experience working with children, families and adults in a multitude of mental health settings. Kathleen's focus has been in community based mental health, beginning as a family therapist and moving into supervisory, training and program leadership roles at HFLW. She currently serves as the Program Director of the Park Street CSA overseeing the day-to-day operations and administration of all aspects of programming including the CSA development plan implementation. She is experienced in health care innovation and care integration with behavioral health and Emergency Room services.

Since the inception of Children's Behavioral Health Services, HFLW has made significant investments in recruitment, training and retention of our ICC workforce. In addition to the initial agency on boarding and new employee orientation provided by the Workforce Learning & Development Department; the CSA leadership has been providing the initial and in-service trainings on particular Wraparound topics; as mentioned elsewhere in this proposal.

In order to streamline the training and recruitment efforts, the project team will meet on a regular basis. Both the trainer and the recruiter will work closely with CSA leadership on their respective deliverables between these meetings and provide updates. Our goal is to create the internal

capacity and the necessary structures that will allow HFLW to keep up with the training and recruitment demands the current employment market dictates.

To ensure targeted internal communication and to minimize duplication of efforts, the following team has been assembled.
The Senior Director of Community and Behavioral Health, in addition to the defined responsibilities in his job description will:

- Chair the monthly DSRIP implementation meetings
- Define the project teams action plan and be responsible for ensuring each member's deliverables
- Attend statewide MassHealth conferences and information sessions
- Be the lead liaison to MassHealth and other payor entities

Supervising Program Director's responsibilities will include:

- Act as the lead CSA liaison to the project team
- Work closely with the Wraparound Trainer to develop the curriculum
- Work closely with the recruiter to develop the strategic recruitment plan and implementation of the strategic plan
- Ensure uniform implementation of Care Planning across HFLW programs
- Participation in monthly DSRIP implementation meeting
- Attendance at the Children's Services Association of Behavioral Health meetings
- Work with the Wraparound trainer to develop trainings for CSA staff on updated workflow procedures for ICCs as needed.

CSA Program Directors, in addition to their programmatic roles, will:

- Participate in monthly DSRIP implementation meetings
- Coordinate and lead test groups within their programs designed to pilot the Wraparound curriculum developed by the Trainer.
- Report findings of the pilot/test groups to the project team

HFLW Workforce Development Project will be lead and managed by our Senior Director of Community and Behavioral Health Services. The Senior Director is responsible for the operations of all our community based programming at HFLW, including both of our CSAs involved in this project. In this capacity, supervisions and operational workflows have been established that allow for the successful completion of multiple projects at any given time. Specific to the DSRIP project, the Senior Director will convene an additional monthly project team meeting where timeline and the corresponding deliverables will be assigned, reviewed and updated. The Senior Director will also work closely with the Director Employment services to ensure efficient workflows during on boarding of the new recruiter position to the agency and to their CSA specific role.

HFLW's proposed workforce development plan timeline is as follows:

Jan-18	Develop and post job descriptions for Wraparound trainer and CSA staff recruiter	Develop and post job descriptions for Wraparound trainer and CSA staff recruiter
Feb-18	Interview candidates and hire Wraparound trainer and recruiter	Interview candidates and hire Wraparound trainer and recruiter
Mar-18	Interview and hire Wraparound trainer and recruiter. Wraparound trainer and recruiter complete new employee orientation	Interview and hire Wraparound trainer and recruiter. Wraparound trainer and recruiter complete new employee orientation
Apr-18	Trainer conducts assessment (interviews/observations) on current use of Wraparound model and reviews TOMs reports	Recruiter evaluates current process for recruiting CSA staff including sources of recruitment, job descriptions, interview process, offers, background checks, etc. and reviews CSA staff retention data; interviews CSA supervisors/leadership and staff and trainer regarding retention issues.
May-July 2018	Trainer develops Wraparound training and schedule for existing and new staff, TOM implementation schedule; and a plan for reviewing aggregated TOM results for improvements to staff training and development.	Recruiter develops comprehensive recruitment and retention plan, which includes short and long-term strategies for CSA staff development and growth
August-Nov 2018	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
1Q Year 2	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations

2Q Year 2	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
3Q Year 2	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
4Q Year 2	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
1Q Year 3	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
2Q Year 3	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
3Q Year 3	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
4Q Year 3	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
1Q Year 4	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
2Q Year 4	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations

3Q Year 4	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
4Q Year 4	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
1Q Year 5	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
2Q Year 5	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
3Q Year 5	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations
4Q Year 5	Implementation of trainings and TOM; review of TOM results and Implementation of quality improvements	Implementation of recruitment/retention plan; review of results; and implementation of quality improvement recommendations

Budget Report and Budget Narrative are attached.

Sustainability

As one of the largest behavioral health providers in the Commonwealth, generating more than 50 million dollars in claims annually, HFLW has an existing sustainable administrative infrastructure to guide us through every stage of complex project implementation. The DSRIP funding for the workforce development project proposed will provide capacity building funds as we add staff positions to our operating budget. The initial prep and year 1 budget periods will provide the agency with the time needed to budget for the additional staffing costs in years 2 through 5. We have built the proposed 5 year budget with the plans to absorb the salary costs over time gradually so that these positions are funded in the agency budget by the end of the contract term. HFLW will utilize existing meeting structures as tools for a) determining capital expenditures and b) determining and resourcing strategic initiatives. Membership at these

meetings consist of executive level leadership and key project leaders who report directly to the CEO and ultimately the Board of Directors. The DSRIP contract, and the associated strategic decisions and expenditures that will be developed further, evaluated and fully vetted by these groups. It is thru this process, as well as our newly developed monthly project meetings, that a sustainable financial plan will be established.

Section 6.5 Coordination with ACOs, MCOs, and Primary Care Providers

Table of Contents

A. Improving bidirectional communication between HFLW and pediatric practices..... 28

B. Improving referral management protocols for follow-up and informational sharing 28

C. Improving team-based treatment planning in collaboration with pediatric practices 29
D. Improving timely access to ICC services 29
E. Improving connections to social services 30

A. Improving bidirectional communication between HFLW and pediatric practices

An integrated Electronic Health Record is crucial to high quality healthcare. The Home for Little Wanderers utilizes the Evolv system operated by NetSmart as the official documentation of health care. Evolv is a highly utilized and respected EHR that is capable of connecting to the Massachusetts Information Highway where the future of health care information sharing will ultimately be exchanged between providers, Managed Care Organizations and Accountable Care Organizations. In anticipation of this, The Home for Little Wanderers applied for and was chosen to participate in a MeHI, E-Quip pilot program designed to ensure that behavioral health providers like HFLW were prepared to be leaders in the information sharing future. In 2016, HFLW purchased the necessary software, connected to the Mass HIway and developed a bidirectional connection that enabled us to successfully share information with another provider soon after. We now have the capability to exchange health data with any pediatric practice that is connected to the Mass HIway or has an EHR that is a member of NetSmart's Health Information Services Provider (HISP).

In our efforts to further develop bidirectional communication with community Health Centers and Primary Care Clinicians, The Home for Little Wanderers will purchase Surface-Pro tablets that will allow our Care Coordinators to deliver care more effectively.

B. Improving referral management protocols for follow-up and informational sharing

Effective Care Coordination ensures that the exchange of patient information among providers, across settings, keeps the care team informed of the clients' health status, develops referral and information sharing protocols with relevant providers, stipulates expectations for access to the ICC service including plans for problem solving access issues, empowers family members to lead their care coordination teams through education and relevant health promotion strategies. Research indicates that "persons served by the public mental health system experience lower life expectancy, in part due to a lack of access to integrated physical and behavioral health care.[1]" Many of these patients, children and their families, present in a variety of community based settings including primary care offices, behavioral health centers and schools. Research has shown that the percentage of patients who initiate mental or behavioral health treatment after being referred by primary care physicians is low. Some of the reasons include ease of access, stigma, denial, and trust of a new service provider. Often the referral is made and the PCP will ask about it at the next medical appointment only to find out it never happened. The Home for Little Wanderers will utilize DSRIP funds to ensure that our workforce has the technology to track referrals, promote the ICC service, and share information across providers and have the

[1] Morbidity and Mortality in People with Serious Mental Illness, National Association of State Mental Health Program Directors, Medical Directors Council; Editors: Parks, Svendsen, Singer, Foti, Technical Writer: B. Mauer. October 2006

training and coaching support that equops our workforce with these skills. The Home will be working with many PCPs and practices with varied staffing and electronic capabilities. Our relationship will begin by working with PCPs on their behavioral health screening tools and when behavioral health referrals are warranted. Once that is determined, the gold standard we envision is one in which PCPs utilize an electronic referral form that will include basic information (demographic, diagnosis, health insurance) and reason for referral. HFLW will pilot an electronic tool to provide PCP feedback on whether the patient scheduled and kept the appointment, and the results of the appointment (e.g. initial diagnosis /diagnostic impression, tests ordered, next steps, etc.). This referral management loop will help more patients get the behavioral health services they need and will identify those who fail to seek treatment.

C. Improving team-based treatment planning in collaboration with pediatric practices

Our Community Service agencies are highly experienced in wrapping treatment teams around the families that we serve. Unfortunately, time and demand often interfere with the participation of a primary care physician. To problem solve the lack of access of primary care to our treatment plans HFLW has embedded ICCs in health centers and been extremely diligent in communications to community health centers. While these efforts have certainly assisted us in connecting primary care physicians to the larger treatment team, technology has not been leveraged to its fullest extent because of cost. HFLW will continue to build on our relationships to engage primary care doctors in the treatment team planning. Our gold standard vision is to have a single, shared treatment plan with behavioral and medical health goals integrated with periodic team consultations. When that is not possible, at a minimum, we envision the mutual sharing (electronically) of assessments, treatment plans and treatment progress. In this way physicians will have direct access to their patients' behavioral treatment plans and behavioral health clinicians will have direct access to the medical treatment plans, which will enable mutual support and reinforcement of all treatment goals. A key element to treatment adherence is for the patient to take ownership and be driver of their own care. Each provider having a holistic view of all treatments will help support that ownership and ensure concurrent treatments are not contradictory.

D. Improving timely access to ICC services

HFLW acknowledges the critical importance of timely access to services for ICC enrolled members' engagement due to the unique challenges families face while raising children with Serious Emotional Disturbance. In fact, statistics demonstrate that engagement strategies such as "the warm hand off" or "same day access" significantly increase the chances that a patient will engage in services. In addition to strategies such as these which are already being implemented in our multiple partnerships with health centers, HFLW is proposing multiple technological strategies to increase timely access to ICC services. First, our workforce is in need of tablets with electronic signature software. This investment in the equipment of our front line care coordinators will help them be more mobile, research services with families, obtain electronic signatures for treatment plans and assessments and most importantly, allow our care coordinators to demonstrate to their families how they can leverage technology to more efficiently access their

care plan and communicate with their care plan providers electronically. Second, HFLW is HFLW is proposing to create a client portal where clients and caregivers can access their ICC and or PHI instantly and securely. We envision this portal to be a key scheduling strategy with our clients to prevent multiple phone calls and other forms of lagging communication that can limit timely access to care. In addition to the technology enhancements we are proposing two new staff support positions; one for training and one for recruitment to strengthen our workforce. The recruiter will play a crucial role in improving timely access to services by ensuring that our CSAs are fully staffed and vacancies are filled promptly with the right hires.

E. Improving connections to social services

The technology enhancements proposed in this response will be invaluable assets to our care coordinators as the landscape of our health care system moves away from a "fee for service" model to a "pay for performance" model. Our care coordinators need the tools that will make it simple to connect families to social services and simple for the family to maintain those connections in a way that the larger medical field has already made possible for their patients. Social Services play a key role in a family's wellbeing and/or path to recovery. It is our belief that with the help of our new trainer, the staff will feel better prepared to help ICC engaged members in maintaining and improving connections to social services.

				$ -
				$ -
	Total Salary	0.5		$ 21,250
	Fringe rate	21.0%	Total Fringe	$ 4,463
			Total IT Staffing including Fringe	$ 25,713

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in executing activities related to the project.
The IT Director will purchase and configure laptops/tablets for CSA Staff use, ensure upkeep of the hardware and software and will manage all the security and staff training for the laptops/tablets.
The E.H.R. Manager will work directly with the E.H.R. vendor to ensure that the CSA-specific forms are developed properly and link with other necessary forms in system. E.H.R. Manager will also troubleshoot all individual E.H.R.-specific issues in the system and ensure the program is continuously running smoothly and efficiently.
The VP of Compliance will be responsible for the development of policies and procedures for mobile technology for Community-Based staff. There is currently no use of mobile technology in Community-Based work at Wayside.

Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Development of new CSA-specific forms in E.H.R. system	$ 15,180.00
Total Development and Adaptation of EHR and Care Management System	$ 15,180.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Wayside will be developing CSA-specific forms in the new E.H.R. that is selected. Cost is based upon the cost to develop and test and implement new CSA-specific forms in Wayside's current system. The cost quote was $220 hour for development and testing as follows:
Care Plan form=25 hrs
Family Indicator Form-- 12 hrs
Youth Indicator Form--12 hrs
SNCD form-12 hrs
Agenda Form--6 hrs
Attendance Sheet--2 hrs
Total of 69 hours form development=$15180.00.

Technology for Service Delivery

Description of Expense	Cost
laptops or tablets w/appropriate software and licenses	$ 48,000.00
Mobile Hotspots monthly services	$ 10,000.00
Total Technology for Service Delivery	$ 58,000.00

Provide a description of each IT line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Purchase of 40 laptop computers or tablets with all appropriate software and software licenses, virus protections, etc. Estimated at $1200 per laptop or per tablet. There are currently 40 FTE Care Coordinators, Family Partners, Sr. ICCs, and Sr. Family Partners between the 2 CSAs. This will allow for one laptop or tablet per staff FTE working in these programs.

Wifi "hotspots" @ $50/month for 40 laptops or tablets for 5 months. This will support all 40 FTE CSA staff currently employed in our 2 CSAs.

	Total Salary	0.8		$ 28,958
	Fringe rate	21.0%	Total Fringe	$ 6,081
			Total Workforce Development Staffing including Fringe	$ 35,040

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in executing activities related to the project.
Talent Aquisition Manager and CSA Program Directors will develop formal relationship including development and execution of formal internship program with UMass Lowell and Framingham State University. Talent Aquisition Manager will devote an average of 8 hours/week to this project for 5 months. CSA PDs will devote an average of 4 hours/week to this project for 5 months.
VP of Community Services to develop and execute MOU with universities and oversee project, ensuring milestones are met. Estimated 4 hours per week of time over a 5 month period.
Clinical Compliance Coordinator and CSA PDs to develop a comprehensive training for all CSA staff in "The Golden Thread of Medical Necessity." This training will be in 3 different formats specifically for different level staff: MA level, BA level, and Family Partners. The Clinical Compliance Coordinator will devote 4 hours/week to this project and the PDs will devote 4 hours each/week.

Recruitment Expenses

Description of Expense	Cost
Advertising of positions on new sites	$ 5,000.00
Total Recruitment Expenses	$ 5,000.00

Provide a description of each recruitment expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Advertising costs for "typical" job sites with positions highlighted so that they come up first in job searches. Cost is estimated for total of 2 different major sites for a 5 month period of time. We are quoted $2500/month under our current contract to highlight 5 unique positions on the Indeed website.(breaks down to about $500 per unique position each month) We would like to be able to highlight the ICC positions for each of Lowell and Framingham ($1000 total per month) for 4 months each ($4000) and additionally highlight Family Partner positions for each program site for one month ($1000). Although we may seek new sites on whcih to advertise, we are using real costs for this budget as we have been quoted them to date.

Training Expenses

Description of Expense	Cost
Motivational Interviewing Advanced Training	$ 5,000.00
10 Sr. Level CSA Staff Tier 1 Certification	$ 10,000.00
Total Training Expenses	$ 15,000.00

Provide a description of each training expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Staff at both CSAs will receive advanced training in Motivational Interviewing so that they will be able to continue to train new staff in the model as they come on board. MI is a key method Wayside uses towards improving engagement of clients. To do this we will have an expert MI trainer come on-site for two separate full days at the cost of $2500 per full day training. It is a flat cost and we anticipate that a total of 10-12 CSA staff will participate.

All supervisory and management level staff at both CSAs will become Tier I Certified in Wraparound. Estimated to cost $1000/staff X 10 staff.

Section 6.5: Coordination with ACOs, MCOs, and Primary Care Providers……16

Section 6.2 Executive Summary:

Wayside Youth & Family Support Network is pleased to serve as the Community Service Agency for the Framingham and Lowell Areas. Wayside has served in this capacity for Framingham since the inception of the CBHI in 2009. Wayside subsequently became the CSA for the Lowell Area on 12/31/2012 when the previous CSA in Lowell opted to discontinue its contract.

Overall, Wayside's Framingham and Lowell CSA development plans share a focus on expanding and improving timely access to Intensive Care Coordination (ICC) and Family Support and Training (FS&T) services, as well as continuous improvement in reaching high fidelity Wraparound, most specifically in the areas of strengthening community connections, natural supports, and team based collaboration. Both sites have common and unique strengths as well as needs that are being addressed on their respective development plans.

The strengths of Wayside's Lowell CSA include a steady enrollment of an average of 115 youth, a vibrant System of Care with a consistent membership of 25-30, and a growing team of staff that provide significant cultural and linguistic diversity. The strengths of Wayside's Framingham CSA include a core team of staff that have been part of the CSA since its inception in 2009, and Family Partners that have various expertise in adoption, substance abuse, transition aged youth, and Grandparents as primary caregivers.

Both the Lowell and Framingham CSAs share common strengths of strong community connections and significant knowledge of community resources to support the families enrolled. In addition, both CSAs have strong partnerships with local health centers and primary care practices. The Lowell CSA has received several referrals from Lowell Community Health Center and Lowell Pediatrics and has strong partnerships with their multidisciplinary teams. In this same vein, the Framingham CSA has experience working with multiple medically complex youth and has had successful collaborations with Children's Hospital and the UMass Hospital system.

As another area of strength, Wayside's overall commitment to recruitment, staff retention and staff training have begun to yield successful outcomes. Since Wayside hired a fulltime staff recruiter in 2015 approximately 15 new Intensive Care Coordinators and 7 new Family Partners have been hired. Between both CSAs combined, approximately 55 % of staff have been in their positions for over 2 years. This past year all Wayside agency staff have been trained on using Motivational Interviewing and several staff have participated in an Intensive Learning Community focused upon the ARC model. Additionally, several staff have participated in the Family Partner CBHI course through Urban College; others have completed Wraparound Tier One Certification, and various Wraparound Refreshers. Wayside also provides monthly free clinical trainings on topics such as trauma, substance abuse,

diversity, and working with specialty populations such as immigration, divorce, adoption and parental mental health.

A significant area of need for both the Framingham and Lowell CSAs is to improve timely access to ICC services. Each site's development plan has a priority goal to eliminate wait times for ICC services by increasing capacity by hiring more staff. This goal also matches a key Wayside goal on the agency strategic plan. The action steps identified to reach this goal includes increased recruiting efforts through various external platforms, increasing compensation and benefits, cross-training existing staff and developing an internal career ladder to promote upward mobility into Care Coordination roles.

In addition to these existing strategies, Wayside has recently partnered with Middlesex Community College to develop a Children's Behavioral Health Certificate program that will establish a work force pipeline for Family Partners and Therapeutic Mentors. As will be outlined in one of our proposed projects in this proposal, Wayside plans to develop similar partnerships with Framingham State University and UMass Lowell to establish a workforce pipeline for Intensive Care Coordinators through internships and service learning projects.

Another area of development that both CSAs have been focusing on is increasing high fidelity Wraparound in the areas of strengthening sustainable community connections, natural supports and team based coordination. The action steps identified to reach these goals consist of monthly focus groups within the CSA team to brainstorm new strategies and create achievable action steps; increased frequency of initial Wraparound training and regular Wraparound Refreshers on specific phases and principles.

To this end, this past year both CSAs have been active participates in their respective regional Wraparound coaching teams. Both regions have been focusing on joint initial Wraparound trainings as well as monthly joint Wraparound refreshers. In the Northeast Region 7 Lowell CSA staff have received Tier One Wraparound Certification and in the Central Region, an initial Wraparound training is scheduled to begin this coming year. All CSA staff have participated in Wraparound Refreshers within their own CSA, as well as refresher trainings hosted by other CSAs in the region.

Lastly, an area of focus for both CSAs to develop is in strengthening coordination with pediatric primary care. Although, there has been some recent success as previously mentioned through an increase in referrals and specific collaborations, more work is needed. Action steps towards achieving this goal include developing better internal systems and efficiencies, and improving technology focused upon increasing communication and ongoing planning with pediatricians. Our second proposed project outlined below details further specifics towards reaching this goal.

Section 6.3 Populations Served and Community Engagement:

Wayside's Framingham Area CSA covers 23 cities and towns, including Framingham and the surrounding area. The Lowell Area CSA covers 13 cities and towns, including Lowell and the surrounding area. All of the youth served by the CSA meet the eligibility criteria stated in the ICC and FS&T service specifications.

As noted earlier, Wayside Youth & Family Support Network has served as the Community Service Agency for the Framingham Area since June 30, 2009 and for the Lowell Area since December 31, 2012. Both of our CSAs are well-connected within these Service Areas; one with a much more longstanding historical connection and the other more recently connected.

Wayside as an organization has been embedded in the Framingham Community for almost 40 years. Founded in 1977 in Framingham, Wayside has been serving children and families with behavioral health conditions, child welfare involvement, and high-risk environments in a variety of capacities since that time. Wayside's mission is to build strength, hope and resiliency in children, families, and communities through a youth and family development model that sees youth as assets and partners and families as the most valuable resource in the lives of their children. Through its full continuum of residential and community services--funded primarily by DCF, DMH, and Insurance--Wayside serves a culturally, economically and linguistically diverse population of youth and their families. Wayside is well-connected to the MetroWest Community both as a result of its history in the MetroWest Area as well as the community-based manner in which all of our programs operate; we are successful because of the connections we hold and the value we place upon these connections. Throughout this particular region we operate a full continuum of care for children, young adults, and families.

In the Lowell Area, Wayside's presence is much newer but is equally robust. When we took over the Lowell CSA on December 31, 2012, Wayside "inherited" 8 families to our brand new CSA. As of this writing, Wayside serves over 200 families in the Lowell Area at any one given time via the combination of our CSA, along with our IHT and TM teams. As noted earlier, our System of Care Committee is robust and active. Our presence in the community is palpable with many more families seeking our services than we are currently able to serve.

Through the System of Care Committees both CSAs have developed and fostered relationships with various state agencies, such as DMH, DDS, DCF, and on occasion DYS. Other partnerships include the Middlesex Juvenile Court, area CBHI providers, public school systems, including area charter schools, the Family Resource Center, faith based organizations, and various community providers such as the YMCA, Boys & Girls Club, Girls Inc., Community Team Work.

The mission and guiding principles of the System of Care are grounded in the Wraparound philosophy. The monthly meetings are a forum to network, collaborate and foster relationships with community and system partners. This monthly collaboration has led to an increase in staff

knowledge of services and community resources. The monthly System of Care meetings have also promoted strong collaboration amongst service providers; which in turn has resulted in individualized needs of ICC-enrolled youth being met consistently. Concurrently, our relationships with this full network of child and family serving agencies, school systems across the communities, providers of behavioral health services, DCF, DMH, DYS, the courts, and social service agencies are instrumental in identifying youth and families who can benefit from our CSA services. Our continued nurturance of these relationships is critical to our CSAs.

The System of Care Network and guiding principles will also be used to strengthen collaboration with primary care pediatric practices. The CSA Program Directors will increase System of Care memberships to include key staff from area practices. The Lowell System of Care already includes membership of staff from Lowell Community Health Center and Greater Lowell Pediatrics. There will be significant outreach efforts by the Lowell and Framingham Program Director to increase membership by more pediatric practices for both the Lowell and Framingham areas. Wayside will leverage its very robust set of existing relationships in these communities as we seek to improve the quality of our ICC services.

In addition to building upon the System of Care Committee membership, there will be significant targeted training on collaboration with primary care. As outlined in Section 6.4, training for Care Coordinators will contain modules that focus on increasing knowledge and collaboration skills. Topics will include screening/assessment and treatment of co-occurring medical conditions, overview of common medical conditions in children/adolescents, and collaboration with primary care practices.

Our proposed projects—one focused upon workforce development, the other focused upon efficiencies achieved by improved technology—are directly connected to our partnerships. By being able to more quickly, effectively and efficiently serve families referred to our CSAs we are better able to meet the needs identified by our partnership organizations. Wayside already has a protocol for outreach and active engagement of families who might be interested in or referred to our CSA. This protocol will be further enhanced by improved access and efficiency achieved by our proposed projects.

Section 6.4 Proposed Project(s) and Investment Plan:

A) Project Description:

As noted earlier, Wayside Youth & Family Support Network has two CSAs—Framingham and Lowell. In our response to this RFR we seek to implement two different projects that will be implemented across both of our CSAs. Below we will describe each project separately and will refer to them going forward by their titles.

Project #1: Fostering Improved Care Integration via Implementation of Mobile Technology (hereafter referred to as "Project #1")

Project #1 seeks primarily to improve the integration of care for ICC-engaged members via the use of mobile technology. Concurrently, we believe that the use of technology will also improve efficiency in care which will, in turn, help improve access to care and coordination.

Mobile technology, such as laptops or tablets, will assist CSA staff in increase communication and participation with all Care Plan Team members, specifically pediatric primary care. With the use of mobile devices CSA staff will be able to communicate with primary care providers electronically via email or skype, while in the presence of the family in their home. Assessment and treatment plan information can be written in collaboration with the family and readily shared with team members. Additionally, attendance of pediatricians and nursing staff at Care Plan Meetings can be enhanced through the use of skype.

Mobile communication will also serve as an aid to provide 'real time' coaching with the family on effective treatment plan collaboration with team members, specifically their primary care providers. In addition to increasing effective collaboration with team members, CSA staff will use mobile technology while in the field with families to access additional community resources, complete on-line referrals, and as a vehicle for psychoeducation through web-based research.

The most significant portion of funds will be needed during the first year of the project. During this time, we will purchase either laptops or tablets for CSA staff to use while in the field working directly with clients. Along with the hardware needed, each staff person will also require a mobile hotspot to ensure internet access while in the community at all times. This latter cost will continue for the entirety of the funding cycle. However, it is concurrently hoped that the cost for this ongoing use of mobile technology will eventually be able to be absorbed into the other ongoing administrative costs expended by the program.

Internal resources necessary to implement this project include an up-front amount of time spent by Wayside's IT Director to both purchase and configure the correct hardware for this purpose. Subsequently, this resource will be needed only to maintain the integrity of the hardware, troubleshoot problems that might occur, and ensure appropriate upgrades are done on a consistent basis.

Funds to be allocated for this project will be allocated across the two Wayside CSAs based upon the number of Intensive Care Coordinators and Family Partners working at any given time out of each CSA. Access to the exact same resource will be provided to each ICC, regardless of the CSA site out of which they work.

Effectiveness of this proposed project will be measured by improved Wraparound fidelity scores in the area of Team-based Coordination and Effective Teamwork on the TOM. It will also be measured by improved productivity and efficiency of staff who will be able to document their work "in the moment" which will significantly improve their overall efficiency in coordinating care.

Specific targets and measurements proposed are as follows:

Target #1	There will be stronger communication and collaboration with all Care Plan Team members.
Evidence of Progress:	WIFI scores in Team-Based Coordination will improve to 75% (current score average is 65% for Lowell and Framingham combined.) TOM score in Effective Teamwork will improve to 93% (current score average for Lowell and Framingham combined is 86%)
Target Date:	BP2 (December 31, 2019)
Measurement Tool(s):	WIFI TOM
Responsible Party:	Program Director
Target#2	Improved efficiency and productivity of all CSA staff, resulting in improved access to care for clients.
Evidence of Progress:	Elimination of waitlist for CSA services at both CSAs
Target Date:	BP1 (December 31, 2018)
Measurement Tool:	Waitlist data
Responsible Party:	Program Directors/Intake Coordinators

Project #2: Improving Access to Care: Building a Workforce of Effective Intensive Care Coordinators (hereafter referred to as "Project #2"):

Project #2 seeks to improve timely access to care for children eligible to receive ICC services and their families by developing a robust and sustainable recruitment and training program for new Intensive Care Coordinators. It also seeks to strengthen fidelity to the overall Wraparound process via advanced training for supervisory staff in Wraparound and for a number of CSA staff in Motivational Interviewing.

To this end, Project #2 will include the development of a partnership with two key institutes of higher education—UMass Lowell and Framingham State College. These partnerships will ensure that there is a steady stream of potential applicants for these positions by virtue of an internship program whereby Wayside will offer ICC internships towards college credit. In addition, this project will also include the "beefing up" of some of our current recruiting efforts as it relates to Intensive Care Coordinators.

Additionally, a team of Senior Staff at both of Wayside's CSAs will work in concert with the agency Clinical Compliance Coordinator to develop the curriculum for a specific training module on the "Golden Thread of Documentation." This curriculum will be developed in 3 different ways—one geared towards MA level staff, one geared towards BA level ICCs, and one geared towards Family Partners. This module will be developed, vetted, and loaded into the agency's on-line training system for use on an ongoing basis with new staff who are hired.

Finally, we seek to increase the level of skill and competence of specific CSA staff in both Motivational Interviewing and in Wraparound. Towards this end, we seek to provide advanced level training to staff in these models as a way to ensure ongoing sustainability of the training needs of the programs going forward. We will ensure that 10-12 staff in both CSAs received advanced training in Motivational Interviewing. Additionally, up to 10 Sr. level CSA staff will become Tier 1 Certified in Wraparound. We feel strongly that both of these advanced levels of training will enhance the services offered by our CSAs and also ensure sustainability of training for the programs moving forward.

Much of the cost for this project will come in the preparation period and in year 1 as we seek to develop the partnerships with the colleges, build our curriculum, and develop processes for the ongoing internships. We will then subsequently "roll out" the new training program, make adjustments as needed and, when appropriate adjustments have been made, the program itself will be sustainable with minor adjustments as needed in future years. We anticipate that funds received will support the project through two full years at which point the project will be self-sustaining.

Specific targets and measurements proposed are as follows:

Target #1:	Wayside will increase the number of new ICC hires in a timely manner and, as a result, access to services will improve.
Evidence of Progress:	Size of CSA caseload at each site will increase. Current CSA caseload in Framingham is 65 and in Lowell is 110 (December 1, 2017). Caseload in Lowell will increase to an average of 125 and
in	Framingham to an average of 90.
Target Date:	BP2 (December 31, 2019)
Measurement Tool(s):	Caseload Averages
Responsible Party:	Program Director /Intake Managers

Target #2:	CSA staff at all levels will improve their fidelity to Wraparound
and	overall client engagement via advanced training in Wraparound
and	Motivational Interviewing.
Evidence of Progress:	Total average WIFI scores for Wayside will improve to 75% (current average for both CSAs together is 63%) Total average TOM scores for Wayside will improve to 83% (current Wayside overall average for both CSAs together is 78%)
Target Date:	BP2 (December 31, 2019)
Measurement Tool(s):	TOM WIFI
Responsible Party:	Program Directors

B)Project Team Description:

Roles/Responsibilities of Staff Involved in Project

Staff Name	Staff Title	Role in Project
Beth Chin, LICSW	Program Director—Lowell CSA	Coordination/oversight of projects; facilitation of development of training curriculum, development of training curriculum, facilitation and development of relationship with local colleges
Kim Ward, LICSW	Program Director—Framingham CSA	Development of training curriculum
Heather Polidi, LICSW	Sr. ICC—Framingham CSA	Development of training curriculum; implementation of training curriculum, internship supervisor
Beth Kelner, LICSW	Sr. ICC—Lowell CSA	Development of training curriculum; implementation of training curriculum, internship supervisor
Amanda McClintock, LMHC	Sr. ICC-Lowell CSA	Development of training curriculum; implementation of training curriculum, internship supervisor
Patrick Keaton	IT Director	Purchase and setup of new mobile hardware

The project team will be led by Beth Chin who will coordinate all aspects of the projects and, in doing so, will ensure all efforts are coordinated among staff. Upon award of the contract, she will develop a work plan with clear timeframes for completion of tasks associated with the project and will report weekly on progress to her supervisor (Vice President of Community Services).
Each staff person assigned to this project is uniquely qualified to serve in this capacity by virtue of their current agency roles. In particular, each Senior. staff person in the respective CSAs is qualified for their Wayside jobs via their educational credentials, licensure, and their training in all of the program specifications for the services delivered by the CSA. Wayside's IT Director is also uniquely qualified for his role via his role and responsibilities for Wayside as an organization.

Attached, please find the job descriptions for Wayside's CSA Program Directors and Senior Intensive Care Coordinators. Attached also please find the Wayside Organizational Chart.

C) Implementation Plan and Timeline:

Monthly Implementation Timeline
Preparation Budget Period: January 1, 2018-May 31, 2018 (5 mos)

Project	Domain	Task	Jan	Feb	Mar	April	May
Project #1 (Mobile Technology)							
	Hardware	Identify appropriate hardware to purchase	x	x			
		Purchase laptops/tablets			x		
		Prepare and disperse mobile technology to staff				x	x
	Quality/Risk Management	Develop processes for info sharing, secure encryption, and how to use mobile technology				x	
	Training	Train staff in use of mobile technology					x
Project #2 (Workforce Development)							
	Planning	Meeting of all team members to develop work plan	x				
		Establishment of responsibilities for writing module	x				
	Curriculum Development	Research and write curriculum		x	x		
		Review curriculum				x	
		Finalize curriculum					x
	Relationship with Colleges	Meeting with UMass Lowell and Framingham State University to formally establish partnership		x			
		Development of MOU			x	x	
		Finalize MOU					x

Monthly Implementation Plan
Budget Period 1: June 1, 2018-December 31, 2018 (7 mos)

Project	Domain	Task	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Project #1 (Mobile Tech)	Training /Implementation	Train staff on best practices in use of mobile technology for better care integration	x	x					
		Staff begin using mobile technology in primary care settings and other community locations			x				
Project #2 (Workforce Development)	Curriculum Implementation	Upload new curriculum to Relias	x						
		Test use of new curriculum module on existing staff		x					
		Make appropriate adjustments to curriculum			x				
		Train first new staff on new curriculum				x	x		
		Train all new staff on new curriculum						x	x
	Relationships with colleges/internship development	Develop clear guidelines for undergraduate internships	x	x	x				
		Develop and publish internship description				x	x		
		Interview potential interns						x	x

Quarterly Implementation Plan
Budget Period 2: January 1, 2019-Dec. 31, 2019

Project	Domain	Task	Q1	Q2	Q3	Q4
Project #1 (Mobile Technology)	Implementation	Continue to use mobile technology	X	X	X	X
Project #2 (Workforce Development)	Training	Continue to train new staff on curriculum	X	X	X	X
		Continue to make adjustments/update curriculum	X	X	X	X
	Internship Development	Interview and onboard first class of undergraduate interns	X			
	Internship Development	Make adjustments to undergraduate internships based on experience			X	X
	Quality/Reporting	Produce reports			X	X

D.Budget Report and Budget Narrative:

See Attachments B and Attachment C

E) Sustainability:

Wayside Youth & Family Support Network will endeavor to sustain the investments made in these projects both during and beyond the contract term
.
First, by meeting (and exceeding!) the requirements for this contract, we will maintain the funding afforded to us.

Then, by definition of the purpose of these projects—"Capacity-Building"—we will improve our overall capacity to better serve more clients, more efficiently. By meeting the goals of these capacity building projects, we anticipate that we will increase the number of clients served in a timely manner out of our CSAs, while concurrently maximizing productivity of staff by hiring more staff, quickening their training process, and maximizing efficiencies in their time. As a result, we will be able to not only increase the numbers of clients served, but also maximize revenues to be gleaned from the increased clientele.

Section 6.5 Coordination with ACOs, MCOs, and Primary Care Providers:

Consistent communication and collaboration will be a key strategy to ensuring ICC-enrolled youth meet their health and wellness goals indicated on their individualized care plan. Communication between the CSA and pediatric practices will be multi-modal and rely on both staff collaboration skills and technology efficiencies.

Wayside has already established communication protocols that begin at the referral process, which include contacting the pediatric practice upon referral once consent has been obtained. Contact to the practice consist of phone calls, email communication and requesting and sharing assessment information. Increased technology as outlined in Section 6.4 will provide efficient means of sharing information via secure email and through mobile capacity.

Secure email will allow for an increase in sharing of protected health information through a safe and protected platform. The use of mobile devices will increase means to communicate information with all team members, including pediatric practices, through a collaborative process with family members present.

The Care Planning Team (CPT) will continue to be the primary means for treatment planning for all ICC-enrolled youth. Families will be highly encouraged to include members from their multi-disciplinary primary care team to all CPT meetings. Mobile devices will be used to allow capacity for members to skype into meetings when not able to attend in person.

Referral management for both CSAs will continue to be led by a team of Master level clinicians to assess for needs and medical necessity for ICC services. Increasing referrals from ACOs, MCOs, and Primary Care Providers will be a significant area of focus. There will be significant outreach efforts by the CSA Program Director and Referral Team to educate all primary care practices in their respected areas. ACOs, MCOs, and Primary Care Practices will receive weekly communication by the Referral Team on the status of openings and to confirm member enrollment.
In addition, the System of Care Committee will serve as the monthly forum to increase collaboration amongst the ACOs, MCOs, Primary Care and community service programs. This ongoing forum of monthly face-to-face collaboration will be a key factor in increasing the likelihood for achieving successful outcomes for youth.

6.4 Proposed Project and Investment Plan #1

A. Project Description

1. Name of specific project: Workforce Recruitment Improves Timely Access

2. Specific goal: The goal of this project is to Improve Timely Access to Intensive Care Coordinator (ICC) Services for children eligible to receive ICC and their families through a strategic campaign to increase the number of Masters-level ICCs by a minimum of six additional ICCs over a three-year period within the CSA programs sited in Southbridge and Milford, MA. A workforce increase of six will ultimately improve the timely access to ICC services for approximately 185 additional children and their families eligible to receive such services. To this end, YOU, Inc. plans to engage in a cross-departmental process to develop a strategic recruitment and talent branding campaign to increase its CSA workforce, and to add .5 FTE Clinical Talent Acquisition Specialist dedicated to the task of launching the campaign in year one, and then stepping down in number of hours to maintain the activity over subsequent years. This campaign will formally bring together the expertise of the Human Resources and Marketing departments with the CSA Operational staff. It will be constructed and implemented in year one, with these efforts continuing and sustained beyond as part of our infrastructure.

3. Scope of the project: The duration of this Workforce Recruitment Improves Timely Access project is from November 2017 through December 2020. To achieve the goal above the project will begin with a kickoff meeting, which will include CSA managers, members of the Human Resources and Development and Marketing departments, and key ICC supervisors to analyze and evaluate current practices and plan for the full implementation of this project. The activities to be performed over the project to achieve the above goal will include, at minimum:

- Utilizing a licensed MA/MSW level clinician as an embedded .5 FTE Clinical Talent Acquisition Specialist within our CBHI services area. This position will function as a liaison between the CSA and Human Resources department to improve talent recruitment, vetting practices, and hiring efficiency. Utilizing an experienced clinician who has provided CBHI services will strengthen our ability to more clearly articulate and represent the responsibilities and demands of the ICC position in talent branding and in-person recruitment opportunities. This Clinical Talent Acquisition Specialist will also vet qualified Master Level ICC candidates by listening for competency. Improved vetting practices will result in securing qualified candidates, while streamlined communication to Human Resources will result in hiring candidates more quickly.
- Utilizing the same licensed MA/MSW level clinician will also strengthen talent acquisition efforts by dedicating a portion of their .5 FTE time to talent branding on social media, representing the CSA at career fairs, developing relationships with local colleges/universities career departments, working to retain graduate-level interns, etc.

- Updating our website and applicant tracking system to streamline the application process and to highlight agency benefits, including loan forgiveness, a licensing scholarship, annual and specialized training opportunities, as well as highlighting successful outcomes from working with families and children.
- Centralizing and implementing electronic recruitment processes within the HR department including reference checks, screening and coordination of the on-boarding plan.
- Sending a postcard (both hard copy and digital) to current licensed and unlicensed Master level candidates describing sign-on bonuses and the value of working at YOU, Inc. (Lists can be obtained from the MA Board of Professional Licensure).
- Designing a new brochure that specifically targets the benefits of a career at YOU, Inc.
- Providing a series of well-advertised Open Houses throughout Central MA where the Clinical Talent Acquisition Specialist and current ICCs will describe their job and answer questions, with on-the-spot interviews conducted to facilitate a rapid hiring process.
- Utilizing social media and new online recruitment channels to both advertise current ICC openings and to engage potential passive candidates

4. Proposed Deliverables: The following deliverables will result from the Workforce Recruitment Improves Timely Access Project:

1) The CSA will increase the number of qualified Master-level ICC candidates by six additional ICCS, a 40% increase over current staffing, within 3 years.
2) The CSA will demonstrate efficient hiring practices by making an offer to qualified candidates within 10 business days of completed application and interview process.
3) The CSA will decrease vacancy time for ICC positions by an average of 5 days.
4) The CSA will increase the total number of ICCs by a minimum of 6 additional ICCs within 3 years:
    a. The CSA will increase the workforce by a minimum of 2 new ICCs in year one.
    b. The CSA will increase the workforce by a minimum of 2 new ICCs in year two.
    c. The CSA will increase the workforce by a minimum of 2 ICCs in year three.
5) Once #4 above is achieved, an additional 55 youth/families will be served by the CSA, resulting in an expected average monthly enrollment of 185 families.

5. Specific use of DSRIP Funding: DSRIP funding for this project includes the .5 FTE Clinical Talent Acquisition Specialist (CTAS) position, the printing of new talent branding/marketing materials, and recruitment travel expenses. These investments directly support a specific recruitment effort to increase the number of ICCs; such an increase supports both workforce development and access to timely services but reducing the waitlist. Other costs in this project, such as design of the marketing materials, CSA management time overseeing the CTAS, etc., is not part of the DSRIP funding and is an in-kind contribution by YOU, Inc.

6. Existing Internal Resources: The agency proposes to utilize a number of existing internal resources to support this Workforce Recruitment Improves Timely Access Project. Firstly, the

agency refreshed its marketing identity, from logo to tagline to messaging, this past year. This project can benefit from that process and build off of it. Similarly, the agency is currently creating a new, mobile-responsive website that should enhance recruitment efforts and aid the Clinical Talent Acquisition Specialist. Secondly, existing managers will provide consultation, support and/or supervision to members of the project team. The agency's new Marketing Manager will also provide consultation and design work for the new talent branding/marketing efforts. Project staff will be located in existing sites in Worcester, Milford and Southbridge. Finally, project staff will have access to existing technology, including computers, printers, scanners, etc.

7. Allocation of Funds: The funds for this project specified in the Budget Report and Narrative (Attachments B and C) will be allocated as follows: to the Human Resources department for the .5 CTAS position, with the remainder of the funds allocated to the CSA for marketing and printing, and recruitment travel across all CSA sites. The YOU, Inc. CSA program services the South Central area, which encompasses a large part of Southern Worcester County. This area covers from Franklin on the eastern side of the catchment area to Sturbridge on the western side. The largest towns within the area are Southbridge, Webster, Northbridge, Milford and Franklin.

8. Internal Evaluation, Measurement, and Performance Management Strategies: In order to measure the efficiency and effectiveness of our recruitment and marketing plan, the Project Team will utilize a tracking system to track data relative to volume of candidates, and timely hiring of qualified candidates to ICC position. Response rates for digital talent branding and marketing efforts for this project will be evaluated by the Marketing Manager and discussed with the CTAS and CSA management team each quarter.

B. Project Team Description

1. See attached Organizational Chart.

For 2. List of Current Staff, 3. Proposed Staff, and 4. Roles and Responsibilities of Staff for this project, please see Table 1 below:

The Workforce Recruitment Improves Timely Access Project Team will be comprised of the Director of Human Resources, the Marketing & Communications Manager, the Director of Community Based Services (CBS), the Director of the Community Services Agency (CSA), and the Clinical Talent Acquisition Specialist. Only the latter, noted in bold below, is funded by DSRIP funding, the rest of the staff time below will be an in-kind contribution by the agency.

Name	Title	Qualifications	Project Role/Responsibility
Joellen Andrews	Director of Human Resources	5 years as an HR Director, 17 in the field, MBA	Provide oversight of the project and co-supervision of the Clinical Talent Acquisition Specialist (CTAS)

			Facilitate team meetings to review project recruitment goals and progress
TBD (currently being hired)	Marketing & Communications Manager	3+ years in marketing design and print and digital communications	Provide design and consultation on the talent branding/marketing efforts of the CTAS
Kim Jeznach	Talent Acquisition Specialist	4+ years as a Nonprofit Recruiter and Talent Acquisition Specialist	Assist the CTAS in implementing the social media, in-person, and digital plans to recruit new ICCs
Judi Rock	Director of Community Based Services		Provide supervision and support of the Director of Community Service Agency Monitor hiring efforts with the Director of CSA
Joanna Cyr	Director of Community Service Agency		Provide co-supervision and support for the CTAS Monitor recruitment and marketing efforts
TBD, Proposed staff of the project	**.5 Clinical Talent Acquisition Specialist**	**Proposed:** Experience working in a CSA required; experience in marketing or recruiting desired.	Act as a liaison between CSA and the Human Resources and Marketing departments Implement the talent branding/marketing plan for ICCs Represent the CSA at career fairs, open houses, on-campus at colleges/universities Screen and vet all ICC candidates for qualifications, proper credentials, clinical skill and experience Track recruitment outcomes

5. Management of the Project: The project team will be comprised of staff in key leadership positions within the agency (see table above), but it is the Director of CSA, Joanna Cyr, who is responsible for the recruitment and retention of CSA staff and who will directly coordinate and manage this Workforce Recruitment Improves Timely Access project. Specifically, the Program Director will coordinate bi-weekly planning meetings with the project team in order to monitor progress toward project timeframes and goals. The Program Director will monitor tracking data for trends, will ensure that the Clinical Talent Acquisition Specialist represents the CSA at local career fairs, and that established practices for ensuring efficient hiring are implemented and being maintained.

C. Implementation Plan and Timeline (Table 2, All Projects):

Budget Period	**Project 1: Recruitment**	**Project 2: Community Outreach**	**Project 3: Coaching**	**Project 4: Technology**
Preparation Budget Nov. and Dec. '17	Identify staffing of the Clinical Talent Acquisition Specialist (CTAS) position; Hold Kickoff meeting of CSA managers, HR and Marketing departments, and key ICC supervisors; Design marketing materials; Train CTAS	Identify: Staffing of the Community Outreach Specialist (COS); Work plan for outreach to ACOs and PCPs; Present obstacles in coordinating healthcare and develop a plan to address them; Train COS	~~Initial VROON VDB Wraparound Coaching Training & Certification on-site is held.~~	Purchase and distribute new netbooks to all ICC staff; Purchase Data Analysis System; MIS and CSA leadership meet to determine 5 key metrics for Data Analysis System implementation.
Preparation Budget Jan. through March '18	CTAS schedules and attends initial college & career fairs visits, posts first marketing items online; Update website & HR processes; Mail postcards; Schedule/ advertise Open Houses.	Educate ICCs, Senior CCs, Family Partners, and Central Referral on role of COS; Create marketing materials; Develop Evaluation Plan and data entry methods; COS makes initial	On-Site "Booster" training by NWIC is held ~~See above~~	Implement Data Analysis System with 5 data metrics to be used in Years 1-5.

		outreach visits COS completes UMASS Integrated Care Management certification		
Year 1, Q2	CTAS reduces hours from 20 to 6 per week; CTAS conducts recruitment visits and marketing tasks; HR tracks data on deliverables; CTAS vets candidates- ongoing thru Q4	COS reduces hours from 20 to 8 per week; COS conducts outreach visits and tracks data—ongoing thru Q4	~~Two days of follow-up VROON training will be conducted~~ Leadership team attends NWIC Academy in Washington D.C. Quarterly NWIC support for leadership team through Virtual Coaching Platform and access to NWIC training modules and resources	See above
Year 1, Q3	See above	Monitor and adjust work plan as needed	See above	See above
Year 1, Q4	Evaluate initial data tracked, marketing outcomes, etc. and adjust Year 2 work plan as needed	Evaluate initial data tracked and adjust Year 2 work plan as needed	See above	Evaluate initial data metrics and tracking and report out to team.
Year 2, Q1	CTAS reduces to 4 hours per week; CTAS conducts recruitment efforts and marketing tasks—ongoing thru Q4	COS reduces to 4 hours per week; COS conducts outreach visits and tracks data—ongoing thru Q4	~~Minimum of 6 supervisors receive coaching certification by end of Year 2, Q2~~ Leadership team attends NWIC Academy in Washington D.C.	See above

			Quarterly NWIC support for leadership team through Virtual Coaching Platform and access to NWIC training modules and resources	
Year 2, Q2	See above	See above	Quarterly NWIC support for leadership team through Virtual Coaching Platform and access to NWIC training modules and resources~~See above~~	See above
Year 2, Q3	See above	See above	Quarterly NWIC support for leadership team through Virtual Coaching Platform and access to NWIC training modules and resources~~See above~~	See above
Year 2, Q4	Evaluate tracked data and adjust Year 3 work plan as needed.	Evaluate tracked data and adjust Year 3 work plan as needed	~~Two days of follow-up VROON training will be conducted; All current ICC staff complete TIER II certification by Year 2, Q4~~ Quarterly NWIC support for leadership team through Virtual Coaching Platform and access to NWIC training modules	Evaluate data metrics and report out to CSA team; Add at least 2 new data metrics to be used in Years 3-5.

			and resources	
Year 3, Q1	CTAS reduces to 2 hours per week as function begins to be embedded in agency staffing—ongoing thru Year 3, Q4.	COS reduces to 2 hours per week as function begins to be embedded in agency staffing; COS conducts outreach visits and tracks data—ongoing thru Year 5, Q4	See above	See above
Year 3, Q2	See above	See above	See above	See above
Year 3, Q3	Evaluate tracked data for deliverables and to inform permanent position (see below)	See above	See above	Evaluate data metrics and report out to CSA team.
Year 3, Q4	DSRIP-funded CTAS position concludes; position added to HR	See above	~~All new ICC staff will receive certification by Year 3, Q4~~	Add at least 2 new data metrics to be used in Years 4 and 5.
Year 4, Q1	n/a	See above	n/a	See above
Year 4, Q2	n/a	See above	n/a	See above
Year 4, Q3	n/a	See above	n/a	See above
Year 4, Q4	n/a	See above	n/a	See above
Year 5, Q1	n/a	See above	n/a	See above
Year 5, Q2	n/a	See above	n/a	See above
Year 5, Q3	n/a	See above	n/a	See above
Year 5, Q4	n/a	Finalize embedding of COS function into agency staffing	n/a	Add at least 2 new data metrics to be used going forward.

D. Budget Report and Budget Narrative (see attachments B and C)

E. Sustainability

The main way this project will be sustained over time will be the ongoing increase in revenue generated by the additional CSA workers hired into the program. Like with all services, a percentage of the revenue will go to management and general costs that support the agency

administration. This revenue will allow us to maintain the identified part time .50 position hired through DSRIP dollars, enhancing the Human Resources department, thus increasing the ongoing ability to attract and maintain qualified staff who serve more ICC-eligible children and families. This position would become a permanent full time position in the Human Resources department. This goal is reasonable, given the likelihood that agency revenue will continue to increase as more billable hours are generated.

6.4 Proposed Project and Investment Plan #2

A. Project Description

1. Name of specific project: Community Outreach

2. Specific goal: The goal of this Community Outreach Project is to improve the integration of ACOs and Primary Care Providers for ICC-engaged members and their families. YOU, Inc. will accomplish this with the addition of a Community Outreach Specialist who will further strengthen our existing partnerships with ACOs and PCPs and who will network with additional ACOs and PCPs within the Milford and Greater Southbridge communities. This effort will include a focused and intensive marketing campaign designed to educate ACOs and PCPs and their staff to the benefits of the wraparound CSA model of services working in conjunction with them on the same goal: improving healthcare services and, in turn, the health of our shared clientele. The Community Outreach Specialist will complete the UMass Integrated Care Management certificate program and through a train the trainer model, will provide the CSA staff with training and support in this model. The Community Outreach Specialist role will be integrated into the CSA Program as a 0.5 FTE position, allowing the required tasks to be accomplished over our wide geographic area.

3. Scope of the project: The Community Outreach Project lasts from November 2017 through December 2020. The initial .5 FTE Community Outreach Specialist (COS) position lasts from November 2017 through March 2018; thereafter the position steps down from .2 FTE in Year 2 to .05 FTE to maintain activity in Year 5 before that function becomes embedded in the CSA service. The COS's focus will be to engage with PCPs and ACOs within the communities with three major outcomes:

- Networking and relationship building,
- Comprehensive education concerning CSA and its wraparound services, and
- Improving the coordination and integration of services across these systems of care for ICC-engaged members.

We will accomplish these goals through:

- A strategic and comprehensive public relations (PR) plan within the entire catchment area. Key elements will include the targeted use of social media, a newly designed and updated set of marketing materials including a new brochure, postcards, and business cards, as well as access to a newly designed website page highlighting the CSA program.
- The Community Outreach Specialist (COS) will maintain regular communication with providers, and will assess which mode of communication is more suited to each provider, e.g., some pediatricians or psychiatrists prefer texting or messaging, while others prefer a direct phone call. However, what is essential to this plan is that regular face-to-face meetings will also take place. This relationship building will lead to problem-solving, thus improving the integration of services.
- The COS will also have access to agency giveaways such as water bottles, pens, notepads, keychains, posters for pediatric offices, etc. to keep YOU, Inc. and its CSA front-of-mind for providers.
- Critical to this plan's success will be the knowledge base of ICC and Family Partner services, the community, and the ability to share success stories. Therefore, the COS will be someone with direct knowledge of the value of intensive wraparound services, the target population and the communities in which it is delivered. The COS will also complete the UMass Integrated Care Management certificate program.

4. **Proposed Deliverables:**

1. A new CSA brochure as well as marketing postcards will be created and printed, with a minimum of 500 combined creative pieces put into circulation over the course of a year.
2. In visits with PCPs the COS will problem-solve barriers to care when appropriate and discuss increasing integration of care. Attendance by PCPs at our System of Care meetings will be tracked and the number attending at least twice yearly will increase by a minimum of 10%.
3. With the assistance of our MIS Department we will develop a data tracking system to measure the following outcomes:

- Number of new PCPs and ACOs receiving regular face to face contact
- Overall number of regular meetings with ACOs and PCPs

5. Specific use of DSRIP Funding: DSRIP funds will be used to fund the cost of the COS position, UMass Integrated Care Management certificate program cost, outreach materials (print and online), as well as outreach travel expenses. This investment will allow YOU, Inc. to jumpstart significantly the improvement of the integration of ACOs and Primary Care Providers for ICC-engaged members and their families for the agency's CSA.

6. Existing Internal Resources: Internal resources that will support this plan will include staff supervision, office space, office supplies, existing technology and training.

7. Allocation of Funds: The funds for this project specified in the Budget Report and Narrative (Attachments B and C) will be allocated to the CSA for the COS position, marketing and

printing, UMass Integrated Care Management certification training, and outreach travel across all CSA sites. The YOU, Inc. CSA program services the South Central area, which encompasses a large part of Southern Worcester County. This area covers from Franklin on the eastern side of the catchment area to Sturbridge on the western side. The largest towns within the area are Southbridge, Webster, Northbridge, Milford and Franklin.

8. Internal Evaluation, Measurement, and Performance Management Strategies: In order to measure the efficiency and effectiveness of our Community Outreach Project, the Project Team will utilize a tracking system to track data relative to the number of new PCPs and ACOs receiving regular face to face contact, the overall number of regular meetings with ACOs and PCPs, and attendance by PCPs at our System of Care meetings. Responses for outreach marketing efforts for this project will be evaluated by the Marketing Manager and discussed with the COS and CSA management team each quarter.

B. Project Team Description

1. Organizational Chart: Please see attached.

2. **List of Current Staff**: Judi Rock, LICSW Component Director, Joanna Cyr, LICSW Program Director II, Marketing Manager (currently being hired).

3. Proposed Staff: One 0.5 FTE (20 hours per week) Community Outreach Specialist, stepping down to a .05 FTE through December 31, 2022.

4. Roles and Responsibilities of Staff: The Component Director will oversee this project in partnership with the Program Director. The Program Director will directly supervise the COS and be responsible for the evaluation of the project. The Marketing Manager will design the creative pieces for the project and consult with the Community Outreach Specialist on their implementation. The Community Outreach Specialist will be directly responsible for implementing all goals identified in the Project Narrative.

5. Management of the Project: This project will be overseen by Judi Rock, LICSW, Component Director. She will directly supervise Joanna Cyr, LICSW, CSA Program Director. Together they will identify staffing and implement this project. As they meet weekly, all aspects of the start-up and implementation will be discussed regularly. In addition, Ms. Rock and Ms. Cyr will schedule longer planning meetings at least quarterly. Senior ICCs, ICCs and Family Partners will be informed of this service and trained as to how to use the COS within their roles.

C. Implementation Plan and Timeline: Please see Table 2 on page 5.

D. Budget Report and Budget Narrative (see attachments B and C)

E. Sustainability: It is projected that the Community Outreach Specialist project will be completed over a one year period. This project will give us a huge jump start on engaging PCPs and ACOs regularly to increase care integration and healthcare outcomes. After the project's completion, the CSA leadership will embed aspects of it into the regular budget and practice of the program.

6.4 Proposed Project and Investment Plan #3

A. Project Description

1. Name of specific project: ~~Coaching Certification of Wraparound Staff~~

NWIC Wraparound Coaching "Boosters" and CSA Leadership Support & Training

2. Specific goal: The goal of this project is to strengthen fidelity to Wraparound processes including care planning, care management and care coordination processes for ICC engaged members and their families. This proposed project will directly impact the skill sets of the ICC staff in providing a high-quality wraparound process specifically in the areas reflected in our fidelity scores and provide direct support to the CSA leadership team for sustainability.~~.~~

3. Scope of the project: The duration of time that funding will be utilized will be during the budget preparation period and during the first two budget years ~~for this Coaching Certification of Wraparound Staff project~~. YOU, Inc. proposes funding for partnering with the National Wraparound Implementation Center (NWIC) to provide "booster" trainings to the CSA staff that will be individualized and tailored for the YOU Inc. CSA program based on the areas where Wraparound fidelity scores have been low and where our staff struggle in regards to providing high fidelity wraparound. This will include trainings for staff on including natural and community supports in the wraparound process, using creative brainstorming and options when developing a wraparound plan with a family and ensuring that care plans are created using outcome measurements so families and teams can see progress. We have made contact with Kim Estep, Director & Systems & Content Expert Coach at NWIC to provide this intensive on-site "booster" training and ongoing leadership support. Kim and her team of coaches at NWIC will be able to review the YOU Inc. CSA WAFAS data to design their trainings to tailor around the program's specific needs. NWIC will be able to provide on-site "booster" training to the entire program staff that is tailored to our individual needs as well as provide support to our supervisory leadership team both on site and through a "Virtual Coaching Platform". Through this intensive training and coaching support, we will build sustainability in providing high fidelity wraparound to our ICC engaged members and their families. ~~hiring an outside trainer to provide coach certification for the Sr. ICC staff and Sr. Family Partner staff, in order to have sufficient certified coaches to provide ongoing coaching and training in the wraparound model for all ICC staff. We have made contact with Jim Rast of~~

~~Vroon VDB, a nationally recognized trainer of wraparound and a trainer who has been utilized by MassHealth to provide coaching for the CSA's. Jim has submitted a proposal to provide coaching at a site in Worcester for our staff. We can also open this up to other CSA's that want to send senior staff to receive the training.~~

~~High Fidelity Wraparound training is an important first step in creating sustainable High Fidelity Wraparound services.~~ In addition to the training modules provided by the state, our CSA will improve overall fidelity to the wraparound model by focusing on these areas of need for our staff and a model of ongoing support for our leadership team to sustain this fidelity. Research has shown that training without ongoing coaching may not result in fidelity. Coaching is a long term investment in sustainability and change. Through the support of NWIC, our leadership team will receive ongoing coaching and support on a quarterly basis as well as have access to an extensive library of training modules and related resources through their virtual training center. This will be provided through the end of Budget Year 2. ~~Coach training presents the skills necessary for coaches to make a lasting impact on the quality of wraparound provided at the agency. The Vroon VDB certification process is designed with the goal of having each site certify multiple certified Wraparound coaches toward developing a strong learning culture and providing high fidelity, sustainable wraparound.~~

~~Coaching and Certification of ICC staff is a major factor in workforce development. By providing ongoing Tier I and Tier II certification for ICC staff, they strengthen their skills in facilitating the wraparound process and improve their fidelity to the wraparound model. This training enhances staff's sense of professional skills and fosters a greater commitment to their role as Wraparound facilitators.~~ On-site, intensive training from the highly skilled, energetic coaching team at NWIC will provide our staff the necessary "boosters" they need to improve their practice in Wraparound. With improved skills and refreshing ideas, staff will gain confidence in the work they do and the Wraparound model as a whole. We believe this will increase retention of staff and allow staff a greater sense of professional development.

~~We are proposing a 'train the trainer' model which will certify our senior supervisors as coaches and enable them in turn to train ICC staff and provide certification for them. This will allow us to utilize the funds initially to fund the training of the supervisors and all costs will be incurred in the initial years of funding. After that period, trained supervisors will be able to ensure that coaching can be sustained in order to certify ICC staff.~~ We are focusing a large portion of this training to be with our CSA leadership team of supervisors and Senior ICC and Senior Family Partner staff. We feel as though providing support and training to this team will strengthen our internal training for the CSA staff therefore leading to strengthened fidelity to the Wraparound process. We would propose to send a minimum of 2 supervisors from our CSA leadership team to the NWIC Academy in September of 2018 and also in 2019 to further strengthen and sustain their skills in providing effective supervision and training to our CSA staff.

4. Proposed Deliverables: (A) ~~-~~ On-site "Booster" training will be provided for the CSA staff by June 2018. ~~A minimum of 6 supervisors will receive coaching certification by no later than June 2019~~. (B)CSA Leadership staff will receive on-site coaching and support as well as virtual coaching through December 2019 on a quarterly basis ~~All current ICC staff will complete Tier II certification as a wraparound facilitator by December 2019~~. (C) ~~New ICC staff will receive certification by December 2020.~~A minimum of 2 CSA Leadership staff will attend the NWIC Academy in September, 2018 and then again in 2019.

5. Specific use of DSRIP Funding: DSRIP funds will be used to fund the cost of the ~~trainer's time~~NWIC coaching team, as well as ~~his~~ their travel expenses. The funds will also provide the CSA access to NWIC's extensive library of training modules and related resources through the virtual training center and fund the cost of the quarterly virual coaching sessions with the leadership team through the end of Budget Year 2. The DSRIP funds will also be used to send a minimum of 2 senior or supervisory staff from the CSA to attend the NWIC Academy held in September 2018 and 2019. The funds will be used to pay for their registration to the Academy and their travel costs. ~~The YOU, Inc. CSA program services the South Central area, which encompasses a large part of Southern Worcester County. This area covers from Franklin on the eastern side of the catchment area to Sturbridge on the western side. The largest towns within the area are Southbridge, Webster, Northbridge, Milford and Franklin. Through this investment of funds, staff will be certified in wraparound and the goal of strengthening the wraparound processes will be attained. Additional costs will be utilized for ongoing coaching of the participants to complete the certification process.~~

6. Existing Internal Resources: YOU, Inc. plans to utilize its senior managers, as well as experienced ~~ICC~~ staff in this CSA project to continue to support and train the CSA staff in high fidelity Wraparound and sustain the skills developed through the support of the NWIC coaching team.~~, to become certified as trainers in order to sustain the goal of certifying all ICC staff. We will also utilize agency training space and training tracking.~~

7. Allocation of Funds: Funds will be allocated for the training of all CSA staff at both the ~~the training of supervisors from both~~ Milford and Southbridge sites as well as the ongoing coaching support for the leadership team of supervisors.~~.~~

8. Internal Evaluation, Measurement, and Performance Management Strategies: The CSA program will partner with the agency QM and Training Department to track the ~~progress of supervisors working toward their certification~~training of staff via the agency's electronic learning platform. The CSA program will also work with ~~the trainer/consultant~~NWIC for tools that can strengthen our capacity to efficiently collect and effectively use data to monitor our fidelity to the Wraparound process. ~~be utilized to track the certification process and tasks that need to be completed and timelines established.~~

B. Project Team Description

1. See attached organizational chart

2. List of Current Staff: The Project team would consist of Joanna Cyr, LICSW, Program Director of the CSA, Judi Rock, LICSW, Component Director of Community Based Services, as well as Sr. ICC Hilary Fernandes, LMHC and Sr. ICC Margaret Langley, LMHC. The project team will also include Sr. Family Partner Dolores Toribio and Sr. Family Partner Cheryl Marino-Page. This team will work with NWIC to develop the "Booster" trainings for the CSA staff and also participate in the on-site and virtual coaching for the leadership team. ~~the outside consultant to complete the coach certification process.~~ This team will participate in the ~~initial training,~~onsite training as well as ongoing virtual coaching through at least the first 2 year budget periods. ~~several days of follow-up training to complete all requirements for certification.~~

3. Proposed Staff: The bidder plans to hire a consultant/trainer for this project. YOU, Inc. plans to contract with the National Wraparound Implementation Center (NWIC) to provide on-site coaching to the CSA staff as well as ongoing support to the leadership team through virtual coaching. ~~has already received a proposal from Jim Rast of Vroon VDB, a nationally recognized coach of wraparound staff. VVDB has been training and working with coaches across North America for over 20 years and certifying over 400 coaches in our system. During that time, VVDB has learned new strategies for training and new ways for maximizing training transfer. Based on this, VVDB has developed a new coaching textbook and curriculum that compiles all of our learning from our experience coaching and supervising on our programs to training and coaching across North America.~~

4. Roles and Responsibilities of Staff: The Senior Managers, Judi Rock and Joanna Cyr, will oversee the project and provide the coordination with the consultant to ensure efforts are coordinated and not duplicated.

5. Management of the Project: The Program Director of the CSA, Joanna Cyr, will be responsible for managing the project. She will develop goals and objectives to organize the implementation of this project and she will report out project accomplishments/progress towards goals semi-annually to Component Director Judi Rock.

C. Implementation Plan and Timeline: Please see Table 2 on page 5.

D. Budget Report and Budget Narrative (see attachments B and C)

E. Sustainability: This project is highly sustainable as it focuses the coaching support on the supervisory team who then directly supervise the CSA staff and who create the sustainable trainings that will continue beyond the funding periods of this proposal. ~~creates a group of trainers who will provide ongoing coaching and training for ICC staff without incurring additional cost beyond the initial periods of funding.~~

6.4 Proposed Project and Investment Plan #4

A. Project Description

1. Name of specific project: Leverage and expand technology to capture, analyze and share relevant data.

2. Specific goal: The goal of this project is to utilize our existing Electronic Health Record system (and its connection to the Mass HIway) to strengthen the use of data, and improve the integration of ACOs and Primary Care Providers. By providing our Intensive Care Coordinators with updated technology, we anticipate they will be more efficient in documenting service delivery and coordinating care for our families. In addition, the implementation of a data analytics system will allow our staff to better track referrals, service delivery, and residential treatment admissions, in addition to many other data metrics. While the data analytics system will implemented in the Preparation Period, the creation of additional data metrics will continue through Year Three.

3. Scope of the project: The duration of this technology project is from November 2017 through December 2022. The focus will be to improve the ability to document and access data with two major outcomes:

- Deployment of new end-user technology (netbooks) to document service delivery and care coordination more efficiently.
- Improve the efficiency and quality of our services through the implementation of a data analytics system to better track key metrics.

We will accomplish these outcomes through:

- Creating new and utilizing existing data sets within CareLogic (our existing EHR) to improve data collection amongst our CSA staff. Those data sets will be used to create dashboard to drive workflow changes. We believe that data alone doesn't improve performance, but that adapting and changing workflows leads to client outcomes.
- Connecting our EHR to the Virtual Gateway for a more efficient entry of the CANS.
- Coordinating care more efficiently by sharing clinical documentation with other community partners through the use of the Mass HIway.

4. Proposed Deliverables: (A) It is expected that all Intensive Care Coordinators will receive netbooks by December 2017. (B) Implementation of the Data Analytics System will be complete with 5 data metrics by the end of the Preparation Period. (C) An additional two (2) data metrics will be created and utilized in 3 subsequent years.

5. Specific use of DSRIP Funding: DSRIP funds will be used to fund the cost of netbooks and signature pads for clinical staff as well as the purchase and implementation of a data analytics system. The netbooks and signature pads are expected to cost $15,000. The data analytics system is expected to cost $40,000. This includes both implementation costs and monthly licensing fees. Through this investment of funds, staff will be better able to document service delivery, track significant data metrics, and gain efficiency in use of time.

6. Existing Internal Resources: YOU, Inc. plans to utilize its MIS Staff, Quality Management staff and CSA program leadership to develop dashboards and data metrics.

7. Allocation of Funds: Funds will be allocated for purchase of netbooks for CSA clinical staff as well as for the purchase and implementation of a data analytics system. YOU, Inc. will cover the costs of the data analytics system by more than half in Year 2 (.6 in-kind) and increasing every year until .9 in-kind in Year 5. The YOU, Inc. CSA program services the South Central area, which encompasses a large part of Southern Worcester County. This area covers from Franklin on the eastern side of the catchment area to Sturbridge on the western side. The largest towns within the area are Southbridge, Webster, Northbridge, Milford and Franklin

8. Internal Evaluation, Measurement, and Performance Management Strategies: The Chief Information Officer, Database Administrator, Director of Quality Management, and EHR Specialist will work with CSA program staff to create tools to collect and analyze measurable data, and to evaluate progress towards deliverables.

B. Project Team Description

1. See attached organizational chart

2. List of Current Staff: The project team would consist of Jonathan Miller, Chief Information Officer, Kathleen Fleming, Database Administrator, Chris Darling, EHR Specialist, Joanna Cyr, LICSW, Program Director of the CSA, Judi Rock, LICSW, Component Director of Community Based Services, and Jillian Alfeo, LMHC, Director of Quality Management. The team will work with the data analytics vendor to implement the system. This team will participate in training on the system and will work with program staff to understand and utilize the data to achieve desired outcomes.

3. Proposed Staff: none.

4. Roles and Responsibilities of Staff: Jonathan Miller, Chief Information Officer, will oversee the project to ensure efforts are coordinated and not duplicated.

5. Management of the Project: Jonathan Miller, Chief Information Officer, will be responsible for managing the project. He will develop goals and objectives to organize the implementation of this project.

C. Implementation Plan and Timeline: Please see Table 2 on page five.

D. Budget Report and Budget Narrative (see attachments B and C)

E. Sustainability: Through the use of data analytics, we anticipate being able to deliver services in a more efficient manner while also providing better care coordination. This increased efficiency will allow us to service more families. While still early, we anticipate that we could reduce costs while increasing the number of services delivered, allowing us to easily sustain this effort.

BH Communi

CSA Budget Report

Youth Opportunities Upheld (YOU), Inc.

Investment Funding	Prep Budget Period	Budget Year 1	Budget Year 2	Budget Year 3	Budget Year 4	Budget Year 5	Total Revenues
Number of CSA sites	1	N/A	N/A	N/A	N/A	N/A

Recruitment Expenses

Description of Expense	Cost
Total Recruitment Expenses	$ -

Provide a description of each recruitment expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

Training Expenses

Description of Expense	Cost
Booster training	$ 8,450.00
Integrated Care Management	$ 800.00
Total Training Expenses	$ 9,450.00

Provide a description of each training expense line item included in the table above, how each will assist in accomplishing the goals of the project and how the costs were determined:

This includes a 2-Day on-site intensive "booster" training provided by the National Wraparound Implementation Center (NWIC). This training will assist staff in building sustainable child capacity, to provide model-adherent, high-quality wraparound, thereby increasing positive outcomes for children, youth and families.

Integrated care management certificate training, provided by UMASS, will allow for a higher level of training sophistication so that care improvements and client care quality can improve while providing wraparound services.

4	Leverage and expand technology to capture, analyze and share relevant data	Implement Data Analysis System	01/01/18	12/31/21	**Technology**	Development Adaptation of EHR and/or Care Management System	Complete research of Data Analysis Systems	5 Key metrics for Data Analysis System identified by MIS and CSA leadership			Purchase Data Analysis System	Data analysis system is implemented		
4	Leverage and expand technology to capture, analyze and share relevant data	Strengthen the use of data and improve integration with ACOS and Primary Care Providers	01/01/18	12/31/21	**Technology**	Development Adaptation of EHR and/or Care Management System	Chose new and existing data sets for our exisitng EHR that will improve data collection among CSA staff	Data sets for a dashboard to drive workflow changes are identified and/or created			Dashboard that drive workflow changes is implemented and shared with CSA staff	Utilization of CSA dashboard has begun		
4	Leverage and expand technology to capture, analyze and share relevant data	provide all ICC staff with new netbooks	01/01/18	05/31/18	**Technology**	Technology for Service Delivery	Purchase netbooks for all ICCs	Netbooks have been purchased			All netbooks for ICCs are deployed	ICCs are using netbooks daily in the field		
1	Workforce Recruitment Improves Timely Access	create and implement strategic recruitment and talent branding campaign to increase # of Masters-level ICCs	01/01/18	12/31/21	**Workforce Development**	Workforce Development staffing including Fringe	Identify and train .5 Talent Acquisition Specialist	Clinical Talent Acquisition Specialist works with support staff to plan recruitment and talent branding campaign			Implement recruitment and talent branding campaign	Increase # of applications for ICCs by 10%		
1	Workforce Recruitment Improves Timely Access	create and implement strategic recruitment and talent branding campaign to increase # of Masters-level ICCs	01/01/18	12/31/21	**Workforce Development**	Workforce Development staffing including Fringe	Marketing and HR departments create draft recruitment and talent branding peripherals	Draft peripherals are reviewed by CSA senior management and new Talent Acquisition Specialist			Recruitment and talent branding peripherals (print and digital) are deployed.	At least 500 print pieces have been put into the community and at least 500 social media impressions have ocurred for this campaign.		
3	NWIC Wraparound Coaching "Boosters" and CSA Leadership Support & Training	further strengthen fidelity to Wraparound proccesses specifically in areas reflected in our fidelity scores and provide ongoing direct support to the CSA leadership team for sustainability	01/01/18	12/31/19	**Workforce Development**	Training Expenses	All 2018 trainings--on-site "booster" and Leadership staff attending NWIC Academy--are scheduled.	CSA training calendar for 2018 completed.			On-site "Booster" training provided to CSA staff.	CSA staff increase understanding of high-fidelity Wraparound		
2	Community Outreach	create and implement work plan for outreach to ACOs and PCPs	01/01/18	12/31/22	**Operational Infrastructure**	Operation Staffing including Fringe	Identify and train Community Outreach Specialist	Community Outreach Specialist completes UMASS Integrated Care Management certification			Community outreach workplan implemented	Number of PCPs and ACOs receiving fact to face contact increases		

Section 6.2 Executive Summary

A. Bidder's current performance on its Development Plan:

YOU, Inc. has identified several areas to focus on through its development plan. These include reducing the timeframe for an intake date for families that are referred to the program. This is directly related to the issue of timely access to ICC services. Another goal in the current development plan is to improve fidelity scores in four areas: outcome measurement, natural supports, youth engagement and facilitation skills. This is directly related to improving fidelity to wraparound. Another goal is to improve/enhance the training coaching process for Family Partner staff through the implementation of observation tools. This is directly related to improved coaching and training of staff. YOU, Inc.'s progress on its development plan has seen periodic gains on reducing the waitlist. This has been impacted, however, by staff turnover, which results in increases in the waitlist. Numerous efforts have been made to reduce turnover but have not been able to be sustained. It is anticipated that through this funding initiative long term impact can be made in this area of staff recruitment and retention.

Areas on the development plan where goals have been met include improving the quality of progress notes and assessments by staff, completed and implemented standardized initial training for all staff as well as the implementation of observation tools for the ICC staff.

B. Strengths and Needs of the Bidder:

A strength demonstrated by the YOU, Inc. CSA program has been the level of integration of both school and medical staff into the System of Care meetings. We have seen a greater interest from several of the pediatric practices in the area to become more involved with CBHI services. We have continued to work well with the many school districts in our catchment area. We have also developed a very strong relationship with both DCF and DMH staff. With our participation, DCF created an interagency group to foster better communication and collaboration. Despite some ongoing issues regarding staff retention, we have numerous ICC staff who have remained in their roles for over three years and some for over 7 years. The other strength of our CSA has been the willingness of staff to take on implementing the ARC GROW model into the wraparound model. This has enabled staff to better educate parents on understanding the impact of trauma on their children.

Another strength of YOU, Inc. is our the recent leadership that we have taken in creating and running ADVANCE, a behavioral health professional development collaboration with Assumption College and four other agencies. This initiative, first funded externally and now embedded in our organizational structure, helps professionals earn Masters degrees at a reduced tuition, benefitting both the individual and the behavioral health workforce. While we have taken the lead in workforce development with this initiative, more needs to be done,

hence why two of the four proposed projects for DSRIP funds are meant to improve both the number of ICCs and their expertise in wraparound fidelity.

Needs of the bidder would focus on recruitment of staff in order to provide timely access to services, as well as efforts to enhance staff development in order to impact staff retention. Other needs include further training of staff in collaborating with medical personnel and strengthening the relationships with PCPs in the communities that we are located. Although we have a well-developed Electronic Health Record for the CSA program, a critical need for enhancing data analysis now exists. Finally, the development of a sustainable coaching system would ensure continued training and fidelity to the wraparound model.

It should be noted that the four projects that we outline in section 6.4 are geared to address the need areas for the program. By receiving funding for these projects, YOU, Inc. would be able to prepare the CSA for a greater role in the new system under MassHealth and working collaboratively with ACOs.

C. Plans for improving timely access to ICC services

Timely access to ICC services will be improved through the development of a strategic recruitment and marketing plan to acquire talented staff. In order to maintain timely access to ICC services, we need to ensure a greater capacity of ICC staff so that families can be assigned to an ICC within a reasonable timeframe from referral. A plan to dedicate a staff person just to focus on recruiting ICC staff and to purchase needed marketing materials would greatly enhance current efforts to fill ICC positions. YOU, Inc. has a Central Referral system that ensures a quick turnaround time for referrals to be triaged and sent to be assigned by the program. See section 6.4 project description of workforce development for a more detailed description of staff recruitment efforts.

D. Plan for improving care coordination, care planning and care management for ICC-Engaged Members

The plan to improve care coordination, care planning and care management is directly tied to the project that is outlined in section 6.4 to develop a system of coaching certification for all ICC staff. This will be done by contracting with Vroon VDB, a nationally recognized wraparound coaching and training group from Colorado. By training our senior managers and supervisors to be certified as coaches we will have the ability to provide wraparound certification for our staff, and to ensure a greater level of fidelity to the wraparound model and improve the work that the ICC staff do in care coordination and care planning. This will be an investment in sustaining a system of coaches within our own agency that can maintain this training on an ongoing basis. Research has demonstrated that this train the trainer model has consistently provided greater fidelity over a sustained period of time.

E. Plan to improve performance on quality scores and development plan goals.

This plan again centers on the projects as outlined. By improving recruitment of staff and improving fidelity to wraparound through enhanced coaching, quality scores and development plan goals will be improved. Certification of coaches on staff will have a long lasting impact on the training of ICC staff and therefore, in the quality of wraparound being provided to ICC engaged members. Through monitoring of WAFAS scores, we will be able to monitor the progress on quality scores. The program will also utilize the transition indicator tools to measure progress of families in the program.

F. Plan for improving coordination with pediatric primary care and other physical and behavioral health care providers across the care continuum for youth.

The plan for improving this coordination is tied to the enhancement to the program of a community outreach specialist who will focus their energies completely on the furthering of our relationships with PCPs and other healthcare providers. We have already begun developing some strong relationships in each area (Milford/Southbridge) and expect to be able to build upon these relationships to further develop additional collaborations. We already work closely with all the behavioral health providers as our ICC staff work collaboratively with many providers on care planning teams with our families. By adding this dedicated staff time to this project we will be able to greatly improve this area of collaboration. See section 6.4 for more detailed description of the role of the community outreach specialist.

6.3 Populations Served and Community Engagement

A. Member Populations and Communities Served

The YOU, Inc. Community Service Agency (CSA) program services the South Central area, which encompasses a large part of Southern Worcester County. This area covers from Franklin on the eastern side of the catchment area to Sturbridge on the western side. The largest towns within the area are Southbridge, Webster, Northbridge, Milford and Franklin. There are also a number of smaller communities that are generally rural in nature. The highest number of ICC members are concentrated in the communities listed above.

Due to the large geographic nature of this area, YOU, Inc. has established two office sites to enhance our outreach to all towns in this catchment area. One office is located in Milford at 221 East Main Street and the other in Southbridge at 328 Main Street. School data for Southbridge and Webster reflect a high percentage of economically disadvantaged students. In Southbridge the percent of students identified as economically disadvantaged is 61% compared to a statewide average of 27%. In Webster, the percentage of students identified as economically disadvantaged is 46% compared to statewide average of 27%. The other important factor in Southbridge and Webster is the high percentage of Hispanic/Latino students. In Southbridge the percentage is 50.5% compared to a statewide average of 18.6%. In Webster the percentage is 20% which is slightly higher than the statewide average. This has resulted in a greater demand for bilingual Spanish speaking staff, as many parents of eligible members do not speak English or feel more comfortable communicating in their first language.

Currently, of the 134 families, YOU, Inc. serves in its CSA program, 23% of the families report being Hispanic or Latino. Both the Southbridge and Milford communities have a high percentage of Spanish speaking families. We currently have four bilingual staff between the two sites to help address this access issue.

In both the Southbridge and Blackstone Valley communities, we have worked closely with several pediatric practices. We have worked with pediatricians at the Harrington Healthcare system in Southbridge, including Dr. Anu Pathak, Dr. Cynthia Wilson-Grillo and Dr. Robert Giordano. We also held our System of Care committee meeting in November at Harrington Hospital in order to foster better communication and collaboration with the healthcare system. In Blackstone Valley, we have worked closely with Dr. Jeffrey Lukas from the TRI-River Family Health Center. Dr. Lukas has collaborated well with our ICC staff in Milford and has attended several Care Planning team meetings. We also held our System of Care meeting this past fall at the Tri-River Family Health Center and several of the pediatricians were able to attend that meeting. We believe the CSA program will be able to build upon these already established relationships with the additional staff input (from Plan # 4) and increase the number of pediatricians in the area that work with ICC staff. This will also enable staff to work more closely with medical personnel and our families to promote the health and well being of the

individuals we serve. It is anticipated that through regular communication with medical staff, our ICC staff will be able to identify areas for promoting health with the families of these members.

B. Relationships in Community to Leverage to Improve Quality of Service

The YOU, Inc. CSA Program has developed strong partnerships and relationships in the communities we serve. In the Blackstone Valley area, we collaborate closely with several Behavioral Health providers including Wayside Youth and Family Network, Family Continuity Programs, Riverside Community Care and Arbour outpatient services. We hold our System of Care meetings at the Whitin Community Center, which is a community recreational center as well as a child care provider. Our collaboration with them has created recreational opportunities for Therapeutic Mentors for several agencies in the area. We have developed a strong working relationship with the local DCF office in Whitinsville, which has included joint trainings for their staff and ours. We also participate monthly in an interagency meeting which includes probation staff from the Milford and Dudley courts, as well as staff from DMH and DDS. We have collaborated with both Parent Professional Advocacy League (PPAL) and the Kennedy Donovan Center in Milford to support an ongoing parent support group. Additionally, we are an active member of the Juvenile Advocacy Group (JAG) which works with community partners, including the Milford Youth Center to prevent substance abuse and address emerging needs in the communities of Milford, Bellingham and Hopedale.

In Blackstone Valley, we have worked with several school districts, particularly Milford, Northbridge and Franklin. We have made several presentations to Franklin school staff concerning behavioral health services and assisting staff in accessing CBHI services. As a result of this collaboration, Franklin schools have utilized the CSA services for many families in their community.

In the Southbridge and Webster areas, we have worked with several agencies including GB Wells and Harrington Healthcare system, as well as Wayside, FCP and South Bay Mental Health. In Southbridge, YOU, Inc. has participated directly with the school system and has worked with the receiver appointed by DESE, as well as a workgroup formed by DESE to create a plan for improvement for the Southbridge schools. This specifically included ways to improve access for the students to mental health services. YOU, Inc. also provides extensive behavioral health services in the area in addition to the CSA program. We provide Outpatient Therapy, In-Home Therapy, Therapeutic Mentoring, as well as IHBS services. ICC staff also coordinates care with individuals receiving mental health services from GB Wells, the outpatient department of Harrington Healthcare.

Additionally, YOU, Inc. manages a contract with the Department of Youth Services to provide their District office in Webster with Youth Service Coordinators, and we have formed a close working relationship under this contract. The youth service coordinators ensure DYS clients

access appropriate mental health services, including ICC services when needed. YOU, Inc. through this contract provides casework support to DYS youth throughout the Southern Worcester County, as well as the rest of Worcester County.

C. How Current and Planned Partnerships Align with Bidders' Proposed Projects

Our current partnership with Tri-River Family Health Center (FHC) will be greatly enhanced by the implementation of a community outreach specialist to improve access and communication for eligible members. Tri-River FHC is a part of the UMass Memorial Healthcare system which will also be providing ACO services. It is planned to expand this relationship as a way to bridge further development of YOU, Inc.'s connection to the ACO organization.

One of our proposed projects is to provide coach certification in wraparound in order to improve fidelity of ICC staff to the wraparound model. Our current collaboration with other CSA's in the central region will enable us to bring in wraparound trainers to provide this certification and to provide a train the trainer model which will enhance the sustainability of this project. During this past year, we have provided shared trainings with Community HealthLink and Wayside to enhance the trainings available for both ICC and FP staff in the region.

One other very important partnership is YOU, Inc.'s participation with the Southern New England Practice Transformation Network. This collaborative is led by UMass Medical School and UConn Health. This participation is geared to helping our clinical practices be better prepared for transforming our practice in line with changes being made, such as alternate payment methodologies and greater use of technology in providing clinical care for consumers.

We believe this process will enable us to better identify target areas of practice transformation to focus on, as well as to identify strengths the organization will bring to this critical work. Furthermore, this will help us in our continued use of technology and the expansion of our technology planned under this grant.

Section 6.5 Coordination with ACOs, MCOs and Primary Care Providers

A. **Bidirectional communication between the Bidder and pediatric practices**
As detailed in Section 6.4, Proposed Project and Investment Plan, the agency intends to improve collaboration, communication and coordination with PCPs and ACOs by utilizing DSRIP funding to staff a Community Outreach Specialist position. The COS role is to target (1), **ongoing networking and relationship building with ACOs and PCPs, (2) comprehensive education concerning CSA and its wraparound services, and (3) improving the coordination and integration of services across these systems of care for ICC-engaged members.** Presently, the CSA Program Director participates in ongoing planning and informational meetings with MCOs, (MBHP and Beacon/Fallon Regional Coordinators) on a quarterly basis. These meetings provide networking opportunities, time to strengthen working relationships and ongoing bidirectional communication. The focus of most meetings is to revisit Development Plans, discuss waitlists, analyze CANS reports and note successes. In addition, member files are reviewed. We have been fortunate to have established a long-term and productive relationship with the two Regional Coordinators. In between meetings, ongoing electronic and telephone communication occurs regularly.

B. **Referral management protocols for follow-up and informational sharing**
YOU, Inc. utilizes a Central Referral department that receives referrals and directs them to the appropriate service. Pediatricians and other healthcare and behavioral healthcare providers frequently call to both make referrals and to check on the status of clients previously referred. They can reach the Central Referral and intake specialists from 8:30am to 5:30pm each business day through email and telephone. They receive a response within 24 hours. However, no confidential client information or even their status on the waitlist can be discussed unless there is a Release of Personal Health Information on file. In addition, anyone making a referral must complete a comprehensive referral form. This information is used to confirm which program can best serve a client's needs, allows Central Referral to check insurance and includes all contact information. This information is forwarded to the program. In the case of the CSA Program, once this information is received, senior care coordinators manage the referral waitlist and assign cases to the ICCs and Family Partners. Once the case is assigned, the ICC works with the family to foster good communication between them and their care providers. Other opportunities to share information happen at the family "Wrap" meetings where all providers are invited to participate. To further support these efforts to maintain good communication we are proposing that the Community Outreach Specialist acts as an expediter whenever there is a misunderstanding in the two-way communication.

C. **Team-based treatment planning in collaboration with pediatric practices**

The CSA model is based primarily upon the team approach and relies on collaborative systems of care and natural family supports to assist the team in a concerted effort to partner with families for the best possible outcomes. It can be challenging to coordinate multiple healthcare and behavioral health entities, but it is so important to have them at the table to jointly treatment plan. We have recognized over the years that pediatrician offices, for an example, play a critical role in the lives of our families, but that it is difficult for the doctor to attend outside meetings because of their schedule. Instead our ICCs reach out to nurse practitioners and social workers who are often part of pediatric practices. In turn, our Family Partners coach parents and caregivers how to navigate medical systems successfully. To further strengthen this team approach we will ensure that our ongoing CSA trainings continue to focus on macro efforts to impact team based treatment planning. The role of our proposed Community Outreach Specialist fits nicely into this plan.

D. Timely access to ICC services

The timely access to ICC services is our priority. To that end we are proposing a comprehensive workforce recruitment and marketing plan as one of our proposed projects in Section 6.4. This plan will increase the number of ICCs and decrease our CSA waitlist, which is currently at an all-time high.

E. Connections to social services

We are fortunate in both the Milford and Greater Southbridge areas and across all agency programs to have established a broad spectrum of resources to assist us in our provision of services to families, children and adolescents. The CSA in particular participates in numerous coalitions, naturally occurring team and "wrap" meetings and partners with multiple providers in identifying and making referrals to available services. Our Centralized Referral Center keeps a database of provider services and our Community Connections and Family Resource Center sends out agency-wide information on new social service programs as well as notifications on upcoming community events. Our team consists of many seasoned professionals possessing a wealth of available natural and creative connections. Finally, our agency alone has a wide continuum of programming and strong connections with public and private entities such as DCF, DMH, DPH and DTA.
