MassHealth

Section 1115 Quarterly Report

Demonstration Year: 21 (7/1/2017 – 6/30/2018)

Quarter 3: (1/1/18 – 3/31/18)

Introduction

The Commonwealth of Massachusetts' current 1115 Demonstration agreement (Project Number II-W-00030/I) Extension was approved on November 4, 2016, effective July 1, 2017 through June 30, 2022. This extension seeks to transform the delivery of care for most MassHealth members and to change how that care is paid for, with the goals of improving quality and establishing greater control over spending. The Demonstration also addresses the epidemic of opioid drug use in Massachusetts. The Demonstration extension seeks to advance six goals:

- Goal 1: Enact payment and delivery system reforms that promote integrated, coordinated care; and hold providers accountable for the quality and total cost of care
- Goal 2: Improve integration of physical, behavioral and long-term services
- Goal 3: Maintain near-universal coverage
- Goal 4: Sustainably support safety net providers to ensure continued access to care for Medicaid and low-income uninsured individuals
- Goal 5: Address the opioid addiction crisis by expanding access to a broad spectrum of recovery-oriented substance use disorder services
- Goal 6: Increase and strengthen overall coverage of former foster care youth and improve health outcomes for this population.

In accordance with the Special Terms and Conditions (STCs) of the Demonstration and specifically STC's 78 and 79, the Massachusetts Executive Office of Health and Human Services (EOHHS) hereby submits its quarterly operational report for Demonstration Year 21, Quarter 3 ending March 31, 2018.

Enrollment Information

The enrollment activity below reflects enrollment counts for SFY 2018 Quarter 3, as of March 31, 2018.

Eligibility Group	Current Enrollees (to date)
Base Families	814,810
Base Disabled	227,164
1902(r)(2) Children	15,981
1902(r)(2) Disabled	16,160

Base Childless Adults (19-20)	27,377
Base Childless Adults (ABP1)	31,706
Base Childless Adults (CarePlus)	286,880
BCCTP	1,248

Eligibility Group	Current Enrollees (to date)
CommonHealth	27,017
e-Family Assistance	7,934
e-HIV/FA	667
SBE	22
Basic	N/A
DSHP- Health Connector Subsidies	N/A
Base Fam XXI RO	0
1902(r)(2) XXI RO	0
CommonHealth XXI	0
Fam Assist XXI	0
Asthma	N/A
TANF/EAEDC*	N/A
End of Month Coverage	N/A
Total Demonstration	1,456,966

*TANF/EAEDC is a subcategory of Base Families

Enrollment in Managed Care Organizations and Primary Care Clinician Plan

Plan Type	QE 09/17	QE 12/17	Difference
MCO	789,436	637,742	-151,694
PCC	420,114	310,094	-110,020
MBHP	486,277	499,411	13,134
FFS/PA*	626,575	609,388	-17,187
ACO	0	275,166	275,166

*PA included in FFS enrollment count

Enrollment in Premium Assistance and Small Business Employee Premium Assistance

During this reporting quarter, MassHealth provided premium assistance for 43,193 health insurance policies (including Student Health Insurance Plan policies), resulting in premium assistance to 54,698 MassHealth eligible members. Note that in the delivery system enrollment numbers above, members in FFS and in MBHP may receive also premium assistance.

The Small Business Premium Assistance Program is still operating and the enrollment numbers

remained the same since the last reporting period. During the quarter we had an average monthly enrollment of 14 members in the SBEPA program. The gradual drop in enrollments over time continues to be mainly due to either loss of private insurance, or the member was determined eligible for a richer benefit and has been transferred to a Premium Assistance benefit under another category of aid.

A new premium assistance project was implemented by MassHealth in fall of 2016 called Student Health Insurance Plan Premium Assistance (SHIP PA). This project allows current MassHealth members who are full-time college students and have access to SHIP through their college or university to enroll in their schools' SHIPs and receive MassHealth Premium Assistance. MassHealth eligible college students were previously able to waive out of electing SHIP but on November 4, 2016, MassHealth received approval through the 1115 demonstration to require that any full-time student enrolled on MassHealth must enroll in the SHIP plan, if available. As of March 2018, 31,500 students were enrolled in the program, which far exceeded expectations for the project.

Premium Assistance Program	**Disabled Members**	**Non-Disabled Members**	**Total MassHealth Enrolled Members**
Standard	1,984	9,691	11,675
CommonHealth	3,305	0	3,305
Family Assistance	17	7,681	7,698
CarePlus	0	506	506
Small Business Employee Premium Assistance (SBEPA)	0	14	14
Student Health Insurance Premium Assistance (SHIP PA)	0	31,500	31,500
Total for Q3	**5,306**	**49,392**	**54,698**

Outreach/Innovative Activities

Certified Application Counselor Training and Communication

MassHealth continues its extensive training and communication efforts to continually educate and inform the over 1,400 Certified Application Counselors (CACs) across 270 CAC hospitals, community health centers, and community service organizations. Collaboration with the Massachusetts Health Connector on these activities provides timely, uniform knowledge and messaging across all enrollment Assisters (CACs and the Health Connector Navigators, Independent Enrollment Assisters).

CAC training and certification starts with successful completion of ten online, comprehensive certification training courses (over 850 pages) to prepare CACs to assist consumers in obtaining

MassHealth/health insurance per ACA regulations, covering all aspects of MassHealth, subsidized and unsubsidized health coverage, as well as instruction on utilizing the paper and online applications in the most effective and efficient way. Learning for CACs continues throughout the year in the form of mandatory online trainings covering updates and MassHealth initiatives, Assister emails, conference calls, webinars, meetings, and other outreach activities. All CACs must also take and pass a comprehensive assessment each fall to meet annual recertification requirements.

Frequent email communications are distributed to all enrollment Assisters on a wide variety of MassHealth eligibility and related topics, as well as refreshers, in order to help Assisters assist MassHealth applicants/members/consumers effectively. Thorough communications and trainings are provided for all application changes and Health Insurance Exchange (HIX) system releases. Regular one-hour conference call trainings are also provided for the Assisters, providing a more in-depth explanation and include detailed question and answer sessions with subject matter experts. Certain trainings are considered mandatory and CACs are required to complete the training within a specific time period in order to maintain CAC certification. Mandatory events cover key topics such as policy or process updates, certification course updates, and other eligibility/enrollment activities.

This quarter the CAC Training team's primary focus continued to be on activities in support of the new MassHealth health plan options and introduction of Accountable Care Organizations (ACOs) that went into effect March 1, 2018. With MassHealth member mailings sent to all MassHealth managed care eligible members late last fall with personalized information about changes to their health plan enrollment effective March 1, timely and ongoing communications and updates for the CACs was central to a smooth transition for members.

"Assister Update" newsletters and conference calls continued in earnest this quarter around the new MassHealth health plan options to help ensure CACs were kept up to date about the changes, their impact on members, and share information learned from frequently asked questions coming into customer service. Additional CAC support and learning opportunities were also offered and included presentations at the quarterly Massachusetts Health Care Training Forums (MTF), job aids to help navigate health plans, the MassHealth Choices website and provider directories, and opportunities to participate in webinars that reviewed the changes.

Bi-weekly check-in calls throughout the quarter focused on the new health plans, managed care eligible member transition, and continuity of care after March 1st and were hosted by MassHealth policy experts. In addition to providing important updates, reviewing the new health plans and supports, and reinforcing best practices, each call included an open question and answer period for the CACs. Questions and feedback from the calls were tracked and shared with internal operations and program staff for research, clarification, and follow up with vendors, health plans, or operational staff as needed. Follow up and issue resolution was provided to individual CACs or all CACs as appropriate.

Many of the conference calls focused on MassHealth's commitment to working with all relevant parties to ensure continuity of care for the many members who were moving to new plans, whether they were going to or from an ACO Partnership Plan, a Primary Care ACO, an MCO, or

the Primary Care Clinician (PCC) Plan. The "Continuity of Care–Supporting Member Transitions to New MassHealth Plan Options" document and a subsequent Continuity of Care FAQ document were reviewed in detail during the February and March calls and reinforced how MassHealth is working with ACOs, MCOs, and providers to ease the transition to new plans. These key documents were also shared with the CACs in Assister Update emails and stored as a resource in the Learning Management System.

MassHealth Health Plan check-in calls are scheduled through Q4 to keep CACs informed and help them provide members with continued support for the transition process, member enrollments, and the close of the Plan Selection Period (PSP).

The majority of the 36 Assister Update emails sent and 9 calls/webinars held this quarter focused on the new MassHealth Health Plan initiative ensuring CACs had knowledge of and access to the latest information, resources, and updates including:

- Job aids to help CACs as they assist members explore, understand, and enroll in (if needed) the new health plans. Included was an easy-to-use, detailed one-page MassHealth Health Plan Directory tool that provides comprehensive directions on where to go to find primary care providers (PCPs), specialists, behavioral health specialists, and hospitals by plan type. A MassHealth Health Plan Directory Desk Guide provided tips and best practices for using both the MassHealthChoices.com and the MassHealth Provider Directory to search for providers and to find/compare plans.
- Guidance on how to access and use the MassHealth online enrollment form. With online health plan enrollment being the fastest and best way to enroll in a plan, Assisters were strongly encouraged to use, and took great advantage of, the MassHealth online enrollment form when helping members. MassHealth also implemented some temporary changes to the enrollment form prior to March 1st, based on CAC and member feedback, which allowed members to indicate whether the enrollment was to take effect immediately or on March 1st.
- A specific MassHealth Health Plans folder in the Learning Management System where job aids, documents, and important links gave CACs easy access to key resources for the new health plan rollout.
- Assister Update emails that shared updates and guidance on topics such as the expanded MassHealth customer service hours in March (specifically for health plan enrollment), member guidance on carrying and using MassHealth and Health Plan cards, CAC resources for the latest health plan enrollment information for a member, and ongoing MassHealth in-person enrollment events.

In addition to the new MassHealth Health plan options, other key CAC activities for the Training and Communications team this quarter included providing information on the Health Connector and MassHealth End of Year Tax filing Process—including an Assister call, mandatory online training in the LMS, job aids, links to tax filer resources, and guidance on how to help members, and recent changes on the federal individual mandate—as well as Health Connector Open Enrollment and Closed enrollment and updates/Q&A at the four January regional MTF meetings.

<u>Member Education and Communication</u>

As noted above on March 1, 2018, MassHealth rolled out new health plan options to support the state's Payment and Care Delivery Initiative (PCDI). This rollout out impacted roughly 1.2M MassHealth managed care eligible members.

MassHealth developed and implemented a multi-prong member support strategy to rollout this effort. That approach covered three categories and each focused on different strategic goals and reaching different populations. The approaches were to create global awareness and education, support materials and member engagement, and enhancements to customer service support. During this quarter, MassHealth continued to implement those strategies.

1. **Global Awareness and Education**

The first category, creating a global awareness and education approach provided training, created communications and member friendly materials that shared broad information to mass audiences, educating members and our stakeholder communities on the new health plan options available to managed care eligible members. During the quarterly Massachusetts Training Forums (MTF) in-person meetings (total of 4 meetings reaching 4 regions statewide), we educated and trained our stakeholders, hospital staff, health center staff, the provider community and organizations that support our members, to help them understand available resources and timelines relevant to these health plan changes. In addition to the in-person meetings, additional webinars and conference calls were held to update our stakeholders and offered opportunities for training and information to those that weren't able to attend the in-person meetings. For the January 2018 MTF session, in total over **1,083** individuals participated and were trained and 235 individuals participated in webinars. To provide additional support and trainings, additional in-service trainings, webinars and conference calls were held to support inter-agency Executive Office of Health and Human and Services (EOHHS) staff and over 140 staff members participated. These webinars provided additional information related to member impact, addressed specific information that would impact the populations they work with, and answered questions.

2. **Support Materials and Member Engagement**

The second category is creating materials and engaging directly with our members during this transition. MassHealth created member-friendly materials and began to hold special events to support member enrollment choices and assist with any eligibility issues they were experiencing.

In October – December 2017, MassHealth developed member-friendly letters to inform members of their new health plan choices. In order to maintain important provider relationships and ease continuity of care, if a member's primary care provider was moving into a new health plan, they received a letter informing them that they would be following their primary care provider into a new health plan on March 1st, if they did not make another decision. Heads of household also received a new MassHealth Health Plan Enrollment Guide, which provided them with information about all the MassHealth health plans available. All materials were written in plain language, using infographics, and were translated into English and Spanish. Member materials were focused tested with individuals who work directly with members to ensure readability and clarity.

Materials were made available, upon request, in other languages. All member notices were sent in either English or Spanish, depending on the preferred language indicated by the member. In addition, all notices included a standard Babel sheet, with information consistent with requirements of ACA Section 1557 on how to access the information in 15 other languages as well as alternative formats such as braille and large print, and the availability of a language line offered by our customer service vendor and translators to support requested needs.

A new member website was launched in late 2017 called MassHealthChoices.com. It was created as an interactive way for members to Learn, Compare, and Enroll in their desired health plan. The website is available in English and Spanish. Additional materials including tools to understand how to select a health plan and a primary care provider that's important to the member, to understand the new Accountable Care Organization models and some of the benefits for members, to how to navigate our new MassHealthChoices.com website, along with easy to read and understand new health plan web content were developed and distributed broadly to our provider community, community agencies, stakeholders, and made available on the MassHealth website.

During the quarter and into Q4 MassHealth outreach staff held enrollment events to help members complete renewals and health plan selection. Enrollment events are opportunities for new applicants and current members to meet with MassHealth staff to ask questions about their coverage, and seek assistance in understanding how to use their health care. During January through March of 2018, MassHealth held 7 enrollment events across Massachusetts targeting diverse communities with high access needs and continued high under insurance rates. These events are to reach individuals where they are and conduct services and provide assistance in a way that meets the individual's needs. Language and American Sign Language interpreters are available at all events to assist consumers who are in need of those services. In total, approximately 300 members attended and were helped at these events.

3. Enhancements to Customer Service Support

And lastly, MassHealth continues to make enhancements to the customer service center to provide effective customer service support to members by answering questions, providing resources, and resolving member issues. This was accomplished by increasing customer service staff numbers and training all customer service staff on health plan changes. In addition, in an effort to address member information in a timely manner, updates were made to our member messaging system and a special line was set up to directly provide members with particular health plan enrollment information. Specific teams were developed at the customer service center to address specific health plan questions. A reporting strategy and a triage process were established to escalate cases, with enhanced communication processes between the health plans and our customer support managers. An escalation team was also created to handle specific urgent medical and pharmacy needs for members during the transition to new health plans.

<u>Provider Education and Communication</u>

During the third quarter, MassHealth conducted **Phase II: Operations** trainings as part of a multi-phase approach to educate providers about the operational changes due to the new plan

options. Phase II concluded in April and Phase III training dates are still being finalized.

This second phase of education (webinars and in-person events) is focused on:

- Overview of PCDI Communication and Education strategy
- Changes to the Eligibility Verification System (EVS)
- Plan-specific administrative and operational functionality
- Continuity of care policy
- Overview of member resources

In this quarter, MassHealth held 17 webinars with a total of 457 attendees and 4 in-person sessions with a total of 46 attendees

MassHealth has developed two additional fact-sheets targeted to Long Term Services and Supports and other covered services providers which educated them on PCDI, provided information on how to communicate these changes with their patients, and how these changes influence important aspects of their practice such as networks, billing, and prior authorizations.

In March, 2018 MassHealth published All Provider Bulletin 275: MassHealth EVS Codes and Restrictive Messages for 2018 Managed Care Health Plans for providers. There were also updates made to the a EVS Restrictive Messages quick reference guide, and Screenshot Examples to assist providers to further their understanding of EVS and system programming needs in preparation for the March 1st implementation.

Since the initial launch in December 2017, MassHealth continued to update the provider focused webpage, https://www.mass.gov/payment-care-delivery-innovation-pcdi-for-providers with materials and information as they became available. This is a primary landing page for providers to access key materials and learn more about payment reform activities.

During the quarter, MassHealth conducted a series of webinars and in-person events, conducted Provider Association Forum (PAF) meeting, presented at MassHealth Training Forum (MTF) events, created Provider Bulletins, created provider reference materials and enhanced MassHealth provider webpages on Mass.gov. These activities are part of MassHealth's approach to provide education to all 68,000 MassHealth providers during Spring 2018.

Additionally, MassHealth is continuing to work with external stakeholders such as Provider Associations, Sister Agencies, and ACO health plans.

Delivery System Reforms and DSRIP

Accountable Care Organizations (ACOs)

During January and February 2018, MassHealth held public meetings across the state and met with dozens of provider and other stakeholder groups to discuss the ACO program. MassHealth also worked to ensure that all health plans exchanged important information, such as authorization for services and prescriptions, for members who were

changing plans as a result of the launch of the program. ACOs also identified members with complex conditions for special outreach.

MassHealth launched its ACO program on March 1, 2018 with 17 ACOs serving about 850,000 members. During the month of March 2018, MassHealth hosted weekly Office Hours for several groups of providers and stakeholders, in person and by phone (e.g., hospitals and medical providers, behavioral health providers, community health centers, member advocates). MassHealth further provided guidance to members and providers about the continuity of care process for members as they transitioned into their new plans through written FAQs. In response to heavy call volume related to the ACO program launch during the month of March, MassHealth extended its customer service center hours on evenings and weekends to ensure that members could receive assistance.

During this quarter, MassHealth continued to provide robust guidance and support to ACOs and MCOs regarding the Community Partners (CP) program. MassHealth held joint meetings with the ACOs, MCOs, and CPs to share important milestones and concepts and provide a forum for constructive feedback, as well as one-on-one monthly meetings with MassHealth contract and performance management staff for each of the ACOs, MCOs and CPs. Additionally, MassHealth released comprehensive guidance on care management and care coordination in the CP Program; provided support for the development of operational processes to be shared by the entities; and continued working on data sharing arrangements across entities.

In February, MassHealth received and began its review of the ACOs' Full Participation Plans, through which the ACOs provided detailed information about how they plan to use DSRIP dollars to provide better, more integrated care to members. MassHealth also approved the majority of the ACOs' PY1 budgets and disbursed Performance Year 1/Q1 DSRIP payments to most of the ACOs. At the end of March, MassHealth received the ACOs' PY0 Progress Reports in which the ACOs reported out on the expenditure of their PY0 DSRIP funding. DSRIP funds support innovations that include free monthly mobile markets with fresh fruits and vegetables for patients and community members; intensive care management in support of frequent ER users; cell phones for members with complex medical/behavioral health care needs; and an opioid prescription management program for providers.

During this quarter, MassHealth put its internal performance monitoring strategy into place for each ACO, including establishing a quarterly cadence for contract management meetings with ACO staff and semi-annual meetings with ACO leadership. MassHealth continues to hold weekly Office Hours for all ACOs to provide support generally and to focus on specific areas including Quality.

Lastly, on the DSRIP side specifically, Massachusetts continued to work with the 17 contracted ACOs, approving the majority of the ACOs' Performance Year (PY) 1 Budgets. The ACOs submitted their Full Participation Plans and the State and Independent Assessor began their review of the plans. In Q3, the State disbursed approximately $52M in DSRIP funds corresponding to PY1 Budgets. ACOs are

utilizing the funds for a variety of different startup and ongoing tasks with a focus on primary care. Some examples of these DSRIP investments include: (1) support for behavioral health integration in primary care settings through the use of alternative payment mechanisms with providers, (2) complex care coordination programs that target the specific needs of MassHealth members, with a focus on behavioral health and social determinants of health, and (3) an Ambulatory Intensive Care Unit (ICU) Program that will care for members with serious medical conditions in their homes.

Community Partners (CPs)

MassHealth continues to work towards the launch and implementation of the Community Partners (CP) Program and the Community Services Agencies (CSA) DSRIP program, which are geared towards investing and supporting populations with high behavioral health (BH) and complex Long-Term Services and Supports (LTSS) needs in the Commonwealth. Both programs are set to launch July 1, 2018, which is one month later than previously anticipated.

MassHealth worked closely with contracted CPs on readiness review during this quarter. This included hosting monthly meetings with all contracted CPs and joint meetings with CPs and ACOs/MCOs, as well as providing guidance on and reviewing deliverables from CPs. Deliverables included Preparation Budget Period Milestones; enrollment forecasting and capacity determination in regard to the numbers of individuals that could be supported by each contractor; Full Participation Plans and BP 1 Budget and Budget Narratives; and baseline assessments of Electronic Health Records.

MassHealth convened CPs, ACOs and MCOs to further clarify and discuss expectations regarding contractually-required ACO/MCO and CP Agreements and Documented Processes on topics such as enrollee assignment and engagement and care transitions. While MassHealth anticipates ACO/MCO and CP Agreements to be completed by mid-April, Documented Processes clarifying roles and responsibilities between the entities must be completed prior to CP Program launch and will be due to MassHealth in two phases. MassHealth convened the parties over multiple meetings to answer questions and discuss key questions intended to assist in the development of required Documented Processes.

In January, Account Managers made status calls to all CPs to discuss progress on ACO/MCO and CP agreements, including initial challenges, successes and key barriers. Account Managers visited each CP in February to discuss progress on and status of the deliverables noted above and to review internal processes and workflows. In March, Account Managers made additional status calls to identify challenges, successes and barriers in development of Documented Processes and to check-in on deliverable progress.

Following MassHealth review of budget requests, BH CPs were provided additional funding to implement standardized assessments using an InterRAI assessment tool.

Due to challenges with MMIS functionality, MassHealth made changes to the assignment process and will make assignments directly to CPs for July 1 and October 1, 2018. ACOs and MCOs will be accepting referrals to the program starting in January 2019.

CP Preliminary Participation Plans and Prep Budget Period (PBP) Budgets and Budget Narratives were approved by EOHHS. Roughly $12.1M in DSRIP PBP funds were disbursed to Community Partners (CP) in January. CPs are utilizing their DSRIP PBP funds for a variety of different startup and ongoing tasks associated with conducting CP supports. Such investments include, but are not limited to, sourcing appropriate office space for the CPs, establishing documented processes with ACOs, hiring and training new staff, purchasing essential equipment for staff (e.g. computers, desks, phones, etc.) and purchasing/developing their own Electronic Health Records. In January, the State also completed contract execution with 19 Community Service Agencies (CSA) and approved their Preliminary Participation Plans and PBP Budgets and Budget Narratives. Approximately $2.9M in PBP DSRIP funds were disbursed to CSAs. In March both CPs and CSAs submitted their Full Participation Plans and Budget Period 1 Budgets and Budget Narratives. These deliverables are currently under review by the State and Independent Assessor.

DSRIP Statewide Investments

Statewide Investments (SWI) is a portfolio of eight investment streams designed to build and strengthen healthcare workforce capacity and delivery system infrastructure across Massachusetts, with the goal of helping ACOs, CPs, and CSAs succeed in MassHealth payment reform.

During Q3, the State signed a contract with Abt Associates to serve as the external partner to assist with standing up and managing the Technical Assistance (TA) investment, which comprises the largest proportion of SWI funding (~$44 million over five years). The SWI team also signed a contract with the Massachusetts League of Community Health Centers (MassLeague) to assist with standing up and managing student loan repayment programs, the Primary Care Integration Models and Retention Program, the Investment in Primary Care Residency Training programs, and a portion of technical assistance specifically focused on CHCs. The State also engaged in discussions with the Executive Office of Labor and Workforce Development (EOLWD) regarding an Inter-Agency Service Agreement (ISA) that would enable a partnership with the Commonwealth Corporation, a quasi-state agency with expertise in workforce development associated with EOLWD, to stand up and manage programs under the Workforce Development Grant Program, which will invest in training for Community Health Workers, Certified Peer Specialists, and frontline workers in ACOs and CPs. Additionally, the State released an RFP to solicit proposals for grant awards under the Alternative Payment Methods Preparation Fund and continued to make progress in the design of the Enhanced Diversionary Behavioral Activities investment. Lastly, the State continued working under the ISA with the University of Massachusetts Medical School (UMMS) to design a provider directory for MassHealth members that details the accessibility accommodations at MassHealth providers.

DSRIP Operations and Implementation

The fourth stream of Operations and Implementation provides funding for staff and vendor contracts to assist the DSRIP program. EOHHS has transitioned all State Innovation Model staff to DSRIP support in Q3. In Q3, EOHHS also contracted with the Disability Policy Consortium

for Ombudsman services.

On December 1, 2018, EOHHS contracted with Public Consulting Group (PCG) to serve as the DSRIP Independent Assessor. In Q3, PCG's ACO Team reviewed revisions to ACO PY1 Budgets and Budget Narratives for compliance with the Special Terms and Conditions, DSRIP Protocol, and EOHHS-issued guidance and feedback. In Q3 they reviewed the Full Participation Plans and provided initial feedback. PCG will review Prep BP Progress Reports next quarter. PCG's CP/CSA team began their review of all CSA BP1 Budgets, Budget Narratives, and Full Participation Plans. In Q4, they will complete their review and begin their review of the CP BP1 Budgets, Budget Narratives, and Full Participation Plans. In Q3 CMS provided guidance to the State that it would need to conduct a separate Midpoint Assessment (MPA); the State began conversations with PCG to develop the scope of the MPA.

In Q3, Massachusetts Health Quality Partners (MHQP), MassHealth's contractor supporting member experience administration, fielded and began collecting responses to the adult and children's Primary Care surveys for the six pilot ACOs. MHQP monitored response rates and implemented tactics, such as redesigning the envelope, implementing a second wave of the survey, to increase rates as needed.

In Q3, MHQP also continued work to develop Behavioral Health and Long-Term Services and Supports (LTSS) surveys for administration in 2019. Their work consisted of researching available tools, working with the MassHealth BH/LTSS member experience workgroup to identify key domains, priorities and gap areas in the survey tools. MHPQ proceeded to conduct a series of focus groups and in-depth interviews with MassHealth members, providers, Community Partners, and other key stakeholders to review and collect feedback on potential candidate survey tools. The feedback informed the domains, unmet priorities and gaps as part of the process and next steps toward finalizing of surveys.

To provide advice and feedback on the implementation of delivery system reform, Massachusetts has procured a Delivery System Reform Implementation Advisory Council (DSRIC). DSRIC is made up of ACOs, CPs, providers, patient advocates, and other stakeholders that meet on a bi-monthly basis to discuss various payment reform topics. In February, EOHHS presented on its proposed policies for populations with Special Health Care Needs (SHCN) as well as the processes for screenings and comprehensive assessments. Since this was the last meeting prior to the full launch of the ACO program, members also voiced their thoughts around continuity of care, service area exclusions, and other pre-launch concerns. EOHHS was responsive to this feedback, making several significant policy changes dealing with these issues (e.g. extension of Continuity of Care period, extension of the plan selection period), which were implemented during Q3, and have been discussed during calls with CMS.

Flex Services

MassHealth received feedback from CMS on the draft Flexible Services Program (FSP) protocol in late February. Based on that feedback, MassHealth spent a significant amount of time during this quarter revising its FSP protocol to better align its structure with the 1915(i) framework, including: clarifying the FSP's eligibility criteria; refining

the list of services (especially calling out when such services are not currently captured within the 1915(i) framework; developing screening, assessment, and care planning principles; and payment details, among other topics.

Infrastructure and Capacity Building

EOHHS released an additional $4.6 million out of a potential $5 million ("ICB Round 2") for SFY 2017. ICB Round 2 provides eligible acute care hospitals with funding to complete independent financial and operational audits and to implement recommendations from the audits. The audits and resulting projects focus on enhancing sustainability and efficiency and improving or continuing health care services that benefit the uninsured, underinsured, and MassHealth populations. Final reports for ICB Round 2 grants are due July 31, 2018.

For SFY 2018, the State is providing another opportunity for ICB Round 2. In Q3, the State updated its guidance alerting providers to an additional $10.385M available for eligible acute care hospitals. As in SFY 2017, the funds must be used complete independent financial and operational audits and to implement recommendations from the audits. The audits and resulting projects focus on enhancing sustainability and efficiency and improving or continuing health care services that benefit the uninsured, underinsured, and MassHealth populations. Those eligible hospitals looking to participate in ICB Round 2 were required to submit an attestation in April 2018.

Operational/Issues

During this quarter, MassHealth continued to work with the Massachusetts Health Connector and our systems integration vendor on fixing HIX defects to improve system stability and eliminate workaround processes. These enhancements included a Back Office redesign to improve navigation and information available to eligibility staff to support customer service inquiries, a link with the MH document management system to identify when a document is received to ensure a member is not closed for failure to respond to a request for information/renewal if they have responded prior to the time clock expiration, and defect fixes.

As noted above, during this quarter, MassHealth Operations also continued to support PCDI/ACO implementation by holding several enrollment events to assist members with the transition to new managed care options effective 3/1/2018.

Policy Developments/Issues

During the quarter, EOHHS and CMS continued discussions about the effective date for the provisional eligibility request included in the amendment that EOHHS submitted to CMS on June 26, 2017 and that CMS approved on December 14, 2017. The approved amendment, once implemented, will eliminate provisional eligibility for certain adults.

During the quarter, EOHHS and CMS also continued discussions about the requests included in the amendment that EOHHS submitted to CMS on September 8, 2017. This amendment requests flexibilities to ensure the sustainability of the MassHealth program while retaining access to care for vulnerable populations. The specific requests in the amendment would allow MassHealth to

align coverage for certain non-disabled adults with commercial plans, to adopt widely-used commercial tools to obtain lower drug prices and enhanced rebates, to allow Gold Star veterans and families to continue to have access to health insurance despite the receipt of a state veterans annuity and to improve care, reduce costs and achieve administrative efficiencies through a variety of strategies.

Finally, during the quarter, EOHHS also continued conversations with the state legislature to request support for the items in the amendment that require legislation to implement. Certain items were included in the Governor's FY2019 Budget which was released on January 24, 2018.

Financial/Budget Neutrality Development/Issues

The attached budget neutrality (BN) statement includes actual expenditures and member months through Quarter 3 of state fiscal year (SFY) 2018 as reported through the quarter ending March 31, 2018 (QE 03/31/18). SFY 2018 expenditures and member months are projected from SFY 2018 Quarters 1, 2, and 3 actual data. These data are combined with the MassHealth budget forecast as of March 31, 2018 for SFY 2018-2019 and Commonwealth Care and Health Safety Net (HSN) information provided by the state agencies that manage those programs.

This BN demonstration includes actual expenditure figures, updated according to the most recent complete data available for SFY 2016, SFY 2017, and SFY 2018 Quarters 1, 2, and 3. The enrollment data for the years SFY 2016, SFY2017, and SFY 2018 Quarters 1, 2 and 3 were updated based on actual enrollment through May 2018.

Safety Net Care Pool (SNCP)

The five-year SNCP target is based on projected expenditures for SFY 2018-2022. The changes for SFY 2018 will continue to be updated as the fiscal year progresses.

Budget neutrality - summary

In sum, the total projected budget neutrality cushion is $5.7 billion for the period SFY 2018 through SFY 2022 and $29.7 billion for the period SFY 2012 through SFY 2022. We will continue to update CMS through quarterly reports as updated information is available.

Consumer Issues

MassHealth In-Person Enrollment Events

From January through March 2018 we conducted eight events in the cities of Boston (twice at the State Transportation Building), Fall River (Bristol Community College), Lawrence (the Lawrence Public Library), Chicopee (Castle of Knights), Pittsfield (Crowne Plaza Holiday Inn), and Worcester (the DCU Center).

Quality Assurance/Monitoring Activity

Managed Care Quality Activities

In Quarter 3 the MassHealth Managed Care (MCO) Program engaged in several quality activities. Managed Care entities embarked on the collection of HEDIS data for the 2018 HEDIS cycle, which reviews CY17 services. HEDIS data collection will continue into Q4, ending in mid-June with submission to NCQA via the Interactive Data Submission System (IDSS). Post submission to NCQA, MCOs will submit a copy of their IDSS to the MassHealth Quality Office (MQO) for review. Data analysis will begin in Q1 of the next fiscal year; however benchmark data will not be available until Q2.

The MassHealth managed care program modified the Appendix B, Quality Goals Program, of the MassHealth MCO contract. Modifications to the Appendix B consisted of identifying key performance measures by which MCO performance will be assessed annually. Additionally the

modified Appendix B presented updated domains in which the MCOs will be expected to conduct quality improvement projects/activities in the upcoming quality goals cycle.

Finally, EQR activities continued during this quarter. Technical Reports for MCOs were finalized in Q3.

External Quality Review Activities

During this quarter, the EQRO finalized the calendar year 2017 technical reports. The EQRO also continued its planning for the 2018 EQR cycle, completing its work plan as well as PIP reporting templates and guidance. A training was held in March for MCEs regarding performance improvement project reporting. SCOs, MBHP and OneCare plans submitted project plans in March for review and approval by the EQRO. Following approval, MCEs began implementation of Year 1 project activities.

MassHealth Quality Committee

In Quarter 3, the MassHealth Quality Committee continued to meet monthly with representation from various MassHealth programs (e.g., MCO, PCC, ACO, Hospital Incentive and P4P Programs). During this quarter, the Committee focused its effort on identifying performance measure slates to meet the CMS Managed Care Rule requirements for public reporting, specific measures to be included, reporting format, and location on MassHealth website. The Quality Committee continues to review and refine the MassHealth Quality Strategy with the intention of completing it in Q4 for submission to CMS in July.

MassHealth ACO/CP Quality Strategy

In Quarter 3, MassHealth released final specifications of quality measures for the 2018 ACO program with CMS. MassHealth and CMS continue to meet regularly to finalize quality measure benchmarks for the quality measures entering performance in 2019. MassHealth has continued regular discussions with external and internal quality stakeholders, including the procured DSRIP Quality Subcommittee (DSRIP QSC) on issues related to member experience surveys, future measurement priorities, and risk-adjustment. In Quarter 3, MassHealth continued reviewing the technical specifications for the CP quality measure slate with CMS, and continues to work towards finalization of the measures. MassHealth continues actively participating in the DSRIP Quality Measurement Alignment Taskforce, alongside representatives from commercial health insurers, consumers, providers, and purchasers. The DSRIP Quality Measurement Alignment Taskforce aims towards harmonizing quality measures used in ACO quality contracts across the Commonwealth, and striving towards attaining alignment and administrative simplification. In Quarter 3, the DSRIP Quality Measurement Alignment Task Force completed reviewing all candidate measures.

CMS Grant Activities -- Contraceptive Use Grant

During this quarter, the grant team completed and disseminated reports on contraceptive use for dates of service in SFY2017 to 15 Title X funded providers, who had previously received reports

on contraceptive use for dates for dates of service in CY2016. The goal of these reports is to allow providers to identify variations in contraceptive use rates among Title X funded providers, and over time, as a way to support identification of areas for improvement.

The grant team also submitted rates for the Contraceptive Care for Women and the Contraceptive Care Postpartum measures to CMS as part of MIHI and Child and Adult Core Measures set reporting.

Demonstration Evaluation

MassHealth received feedback on its draft overall evaluation design for the 1115 Extension in January 2018 and is working to address CMS' comments. During this quarter, MassHealth requested that the DSRIP Evaluation and the overall 1115 Demonstration Evaluation be combined into one deliverable and aligned the due dates for the two evaluations in order to clarify the evaluations' purpose and reduce unnecessary duplication in evaluation efforts. The Independent Evaluator, the University of Massachusetts Medical School (UMMS), continues to identify data flows necessary to support the evaluation and to develop the design proposal for the DSRIP and overall 1115 Demonstration evaluation due to CMS on the new date of June 30, 2018.

Enclosures/Attachments

In addition to this narrative report, we are submitting:

- Budget Neutrality Workbook
- 5 Zip Files containing the Preliminary DSRIP Participation Plans and Budgets for the CPs and CSAs

Note: The hypothetical populations to the left are some of the populations that will make up the new "VIII Group" in 2014. The new VIII Group also will include other populations, such as our current Basic and Essential 21-64 year old populations. The Essential population, for example, will make up about one-third of the total VIII Group. Essential members are significantly higher cost (approx. $1,000 PMPM). This will increase the average cost for the overall VIII Group compared to the historical costs for the hypothetical populations shown here. In addition, the benefits and cost sharing

Hypothetical Population Analysis

DRAFT - for policy discussion only

STC 73(a)(iii): Starting in SFY 2009, actual expenditures for the CommCare-19+20 and CommCare Parents [parents and caretaker relatives who would be eligible for base EGs, except for income] EGs will be included in the expenditure limit for the Commonwealth.

Starting April 1, 2010, actual expenditures for the CommCare-133 EG [<=133% FPL] will be included in the expenditure limit for the Commonwealth.

The amount of actual expenditures to be included will be the lower of the trended baseline costs, or actual per member per most cost experience for these groups in SFYs 2009-2011.

Essential 19+20 Hypothetical Population

DRAFT - for policy discussion only

1) STC 73(a)(iii): Starting in SFY 2009, actual expenditures for the Essential-19+20 EG (19 and 20-year old members enrolled in Essential) will be included in the expenditure limit for the Commonwealth. The amount of actual expenditures to be included will be the lower of the trended baseline costs, or actual per member per most cost experience for these groups in SFYs 2009-2014.

2) Expenditures for Essential 19+20 in SFY 2013 and SFY 2014 Q1&Q2 were estimated by multiplying total Essential expenditures by the ratio of Essential 19+20 member months to total Essential member months.

Member Months	Essential 19+20	all Essential	% 19+20
SFY 2009	57,938		
SFY 2010	81,721		
SFY 2011	91,598		
SFY 2012	89,796		
SFY 2013	86,079		
SFY 2014	40,743		

Actual PMPM	Essential 19+20

Data Admin Support	$ 30,000.00	3	1.25	$ 9,375
Total Salary (Program Budget Line 1)		**32.61**		**$ 191,577.08**

For each position listed above, provide a brief statement of the position's responsibilities:

Assistant Program Director: Oversees multiple Care Management teams; hires staff; supervises clinical care managers; coordinates with other BHN programs; meets with external partners; troubleshoots day to day issues; develops program workflows.

Nurse Care Manager: Performs medication reconciliations; case consults on medically complex cases; reviews nursing and other assessments and provides synthesizes suggestions to member and teams; follows up with hospital transitions of care; develops care plans in conjunction with team.

Clinical Care Manager: Supervises a team of care coordinators; performs day to day operational functions; serves as a clinical consultant on cases with significant BH needs; develops care plans in conjunction with nurses.

Care Coordinators: Holds a member caseload; direct contact with members via phone and in-person encounters; assists with referrals, paperwork, benefit needs.

Admin Support: Front office support including faxing, paperwork management.

Enrollment Team Leader: Oversees all enrollment, marketing, outreach efforts; develops relationships with community and internal partners; oversees enrollment specialists making direct outreach to members; manages data workflows on new team assignments.

Enrollment Specialists: Makes direct outreach attempts to engage and enroll members and schedule required assessments/care plans.

VP: Develops and manages ACO and community partner relationships; sets strategic direction for BHN's Integrated Service lines including Care Management; serves as an Executive Sponsor to the CP program.

AVP: Oversees functions of all teams; sets direction for workflow management, day to day operations, and managed implementation of BHCP/LTSS CP.

Data Managers: Oversees flow of data coming into and out of BHN to meet contractual and quality requirements; oversee admin staff

Wellness Coach: Develops wellness programming for members; consults with teams on whole health strategies and incorporation of strategies into care plans; develops relationships with community partners in the wellness space

Admin Support: Tracks incoming and outgoing data elements; communicates needed data to teams/supervisors

Row 2 - Fringe

Fringe Item	Total Salary	Fringe Rate	Fringe
Fringe Item	$ 191,577.08	22%	$ 42,147
Total Fringe (Program Budget Line 2)			**$ 42,147**

Total Personnel*	**$ 233,724**

* Should align with Personnel Costs row in Program Budget

Row 3 - Training and Professional Development

Description of Service	Unit Cost (if applicable)	# Staff (if applicable)	Total Cost
Total Training and Professional Development (Program Budget Line 3)			

Provide a description of each Training and Professional Development line item included in the table above:

Row 4 - Travel

Position	Est miles per month	# months	Mileage reimbursement rate	Total Cost
				$ -
				$ -
				$ -
				$ -
				$ -

			Total Mileage	$	-

Travel Expense Description	Cost
Total Mileage	$ -
Parking and tolls	
Public transportation	
Enrollee travel	
Total Travel (Program Budget Line 4)	**$ -**

Please describe how mileage estimates and other travel expenses listed above were determined . If including enrollee travel expenses above, please explain how these expenses will be used by enrollees.

Row 5 - Equipment

Description of Equipment	Unit Cost or Cost/FTE	#units or FTEs	Cost
Total Equipment (Program Budget Line 5)			

Provide a brief description of the intended use for each Equipment line item listed above and how the estimated costs were determined:

Row 6 - Supplies

Description of Supplies	Unit Cost or Cost/FTE	# Units or FTE	Cost
Total Supplies (Program Budget Line 6)			

Provide a brief description of the intended use for each Supply line item listed above and how the estimated costs were determined:

Row 7 - Contract Services

Name of Contractor	Contractor Type	Goods and Services Provided	Cost
Total Contract Services (Program Budget Line 7)			

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Row 8 - Software Licensing

Description of Software	Cost per License	# Licenses	Cost
Total Software Licensing (Program Budget Line 8)			

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

Row 9 - Telecommunications

Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
		Total Telecommunications (Program Budget Line 9)	

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

Row 10 - Occupancy

Occupancy Expense	Total SqFt	Cost/SqFT	Cost
Rent	1140	18	$ 11,970.00
Utilities			$ -
Repair and Maintenance			$ -
			$ -
			$ -
		Total Occupancy (Program Budget Line 10)	**$ 11,970.00**

Provide a brief description of how each Occupancy line item listed above will support the CP's performance and how the costs were determined:

Add space to existing team locations, through procuring additional occupancy in health centers with integrated teams (Holyoke Health Center, Baystate High St. Clinic, etc.) and add space at Liberty Street to accommodate new teams.

1140 sq ft *$18/year = $20520
$20520/12 = $1710
$1710*7 months= $11970

Row 11 - Other

Other Direct Expense Description	Cost
Total Other (Program Budget Line 11)	**$ -**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Row 12 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 12)	**11.30%**	

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Federally approved indirect rate for BHN

				$ -
				$ -
	Total Salary			$ 109,917
	Fringe rate	22.0%	Total Fringe	$ 24,182
			Total IT Staffing including Fringe (Infrastructure Budget Line 1)	**$ 134,098**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

Care Mgmt Software Project Manager: Oversees implementation of CM software; serves as interface between software vendor and internal implementation team

Data Warehouse Developer: Architects/designs the infrastructure for managing for all incoming and outdoing data streams

HIE Interface Manager: Implements integration engine; communicates with external partners to design HIPAA and 42CFR compliant data-sharing solutions

IS Analyst: Develops, tests, and publishes reports in multiple formats (SSRS, data visualization) for use by program staff

Row 2 - Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost

	A	B
34	CM Software Startup Implementation Expense	$ 16,491.00
35		
36

40	**Total Development and Adaptation of EHR and Care**	
41	**Management System**	$ 16,491.00
42	**(Infrastructure Budget Line 2)**	

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

BHN will procure a care management software platform that will provide us with the technology to drive population health management and which will incorporate quality metrics on performance and cost. We are prepared to implement an integrated platform that provides a coordinated approach to the management of chronic conditions between care managers, physician practices and the people that we serve in an effort to improve the coordination and access to care while decreasing the overall costs. The platform will introduce clinical innovations, care models and interventions to improve the outcomes for the high risk populations we will serve. Through the use of financial, clinical and operational analytics, BHN will incorporate data to track and forecast performance and workflow improvements.

Costs determined through a competitive RFP process , after working with an outside consultant to determine software needs. BHN

	Staff Ratios - Please calculate the following ratios:		
15	Ratio of RN and Clinical Care Manager (RN) to Assigned and Engaged Enrollees	1:400	*Estimated number of Assigned and Engaged Enrollees at the end of BP1 divided by total FTEs of (RN+RN Clinical Care Managers)*
16	Ratio of Care Coordinator Supervision to Care Coordinators	1:8	*Total Care Coordinator FTEs divided by Total Care Coordination Supervision FTEs*

Please describe which Program staff listed in lines 2 through 8 above directly supervise Care Coordinator staff: Clinical Care Managers; Assistant Program Directors

Section 7.3 Initial DSRIP Participation Plan
Subsection A. Executive Summary

1. BHN's 5-year business plan is to develop and add BHCP services to an already existing and robust care management infrastructure, which includes a dedicated Vice President of Integration as well as a Senior Program Manager of Population Health overseeing this department. As noted elsewhere in this response, our Population Health and Care Management Program currently provides CM services for One Care and the MBHP PBCM program. Together, these two programs currently serve more than 2000 Enrollees. Our program also serves the same areas for which we are applying to be a CP: the greater Westfield, Holyoke and Springfield areas. As a BHCP we will build upon our well developed and successful staffing structure and service models. Our teams of nurse care managers, clinical care managers, and care coordinators are already embedded, along with integrated behavioral health clinicians, at the Holyoke Health Center, and all four of Baystate's large community health centers in Springfield. These teams, along with CSP workers, Family Partners, Recovery Coaches and other BHN employees work side-by-side with primary care providers and care managers in these large, primarily MassHealth serving, primary care centers. We have worked in these territories for over 25 years and have visibility, frequent contact and established collaboration with families, social service and state agencies and healthcare. Our existing infrastructure, and these existing, solid relationships will allow us to "hit the ground running" and to rapidly add Enrollees in all areas. We will be able to immediately focus on helping our ACO partners to better support Enrollees, improve the quality of care, and reduce the total cost of care. BHN's process and outcome data with our One Care population (e.g., 30% reduction in hospitalization rates, significant reduction in average spending per member) demonstrate that we can be an effective collaborator to our ACO partners. We have already held initial discussions with all of the region's ACO applicants about creating an integrated, jointly-managed care management program, rather than separate, duplicative care management systems for physical and behavioral health.

One challenge that we face in care management is that the engagement of clients is often disconnected from the healthcare system. For many individuals with MH or SUD issues, engagement is most challenging if they have not been service recipients in either the healthcare or BH system. We have been very successful in engaging these individuals through our Health Policy Commission funded CHART program partnership with Mercy Medical Center, where we identify repeat visitors to the emergency department and support them in getting community services. We have also been successful at finding and engaging these individuals in our One Care and MBHP programs by designating specific staff, our Referral and Engagement Team, to seek them out in the community, connect with them, and encourage and support them in becoming engaged with our care management programs. As a BHCP we will use DSRIP funding to expand this team in each Service Area, and then sustain that with PMPM funding as our census grows. In our DSRIP plan, we will also fund creative technology solutions to promote engagement and oversight. We will modify and expand the marketing that has been in place for our current CM programs. We will train all staff in our "gates" (ESP, court clinics, central intake, outpatient, SUD programs), to connect to BHCP services for those eligible. Our existing policies and procedures will be modified, then used to train new staff being added for expansion. We have resource manuals for staff to use in assisting clients engage in their communities. These, too, will be updated as needed.

Another challenge to our 5-year development plan will be hiring staff with the credentials and interest in doing this work. It is an emerging field of work for professionals. With so many

new CPs across the region, we will be competing for staffing in a market which is low on qualified and experienced workers in this field. We will need to work on recruitment strategies that entice new staff to come to our program.

A third challenge will be encountered as CP staff attempt to triage clients into the service delivery system. Access to outpatient services, SUD treatment beds, and LTSS services is, and could remain, a challenge. ACOs will be looking for cost effective service delivery to manage needs of their clients. As a BHCP, we will work collaboratively with our ACO partners to identify treatment system issues and advocate or develop access where possible.

2. & 3. BHN plans to serve 4,734 Assigned and Enrollees across 3 Service Areas: 2,840 in Springfield, 1,420 in Holyoke, and 474 in Westfield.

4. As detailed above BHN's current extensive Case Management infrastructure and its robust administrative structure should allow for smooth development and implementation of our BHCP program. The Preparation Budget Period will be used to acquire a CM software package and other needed technology, as well as to begin developing modification to policies and procedures and quality measurement programs to comply with the specific requirements of the BHCP. We will work with our Material Subcontractors, to ensure their compliance with the performance specifications of a BHCP. Once assured of their ability to comply, we will establish referral, monitoring and reporting systems, to insure their delivery is incorporated into our own program's performance. We will also work with ACO partners during this period on establishing how to meet the contractual obligations. Much planning is needed on how to manage the BHCP population and the requirements of each party to ensure efficiency in referral, data sharing, approvals, and communication. For data sharing, a process is already in place and supported by a MeHI grant to BHN. However, we anticipate the need to expand this initiative, and to allocate resources for planning and implementation. We will hire and train the first teams of care managers to be ready to accept referrals 4/1/18. After that date, we will be well positioned for a steady growth in census already seen in our other CM programs. We anticipate that clients in our MBHP CM pilot and some of our CBFS clients may change how their care is managed. We will create communications and delivery of information to those clients to assist them in decision-making or transitioning to a new Care Management service.

Subsection B. Supporting Populations and Community Engagement

1. BHN has long-standing, extensive relationships with health, behavioral health, social support, and government sectors in the Springfield, Holyoke, and Westfield Service Areas, as well as across the Commonwealth. Our current care management services programs for One Care and MBHP share a resource directory of several hundred partners and referral resources for clients.

BHN is active in the state trade organization, Association for Behavioral Health, through which we cultivate relationships with our peer organizations and BHN is a leader in collaborations with our peers across the state. BHN partners on a number of initiatives with Clinical and Support Options, our Material Partner, which provides behavioral health services in four Western MA counties. BHN engages in collaborative relationships with Service Net in Hampshire County and multiple behavioral health providers in Hampden County, including Gandara, Pathways, MHA, and MSPCC.

BHN is a leading provider of integrated behavioral health services in more than a dozen primary care practices and is an active partner with six area hospitals and medical centers, including the three largest: BayState, Mercy and Holyoke Medical Centers. Enhanced communication and collaborations are expected with the implementation of BHN's Connected Communities grant. This grant from the Massachusetts E-Health Institute is enabling BHN to electronically share health information on consenting patients with other care providers across different health systems.

BHN is an active participant in the Early Childhood System of Care that is convened out of Springfield's Office of Health and Human Services, and supported by the Boston Public Health Commission. Through this venture, we are excited to continue to build bridges and communication opportunities among a large cross-section of agencies in our region who provide services to children and families. In addition, BHN has been the grantee for most of the past 15 years for the Department of Early Education and Care's (DEEC) Early Childhood Mental Health Consultation program in all four counties of Western Massachusetts. Through our partnership with Baystate High Street Pediatrics community health center, we are also the implementation team for a DPH replication of their successful Project LAUNCH program for early childhood mental health support in the primary care setting. BHN is in contractual relationship with DEEC's Coordinated Family and Community Engagement grantees to provide parent support and education programs in the community in partnership with housing providers, schools, preschool, and various community agencies.

We work with several government agencies. We have collaborated with DCF for many years providing a wide-range of child and family-specific interventions for their most needy children. Our collaboration with DMH began in year one of BHN's existence in 1937. We work in close partnership, as well, with DDS and DPH/BSAS for the clinical care and support needs of vulnerable populations living in our three anticipated BHCP service areas. We offer residential settings, outpatient and medication services, forensic services, day and peer supports in partnership with our state funders.

BHN partners with area shelters and housing authorities including Friends of the Homeless, Springfield Housing Authority, Way Finders (formerly HAP Housing) and Home City Housing. BHN provides parent education programs and direct therapy services to children and their parents, many of whom have co-occurring MI and SUD. BHN is also a member of the Western MA Network to End Homelessness, and as such partners with a variety of housing agencies as clinical services are needed. In addition, BHN participates actively on the McKinney Vento

homeless coalition in Holyoke and Springfield and provide contracted service delivery programs to the Springfield coalition. We work with the local Regional Employment Board to provide the evidence-based Talk-Read-Succeed Program, through which we offer parent education and support programs as well as individual services for children and their parents living in public housing. In addition, BHN is the recent recipient of an Innovation Grant from the Health Policy Commission to provide care management services to families living in shelter or public housing who are at risk of homelessness and for whom someone in the family has a mental health or substance use challenge. Through collaborative work with housing and community social service agencies, the goal is to support these families to stabilize and improve their health and behavioral health functioning and thereby reduce their total cost of care.

BHN participates in coalitions, task forces, and steering committees including the Springfield EOHHS Maternal Child Health Commission, Children's Behavioral Health Initiative (CSA Systems of Care meeting), National Alliance for Mental Illness (NAMI), public school Parent Advisory Councils (PAC), Hampden/ Wilbraham Safe Schools/ Health Students programs, coalitions such as Mason Square Health task force, the YEAH (Youth Empowerment, Adolescent Health) Network, New North Citizen's Council, and Holyoke Youth Task Force. We participate in Massachusetts Opioid Abuse Prevention Collaborative (MOAPC) Springfield 413, the Opioid Task Force in Franklin County, the Quaboag Hills Substance Use Task Force, Baystate Health Addiction Task Force, Westfield Drug Task Force and the Ware River Valley Domestic Violence Task Force.

Our collaborations with police across all three service areas are solid, with BHN co-responding to crisis situations and providing quarterly trainings and technical assistance to police Crisis Intervention Teams. We also collaborate with police in Ware, Warren, Belchertown, and Hardwick to help victims of domestic violence.

Vocational and educational partners help persons in BHN SUD programs who are in early recovery and reclaiming their preferred lives in the community. We work with Springfield Technical Community College, Career Point, and Future Works. Recovery support is offered at Gandara Center, Hope for Holyoke. Clubhouses and community resources for persons with mental health disorders include Human Resources Unlimited, Forum House and Lighthouse or the W MA Recovery Learning Center. Transitional age youth with early psychosis may receive a referral to Service Net's PREP West program.

2. BHN has a robust collaborative infrastructure in place due to the longevity and breadth of services we provide in Western MA. Care management and care coordination are core services in all three of our major services lines for persons impacted by SUD, MI, and I/DD. Given the intricate network of community connectivity we have already established, growing community connections is not a critical first step for BHN. However, the need for community connections is critical to our success. Therefore, we will continue actively cultivating our current community relationship and staying abreast of new agencies or programs with whom we should be collaborating.

3. New case management staff will have an orientation period wherein they become conversant in available community resources. BHN is developing plans to put resources in a format that is searchable and easy to update as community resources change often. BHN will develop a resource "data base" categorized by resource categories of services and providers. We will identify key information needed for effective search/sorting of resources. Existing resources will be sent to a centralized person for database maintenance and updating. This person may also

represent BHN in Community Meetings. This would prevent parallel processes that currently exist and free up resources within programs. Process for database development and maintenance:

- Resources will be verified and entered using agreed upon format
- A schedule for review of resources will be established so that each category will be reviewed at least annually
- Learning Activities will include accessing and verifying resources as well as identifying new resources. Any additions/discrepancies will be sent to the "Resource Coordinator".

Subsection C. Community Partner Supports and Activities
Subsection C1. Outreach and Active Engagement

a. It has been our experience that individuals are more receptive to engaging in care management when they understand the connection between care management and their trusted treatment providers. As such, we will attempt to leverage existing relationships within our own system of care, as well as within our large network of community partnerships to conduct strategic outreach and engagement with Enrollees, particularly with those who are more difficult to reach. BHN has extensive experience and an impressive track record with this type of outreach and engagement in our current One Care and MBHP care management programs.

Our first strategy is to research current treatment activity at BHN. If present, our care management team will reach out to the assigned treatment providers to alert them to their client's eligibility and ask for their support in engaging the Enrollee. Our Engagement Specialists will visit the Enrollee at the BHN treatment location at time of visit to explain the CP program and work toward enrollment.

Similarly, BHN operates integrated behavioral health partnerships with many of the ACO/ MCOs in our region. We will look to those ACO/ MCO partners for information on scheduled primary care appointments for targeted populations. Our BHN care management Engagement Specialists will contact current primary care providers and schedule to attend an upcoming appointment to discuss care management enrollment.

For Enrollees who do not have current BHN services or upcoming primary care visits, BHN Engagement Specialists will attempt initial outreach via phone call to the last known phone number. If unsuccessful by phone, BHN Engagement Specialists will outreach to the last known address. If the Enrollee is not home, BHN will leave contact information in the mailbox with a request for return phone call and offer of subsequent visit.

For Enrollees who are homeless and have no reliable phone, we will employ additional engagement strategies. BHN has significant experience with engaging this population, as seen most recently in our Health Policy Commission (HPC) funded CHART program with Mercy Medical Center's Emergency Department, as well as our own Mission West, CSPECH and Project Hope programs. All four programs routinely engage chronically homeless individuals who have untreated MI or SUD. For this work, BHN primarily leverages our partnerships with the homeless shelters and other homeless services providers (e.g., food pantry, HealthCare for the Homeless, etc.) as well as local police departments. Our staff regularly visit those service locations as well as common outdoor homeless encampments to find individuals and engage them in needed health and behavioral health care. Initial contact with the Enrollee will be conducted within 30-days of assignment and at least one face-to-face contact will be conducted within 90-days of assignment.

b. The strategies outlined above will be employed for individuals with mental health disorders as well as those with substance use disorders. BHN maintains a full continuum of substance use treatment options which may be providing treatment for Enrollees at the time of assignment into Community Partner care management services. We will therefore begin by attempting to reach these individuals through current BHN treatment programs, or through their primary care visits, as outlined above.

c. BHN has extensive experience with the process of obtaining and documenting Enrollee's agreement to participate in CP supports as evidenced in our current care management census of 2000+ individuals. Both One Care and MBHP require participants to sign an agreement to participate in our care management services.

BHN plans to develop written materials explaining the benefits, design and purpose of the CP supports. This will include information on BHN and its providers as well as how our CP supports will work as a team with their other current and future treatment providers. We will discuss what Protected Information (PI) we intend to obtain, use and share with the individual's treatment team for the purposes of providing CP supports. Written materials will also include information on the process for Enrollees to engage with BHN's CP supports as well as their option to opt out or request assignment to a different CP if they prefer.

If our first contact with the Enrollee is via a shared visit at a treatment provider (BHN or partner provider), or in person visit at home or community location, our Engagement Specialists will bring the written materials and participation form and use it as reference in explaining the services. We will discuss with the Enrollee all items outlined in written documents, including benefits, design and purpose, PI sharing and option to opt out/ change assignment. All concerns or questions will be answered and clarified. If the Enrollee agrees to enroll, our Engagement Specialists will ask the Enrollee to sign the participation form in that visit. If the Enrollee would prefer to opt out or requests assignment to a different CP, we will note that as well, and share the information with appropriate entities.

If the first contact with the Enrollee is via a phone contact, the Engagement Specialist will discuss the benefits, design and purpose of the services as well as their option to opt out or request a different assignment. If the Enrollee gives verbal permission to participate, the Engagement Specialist will schedule an appointment for the comprehensive assessment at a future time, but before 90 days post initial assignment. The BHN staff member conducting the comprehensive assessment will bring the written materials and participation form to that visit. The staff will again explain the purpose of the participation form as confirmation of the Enrollee's agreement to participate in CP supports, explain the benefits, design and purpose of the CP supports, the need and plan for sharing PI, and the option to opt out or change assignment. If the participant agrees to continue, they will be asked to sign the participation form prior to beginning the scheduled comprehensive assessment. In addition, the participant will be asked to sign a written authorization to the uses and disclosures of his or her PI as necessary for providing CP supports.

Subsection C2. Comprehensive Assessment and Person-Centered Treatment Planning

a. During the initial contact, we will attempt to confirm Enrollee's agreement to participate in the program, via verbal (if on the phone) or written acceptance of the participation form. At that time we will explain that the first step of the CP Support Program is to meet with their care coordinator to review their current services and needs. We will then attempt to schedule the Enrollee for a comprehensive assessment with a member of our care management team. This appointment will be scheduled at a time and place convenient for the Enrollee, but no later than three months after the original Enrollee assignment date. If the Enrollee is unable to confirm a future appointment date with us during our initial contact, they will be asked when a good time would be to call again and their name will be placed on a list of Enrollees to be called at that later date. BHN staff will attempt to reach the Enrollee via phone or in-person visits until an assessment is scheduled or until the Enrollee is determined to no longer be interested in or available for CP supports. Once the comprehensive assessment appointment is scheduled, BHN will send an automated text and/or phone reminder (based on individual preference) to the Enrollee 24-hours prior to their assessment appointment.

At the appointed time, the BHN team member will arrive at the chosen location with written materials on the CP Support Program, participation form (if not yet signed), authorization forms for communicating with the individual's treatment team members and the comprehensive assessment form. All members of the BHN CP Support Program will be trained in principles of motivational interviewing, client engagement, and person-centered planning. Staff will use these tools to engage the client in discussion of their needs and goals and how the CP Support Program can help them achieve their goals. Through this process, the identified information required for the comprehensive assessment tool will be obtained. Currently BHN's two care management programs utilize two different assessments, as defined by the funder. The One Care Program uses the MDS assessment tool, entered directly into the electronic health record for the Commonwealth Care Alliance. However, similar to the current proposal, MBHP's Practice-based Care Management Program required providers to create an assessment tool covering specific identified domains. BHN created the Health Needs Assessment (HNA) to meet the requirements of that particular program. Many of the data points contained in the CP supports comprehensive assessment are covered in the MDS and HNA. However, additional questions are proposed herein to be added to those assessments for a complete assessment which addresses all required data points. Finally, with DSRIP funding, BHN proposes to complete our process of selecting and implementing a care management software package. It is our expectation that the pre-loaded and modifiable assessments contained in these software packages will address the required data elements for the CP supports comprehensive assessment or be modifiable to add any missing fields. Therefore, the exact wording and layout of questions may change from this submission with the adoption of care management software.

As an integral part of the assessment process, the Enrollee will be engaged in a process to identify the goals and interventions which will comprise their treatment plan. Following the assessment appointment, the workflow plan will be implemented. The medical needs, medical history and medications will be reviewed by the team's registered nurse and the entire comprehensive assessment will be reviewed by the team's behavioral health clinical care manager. This assessment will be used to inform the creation of the treatment plan.

Results of the comprehensive assessment will be communicated to the Enrollee's care team, ACO/MCO and other providers on the care team. It is our expectation that this assessment will be communicated electronically between BHN's care management software and the medical

record of the PCP. BHN has been engaged in a Connected Communities project through MA eHealth Institute to create interfaces between BHN and our primary care partners at Baystate and Holyoke Health Center. Workflows, interfaces and protocols built through this process will be the critical foundation upon which we build the process and protocols for electronic exchange of the comprehensive assessment and subsequently the treatment plan for the CP Supports Program.

b1.The Enrollee will be initially engaged in the person-centered treatment planning process at the time of the comprehensive assessment. BHN's solution-focused approach to care guides our assessment process to define goals, hopes and vision as part of defining needs. Therefore, as part of conducting the comprehensive assessment, the BHN care team member will engage the Enrollee in defining long and short term goals for their health and wellness and determine what types of support and services might be indicated to work toward goals.

Following the assessment appointment, medical needs, medical history and medications will be reviewed by the team's registered nurse and the entire comprehensive assessment will be reviewed by the behavioral health clinical care manager. Additional data on the Enrollee's needs will be gathered from primary care, behavioral health and other providers involved with the individual's care. The CP Support Care Team will use this information from providers as well as the input from the Enrollee to develop a treatment plan which outlines the long and short term goals for reducing risk and helping to manage the individual's health conditions as well as the types, frequency and duration of services recommended to support the individual in achieving their goals. The Person Centered Treatment Plan (treatment plan) will also include any anticipated barriers to meeting goals as well as proposed interventions to overcome those barriers. The plan will include a section addressing potential behavioral health or medical crises and how the individual and care team members will respond to prevent or intervene. Finally, the care plan will include contact information for all care team members, including providers and the Enrollee as well as specific dates for reassessment.

b2. BHN has been researching care management software for the past year and will purchase and implement a solution with DSRIP funding. Our comprehensive assessment and treatment plan documents will be live documents in the software. From the products we have reviewed, it is our expectation that the BHN team will work with the software vendor to customize the fields in the comprehensive assessment and treatment plan to reflect the domains being assessed in the CP Support Program. It is our expectation that needs identified in the assessment will translate into tentative goals in the treatment plan, to be modified as needed by the treatment team and Enrollee upon review. It is our expectation that the treatment plan will include discrete sections to articulate short and long term goals, specifics on services and programs recommended and agreed upon patient self management approaches. The BHN CP Support Team member assigned to be the on-going care coordinator for the Enrollee will be responsible for ensuring that the treatment plan is complete and accurate. The care coordinator will review the completed treatment plan with the Enrollee and their assigned PCP for final input, make changes based on their input, and will send a final copy to all designated care team members, providers, ACO/MCO and other state agencies or providers serving the Enrollee.

b3. The treatment plan will be updated every six months and following a change in the Enrollee's health status. Such a change will reflect a consistent pattern, impact more than one area of health status, will not be self-limiting and may be related to a progressive disease, decline in functioning, presentation of a new problem or goal, or resolution of a prior goal.

The care coordinator and the Enrollee will discuss the need for each 6-month reassessment one month in advance of the reassessment due date. At that time, the reassessment appointment

will be scheduled for a time and place convenient for the Enrollee. The care coordinator will conduct the reassessment at the appointed time. The focus of the reassessment will be to re-assess health status, determine progress to date towards prior goals, assess on-going relevance for existing goals and potential need for revision/ modification and determine goodness of fit of the current treatment plan for meeting needs. The care coordinator will complete documentation of the reassessment and will update the treatment plan as appropriate. If the treatment plan has been updated, the Care Coordinator will follow the same protocol as outlined above for the initial plan with regard to getting approval from the Enrollee and PCP. A final copy of the treatment plan will be shared with the Enrollee and PCP as well as other treatment team members as appropriate, via electronic exchange wherever the care team member has IT interoperability.

b4. BHN's person-centered approach to care in all of our treatment programs informs our system for ensuring client participation in the treatment planning process and in the documentation of the treatment plan. For example, in our outpatient system, BHN expects staff to implement 'collaborative documentation' practices which require that documentation of the visit be completed at the time of the visit with client input. In addition, our treatment plan template in the electronic health record has a field requiring the staff to attest that they shared the treatment plan with the client. Person-centered philosophy, practices, and accountability systems are established practices at BHN. In our care management programs, we have similar systems in place to ensure that the engaged members participate in the development of their care plan and receive a copy of the final plan. This experience and infrastructure in our treatment and care management programs will inform our process for ensuring that the Enrollee in the CP Support Program approves the treatment plan. Enrollees will be included in the development of their treatment plan and they will be asked to sign off on the initial plan developed collaboratively with them. Following review by the nurse care manager and clinical care manager as well as input from other providers (including PCP), the treatment plan will be finalized. If any changes are indicated by this input, the Enrollee will be contacted via phone or in person to discuss the changes and get their verbal approval or address any concerns. The final treatment plan will mailed to the Enrollee and this will be noted in our electronic record, for the purpose of accountability tracking.

Our process for ensuring PCP approval of the treatment plan will be informed by our experience partnering with PCPs to develop models of integrated behavioral health and care management in their primary care practices over the past 4+ years. Through this experience, BHN leadership, staff and our partner primary care practices have developed workflows and tracking systems to share the results of our assessments and interventions. BHN is currently funded through MeHI to develop electronic information exchange between BHN and Baystate, and between BHN and Holyoke Health Center, partners in our two largest integrated programs. We will use this experience to inform establishing electronic exchange between our new care management software and the PCP record to share the treatment plan. For those primary care practices not ready to receive information exchanged electronically, we will set up systems to share in hard copy the treatment plan. Systems will be created for the PCP to acknowledge receipt of the plan, which will denote review and approval of the plan.

Subsection C3. Care Coordination and Care Management

BHN will draw on our experience with Wraparound (National Wraparound Initiative) in the Children's Behavioral Health Initiative as well as our experience with care teams in our current care management programs to inform our approach to satisfying the Care Coordination and Care Management requirements of the CP Support Program. In the Wraparound approach, clients are the center, and individuals from their natural support system are key members of their care team. In addition, in our current care management program, the primary care provider, behavioral health provider, nurse care manager, clinical care manager and care coordinator together comprise the core of the care team.

3a.To identify all stakeholders, BHN will explore a few specific avenues. Initial assignment of the Enrollee will include some information on relevant stakeholders. Whether assignment comes from the ACO or MCO directly or from EOHHS, we assume that it will include information on the primary care assignment as well as relevant behavioral health provider history. For those Enrollees with treatment history through BHN, the CP Support Program staff will research our electronic health record to determine names of current behavioral health providers. When conducting the comprehensive assessment, BHN staff will explain the concept of a care team and share information about BHN staff who will be on the care team (nurse care manager, clinical care manager and care coordinator) and will request names of primary care and behavioral health provider to be included as well. Enrollees will be encouraged to identify additional individuals they would like to include on the care team, such as family member, other informal caregivers, state agencies or advocates. The care team membership will designed from this list of professional and informal stakeholders according to the needs and preferences of the Enrollee.

3b. BHN plans to share information with the care team stakeholders through electronic, telephonic and in-person methods. In our current One Care and MBHP Practice-based Care Management programs, those care management teams are collocated in the larger primary care practices and have access to the electronic health record at BHN and the PCP. BHN's care management team (care manager, care coordinator or nurse care manager) meet with the primary care providers as needed and communicate regularly via secure email about the members' needs and progress towards goals. BHN's care management team frequently attends medical visits with members and through that venue exchanges information with PCP, the member and any additional support people the member has brought to the appointment. Similarly, the BHN care management team connects via phone or in person with the specialty behavioral health providers to collaborate and share information, and they document all activities in BHN's EHR. BHN care management team keeps in regular contact with additional outside providers via phone and/or secure email to ensure progress towards treatment goals. These contacts are documented in BHN's electronic record and updates are shared with the PCP as appropriate.

3c. BHN will identify members of the Enrollee's care team through a number of avenues. The original assignment from EOHHS or the ACO will presumably identify the primary care provider and any behavioral health history with provider information. The Enrollee will also be asked to identify providers and natural supports to participate on the care team. BHN's care management team will help care team members understand the goals and functioning of the care team as well as their role, appropriate to their licensure, training and relationship to the Enrollee. BHN care management team will keep a record of care team members' names, contact information and relationship to the Enrollee.

3d. Care coordinators and our electronic records will provide the primary mechanisms for ensuring effective ongoing communication across all stakeholders. Care coordinators will be responsible for developing and maintaining relationships with the providers and other care team members involved with the Enrollee. With partners who are connected electronically through our care management software, care coordinators will monitor activity related to the member, including primary care visit notes, hospital notes, or activity with other care providers. As needed, the care coordinator will contact these providers or care team members via phone, email or face to face to follow-up on the activity and implications of that activity on the Engaged Member's progress towards their stated goals in the treatment plan.

Where electronic exchange is possible, information on the work of the care team will be shared with the providers (primary care and behavioral health) and stored in their electronic health records for future reference. For example, the final treatment plan will be documented in BHN's electronic record and a copy will be electronically shared with the PCP, provided their system is able to receive this information. For those PCPs without health information exchange capacity, a hard copy of the plan will be shared via secure email or secure fax, to be input into their health record. For those partners able to conduct electronic exchange, BHN's system will be set to send updates automatically when on-going updates are noted in BHN's care management and treatment electronic records or via email, phone or face to face contact, as needed.

Subsection C4. Care Transitions

BHN's approach to care transitions is informed primarily by our experience with the One Care and MBHP Practice-based Care Management programs and is based on elements outlined in Dreyer, T (2014) "Care Transitions: Best Practices and Evidence-based Programs" http://www.chrt.org/publication/care-transitions-best-practices-evidence-based-programs/

Key elements of BHN's care transitions approach include understanding the Enrollee's assessment by treatment providers before discharge, engaging the Enrollee in revising care plan goals, coaching the Enrollee in self-management, medication reconciliation and on-going communication with Enrollee and sending/receiving providers during and after transitions.

Prior to an Enrollee's discharge or change in treatment settings, the appropriate member of the BHN CP Support Care Management Team will work with the Enrollee and their PCP, ACO, MCO and inpatient/outpatient providers to create an appropriate discharge plan. The appropriate member of BHN CP Care Team will be present for discharge planning meetings at the treatment setting to discuss after care, understand medication and treatment needs and begin coaching on self-management. The BHN CP Care Team member will follow-up with the Enrollee in a face to face visit within three business days following transition in care. The focus of that meeting will be to answer any questions and ensure that the Enrollee understands the discharge plan, medication administration and self-management plans. The BHN CP Care Team member will update the treatment plan to reflect the change in functioning evidenced by the care transition as well as any new medication, self-management goals and recommended services. Finally, the BHN CP Care Team member will work with the Enrollee to coordinate referrals and participation in recommended after care services. This may include a care team member facilitating a face to face introduction between the Enrollee and the provider of services to which they are being referred, attending the recommended follow-up visits with the Enrollee or supporting the Enrollee in attending the recommended appointments by helping arrange transportation and following up with the Enrollee after missed appointments. BHN CP Care Team member will also share records with the new providers to which the Enrollee has been referred, to ensure fully coordinated care.

Subsection C5. Medication Reconciliation

As part of our care management protocols for One Care and MBHP clients, BHN conducts medication reconciliation (MR) for all newly enrolled members, as well as for any member discharged from an inpatient stay. This MR includes contacting the member's PCP and other providers. Because our CM teams are embedded in so many large health centers and PCP practices, having access to their EHRs in many cases, we are able to review all medications prescribed by the PCP, as well as any prescribed by BHN providers. We reach out to the member's other known providers and check with their pharmacy to ensure that all prescriptions are accurate and being filled as prescribed. Our RNs do all of this in collaboration with the member, educating them along the way about their medications, answering questions, providing materials, and helping them to better understand the importance of taking their medications as prescribed. We are currently investigating technological supports to help our more challenged members to better manage their daily medication regime. At a large FQHC, where our on-site CM staff manage more than 500 members, we have reviewed pharmacy expense data and have identified the members whose pharmacy costs are the highest. We are working with pharmacists to engage these members in Medication Therapy Management (MTM), a best practice in working with individuals and their providers to ensure safety, accuracy and adherence to a coordinated medication regime. BHN recently signed an agreement with Genoa to build an on-site pharmacy at our Liberty Street site, and as part of this agreement, Genoa will provide several hours each week of pharmacist time to work with our CM staff and members on MTM. For any member who is participating in a MAP, we coordinate with the member's MAP provider as well as their PCP and the rest of their treatment team.

We have also modified our EHR forms and workflow to include a medication review process. We use the ePrescribing module of our EHR to document medications prescribed by internal and external prescribers. By entering them into our ePrescribing module, we are able to view contraindications and alerts on the medications and their interactions with allergies.

Additionally, our prescribers are being trained in the use of the MassPAT system, starting with our physicians and APRNs who work with individuals with substance use histories. MassPAT is the Massachusetts Prescription Awareness Tool and is the product of the Massachusetts Prescription Monitoring Program (MA-PMP). The MA-PMP collects dispensing information on Massachusetts Schedule II through V controlled substance dispensed prescriptions. The MA-PMP analyzes data to determine prescribing and dispensing trends; provides patient prescription history information to prescribers and dispensers and provides educational information to health care providers and consumers.

Subsection C6. Health and Wellness Coaching

a. BHN has an extensive history of engaging those we serve in health and wellness understanding, planning, and engagement. Several years ago we received a SAMHSA Primary Care – Behavioral Health Integration grant, wherein we developed health and wellness programming both at our Liberty Street campus and at large, local health centers. Each client worked with staff on a Person-Centered Health and Wellness Plan. Plan components included (as needed) smoking cessation classes at BHN, walking/fitness/exercise programs, or chronic disease (e.g., diabetes, hypertension) education and self-management.

A master's level clinician provided behavioral health supports to clients enrolled in the Diabetes Clinic at Mason Square Health Center. Our clinician assessed clients for behavioral health or substance use issues impacting their ability to manage their diabetes, and assisted them with developing strategies to manage these issues via a care manager. The diabetes clinic was focused on reducing patients' Hgb A1C scores.

Other BHN programs employ a variety of strategies towards health and wellness for clients. Adults in our Day Treatment Programs at Liberty Street Clinic have been provided with weekly health and wellness groups utilizing the *Solutions for Wellness* curriculum. As a recovery-based, illness and life-skills management resource, *Solutions for Wellness* assists people with serious mental illness to better understand their illness, strengthen resilience and partner with their treatment team. It incorporates physical health and wellness into the recovery process. This curriculum addresses areas such as healthy eating, weight management, cardio-vascular health, and stress management. We have also provided a *Whole Health Action Management* (WHAM) group for our Day Treatment clients. WHAM is a training program and peer support group model developed by CIHS to encourage increased resiliency, wellness, and self-management of health and behavioral health among people with mental illnesses and substance use disorders.

Our residential programs offer YMCA or fitness club memberships to those we serve, often providing staff supports as needed. Memberships regularly include nutritional counseling to our residents, as well as smoking cessation education and supports. Nurses in these programs regularly offer in-service trainings on cooking and dietary health, as well as individualized education regarding diabetes, respiratory health, and eating disorder management. They also offer a harm reduction training to teach staff interventions that can be used for clients in the early stages of making health changes.

All of these strategies are made available to members enrolled in our care management programs as well, (i.e., CCA One Care and MBHP PBCM), and will be part of the plan we develop with Enrollees in our BHCP.

b. BHN plans to procure a care management software package that will guide and document our care planning process. The comprehensive assessment will identify wellness needs and suggest areas for wellness goals. BHN CP Support program staff will work with Enrollees to identify the wellness goals that they are interested in working towards, as informed by the comprehensive assessment and wellness resources available at BHN and in the community. Goals and interventions will be documented on the treatment plan, as well as the goals in other areas of medical and behavioral health care. Care coordinators will be responsible for checking regularly with Enrollees and their care team providers as to progress on health and wellness goals. Updates will be added to the care plan as appropriate.

Subsection C7. Connection to Community and Social Services

The first step to getting community and social services in place is to identify what the individual's community and social services needs are. BHN plans to employ a standardized screening tool to identify social determinants and social needs for each Enrollee. We plan to select the specific tool once our care management software vendor has been selected, so that our tool can be well integrated into the software system. There are currently two tools which are in use or being considered for use by partners in our community. Caring Health Center is currently using the PRAPARE tool, (Protocol for Responding to and Assessing Patient Assets, Risks, and Experiences).

http://www.nachc.org/wp-content/uploads/2016/09/PRAPARE_One_Pager_Sept_2016.pdf

This evidence-based tool is endorsed by the National Association for Community Health Centers and covers core areas of Race, Education, Ethnicity, Employment, Migrant and/or Seasonal Farm Work, Insurance, Veteran Status, Income, Language, Material Security, Housing Status, Transportation, Housing Stability, Social Integration and Support, Address or Neighborhood, Stress as well as additional areas of Incarceration History, Safety, Refugee Status, and Domestic Violence.

Baystate Health is also spearheading a community coalition, in which BHN is an active member, to adopt the social determinants screening tool and cloud based platform Health Leads Reach. https://healthleadsusa.org/solutions/enable/health-leads-reach/. This evidence-based model is accessible on care coordinators' hand held devises and not only offers screening and assessment tools, but also links to a pre-loaded database of local community resources to which our team can refer Enrollees to meet the identified need.

A factor in BHN's selection of a care management software platform will be its ability to integrate with one of these social needs screening tools and/or have a comparable tool already loaded in the software. Our final decision about which tool to use will be based in part on that selection process. However, the final product will include the dimensions reflected in these two evidenced-based screening tools.

BHN proposes to formally screen all Enrollees as part of our initial comprehensive assessment process. Goals on the care plan will reflect identified social needs, and corresponding interventions/ referrals to community and social services will be reflected as well in care plan for each Enrollee.

Care coordinators will be primarily responsible for staying connected with Enrollees and with the community resources they are referred to. In their regular prescribed contact with Enrollees, as well as any as-needed contact, care coordinators will review the social needs interventions and referrals to ensure that suggested services are meeting identified needs. If not, care coordinators will work with Enrollees to identify barriers and strategize solutions to those barriers.

Subsection D. Innovative Technologies for Service Delivery

BHN is on the verge of investing in a care management software platform that will provide us with the technology to drive population health management and which will incorporate quality metrics on performance and cost. We are prepared to implement an integrated platform that provides a coordinated approach to the management of chronic conditions between care managers, physician practices and the people that we serve in an effort to improve the coordination and access to care while decreasing the overall costs. The platform will introduce clinical innovations, care models and interventions to improve the outcomes for the high risk populations we will serve. Through the use of financial, clinical and operational analytics, BHN will incorporate data to track and forecast performance and workflow improvements.

BHN will need to hire a dedicated Project Manager (one FTE) to structure and successfully lead the teams responsible for the implementation of this application and workflow. The candidate must have a high degree of care management expertise in order to assist BHN in achieving the maximum benefit from the technology.

BHN will continue the development of its integrated data warehousing strategy and business intelligence interface to provide financial, clinical and operational analytics. The data warehouse will become the main source of information for report generation and analysis via reporting tools that can be used for such things as ad-hoc queries, canned reports, and dashboards. As information is crucial to the continuous quality improvement in outcomes and managing the total cost of care, this development is critical in achieving our vision. To accomplish this we will need to upgrade our virtual network environment by adding additional server capacity with the necessary Business Intelligence (BI) analytics. A Data Warehouse BI Developer position (1 FTE) will be added to the Information Systems Department to lead that project.

BHN is already advancing its ability to interface with our ACO partners through the purchase of an integration engine that will serve to connect our care management software and electronic health record with the electronic health records of our ACO partners. This tool will also allow us to transmit information about the care of those we serve with partner social service agencies in any format and to any specified secure location regardless of their internal electronic exchange capabilities.

BHN will expand the use and deployment of smart phones and mobile tablets to the CP Staff and high risk individuals we are care managing. Mobile apps will be employed to support the monitoring and self-maintenance of these clients to support healthier functioning. As a result, expenses will be incurred to provide coverage plans to use those devices. To prevent the loss or breach of data, we will deploy a mobile device management software solution to track and secure BHN's mobile devices in the field. The application will provide the ability to locate, lock, and potentially wipe lost devices. BHN will use geofencing capability so that alerts can be generated to insure additional personal security.

Subsection E. Personnel and Staffing

1. Subsection E Attachment Programmatic Response Org Chart

2.

Service Area	FTE Administration	FTE Supervision	FTE Care Mgmt	FTE Care Coordinators
Springfield	4.2	2.4 + →	14.2	59.8
Holyoke	2.1	1.2 + →	7.10	30.4
Westfield	.7	0.4 + →	2.36	10.4

BHN currently has a very well developed Population Health and Care Management Program. We contract with CCA for the One Care population, and MBHP for their Practice-based Care Management Program. Our staffing model for these programs, developed with both national consultation and learned experience, is what we would propose as a BHCP in the Springfield, Westfield, and Holyoke Service Areas.

Starting at the level closest to the enrolled member, our program utilizes Care Management Teams that are comprised of a masters or doctoral level behavioral health clinical care manager (CCM) and a nurse care manager (NCM). These two lead the Team and supervise up to eight Care Coordinators / Health Outreach Workers. Each of these ten FTE Teams is able to provide quality care management for approximately 400 enrolled members. Therefore, the number of teams and care managing staff would scale in each Service Area as enrollment grew.

BHN's Care Management teams are currently located at a variety of sites. Some teams work out of community-based BHN sites. Other teams are co-located in the region's large health center and are integrated with BHN's on-site Integrated Primary Care Behavioral Health Teams. For example, our CM team at Baystate's Mason Square Health Center works in an integrated structure with BHN's BH clinicians, CSP workers and CBHI staff, as well as with Mason Square PCPs and Baystate care managers. This has proved to be an extremely effective staffing and structuring model for locating and engaging members, and for coordinating care with primary care providers. As a BHCP, we will continue with and build upon this model for referred or Enrollees.

The CCM and NCM report to an assistant program director (APD), who typically oversees up to three teams. APDs report to BHN's Assistant VP for Population Health and Care Management. Also reporting to this Assistant VP is the supervisor of the team responsible for member engagement and enrollment. This team is comprised of several outreach workers who mostly focus on locating and engaging members, and RNs who perform initial comprehensive assessments.

Additionally, we staff a number of administrative support positions and data managers. The data managers enter, process, and generate reports related to established quality measures, and have a dotted line reporting relationship to the BHN VP for Clinical Quality as well.

3. BHN utilizes a variety of strategies to recruit qualified, diverse applicants. Our single most successful recruiting and hiring strategy is the successful retention of students in a wide variety of disciplines completing their internship at BHN, graduating from their program, and then remaining at BHN as an employee. Each year BHN hosts and trains more than 100 interns from psychology doctoral, social work, mental health counselor, marriage and family therapy, public health, and other related programs. Our peer specialists come from our own persons served, NAMI or RLC. Peers recruit other peers for BHN. We work with the Regional Employment Board, Career Point, MCDI, and Mass Rehab, as examples, to hire for BHN. Our goal as a

BHCP will be to continue to build a competent and diverse staff, robust enough to meet the enrollment targets we have established for this program.

Once notified that have been selected as a BHCP, our timeline for expanding care management staff is such that we will be fully ready to begin accepting referrals on April 1, 2018. Because our care management infrastructure is already in place, we are willing and able to negotiate an earlier start date to begin active BHCP services.

4. In our current Population Health/Care Management Program, we have been extremely successful at recruiting and hiring staff as the numbers of enrolled members has increased. Our current staffing of five managers, seven supervisory level clinical care managers, 11 RNs, and 42 care coordinators and health outreach workers includes 36 individuals who are bilingual in Spanish, three individuals who speak a second language other than Spanish, and 47 individuals whose race or ethnicity reflect those of the large Latino (36, or 55%) and African-American (11, or 17%) populations we serve. When we have accessed Certified Peers or Certified Recovery Coaches from those departments at BHN to work with enrolled members, those individuals as well have brought cultural and linguistic diversity to our program. We also advertise on multiple on-line sites; hold career and job fairs both in the community and at local colleges; offer recruiting bonuses to BHN staff for their help in attracting candidates; and have close connections with local college programs. We recruit from South Florida and Puerto Rico for bilingual/bicultural staff.

5. BHN is developing a comprehensive training and orientation system for staff in our care management programs, which is based on the successful system recently developed for our Primary Care Behavioral Health program via a grant from the Commonwealth Corporation's Workforce Transformation Grant. The system includes three primary interlocking components: core competencies needed to be successful in the role; online and in person training modules designed to address the learning objectives required to achieve proficiency in each core competency; and a supervisor framework for monitoring acquisition and application of core competencies in the on-going work. The core competencies required for the care coordinator position are as follows: Methods & Strategies for Referrals, Effective Communication, Culturally Responsiveness , Care Coordination & System Navigation, Writing and Technical Communication Skills, and Professional Skills & Conduct. Each competency has 6- 10 benchmark activities which reflect level of skill development in that competency area. For example, the competency of Care Coordination and System Navigation is broken down into the following benchmark activities:

A. Obtain and share up-to-date eligibility requirements and other information about health insurance, public health programs, social services, and additional resources to protect and promote health.

B. Work collaboratively as part of a care team.

C. Coordinate and assist in implementing care plans, in cooperation with clients and professional colleagues. (Care plans should be based on needs and resource assessments. Plans should describe how each party involved will help meet the goals and priorities defined in collaboration with clients.)

D. Provide care coordination, which may include but not be limited to facilitating care transitions, supporting the completion of referrals, and providing or confirming appropriate follow-up.

E. Provide support for clients to use provider instructions or advice, and convey client challenges to IBHC

F. Make referrals and connections to community resources to help individuals and families meet basic social needs

The training modules are designed to teach people these skills in order to deliver competent care coordination and system navigation. The trainings modules are delivered through a number of modalities to provide variety and address different learning styles, including web-based lessons created in Articulate Storyline software, individual meetings and group meetings. Each module has a quiz at the end and a passing grade is required before continuing to the next module.

The first two weeks of employment, the new staff have a set schedule which intersperses each learning module with shadowing, meetings with mentors and supervisors and hands on practice. The new hires are considered still in training for the first 6 months, during which time there is frequent assessment by supervisor of their progress on the learning objectives and benchmark activities. The supervisor notes where the staff is in the progression from Novice to Emerging, to Meets Expectation to Exceeds Expectation and what examples are evident in their work to substantiate that level.

Each job role (care coordinator, clinical care manager, nurse care manager, supervisor, etc.) will have a system of core competencies, training modules to teach the benchmark activities and supervisory/ evaluation structure to monitor acquisition of knowledge skills.

6. BHN employs a wide variety of staff retention strategies. Based upon national survey data that clearly indicate factors such as "relationship with direct supervisor" and "feeling of competence and possessing tools to do the job" are key to staff retention, we place a heavy emphasis on providing staff with intense and ongoing training, and an individual supervisor with whom they feel they have a positive working relationship. Because we are a large agency, we are able to use upward evaluation data to ensure that supervisors are experienced by their staff as supportive and providing needed guidance and training.

Clearly, other key factors in retaining staff are compensation and opportunities for advancement. BHN has been financially stable for many years, and we have been able to provide staff with periodic raises and occasional non-standard compensation at years' end. In our care management programs, where we have a number of value-based incentives, we met our targets and have been able to pass some of our incentive payments on to staff in those programs. BHN offers a comprehensive benefit package and strives to provide a family supportive environment for its staff.

Employees are offered and encouraged to pursue ongoing professional development courses and BHN provides paid time for such training. For employees pursuing further education, BHN has internship and clinical opportunities available. BHN also participates in the state Massachusetts Loan Repayment Program (MLRP) and the National Health Service Corps (NHSC) loan repayment programs which serve as an incentive for many clinically trained staff to join and remain at BHN. Existing employees are encouraged to recommend colleagues, neighbors, friends and families who possess the skill and talent needed for our community interventions; current employees may be eligible for significant bonuses for difficult to fill positions if their referral results in a successful hire.

Subsection F. Implementation Plan and Timeline

Subsection F Attachment Preparation Budget Timeline

Subsection F Attachment Quarterly Implementation Plans

Subsection G. Budget Report and Budget Narrative

1. Attachment B- Budget Report
   a. Budget Reports shall be based on the number of Assigned and Enrollees in each Service Area indicated by the Bidder on Attachment D.
   b. Attachment B must be completed and submitted in an Excel format to EOHHS.
2. Attachment C-Budget Narrative
   a. Bidders shall submit a detailed Budget Narrative for the Preparation Budget Period and Budget Period 1.
   b. The Bidder shall submit Budget Narratives for Budget Periods 2-5 that are summarized by project.

Subsection H. Sustainability

BHN will use DSRIP funds for two significant expenses. The first is the purchase and implementation of care management software. Because the purchase and the majority of implementation expenses are one-time costs, sustainability should not be an issue for these expenses. One potential cost, to be decided during implementation planning with the new software company, is the need for IT/IS staff responsible for ongoing product functionality and maintenance. This staff position will need to be sustained. Also, all products under consideration have ongoing monthly fees based upon the number of Enrollees registered within the software. The larger the number of Enrollees, the smaller the per Enrollee fees. As we explore care management software, we are consulting with our BHCP partners, and other collaborator organizations to research a product that could be shared among a number of organizations. This might be able to give us an economy of scale to keep Enrollee fees low. This optional strategy is not guaranteed.

Much of BHN IT/IS costs for infrastructure are managed across the larger system. Our EHR, Accounting and HRIS software are currently supported in the overhead cost structure. These costs will not substantially change after the initial term of this program. Thus, the new ongoing costs will be sustained as one of the costs supported by the established PMPM base rate plus the decreasing additional infrastructure payments received during the initial Contract Term. By the end of the term our plan would be that the large numbers of Enrollees that we plan to serve would provide us with a sufficient economy of scale to not only meet personnel and program operating expenses, but to be able to sustain the costs of the monthly CM software user fees. It is assumed that at the end of the 5 years, the PMPM will need to be negotiated with the ACO/Medicaid, taking into consideration the contributions BHN has made to reducing overall costs and meeting other performance outcomes. Our history to date demonstrates that we can meet targets, and we have received incentive payments. These additional revenues will help us sustain this program as well.

The second area where BHN plans to use DSRIP funding is hiring and training additional managers, clinical care managers, nurse care managers, and care coordinators, as well as (a fewer number of) wellness coaches, peers, and administrative support staff. As there will be no PMPM revenue during the Preparation Budget Period, DSRIP funds will be used to support some staff. However, during this period we will continue to provide CM services to MBHP PBCM Pilot members, and the staff serving these 600+ members *will* be supported by the MBHP PMPM payments. Our assumption is that many of these members will qualify for BHCP services, and on 4/1/18 will transition into the BHCP program. At that point. the staff serving them will also transfer from being MBHP funded to being supported by BHCP PMPM funding. Then, during the early years of the contract term, as the program is expanding its census continues to grow, infrastructure support funding will be used to cover costs of personnel and program operations not supported by the monthly base PMPM payments. Again, as the program grows, there should be sufficient economy of scale to allow for decreasing dependence on these infrastructure funds, and an increasing ability of PMPM funds to cover all costs associated with running a high quality BHCP program.

Subsection I. Quality Management and Performance Monitoring

BHN's Quality Improvement program ensures that services to individuals are delivered in a manner that is person-centered, improves their health and well being, is cost effective, and meets accreditation and regulatory requirements. These aims are considered in the context of a rapidly changing health care environment.

The Quality Program focuses on Population Health, the Experience of Care, and Per Capita cost. Population Health refers to using information from various sources to improve and inform service delivery. This includes using clinical data to understand the risks and needs of individuals served and ensuring we meet the necessary outcomes. The Quality Team works with various units at BHN to determine their data needs, acts as the liaison with the Information Systems and Electronic Health Record staff, and facilitates the training and use of this information to aid in the delivery of services. The team runs queries on data to understand risks and outcomes with clients and works with the various clinical teams to address the issues and concerns.

Experience of Care is aimed at improving how clients, staff and external partners can improve their processes and outcomes. BHN uses surveys with clients, staff and providers to understand their perceptions and to understand our challenges in providing care. These surveys' include data on health disparities based on race, ethnicity, gender and geography. Additionally, the Quality Team reviews and simplifies workflows to improve the efficiency and experience of clients and staff. For instance, process improvements have occurred with our Substance Use, Crisis, and Integrated Primary Care programs to enhance and standardize our documentation and work with health care partners.

The Quality Program audits client records and meets with clinical staff to ensure that client care is well documented and meets person-centered standards. This ensures that treatment incorporates evidence-based, effective practices with a broad range of trainings and knowledge. We review reports on connections to care, incidents, and utilization to ensure that services are provided in a timely and efficient manner, with appropriate coordination and continuity across all phases of care and all providers of care.

Per Capita cost is the understanding that new models of care involve reimbursement based on the needs of the whole client, and so the integration and care management of those services become critical to meet the needs of the clients within fixed resources. The Quality Team supports this model by working with service providers to understand the costs and review the benchmarks for high risk and high cost clients. This allows the agency to address the client needs and work to reduce overall costs of care.

2. BHN will pursue two quality measure outcomes in the first budget period. The first will be the 'initiation and engagement of alcohol and drug dependence treatment for individuals served'. BHN has developed an extensive set of mental health and substance use related programs over the years. Staff already work to address the co-occurring nature of these disorders, and we believe that improvements in care and recovery are dependent on our ability to integrate care for both disorders. The markers of success will be *an increase in the number of services* that address both substance use and mental health disorders, *increases in the number of treatment plans* that include both sets of problems and goals, and an increase, based on the consumer survey of individual who specify that their services are for both substance and mental health issues. This will be demonstrated by metrics obtained from our service data, review of charts in our audits, and the data collected in our consumer satisfaction survey that specifically asks about the types of behavior health problems addressed in their services.

The second outcome will be timely follow up with individuals who have been psychiatrically hospitalized. This measure has long been viewed as a critical part of care. BHN has existing reports and processes to address this follow up. We have developed an automatic notification system wherein clients who go to the Crisis Program (a step toward all types of hospitalization) have their care and service staff notified. This allows staff to quickly follow up on all clients that are at risk for any type of inpatient behavioral health need. BHN has also developed an electronic monitoring form and set of reports that track all types of hospitalizations. This electronic system prompts staff to follow up with clients with specific time frames, usually 48 hours and 7 days. This process has been shown to be very effective. BHN programs that have tracked hospitalizations have met the thresholds for response at over 90% (7-1-16 to 12-31-16) and reduced hospitalizations by over 30% for the care managed population.

3. To achieve goals, the Quality Program has a comprehensive team that includes Quality Analysts, the Clinical Director, the Human Rights Director, Department of Professional Development (DPD) staff and a Project Manager. Quality Analysts perform the hands-on analysis, documentation and implementation of yearly quality initiatives. The Clinical Director provides the guidance and direction of clinical initiatives to meet the needs of our client population. The Human Rights Director ensures that clients are treated with respect and investigates concerns in care. The DPD organizes and facilitates the various trainings to ensure a workforce that addresses administrative and client-centered needs. Our Project Manager oversees major implementations to facilitate a thoughtful, timely process for change management.

The Quality Program is overseen by the agency Program Committee whose sole focus is the Quality Program. This committee includes four members of the Board of Directors, CEO, Vice President of Quality, Clinical Director, and members of management and staff representing many levels of care, including managers from the Crisis Program, Developmental Services, Residential Substance Use programs, and Outpatient Services and Care Management programs.

The Quality Program is accountable to all Senior Vice-Presidents who oversee the array of clinical and care management programs. The Quality Program works closely with the Electronic Health Record team and the Information Systems team responsible for overall agency reporting.

Subsection J. Coordination with ACOs and MCOs

1. For over two decades, BHN has been doing business through contracts, joint initiatives, grants and integrated care with the healthcare systems that cover the Springfield, Holyoke and Westfield Service Areas. All of our historical healthcare partners have applied to be an ACO or part of an ACO in our region. The hospitals are Baystate Health, Sisters of Providence Health Systems, and Holyoke Medical Center. Our community health centers and Federally Qualified Health Center partners are Mason Square Neighborhood Health Center; Brightwood Health Center; High Street Health Centers (adult and pediatrics) Holyoke Health Center and Caring Health Center. We have been integrating clinicians, CSP workers and care managers into these setting for many years. Group and primary care practices with whom we do collaborative BH-Primary care integration include Holyoke Pediatric Associates, Pediatric Care Associates, Mercy Medical Practices, Pediatric Associates of Hampden County, Family Medicine Associates, Chestnut Medical Associates, Valley Medical Associates and a number of other primary care practices. Our embedded staff includes master's level clinicians, community support workers, care managers (for One Care and MBHP Provider-based CM), peers, Family Partners, and Recovery Coaches. We also partner with many MCOs: Health New England, BMC Healthnet, MBHP/Beacon, Commonwealth Care Alliance. Each has applied for inclusion in an ACO in our service territory or is currently a Health Home. For over three years, we have been managing care and fulfilling the CP role in service to 2000 covered lives for CCA and MBHP. Relationships with healthcare partners have enabled us to be successful in planning, implementing, and problem-solving for a variety of regional integrated and coordinated services.

These varied and successful collaborative efforts have positioned BHN to establish working relationships with hospital system executives as well as medical leadership. Our CEO meets periodically with all hospital CEOs and negotiates our agreements. She can pick up the phone to discuss and problem solve as needed. Other BHN leaders have regular meetings with those within our partners' organizations charged with developing and delivering services. Since BHCP began planning in earnest, we have been conducting regular meetings with all of these partners, sharing intent and plans for CPs within their systems. As each prepared their own ACO applications, we consulted on options for integrated care management departments with health and BHCPs working jointly together. Our One Care initiative with Holyoke Health Center (currently more that 700 enrolled members) has demonstrated to them the value of a joint CM department, and it is their plan to maintain this if BHN is selected as a CP for their Medicaid members. Therefore, it is fair to say, that the necessary relationships to negotiate contracts with ACOs and MCOs in our territory are already established, and in some cases, the planning has begun. Our skills and expertise in care management have already been demonstrated to those who have applied to be an ACO. We have met with each and have agreed to meet again, once all decisions have been made on ACOs and BHCPs. Each has agreed that our historical relationship ensures they will work with us, as we have demonstrated value to them already in their primary care practices and specialty populations served. BHN has already established the relationships to plan, contract, implement, and manage outcomes for care management partnering with the proposed ACOs.

2. Branding and marketing for our Whole Health Care Management program has already taken place due to our One Care and MBHP pilot programs. We have brochures, marketing materials for our healthcare partners to use with their assigned lives, materials that physicians use to educate their patients on the concept and value of care management services. BHN's Care Management Department has established protocols for client engagement and outreach that have

been successful in building our program quickly and engaging clients assigned to us. The templates for marketing and systems for engagement already exist and will be modified during the ramp up phase once ACOs are selected and we are invited to the table to do more detailed planning on our involvement in launching the ACOs in our service territory.

3. We have already met with each ACO applicant in our region. We have agreed with all that once ACO awards are made, we will be invited to talk further about our role as a BHCP. They each have assured us that we will be at the table with them, as we already have service delivery and care management in place with all of them. We will strategize further with them how this will fit into their plan for ACO implementation. Steve Winn, SVP and Kathy Moss, VP for Healthcare Integration, will be our leads in communication with the ACOs on plans for implementation. They have been the leads in One Care and our MBHP PBCM pilot. Drs. Winn and Moss have also been the leads in the implementation of our Integration of BH into primary care practices initiatives which have been operational for many years.

4. BHN holds many contracts with our healthcare partners mentioned above (e.g., ESP services). Within each current contract, there is a Conflict Resolution section that outlines the process for conflict resolution, the participants in the process, and the mechanism for resolution in the event that the process fails. We have experienced that each healthcare partner has their preferred process for conflict management, so these agreements will need to be individually negotiated by leadership and legal counsel of both parties to the agreement. This will then be inserted into the MOU/Contract between the ACO and BHN as a BHCP.

We also have built into each contract, regular meetings among key staff of both parties who are responsible for managing the integrated programming. They may occur weekly, monthly or quarterly, depending on the need. These meetings have been found to provide low-level problem solving in real time, negating the need for a higher level of problem solving and conflict resolution. Our collaborative service delivery models build in processes for good dialogue and team approaches to delivery so that our program staff successfully manage many issues before they become problems. We will use this same model in working to establish coordinated and, hopefully, integrated care management with our ACO partners.

BH Community Partner - Staffing Model

Behavioral Health Partners
METROWEST

Section 7. Program Response
Section 7.3 Initial DSRIP Participation Plan
Revised 12/1/17

A. Executive Summary

BHPMW BHCP five year business plan is founded on longstanding collaborative partners that created an LLC to prepare for health care reform; extensive advanced planning on all aspects of the BHCP model; and knowledge, experience, and investment in health care service delivery reform. BHPMW, LLC will be the Contractor; LLC member agencies Advocates, SMOC, Spectrum and Wayside will be Consortium Entities (CE); and Family Continuity will be an Affiliated Partner (AP). Their combined expertise enables BHCP to provide robust CP supports to many focus populations: Enrollees with SMI, SUD, co-occurring SMI/SUD, co-occurring BH/LTSS, CBFS clients, Enrollees who are homeless, Enrollees involved with the criminal justice system, transitional age youth/young adults, and Enrollees with culturally, ethnically and linguistically diverse backgrounds. The CEs and AP are embedded in the proposed Service Areas and will utilize their experience, locations, continuums of care, and community partnerships to provide all CP supports to these diverse populations therein. Financial success will depend on: centralized contract management; appropriately maximizing care coordination and infrastructure revenue by engaging as many Enrollees as quickly as possible; providing Qualified Activities consistently; managing accurate and efficient billing processes; achieving positive outcomes and a strong DSRIP Accountability Score; and working proactively with ACOs and MCOs on Alternative Payment Methodologies (APM) and sustainability plans.

1. Goals, challenges, and Proposed Solutions

Table 11: Priority Goals
To support Enrollees in improving their health and wellness by effectively providing CP supports and partnering with them to meet their self-defined needs, coordinate and integrate their care across primary care, specialty medical, BH, SUD, LTSS and social services that affect health
To consistently meet EOHHS's expectations and contribute to achieving delivery system reform that results in improved Enrollee outcomes; cost efficiencies; new ways of doing business; and sustainability for the BHCP

Table 12: Challenges and Proposed Solutions
Challenge: # people with BH, SUD and social service needs who do not access needed services and supports; **Solution:** Qualitative and quantitative processes for identifying eligible Enrollees will enable BHCP to outreach and engage them in needed services
Challenge: impact of social needs- housing, financial support, etc.- on people's ability to take care of their health and use services that are available to them; **Solution:** BHCP well positioned to link people to needed social services, many of which are offered by one of the CEs (SMOC)
Challenge: lack of capacity and availability of needed BH and other services; **Solution:** BHCP well positioned to link people to BH and other services in their continuums of care and through robust community partnerships
Challenge: community members lack of knowledge about where and how to access services; **Solution:** BHCP will educate Enrollees and referral sources- ACOs, PCPs, etc.- about how to access services via the BHCP

Challenge: lack of services and supports that are recovery oriented, culturally appropriate, trauma informed; **Solution:** BHCP staff will be trained and CP supports delivered in a recovery oriented, culturally appropriate and trauma informed manner, with use of Evidence Based Practices
Challenge: lack of communication, coordination and integration among service providers; **Solution:** BHCP has developed strategies and will develop protocols to facilitate communication, coordination, integration
Challenge: fragmentation, lack of alignment among service structures, delivery, reimbursement; **Solution:** BHCP will work with ACOs, MCOs, PCPs, etc. to achieve shared outcomes of redesigned MassHealth system
Challenge: inadequate reimbursement methodologies; **Solution:** BHCP will demonstrate value and work with ACOs and MCOs to develop APMs during and after Contract Term

2. Number of Assigned and Engaged Enrollees

BHCP proposes to serve 3500 Enrollees; a five year ramp up plan has been developed.

3. Service Areas

Central- Athol, Framingham, Gardner-Fitchburg, Southbridge, Waltham, Worcester
North- Beverly, Gloucester, Haverhill, Lawrence, Lowell, Lynn, Malden, Salem, Woburn

4. Plan and Timeframes to Operationalize the Community Partner Program

BHPMW has developed a structured plan to operationalize the BHCP program in compliance with the Model Contract. The Implementation Plan and Timeline can be found in the attachments for Section 7.3.F. of this proposal.

Activities early in the Budget Preparation Period will include negotiating BHCP contract and establishing a quarterly meeting and reporting schedule with EOHHS; submitting an initial DSRIP Participation Plan, Budget Report and Budget Narrative to EOHHS for approval; establishing an implementation team and Governing Body Executive Committee; executing agreements with CEs and AP; executing a contract with a care management software vendor; and negotiating contractual agreements with ACOs and MCOs. The next phase during the Budget Preparation Period will involve developing and documenting policies and procedures for BHCP operations; developing Enrollee protections and grievance policies and procedures; finalizing staff recruitment, hiring, orientation and training plans and curricula; hiring key leadership staff; expanding community partnerships and resource databases; finalizing the comprehensive assessment and person-centered treatment plan; working with the care management software vendor to modify the system to meet all BHCP requirements; adopting a formal Continuity of Operations Plan; and establishing accounting and financial management, IT, billing, and reporting systems. The final phase of the Budget Preparation Period will involve successfully completing the EOHHS Readiness Review; hiring and training all staff on the BHCP model, CP supports, EBPs, and care management software; educating and outreaching Enrollees with pre-existing relationships; beginning to recruit potential Consumer Advisory Board (CAB) members; and developing relationships and protocols with PCPs, ACOs and MCOs.

BHPMW Executive Director will be responsible for all Budget Preparation Period activities. BHCP Program Director will be hired in February 2018; manage all program start up activities; and in collaboration with CEs and AP recruit, hire and train staff by May 31, 2018 utilizing a start-up approach consistent with staffing ratios that account for initial volume projections.

Key steps to operationalize the BHCP during Budget Period 1 will include accepting Assigned Enrollees and implementing all CP Supports; continuing to provide extensive staff training; initiating monthly to quarterly BHPMW contract management meetings with each CE and AP to assess and support their performance; convening the Quality Management Committee, developing a QI Plan, and implementing the annual quality initiative; convening the CAB; and

establishing systems to implement all annual deliverables to be met in all subsequent Budget Periods throughout the initial Contract Term. Beginning in Budget Period 3 and increasing in Budget Periods 4 and 5, many activities will focus on sustainability and transition planning.

B. Supporting Populations and Community Engagement

1. Community Connections

The CEs and AP are well connected to the proposed Service Areas through robust community connections that position them to provide CP supports effectively to the focus populations. They collectively offer many of the resources that Engaged Enrollees will need to access, within their own continuums of care, including services for BH, SUD, and co-occurring disorders, LTSS, and resources to address housing and other social needs that affect health. These agencies already have multidirectional collaborations among themselves. They are embedded in these areas through their numerous locations and programs and their extensive partnerships with external community based organizations, advocacy groups, BH and social services, housing/shelter providers, and state agencies. In all Service Areas, they have longstanding relationships with EOHHS agencies - DMH, BSAS, MRC, DCF, DYS, DOC, MCDHoH, and others - through contracts, bidirectional referrals, and collaboration on many initiatives. They have working relationships with ESPs, CSAs, CBFS providers, and DCF lead agencies in all areas and are in these roles themselves in some of them. Table 13 shows CEs and AP with major locations and programs in each Service Area and many current connections. Lists are abbreviated due to page limits; more information is available.

2. Growing Community Connections

BHPMW BHCP will target specific gaps, mostly related to primary care, BH and social services, in each Service Area, particularly Athol, Beverly, Lawrence, Lynn, Malden, Salem and Southbridge. There are disparities in resources across these communities; the BHPMW will use

its experience in helping develop new resources and collaborations. Two groups have been identified that offer many supports in these areas: Catholic Charities and Jewish Child and Family Services. The CEs and AP will use their relationships in the provider community to reach out.

3. Keeping Staff Current with Community Connections

Staff will keep current through a services database of all the CE and AP services already created by the BHPMW, and through ongoing resource identification and information sharing, with a dedicated Triage/Resource Coordinator at the BHPMW.

C. Community Partner Supports and Activities

The BHPMW BHCP will maintain Contractual Agreements with ACOs and MCOs that operate in its Service Areas that require the BHCP to perform the following CP supports and activities with protocols informed by the National Quality Forum (NQF), Preferred Practices and Performance Measures for Measuring and Reporting Care Coordination: A Consensus Report, Washington, DC: NQF; 2010. BHPMW will triage Assigned Enrollees to CEs and AP to provide all CP supports and activities to the assigned members. Each will accept Assigned Enrollees and provide CP supports in the proposed Service Areas as summarized in Table 14, using their expertise to deliver CP supports to Enrollees with BH, SUD, and/or LTSS needs; medical complexity; and those who are homeless, transitional age youth/young adults, and/or involved in the criminal justice system.

Table 14: CEs and AP that will provide CP Supports in each Service Area

Region	Service Area	Advocates	Family Continuity	SMOC	Spectrum	Wayside
Central	Athol			X		
	Framingham	X		X	X	X
	Gardner-Fitchburg	X		X	X	
	Southbridge		X		X	X
	Waltham	X			X	X
	Worcester	X	X	X	X	
North	Beverly		X			
	Gloucester		X			
	Haverhill		X		X	
	Lawrence		X			
	Lowell	X		X		X
	Lynn		X		X	
	Malden					X
	Salem		X			
	Woburn	X				X

In providing all CP supports, BHPMW BHCP will be guided by the ten principles of Wraparound: family voice and choice, team-based, natural supports, collaboration, community-based, cultural competence, individualized, strengths-based, persistent, and outcome-based. Advocates, Family Continuity, SMOC and Wayside all have training and experience in this Evidence Based Practice (EBP) through their provision of Children's Behavioral Health

Initiative (CBHI) services for the past eight years. Wraparound principle and practices will be included in the BHCP training plan.

1. Outreach and Active Engagement

BHPMW BHCP will develop, implement, maintain and adhere to a protocol, to be approved by EOHHS, for outreach and active engagement of Assigned Enrollees. The protocol will include core outreach and engagement activities that will be implemented with all Assigned Enrollees and with specific strategies for hard to reach members. It is expected that the level of effort will vary, as some will be easier to reach and/or easier to engage than others. Staff will be proactive and persistent while also respectful of privacy rights so they do not alienate the people they are trying to engage. BHPMW BHCP will work with ACOs to shape the content of the referral information that they provide to facilitate these efforts. It will be critical to get accurate contact information for the member and their providers, and guardianship information will be important for some.

a. Strategies for outreaching to and engaging with Assigned Enrollees

BHCP staff will conduct at least one outreach activity to each Assigned Enrollee within 30 days of the enrollee's assignment and at least one face to face visit within the first 3 calendar months of assignment. A flag will be put in the care management software to alert BHCP if activities have not been completed as these timeframes are approaching. BHCP plans to exceed these requirements in terms of both the number of outreach activities and the timeframe in which outreach activities are initiated. In the first year of operation, BHCP will be in the outreach and engagement phase with a large volume of enrollees. The CEs and AP's collective experience is that this stage is labor intensive and time consuming; outreach and engagement are critical interventions and as important as the services themselves in the care management process.

BHPMW will devote all resources to outreach and engagement during the first year to maximize the ability to outreach, engage and enroll as many members in BHCP as quickly as possible. The Care Coordinators (CC) and Clinical Care Managers (CCM) will conduct outreach and engagement activities with specific training and support from the BHCP program managers and quality managers at each CE and AP. They will also rely on the Peer Specialists, Recovery Coaches and Family Partners on their CP teams, appropriate to the population they are engaging, to be active in outreach and engagement. Peer Support is an EBP that is successful as the primary relationship that demonstrates mental health recovery is possible – that people who have spent decades in hospitals and community mental health treatment due to a serious psychiatric diagnosis such as schizophrenia, can and do recover. Peer Support will be used throughout the provision of all CP supports and activities. Another staffing strategy will be employing staff reflective of the population racially, ethnically and linguistically, which can also be important during the outreach and engagement phases. BHPMW BHCP Director of Population Health and Triage/Resource Coordinator will manage Enrollee assignments efficiently and will train CP teams on outreach and engagement best practices.

As community based providers, the CEs and AP know their communities and are adept at being able to locate people, meet them, offer assistance, be available and work with them in an ongoing manner. BHCP will proactively employ many specific strategies for outreach that have been successful in the agencies' care management and other programs. It is anticipated that some Assigned Enrollees will be known to the CEs and AP who may know how to reach them. Whether known or not, staff will utilize any available contact information - phone numbers, addresses, current and last known providers, and places the members frequent - from the referral sources, members' PCPs, other known providers, and internal records if they were previously

served by CEs or AP. MCOs may have this information as they often have longitudinal information on members. CCs will call any phone numbers obtained. One advantage is that if members have cell phones, they stay with them wherever they go. However, people are often worried about the number of minutes available, making it less likely they will answer their phones, return calls, or talk for long. Many people don't listen to voice mails. Texting and emailing mitigates some of these barriers. CCs will arrange free cell phones thru Safe Link-Massachusetts, with 250 monthly minutes, which will enable Enrollees and staff to keep in touch.

CCs will use internet search engines and social media sites to try to find people and their contact information, and communicate with them electronically. CCs will go to locations at which the Enrollees are known to currently reside, and any other addresses on record, and conduct face to face visits if staff locate them. If they are not there, they may leave a note. CCs will mail letters, asking members to contact them, and contact family members and significant others if they have their information and current releases on file, if the members had been served previously.

If members have primary care, BH, and/or other providers, CCs will provide written materials and engage those providers to talk with the members when they see them, to educate them about BHCP, encourage them to contact us or get consent to give us their contact information. Staff will conduct face to face visits with Enrollees in these providers' settings, if possible. In order engage PCPs in the process of delivering CP supports, BHCP will develop brief handouts and begin visiting PCPs before the contract start date to educate PCPs and their designees and begin to develop relationships and protocols for their participation on the Care Team (CT) and for Enrollee engagement, assessment, treatment planning, and ongoing care coordination. It will be important for BHCP to demonstrate to the PCP how the CP, and the care integration we can achieve together, can be helpful to them and their patients. This will ultimately be the most successful way to engage them in this process. BHPMW will outreach to ACOs to work collaboratively in engaging their PCP networks.

CCs will conduct face to face visits with members in shelters, hospitals, detoxification programs, and other locations. They will go to places that specific members or many of the members they serve generally frequent: recovery connections/young adult/family/employment training resource centers, re-entry programs, drop in centers, food pantries, WIC programs, fast food restaurants and public libraries. BHCP will develop Business Associate Agreements (BAAs) with entities, such as shelters, that the BHCP is likely to work with frequently to locate, outreach and engage members. In all these outreach efforts, staff will abide by privacy rules and principles of respect.

BHCP will work closely with the Emergency Services Programs/Mobile Crisis Intervention (ESP/MCI) providers as many high-risk members are known to them, and they may have contact with people staff are trying to locate, particularly when they present in a hospital ED setting. BHPMW BHCP is well positioned to coordinate with ESP/MCIs, given that Advocates and subcontractor Wayside operate the ESP/MCI in the MetroWest area which includes portions of both the Central and North regions in which BHPMW is bidding. Advocates ESP/MCI and the CEs and AP have relationships with the other ESP/MCI programs in the proposed Service Area.

Engagement Strategies

Once outreach efforts are successful and BHCP staff have contacted the Enrollee, the overarching engagement strategy will be to start "where the person is." Staff will be persistent while respectful; the approach will be culturally responsive and trauma informed, in the language of the person; and staff will utilize motivational interviewing (MI), an EBP and a core component of many EBPs and emerging best practices. BHCP will use MI in conducting many

of the CP supports and activities to assess participants' readiness for change and engage them in the process. CCs will ask members what would be helpful to them and respond to whatever needs they identify. Someone's initial concern may be needing a ride to a medical appointment or food pantry or help applying for entitlement benefits. Enrollees often initially say they don't need anything: staff have learned to ask if it's okay to continue to call them at an agreed upon interval, and most members accept. Members eventually tell us "I got this letter I don't know what to do with", or "I have this appointment I am worried about", or "I need to get my prescriptions filled." Staff will develop trust by taking their priorities seriously and working on what they feel they need. This illustrates how care coordination activities begin during the engagement process. CC's will start providing whatever care coordination and other assistance the member will allow even before they sign participation forms. During this period, CCs will integrate information about the benefits, design and purpose of CP supports and the process for engaging in the BHCP. CCs will also provide opportunities for the Enrollee to opt out of receiving CP supports or request a different CP.

For populations or specific Enrollees who may be particularly hard to reach, BHCP will employ all the strategies above, in more intensity and/or for a longer duration than with other members. Additionally, staff will use the approaches outlined below for the following focus populations.

Strategies for outreaching to and engaging members who are homeless and hard to reach

Outreach and engagement strategies with individuals experiencing homelessness usually start with staff going to shelters, particularly those where known members tend to stay, especially if they are known to the CEs and AP or staff get this information from their providers or others. Because shelters close during the day, CCs will go to places where people are during these hours - food banks, lunch programs, drop in centers, libraries, and other public places. To go to shelters, BHCP staff will work in the late afternoon and evening. SMOC operates shelters in the proposed Service Areas in the Central and North regions, so BHCP will have good access to members in those settings. CEs and AP work with closely with police; individuals who are homeless or otherwise hard to reach are sometimes known to them and/or of concern to them. The CEs and AP have good relationships with numerous police departments in the proposed Service Areas.

b. Strategies for outreaching to and engaging assigned enrollees diagnosed with SUDThe most effective strategy is to go to Acute Treatment Services (ATS, aka, detoxes) and other 24 hour levels of care (LOC) for people diagnosed with SUD and contact them while they are still in those settings. Advocates has established protocols with three local ATS programs to identify and contact members in a HIPAA compliant manner before they are discharged from these settings. BHCP staff will work with residential treatment programs and sober houses. Of note: three of the providers in BHPMW BHCP operate some of these programs in the proposed Service Areas, so BHCP will have good access to members in those settings. Spectrum operates many outpatient clinics providing Medically Assisted Treatment (MAT) where some of these members attend services daily. CCs will go to Structured Outpatient Addictions Programs (SOAPS), alcohol recovery centers and young adult resources centers which some members attend, mostly during the day. Advocates, SMOC and Spectrum employ peer recovery coaches, and some of these agencies have CCs who have lived experience with SUD, resources that will also be used in BHCP, as these staff are often instrumental in engaging members with SUD.

c. Process for obtaining and documenting agreement to participate in CP Supports

Once staff have forged initial alliances and have begun to help Assigned Enrollees with their felt needs, Enrollees are usually willing to sign the paperwork necessary to continue receiving the care coordination services staff are offering. CC will ask the Enrollee to sign a participation form; explain the purpose as confirmation that the member agrees to participate in BHCP; explain the Protected Information (PI) that BHCP will obtain, use and share; and request written authorization to use and disclose PI as needed during the provision of these services. CCs will provide the participation form and consents in languages other than English; enter this documentation in the care management software; and give copies to the member. The participation form will be executed before initiating the Comprehensive Assessment. Within 5 business days, BHCP will assign a CC, usually the one who conducted outreach and engagement with the member.

2. Comprehensive Assessment and Person-Centered Treatment Planning

Person-centeredness is embedded in the BHPMW, CEs and AP's values and philosophies. Since person-centered planning and service delivery has become a priority in the BH field, all have integrated these concepts into staff training, program protocols, and quality improvement programs. Person-centered planning, an EBP, will be included in the BHCP's training plan. Since BHPMW BHCP's approach to outreach and engagement starts where members are at, the natural next part of the process is working with them to understand their needs, goals, and barriers to achieving those goals. CCs will engage Enrollees in articulating this through the assessment and treatment planning process and give input in a transparent way.

a. Process for completing comprehensive assessment and ensuring Enrollee participation

For each Enrollee who signs a participation form, CCMs and CCs will complete a Comprehensive Assessment at least within three calendar months of the Assigned Enrollee's assignment to the BHCP and annually. Subject to approval by EOHHS, BHCP will use a tool that includes an assessment and documentation of all domains specified in the Model Contract. BHPMW's proposed assessment is attached. It will be built into the care management software that BHPMW BHCP will purchase and collaboratively configure with the vendor.

BHCP will ensure that Engaged Enrollees participate in the assessment process by completing the assessment collaboratively with them. They will meet, have a conversation about the assessment questions and complete the assessment form together. As illustrated in BHPMW comprehensive assessment tool, in the attachments for this section, CCs will share the information they have been given about the member from the referral source and ask for verification, clarification, and additional data. This approach is used to be transparent with members about what information BHCP already has and to enable them to not repeat information that they or others have already provided. As also reflected in the assessment tool, staff will state such information as needs, goals and barriers, in person-centered language, e.g., "I want to get stable housing." This person centered approach engages the member in feeling that the assessment and plan is theirs.

The process also includes incorporating collateral information into the assessment, with the full knowledge and consent of the Assigned Enrollee. Using authorizations obtained when the Enrollees signed participation forms, and additional consents if needed, CCs will contact their providers including primary care, specialty medical, BH, and others. They will reach out to them via phone, email, mail or fax to request information and offer input into the assessment. CCs will engage with them to whatever extent they are available, by sending information, obtaining records, and/or having a discussion to share collaborate and coordinate care. The easiest providers to contact are those within our own agencies when members are receiving other

services therein. It is expected this will be the case for BHCP Enrollees who have pre-existing relationships with the BHCP. If the Enrollee's providers are at other agencies, CCs will be persistent in calling and emailing them. CCs will generally request a call back to introduce themselves, explain BHCP role as part of the CT and initiate ongoing collaboration. They will ask for input into the assessment and treatment plan including goals and needed services.

In the CEs and AP's collective experience, the most challenging attempts to get input into the comprehensive assessment and forge ongoing communication has been with medical providers. It tends to be difficult to get the PCPs or their designees to return calls. A specific strategy that has been helpful is accompanying members to primary and specialty care appointments, particularly when they are medically complex. The medical providers then know the CCs and are more likely to return or initiate calls to coordinate care. Another effective approach is nurse to nurse communication. We look forward to working with PCP designees in the ACO model.

An additional strategy to engage PCPs will be utilizing data to identify practices that have significant numbers of BHPMW's BHCP Engaged Enrollees on their panels. BHCP will use RN, CCM and CC staff to visit the practices, introduce BHCP program, and develop RN to RN or RN to NP relationships and communication. BHPMW will also collaborate with the ACOs to assist with brokering communication, information sharing and integration among the CP, PCP and specialty medical providers. The initial goal will be to get input into the comprehensive assessment and person-centered treatment plan and begin to establish ongoing collaboration.

Once CCs obtain information and input from PCPs and other collaterals, they will share that information with the Engaged Enrollee and incorporate it into the assessment. The member's CC will have primary responsibility for completing the comprehensive assessment with involvement from others on the CP team, under the supervision of a CCM who meets the required credentialing criteria. CCMs will have direct contact with Enrollees as indicated based on their needs, the complexity of the assessment, and the level of support needed by the CC. The CC will document the assessment tool in the care management software. The RN on the CP team will review each Engaged Enrollee's medical history, medical needs and medications. The RN or CCM on the CP team will provide final review and approval of the entire assessment. In most cases, the member's CCM, who supervises the CC who completed the assessment, will conduct this final review and approval. CC will give a copy of the assessment to the member, in languages other than English or other formats as needed.

An exception to completing the initial comprehensive assessment within three months will be if an existing comprehensive assessment was completed with the Enrollee within three calendar months prior to assignment to BHPMW BHCP and includes all required domains. If so, CC and Enrollee will review the assessment and update it as needed, ensuring all domains are included, and if not CC and member will complete the missing assessment sections. In all cases, CC will complete a new comprehensive assessment with the member at least annually.

b. Process for developing person-centered treatment plan

1) Ensuring Enrollee participation

CC will meet with the member to collaboratively "put together a plan for our work together." Goals will be written in person centered language, e.g., "I want to get a new psychiatrist", "I need a safer place to live." CC will elicit manageable steps to achieve the goals and incorporate the member's preferences, needs and cultural considerations in developing the plan, using their language, translating documents and providing other formats if needed. The CT, including guardians if applicable, will be involved in developing the plan, using similar strategies described above for involving them in the assessment. The plan will document the stakeholders

to whom it is sent, including the PCP, other CT members, and the ACO or MCO, as authorized by the member. CCM will supervise plan development and be directly involved as needed.

2) Process for documenting the person-centered treatment plan

CC will document the person-centered treatment plan in the care management software that BHPMW BHCP will purchase. The format will contain all the domains and meet all the requirements specified in the Model Contract including the results of the assessment, services including Flexible Services, goals, barriers, contact lists and reassessment dates. The CEs and AP have extensive experience with crisis planning which will also be part of the assessment and treatment planning process. As evidenced by the attached comprehensive assessment form, CC will ask Engaged Enrollees if they have crisis plans and/or want plans. The Crisis Plans will be developed along with the person-centered treatment plan and will include: strengths and resources; description of what happens when the member is doing well and not doing well; strategies that do and do not help, e.g., coping skills, wellness tools, accessing services, informal supports; contact information for the ESP/MCI and all supports and service providers identified as resources in a crisis; referred facilities if the member needs more intensive LOCs; the stakeholders to whom the plan will be sent; and the member's signature approving the plan.

3) Process for updating the person-centered treatment plan

All requirements will be met relative to updating treatment plans at least every six months and when the Engaged Enrollee's status changes significantly. CC will meet with the person, explain the need to update plan, and review: the current plan, what has changed, what has and has not worked, and the status of client's goals - what's been achieved, what has not, what should remain/change/be added. CC will also reassess the person's health status and document the recommendations for follow-up. Enrollees will receive copies of the updated plan.

4) Process for ensuring PCP or designee approve the person-centered treatment plan

BHPMW will work with ACOs, MCOs and PCPs to develop protocols for obtaining approval of the plans by PCP or designee. Beginning with the outreach and engagement phase, BHCP staff will have developed relationships and educated PCPs about BHCP. PCPs and designees will also have been involved in giving input into the assessment and treatment plan and will be aware that the treatment plan will be coming to them for approval. It is anticipated that there may be a need to familiarize PCPs about the person-centered approach. PCPs could request goals or services to be included in the plans to which members have not agreed. If so, staff will educate the PCPs about the Enrollees' visions for the plans and talk with the Enrollees about the PCPs' recommendations.

Logistically, CCs will email or fax the treatment plan to the PCP office; request approval and give options - sign and send back, email or call with approval, or whatever works for the individual PCP or designee and complies with MassHealth's requirements. Ideally, BHCP will work with high volume PCPs to develop protocols that work for those practices. BHCP will identify their PCP designees and develop relationships with them in advance, so they are familiar with the process, know the treatment plans are coming, and will be ready to follow the protocol the BHCP has worked out with their practices. BHCP may assign a CP team member to a high-volume PCP to go to the office weekly to obtain approval of treatment plans. A similar strategy could be working with large ACOs in the proposed Service Areas to develop protocols with large PCP practices. BHPMW BHCP will strive to complete the assessment and treatment plan within two months of initial assignment to allow one month to obtain PCP approval and submit a "Person Centered Treatment Plan Complete" Qualifying Activity by the end of the third month.

3. Care Coordination and Care Management

Under the supervision of the CCMs and with their direct involvement when indicated, CCs will be responsible for forming and operating a Care Team for each Engaged Enrollee. BHPMW BHCP will ensure that all requirements are met for the CT and the overall provision of care coordination and care management supports. The CEs and AP have substantial experience in convening Care Teams and providing care coordination and care management services through Wayside's role as a CSA and all the providers' care coordination contracts.

a. Stakeholder and Care Team (CT) identification

Continuing a person-centered approach, the Engaged Enrollee will "be in the driver's seat" in developing the CT. CC will engage the Enrollee in identifying all involved stakeholders and determining who will be invited to participate in the CT. CC will have already worked with the Enrollee and others to list all stakeholders in the comprehensive assessment, as well as those who will be involved with the member going forward in the person-centered treatment plan and crisis plan. CC will review these lists with the Enrollee to ensure all stakeholders are identified and consider which of them will be included in the member's CT. Enrollees will be asked who they consider to be on their current CT, if they perceive themselves as having teams, and who they would like to be on them going forward. CC will educate the Enrollee about contractually required stakeholders included on the team and why their participation is important; the CC will request consent to include them. CT will vary based on the Enrollee's needs; the types of expertise, services and supports needed; and the person's preferences.

While at each Enrollee's discretion, it is broadly envisioned that CTs will include the Engaged Enrollee, informal supports such as family members, guardians, advocates, friends, neighbors, faith based organizations, cultural groups, and other community resources; and formal supports including PCPs or PCP designees, other medical providers, state agencies, BHCP CCMs and CCs, and social services agencies. During the ongoing care coordination and care management process, as CCs work with members, get to know their networks, and facilitate linkages to new providers, state agencies, and other supports, they will keep track of those contacts. While a goal will be a consistent core group of CT members for each Enrollee, the team will be a fluid, evolving set of stakeholders who can support a member over time, as needs fluctuate.

b. Information exchange with stakeholders

For the CT to coordinate and integrate care, collaborate, and support the Enrollee effectively, information exchange is necessary. CCs and the Enrollees will discuss the nature and purpose of sharing information with the team in a completely transparent way so they can make informed choices about the content of information to be shared and with which CT participants. CCs will obtain member consent and follow HIPAA compliant procedures. BHPMW BHCP will execute BAAs with entities with which information will be exchanged frequently, as appropriate.

c. Care Team organization and roles

BHPMW will create a form letter to invite stakeholders to participate in CTs. CC will mail or email the letter to the stakeholders that the Engaged Enrollee wants to include on the CT. The letter will contain: Engaged Enrollee's name, stakeholder's name, proposed role on the CT; information about BHCP program, role of the CT and the treatment plan; points of contact and involvement participants should expect. It will request confirmation that the recipient will participate in the CT. BHCP will work with ACOs and MCOs to leverage the participation of CT members, particularly medical providers, initially and ongoing. It may be helpful to specify information about how stakeholders can bill for time spent participating in CT activities.

CC will work with the Engaged Enrollee and CT members to identify each participant's role on the team, appropriate to licensure or training and relationship to the Enrollee. Many roles will have been defined in the treatment plan in terms of services and supports a given CT member will provide. Generally, all CT members' roles will be to bring information to the team; utilize their knowledge and relationship with the person to support and engage them; give input and suggestions; and accept and implement follow up tasks. There may be CT members who participate more actively, depending on the Enrollee's needs, while other CT participants may play a less active role in exchanging information and being available to get more activated if needed.
CC will document the names, contact information and role of each CT member.

Role definition will be particularly important when Enrollees are engaged in other care coordination supports, such as state agency caseworkers or ACO and MCO care management programs. To avoid duplication, BHCP will work with the Enrollees and the other care coordination resources to define roles and responsibilities in a manner that best supports the Enrollees, respects stakeholders' roles and contractual obligations, and achieves efficient, effective care management.

d. Process for ensuring effective ongoing communications across all stakeholders

BHCP staff will facilitate communication among and coordinate with the Engaged Enrollee, the PCP, and other providers who serve the Enrollee including Recovery Support Navigators, CBFS providers, LTSS providers, EOHHS agencies and others to promote service delivery coordination and improved outcomes. Some of these stakeholders will participate in the CT and CC will be responsible for ongoing communication with them. The purpose, content, frequency, intensity and mode of this communication will vary based on Enrollee needs. There will be ongoing communication with all Enrollees' CTs through phone contact, mail and email. Some Enrollees' teams will hold team meetings - face to face, virtual, or telephonic. If CT members cannot participate in a meeting or other contact, CC will obtain their input prior to the meeting and share the outcome with them. Communication methods will vary based on the Enrollee's level of need and acuity, the nature of the communication, e.g., simple information sharing vs. the need to revise the Care Plan due to a significant change, and/or the Enrollee's and CT's preferences, all of which will vary over time. In addition to communicating with the CT, CC will communicate with other stakeholders as indicated. All communications will be done in a transparent manner with the Enrollees, with their consent, and following HIPAA compliant procedures. BHCP's care management software will help manage communications, particularly among the CEs and AP that will utilize it, as may other technology and the use of the Massachusetts HIway.

Support for Engaged Enrollees with LTSS needs

BHPMW BHCP will be well positioned to provide CP supports to Engaged Enrollees with BH and LTSS needs given that one of the CEs, Advocates, has extensive experience with the various LTSS focus populations and provides LTSS services. As a BH health home for CCA OneCare, Advocates care management team facilitates access to LTSS services for those members and works regularly with LTSS providers. The agency is part of an application to serve as an LTSS CP and will have an integrated team providing BH and LTSS CP supports. This CE will consult with the other CEs and AP around supporting members assigned to them with LTSS needs. The BHCP will ensure that CCMs and CCs are trained in LTSS services, programs and providers. Another strategy will be efforts to hire CCMs and CCs with LTSS experience.

For BHCP Engaged Enrollees with LTSS needs, BHCP will facilitate and coordinate LTSS services. CC will educate them about options for LTSS services, programs and providers during the development of their person-centered treatment plans. They will document the choices presented to the members and they will offer at least two providers for consideration. CC will then engage Enrollees in selecting the services and providers they need and want and arrange linkages to those services. CC will encourage Enrollees to include LTSS providers in the CTs and CC will ensure they are communicating with LTSS providers along with all other stakeholders. Given that these BHCP Enrollees will have specific needs that differ from other BHCP Enrollees, CCMs will tend to be more involved in supporting them along with CCs.

Activities to support the treatment plan and timely access to all services

BHCP staff will conduct all necessary activities to support the Enrollees' person-centered treatment plans and ensure that they have timely and coordinated access to all needed services and supports identified therein. One activity will involve CC explaining PCP, specialist and other provider directives to the Enrollee that may have emerged during appointments and/or as part of the comprehensive assessment and treatment planning processes. CC will educate members about the importance of following up on the advice of PCP, specialty medical, BH and other providers; ensure they understand the recommendations; assist with clarifying any questions; engage them in deciding upon a course of action; assist with appropriate follow up; identify and resolve any barriers with adhering to recommendations; and ensure transportation.

BHCP staff will be trained on shared decision making skills, an EBP used in clinical care to increase the Enrollee's participation in their healthcare and related decision making. Prior to meetings with PCPs and other providers, CC will help Enrollees prepare their questions, concerns, needs, and requests to increase the likelihood that they feel part of the decision making that occurs during those visits and have ownership of the resulting plan. BHCP will give CP staff tools to help them monitor Enrollees' medical conditions and compliance with providers' recommendations. BHCP training plan includes community health worker competencies. BHCP will also engage members in health and wellness activities to support their engagement in their health and follow through on provider recommendations.

Care reminders; scheduling and keeping appointments

BHCP's care management software will include a solution for care reminders. CCs will enter Enrollees' appointments into the system and it will generate appointment reminders to the CC. CP staff will make reminder calls to Enrollees. The goal is for this system to send care reminders to Enrollees telephonically and/or electronically, using alternative formats if needed. CCs will actively assist members in scheduling all services and supports identified in their treatment plans. They will involve Enrollees in selecting providers and scheduling appointments at days, times and locations that are convenient to them. CCs and Enrollees will decide if there is a need for CC to accompany the person to certain appointments. If not, CC will identify transportation options, if needed, using both formal and informal resources. CCs will provide transportation when needed, particularly early in the Enrollee's engagement in BHCP, and will work toward accessing other transportation such as The Ride and PT1 forms or using public transportation such as the MetroWest Regional Transit Authority. After appointments, they will follow up to confirm attendance, discuss the outcome and assist with follow up. In cases of non-attendance, CCs will determine the reasons, reschedule and support the member in following through. BHCP will ask ACOs to help engage their PCPs and other providers to share information when people miss appointments so staff can be aware when follow up is needed.

Medication adherence

BHCP staff will confirm with Engaged Enrollees that they are adhering to medication recommendations from all prescribers. When meeting with members, CC will ask how they are doing with their medications; assess if education is needed; obtain answers to any questions or concerns; determine if there is an indication for BHCP RN or a home care nurse to be utilized short term to provide education, set up systems to manage medications, and conduct teaching; and assess the need for medication dispensing devices or prepackaged medications. They will explore other barriers, such as side effects, or the member disagreeing with the prescribed medication regime. If so, CC, CCM or RN will facilitate the Enrollee talking with the prescriber, addressing the concerns, and supporting the member in their decision making. Staff will use shared decision making skills to assist Enrollees in preparing for discussions with their prescribers, which can help to achieve a medication regimen that the member will support.

4. Care Transitions

BHPMW BHCP will meet all requirements related to managing care transitions, beginning with activities prior to the Engaged Enrollee's inpatient discharge or other change in treatment setting.

Discharge planning prior to discharge or change in setting

BHCP will be involved in all care transitions including medical, BH and SUD admissions and other types of transitions in care. Internal mechanisms will be developed to facilitate awareness of care transitions through ongoing communication with Engaged Enrollees and service providers within the CE and AP agencies as well as other involved stakeholder such as state agencies. BHPMW is considering developing an event notifications system among the five CEs and AP which would include information about admissions from Advocates ESP/MCI, Spectrum ATS and other programs. BHCP's effectiveness in managing care transitions will also be dependent upon external systems - ACOs, MCOs, and the state's planned event notification system - developing a seamless system for notifying CPs of admissions and discharges. ACOs and MCOs can also be helpful in ensuring that inpatient and other treatment settings understand BHCP's role including involvement during the admission and discharge. BHCP's effectiveness further depends on being notified as close as possible to the time of admission so staff can be involved with the member during the admission, have early awareness of the anticipated discharge date, and give input into scheduling the discharge planning meeting. This will increase the effectiveness of the discharge plan, the Enrollee's buy-in and the positioning of the BHCP to facilitate the transition in care. BHCP staff will add value to the process through their relationships with the members and ability to help engage them in developing discharge plans that will work for them.

Ensure member of CP team is present at discharge planning meetings

Logistically, BHCP will learn of an admission of an Engaged Enrollee. CC or CCM will contact the facility's social worker; introduce themselves and their roles; ask them to obtain a release of information from the member and call us back; or, CP staff could visit the Enrollee and ask for a release. Facilities may or may not confirm that the Enrollee is there. The MCO or ACO may have to inform the facility that the person is enrolled in a specific BHCP, give them BHCP's contact info and expect the facility to call the CP to involve us in discharge process.

BHCP will ensure that a CP team member is present at the discharge planning meetings, as appropriate, in coordination with the Engaged Enrollee and the ACO or MCO. Every effort will be made for the person's own CC to attend. Alternatives will be CCM assigned to the member, who supervises the assigned CC; another CC on CCM's team; or a CC or CCM on another CP team. The goal will be to attend face to face but if necessary staff will request telephonic participation. This may be warranted by the distance to facilities and the possibility that multiple

discharge meetings or other major commitments with Enrollees could occur on the same day. It will be helpful if MassHealth, ACOs and MCOs prepare facilities of the need for flexibility around the mode of participation in discharge meetings and giving as much advance notice as possible about the scheduling of the discharge planning meeting, increasing the likelihood BHCP and other CT members will be available to participate.

Another contribution BHCP can make is engaging family members and significant others, with appropriate consent, about how to best support Enrollees during the transition; assessing if the environment will support their return to home and community; educating them about revised care plans; and preparing the environment for Enrollees' return. Involving the CP Teams' Peer Specialists/Recovery Coaches/Family Partners and care coordinators who are persons with lived experience and coordinating these efforts with state agency staff can be helpful in supporting Enrollees, families and significant others.

Follow up, accessing services on discharge plan, and ensuring attendance

BHCP will follow up within three business days of an Engaged Enrollee's inpatient discharge or change in treatment setting. Staff will conduct a face to face visit, using that same algorithm as above for who would conduct the visit, and document if a visit was offered and the Enrollee preferred not to meet within that timeframe. Staff will work with the Enrollee to update the person centered treatment plan and crisis plan, incorporate any new needs, goals, services and supports from the discharge plan; and coordinate clinical and support services to implement the discharge plan and revised treatment plan. These activities - linking members to needed resources, scheduling appointments and facilitating follow up - are continuous BHCP functions. CC will update the ACO or MCO, through ongoing communication across stakeholders and through processes the BHCP develops for this purpose with the ACOs and MCOs.

CCs will assist Engaged Enrollees who are referred to other levels of care, care management programs, or other providers in accessing them. Staff will assess what assistance is needed, considering how new the services or providers are to the members, how invested the members are in them, and how independent they are in attending appointments. When indicated, such as if the Member has been referred to a new service at an unfamiliar provider and is unsure about their level of investment or comfort in attending the appointment alone, BHCP staff will be more involved. CCs will conduct warm handoffs and share information with newly involved providers, with member consent and as appropriate. CCs will ensure members attend, coordinate transportation assistance, and follow up after missed appointments. Staff will utilize care reminders, provide or arrange transportation assistance through natural supports and available transportation resources and help the member prepare for visits. CCs will also follow up after missed appointments to address barriers, reschedule, and support the Enrollee's attendance. These activities - linking members to needed resources, scheduling appointments and facilitating follow up - are continuous functions of BHCP staff. Additional specific strategies are in 7.3.C.3.

Ensuring person's stability and satisfaction following a transition in care

In the course of the ongoing provision of CP supports, and in order to ensure a member's stability and satisfaction following a transition, staff will ask enrollees about their stability and satisfaction following a transition. With consent, CCs will follow up with family, significant others, providers and other CT members to get their assessment about the Enrollee's transition. CCs will ensure Enrollees and their support systems know how to reach the BHCP and other supports including the ESP/MCI if the Enrollee or others around them have concerns about their stability following a transition in care.

Preventing and managing other types of transitions in care

BHCP providers have robust experience with preventing transitions in care, e.g., supporting Enrollees to maintain community tenure and avoid unnecessary ED utilization and admissions to higher levels of care. This expertise is derived from many programs including Advocates/Wayside strong track record as an ESP/MCI provider, Advocates Emergency Department Diversion and Wraparound Team, Advocates CBFS, Wayside's CSAs and many other programs. BHCP staff will be trained on strategies to prevent unnecessary transitions in care, as well as facilitating transitions to lower levels of care other than hospitalizations when possible.

5. Medication Reconciliation

BHCP will conduct medication reconciliation, performed by the RN on the CP Team, for Engaged Enrollees discharged from inpatient stays. The complexity and intensity of these activities will increase based on the Enrollee's number of medications and prescribers. BHCP's care management software will be helpful in documenting these activities and may automate some components of the medication reconciliation process. Also, the RN may be able to work with pharmacies in carrying out some of these roles. Genoa Pharmacy, co-located with one of Advocates outpatient clinics, verifies medication orders with PCPs, verifies medications across all prescribers and asks people if they understand how to take their medications.

Verify medication orders are appropriate and filled accurately and Enrollee understands

With member consent, the RN on the CP team will communicate discharge medication orders to Enrollee's PCP or PCP designee. This would likely be a nurse to nurse conversation. The RN will ask for approval or notification if the PCP has concerns about the appropriateness of the orders.

Upon discharge, the CC will work with the Enrollee to ensure that medications are filled. The RN will verify that medication orders are filled accurately by looking at them and the prescriptions and comparing the orders and labels; review the instructions on the prescriptions and the inserts with the member; plan with the Enrollee how they will organize their medications and when they will take them. The RNs will involve CCs in this process so they are positioned to monitor medication administration going forward. The RN will identify any need for pill cassettes, prepackaged medications, or medication dispensing system and the CC will arrange for them.

Check for discrepancies and non-compliance, support adherence, identify supports, MAP

The CC, with support from the RN, will monitor the Enrollee's medication administration during visits and phone calls and assist them with any questions or barriers that arise. CC's will ask to view their medications and medication systems during visits and continually review how their system is working and if they need other systems or tools. CC's will consult with the supervising CCM and RN if they identify that a member may not be taking a medication, and the team will communicate with the prescriber, if consent is in place. If an Enrollee complains about side effects, CC's will consult with CCM and RN and facilitate follow up with prescriber. If an Enrollee disagrees with the medication orders, CCs will use shared decision making skills to engage the person in addressing this with the prescriber, as noted in 7.3.C.3. Staff will be trained to support Enrollees in medication administration. For BHCP Enrollees participating in a Medication Assistance Program (MAP), the RN will oversee the sharing of updated medication order forms from Enrollee's PCP or discharging prescriber with the MAP providers.

6. Health and Wellness Coaching

BHCP will conduct all required health and wellness coaching (HWC) activities as indicated in the Engaged Enrollee's person-centered treatment plan. As detailed in 7.2.D.2., the CEs and AP have robust health and wellness programs. They will use their experience with a wide range of HWC programs and approaches. Enrollee specific HWC activities will be provided or coordinated by the CCs and programs for groups of Enrollees will be provided across the CP utilizing RNs, CCMs and CCs. CCs will be trained in community health worker competencies and these programs will be supported by HWC staff and resources in the CEs and AP agencies.

a. Health and wellness education, coaching and health promotion programs

BHCP will directly provide and link to home and community based resources to help people manage health conditions. BHCP staff will conduct education about wellness issues including nutrition, weight management, exercise, stress management and smoking; help members link to health plans' health and wellness and disease management programs such as those for asthma and diabetes; and facilitate their use of available community based programs including gyms with which CEs and AP have negotiated reduced or no-cost arrangements, farmers markets such as a mobile market that Edward M Kennedy Community Health Center is starting, and the many programs that local hospitals offer including disease-specific education programs. BHCP staff will also make use of the wide array of health and wellness programs within the CEs and AP, some of which are listed in 7.2.D.2. Some of these health and wellness activities relate to assessing support relative to social needs that affect health such as nutrition. SMOC brings extensive resources to the BHPMW BHCP in these areas.

Health education, coaching, and symptom management activities will be geared toward enabling Enrollees to be knowledgeable in the prevention and management of chronic medical conditions including asthma, diabetes, heart health and metabolic conditions. Other activities will focus on educating enrollees on how to reduce high risk behaviors and health risk factors, e.g., smoking, inadequate nutrition or infrequent exercise. These activities will take shape in classes, groups and events offered to various focus populations across the proposed Service Areas. BHCP will utilize data on Enrollees' medical conditions and social needs that affect health as well as health and wellness goals in their treatment plans to target health and wellness activities for BHCP Enrollees across the Service Areas. The numerous CE and AP locations therein will be used to host these health and wellness activities.

b. Ensuring goals for the health and wellness programs are recorded and tracked

BHCP comprehensive assessment tool found in the attachments for this section contains several questions about health and wellness domains and assesses the member's interest in addressing them. CCs will use this to assist Enrollees in setting health and wellness goals in the person-centered treatment plan. Members' priorities tend to be basic needs such as housing and they may need to be encouraged to identify goals related to health and wellness. CCs will raise these areas proactively. These goals will be entered in the treatment plan in the care management system. Enrollee attendance at HWC activities will be documented and progress tracked in the treatment plan update process. Many of these applications address various health and wellness domains and contain tracking of Enrollees' goals and progress.

7. Connection to Community and Social Services

BHCP will connect Engaged Enrollees to social services and community resources and ensure ongoing connections. The CEs and AP are extensively embedded in their communities and connected to social services and community resources, as documented in 7.2.D.3.e. and 7.3.B.

SMOC brings longstanding expertise and comprehensive resources to the BHPMW BHCP from decades of providing services and supports that address social needs that affect health to the focus populations. These resources include the following: housing services, homelessness housing continuum, rental assistance, tenancy education, financial assistance, fuel assistance, employment services, education services, workforce development, green jobs academy, English as Second Language, nutrition, domestic violence programs, young parents program, Head Start, and child care. SMOC offers these services in many of the proposed Service Areas, with hubs in Framingham, Lowell and Worcester, so these community-based social services will be accessible to BHPMW BHCP Engaged Enrollees across the geography.

How Engaged Enrollees will be connected to social services and community resources

The process will begin with identifying Engaged Enrollees' social service needs through specific questions in the BHCP comprehensive assessment tool located in the attachments for 7.3.C.2. BHCP may use additional tools to assess for community-based, social and Flexible Services needs employing additional tools that SMOC utilizes. Once such tool assesses ten domains including homelessness, health care, independent living skills, and survival skills, rating each area on a four point scale: vulnerable, safe, building capacity, empowered. Based on the BHCP comprehensive assessment and any specialty assessment tools used, Care Coordinators (CC) and Engaged Enrollees will identify needs, goals, services and supports in the person-centered treatment plan.

CCs will follow procedures to link Engaged Enrollees to these resources - similarly to how they will connect them to medical, BH and other services as described in 7.3.C.3. and 7.3.C.4. They will inform members of social services resources and options; engage them in choosing the supports they need and want; arrange appointments or attendance at services and programs and/or apply for resources; coordinate transportation assistance if needed; help prepare for the first meeting or use of the resources; accompany the member to the appointment if needed; follow up to ensure participation; and assess member satisfaction.

Addressing some of the Engaged Enrollee's social needs that affect health may require funding. When this need arises, the CC will prepare a recommendation for Flexible Services to be submitted to the Engaged Enrollee's ACO, following the procedures established by the ACO for this purpose. All Flexible Services recommendations will be reviewed and approved by the Engaged Enrollees' Clinical Care Managers before submission to the ACOs. Tasks will be generated in the care management software to remind the CCs to follow up on these requests if responses are not received from the ACOs within the agreed upon timeframes.

CCs will facilitate ongoing linkages by monitoring the members' use of these resources and establishing and maintaining contact with the social service providers and community organizations. Enrollees will be encouraged to include these stakeholders in their Care Teams, particularly if it is expected that they will utilize their supports in an ongoing manner. CCs will follow procedures for ensuring ongoing connections to community resources and social services similar to strategies delineated in 7.3.C.3.

SMOC will train BHCP staff in all CEs and AP on assessing for community and social service needs; educate them on resources; and consult around accessing needed services. BHPMW BHCP will further support the CP teams by proving access to the database that has been created of the member agencies' services and supports. The BHPMW Director of Population Health and Quality Management will also assist by identifying available resource directories and compiling service information to fill gaps. BHCP's selected care management software, Care Navigator, contains tools for resource information in the system.

Behavioral Health Partners METROWEST

Behavioral Health Community Partner Comprehensive Assessment Tool

Enrollee Information:

Name: _____ DOB: _____ Date: _____

Address: _____

Phone: _____ (type:) Phone: _____ (type:) Phone: _____ (type:)

Initial Assessment: ☐ **Annual Assessment:** ☐

1. Review of Referral: You were referred because: (staff shares referral info)

a. Do you agree? ☐ Y ☐ N Explain or add information as needed:

b. Are you your own guardian? ☐ Y ☐ N ☐ I Don't Know If no, do you have a guardian? ☐ Y ☐ N ☐ I Don't Know

If yes, guardian name and contact info:

c. Do you have immediate health care needs of any type? ☐ Y ☐ N ☐ I Don't Know Explain and add information:

d. Do you have other immediate concerns about your medical condition and wellbeing? ☐ Y ☐ N ☐ I Don't Know Explain and add information:

2. Tell me about your strengths, needs, and goals:

a. Describe your Strengths:
Challenges: Needs:
b. What are your personal goals?
c. What are your overall health goals?
d. How do you manage stress?

3. Tell me about your interests and leisure activities:

a. What are your interests, hobbies and pastimes?
b. What do you do for socialization and enjoyment?
c. Are you involved in volunteer activities? ☐ Y ☐ N
d. Do you participate in a faith community or spiritual activities? ☐ Y ☐ N
e. Do you participate in a cultural community or cultural activities? ☐ Y ☐ N
f. How else are you involved in your community?
g. How can we assist you in this?

4. Describe your social supports, social network and peer support relationships:

a. Do you currently have supports? ☐ Y ☐ N ☐ I Don't Know b. If yes, describe:
c. If no, what are your hopes, needs, and potential resources?
d. How can we assist you in this?

5. Functional Status: Do you need assistance with any of the following Activities of Daily Living? ☐ Y ☐ N ☐ I Don't Know

☐ Personal Care Skills (includes groom and dress) ☐ Housekeeping/Laundry
☐ Transportation ☐ Grocery Shopping/Food Prep. ☐ Time Management
☐ Safety/Self Preservation ☐ Problem Solving Skills ☐ Money Management
☐ Other: _____

a. If yes, please describe:
b. How can we assist you in this?
c. Is staff observation consistent with client report? (Make note of enrollee's presentation) d. Other info:

6. Do you have any accessibility requirements: ☐ Y ☐ N ☐ I Don't Know

If yes, which of the following?

☐ Language ☐Communication ☐Transportation ☐Equipment
☐ Other: _____ If yes, how can we assist you in this?

7. According to the referral we received, your medical history includes: (staff shares referral info)

a. Is that correct? ☐ Y ☐ N ☐ I Don't Know Explain and add information: b. Your family history includes:

Is that correct? ☐ Y ☐ N ☐ I Don't Know Explain and add information: c.
Your medications are:
Is that correct? ☐ Y ☐ N ☐ I Don't Know Explain and add information:
d. Do you have physical limitations or mobility issues? ☐ Y ☐ N ☐ I Don't Know
Explain and add information

8. According to the referral, your current and past mental health history is: (staff shares referral info regarding diagnoses, treatment history, etc.)

a. Is that correct? ☐ Y ☐ N ☐ I Don't Know Explain and add information:

9. According to the referral, your current and past substance use and history is: (staff shares referral info regarding use, diagnoses, treatment history, etc.)

a. Is that correct? ☐ Y ☐ N ☐ I Don't Know Explain

10. Do you have a history of trauma? ☐ Y ☐N ☐ I Don't Know

a. If yes, which of the following have your experienced?
☐ Physical neglect ☐Emotional neglect ☐Exploitation ☐Physical abuse
☐ Witness to violence ☐Domestic abuse ☐Elder abuse ☐Other: _____
b. Explain and add information about history and/or trauma intervention:

11. Review of current services, including but not limited to medical, behavioral health, care coordination or care management and services provided by state agencies, (Prompts: medical, therapy, psych, PCP, DMH, CBFS, PACT, DPH, DCF, DYS, DDS, MRC, MCB, MCDHH, primary care, specialty medical care, dental, skilled nursing, visiting nurse, home care, home health aides, PCA, Other). Is there anyone else that helps you in your home or through any other services and supports?

a. Provider Contact Information: (list all)

NAME	AGENCY	ROLE/SERVICE	PHONE	ADDRESS	EMAIL

b. Are these providers and services meeting your needs? ☐ Y ☐ N ☐ I Don't know
Explain what needs are not being met.
How can we better meet them?
What other services and supports do you want and feel you need?

12. Education:

a. According to the referral, the highest educational level you have achieved is: Is that correct? ☐ Y ☐ N ☐ I Don't Know
   Explain and add information:
b. Are you currently enrolled in an educational program? ☐ Y ☐ N If yes, please explain.
c. Do you have interest in further education? ☐ Y ☐ N ☐ I Don't Know If yes, what are your goals and how can we assist you in this?

13. Employment:

a. According to the referral, your employment history is: Is that correct? ☐ Y ☐ N ☐ I Don't Know

   Explain and add information:

b. Are you currently employed? ☐ Y ☐ N ☐ I Don't Know
   If yes: What is your position?
   Length of employment:
   Weekly hours worked:
   Income:
   Do you like your job?
c. Do you have other employment goals?
d. Do you have interest in training and/or other assistance related to employment?

14. Income/Financial Support: (In addition to any information under 'employment')

a. What is your source of income?
b. What is the total amount monthly?
c. Do you receive any sources of financial assistance:
   ☐ SNAP ☐ Fuel Assistance ☐ EAEDC ☐ Food stamps ☐ Disability
   ☐ TAFDC ☐ Veteran's benefits
d. Are you able to meet all of your monthly bills? ☐ Y ☐ N If no, describe?
e. How can we assist you in this?

15. Housing – Where do you live?

☐ Own Room ☐ Own apartment ☐ Own home (roommates:)

☐ Shelter ☐ Homeless/street ☐ Temporary with family/friend

☐ Residential program or group home ☐ Other: _____

a. Does your current housing meet your immediate needs? ☐ Y ☐ N
b. Do you have housing related needs? ☐ Y ☐ N Explain:

16. Do you have access to enough food? ☐ Y ☐ N

a. What is your primary source?
   ☐ Grocery store ☐ Convenience store ☐ Fast food ☐ Food pantry ☐ Other: _____

b. Do you have a diet restriction or special diet? ☐ Y ☐ N ☐ I Don't Know
c. Are you able to follow your diet? ☐ Y ☐N ☐ I Don't Know
d. If no, what are the obstacles?
e. How can we assist you in this?

17. Do you exercise? ☐ Y ☐ N

a. How frequently?
b. What type?
c. Would you like to exercise more? ☐ Y ☐ N ☐ I Don't Know
d. What type?
e. Are you concerned about your weight? ☐ Y ☐ N ☐ I Don't Know
f. How can we support you in this?

18. Do you have current and/or past legal issues? ☐ Y ☐ N ☐ I Don't Know

a. Describe any current and/or past legal experiences/arrests/convictions:
b. Are you on parole/probation? ☐ Y ☐ N ☐ I Don't Know
c. Name of PO:
d. How can we assist you in this?

19. Do you ever feel threatened or unsafe at home and/or in your community? ☐ Y ☐N ☐ I Don't Know

a. In what way?
b. Where?
c. By Whom?
d. Do you have a safety plan in place? ☐ Y ☐ N ☐ I Don't Know
If yes, locate and review with Enrollee.
If no, would you like to develop one? ☐ Y ☐ N ☐ I Don't Know

20. According to the referral, you ☐HAVE ☐DON'T HAVE a current acute care plan.

If yes, locate it and review with Enrollee.

a. If your condition becomes acute, what needs to happen?
b. What does and does not help?
c. What is your preferred facility(s)?
d. Who will take care of your children, animals, plants, etc.?
e. Who do you want to be notified?
f. Do you have other immediate needs? ☐ Y ☐ N ☐ I Don't Know Explain and add information:

21. According to the referral, it says you ☐DO ☐DO NOT have an Advanced Medical Directive:

a. Is that correct? ☐ Y ☐ N ☐ I Don't Know
b. Do you want one? ☐ Y ☐ N ☐ I Don't Know
c. Do you want more information about it? ☐ Y ☐ N ☐ I Don't Know

d. Do you have a health care proxy? ☐ Y ☐ N ☐ I Don't Know If yes, name and contact info:

22. Do you have a plan for preventing and managing mental health or substance use crises? ☐ Y ☐ N ☐ I Don't Know

a. If yes, do you have a copy? Do you know who does? (Prompts: ESP, CBFS staff, group home staff, other). Locate and review with Enrollee.
b. If no, are you interested in developing one? ☐ Y ☐ N ☐ I Don't Know

23. Is there anything else you want to tell me or discuss? If yes, describe:

Enrollee approval:

Enrollee Name (print)	Enrollee Signature	Date

Care Coordinator completing assessment:

CC Name (print)	CC Signature	Date

***RN review of medical history, medical needs, and medications:**

RN name & credentials (print)	RN Signature	Date

***Clinical Care Manager Final Review and Approval:**

CCM name & credentials (print)	CCM Signature	Date

*Any feedback, concerns, or recommendations will be discussed with CC and the assessment adjusted as needed before signing.

D. Innovative Technologies for Service Delivery

BHPMW BHCP will use current and new innovative technological tools for the delivery of CP supports. Staff will be provided with laptop computers and smart phones. CEs and AP use adaptive communications technology including video phones and a language line and will do so in providing BHCP services. In some of these agencies' care management and other programs, staff are accustomed to using automatic pill dispensers and electronic medication reminder systems. All CEs and AP use e-prescribing and work with pharmacies in different ways. Advocates on-site pharmacy, Genoa, offers unique capabilities including pre-packing multiple medications in the same slot in a bubble pack, which increases adherence; visuals to verify medications; personalized refill processes; and mailing medications. This pharmacy can be used for any of the BHCP Engaged Enrollees regardless of which CE or AP provides CP supports to them.

Care management software

As described in 7.2.E., the care management software that the BHPMW plans to purchase, Blueprint Technology's Care Navigator, will be the major new technology that will be used in the delivery of CP supports. The system is not simply a depository for documentation; it is a tool that facilitates care coordination workflows; generates reminders, calendars and alert dashboards; and organizes care coordination teams and tasks. Care Navigator's functionality offers technology solutions for many CP support tasks and BHCP Model Contract requirements, a sample of which includes: electronically assigning care coordinators; generating care reminders to alert them to Enrollee appointments; aggregating medication information from external sources such as discharge documents; sending completed comprehensive assessments to Clinical Care Managers for review; facilitating communication and coordination among internal and external Care Team members through multiple mechanisms; tracking and reporting of disengagement reasons; and esignatures to obtain PCP approval of care plans and Enrollee signatures on participation forms. Care Navigator is committed to building additional features to facilitate the delivery of CP supports and compliance with BHCP requirements.

Currently, SMOC uses Triggr Health, a mobile platform that uses behavior on and around the phone to predict the state of a person's recovery in real-time. It increases adherence to long-term continuing care, reduces relapse rates post-treatment and dramatically improves outcomes for those in early recovery. By analyzing phone data, Triggr Health predicts with 88-92% accuracy three days before a person relapses, enabling proactive outreach. The application includes motivation, support, goal setting and progress tracking.

The combined use of multiple technologies - care management software, information exchange through the MA HIway, , and various communications modes - will result in improved communication, coordination and integration among Enrollees, their Care Teams, BHCPs, ACOs, MCOs and EOHHS and its agencies.

E. Personnel and Staffing

1. Program Organizational Chart

Please find the program organizational chart in the attachments for this section.

2. Sample Staffing Model

Table 15: BHPMW Program Staffing Model for Budget Year 1			
Position FTE	**Schedule**	**Reports to**	**Supervises**
Executive Director* .5 FTE	4 hours per day and as needed	Governing Board	Medical Director, BHCP Program Director
Medical Director* .05FTE	2 hours per week	Executive Director	- - - - - - - - - -
BH CP Program Director 1 FTE	8 hours daily Monday-Friday	Executive Director	Director of Population Health, Triage/Resource Coordinator, Chief Financial Officer, Billing Manager, Director of Information Technology, Consumer Advisory Board, Quality Management Committee
Chief Financial Officer* .1 FTE	4 hours per week and as needed	BH CP Program Director	.4 financial management staff
Director of Information Technology* .5 FTE	4 hours daily and as needed	BH CP Program Director	IT Services Staff
IT Services Staff** 1 FTE	8 hours daily Monday-Friday		also IT Configuration Staff 1 FTE
Billing Manager** 1 FTE	8 hours daily Monday-Friday	BH CP Program Director	- - - - - - - - - -
Administrative Assistant** .5 FTE	4 hours daily Monday-Friday	BH CP Program Director	- - - - - - - - - -
Director of Population Health Management .5 FTE	4 hours daily Monday-Friday	BH CP Program Director	Data Analyst, Designated Compliance Officer, BHCP Managers
Data Analyst** 1 FTE	8 hours daily Monday-Friday	Director of Population Health/QM	- - - - - - - - - -
Designated Compliance Officer* .2 FTE	8hours per week	Director of Population Health/QM	- - - - - - - - - -
Peer Specialist .2 FTE	8 hours per week	Director of Population Health/QM	To assist with development of the Consumer Advisory Council in year 1

Table 16: BHPMW Community Partner Care Management Teams Staffing Model			
Community Partner Care Management Teams - a total of 12-14 teams across 5 provider agencies; 9-10 teams in the Central Region and up to 4 teams in the North Region. Each team supports 275 members (non-CBFS) or 200 (CBFS).			
Position FTE per team	**Schedule**	**Reports to**	**Supervises**

BHCP Program Manager .2 FTE (note: Each CE and AP will start with .3 FTE for BHCP start date and FTE will increase based on this ratio as their Enrollee volume and teams grow.)	8 hours per week per team Monday-Friday	CE and AP Senior Operations Staff, secondary report to Director of Population Health/QM	Quality Manager, Registered Nurse, Peer Specialist/Recovery Coach/Family Partner, Clinical Care Manager, Administrative Assistant
Quality Manager .1 FTE	2 hours per week per team Monday-Friday	BH - CP Program Manager	- - - - - - - - - -
Registered Nurse Clinical Care Manager 1 FTE	8 hours per week per team Monday-Friday	BH - CP Program Manager	- - - - - - - - - -
Administrative Assistant .2 FTE	8 hours per week per team Monday-Friday	BH - CP Program Manager	- - - - - - - - - -
LMHP Clinical Care Manager .4 FTE	3.2 hours per day per team Monday-Friday	BH - CP Program Manager	Care Coordinator
Care Coordinator 5 FTEs	40 hours per day per team Monday-Friday	Clinical Care Manager	Some will be persons with lived experience .
Peer Specialist 1 FTE (note: This FTE is static, e.g., does not vary by # teams)	40 hours per day per team Monday-Friday	Clinical Care Manager	

* Stated FTEs for these positions are when the program is fully operational.

** These positions will start part-time and increase to full-time as the program ramps up to full capacity

3. Recruitment and Job Descriptions

BHPMW will implement multipronged strategies to ensure recruitment and retention of excellent employees at all levels. BHPMW will subcontract to one of the CEs, Advocates, who will use two full time recruiters to coordinate recruitment activities for BHPMW BHCP staff and for Advocates staff who will provide CP supports. The other CEs and AP will use their Human Resources departments and protocols to hire staff they will employ to deliver CP supports. Activities will include online recruitment through BHPMW partner agencies' websites and engaging candidates through social and networking sites such as LinkedIn, Facebook and Google+. Supervisors will be trained in effective interviewing techniques and consistent hiring practices to support the engagement of qualified candidates throughout the hiring process. Open positions will be posted to online job boards: Indeed, Jobs with Heart, area graduate school job boards, applicable professional membership groups, and NASW job link. Job postings will be shared on internal communications and newsletters as "job of the week" and highlighted as part of each agency's employee referral bonus program. The recruiters will reach out to personal and professional connections through current employees, such as Nurses and Case Managers in Adult Family Care with cultural and linguistic competence in serving Mandarin, Cantonese, Vietnamese, and Spanish speaking populations; and bilingual Clinicians in Outpatient and Emergency services with experience serving individuals in Latino and Brazilian communities.

Many employees across the five partner agencies have academic affiliations, e.g., teach or are field advisors, and those relationships will be tapped for potential candidates. Internship programs are also a source of excellent candidates. Open positions will be featured in on-site job fairs so candidates can speak directly with hiring managers.
Recruitment will begin upon notice of contract award, before the actual contract starts. Several key leadership positions are already in place using leased or in-kind staff from BPHMW CEs and AP. Remaining positions will be advertised immediately upon award. The Program Director will be the first employee hired. Recruitment staff will screen candidates to match them to other job vacancies; the Executive Director and/or Program Director will interview. Recruitment staff will ensure all necessary reference checks are completed prior to extending offers, and all background checks/CORI will be completed in compliance with Massachusetts law. BHCP will work toward filling all positions in time for staff training to occur before the contract start date.

Job descriptions for each position are attached.

4. Cultural and Linguistic Recruitment

The recruiters with whom BHPMW will work understand the inherent challenges in hiring bilingual or multilingual staff. They have developed effective recruiting strategies that have resulted in Advocates hiring: eight therapists who are fluent in Spanish and two therapists who speak Portuguese in outpatient services; staff who speak nine languages in Adult Family Care; staff who speak Mandarin, Cantonese, and Vietnamese in Family Support Centers and residential programs; and Deaf and hearing staff who are fluent in American Sign Language (ASL). They have found the most effective recruiting strategies to include advertising in local native language newspapers, reaching out to networks of professionals, and most importantly, working with existing multi-lingual and multi-cultural staff to identify potential employees. The recruiters have found that the most effective recruiting strategy is recruitment from current employees. These strategies – along with the usual linkages with on-line advertising, networking with local schools and colleges and traditional print advertising – will be used to recruit from diverse communities.

In addition to the recruitment strategies described above in section 7.3.E.3, specific strategies for the recruitment of staff from cultural and linguistic communities will include: employee referral; internal employee transfers and promotions; tapping relationships with area colleges and universities including career center staff as well as professors; attending school career fairs and information sessions; and connecting with professional membership groups such as National Association of Black Social Workers (NABSW), National Association of Puerto Rican Hispanic Social Workers (NAPRHSW), National Council for Behavioral Health, Latino Social Workers Organization (LSWO), and MA Mental Health Counselor Association (MaMHCA).

5. Staff Orientation and Training

All staff will be oriented to the BHCP model, BHPMW BHCP program, and all related policies, procedures and protocols. They will also be trained on the use of evidence-based practices (EBPs), which requires rigorous training. The systems-contextual (SC) training model for dissemination and implementation efforts underscores the importance of the provider, client, and organizational variables that influence training and consequent provider uptake and adoption of EBPs. Change in community provider behaviors (e.g., adherence, competence and skills) and client outcomes only occurs when interactive and experiential training addresses each level of the SC model and includes active learning (Sanders & Turner, 2005; Turner & Sanders, 2006). BHPMW's framework for orientation and training is based on the SC training model and the current "gold standard" of training in EBPs which includes the initial orientation based on a workshop modality with manuals, experientials and participant documentation, as well as

ongoing clinical training and supervision (Sholomskas, Syracuse-Siewert, Rounsaville, Ball, & Nuro, 2005).

The Initial Orientation Training as well as Annual Refresher Training modules are evidence-based and will be staff-integrated (nursing, clinical care managers, care coordinators, others) to promote thorough cohesion and engagement of provider staff, and participation will be documented for compliance tracking. Through this structured, interactive orientation and training plan, BHPMW will promote an atmosphere of service delivery and outcomes excellence.

Initial Orientation and Training Agenda

BHPMW will hold the CP contract with EOHHS and each CE and AP will employ staff (RN, Clinical Care Mangers, Care Coordinators, Peer Specialists, and others) to provide CP supports. BHCP staff will attend initial orientation at their respective agency employer. Staff across the BHPMW BHCP will then be brought together at a central location for a full day orientation to the BHCP program, the delivery of CP supports, and the EBPs they will be using. Additional training sessions will be conducted before the contract start date. Orientation and training topics include:

Program Overview: BHCP model; BHPMW BHCP structure and the roles and services offered by each CE and AP; and BHCP policies, procedures, protocols and plans including protocols for delivering each CP support and activity

Person-Centered Treatment Planning Module, based on EOHHS standards; ATTC Network: engaging in collaborative conversations directed by clients in partnership with care providers and natural supports; fostering a recovery orientation in care planning discussion; and treatment planning endorsed by members which addresses their needs and preferences

Cultural Competency Module, based on the American Counseling Association and CLAS Standards: awareness of own cultural values and biases; limits of own competencies and expertise; comfort level with differences; knowledge about own racial and cultural heritage and its effects on others; and knowledge about own social impact on others

Accessibility and Accommodations Module, based on EOHHS standards: written information availability and oral interpretation services accessibility in prevalent non-English languages; alternate format information availability and accessibility for special needs; and Enrollee coordination and accommodation of visits with Care Coordinators

Independent Living and Recovery Principles Module, based on SAMHSA National Council on Independent Living: peer support; information and referral; individual and systems advocacy; independent living skills training; transition; and BH/Recovery Support Navigators

MassHealth State Plan LTSS and Eligibility Criteria Module, based on EOHHS standards: eligibility criteria; co-occurring and LTSS needs; managing and coordinating care; and supporting transitions in care

HeClth and Wellness Principles Module, based on SAMHSA's Eight Dimensions of Wellness: emotional - coping effectively with life and creating satisfying relationships; environmental - good health by occupying pleasant, stimulating environments that support well-being; financial - satisfaction with current and future financial situations; intellectual - recognizing creative abilities and expanding knowledge and skills; occupational - personal satisfaction and enrichment from one's work; physical - recognizing the need for physical activity, healthy foods, and sleep; social - developing a sense of connection, belonging, and a well-developed support system; and spiritual- expanding a sense of purpose and meaning in life

Motivational Interviewing Module, based on Rollnick and Miller: express and show empathy; support and develop discrepancy; deal with resistance; support self-efficacy; and autonomy

Trauma-Informed Care Module, based on SAMHSA TIP 57: safety; trustworthiness and transparency; peer support and mutual self-help; collaboration and mutuality; empowerment, voice and choice; and cultural, historical and gender issues

Conflicts of Interest and Mitigation Module: conflicts of interest defined; personal conflicts of interest/organizational conflicts of interest implications; identifying potential conflicts; overview of organizational conflict of interest mitigation plans.

Each CP staff person will attend an annual refresher training that will review the training modules from the Initial Orientation Training; other select training topics will be presented in more depth on an annual basis. One additional training priority will be Community Health Worker competencies. The Spectrum Vice President of Clinical Development will take the lead in developing training modules to prepare Care Coordinators and other staff in these skill areas. Training on common medical conditions will be included. Training will also be provided on additional EBPs: wraparound, peer support and shared decision making. Program outcome measures will be used to identify areas that need improvement and training will be tailored to address those areas. Per policy, staff will be required to complete a post-test to indicate understanding of the topic presented. Staff identified as needing more training in a specific area will be directed to their supervisor to correct the deficiency.

6. Staff Retention Strategies

Retention of highly qualified knowledgeable staff is achieved through creating a work environment in which all staff are valued, staff are offered opportunities to learn and grow and a meaningful connection is made between the individual staff role and the mission and philosophy of the larger agency. It starts at the initial interview process by offering candidates insights on actual experiences and discussing all aspects of the job (known as a realistic job preview). Once hired, staff orientation at each provider agency is important in providing necessary trainings and certifications; opportunities to meet various leaders who conduct orientation sessions; and an accurate job description.

BHPMW and the CEs and AP will maintain an Open Door Policy, encouraging employees to feel comfortable speaking with anyone through all levels of the organization. A Problem Resolution Process will be in place to facilitate the communication of issues or concerns that arise through proper leadership channels; and to ensure issues are addressed in a timely and appropriate manner. As BHPMW operations are established, retention activities will be initiated such as team building opportunities, employee satisfaction surveys, longevity awards, peer nominated awards, and employee appreciation and recognition activities/events.

BHPMW will offer employees a comprehensive benefits package including medical, dental and vision insurances, tuition reimbursement and a 401(k) plan. BHPMW staff will be able to access services through Advocates Employee Assistance Program. A generous paid time off program will be offered that will increase with length of employment.

Professional development opportunities will be provided by each CE and AP. BH CP staff will be able to access required and professional development training sessions offered by partner agencies including agency sponsored CEU training opportunities.

BHPMW, LLC FUNCTIONAL JOB DESCRIPTION

Job Classification:	**Behavioral Health Community Partner Program Manager**
Reports to:	**Director of Population Health / Quality Management**
Supervise:	**Clinical Care Managers**
FLSA Status:	**Exempt**

Job Summary:

The Behavioral Health Community Partner Program (BHCP) Manager develops and manages the daily operations of the Behavioral Health Community Partners care management service line on-site at respective BHPMW BHCP consortium entities (CE) and affiliated partner (AP) agencies. This position oversees all CP Teams and the provision of all CP supports within the assigned CE or AP.

Essential Functions:

1. Lead the development and management of the BH CP at respective agency; serve as agency liaison to the BHPMW for the BHCP program.
2. Develop multi- disciplinary staffing pattern, within the BH CP at respective agency to provide BH CP services.
3. Hire, train, supervise, and evaluate clinical care managers, RNs and Quality Manager. Maintain consistent communication with staff and conduct regularly scheduled staff meetings. Provide and document clinical supervision to service line staff. Provide back up to service line staff as needed during emergencies or staff vacancies.
4. Oversee the receipt of Assigned Enrollees from the BHPMW BHCP and assign them to Care Teams.
5. Provide direct services within the care management services lines, including assessment and care plan development, as needed and appropriate.
6. Ensure that care management services are delivered in accordance with BHPMW clinical philosophy. Create and maintain a welcoming, recovery oriented, trauma informed, culturally sensitive environment and treatment approach. Ensure that clients are treated with dignity and respect in accordance with BHPMW's Human Rights Policy.
7. Collaborate with the BHPMW Director of Population Health / Quality Management and Compliance Officer in ensuring that the provision of care management services complies with BHPMW BHCP policies, procedures and quality standards as well as licensing, regulatory, and payer requirements.
8. Collaborate with other BHPMW providers and community resources to provide and obtain consultation, and access services needed by persons served in the care management program.
9. Collaborate with the BHPMW Director of Population Health / Quality Management to identify and measure care management outcomes, consistent with the needs of persons served and the goals of payers.
10. Working with the BHPMW Program Director and Director of Population Health / Quality Management, ensure management of BHCP service delivery including meeting contractual requirements and billing and outcomes data is reported as required.
11. Identify community providers and related agencies to be developed as community resources, to meet the needs of persons served in the care management program.
12. Perform all duties in accordance with the agency's policies, procedures and standards.

Please note: The essential functions listed in this section are not limited only to the tasks listed and may include other duties as assigned.

Qualification/Education/Experience:

1. MA/MS/MSW degree in social work, behavioral health, human services, healthcare or a related field, or RN with experience in one of these fields
2. Massachusetts clinical license required, independent practice licensure preferred.
3. Minimum of five years of clinical experience, two years of intake and/or care coordination experience required. Two years of supervisory and management experience preferred. Any of these experiences may overlap.
4. Demonstrated knowledge base and judgment necessary for independent clinical decision making. 5. Training in care coordination and integration of medical and behavioral health services preferred.
6. Experience developing and managing internal and external relationships.
7. Strongly prefer that a candidate will have a demonstrated understanding of and competence in serving culturally diverse populations.
8. Ability to read and write English and communicate effectively in the primary language of the program to which he/she is assigned.
9. High energy level, flexibility, superior interpersonal skills, and ability to function in a multidisciplinary team atmosphere while also working independently.
10. Strong skills in the areas of organization, follow through, collaboration, customer service, problem solving, and negotiation.
11. Commitment to BHPMW and partner agencies' values, missions, and goals.
12. Computer skills, including Word, Excel and Outlook, ability to learn new systems, and experience working with data
13. Valid driver's license and access to insured auto.
14. Ability to perform each essential duty satisfactorily.

Physical Demands:

The physical demands described here are representative of those that must be met by an employee to successfully perform the essential functions of this job. Reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions.

General requirements:

1. Full upper extremity range of motion
2. Full lower extremity range of motion

***Continuous:** Hearing, talking

***Frequent:** Standing, sitting, walking

BHPMW, LLC FUNCTIONAL JOB DESCRIPTION

Job Classification:	**Care Coordinator**
Reports to:	**Clinical Care Manager**
FLSA Status:	**Exempt**

The Behavioral Health Community Partner (BHCP) Care Coordinator provides CP supports and activites to Assigned Enrollees.

Essential Functions:

1. Utilize effective, dignified, empowering and creative engagement strategies to ensure Enrollees are at the center and lead in their BHCP services.
2. Conduct outreach and engagement activities with Assigned Enrollees and engage them in enrolling in the BHCP program.
3. Complete comprehensive assessment in a collaborative manner with Engaged Enrollees, under the supervision of the Clinical Care Manager, and with input from Care Team members and other stakeholders. Conduct annual re-assessments.
4. Develop a person-centered treatment plan with each Engaged Enrollee, under the supervision of the Clinical Care Manager, and with input from Care Team members and other stakeholders. Update the treatment plan according to required timeframes.
5. Develop advanced directors, acute care plans, and/or crisis plans with Engaged Enrollees as needed.
6. Work with Engaged Enrollees to assemble Care Teams and facilitate all communication and coordination with the team.
7. Support Engaged Enrollees during care transitions including attendance at discharge planning meetings, face to face meetings post discharge, ensuring linkages with all needed services and supports, and facilitating Enrollee participation in those services.
8. Assist the RN with medication reconciliation functions as needed and requested, such as information collection.
9. Provide health and wellness coaching to Engaged Enrollees and assist them identifying and utilizing health and wellness supports in the community.
10. Connect Engaged Enrollees to all needed services and supports including those that address social needs that affect health. Facilitate ongoing connection.
11. Collaborate with existing providers, Care Team members, state agency staff, and all other stakeholders and delivers CP supports and activities in accordance with Enrollee's person centered treatment plan.
12. Participate in BHCP team meetings and each Engaged Enrollee's Care Team to ensure effective communication among all disciplines and stakeholders involved in the person's care.
13. Identify community resources and develop natural supports for client.
14. Participate in all required orientation and training.
15. Learn all BHCP policies, procedures, protocols and plans and deliver CP supports and activities in compliance with them.
16. Develop knowledge about all focus populations.
17. Learn evidence based practices identified by the BHCP and deliver CP supports and activities in compliance with them.
18. Complete all required documentation in a timely manner.

19. Attends and actively participates in supervision and staff meetings.
20. Consults with Clinical Care Managers, RNs and other CP Team members as needed around clinical, medical and other matters.
21. Provide on-call coverage, as needed.
22. Ensure that all clients are treated with dignity and respect in accordance with BHPMW's Human Rights policy.
23. Perform all duties in accordance with the agency's policies and procedures.
24. Strictly follow all agency Performance Standards.

Please note: The essential functions listed in this section are not limited only to the tasks listed and may include other duties as assigned.

Qualification/Education/Experience:

1. Minimum of 2 years experience working with adults in a community-based and/or medical setting; BA/BS degree in a related field preferred.
2. Demonstrated knowledge base and judgment necessary for independent decision making.
3. Excellent verbal and written communications skills. Strong interpersonal and customer relations skills required.
4. Excellent organizational, time management and problem solving skills.
5. Ability to openly address and acknowledge issues of substance use and mental illness.
6. Knowledge regarding psychiatric rehab and understanding of recovery model.
7. Must be able to perform each essential duty satisfactorily.
8. Strongly prefer that a candidate will have lived experience with mental health, substance use, and/or social needs that affect health.
9. Strongly prefer that a candidate will have a demonstrated understanding of and competence in serving culturally diverse populations.
10. Ability to develop and maintain satisfactory working relationships with employees and providers.
11. Must hold a valid drivers' license. Must have access to an operational and insured vehicle and be willing to use it to transport members.
12. Ability to read and speak English.

Physical Demands:

The physical demands described here are representative of those that must be met by an employee to successfully perform the essential functions of this job. Reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions.

General requirements:

1. Full upper extremity range of motion

BHPMW, LLC FUNCTIONAL JOB DESCRIPTION

Job Classification:	LMHP **Clinical Care Manager**
Reports to:	**Behavioral Health Community Partners Program Manager**
Supervises:	**Care Coordinators**
FLSA Status:	**Exempt**

Job Summary:

The Clinical Care Manager is assigned to Enrollees. The CCM provides direct CP supports and activities to Assigned and Engaged Enrollees and supervises a team of Care Coordinators within the assigned BHPMW BHCP consortium entity (CE) or Affiliated Partner (AP).

Essential Functions:

1. With the BHCP Program Manager hire, train and supervise BHCP Care Coordinators.
2. Motivate and lead a high performance team; provide supervision, mentoring and professional development opportunities.
3. Collaborate with team members to implement measures that decrease episodic care and meet quality outcomes.
4. Coordinates either directly or through the supervision of Care Coordinators, all aspects of CP service delivery with team members.
5. Utilize effective, dignified, empowering and creative engagement strategies to ensure Enrollees are at the center and lead in their BHCP services.
6. Conduct outreach and engagement activities with Assigned Enrollees and engage them in enrolling in the BHCP program, and supervise Care Coordinators in providing this CP support.
7. Complete comprehensive assessment in a collaborative manner with Engaged Enrollees, with input from Care Team members and other stakeholders. Conduct annual re-assessments. Supervise Care Coordinators in performing these functions related to assessments. Review all assessments completed by Care Coordinators.
8. Develop a person-centered treatment plan with each Engaged Enrollee, with input from Care Team members and other stakeholders. Update the treatment plan according to required timeframes. Supervise Care Coordinators in performing these functions related to treatment plans.
9. Develop advanced directors, acute care plans, and/or crisis plans with Engaged Enrollees as needed. Supervise Care Coordinators in developing these plans.
10. Work with Engaged Enrollees to assemble Care Teams and facilitate all communication and coordination with the team. Supervise Care Coordinators in performing these functions related to Care Teams.
11. Support Engaged Enrollees during care transitions including attendance at discharge planning meetings, face to face meetings post discharge, ensuring linkages with all needed services and supports, and facilitating Enrollee participation in those services. Supervise Care Coordinators in performing these functions related to care transitions.
12. Assist the RN with medication reconciliation functions as needed and requested, such as information collection.
13. Provide health and wellness coaching to Engaged Enrollees and assist them identifying and utilizing health and wellness supports in the community. Supervise Care Coordinators in performing these functions related to health and wellness.

BHPMW, LLC FUNCTIONAL JOB DESCRIPTION

Job Classification:	**Peer Specialist / Recovery Coach / or Family Partner**
Reports to:	**Behavioral Health Community Partners Program Manager**
FLSA Status:	**Exempt**

Job Summary:

The Peer Specialist / Recovery Coach / or Family Partner will provide work with the Behavioral Health Community Partners (BHCP) team to support Enrollees participating in CP supports and activities. A Peer Specialist will also assist with the development of the BH CP Consumer Advisory Council in the first year of operation.

Essential Functions:

1. Utilize effective, dignified, empowering and creative engagement strategies to ensure Enrollees are at the center and lead in their BHCP services.
2. Model recovery principles and practices within the BHCP Team.
3. Provide support to outreach, engage and assist enrollees in identifying their recovery goals and developing recovery plans.
4. Provide linkages to recovery-oriented, peer support self-help supports and services and community based mental health, substance use disorder, and family supports programs.
5. Provide assistance with navigating the healthcare system and provide support/assistance with transitions in care.
6. Provide support to individuals while they are in the hospital, detoxification programs, 24-hour levels of care and other levels of care, emergency departments, and out-of-home placements as well as selfhelp groups and 12-step programs.
7. Provide assistance with solving problems directly related to recovery, including finding sober housing, making friends, finding new uses of spare time, and improving one's job skills.
8. Provide health and wellness coaching to Engaged Enrollees and assist them identifying and utilizing health and wellness supports in the community.
9. Participate in all required orientation and training.
10. Learn all BHCP policies, procedures, protocols and plans and deliver support to Enrollees in compliance with them.
11. Develop knowledge about all focus populations.
12. Learn evidence based practices identified by the BHCP and deliver services in compliance with them.
13. Assist with identifying and engaging Consumer Advisory Board members and support them in their participation.
14. Actively participate in team meetings and supervision to ensure effective communication.
15. Complete all required documentation in a timely manner in accordance with department, agency and contractual guidelines and requirements.
16. Advocate for individual's needs within the program as well as with external agencies.
17. Ensure that individuals receiving services are treated with dignity and respect in accordance with BHPMW's Human Rights Policy.
18. Perform all duties in accordance with the agency's policies and procedures.
19. Strictly follow all agency Performance Standards.

Please note: The essential functions listed in this section are not limited only to the tasks listed and may include other duties as assigned.

Qualification/Education/Experience:

1. Training and certification appropriate to the role; recovery coach or certified peer specialist or family partner training is preferred. If candidate does not have relevant training/certification at the time of hire, training will be arranged by BHPMW and will be required within 6 months of hire.
2. Must have lived experience with mental health, substance use conditions, or family supporting a family member with behavioral health challenges; and be in recovery, if applicable. Prefer current or former recipient of behavioral health services.
3. Ability to use an Electronic Health Record to document medically necessary clinical services.
4. Must be able to perform each essential duty satisfactorily.
5. Ability to communicate effectively verbally and in writing.
6. Strongly prefer that a candidate will have a demonstrated understanding of and competence in serving culturally diverse populations
7. Must have valid driver's license and access to auto.
8. Ability to read and speak English.

BHPMW, LLC FUNCTIONAL JOB DESCRIPTION

Job Classification:	**Quality Manager**
Reports to:	**Behavioral Health Community Partner (BHCP) Program Manager**
FLSA Status:	**Exempt**

Job Summary:
The Quality Manager is responsible for ensuring the implementation of the BHPMW BHCP's quality improvement plan within the assigned consortium entity (CE) or affiliated partner (AP) provider agency.

Essential Functions:

1. Develop, implement, and monitor, in collaboration compliance, the BHCP Program Manager and the BHCP Director of Population Health and Quality Management on-site systems that track and monitor internal and external quality measures, and includes procedures for quality assurance and improvement.
2. Ensure implementation of BHPMW BHCP's annual quality improvement plan, quality improvement activity, and other components of the quality program within the BHCP program at the assigned CE or AP agency.
3. Facilitate flow of quality related data and information to and from the BHPMW BHCP and the assigned CE or AP agency.
4. Serve as a member of the BHPMW BHCP's Quality Management Committee. Bring all outcomes of that committee to the BHCP at the assigned CE or AP agency.
5. Implement metrics and performance targets that assess compliance with the BHCP program and quality on-site at their respective agency. Conduct chart review and other data collection. Facilitate the CP Team's participation in the Engaged Enrollee satisfaction survey.
6. Facilitate reporting and tracking of grievances and critical incidents. Monitor external and internal investigations and conduct investigations as needed.
7. Maintain documentation/reporting related to performance oversight, including but not limited to schedules of audit and monitoring activities, and follow-up with corrective actions
8. Participate in all required orientation and training.
9. Learn all BHCP policies, procedures, protocols and plans appropriate to the Quality Manager position.
10. Develop knowledge about all focus populations and assist CP Team members in doing so.
11. Learn evidence based practices identified by the BHCP and support CP Team members in implementing them.
12. Attend and actively participate in supervision and staff meetings.
13. Ensure that all clients are treated with dignity and respect in accordance with BHPMW's Human Rights policy.
14. Perform all duties in accordance with the agency's policies and procedures.
15. Strictly follow all agency Performance Standards.

Please note: The essential functions listed in this section are not limited only to the tasks listed and may include other duties as assigned.

Qualification/Education/Experience:

1. MA/MS degree in Social Work or related field and 3 years' experience in Human Services quality/risk management.
2. Must be able to perform each essential duty satisfactorily.
3. Ability to communicate effectively in writing and ability to use good judgment.
4. Ability to read English and communicate effectively in the primary language of the programs as assigned.
5. Must possess excellent assessment and interviewing skills
6. Strong analytical, numerical and reasoning abilities.
7. Ability to manage multiple complex projects in varying stages of development.
8. Must have strong knowledge of computers.
9. Strongly prefer that a candidate will have a demonstrated understanding of and competence in serving culturally diverse population.
10. High energy level, superior interpersonal skills, and ability to work independently and function in a team atmosphere.
11. Ability to execute a variety of decision-making models.
12. Must hold a valid driver's license. Must have access to an operational and insured vehicle and be willing to use it to transport clients.

Budget Preparation Period : August 2017 to March 2018									
Community Education and Marketing (continued)	Establish individual outreach & informational meetings for area stakeholders e.g., ACO, MCO, potential qualitative referral sources								
	Visit primary care practices to introduce the BHCP, foster relationships, develop protocols for collaborating on Care Teams, treatment plans & ongoing care coordination.								
	Outreach to Enrollees with pre-existing relationships with the CEs & AP who may be eligible for CP supports to educate about the CP program & how to enroll after contract start date								

*** A primary domain was selected for each task, recognizing that some tasks address more than one domain.**

Quarterly Implementation Plan and Timeline: Budget Periods 1-5

Domain	Task	Q1	Q2	Q3	Q4
	Budget Period 1: April 2018-December 2018				
	Participate in quarterly meetings with EOHHS				
Contracting and EOHHS contract management	Provide EOHHS with performance report 7 days prior to quarterly meetings				
	Participate in trainings, community forums, learning collaboratives, meetings, and events as requested by EOHHS				
	Establish regular meetings with ACOs and MCOs with contractual agreem with BHCP				
	Submit monthly member status report				
Reporting	Notify EOHHS, ACOs, MCOs of capacity to take new referrals in CP				
	Submit all quarterly reporting to EOHHS				
	Submit Semiannual Progress Report to EOHHS by date determined by EOHHS				
Governance	Report all data related to Quality Score and DSRIP Accountability Score				
Structure	Conduct quarterly Governing Body Executive Committee meetings				
Implementation and Operations	Begin BHCP operations				
	Accept Assigned Enrollees to meet or exceed value projections for Budget Period 1				
	Hold bimonthly to quarterly BHPMW contract management meetings wit each CE & AP to review data, performance & contract compliance & develop improvement plans as needed				
	If CE Advocates becomes contracted as an LTSS CP via another bid, establish protocols and mechanisms for collaboration between the BH ar LTSS CPs.				
Budget, Finance and Billing	Process monthly billing in a timely & efficient manner across CP				
	Receive care coordination PMPM payments from EOHHS & reimburse CEs & AP for CP supports				
	Implement system to monitor DSRIP infrastructure spending and related reporting				
	Conduct financial consultation meeting with PCG				
	Submit a Budget Report & Budget Narrative for Budget Period 2 to EOHHS for approval				
Information Technology	Revise DSRIP Participation Plan & resubmit to EOHHS for approval upon s cant changes				
	Assess Engaged Enrollee needs & research Mobile Health Applications to implement in Period 2				
	Maintain a care management system to document CP supports, Qualifying Activities, & Enrollee info in compliance with Model Contract				
	Maintain processes to determine the validity & completeness of data sub ed to EOHHS				

Domain	Task	Q1	Q2	Q3	Q4
	Subscribe & connect to a statewide Event Notification System once developed by EOHHS				
	Implement care management software				
Care Management Software	Continue regular meetings with care management software vendor to operationalize system				
	Provide ongoing staff training on system and any enhancements				
	Budget Period 1: April 2018-December 2018 (continued)				
Interpreter and Translation Services and/or other solutions	Implement software, language line, and/or other solution for interpreter & translation services **software**				
	Provide ongoing staff training on system & any enhancements				
Quality Improvement, Data Analytics and Compliance	Conduct quarterly Quality Management Committee (QMC) meetings				
	Submit annual QI Plan to EOHHS				
	Train QMC & staff on QI Plan and Plan Do Study Act QCI model				
	Implement QI Plan				
	Implement quality initiative for Budget Period 1, train staff on related best practices, track data, measure progress, bring data to QMC & CAB				
	Evaluate fidelity & impact of Evidence Based Practices & best practices, provide continued training, continue to identify & integrate additional				
	Work with Compliance Officer & legal counsel to ensure all compliance issues are addressed				
	Implement internal systems for outcomes measurement & data analytics consistent with BHCP metrics				
	Participate in EOHHS administered Engaged Enrollee experience survey				
	Meet with EOHHS at least annually to review progress in meeting quality & accountability measures				
	Establish quality initiative for Budget Period 2				
	Recruit CAB members				
Consumer Advisory Board (CAB)	Conduct quarterly CAB meetings				
	Track CAB activities for inclusion in BHCP's Annual Report to EOHHS				
Policies, procedures, protocols, plans	Implement all policies, procedures, protocols, and plans				
	Track & report grievances, review data at QMC				
	Track & report critical incidents				
	Deliver all CP Supports & implement all CP supports protocols				
	Implement health & wellness programs				
Community Partner Supports	Update network of resources & ensure staff access				
	Implement protocols for recommending Flexible Services to Engaged				

	Enrollee's ACO				
	Continue to train staff on protocols & resources				
	Continue to recruit, hire, orient & train staff consistent with volume proje s & ramp up plan				
Workforce Development	Conduct orientation & training for newly on boarded staff				
	Conduct ongoing training for all staff consistent with training plan				
Community Partnerships and Resources	Update collaborative relationships with community based organizations & state agencies				
	Identify gaps in resources based on Engaged Enrollees and care coordina feedback and locate resources to address needs				

Budget Period 1: April 2018-December 2018 (continued)

	Go live with website				
	Continue to conduct individual outreach & informational meetings for ar stakeholders e.g., ACOs, MCOs, potential qualitative referral sources				
Community Education and Marketing	Identify PCPs with high volume of Engaged Enrollees & conduct visits introduce the BHCP, foster relationships, develop protocols for collaborating on Care Teams, treatment plans & ongoing care coordinati				
	Continue to outreach to Enrollees with pre-existing relationships with the CEs & AP who may be eligible for CP supports to educate about the CP program & how to enroll				

Domain	Task	Q1	Q2	Q3	Q4
	Budget Period 2: January 2019 to December 2019				
Contracting and EOHHS contract management	Participate in quarterly meetings with EOHHS				
	Provide EOHHS with performance report 7 days prior to quarterly meetings				
	Participate in trainings, forums, learning collaboratives, meetings, & events as requested by EOHHS				
	Continue regular meetings with ACOs and MCOs with contractual agreements with BHCP				
	Submit monthly member status report				
	~~Notify EOHHS, ACOs, MCOs or capacity to take new referrals in CP~~				
	Submit all quarterly reporting to EOHHS				
Reporting	Submit Annual Report for Budget Period 1 within 60 days of end of that Period				
	Submit Semiannual Progress Report to EOHHS by date determined by EOHHS				
	~~Report all data related to Quality Score and DSRIP Accountability Score~~				
Governance Structure	Conduct quarterly Governing Body Executive Committee meetings				
Implementation and Operations	Continue to accept Assigned Enrollees to meet or exceed value projections for Budget Period 2				
	Hold bimonthly to quarterly BHPMW contract management meetings with each CE & AP to review data, performance & contract compliance & develop improvement plans as needed

G. Budget Report and Budget Narrative

The Budget Report and Budget Narrative, using Attachments B and C, are attached.
See Budget and Budget Narratives in the BH Attachment A with Staffing Template.

H. Sustainability

BHPMW BHCP will strive to sustainably fund the proposed infrastructure and capacity building investments and CP supports over the Contract Term and after the initial Contract Term.

During the five year Contract Term, BHCP will sustain funding of CP supports through meeting all contract requirements and appropriately maximizing revenue by: efficiently enrolling as many members as possible as quickly as possible into the BHCP; submitting a "Treatment Plan Complete" Qualifying Activity by the end of the third month after the Enrollee signs the participation form; conducting at least one Qualifying Activity for all Assigned and Engaged Enrollees per month and billing as allowed and required in the contract; and developing and managing accurate and efficient processes for billing of Qualified Activities. BHCP will sustain funding of the proposed infrastructure and capacity building investments through these mechanisms, thereby maximizing enrollment and infrastructure investments, and by timely and efficient implementation of all proposed infrastructure and capacity building projects.

BHPMW will be flexible in developing alternative funding mechanisms as the demonstration progresses and potential sustainability strategies unfold. Ultimately, the intent of MassHealth's waivers is to change the way the health care system does business, resulting in BHCPs and other providers achieving cost efficiencies during the five year demonstration period. Integral to this vision, if implemented as intended, the BHCP will significantly impact where and how high-cost Enrollees receive physical and behavioral health services and other supports, which is also expected to achieve cost savings. BHPMW BHCP's goal is to achieve these cost savings and assist the MCOs and ACOs to realize delivery system efficiencies in an amount greater than ongoing infrastructure costs.

As referenced in 7.3.J., BHPMW believes the key to achieving long term sustainability with the ACOs and MCOs is to demonstrate the BHCP's value through the work of the CP teams with the ACOs and MCOs members, their primary and specialty medical provider networks and their internal care management programs. As described in section 7.3.C., BHCP's engagement with PCPs, specialty providers, ACOs and MCOs begins prior to contract implementation and is integrated throughout BHCP's delivery of all the CP supports and activities. Through these efforts and good outcomes data, BHCP's goal is to demonstrate enough value to motivate the ACOs and MCOs to develop plans for sustaining CP supports or similar care coordination services after the five year period. Then, BHCP can work with MCOs and ACOs to develop new payment methodologies and/or contracts to sustain CP supports and infrastructure and capacity building investments after the initial Contract Term.

It is anticipated that during the initial Contract Term, the ACOs and MCOs will have already worked with BHCP and other providers to develop alternative payment methodologies (APM).

APMs could be created for care management services, direct BH services, or both, resulting in some or all these services being reimbursed in new ways after the Contract Term.

Contingency plans for sustainability

A contingency plan may be the continuation or restoration of care management contracts with the MCOs and potentially expanding these to the ACOs. As listed in 7.2.D., some of the CEs and AP are currently contracted to provide integrated care management services with Beacon/NHP Here For You, MBHP Practice Based Care Management and CeltiCare Health. It is unclear if these care management contracts will continue during the BHCP initial Contract Term, perhaps to serve these
MCOs' members who are not eligible or do not enroll in the BHCP program, or if the MCOs will discontinue these contracts. After the contract Term, these care management contracts and/or similar models could be continued, resumed, and/or expanded, and could serve as a platform onto which BHCP-like services could be shifted.

Another contingency plan could be utilizing the Community Support Program (CSP) covered service, for which four of the five CEs and AP are contracted, to continue a level of care coordination services for members who had been enrolled in the BHCP demonstration program. Enrollees in the BHCP could continue to receive some care coordination services billed through this MassHealth covered service.

A final contingency plan to help sustain infrastructure would be to seek grant funding. BHPMW has been successful to date in securing such funding from various sources to begin to build the LLC's infrastructure to position the entity to bid on the BHCP contract. It is not expected that grant funding would be a stand-alone solution or even a primary funding source for sustaining CP supports or infrastructure. Foundations would not be a likely source to support ongoing CP operations; however, some foundations tend to support infrastructure and capacity building. Some could be interested in short term funding to support the development of specific APMs.

Structures and processes for sustainability and transition planning

BHPMW BHCP Governing Body Executive Committee and leadership staff understand that planning for sustainability must begin from the beginning of this initiative. Particular structures for sustainability planning will include ongoing financial consultation with Public Consulting Group and an Executive Committee meeting that will be devoted to this topic mid-way through Budget Period 3. At the beginning of Budget Period 4, BHCP will include this topic in all Executive Committee meetings, quarterly meetings with EOHHS and ongoing meetings with ACOs and MCOs.

In Budget Period 5, major attention needs to be paid not only to sustainability planning but also to transition planning, e.g., transitioning Enrollee CP supports to whatever programmatic model, alternative payment methodology, contract, program, and/or providers that will be in place after the five year waiver program ends. Planning will also likely need to be done around staff transitions. BHCP will convene a Sustainability and Transition Team at the beginning of the last budget period that will meet monthly and lead this planning. This group will be charged with writing a Sustainability and Transition Plan by the end of the first quarter for approval by the Executive Committee and discussion with EOHHS, ACOs and MCOs. As appropriate to their roles, BHCP will also inform and involve the following in sustainability and transition planning: Enrollees, staff, community partners and vendors.

I. Quality Management and Performance Monitoring

BHPMW will meet all quality management and quality improvement (QI) requirements in the Model Contract and be geared toward achieving good performance on the Quality and Accountability protocols in Appendix C through a multi-pronged QI program, QI plan, Quality Management Committee (QMC) and quality initiatives.

1. Quality Improvement Program

BHPMW BHCP's QI Program will be aimed at improving outcomes for Engaged Enrollees; addressing The Institute for Healthcare Improvement Triple Aim: 1. Improve the health of populations. 2. Reduce the per capita cost of healthcare. 3. Improve the patient experience; and positioning the BHCP to achieve positive outcomes on the individual measures and member experience survey in support of the BHCP's Quality Score and DSRIP Accountability Score.

The QI program will be comprised of:

Leadership: BHPMW leadership staff and senior staff in the CEs and AP will be committed to continuous quality improvement (CQI) and the goals of BHCP's QI program. There will be shared understanding that they must manage the program based on data and be agile to change course based on that data, the performance and outcomes they reflect, and learning from QI activities.

QI Structure: As described in J.3., the QI structure will include the QMC and the Governing Body Executive Committee, with various staff roles and responsibilities for the QI Program and Plan.

QI Plan: QI Plan will be established, submitted and approved by EOHHS annually, and maintained. It will include a systematic approach to improving processes and outcomes through the application of CQI principles and at least one specific QI initiative, which is implemented and evaluated annually, addressing at least one of the following areas: quality of life; chronic disease management; caregiver stress; community tenure; isolation and social connectedness; care coordination and care management; or care transitions.

Performance Measures: Performance measures will be based on the Model Contract requirements and aligned with the individual measures and member experience of care measures determined by MassHealth. To a great extent, the BHCP will utilize those measures as defined. Additional measures will be identified to improve processes and outcomes that support the individual and member experience survey measures. Measures will be selected based on their relevance and the frequency and depth of impact they can have; measurability within the BHCP's capabilities, resources, and access to needed data; and feasibility for the BHCP to realistically improve.

Performance Measurement: BHCP will collect the data needed to measure the identified metrics to monitor the selected aspects of the programs, systems, and processes

Performance Management: Goals will be set and progress toward achieving those goals will be checked regularly by reviewing data on the performance measures and taking action on the results to improve progress toward goals.

Plan Do Study Act (PDSA): This CQI approach will be utilized to understand the problem, target improvement, define measures, measure performance, spanning many components of the QI

program listed above. Many senior staff and others in the BHPMW, CEs and AP have been trained in PDSA and implemented this model.

Evidenced Based Practices (EBPs) and best practices: The practices that will be built into BHCP's delivery of CP supports include Motivational Interviewing, Peer Support, Shared Decision Making, Trauma Informed Care and Wraparound. Additional EBPs and best practices will be identified to address QI needs targeted in the annual quality initiatives.

Training and adoption: Staff will be trained on the EBPs and best practices. Performance standards and protocols will be established to ensure adoption and fidelity to the model.

Data Analytics: Data collection, reporting and analysis will be critical throughout many of the components of the QI Program. Advocates Data Analytics Department will lead data analytics for the BHPMW BHCP.

The Director of Population Health Management, who will also fulfill the required Quality Management Director position, will be responsible for developing, managing and implementing the QI Program, under the supervision of the Program Director, and with the approval of the Executive Director, QMC and Governing Body Executive Committee. Section J.3. details processes associated with implementing the QI program and annual quality initiatives.

2. Budget Period Initiative and Measures for Success

In Budget Period 1, BHPMW BHCP's initial quality initiative will be establishing Assigned Enrollees' timely Care Transition into the BHCP. The goal will be to optimize members' transitions from "Assigned" to "Enrolled."

To accomplish this goal, as discussed in 7.3.C.1., BHPMW will devote all resources to outreach and engagement during the first year to maximize the enrollment of as many members in BHCP as quickly as possible. The Care Coordinators (CC) and Clinical Care Managers (CCM), Peer Specialists, Recovery Coaches and Family Partners will conduct outreach and engagement activities with specific training and support from the BHCP program managers and quality managers at each CE and AP. EBPs will include peer support and motivational interviewing. BHPMW BHCP Director of Population Health will manage Enrollee assignments efficiently and train CP teams on outreach and engagement best practices. As noted in 7.3.C.2., staff will strive to complete the assessment and treatment plan within two months of initial assignment to allow one month to obtain PCP approval and submit a "Person-Centered Treatment Plan Complete" Qualifying Activity by the end of the third month.

Initial measures will include:

- the number and percent of Assigned Enrollees that become Engaged Enrollees
- the number of days from the Enrollee's assignment to the BHPMW BHCP to the Enrollee's signing of participation forms
- the number and percent of Assigned Enrollees that do not become Engaged Enrollees and the reasons for not engaging

BHCP will track this data beginning the first day of contract implementation and the data will be monitored continually by the Program Director and Director of Population Health. Data will be reviewed at the first QMC meeting during the first quarter of Budget Period 1, recognizing that data will be preliminary since the first group of Assigned Enrollees will still be in the first three month period. Data will be reported and analyzed for each CE and AP and for the entire

BHPMW BHCP. CCs, CCMs, Peer Specialists and other staff will be consulted about the strategies that are working to outreach and engage Assigned Enrollees and facilitate the care transition into the BHCP as an Engaged Enrollee. Their use of EBPs - motivational interviewing and peer support - at this stage will be assessed and other best practices identified.

3. Quality Management Committee (QMC) Composition and Functions

BHPMW BHCP will establish and maintain a QMC throughout the Contract Term. As outlined in 7.2.C., the QMC is one of three components of the BHPMW BHCP governance structure, along with the Consumer Advisory Board and the Governing Body Executive Committee. It will report to the BHCP Program Director and, through the Executive Director, to the Governing Body Executive Committee. Under the Program Director's supervision, the Director of Population Health will be responsible for organizing, planning, and convening the QMC and ensuring its responsibilities are completed and documented.

QMC membership will include: BHPMW BHCP Executive Director, Medical Director, Program Director, Director of Population Health Management; Advocates VP Data Analytics; and in each CE and AP, BHCP Quality Manager and a senior staff to whom the BHCP reports, totaling 15 members. The QMC will be responsible for developing the QI Plan and overseeing the QI Program and the PDSA CQI process. This group will meet quarterly to review data and plan and monitor QI activities.

In developing the annual QI Plan, QMC will identify at least one specific quality initiative to implement and evaluate within each Budget Period. The annual quality initiative for Budget Period 1 is specified in 7.3.J.2. In subsequent years, QMC will weigh the impact that a given process or other improvement target can have on BHCP Enrollees by considering these criteria: high volume, affecting a large number of members; high frequency; high risk, placing Enrollees at risk for poor outcomes; longstanding; multiple unsuccessful attempts to resolve in the past; strong and differing opinions on cause or resolution of the problem. QMC will review data, brainstorm opportunities for improvement, nominate and prioritize processes or outcomes to target and select the annual quality initiatives.

Another function of the QMC will be reviewing critical incidents. QMC will also oversee the use of EBPs and best practices, reviewing related data and recommending additional practices that would help to make progress toward established goals.

To facilitate the CQI process up through the reporting structure, on a quarterly basis, the Program Director will report on key findings, QI interventions and needs or barriers to the Executive Director, who will bring this information to the BHCP Governing Body Executive Committee. That group will review and approve the annual QI plan and, on an ongoing basis, give input and make decisions in response to the information from the QMC. The Program Director will also bring data from the CQI process and QMC meetings to the Consumer Advisory Board for review, input into selecting quality initiatives, and recommendations for strategies to make progress toward goals.

To extend the CQI process throughout the CEs and AP's, their senior staff and BHCP Quality Managers, who will be QMC members, will be responsible for bringing data, the PDSA CQI process and quality initiatives to their CP teams and implementing them accordingly. The Director of Population Health Management will work with the CEs and APS BHCP Quality Managers to ensure implementation of all aspects of the QI program.

J. Coordination with ACOs and MCOs

1. Communicating BHCP skills, expertise and value to potential ACOs and MCOs

Communicating BHPMW BHCP skills and demonstrating the value they will bring to the ACOs, MCOs, their primary and specialty care networks and their Engaged Enrollees will be critical to the operational success during the five year demonstration program and sustainability thereafter. BHPMW BHCP CEs and AP have relationships with numerous MCOs and payers as reflected in 7.2.D.1. A centralized approach will be utilized to communicate and outreach to the ACOs and MCOs for multiple purposes: relationship building, contracting, marketing and sustainability. BHPMW Executive Director Anne Pelletier Parker has primary responsibility for expanding relationships and managing the communication and contracting with these entities. She is well connected to the healthcare and health insurance industries in Massachusetts, particularly the MassHealth MCO and provider networks, and has expertise in care management, integrated care, program development and provider contracting in both public managed care and community-based provider settings. She will be supported by CEO/President/Executive Directors of the CEs and AP and other senior staff who have relationships with various payers and extensive experience in healthcare operations, model development, care delivery and contracting.

BHPMW has already begun leveraging these connections, meeting with multiple ACO pilots and applicants during the past year. Significant time has been spent with existing ACOs affiliated with MetroWest Medical Center and their physician groups, as many of them will be part of Fallon/Wellforce, a potential MassHealth ACO with Service Areas in the Central and North regions, consistent with those of the BHPMW BHCP. Initial contact has also been made with NEQCA leadership who will be part of Wellforce. Multiple contacts have been made with Steward Health Care and Reliant Medical Group as they have also applied to be ACOs in these Service Areas. These and other ACO contacts have focused on developing shared understanding of the general role of BHCP and the assets the BHPMW BHCP can offer: expertise in BH, LTSS, social determinants of health and many of the focus populations; integrated care management experience; community embeddedness and access to social services and community resources; a communitybased workforce that can connect with members in their homes and communities; and direct access to the CEs and AP's BH and other continuums of care.

While the development of high level relationships and contracts and formal marketing will be important, the most impactful way to demonstrate value is through the work of the CP teams with the ACOs and MCOs members, their primary and specialty medical provider networks and their internal care management programs. As described in section 7.3.C., engagement with PCPs, specialty providers, ACOs and MCOs begins prior to contract implementation and is integrated throughout BHCP's delivery of all the CP supports and activities.

2. Branding and Marketing Plans with ACOs and MCOs

With grant funding from the MetroWest Health Foundation, BHPMW has already worked with CEs marketing teams, a graphic designer, and website consultants to create a logo, design marketing sell sheets, and begin to envision a website. These tools will be used to reach out to ACOs and MCOs, Assigned and Engaged Enrollees and stakeholders who may identify members through the referral-based process. Because the BHPMW, LLC is

becoming operational in June/July 2017, offering a referral line to the greater MetroWest community, a marketing plan is already being implemented, including a kick-off event, press releases, mass mailing, and a social media strategy designed to build interest in and excitement about this new point of access to BH and other services. With this work well underway, BHPMW is strategically positioned to implement BHCP-specific marketing and communications. BHCP marketing plan will focus on increasing visibility and brand recognition and providing education with regard to this new program. BHCP print materials will be developed and stakeholder meetings and kick-off events will be held for MCOs, ACOs, PCPs, Enrollees and other stakeholders, highlighting the benefits of the BHCP in the redesigned MassHealth system. Ongoing editing of materials to meet the evolving needs of the developing program will provide an opportunity to promote best practices identified during early stages of implementation. Updated materials will highlight outcomes and cost savings that demonstrated the BHCP's value to the ACOs, MCOs and other stakeholders.

3. Engagement and Collaboration Strategies with ACOs and MCOs in Service Areas

As detailed above, BHPMW Executive Director and CEs and AP senior leaders have been actively involved in initial conversations with potential MCOs and ACOs. Attention has been paid to the ACO, MCO and CP procurements and efforts to ensure appropriate alignment of mission and goals. Partnering in a way that promotes the goal of health care integration for Enrollees with the greatest needs, promoting better outcomes in a more cost effective manner, will create the platform for collaboration with ACOs and MCOs. Applying this value proposition to multiple ACOs and MCOs in the BHCP's proposed Service Areas will require developing an understanding of each entity's membership, service delivery and care management models and clinical/quality/financial goals. BHCP Executive Director and Program Director will work with each ACO and MCO to develop a role, approach and protocols for the BHCP to be responsive to their priorities, promote integration and add value to their model. Planning for the sustainability of CP supports and related infrastructure will likely require individualized planning and solutions with each ACO and MCO.

Continued and consistent engagement with all ACOs and MCOs will include ongoing outreach, communication, responsiveness, and relationship building. As noted above, most critical to ongoing engagement will be the BHCP's outcomes related to the delivery of CP supports.

4. Conflict Resolution with ACOs and MCOs

BHPMW is committed to providing quality service that meets and exceeds all expectations of the BHCP program model; a collaborative approach to working with ACOs and MCOs; and providing excellent customer service to all stakeholders. Potential conflicts will be mitigated through comprehensive contract negotiations with explicit documentation of roles, expectations and deliverables. Ongoing communication among all parties and the use of data are essential to ensure smooth and transparent processes, promoting bidirectional adherence to established performance goals. Mutual familiarity, respect and trust that exists between the BHPMW, CEs and AP and some of the ACOs and MCOs will continue to be expanded, and will be assets in preventing and resolving conflicts that arise.

It is to be expected that conflicts will still occur from time to time. BHPMW will seek to reach a mutually agreeable solution with the ACO or MCO. The Program Director will address issues at an operational level and the Executive Director will do so at the senior level in the ACOs and MCOs. The Executive Director will utilize the BHCP governance structure outlined in 7.2.C.1.d.

for consultation and direct involvement, if needed. It is also anticipated that BHCP's contracts with ACOs and MCOs will specify conflict resolution protocols.

Monthly Implementation Plan and Timeline: Budget Preparation Period (Rev. 12/1/17)

Domain*	Task	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May
Budget Preparation Period : August 2017 to May 2018											
Contracting and EOHHS contract management	Learn if awarded contract										
	Enter into contract negotiations with EOHHS										
	Execute contract with EOHHS										
	Provide EOHHS with contact info of staff to represent BHPMW & maintain financial records										
	Establish quarterly meeting with EOHHS										
	Develop & submit initial DSRIP Participation Plan										
	Obtain EOHHS approval of initial DSRIP Participation Plan										
	Participate in trainings, community forums, learning collaboratives, meetings, events requested by EOHHS										
	Successfully complete EOHHS Readiness Review										
	Enter into negotiations for contractual agreements with ACOs & MCOs										
	Execute contractual agreements with ACOs & MCOs										
Reporting	Establish reporting schedule with EOHHS										
	Develop report templates & workflows for Member Status Report, Quality Measures Report, & other reports as required										
Governance Structure	Finalize BHCP governance structure including Governing Body Executive Committee membership										
	Document policies regarding conflict resolution & contract oversite										
	Execute agreements/subcontracts/BAAs with CEs & AP										

	Establish schedule & conduct Governing Body Executive Committee meetings before & throughout contract term										
Implementation and Operations	Establish BHPMW BHCP implementation team, hold orientation meetings to establish work plan										
	Implement & monitor work plans to completion										
	Establish bimonthly BHPMW contract management meetings with each CE & AP to assess & support readiness activities										
Budget, Finance and Billing	Conduct financial consultation meeting with PCG										
	Submit a Budget Report & Budget Narrative for Budget Preparation Period to EOHHS for approval by date set by EOHHS										
	Submit a Budget Report & Budget Narrative for Budget Period 1 to EOHHS for approval										
	Receive DSRIP payment for Preparation Budget Period										
	Establish systems for accounting & financial management										
	Develop & process map the system for billing, payment and remit										
	Test billing system										
	Develop system to receive care coordination PMPM payments from EOHHS & reimburse CEs & AP for CP supports										
	Develop system to monitor DSRIP infrastructure spending and related reporting										
Information Technology	Confirm capability to meet all IT requirements including supporting statutory & regulatory requirements, sending & receiving MassHealth eligibility files & electronically storing Enrollee info										
	Develop policies & procedures for info sharing, EHR/care management system use & MA HIway connection, ensuring all										

	exchanges are secure										
	Support CEs& AP in connecting to MA HI way as needed										
	Develop & maintain a care management system to document CP supports, Qualifying Activities, & Enrollee info in compliance with Model Contract										
	Develop & maintain internal systems to determine the validity & completeness of data submitted to EOHHS										
	Subscribe & connect to a statewide Event Notification System once developed by EOHHS										
	Equip staff with laptops and cell phones										
Care Management Software	Finalize care management software selection & sign letter of intent										
	Execute contract with care management software vendor										
	Establish regular meetings with care management software vendor to customize & operationalize system										
	Finalize customization of care management software including reporting capacity										
	Test care management software										
	Train staff on care management software										
Interpreter and Translation Services software and/or other solutions	Analyze availability of software solutions & live solutions for interpreter & translation services										
	Execute contract(s) for software, language line, and/or other solutions for interpreter & translation services										
	Test software, language line, and/or other solution for interpreter & translation services										
	Train staff on solutions/systems										

Quality Improvement, Data Analytics and Compliance	Formalize membership of Quality Management Committee (QMC) & establish meeting schedule										
	Finalize QI plan & submit to EOHHS by date requested										
	Establish internal systems for outcomes measurement & data analytics consistent with BHCP metrics										
	Work with Compliance Officer and legal counsel to ensure all compliance issues are addressed										
	Confirm proposed quality initiative for Budget Period 1 & organize data tracking systems & orientation for staff & QMC										
Consumer Advisory Board (CAB)	Begin early identification of potential members of the Consumer Advisory Board										
	Establish CAB meeting schedule & locations										
Policies, Procedures, Protocols and Plans	Convene Policy & Procedure Implementation Team with CEs & AP										
	Develop a conflict of interest policy; submit to EOHHS										
	Write & adopt formal Continuity of Operations Plan & submit to EOHHS upon request										
	Write grievance policy & procedures; submit to EOHHS										
	Develop protocol & materials to provide Enrollees with info on the grievance policy & procedures										
	Write Enrollee rights policy & procedures										
	Develop protocol & materials to provide Enrollees with info on the Enrollee rights policy & procedures										
	Write a protocol to track, review & report critical incidents & identify key personnel to implement & monitor protocol										
	Train staff on all policies, procedures, protocols, plans										

Community Collaboration and Coordination	Develop & maintain collaborative relationships with community based organizations & state agencies										
	Develop relationships with CBFS providers to coordinate care										
Workforce development	Convene Workforce Development Implementation Team with CEs & AP										
	Finalize recruitment, orientation, training & hiring plan										
	Finalize curriculum development & operational staff training plan including dates & locations										
	Execute recruitment plan & activities to engage and hire staff										
	Hire Program Director										
	Hire Director of Population Health Management										
	Hire all remaining staff consistent with staffing rations based on volume ramp up projections										
	Conduct centralized initial orientation & training for all on boarded staff across the CP										
	Load video of trainings to web-based learning solution for ongoing access.										
Community Partner Supports	Document policies & procedures for triage & Enrollee assignment										
	Develop protocols for outreach & engagement										
	Develop protocols for Comprehensive Assessment & Person-Centered Treatment Planning										
	Finalize Assessment tool & treatment plan for programming in care management software										
	Develop protocols for Care Coordination & Care Management										
	Develop protocols for Care Transitions										

	Develop protocols for Medication Reconciliation										
	Develop protocols for Health & Wellness Coaching										
	Identify health and wellness resources; plan programs										
	Develop protocols for Connection to Community, Social & Flexible Services including follow up to ensure Engaged Enrollees are obtaining needed services as indicated by the treatment plan										
	Develop extensive network of resources including BH, medical & social services; identify gaps in Service Areas & expand existing affiliations; utilize BHPMC databased of CE services, create other databases & ensure staff access										
	Develop protocols for recommending Flexible Services to Engaged Enrollee's ACO										
	Develop protocols for provision of CP Supports to Enrollees with BH & LTSS needs										
	Train staff on all protocols & resources.										
Community Education and Marketing	Develop brochures & other written materials for enrollees consistent with program operations in multilingual and alternative formats										
	Develop written materials for primary care & specialty medical providers consistent with program operations										
	Develop website										
Community Education and Marketing (continued)	Establish individual outreach & informational meetings for area stakeholders e.g., ACO, MCO, potential qualitative referral sources										
	Visit primary care practices to introduce the BHCP, foster relationships, develop protocols for collaborating on Care Teams, treatment plans & ongoing care coordination.										

	Outreach to Enrollees with pre-existing relationships with the CEs & AP who may be eligible for CP supports to educate about the CP program & how to enroll after contract start date										

*** A primary domain was selected for each task, recognizing that some tasks address more than one domain.**

Community Partner Program Budget Report - Prep Budget Period

Only complete this Program Budget Narrative using amounts anticipated for PBP.

Lines may be added to the Program Budget Narrative tables as necessary

Row 1 - Salary

Position	Annual Salary	FTEs	# Months	Total
Program Director	$ 127,000.00	0.50	7	$ 37,042
CP Medical Director	$ 202,750.00	0.20	7	$ 23,654
LICSW	$ 55,000.00	1.00	2	$ 9,167
Program Manager	$ 65,000.00	1.00	4	$ 21,667
RN Care Manager	$ 80,000.00	6.00	0.5	$ 20,000
Care Coordinator	$ 41,000.00	23.00	0.5	$ 39,292
				$ -
				$ -
				$ -
Total Salary (Program Budget Line 1)		**31.70**		**$ 150,822.00**

Row 2 - Fringe

Fringe Item	Total Salary	Fringe Rate	Fringe
Fringe Item	$ 150,822.00	24%	$ 36,197
Total Fringe (Program Budget Line 2)			**$ 36,197**

Total Personnel*	**$ 187,019**

* Should align with Personnel Costs row in Program Budget

For each position listed above, provide a brief statement of the position's responsibilities:

Program Director: oversees BH CP Program, develop strategic plan to establish relationships with ACOs, MCOs and Providers, act as point of contact for MassHealth, ACOs, MCOs, and SDH Affilated Partners. Supervises Program Manager reviewing and approving key document drafts.

CP Medical Director: leads and provides strategic direction for clinical teams to implement BH CP. Will be involved in educating and engaging providers including non Consortium providers about expectations under BH CP.

LICSW: liaison with area hospitals with psychiatric units and Suffolk County jails to manage transitions of care.

Program Manager: Reports to Program Director and provides administrative support to Director and CP teams including but not limited to helping with enrollment, drafting required reports to ACOs, MCOs, & MassHealth, coordinating training, initiating payment request for fund flow to Partners., etc. Supervises Team Leads. (Note: we increased the salary of this position and level of responsibility from previous submission.)

RN Care Manager: supervise and provide support to non-clinical care coordinators, engaging with enrollees for all clinical needs.

Care Coordinator: work with enrollees, engaging them in care that advances patient centered care plan goals. Number of Care Coordinators hired by Affiliated Partners is based on volume of enrollees assigned based on established relationships--approximately 40 enrollees/care coordinator.

Row 3 - Training and Professional Development

	A	B	C	D	E	F
42	**Description of Service**	**Unit Cost (if applicable)**	**# Staff (if applicable)**	**Total Cost**

Total Travel (Program Budget Line 4)	**$ -**

Please describe how mileage estimates and other travel expenses listed above were determined . If including enrollee travel expenses above, please explain how these expenses will be used by enrollees.

Row 5 - Equipment

Description of Equipment	Unit Cost or Cost/FTE	#units or FTEs	Cost
Total Equipment (Program Budget Line 5)			

Provide a brief description of the intended use for each Equipment line item listed above and how the estimated costs were determined:

Row 6 - Supplies

Description of Supplies	Unit Cost or Cost/FTE	# Units or FTE	Cost
Materials for training			$ 170.00
Total Supplies (Program Budget Line 6)			**$ 170.00**

Provide a brief description of the intended use for each Supply line item listed above and how the estimated costs were determined:
Cost of training materials to orient the CP teams (35-40 attendees) includes office supplies and printing.

Row 7 - Contract Services

Name of Contractor	Contractor Type	Goods and Services Provided	Cost
Total Contract Services (Program Budget Line 7)			

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Row 8 - Software Licensing

Description of Software	Cost per License	# Licenses	Cost
		Total Software Licensing (Program Budget Line 8)	

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

Row 9 - Telecommunications

Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
Cellphone service plan	60	35	$ 2,100.00

278			**Total Telecommunications (Program Budget Line 9)**		**$ 2,100.00**	

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

Having smartphone with secure texting @ $60 per month service plan enable the CP team members to commun icate easier when doing outreach.
Each Care Coordinator and NCM will be offered a smartphone. Care Coordinators hired by Affiliated Partners will receive smartphones and their data plan will be paid for directly by BHCHP. The number of Care Coordinators hired by Affiliated Partners is based on volume--approximately 40 enrollees/care coordinator.

Row 10 - Occupancy

Occupancy Expense	**Total SqFt**	**Cost/SqFT**	**Cost**
Rent			$ -
Utilities			$ -
Repair and Maintenance			$ -

Community Partner Infrastructure Budget Report - Technology - Prep Budget Period

Only complete this Infrastructure Budget Narrative using amounts anticipated for PBP.

Lines may be added to the Infrastructure Budget Narrative tables as necessary

Row 1 - IT Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
Helpdesk Support	$ 50,000.00	0.5	0.5	$ 1,042
IT/Data Analyst	$ 100,000.00	0.5	7	$ 29,167
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
	Total Salary			$ 30,209
	Fringe rate	24.0%	Total Fringe	$ 7,250
			Total IT Staffing including Fringe (Infrastructure Budget Line 1)	**$ 37,459**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

Helpdesk Support: provide day-to-day support for the CP team.(Not Analytical data support)

Data Analyst : support improvements in data platform, facilitate development of reports needed to inform program performance, works with Green River vendor (and Affiliated Partner's vendors to ensure stability of the interface among EHR, ETO.). BHCHP will fund these positions to support BHCHP and Affiliated Partners on an ad-hoc basis as needed. Funding is not allocated to Partners in any particular way.

Row 2 - Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
SDH Partners connection to ETO platform	$ 45,000.00

	A	B
34	SDH Partners' EHR Integration	$ 25,000.00
35		
36		
37		
38		
39	**Total Development and Adaptation of EHR and Care**	
40	**Management System**	$ 70,000.00
41	**(Infrastructure Budget Line 2)**	

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

$45,000 paying Green River to connect Affiliated Partners EHR's to data platform working with AP vendors if needed to improve functionality.In addition, GR will also connect PSI and BRM ETO to data platform (all other partners' ETO are currently connected. Funding is allocated based on entity need. Most of the funding will be allocated to PSI and BRM to address their connection issues. Remainder of funding will support technical assistance for newly hired Care Coordinators.

$25,000 paying to work with Affiliated Partners' EHR vendors to support EHR integration and minimize duplicate data entries. Only BHCHP, Casa, VPI, and Bay Cove have EHRs. All work with EHR vendors to operate their EHR systems (i.e. OCHIN for BHCHP). Changes in reporting and functionality will require work for vendors to charge time for their labor. We will either pay vendors directly or work out that we will reimburse AP for invoices submitted--total not to exceed this budget line. Funding is allocated based on entity need and will support entities with EHRs. There are 5 Affiliated Partners with EHRs, and each will have $5,000 to support EHR integration.

	Total Salary	2		$ 4,417.00
	Fringe rate	24.0%	Total Fringe	$ 1,060.00
			Total Program Staffing including Fringe (Infrastructure Budget Line 12)	**$ 5,477.00**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

Team Lead: This is a non-clinical position that provides operational support and population health management to Care Coordination Teams working with RN Care Managers and Care Coordinators to help identify care gaps (i.e. quality outcomes) and where patients are in the system (i.e. hospitals, shelters) to identify opportunities for engagements. Works with Program Manager to develop training curriculum and Health and Wellness programming in collaboration with BH CP director.

Row 13 - Other Operational Expenses

Description of Expense	Cost
SDH Partner Admin Support	$ 48,000.00
Legal fees	$ 3,000.00
Consultant to redesign clinic space/flow	$ 10,000.00
Translation of education materials	$ 6,000.00
Total Other Operational Expenses (Infrastructure Budget Line 13)	**$ 67,000.00**

Provide a description of each retention expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

$48,000 (8 @ $6,000) to the Partners for adminstrative support including executive or related staff attending meetings, overseeing IT integration, etc. during the prep budget period.

$3,000 legal fee: review of documents and contracts related to CP with ACOs and Affiliated Partners.

$10,000 consultant: evaluate current workspace and workflow and propose plans for improvement to integrate BH CP program into existing workflows.

$6,000 translation of patient education materials regarding the CP program.

Please describe which Program staff listed in lines 2 through 8 above directly supervise Care Coordinator staff: Clinical Care Managers

7.3.A. Executive Summary

People with serious mental illness (SMI) die on average 25 years earlier than the general population.[1] For a person with mental illness and/or substance use disorders, adding homelessness further increases the disparities in life expectancy as well as the challenges in coordinating and providing care. A 2013 study of 6,500 BHCHP homeless patients demonstrated that more than two thirds had some form of mental illness, 60% had SUD, and 48% had co-occurring mental illness and SUD.[2] The study population also had high health care expenditures—$2036 per member per month compared with $568 per month for all MassHealth members. Even among this population with higher than average costs, there was a subgroup of 650 individuals, representing 10% of the study population that accounted for a staggering $71.4 million in Medicaid expenditures, mostly a result of hospital and emergency department utilization, representing 40% and 11% of the costs respectively.

Engaging complex, homeless populations in mental health, substance use, and primary care services requires strategies that exceed the capacity of traditional primary care, behavioral health, or managed care organizations to deliver. Effectively caring for and engaging this population begins with a trusting relationship that takes patience to cultivate and must be offered with dignity and respect. It requires a person-centered approach understanding that meeting basic survival needs such as shelter, safety, clothing, and food is a bridge to engagement in needed behavioral health and medical care services. In addition, engagement and care must be designed to meet homeless individuals where they are—literally, in shelters or under bridges; and figuratively, using harm reduction to begin engagement on substance use treatment.

The organizations that form the SDH BH CP Consortium have more than 250 collective years of caring for Boston's most vulnerable populations that a significant breadth of homeless individuals. Having a BH CP with the experience, trust, resources, and mission to address the extraordinary needs of this complex population will be a powerful asset for ACOs or MCOs to advance MassHealth Triple Aim goals. Through our HPC HCII SDH Coordinated Care Hub for Homeless Adults pilot (referred to after as HPC HCII pilot), we have built the foundation for cross-sector coordination and communication that spans the continuum of care across our proposed Affiliated Partners and major hospital partners. This innovative pilot leverages existing trusted relationships from established community-based providers that targets homeless, high risk/high costs MassHealth patients (all who would meet BH CP criteria). Our goals are to reduce emergency department use and hospital admissions by 20% *and* improve patient self-sufficiency by facilitating access to primary care, mental health, substance use, housing and social services. We also focus on transitions of care, connecting patients to follow-up care (medical, SUD and mental health services) post hospitalization. This pilot was purposefully designed to become a BH CP serving MassHealth enrollees in Boston. The protocols and workflows used in the pilot have been developed by our SDH Consortium partners, reviewed by our pilot Consumer Advisory Board (CAB) and tested by our pilot staff with the purpose of using our lessons learned to strengthen our BH CP capacity.

There is a critical mass of homeless individuals in the Boston-Prime Service Area that are likely to qualify for BH CP services that justifies the need for a BH CP that understand their complex needs. By integrating EHR and MassHealth PCPR claims data to estimate the percentage of PCC plan patients attributed to BHCHP who would meet draft BH CP eligibility criteria, we found that 41% would likely be eligible. Extrapolating that 41% figure to our MCO patients we found that more than 900 MassHealth enrollees (in PCC and MCO plans) would likely meet BH CP

[1]National Association of State Mental Health Program Directors Medical Directors Council, author. Morbidity and Mortality in People with Serious Mental Illness. 2006. [October 1, 2012]. www.nasmhpd.org.

criteria—and this is just a fraction of the demand. In 2016, BHCHP cared for more than *8800 MassHealth enrollees experiencing homelessness that were attributed to other (mostly) Boston providers.* No doubt a significant percentage of these non-attributed enrollees would meet BH CP criteria bringing a potential BH CP population in excess of one or more thousands in the Boston-Prime service area that we would contract for BH CP services. We have a BH CP ready to coordinate care for thousands of homeless and other MassHealth enrollees in the Boston-Primary service area in 2018 that will spring off core infrastructure and staff already in place by our HPC HCII Pilot.

Nov. 17-Year 1 launch. ▪We will transition from HPC HCII pilot to BH CP and transition many existing pilot Administrative staff for BH CP planning including the BH CP Director, Medical Director, and IT/Data Analyst. Senior staff will engage with ACOs, MCOs, & external providers including hospitals with psychiatric units & LTSS. ▪We will modify existing pilot legal agreements, data platform, training curriculum, assessments, and integrated care plan as needed for BH CP. ▪We will contract with IT vendor to connect Affiliated Partners' EHRs to our data platform and expand the capacity of our cloud base server. ▪Monthly Consortium will continue and bimonthly Consumer Advisory Board (CAB) meetings will be relaunched with plans to conduct a needs assessment for 'health promotion' programs & other community activities.

Year 1: ▪With the Program Manager will work with Team Leads to orchestrate outreach and enrollment in the BH CP program leveraging the data platform to locate enrollees and communicate between team members. ▪Using needs assessment data, Program Manager and Team Leads will work with Affiliated Partners & BH CP NCMs to develop and implement activities to engage enrollees. ▪BH CP Care Coordination Team will meet face-to-face with enrollees for ongoing engagement and connection to needed services, case conferencing, care transitions. BH CP will document all encounters, monitor data, and conduct performance PDSA cycles.

Year 2-4: Scale BH CP beyond 1000 to accommodate more enrollees; add BH CP team staff. ▪BH CP activities as above, conduct bimonthly trainings ▪Update community needs assessment ▪Assess whether some staff roles can be consolidated to adapt to declining DSRIP revenue.

Year 5: ▪BH CP activities as above. ▪Negotiate with ACOs and MCOs for new contract cycle.

7.3.B Supporting Populations and Community Engagement

Our SDH BH CP Consortium will be an expert partner in helping MassHealth PCC, ACOs, and MCOs to improve the delivery of care to Boston's homeless and other enrollees with SMI, SUD, and medical complexity--no doubt the highest cost, highest needs MassHealth enrollees. Our model of providing 'intensive care coordination' focused on homeless Medicaid enrollees is similar in vision to Minnesota's Hennepin Health's "Ambulatory ICU." This initiative also focuses services on a high concentration of Medicaid homeless enrollees and was found to be a key strategy to the ACO's success in achieving savings greater than $24,000 per patient/year.[3]

Our SDH BH CP Consortium will pool together the best expertise for delivering the spectrum of services across 9 long-standing, community-based organizations in Boston; innovative data infrastructure (with legal agreements already in place enabling sharing physical, behavioral, social service data as well as housing data from the City of Boston) for integrated care coordination **and** performance feedback at the enrollee, care coordinator, site, and system level; and the biggest footprint to find and engage homeless enrollees face-to-face. BH CP Care coordinators will be based in the community where homeless people go: the street, day shelters,

[3]Bodenheimer, T. Strategies to Reduce Costs and Improve Care for High-Utilizing Medicaid Patients: Reflections on Pioneering Programs. Center for Health Care Strategies, Inc. October 2013

night shelters, temporary and permanent housing, primary care clinics, mental health centers, substance use treatment facilities, etc.

The Bidder and Affiliated Partners represent 9 community-based organizations that span the continuum of care: primary care, substance use treatment, mental health, social services, and housing and shelter providers. We are actively engaged with an advocacy organization in our BH CP planning: Massachusetts Housing and Shelter Alliance (MHSA) who continues to be a voting member in our SDH Consortium and part of our OHCA agreement (see 7.2.C). The SDH Consortium that includes the 9 organizations named on this proposal and MHSA have been convening since 2013 to improve cross-sector collaboration and service delivery of homeless services and work toward becoming a MassHealth CP.

With MassHealth approval, our BH CP will identify new resources to connect enrollees to needed services identified in their Patient Centered Treatment Plan by their BH CP team. We will formalize relationships with LTSS organizations that we have had successful relationships with in our OneCare work that have been responsive to our patients' needs. We will expand our work with community based organizations to conduct Health and Wellness Fairs offering yoga, nutrition classes, and opportunities to get wellness and prevention care visits. We will collaborate with area hospitals that have psychiatric units —something we have longed desired to do, but have not had the resources-- to coordinate discharge transitions.

We will keep our BH CP staff informed of new resources through bimonthly e-newsletters and trainings. Our SDH Consortium continues to meet monthly and will continue to be a major source of communication for information exchange and sharing of best practices, new resources, MassHealth updates, etc. Meeting minutes are taken and circulated widely between Consortium members to keep staff updated. These meetings will continue as our governance model for our BH CP.

Section 7.3.C Community Partner Supports and Activities

BHCHP and its Affiliated Partners are expert at caring for vulnerable populations, especially homeless individuals. Homeless individuals with serious mental illnesses, substance use disorders, and medical complexities require expert support navigating a complex system that spans the continuum of care. These individuals often have multiple overlapping providers and case managers and rarely one point person or team that understands the whole picture including the realities homeless individuals face navigating daily survival skills while struggling with mental illness, SUD, and complex medical diseases. Homeless individuals get lost in this vast system and most providers don't know where to find them or exactly how to help them without duplicating services that are already in place.

The SDH BH CP Consortium will harness the expertise and capacity of the most established and respected homeless service providers in the Boston Prime Service Area to deliver a model of care that is arguably the most innovative, comprehensive, and efficient in the nation. We propose to do so by leveraging--not duplicating-- the significant infrastructure already in place. We will evolve this infrastructure to the next level by strategically using funding from BH CP and hiring staff and making investments that will connect—not replace-- existing infrastructure.

BHCHP--with primary care sites (many of them offering integrated behavioral health care) in more than 40 locations, a multidisciplinary street team, and imbedded staff at major hospital systems--has a significant footprint in Boston. Adding our Affiliated Partners to this footprint with staff that serve homeless and unstably housed individuals at day and night shelters; temporary and supportive housing units, addiction treatment centers; mental health clinics; day programs, etc. means that we are in most places where most homeless individuals go. The experienced, effective, compassionate staff from BHCHP and Affiliated Partners will work in

close collaboration and approximation with the BH CP Teams. The Care Coordinators staff hired by our Affiliated Partners will be based locally enabling collaborative and coordinated efforts to find, outreach, engage, and support enrollees with serious mentally illness, SUD, and chronic medical illnesses.

1. Outreach and Active Engagement

Outreach and engagement for enrollees especially those experiencing homelessness is, no doubt, the most challenging required activities; but it is precisely the task that demonstrates why our BH CP will be an asset for MassHealth, ACOs, MCOs, and PCPs and BH providers. Our SDH BH CP Consortium with longstanding, functional cross-sector relationships will be able to outperform any other BH CP in outreach and engagement with face to face encounters especially with homeless enrollees augmented by enhanced communication.

The unique capacity of our proposed SDH BH CP Consortium will be enabled by an Organized Health Care Arrangement (OHCA) in place since December 2016 that allows us to communicate PHI, housing, social service, and other data. The OHCA allowed the development and launch of a shared data platform—a cornerstone of our HPC HCII pilot. The data platform connects the Consortium through sharing real time data including team notes to administrators, clinicians, and case managers to support outreach and enrollment efforts. It was designed to be scaled for the MassHealth BH CP program. Our shared data platform will enable our BH CP teams to identify locations where homeless patients are sleeping and accessing services, so that we can find them, discuss the BH CP program face-to-face, and gain their participation into the program (and, of course, engage them in care--more on this later.) No other MassHealth BH CP will have this intelligence to conduct a robust outreach and active engagement for this hard to find enrollee population. Other BH CPs will fail if they rely on telephonic encounters with homeless enrollees. Telephonic encounters are an unreliable way of communicating with homeless individuals who often do not have phones, run out of minutes, or change their numbers frequently. Our SDH BH CP Consortium will be able to leverage the data base to support face-to-face visits by knowing where to find enrollees.

The data platform enables us to conduct:

1. Face-to-face outreach where homeless individuals sleep. The HPC HCII pilot data platform pulls daily HMIS data (enabled by a BAA with the City of Boston) that provides shelter/housing census data to help our Consortium case managers find, discuss the pilot benefits, and ultimately gain their consent into the pilot. This capability will be an asset for our BH CP and means that we can track enrollees in all or most of the Boston shelters, day programs, and streets, helping our BH CP teams locate hard-to-find enrollees and go to the appropriate shelter or temporary/permanent housing for a face-to-face encounter.

2. Face-to-face outreach to where homeless individuals access services. In our HPC HCII pilot, BHCHP's Epic EHR and BHCHP RNs embedded at BMC, MGH, Tufts, and BHCHP Respite facilities facilitate access to real-time Admission, Discharge, and Transfer (ADT) data. (Note: with BH CP funds, we plan to embed an LICSW to manage care transitions at area hospitals that have psychiatric units as well as spend 20% of his/her time managing transitions at the Suffolk County Jails). This data is critical for outreach purposes. It allows us to find, outreach, and enroll target patients face-to-face while they are currently an inpatient and discuss the pilot program and ask, "Would you like to work with us in helping you stay out of the hospital?" Patients are vulnerable while in the hospital and are often found to be more open to accepting help from intensive case management/care coordination initiatives.[4] [5] We will use our lessons learned from

[4] Sandberg, S.F., et al. Hennepin Health: a safety-net accountable care organization for the expanded Medicaid population. Health Aff (Millwood), 2014. 33(11): p. 1975-84.

this strategy to find, outreach, and discuss the BH CP program face-to-face and gain participation with identified enrollees.

In addition, our HPC HCII Data Platform gives us the ability to identify when and where our target patients have existing appointments with BHCHP primary care and behavioral health providers so that we can outreach and enroll patients face-to-face while they are in waiting rooms. This data is refreshed daily using BHCHP's EHR. If we are selected to be a BH CP, we will use ICB grant funding and add our Affiliated Partners' EHRs to the data platform to enhance our ability to view scheduled appointments with our Affiliated Partners to augment outreach efforts. For those enrollees that access care from providers external to our SDH BH CP Consortium, our Epic EHR is able to access appointment information from providers that also use Epic. This feature will provide another important data source for outreach for a significant percentage of homeless enrollees.

Our decentralized BH CP Care Coordination Teams (NCM and Care Coordinator) coupled with the immense combined footprint offers many advantages: 1) It give us a leg up finding, outreaching, and gaining signed participation forms from the assigned BH CP enrollees face-to-face. This effort will involve both BH CP and existing BHCHP and Affiliated Partner staff. 2) Since the BH Care Coordination Teams are conducting a vast majority of the outreach including obtaining signed participation forms face-to-face, we will be able to accelerate the process of completing the Comprehensive Assessment and scheduling a Case Conference because the connection between the enrollee and BH CP Care Coordination Team has been established. The BH CP Care Coordination Team may be able to conduct the Comprehensive Assessment at the same time of gaining the participation form and schedule a case conference. (We are testing this workflow/protocol in our HPC HCII grant and are planning to adapt this process for the BH CP program).

Our protocol for outreaching and engaging enrollees begins during the Start-up/Preparation Period where we will establish BH CP Care Coordination Homes. BHCHP BH CP Director, CMO, CMO, and Affiliated Partners Senior Leadership will review the list of identified MassHealth enrollees and run this data against Consortium partners' internal EHRs and service records to identify robust, recent relationships with each enrollee and designate an organization that is best positioned to be the BH CP Care Coordination Home. (Note: As mentioned in other sections, the significance of building on existing, established relationships cannot be overstated. It will provide the best possible advantage for basing a BH CP relationship with a population that often can take long periods of time to build trust.) *This means we will have effectively assigned a BH CP Care Coordination Team (NCM and Care Coordinator) before we launch on June 1, 2018.*

For those enrollees without robust relationships to any one of us, we will adapt the protocol developed for our HPC HCII pilot. In these instances, we will determine an assignment of a BH CP Care Coordination team based on other factors such as veteran status; language preference; and organizational capacity. Having this process established pre-launch will enable us to mobilize assigned teams to quickly outreach and engage enrollees to consent to participate in our SDH BH CP Consortium when we move to launch.

On April 2, 2018 BH CP Director will convene our SDH Consortium to verify BH CP Care Coordination 'Home' assignments agreed to in Start-up/Preparation period. This data will be entered into the data platform signaling to the BH CP Care Coordination Teams to begin outreach.

---

[5]Camden Coalition of Healthcare Providers. 2016 [cited 2016 May 9]; Available from: https://www.camdenhealth.org/.

As new MassHealth enrollees get added to our BH CP, the BH CP director will share identified enrollees in real time with our Consortium partners via secure email. Each organization will run the names against their internal data to identify where enrollees have been accessing services and respond within 48 hours. The BH CP Director will then assign a BH CP Care Coordination Team within 48 hours of entering the data into the platform which will signal to the designated team to conduct outreach to the enrollee to gain their participation in the program.

Within the first month of receiving the identified enrollee from MassHealth we will attempt Outreach and Enrollment into the BH CP program. Based on our HPC HCII pilot model we will scale our current 4-prong outreach and enrollment strategy. If unsuccessful in the first attempt, we will repeat the process at least monthly, knowing that consent to participate is often gained after several attempts.

1. If a potential enrollee is an inpatient: BHCHP RN embedded at hospitals or respite facilities and LICSW based at hospitals with psychiatric units will check daily census/ADT data and meet with a potential BH CP enrollee face-to-face. The embedded BHCHP staff will review BH CP program (using script that reviews the design, purpose, and benefits of the program; how PHI will be shared among SDH BH CP Consortium for the purpose of coordinating care; identify who should be on the BH CP team and how to engage with them; opportunities for opting out of the BH CP program; and options to request assignment to a different "Care Coordination Home" within our Consortium or different BH CP altogether); and consent enrollee. Staff will upload the participation form into Data Platform, which will signal to Care Coordination Team to begin engagement. Program Manager will notify ACO/MCO and MassHealth.

2. If a potential enrollee has an appointment at one of our Consortium's BH or Primary Care clinics: Assigned BH CP Care Coordination team will outreach face-to-face (using script described previously) and consent before or after provider appointment. If appropriate, BH CP Care Coordination Team (NCM or Care Coordinator) will speak to BH CP Team (PCP, BH clinician, etc.) to see if they would be able to discuss and consent potential enrollee (using script) during the appointment. BH CP Team will upload participation form into Data Platform. Program Manager will notify ACO/MCO and MassHealth.

3. *If a potential enrollee is accessing day/evening shelter services or temporary/permanent housing*: Assigned BH CP Care Coordination team will use HMIS data and identify where a identified enrollee is residing. A member from the BH CP Care Coordination will outreach face-to-face and enroll patient (using script) or contact Affiliated Partner shelter/housing staff to determine if they can approach and gain participation face-to-face (using script). Staff will upload participation form into Data Platform. Program Manager will notify ACO/MCO and MassHealth.

4. *If a potential enrollee is sleeping on the street:* Both BHCHP and PSI have experienced and collaborative Street Teams. This outreach and engagement occurs both through daytime and nighttime (9p – 5a) rounds and will allow for face-to-face engagement. The Street Team Care Coordination team will outreach and enroll patient (using script) and upload participation form into Data Platform. Program Manager will notify ACO/MCO and MassHealth.

2. Comprehensive Assessment and Person-Centered Treatment Planning

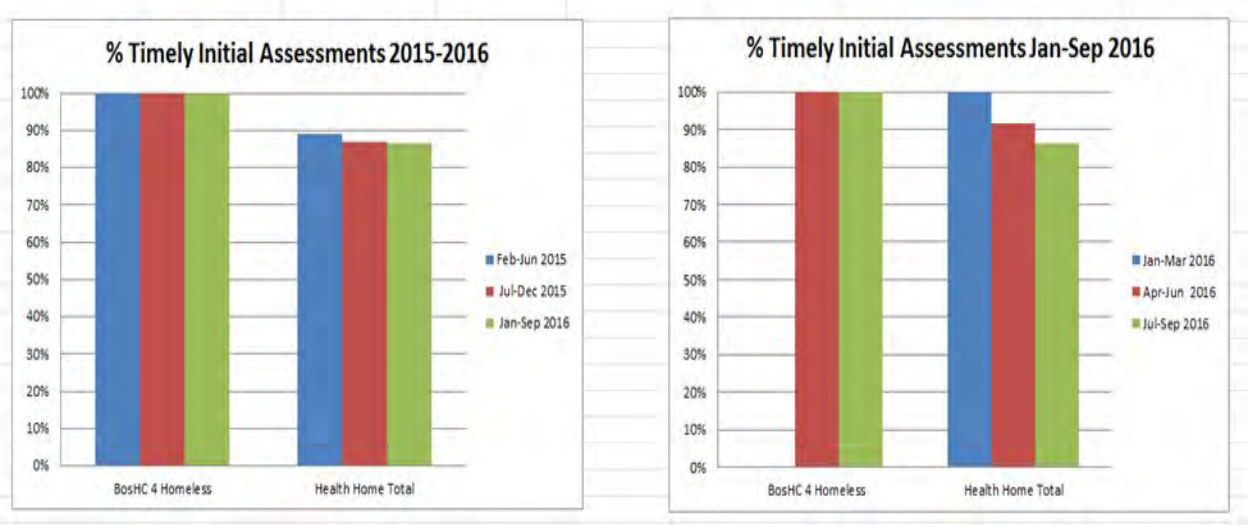
The SDH BH CP Consortium will build from the foundation we established from our HPC HCII pilot, adapting workflows, protocols and assessments in use by the pilot to meet the requirements of MassHealth BH CP program. During the face-to-face consent process for the MassHealth BH CP program, either the staff person gaining consent will share with enrollee the Consortium partner that has been designated as the BH CP "Care Coordination Home'. If the enrollee would like to change to another Consortium partner, we will do so. The staff person will upload the

participation form in the data platform. This process will result in an electronic notification sent to the BH CP Care Coordination Team (NCM and Care Coordinator) that the enrollee has consented for care. From this point, like our HPC HCII pilot, the BH CP Care Coordination Team will have 3 business days to contact the enrollee to set up a face-to-face time for a comprehensive intake assessment.

As mentioned, contacting a homeless enrollee by phone can be challenging. In our HPC HCII pilot and Commonwealth Care Alliance (CCA) One Care contract, after a patient has consented for care, we are able to offer them a cell phone and pay for their monthly bills if they indicate that they do not have a phone and are willing to engage in care. Both the One Care (launched May 2017) and HPC HCII (scheduled: July 2017) cell phone pilots were a result of BHCHP's advocacy on behalf of our patients to offer cell phones as a tool to better engage and communicate with populations that were identified for complex care management. If these strategies prove successful, we will work with the ACOs and MCOs to use flexible support funding to help pay for phones and/or minutes for a certain subset of our BH CP enrollees.

"Catching" an enrollee to conduct a comprehensive assessment before or after an enrollee shows up for a scheduled provider appointment is another strategy that we will scale in our BH CP program. This and other outreach strategies for our One Care patients has resulted in BHCHP having the highest timely "Initial Assessment" metrics among *all Health Homes* in our One Care contract for 2015-2016. (See graph below). This includes outreach time to schedule an assessment, an in-person encounter to complete the MDS (initial assessment), and a care plan entered into CCA's EMR no later than 80 days after enrollment. *BHCHP was more successful in engaging and completing an assessment for homeless populations than other Health Homes providers were for housed populations!*

Timely completion of Comprehensive Initial Assessments [Data from CCA]



Comprehensive Assessment. The BH CP Comprehensive Assessment will be adapted from our HPC HCII pilot intake process. In our pilot, the first view into the data platform is a data dashboard that aggregates data from multiple sources and gives users the ability to see to drill down for more comprehensive detailed data if needed. Our BH CP Comprehensive Assessment will expand on this work adding data from our SDH BH CP Consortium Partners' EHRs and assessments.

There are several advantages to our proposed approach to aggregate data from several sources to form the BH CP Comprehensive Assessment. 1) We have found questions from many standard assessments (e.g. the MDS for One Care) are simply not practical or relevant for homeless patients. 2) Data from standard assessments are not available or aggregated in a useful or timely way for the integrated care team to take action. 3) We can reduce burden on the enrollee who is frequently the subject of multiple assessments from multiple programs. 4) We can reduce burden on the Care Coordination Team (NCM and Care Coordinator) on double data entries and free up time for care delivery. The sources of data for the BH CP Comprehensive Assessment and workflows are:

1) Homeless Management Information System (HMIS) data assessment (See attachment 1). The Care Coordinator will conduct the initial assessment during the first 3 months after enrollee assignment to our BH CP by using the HMIS intake assessment. ▪We are using the HMIS as one of our assessments for the HPC HCII pilot in a unique partnership the City of Boston in its Continuum of Care efforts to end chronic homelessness. Through a BAA with the City, we pull HMIS data into our pilot data platform to inform interventions to reach our pilot goals (reduce ED and hospital utilization) and to support the City's goals (reduce chronic homelessness). This collaboration is likely a nation first -- integrating housing, social service data with medical and behavioral health data in a cross-sector effort to coordinate efforts for individuals experiencing homelessness. For the BH CP we see it offering enormous value as well. ▪Case managers across sectors working with individuals experiencing homelessness already use the HMIS assessment. ▪In addition to rich demographic and housing needs data, the HMIS assessment provides a comprehensive scan of service needs including medical, mental health, and substance abuse; physical and developmental disability history; domestic violence risk; income & financial support; food & benefit programs; education, training, & language services.

2) Arizona Self Sufficiency Matrix (ASSM) (See attachment 2). During this initial intake process, the Care Coordinators will also assess an enrollee's reported self-functioning during a face-to-face meeting within the first 3 months of enrollee assignment using the ASSM—we are also using this tool in our HPC HCII pilot. This tool is well-respected and widely used for homeless populations.[6] It gives immediate feedback via a score across 20 domains (including Substance Use, Mental Health, Safety, Suicidal Risk, Life Skills & ADLs, Family & Social Relationships, etc.). The score gives us the capability to track progress on our care interventions. The BH CP Care Coordinator will upload these forms into our shared data platform that will pull the relevant data into the Person Centered Care Plan (see next section). The completed form can also be accessed by users. This assessment will be updated every 6 months to track progress toward improving enrollee's function and life.

3) EHR data. The BH CP Nurse Care Manager will ensure that the Comprehensive Assessment is complete by first 3 months of the enrollee's assignment, supplementing the Comprehensive Assessment with additional data from the EHR that will be automatically collected and entered it into the platform dashboard and Person Centered Care Plan. EHR data automatically collected will include current and past physical health, mental health, and substance use problem list; current medication list, upcoming appointments, relevant acute care plans for medical and behavioral health conditions. (Note: BHCHP EHR is currently linked to data platform, but we will use DSRIP funds to expand this capacity to our Affiliated Partners). As described in Section 7.2.E, our Epic EHR is connected to many external providers which will facilitate gathering this data from providers external to our BH CP.

[6] Culhane DP, Parker, W.D., Poppe, B., Gross, K.S., Sykes, E. Accountability, Cost-Effectiveness, and Program Performance: Progress Since 1998. National Symposium on Homelessness Research 2007.

4) Claims data. If needed, the NCM will access claims data available from MassHealth, ACOs, and MCOs to identify key members of the enrollee' BH CP Team (PCP, behavioral health clinician, specialists, LTSS provider, other relevant providers) and enter data into the Person Centered Care Plan. During the case conference (described below), the NCM will verify the core Care Team providers with the enrollee including identifying other case managers from DMH or DDS and then enter their names and contact information into the Person-Centered Care Plan (described below).

Person-Centered Care Plan. The BH CP Care Coordination Team (NCM and Care Coordinator) will schedule a case conference to meet face-to-face ideally with key members of the enrollee's BH CP Team including the PCP, BH clinician, the enrollee (and family or significant others, if willing), and others, to complete and approve the Person Centered Treatment Plan and review and update the Comprehensive Assessment within the first 3 months of an enrollee's assignment to our BH CP. The BH CP Care Coordinator will accompany the enrollee to the case conference. If the enrollee expresses strong preference not to meet in person, the BH CP Care Coordinator will meet with the enrollee prior to the case conference to discuss the enrollee's goals and priorities and share the information during the meeting. Case Conferences will also serve as an opportunity to discuss Advance Directives, provide information on options to access LTSS programs (if applicable) and other support services, identify key supports for the enrollee, self-management goals, etc.

We are excited to be piloting an integrated care plan (ICP) (see attachment 3) in our HPC HCII pilot that we think will serve as a pro-type for the Person-Centered Care Plan. The ICP is housed in the data platform and can be viewed or edited by any team member (case manager, BH clinician, PCP, etc.). The ICP includes 4-5 high priority interventions: two include housing and "other social needs", and the others draw from physical health, substance use or mental health goals. There is also a tab for a self-management goal that the patient chooses including the action steps to achieve this goal. After goals are met, they can be archived (and accessed) and new ones selected. We propose to take the lessons learned from this ICP to develop the Patient Centered Care Plan. The Patient Centered Care Plan will be approved by the enrollee and the PCP during the case conference, and updated every 6 months (like we are doing for the HPC HCII pilot). We will be able to print a copy for the enrollee to keep, translating as necessary, or provide a copy in an alternative method if he/she is interested although having a safe place to store this record is a concern for a homeless individual and we will discuss this to safeguard the enrollee's privacy.

For the BH CP, any updates to the Person Centered Care Plan will result in an electronic notification to the PCP, BH Clinician (if they are internal to the Consortium) as well as the BH CP Care Coordination Team (NCM and Care Coordinator). If the PCP and BH clinicians are external providers, it will be the BH CP NCM's role to communicate and receive their input via secure email and then download the final copy to share back with the providers.

3. Care Coordination and Care Management

A defining feature of our BH CP will be our timely face to face encounters and shared integrated data platform – both features of our HPC HCII pilot. This data platform currently supports "timely encounters" as well as enhanced communication between our BH CP and BHCHP's PCMH teams (includes integrated primary care and behavioral health providers) using care management software, Efforts to Outcomes (ETO®). The ETO software was provided to all Consortium members by City of Boston; as a result, we have capacity to share care management data on a daily basis among our medical, behavioral health, housing, shelter social service organizations to better coordinate care and reduce case management redundancy. We are able to share relevant patient medical and behavioral health data from BHCHP's EHR, track patient care including referrals to LTSS providers and social service organizations, as well as monitor performance outcomes. In short, for the first time ever, individual care is communicated across

this vast continuum of service providers. We will leverage this capacity as a BH CP to provide an extraordinary edge to coordinating care for homeless enrollees. Our current data platform enables us to track care at the patient level and program-wide. With DSRIP funding, we will scale this platform to coordinate care for at least 1000 BH CP enrollees and connect our BH SDH partners' EHRs further knitting together our teams to operate more efficiently and effectively for assigned BH CP enrollees.

As mentioned in the previous section, the BH CP NCM will use claims to identify the key members of the enrollee's BH CP Team and ask the enrollee if there are team members from DMH or DDS to include. We will also work with the DMH Homeless Outreach Team to coordinate with those enrollees in DMH care. During the first case conference with the enrollee and BH CP Team, we will identify the BH CP core team members and their roles in helping to advance the goals on the Patient Centered Care Plan. It will be the BH CP Care Coordinator's role to facilitate communication between core team members to progress toward achieving these goals. For BH CP Team members, the data platform will serve as a vital communication tool. For providers that are external to the Consortium, the BH CP Care Coordinator will work with these providers to host the case conference, or at minimum, engage them via phone during the case conference. The BH CP Care Coordination Team (NCM and Care Coordinator) will communicate routinely via secure Epic EHR, email, or phone calls regarding essential information including updates to the Person Centered Care Plan. If the BH CP Care Coordinator is facing challenges working with the BH CP Team, the BH CP NCM or the BH CP Medical Director is available to intervene to ensure that the BH CP Team is responsive to advancing Patient Centered Care Plan goals and BH CP goals.

BH CP Care Coordination Team's responsibility is the implementation of the Person-Centered Care Plan (with active enrollee involvement). The BH CP Care Coordinator (with support from the NCM as needed) will ensure appropriate linkages, referrals, coordination and follow up to needed services and supports, including referral and linkages to LTSS. Specific activities include, but are not limited to, appointment scheduling, conducting referrals and follow up monitoring, participating in hospital discharge processes and communicating with other providers and clients/family members—all of these activities will be documented in our shared data platform through ETO. Our shared data platform will be a tremendous support for Care Coordinators in finding their BH CP enrollees (in shelters, in clinics, day treatment programs, etc.) and communicating to BH CP Team members across the Consortium. If BH CP Team members are external to the Consortium, the BH CP Care Coordination Team will communicate via secure email.

BH CP Team Case conferences will be held within the first 3 months and then every 6 months or more often if needed and will be the main vehicle for keeping BH CP Teams focused on Patient Centered Care Plan goals. The BH CP Care Coordinator's role is to convene these case conferences and to encourage and accompany the enrollee to the meeting if needed to ensure that the enrollee stays engaged. Each BH CP Care Coordinator will be required to make face-to-face contact with each enrollee on his/her caseload (~35-45 enrollees) at least 1/month (more if the enrollee is in crisis) and document all encounters. Currently in ETO, we collect data on the number and kinds (telephone, face to face, etc.) of "encounters" to better understand the intensity of service needs—we will continue this practice in our BH CP.

The BH CP NCM's role is to support the 4 Care Coordinators under his/her supervision and oversee the combined panel (~165 enrollees) focusing on medical, substance use, and mental clinical outcomes; recommending stepped care which is adjusting services or moving to a higher level of intensity as needed[7]; reviewing and approving Patient Centered Care Plan changes;

[7]http://www.rwjf.org/content/dam/farm/reports/issue_briefs/2011/rwjf69438

collaborating with the Program Manager; and serving as clinical support for the CP Team. If a PCP or BH clinician is a provider external to our Consortium, the NCM will communicate via Epic EHR, email, or phone.

4. Care Transitions

The SDH BH CP Consortium is well positioned to manage timely comprehensive care transitions. We have BHCHP RNs already embedded at BMC, MGH, Tufts, Brigham and Women's, and BHCHP's medical respite facilities (Barbara McInnis House and Stacy Kirkpatrick House); and with BH CP funds, we plan to hire 1 FTE LICSW who will share his/her time across area hospitals with psychiatric units as well as spend 20% of his/her time at Suffolk County Jails. During the months leading up to the launch of the SDH BH CP Consortium, BH CP Director and Medical Director will secure formal agreements with these hospitals with psychiatric beds for the LICSW to become credentialed and work on site to manage transitions of care. We will also meet with staff at the Suffolk County Jail for the LICSW to work on site there as well 1 day/week for the purpose of managing transitions back to the community. (Many homeless people struggle with transitions from jail to our community and back to jail. Adding modest LICSW support to the County Jails to manage care transitions would bring benefits to the community by ensuring that individuals being released from jail have timely mental health and primary care appointments and do not fall between the cracks).

These embedded staff gives our BH CP an important foothold for monitoring daily Admission, Discharge and Transfer (ADT) data on our BH CP enrollees. Embedded staff responsibilities include: monitoring daily ADT feeds for BH CP enrollees, communicating (same day) with the enrollee's BH CP Team (including PCP and BH clinician) and BH CP Care Coordination Team (NCM and Care Coordinator) through the shared data platform. If BH CP Team members are external to the Consortium, the embedded staff will communicate with these providers via Epic EHR, secure email, or phone call. The embedded RN staff will coordinated with the enrollee's assigned BH CP NCM on transitions of care planning and document any work in the shared data platform.

Our SDH BH CP Consortium understands better than any other provider the challenges of navigating discharge planning for homeless patients. We have established relationships with numerous LTSS providers including SNFs that have capacity to care for complex homeless patients particularly those with active substance use disorders; home care and social services providers that are flexible and responsive to the needs of homeless individuals; and BHCHP respite facilities' admission criteria. A key aspect of the training curriculum for our BH CP Care Coordination Team and imbedded inpatient staff will be to draw from the BHCHP's vast knowledge of community resources, care management programs, Community Partners, ACOs, and MCOs. Our BH CP Director and Program Manager will develop a resource directory for this purpose specifically with homeless enrollees needs in mind. BH CP Care coordination Teams will also be oriented in the use of web Apps including HelpSteps.[8]

Ideally, our BH CP team will begin discharge planning on Day 1 of an inpatient admission to a hospital, SNF, respite, or other facility. The enrollee will receive a face to face visit from either the BHCHP embedded inpatient staff and/or member of the BH CP Care Coordination Team during his/her admission to help us understand the enrollee's needs/preferences post discharge and engage the enrollee in decision making. The results of this visit will be documented in the enrollee's Person-Centered Care Plan which will automatically send an update to the BH CP Team. If members of the enrollee's BH CP Team are external to our Consortium, the BH CP Care Coordination Team will notify these providers by Epic EHR, email, or phone. If referrals

[8] FMI: https://www.helpsteps.com/

for services are necessary post discharge, either the BHCHP embedded inpatient staff and/or member of the BH CP Care Coordination Team will facilitate a warm 'referral' hand-off prior to discharge if possible. Otherwise, the BH CP Care Coordinator will arrange for the enrollee's transportation and accompany the enrollee if feasible to the service.

As One Care 'Health Homes', both BHCHP and Bay Cove understand the importance of post discharge follow-up and have developed workflows to meet follow up performance expectations with each One Care enrollee within 48 hours post discharge. We will adapt these processes to meet BH CP requirements and assign this responsibility to the BH CP NCMs. Post discharge follow-ups within 3 business days will preferably be face-to-face and occasionally by phone. We will schedule a face to face meeting, ideally coordinating during a post-discharge follow up visit with the BH CP Team (PCP or BH Clinician)—see next paragraph. During this post-discharge follow-up, whether face-to-face or phone, the BH CP NCM will conduct medication reconciliation, review discharge orders and plans, reinforce understanding of medical and behavioral health treatment plans, etc. For our One Care patients, we have adapted a script[9] from the federal Agency for HealthCare Research and Quality (AHRQ) for NCMs to ensure that the call is thorough and consistent; we plan to adapt this tool in our BH CP.

5. Medication Reconciliation

The importance of medication reconciliation post discharge cannot be overstated especially with enrollees on multiple prescriptions due to mental health, substance use, and medical diagnoses. As mentioned in the previous section, BH CP NCMs will be performing medication reconciliation within 3 business days of hospital discharge. Medication reconciliation can also happen at shelter-based clinics or street teams by NCMs already on these teams. We will use the "AHRQ" script adapted for our One Care patients as a training tool in the BH CP NCM curriculum. Our Team leads and NCMs will be able to monitor medication reconciliation performance expectations on our shared data platform to ensure that we meet this important benchmark in a timely fashion.

For homeless BH CP enrollees, supporting medication adherence requires an in depth understanding of the complexities of homeless individuals' day-to-day living and underscores the importance of having a BH CP provider with expertise in serving this population. The bidder and its Affiliated Providers have all worked with homeless individuals for decades and, together, have developed numerous strategies to address medication adherence that include:

1) Storing medications in shelter based clinics to guard against theft and to keep medications at the appropriate temperature;

2) Offering medication administration assistance at shelters in the early morning at 6 am (before guests must leave) and evenings (when guests arrive);

3) Ensuring that enrollees have access to water and food on the street to accompany medication administration;

4) Educating prescribers on options for long acting and/or oral medications, this may not be clinically optimal, but may be more practical and therefore increase medication adherence;

5) Offering translation services for enrollees as needed; and

6) When needed, providing directly observed therapy for additional medication adherence.

[9] https://www.ahrq.gov/professionals/systems/hospital/red/toolkit/postdischarge-phone.html

Our shared data platform will support medication adherence and reconciliation offering, for the first time, up to date medication lists across the continuum of care for our Consortium' BH providers, Care Coordinators, and shelter providers, etc. to be used to reinforce with the enrollee the importance of taking medications, check that the enrollees medication list is accurate, and offer education or linkages to the BH CP NCM if needed for patient or clinician support.

6. Health and Wellness Coaching

Amid the chaos of homelessness, focusing on health and wellness often becomes a distant priority. Our BH CP understands the need to slow down, stay flexible, and meet homeless individuals where they are. Enrollees are unlikely to be focused on wellness goals, when they need to find a safe place to sleep that night. During the Start-up period, we will develop and conduct a community needs assessment and survey our Affiliated Partners and select staff as well as Consumer Advisory Board to get input on gaps in services and activities that will engage enrollees in care.

The BH CP Director and Program Manager will be responsible for working with the BH Consortium Affiliated Partners and our contracted ACOs to leverage Flexible Funds to develop services that engage and are relevant to vulnerable population, but we also have dedicated a modest portion of our ICB budget for PY1-4 for Health and Wellness Programs offering us flexibility to develop programs. We anticipate expanding existing group programming such as "HER Saturdays" (Health, Empowerment, Resources) that is currently held in BHCHP's lobby on Saturday mornings. On average 60 women attend each Saturday, many of whom engage in primary and behavioral care for the first time. This program works with volunteer community partners to engage homeless women in healthy activities, safe from the street, by offering healthy snacks and beverages, rotating activities (BMC therapy dogs, trauma informed yoga, mindfulness, acupuncture, healing touch, Zumba, movies & popcorn etc.), educational activities (oral health, contraception, domestic violence etc., IT/Phone support and educational games (women's health bingo for example). These community partners include: individual volunteer practitioners from local organizations such as LEGITyoga, Cambridge Zen Center, and Boston Medical Center as well as "Hope and Comfort", who supplied donations for Bingo prizes and case management visits. This kind of programming begins the necessary trust building between providers and patients that often leads to engagement in ongoing health care. We will use the results of the community needs assessment survey to guide development of new services and update the assessment at least annually. Other examples of Health and Wellness Programs that we propose to develop including: smoking cessation, STD screening, oral cancer screening, etc.

Our BH CP Care Coordination Teams (NCM and Care Coordinator) based at our Affiliated Partners and Street Team will offer mobility for face-to-face outreach and support to those housed populations. The BH CP Care Coordination team will also add a critical layer of support to those enrollees receiving CSPECH services, working with existing case managers employed by Pine Street Inn, Boston Public Health Commission, and New England Center and Home for Veterans and other organizations as well. Integrating the BH CP Care Coordination Team with CSPECH services will ensure that physical and behavioral health care visits are prioritized and LTSS needs are met and documented in the Person Centered Care Plan.

Our SDH BH CP Consortium will develop Health and Wellness programs for groups if we have several BH CP enrollees living in a congregate housing setting or we will leverage the BH CP Care Coordination Team for one-on-one education on topics such as nutrition, disease self-management, stress management—whatever is needed to help ensure that newly housed BH CP enrollees stay on a path to maintain their housing by making healthy life choices. All these activities will be documented in the Person Centered Care Plan.

7. Connection to Community and Social Services

As mentioned in Section 7.3.C.2 our proposed SDH BH CP Consortium intake will include a thorough assessment of SDH needs via the HMIS tool and the Arizona Self Sufficiency (ASSM) Matrix (both attached.) The power of our Person Centered Care Plan is that the enrollee, working with the Care Coordinator, can select ASSM domains that are the enrollee's priorities. The BH CP Care Coordinator will enter these ASSM priority domains into the section of the Person Centered Care Plan called "Other Social Needs" as well as the interventions and referrals needed to Community and Social Services. Progress toward these goals will be tracked through a numeric score each time the ASSM is administered (every 6 months) giving the entire BH CP Team with feedback regarding progress towards connecting the enrollee to needed social services and supports. BH CP Care Coordinators will leverage community resource directories referenced earlier and free Apps such as HelpSteps to identify community programs – our SDH BH CP Consortium training will introduce and review these resources at orientation. As we work with the enrollees to develop the Patient Centered Care Plan, we will provide them with options that describe the availability of these resources and identify enrollee preferences. We will track whether or not referrals for community-based services were successful and whether the enrollee is engaged and satisfied with the care.

BHCHP embedded inpatient staff will provide expert transitional support services working with the facility staff and the enrollee face-to-face to transition the homeless enrollee into community settings. Our staff understands how to navigate transitions from inpatient settings into shelter and other transitional settings such as medical respite and SNFs ensuring that the enrollee is safe and mitigating the risk for a readmission. These embedded staff will communicate to the BH CP Team through the Person Centered Care Plan which will electronically alert the BH CP Team. We will also use Epic EHR or email updates to external providers. We will prioritize setting up enrollees a face-to-face visit from the BH CP Care Coordination Team within 3 business days following discharge and track this metric in our data platform; all enrollees will have a follow-up appointment with a PCP or BH clinician within 7 days post discharge—again a metric that we will track on our shared data platform. (Seven day post-discharge primary care follow-up for vulnerable patients with complex needs has been found to lower 30-day readmission rates.[10]) The BH CP Care Coordinator will arrange transportation if needed, and if feasible, accompany the enrollee to the 7-day post discharge appointment, which can often be accomplished at the shelter where the patient is staying.

8. Community Collaboration and Coordination

The BH CP Director, Medical Director, and CEO will meet with community based organizations in the Boston Prime service area in the Start-up/Preparation period including the Department of Mental Health to discuss opportunities for collaboration. As longstanding service providers, BHCHP and Affiliated Providers already have strong working relationships with community service providers that provide mental health, substance use services, LTSS, social services, housing support, etc. We will pool our lists of providers in the Start-up/Preparation period to share our experiences, identify providers that we would like to contract with, and highlight where we need to strengthen gaps in care. This process for identifying gaps in services will also be informed by a community gap assessment survey that we will develop and administer to Affiliated Partners and their staff as well as our Consumer Advisory Board in the Start-up Period.

We have budgeted time for our BH CP Medical Director to meet with PCPs, BH clinicians, and specialists in the Boston Prime Service Area to discuss the BH CP program, especially for those that are external to our BH CP. We have time in the Start-up/Preparation period for this work and

[10]Jackson, C., et al. Timeliness of outpatient follow-up: an evidence-based approach for planning after hospital discharge. Ann Fam Med, 2015. 13(2): p. 115-22.

then ongoing. The BH CP Medical Director will help establish buy-in for the BH CP program, and for external PCP and BH clinicians gather their input for the most useful forms of communication including venues for case conferences, shared care plan development, etc.

If enrollees assigned to our SDH BH CP Consortium have a CBFS provider, we will note this on the Person Centered Care Plan and add this provider as part of the BH CP Team notifying the provider through automatic emails when case conferences are scheduled and with the enrollee's consent, providing them with a copy of the Patient Centered Treatment Plan.

7.3.D Innovative technologies for service delivery

Our most innovative technological tool for SDH BH CP Consortium will be our shared data platform (described in detail in Section 7.3.C) that will integrate housing, social service data with medical and behavioral health data in a cross-sector effort to coordinate care for enrollees experiencing homelessness. It will be a central feature of our BH CP model and provide communication, documentation, and performance feedback and monitoring for BH CP Teams and SDH BH CP Consortium. It will leverage existing care management software already supplied by the City of Boston to the Bidder and each Affiliated Partner (ETO) for communication between providers and will send automatic electronic communications to providers named on the Patient Centered Care Plan when updates are made. In addition, we plan to leverage free existing technology such as smart phone Apps including HelpSteps. We will be leveraging DSRIP funds to connect our Affiliated Partners EHRs to this platform adding pertinent data from BHCHP EHR.

We are also budgeting 35 smartphones for our BH CP Care Coordination Teams (NCM and Care Coordinators) and BHCHP embedded inpatient staff and 5 laptops to share to help them with their responsibilities of providing expedient communication and timely documentation. These staff will have the ability of conducting and uploading assessments such as the HMIS and Arizona Self Sufficiency Matrix (ASSM) on the laptop while based in settings throughout the community.

7.3.E Personnel and staffing

1. & 2. See Attachment 1: *Combined* Organizational Chart and Staffing plan

3. Recruitment Plans

Most of the recruitment and hiring responsibilities for the SDH BH CP Consortium will be conducted by BHCHP. Our Affiliated Partners will have responsibility for hiring Care Coordinators that will be based at their sites. We anticipate with 1000 MassHealth BH CP enrollees, approximately 52% or 12/23 BH CP Care Coordinators will be hired by our Affiliated Partners which will account for 1-2 FTEs BH CP Care Coordinators per Affiliated Partner. Our Affiliated Partners will follow their own recruitment and hiring policies adapting the job description for Care Coordinators to fit their organizational needs.

As the Bidder, BHCHP will provide all administrative support, all Nurse Care Manager support, and approximately 48% of Care Coordinator support. BHCHP's experience in overseeing and managing an integrated care coordination model with community-based partners is evident in our current HPC HCII pilot. As mentioned previously in Section 7.3, the HPC HCII pilot is our training ground for our MassHealth BH CP program. There are core administrative staff that are supported in the HPC HCII that are experienced and on board who will transition to the SDH BH CP Consortium.

Personnel for Preparation/Start-up Period: Some staff positions needed for the Preparation/Start-up Period are currently filled and actively engaged with the HPC HCII pilot providing the SDH BH CP Consortium with seasoned, ready experience.

BH CP Director (Takach): Ms. Takach is currently directing the on-time planning, launch, and implementation of HPC HCII pilot at 20% FTE. She will add 50% of her time to direct the SDH BH CP Consortium planning/start-up period commencing in November 2017.

BHCHP Senior Management Staff (Bock, Gaeta, De Las Nueces, Lawrence): Key members of BHCHP's SMT will devote 5% of their time working with Ms. Takach during the planning/start-up period providing strategic direction around ACO, MCO contracting; Affiliated Partners communication; provider engagement (internal to BH CP and external as well); IT vendor contracting and supervision; and personnel recruitment.

IT/Data analyst (Hass): Currently, Mr. Hass is providing IT/data analytic support to the HPC HCII pilot at 20% FTE. He will add 50% of his time to working with Ms. Takach on the SDH BH CP Consortium Preparation/Start-up Period commencing in November 2017.

Timeline for Staff Recruitment November 2017-April 2018

Ms. Saacke (BHCHP Human Resources Director) will vet several Recruitment Consultants beginning in November 2018 who will be responsible for marketing and advertising the positions, as well as screening, assessing and making recommendations regarding the candidates for new positions needed for BH CP Launch. The Recruitment Consultant will be available to offer expert advice to our Affiliated Partners on recruitment and screening if desired. Working with Ms. Takach and Mr. Bock, Ms. Saacke will contract with a Consultant by December 2017.

Ms. Saacke will work with the Recruiter to post and advertise job positions in December 2017; first round interviews will take place in January 2018. Ms. Adams, Ms. Takach and other members of the BHCHP senior management team will conduct final interviews as needed in February 2018 and will make offers in late February for March 15, 2018 start.

We anticipate 33 new positions for our SDH BH CP Consortium. 19 will be BHCHP employees and 12 will be Affiliated Partners' employees:

2 Team Leads (see attachment 2)

6 Nurse Care Managers (see attachment 3)

23 Care Coordinators (see attachment 4)

1 LICSW Psychiatric Hospital Liaison (see attachment 5)

1 Program Manager (see attachment 6)

Implementation Period: April 2018—

Training will commence in mid-late May 2018 to allow new staff to focus on month 1 (June 2018) to outreach and enrollment efforts.

4. How we will recruit and hire staff from cultural and linguistic communities: In conjunction with the contracted Recruitment Agency, the Bidder will reach out to community agencies to seek assistance broadening our recruitment pool. The Bidder will also work with our internal Diversity and Inclusion Committee to assist us with seeking out additional candidates.

BHCHP compensates bilingual and multilingual staff at a higher rate for the following languages: Spanish, Haitian Creole and Portuguese.

5. Proposed Training: BHCHP provides an orientation to all new staff members and our Affiliated Partners will follow their own internal orientation policies. BHCHP internal orientation includes:

Benefit and Policies Orientation: During the first week, all employees will attend a Benefit and Policies Orientation at which basic BHCHP policies, compensation and benefits programs, as well as other information necessary to all employees at BHCHP, will be reviewed. All documentation required as a condition of employment will be collected and all necessary paperwork, such as medical benefit plan enrollment forms, beneficiary designation forms and appropriate federal and state tax forms will be completed and collected. All BHCHP employees are expected to attend a BHCHP-wide formal orientation training session, which is held monthly. Supervisors will schedule all employees to attend this training during their orientation period. At this orientation BHCHP policies are reviewed. We encourage questions during the orientation, as well as at other times, so that employees will understand all the guidelines that affect and govern the employment relationship. In addition, each employee has an orientation to the employee's position. This orientation and training is managed by the employee's direct supervisor. During this orientation, important information will be shared regarding the performance requirements of the position.

As the Bidder, BHCHP will be responsible for providing BH CP program orientation for *all employees hired for the SDH BH CP Consortium*. In addition, we will have BHCHP imbedded inpatient staff, select members of the BH CP Teams attend trainings as well. Following is our proposed training plan for BH CP staff drawing from the curriculum for our HPC HCII pilot. Faculty will mostly draw from BHCHP staff.

SDH BH CP Consortium Learning Collaborative (~3 day training)

Part I – Introduction (2.5 hours)

> **Explanation of SDH BH CP Consortium** (45 minutes)
> Facilitated by: Barry Bock (BHCHP CEO) and Mary Takach (BHCHP Senior Health Policy Advisor). Includes: Purpose, goals and components of MassHealth BH CP program; performance expectations
>
> **BH CP Team Introductions** (45 minutes) Role of NCM, Care Coordinators, Health Team Leads. Facilitated by: BH CP Director
>
> **Social Determinants of Health** (30 minutes)
> Facilitated by: Jessie Gaeta (BHCHP CMO) or Denise De Las Nueces (BHCHP Medical Director)
>
> **Consumer Advisory Board Member Presentation** (30 minutes)
> Facilitated by: CAB member

Part II – Navigation and Documentation (12.5 hours)

> **Navigating the Healthcare System** (4 hours)
> Facilitated by: Gabriel Wishik (BHCHP physician) and Sarah Ciambrone
> Includes: BHCHP embedded inpatient staff roles, Medication adherence, provider roles, case conferencing, appointment coordination; staff safety

Connecting with BH CP Care Teams (1 hour 30 minutes)
Facilitated by: CP Care Members
Includes: Speed Dating activity with members of the BH CP teams; how and when to communicate

Dealing with Health Crises (1.5 hours)
Facilitated by: TBD

Dealing with Psychiatric Crises (1.5 hours)
Facilitated by: Billie Starks, LICSW and Esther Valdez, MD

Participation/Consent Process, Intake Assessments (HMIS and ASSM), Person Centered Care Plan, Data Platform, and ETO (3 hours 15 minutes)
Facilitated by: Mary Takach & BHCHP IT Dept.
Includes: Consent process, importance of proper documentation in platform, IT lab session; filling out intake assessments

PHI/HIPPA and Cortext (45 minutes)
Facilitated by: Dirk Williams (BHCHP Compliance Officer) and Keith McInnes
Includes: Overview of PHI/HIPPA information; secure messaging practices

Part III – Motivational Interviewing (7 hours)
Facilitated by: TBD

6. Staff retention

BHCHP strives to attract and retain motivated, high-performing staff by through the following strategies:

1. Promote retention and satisfaction of high-performing staff by empowering them: providing clarity on expectations; holding all staff accountable for doing their best work; including staff members in strategizing and decision-making where possible and being transparent where not possible.

2. Maintain a competitive compensation and benefits package, designed to attract and retain a high-performing, mission-oriented staff.

3. Remain compliant with all relevant regulations and requirements; communicating these clearly and consistently upholding these standards with all staff.

4. Commit to a performance management system that supports individual and team growth, accomplishment, and satisfaction.

5. Prioritize a safe working environment, support by training, technical features, policies and continuous assessments that put safety first.

7.3.F Implementation Plan and Timeline

Preparation/Start-up

November 1, 2017-May 31, 2018

When?	What?	Who?

November-December 2017	1. Meet with CEOs of ACOs & MCOs; Execute Contractual Agreements for BH CP Services	1. CP Director (Takach), CEO (Bock), CFO (Leung)
	2. Hire and train new staff position for recruitment to work with both BHCHP and Affiliated Partners	2. CP Director (Takach) & Human Resources Director (Saacke), HR from the Affiliated Partners
	3.Finalize contract with Green River, the IT Vendor; develop schedule/workplan to connect Affiliated Partners EHRs to data platform	3. CIO (Lawrence), IT (Haas) working with IT/Data Analytics and IT leads from Affiliated Partners.
	4. Further develop & Administer Gap Assessment Survey for Affiliated Partners and CAB. Purpose: identify resources needed to serve BH CP enrollees and inform Health & Wellness Program activities	4. CP Director (Takach) working with CMO (Gaeta), and Affiliated Partners Senior Leadership
	5. Secure formal agreements with hospitals that have psychiatric beds for the LICSW to work on site for the purpose of managing care transitions. In addition, meet with senior staff at DMH and DDS to discuss ways to further collaborate in BH CP program.	5. CEO (Bock) BH CP Director (Takach) and Medical Director (De Las Nueces) and BHCHP Chief Psychiatrist (Valdez)
January-May 30, 2018	1. Primary Care Provider and Behavioral Health Clinicians "Roadshows": Informational outreach to providers about SDH BH CP Consortium	1. CEO (Bock), CMO (Gaeta), and Medical Director (De Las Nueces); BH CP Medical Director (TBD)
	2. Interview and hire BH CP staff with May 15, 2018 expected start date	2. BH CP Director (Takach), & BHCHP Senior Management Staff; Affiliated Partner staff
	3. Connect Affiliated Partners EHR to Data Platform; modify Shared Data Platform to add BH CP performance metrics	3. CIO (Lawrence) and IT/Data Analyst (Haas)working with Green River Vendor
	4. Further develop training curriculum for May 2018 BH CP Learning Collaborative; secure training site and faculty	4. BHCP Director (Takach) and BHCHP and Affiliated Partners Senior Leadership
	5. Using data from MassHealth describing identified BH CP enrollees [assuming, as described in previous section, that this data is available], convene meetings to develop outreach and enrollment protocol for Bidder and Affiliated Partners to achieve rapid enrollee participation in BH CP program..	5. CP Director (Takach) working with CMO (Gaeta), COO, and Affiliated Partners Senior Leadership and designees

	Analyze MassHealth Potential BH CP enrollees list to determine existing relationships and assign likely "BH CP Care Coordination Homes" for enrollees.	
	8. New BH CP staff begin May 15. Each Consortium site conducts internal staff orientation.	8. The Bidder and Affiliated Partners will conduct their own program orientation process.
	9. Conduct Learning Collaborative for BH CP Teams in late May; evaluate Learning Collaborative to identify topics for future bimonthly trainings/learning needs.	9. BH CP Director (Takach) and BHCHP Senior Management Team consulting with Affiliated Partners Senior Leadership
Y1 1st/3 Quarters	1. Rollout Outreach and enrollment strategic plan using protocol developed in Start-up/Prep period to achieve enrollee participation in BH CP program. After participation form is signed and uploaded by member of BH CP team into shared data base, BH CP Care Coordination Team will be notified through electronic reminder from database.	1. BH CP Director (Takach), Program Manager BH CP Teams (all participating agencies)
	2. Within 3 calendar months of assignment of enrollee to the SDH BH CP Consortium, complete comprehensive assessment, team conference, and Person Centered Treatment Plan.	2. BH CP teams; Program Manager, Team Leads, oversight
	3. Monthly reporting to MassHealth by Bidder on Member Status Reports. Payments to Affiliated Partners for CP Supports and ICB infrastructure.	3. CFO (Leung) working with BHCHP Finance Team
	4. At least monthly face to face engagement of enrollees working toward Person Centered Treatment Plan goals; documentation of all	4. BH CP Care Coordination Team working in partnership with BH CP Teams (PCPs, BH clinicians, other providers)

	qualifying activities	
	5. Begin Monthly Quality and Efficiency Committee (QEC) to discuss BH CP quality and utilization metrics and report findings to Consortium at monthly meetings.	5. CMO (Gaeta) and or Medical Director (De Las Nueces) working with Program Manager, Team leads and QEC Committee.
	6. Monthly Consortium meetings to discuss enrollment, data platform dashboard metrics as well as MassHealth metrics, service needs, strategies to meet needs and improve BH CP performance	6. BH CP Director (Takach), Program Manager, working with BHCHP and Affiliated Partners Senior Leadership
	7. Bimonthly Consumer Advisory Board Meetings	7. BH CP Director, CEO (Bock) and Program Manager
	8. Bimonthly CP team training	8. Program Manager working with CP Director (Takach) and BHCHP and Affiliated Partners Senior Leadership
	9. Submit Annual Quality Improvement Plan to EOHHS	9. CMO (Gaeta) working with Associate Director of Clinical Operations (Giles), BH CP Director (Takach) and Affiliated Partners' Senior Leadership
	10. Analyze Gap Assessment Data. Begin planning of Health & Wellness programs as part of Engagement strategy for the first and second quarter of Y1	10. CP Director (Takach) working with CMO (Gaeta), and Program Manager with Affiliated Partners Senior Leadership
Y1 2nd/3 quarters	1. Activities 1-8 described in **Y1 Q1**	1. Staff designated for activities 1-8 in **Y1 Q1**
	2. Implement Health And Wellness Program activities at select sites with high concentrations of homeless enrollees; document all enrollee engagement in data platform; evaluate findings, revise strategies as needed.	2. Team leads (working with Program Manager and BH CP Nurse Care Managers; BH Care Coordination Teams, Program Manager

Y1 3rd/3 quarters	1. Activities 1-2 described in **Y1 Q2**.	1. Staff designated for activities 1-2 in **Y1 Q2**
	2. Biannually update Person-Centered Care Plan (or more) convening case conferences as needed and reassess enrollee self-function utilizing the Arizona Self Sufficiency Matrix—track progress on scores	2. Care Coordination Team working with BH Care Team and enrollee
	3. Biannually provide payments from Affiliated Partner Incentive Pool to support performance management activities Evaluate Affiliated Partners performance based on agreed upon percentage by Consortium in documenting and meeting Qualifying Activity expectations.	3. CFO (Leung) working with BH CP Director (Takach) and Affiliated Partners toward agreed upon allocations.
	4. Submit Annual Report to EOHHS	4. BH CP Director (Takach) and CFO (Leung) working with Program Manager and Finance Staff
Y2 Q1	1. Activities 1-2 described in **Y1 Q3**.	1. Staff designated for activities 1-2 in **Y1 Q3**
	2. Scale BH CP beyond 1000 to accommodate more homeless enrollees adding CP team staff as needed.	2. BH CP Director (Takach) working with BHCHP and Affiliated Partners Senior Management
	3. Update & Administer Gap Assessment Survey for Affiliated Partners and CAB. Purpose: identify resources needed to serve BH CP enrollees and inform Health & Wellness Program activities	3. Program Manager working with BH CP Director (Takach)
	4. Submit Annual Quality Improvement Plan to EOHHS	4. CMO (Gaeta) working with Associate Director of Clinical Operations (Giles), BH CP Director (Takach) and Affiliated Partners' Senior Leadership
Y2 Q2	1. Activities 1-2 described in **Y1 Q3**.	1. Staff designated for activities 1-6 in **Y1 Q3**

	2. Biannually provide a portion of withhold payments returned to support Affiliated Partners' performance management activities. Evaluate Affiliated Partners performance based on agreed upon percentage by Consortium in documenting and meeting Qualifying Activity expectations.	2. CFO (Leung) working with BH CP Director (Takach) and Affiliated Partners toward agreed upon allocations.

	3. Finalize ACO/MCO contracts for new contract cycle	3. CEO (Bock), CFO (Leung), BH CP Director (Takach), CMO Gaeta
	4. Submit Annual Report to EOHHS	4. BH CP Director (Takach) and CFO (Leung) working with Program Manager and Finance Staff

Section 7.3.H Sustainability

Funding for BH CP Supports and Infrastructure and Capacity Building (ICB) investments provided during the Start-Up/Preparation Period (and the first five years of the BH CP program) will enable our SDH BH CP Consortium (comprised of nine community-based organizations) to invest and build capacity that will firmly integrate our organizations and elevate our service delivery to a new level.

Five years will enable us to get our data platform fully functioning resulting in major efficiencies across the system. By using ICB funding to maximize the capacity of our data platform, we will be able to fully describe our enrollee population, the services they received, the encounters. and the progress toward goals. Our data platform will be maximized in many ways using ICB funding:

- The ICB funding will be used to connect BHCHP and Affiliated Partners' EHRs to the data platform. This will result in the automatic collection and aggregation of limited but necessary amounts of medical, mental health, substance use, housing/shelter, and social service data that will support multi-disciplinary coordination. This will also reduce duplication of services and increase efficiency. Efficiency is the key to sustainability.
- The data platform will combine EHR data with intake assessments which will populate the Patient Centered Health Record thereby reducing clinical staff time with double data entry.
- The data platform will be developed to automatically generate a monthly report that will aggregate Member Status Reports from nine Consortium partners into one template to streamline reporting to EOHHS thereby minimizing burden on billing and finance staff.
- The data platform will be developed to generate quality and efficiency reports to analyze and track BH CP patient-specific metrics. Data will also be available at the BH CP Care Coordination Team level, site level, and program-wide, thereby reducing the time IT/Data Analytics staff are needed to generate reports.

Five years provides us with resources to orient staff *and* organizations across multiple sectors towards productive, regular patterns of communication and coordination. We will break down walls through training, protocols, electronic communication, etc. The result will be collaboration toward shared goals of meeting the needs of homeless individuals with SMI, SUD, and complex medical conditions. We will sustain ongoing training by developing tools such as webinars and modules that can be used for future staff; we will develop protocols to be adopted and used across organizations that will become a part of each organization's culture of doing business; and we will develop a data platform that will instantly message members of the integrated BH CP Team enhancing communication. Ultimately, we will be rewriting the ways that organizations and Teams are meant to work with each other.

Five years will give us opportunity to use ICB funding to help BHCHP and Affiliated Partners to develop performance management skills by qualifying for Accountability payment from achieving acceptable scores and sharing a portion of this payments returned from our withholds. By providing modest performance payments and encouraging healthy competition amongst each other through transparent reporting, we feel that we will build capacity that will help us negotiate with ACOs and MCOs for competitive rates post-DSRIP and qualify for performance payments that will replace these ICB payments.

There are certain ICB investments that are core to BHCHP's mission that we are prepared to sustain after ICB support has ended. In Y1 of ICB funding, the Health and Wellness Program Pool is budgeted at its highest level ($60,000) to engage homeless enrollees in the BH CP. The goal is to build meaningful relationships, and help provide services that introduce healthy problem-solving and healthier choices. We are excited to be able to develop a rich array of programs that serve homeless BH CP enrollees. BHCHP will be offsetting any decline of ICB funding for the Health and Wellness Programs Pool with a corresponding increase from BHCHP operational and development funds to maintain funding levels at or around $60,000 over the five years. We plan to collect data on each of the Health and Wellness Programs to be able to analyze outcomes and to be able to make the case to continue effective programs with ACO and MCO flexible funding. Regardless of the support, if the programs are effective, BHCHP will continue the funding.

We think as we stand up our BH CP, approach a full capacity of engaged enrollees, automate IT systems and documentation, we might be able to consolidate a Team lead position and phase down IT/Data Analyst time.

We are confident that our BH CP model will prove effective improving health outcomes and decreasing costs. We believe that we will be able to build the case such that ACOs and MCOs will want to contract with our SDH BH CP Consortium once DSRIP funds expire.

MassHealth along with the ACOs and MCOs will be getting a BH CP partner that will care for some of the most complex, expensive MassHealth enrollees in the Commonwealth. It is our belief that the foundational support provided to our SDH BH CP Consortium will allow us to develop and hone care coordination that will prove indispensable to the system as a whole and to our patients.

7.3.I Quality Management and Performance Monitoring

1.A Description of the Bidder's quality improvement program

The mission of the Bidder, BHCHP, is to assure access to high *quality* health care for vulnerable individuals especially homeless individuals and families in the Boston area, and this charge will be the basis for quality management activities for the BH Community Partners program. This mission mandates excellence and equity in the provision of primary and preventive health care, mental health, and addiction services and has required creativity and extraordinary collaboration with virtually all public and private health care agencies and providers in Boston. The program works toward achieving this mission in three ways:

1. To provide the **"glue"** between the shelter/housing community and the health care system;

2. To become a **"catalyst"** within the mainstream to help the health care system address the special needs of individuals and families whose health is often determined by abject and persistent poverty and complicated by unsafe and insecure housing;

3. To serve as a **"bridge"** between medicine and public health, a model of primary and preventive care to individuals and families addressing the harsh public health and communicable disease risks faced by impoverished populations living in crowded shelters and on the city's streets.

BHCHP has a history of quality activities resulting in ongoing improvement in the access and quality of the medical care that is delivered to our underserved clients, and this infrastructure will provide the foundation for quality management within the SDH BH CP Consortium.

Health Disparities**.** A driving force behind BHCHP's quality plan is the elimination of health disparities. Homeless people are some of the most marginalized and disenfranchised people in America. Living in poverty, our patients suffer the public health risks similar to other poor populations. The vulnerabilities of life on the streets and in shelters leave our patients more susceptible to communicable disease and chronic illness.

While our primary focus is disparities related to economic status, we are attuned to the confounding role race and ethnicity can play in health outcomes. Our reporting system allows for comparison of quality indicators by racial and ethnic subgroups, and in the past, no significant differences have been noted. This will continue to be a valuable tool in our SDH BH CP Consortium.

Additionally, we see the profound effect of experiencing homelessness on the health status of our patients. To this end we have engaged numerous housing partners in the SDH BH CP Consortium to enhance housing opportunities for our patients. We provide continuation of patient care for those in housing in an effort to help them preserve their tenancies. We have also seen that housing can result in improvement in quality indicators.

Key Quality Measurements. Each year BHCHP selects, through an interdisciplinary process and based on regulatory requirements, the key measurements and goals that will be focused on for the upcoming year. For 2017 and beyond, we are focused on ACO quality measures. For all quality indicators, we establish an annual goal. In addition to these program-wide goals, each site/team can choose other measures that the group feels needs to be of concentration. Metrics range from preventive care measures such as cervical and breast and colon cancer screening, chronic disease management metrics such as hypertension and diabetes control, to behavioral health measures including depression and anxiety screening, as well as access to pharmacological treatment for SUD and prescribing of naloxone rescue kits. In all, our program tracks 14 program-wide metrics, in addition to dozens of team- or site-specific measures.

BHCHP's Quality Data Analyst is charged with tracking data and producing reports for constant feedback to individual clinicians and teams. For reports that require inputs from Medicaid raw claims data for patients attributed to BHCHP, a specific Data Analyst with expertise in claims analysis performs these analyses. Individual team members and sites can monitor their quality improvements through transparent reports embedded in the electronic health record.

We maintain National Committee for Quality Assurance (NCQA) Level III Patient Centered Medical Home (PCMH) recognition for our BMC clinic at JYP, as well as two shelter-based teams at Pine Street Inn and Saint Francis House. In addition, BHCHP has been designated a Massachusetts Health Policy Commission (HPC) "PCMH PRIME" practice in 2016. This designation enhances NCQA's recognition program with the addition of 13 behavioral health integration criteria.

2. A description of at least one quality initiative the Bidder proposes to undertake in Budget Period 1, including measures for success.

The SDH BH CP Consortium will adopt **Follow-Up After Hospitalization for Mental Illness (7-day)** as the first metric to begin tracking and working toward a goal. The metric is defined as the percentage of discharges for ACO Enrollees 6 years of age and older who were hospitalized for treatment of selected mental illness diagnoses and who had an outpatient visit, an intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days of discharge. We choose this metric because it is one that we can analyze internally, given raw claims from the ACO, which we are already receiving, and because we have a significant opportunity to impact our enrollees' lives and performance. Our shared data platform provides a dashboard for the LICSW embedded at hospitals with psychiatric units to enter data for the BH CP Team to track this measure. The platform also provides an opportunity for BH CP Care Coordinators and the BH CP Team to post and view upcoming appointments to inform whether the enrollee needs follow-up care.

The first task at the start of the program will be to calculate the baseline performance for the population. We will then set a goal to reach within one year, with input from the SDH BH CP Consortium and BHCHP's overarching QEC. Every two months, the SDH BH CP Consortium will conduct PDSA cycles to test the effectiveness of new interventions aimed at improving this metric. Examples of PDSA cycles for this metric may include: attempting to notify BH CP care coordinators of psychiatric inpatient admissions via our proposed BH CP LICSWs who will be based at area hospitals with psychiatric units; BH CP care coordinators reach out to patients via telephone, and mobile outreach if needed, within 48 hours of discharge from the hospital in order to coordinate an outpatient mental health encounter. Performance on this metric will be reported transparently every month across BH CP case coordinators and BHCHP clinical teams.

3. The functions of the Bidder's quality committee, including the composition and reporting structure within the Bidder's organization.

The overall responsibility for the BHCHP Quality Plan lies with the BHCHP Board of Directors, and quality improvement activities specifically related to the BH Community Partners program will be embedded within BHCHP's Quality Plan. All quality activities have oversight by the Chief Medical

Officer with additional oversight roles by the Chief Operating Officer. BHCHP's Chief Medical Officer reports quarterly to the Board on current activities and progress, and this will include BH CP quality activities. The annual Quality Plan is reviewed and approved at the BHCHP Board's annual meeting.

The senior quality committee within BHCHP is the Quality and Efficiency Committee (QEC), composed of a multidisciplinary team that includes clinicians, non-clinicians, and Consumer Advisory Board (CAB) members. With the advent of the BH CP program, the BH CP Director, Program Manager, and Team Leads will join the QEC in active roles to report back on performance on BH CP-specific metrics.. This committee meets monthly and serves as the forum that coordinates and reviews all quality activities. Each year the Committee selects program-wide and team-specific quality initiatives and sets implementation plans for meeting related goals based on areas of needed improvement. The Committee regularly monitors and measures these indicators. The QEC committee members also approve the Quality Plan each year. Its composition guarantees that its activities are integrated into other areas to maximize our capabilities and avoid duplication of efforts. This committee is chaired by the Chief Medical Officer and the Chief Operating Officer. Other members of the committee include BHCHP's Quality Data Analyst, as well as various team/site leaders and BHCHP consumers.

Several other subcommittees also meet monthly and report to the QEC. These include, but are not limited to the Pharmacy and Therapeutics Committee (P&T), the Clinical Care Committee (CCC), and the Clinical Standards Committee (CSC). Each plays a key role in the organization's mission of providing quality health care and access to our clients.

The Chief Medical Officer, Chief Operations Officer, and Quality Data Analyst conduct quarterly quality update meetings at each of BHCHP's major sites/teams, and this will also include the monthly SDH Consortium Senior Leadership meetings. At these meetings the site-based quality indicators are reviewed with managers and staff. The group then chooses key areas for focused interventions using PDSA (Plan-Do-Study-Act) tools. The changes in metrics are then tracked in the next quarterly meeting and process improvement implementation is considered.

7.3.J. Coordination with ACOs and MCOs

BHCHP CEO Barry Bock and Senior Health Policy Advisor, Mary Takach have had discussions with Boston area ACO applicants including BACO, Partners, and C3, and MCOs including BMCHP, and Tufts HP regarding the work underway in the HPC HCII pilot and discussions to evolve the pilot into a BH CP program. We are currently working with BMC, BMCHP and Tufts HP to identify members that meet HPC HCII pilot criteria and enroll them in the pilot. The ACOs and MCOs expressed high interest in partnering with the SDH BH CP Consortium.

We will engage with ACOs and MCOs asking for them to refer all enrollees experiencing homelessness in the Boston-Prime Service area that meet BH CP criteria to our SDH BH CP Consortium for care coordination as well as other enrollees as deemed appropriate.

We expect to partner with the ACOs and MCOs to: 1) assign enrollees attributed to primary care from BHCHP; 2) assign enrollees to the SDH BH CP Consortium if any of their claims indicate the presence of a Z59 code (ICD 10 homeless code), and 3) assign any enrollee who is receiving CSPECH services to the SDH BH CP Consortium. If enrollees are receiving CSPECH services, that means they have been recently housed and are very vulnerable to becoming homeless again. Adding BH CP to the service mix for these enrollees would add a greatly needed behavioral health and medical support by coordinating with the existing CSPECH housing case managers. This coordination will increase the chance for these enrollees staying housed and out of the ED/hospital.

With regard to the SDH BH CP Consortium for conflict resolution, we have strong relationships already in place with hospital systems (especially BMC and MGH), existing MCOs, and many of

the potential ACO bidders. Relationships mitigate the conflicts rising to the point of needing formal resolution. In those instances in which conflict resolution occurs (which have rarely occurred), BHCHP will leverage its professional staff including compliance officer, legal counsel, finance department as well as the strong leadership provided by our CEO Barry Bock and our President Jim O'Connell.

When informal settlement efforts are not fruitful, BHCHP proposes settling disputes via arbitration and/or mediation. These methods of alternative dispute resolution save time, are more private, and cost much less than litigation, making them generally agreeable. They are also valuable in resolving disputes without burning bridges with collaborating organizations with which we need to continue working. The costs of mediation and arbitration are a small fraction of the costs associated with litigation, and even when a lawsuit has been filed, BHCHP will propose mediation and/or arbitration as a path to resolving litigation at a lower opportunity cost. Alternative dispute resolution also leads to creative and practical solutions that may be missed in traditional litigation, and agreements reached via mediation/arbitration are more likely to be successfully carried out. BHCHP's standard contracting practices include proposing binding agreements to mediate and/or arbitrate disputes arising under contracts, when appropriate and acceptable.

Community Partner Program Budget Report

The Bridge of Central Massachusetts, Inc.

Program Revenue	Prep Budget Period	Budget Year 1	Budget Year 2	Budget Year 3	Budget Year 4	Budget Year 5	Total Revenues

Fringe Item	$ 149,375.00	25%	$ 37,150
Total Fringe (Program Budget Line 2)			**$ 37,150**

Total Personnel*	**$ 186,525**

* Should align with Personnel Costs row in Program Budget

For each position listed above, provide a brief statement of the position's responsibilities:

Referral Coordinator - Building and strengthening business relationships with ACOs/MCOs. Distribute enrollee information to care teams to engage for enrollment in preparation for Go-Live.

Senior Clinical Care Manager - Oversee the BH component of BHCP. Recruit, hire, train, and supervise the BH Clinical Care Managers in support of CP contract requirements.

Senior RN Care Manager - Oversee the nursing component of BHCP. Recruit, hire, train, and supervise the RN Care Managers in support of CP contract requirements.

Clinical Care Manager - Provide and oversee integrated care coordination. Recruit, hire, train, and supervise Care Coordinators in support of CP contract requirements.

Care Coordinator - Participate in various trainings to provide integrated care coordination and management for individuals to be enrolled in the program in accordance with CP contract requirements.

Row 3 - Training and Professional Development

Description of Service	Unit Cost (if applicable)	# Staff (if applicable)	Total Cost
Staff training		15.5	$ 2,000.00
Total Training and Professional Development (Program Budget Line 3)			**$ 2,000.00**

Provide a description of each Training and Professional Development line item included in the table above:

Staff training - Training and orientation to be provided to the staff hired in the preparatory period, specifically for program onboarding and care management platform training.

All expenses are based on the 3.29 FTEs (approximately 15.5 employees; 3.29 FTEs total based on time of hire and based on percentage allocated to BH budget versus LTSS budget for shared staffing) anticipated to be hired during the preparatory period.

Row 4 - Travel

Position	Est miles per month	# months	Mileage reimbursement rate	Total Cost
Staff travel	1188	6	0.43	$ 3,063.00
				$ -
				$ -
			Total Mileage	$ 3,063.00

Travel Expense Description	Cost
Total Mileage	$ 3,063.00
Parking and tolls	
Public transportation	
Enrollee travel	
Total Travel (Program Budget Line 4)	**$ 3,063.00**

Please describe how mileage estimates and other travel expenses listed above were determined . If including enrollee travel expenses above, please explain how these expenses will be used by enrollees.

Staff Travel - staff mileage paid to staff for travel to meetings with affiliated partners, ACOs, and MCOs. Mileage is also paid to staff for travel to off-site trainings, conferences, etc. The staff mileage will be paid to all staff included in Row 1 as well as all staff included in the Infrastructure budget Row 12.

Row 5 - Equipment

Description of Equipment	Unit Cost or Cost/FTE	#units or FTEs	Cost
Copier			$ 2,100.00
Total Equipment (Program Budget Line 5)			**$ 2,100.00**

Provide a brief description of the intended use for each Equipment line item listed above and how the estimated costs were determined:

There will be a central office floor model copier / printer which will be leased from Ricoh at a cost of $4,200/year. The prorated cost for the prepatory period is $2,100.

Row 6 - Supplies

Description of Supplies	Unit Cost or Cost/FTE	# Units or FTE	Cost
Supplies			$ 1,553.00
Total Supplies (Program Budget Line 6)			**$ 1,553.00**

Provide a brief description of the intended use for each Supply line item listed above and how the estimated costs were determined:

Office Supplies: A cost analysis was completed to estimate the cost per item and needed inventory to stock the start up of this program including desktop items, e.g., staplers, paper clips, pens, etc. as well as supplies for printers, copiers.

Row 7 - Contract Services

Name of Contractor	Contractor Type	Goods and Services Provided	Cost
			$ -
Total Contract Services (Program Budget Line 7)			**$ -**

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Row 8 - Software Licensing

Description of Software	Cost per License	# Licenses	Cost
Total Software Licensing (Program Budget Line 8)			

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

Row 9 - Telecommunications

Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
Total Telecommunications (Program Budget Line 9)			

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

Row 10 - Occupancy

Occupancy Expense	Total SqFt	Cost/SqFT	Cost
Rent and Utilities	1550	$15	$ 23,250.00
Household Supplies			$ 1,578.00
			$ -
			$ -
			$ -
Total Occupancy (Program Budget Line 10)			**$ 24,828.00**

Provide a brief description of how each Occupancy line item listed above will support the CP's performance and how the costs were determined:

Occupancy - Expenses related to office space needed for the BHCP program. These expenses include rent, utilities, as well as facility set-up expenses. Occupancy cost is estimated at 100 square feet per employee at $15 per square foot. The total cost for one month is estimated to be approximately $23,250 (15.5 FTEs x 100 square feet x $15 per square foot).

Household Supplies: A cost analysis was completed to estimate the cost per item and needed inventory to stock the start up of this program including cleaning supplies and sanitary items.

Row 11 - Other

Community Partner Infrastructure Budget Report - Technology - Prep Budget Period

Only complete this Infrastructure Budget Narrative using amounts anticipated for PBP.
Lines may be added to the Infrastructure Budget Narrative tables as necessary

Row 1 - IT Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
				$ -
				$ -
				$ -
	Total Salary			$ -
	Fringe rate		Total Fringe	$ -
			Total IT Staffing including Fringe (Infrastructure Budget Line 1)	**$ -**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

Row 2 - Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Implentation of Care Management platform	$ 75,000.00
Total Development and Adaptation of EHR and Care Management System (Infrastructure Budget Line 2)	$ 75,000.00

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

The cost of the implementation of the care management platform was determined based on a formal quote received by the platform provider, eHana. The total cost of the platform is $200,000 and is being split between The Bridge of Central Massachusetts, Inc. (Lead agency for Behavioral Health Community Partner contract) and Alternatives Unlimited, Inc. (Lead agency for LTSS Community Partner contract).

Row 3 - Technology for Service Delivery

Description of Expense	Cost
Mobile technologies	$ 21,510.00
Total Technology for Service Delivery (Infrastructure Budget Line 3)	**$ 21,510.00**

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Each employee will be provided with a computer package customized to the needs of the positions.

Care Coordinators, because they will spend considerable time in the field, will receive a laptop with a hot spot. In order to easily link to the company systems, while in the office, they will have a docking station to hook into. The unit cost is approximately $1,460

for 12 units. These prices are based on a quote from Dell. Directors, Care Managers, and Referral Coordinators will receive a desktop workstation and monitor at a unit cost of approximately $1,140 for 3 units. The total prepatory period cost is $21,510.

Row 4 - Other Technology Expenses

Description of Expense	Cost
IT Staff (approx 70 hours x $25 per hour)	$ 1,770.00
Total Other Technology Expenses (Infrastructure Budget Line 4)	**$ 1,770.00**

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

IT staff time needed to configure laptops and stations, approximately 70 hours at $25 per hour.

Community Partner Infrastructure Budget Report - Workforce Development - Prep Budget Period

Row 5 - Workforce Development Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
				$ -
				$ -
				$ -
				$ -
	Total Salary	0		$ -
	Fringe rate		Total Fringe	$ -
Total Workforce Development Staffing including Fringe (Infrastructure Budget Line 5)				**$ -**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

Row 6 - Recruitment Expenses

Description of Expense	Cost
Recruitment (job postings)	$ 2,000.00
Total Recruitment Expenses (Infrastructure Budget Line 6)	**$ 2,000.00**

Provide a description of each recruitment expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Job postings for positions to be hired in the preparatory period. The cost includes advertisement and recrutiment efforst in job

boards and media platforms.

Row 7 - Training Expenses

Description of Expense	Cost
Total Training Expenses (Infrastructure Budget Line 7)	**$ -**

Provide a description of each training expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Row 8 - Retention Expenses

Description of Expense	Cost
Total Retention Expenses (Infrastructure Budget Line 8)	

Provide a description of each retention expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Community Partner Infrastructure Budget Report - Business Start Up Costs - Prep Budget Period

Row 9 - Office Equipment

Description of Expense	Cost
Office equipment	$ 6,803.00
Total Office Equipment (Infrastructure Budget Line 9)	**$ 6,803.00**

Provide a description of purpose for each office equipment expense listed in the tables above, including how the costs were determined:

Office equipment for staff hired in the preparatory period. Equipment consists of items purchased such as printers (approximately $150 each for 27 employees) and office phones (approximately $100 each for approximately 27 employees). The cost is based on approximately $250 per employee. In the prepatory period, there are 15.5 employees budgeted to be hired. Office equipment for an additional eleven to twelve employees will be purchased in the prepatory period to be configured for immediate use in Year One.

Row 10 - Office Furniture

Description of Expense	Cost
Office furniture	$ 26,800.00
Total Office Furniture (Infrastructure Budget Line 10)	**$ 26,800.00**

Provide a description of purpose for each office furniture expense listed in the table above, including how the costs were determined:

Office furniture for staff hired in the preparatory period. Furniture consists of items purchased such as desks (approximately $900 each for 15.5 employees), desk chairs (approximately $225 each for 15.5 employees), side chairs (approximately $215 each for 15.5 employees), file cabinets (approximately $250 each for 15.5 employees), a conference table (approximately $600), and conference room chairs (approximately $125 each for 6 chairs). The total cost is based on approximately $1,675 for each employee, There are 15.5 employees budgeted to be hired in the preparatory period.

Community Partner Infrastructure Budget Report - Operational Infrastructure - Prep Budget Period

Row 12 - Operational Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
Quality Manager	$ 65,000.00	0.5	4	$ 10,724
Community Partnership Director	$ 95,000.00	0.5	6	$ 23,750
				$ -
				$ -
	Total Salary	1		$ 34,474
	Fringe rate	24.9%	Total Fringe	$ 8,574
			Total Program Staffing including Fringe (Infrastructure Budget Line 12)	**$ 43,048**

Provide a description of purpose for each office furniture expense listed in the table above, including how the costs were determined:

Quality Manager - CP quality activities, analysis, and reporting of indicators and outcomes for the BH CP program as required by the CP contract.

Community Partnership Director - Oversee the development of the CCHP/BH program and all its components, including overseeing staff hiring. Build relationships with agencies and provide support to the BH program and ensure the CP is meeting contract obligations.

The total cost of the Community Partnership Director and Referral Coordinator is being split between The Bridge of Central Massachusetts, Inc. - 50% (Lead agency for Behavioral Health Community Partner contract) and Alternatives Unlimited, Inc. (Lead Agency for LTSS Community Partner contract) - 50%.

Row 13 - Other Operational Expenses

Description of Expense	Cost
Consultation	$ 3,000.00
	$ -
	$ -

	Total Other Operational Expenses (Infrastructure Budget Line 13)	$ 3,000.00

Provide a description of each retention expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Consultation - Legal consultation provided for CCHP partnership and ACO/MCO agreements for the Behavioral Health Community

Community Partner Infrastructure Budget Report - Indirect Cost/Administrative Overhead- Prep Budget Period

Row 14 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 14)	**12.50%**	**$ 22,491.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

The Bridge of Central Massachusetts, Inc. calculates an indirect cost / administrative overhead for all of its programs at a rate of 12.5% of the subtotal of the program's expenses.

BH Community Partner - Staffing Model

The Bridge of Central Massachusetts, Inc.

line #			
1	Estimated number of Engaged Enrollees (including CBFS if applicable) at the end of Budget Period 1	1703	*Should align with Program Budget*

	BH CP Program Staff	FTEs (Do not duplicate FTE - FTE's may be allocated across staffing positons as applicable)	Comment
2	BH CP Director and Assistant/Deputy Director	0.81	*Total management oversight of BH CP*
3	Medical Director	0.1	*Portion of Medical Director allocated to BH CP for the number of enrollees shown in line 1*
4	RNs	2.27	
5	Clinical Care Managers (RN)	2.41	*Do not include FTEs listed in line 4*
6	Clinical Care Managers (LPHA)	2.37	*LPHA includes LICSW, LMHA, LADC I*
7	Supervisors/Team Leaders	2	*Do not include FTEs listed in lines 4, 5 or 6*
8	Other Licensed Staff		*Do not include FTEs listed in lines 4, 5, 6 or 7*
9	Care Coordinators	37.84	*FTEs providing Care Coordination (may include Health Outreach Workers, Community Health Workers, Peer Specialists, Recovery Support Navigators providing care coordination)*
10	Peer Specialist/ Recovery Coaches (non-Care Coordination)		*Do not include FTEs of Peer Specialists or Recovery Coaches included in line 9*
11	Intake Coordinators/Engagement Specialists	0.81	
12	Administrative Support	1.62	
13			
14			
	Total FTE	50.23	

	Staff Ratios - Please calculate the following ratios:		
15	Ratio of RN and Clinical Care Manager (RN) to Assigned and Engaged Enrollees	1:300	*Estimated number of Assigned and Engaged Enrollees at the end of BP1 divided by total FTEs of (RN+RN Clinical Care Managers)*
16	Ratio of Care Coordinator Supervision to Care Coordinators	1:8	*Total Care Coordinator FTEs divided by Total Care Coordination Supervision FTEs*

Please describe which Program staff listed in lines 2 through 8 above directly supervise Care Coordinator staff: The Clinical Care Managers (RN) and (LPHA) will directly supervise the Care Coordinator staff. Clinical Care Managers will either be a Licensed Clinician or an RN.

Section 7.3 Initial DSRIP Participation Plan

A. Executive Summary

1. Goals, Challenges, and Proposed Solutions

The Bridge of Central Massachusetts, Inc. (The Bridge) as the Lead Agency with its Affiliated Partners and Material Sub Contractors, including, but not limited to, Alternatives Unlimited, Inc. (Alternatives), LUK Crisis Center, Inc. (LUK) and Venture Community Partners (Venture) as Affiliated Partners and AdCare as a Material Subcontractor ("CCHP/BH"), represent an ideal collective of premier human service organizations in Central Massachusetts which employ evidence-based practices to deliver both Behavioral Health (BH) and Long-Term Services and Supports (LTSS). We serve individuals with MassHealth coverage as well as other State EOHHS funded consumers. CCHP/BH partners provide trauma-informed, best practice services to individuals with Serious Mental Illness (SMI) and Substance Use Disorders (SUD) who present with a variety of medical, physical and developmental disabilities.

Our unique application to EOHHS provides fully integrated BH and LTSS CP services to those individuals who require them, while also providing services to individuals who require either BH or LTSS services individually. This RFR submission is specifically to participate as a certified BH Community Partner (BH CP). Collectively, we have unprecedented breadth and depth providing services that closely resemble the same BH CP services that the State is now procuring.

An important aspect to our approach is the inclusion of specialized services for individuals with SUD through AdCare, a Material Subcontractor on this RFR submission. In addition to contracting with AdCare to lead the delivery of BH CP support services to individuals with SUD, we will provide "Recovery Support Navigators" with specialized expertise in supporting this population.

Our organizations are deeply connected with providers, Accountable Care Organization (ACOs) and other community-based organizations (CBOs) within our service area. Given the depth and breadth of existing provider relationships, we are already speaking with ACOs about developing unified assessments and treatment plans to play a meaningful role in integrating care.

Goals. CCHP/BH goals align closely with the State's goals to:

- Support Enrollees with high BH needs to help them navigate the delivery system
- Improve the Enrollee experience by holistically engaging Enrollees with high BH needs with services that strengthen, enhance and diversify access for individuals and families we serve
- Assist individuals in integrating into the community through attaining valued community roles, active membership in local organizations and meaningful relationships
- Incorporate an enhanced data-driven, evidence-based decision-making process currently used in our organizations today to guide clinical and administrative decisions
- Support community first values, SAMHSA recovery principles, and culturally competent care delivery by adopting evidenced- based, best practices

- Collaborate with ACOs, MCOs, CPs, and community organizations to integrate care and address the social determinants of health

Challenges and Solutions. Challenges and solutions associated with meeting the State's BH CP Contract requirements:

Challenges	Solutions
Support true care integration	Utilize a single system that supports data integration among Affiliated Partners, ACOs and others Educate Enrollees and providers re: integration Leverage existing relationships
Connect Enrollees to social service agencies and community organizations to address social determinants of health	Leverage the close relationships we have developed with local organizations throughout the community that serve Enrollees
Develop Information Technology (IT) tools to share regarding care across the full continuum of medical and psychosocial support services	Identify and develop IT solutions that support information connectivity and sharing of information, leveraging BH, existing infrastructure and resources.

2. Anticipated Number of Enrollees

CCHP/BH organizations currently serve an estimated 1,430 BH CP Eligible Enrollees. CCHP/BH will have the capacity to serve approximately 1,700 BH CP Eligible individuals, within the proposed Service Region, during the first year of service delivery. We will develop the ability to serve 3,000 or more individuals during over the course of the contract.

3. Service Areas

CCHP/BH proposes to serve MassHealth Enrollees in all the Central Region, excluding towns in the Waltham service area.

4. Plans to Operationalize the CP Program

These changes in hiring schedules are reflected in the revised budgets and budget narrative.

To operationalize the CP program, CCHP/BH will engage in the following crucial implementation activities, based on time frames indicated below:

Activity	Timeline (Start)
Execute contractual agreements w/MCOs and ACOs	Upon Selection
Develop and implement Contractor Governance structure	Upon Selection
Identify, hire and recruit staff	Winter 2018
Orient and train staff regarding Contract requirements	Spring 2018
Develop the process to accept Assigned enrollees from EOHHS and all related processes and work flows	Upon Selection
Identify and develop general operational business functions	Upon Selection

Create and implement a Consumer Advisory Board	Winter 2018
Develop, distribute and implement a Conflict of Interest policy	Upon Selection
Finalize policies that describe CP Support protocols	Upon Selection
Develop and implement a comprehensive QM/QI strategy	Within 90 days of Selection
Develop IT capabilities	Upon Selection

B. Supporting Populations and Community Engagement

1. Connections to the Community

CCHP/BH, with over 40 years of experience, engages community-based organizations (CBOs) to integrate BH, LTSS and physical health, and to address social determinants of health.

CBOs: Active engagement with the United Way organizations in each of our Service Areas, Youth Connect, City of Worcester DPH, Coalition for a Health Greater Worcester, the Spanish American Center, CENTRO, the YWCA, Worcester Community Action Council, Community Health Link, and other Federally Qualified Health Centers.

Advocacy groups: Collaboration with Parent-Professional Advocacy League, National Alliance on Mental Illness, Kiva Center of the Central MA Recovery Learning Community, Massachusetts Organization for Addition Recovery (MOAR), Everyday Miracles Peer Recovery Support Center, and the SHINE Initiative, promoting best practices in behavioral health (BH) delivery.

BH providers: Care coordination with primary care physicians (PCPs) and community-based BH providers. Enrollee referral to Community Health link, Riverside Community Care, CHL Lipton Center, UMass Memorial and affiliates, Heywood Hospital, The Griswald Center, The Wells Center, Harrington Hospital, South Bay Intervention, Justice Resource Center, Advocates, Inc., South Middlesex Opportunity Council, Clinical and Support Options and Center for Human Development.

Housing/shelter providers: Collaboration with the City of Worcester through an Emergency Solutions Grant to provide support for homeless individuals with mental health and substance use challenges; address homelessness through participation on the Worcester County Continuum of Care committee and partnering with the Central Massachusetts Housing Alliance.

Social service organizations: Coordination with, and referral of Enrollees to, Worcester Community Action Council (WCAC), Employment Options and Genesis Clubhouses, Montachusett Opportunity Council, Our Father's House, Gardner Community Action Committee, Friendly House, and Daybreak for emergency housing; and South Middlesex Opportunity Council.

2. How We Will Grow our Connections to the Community

CCHP/BH will leverage and build on existing relationships in the community.

Participation in community health needs assessments: The Bridge has worked closely with the City's Department of Public Health on MH and SUD components of the Community Health Improvement Plan and will continue to lead workgroups and implement strategies.

Engagement to grow community connections: The Bridge serves on the City of Worcester's Quality of Life Task Force and participates on a committee to address the City's major opioid crisis. The Bridge and our Affiliated Partners are involved in a wide variety of community-based initiatives, many of which are aimed at addressing the opioid crisis.

The Bridge and LUK are members of the Worcester County Continuum of Care committee and partner with the Central MA Housing Alliance to address homelessness in the region.

The Bridge enjoys strong relationships with many other community-based organizations. For example, over the past two years the Bridge has trained the entire Worcester Police Department on mental health interventions as part of the Crisis Intervention Team and has worked with multiple school systems throughout the region on suicide prevention, social emotional learning, and policy changes in schools in support of LGBTQ youth served by our Safe Homes program. The Bridge is also the founding member of a new Provider Alliance convened by Clark University to address health equity in a culturally responsive manner.

Alternatives is recognized nationally for its work with community organizations on social connectedness. The agency has developed a comprehensive curriculum that teaches staff and individuals served how to make deeper community connections and how to become members of local community organizations. In addition to training, the agency has developed a number of non-traditional clubs and activities that help people make connections. The agency performed a baseline survey of over 1000 members and has administered two bi-annual re-surveys that demonstrate a 15% improvement in social connectedness.

LUK maintains strong connections to community organizations including coordinating 11 Intensive Learning Communities for 50 behavioral health agencies and training 500 clinicians and
100 paraprofessionals in Evidence-based Trauma treatment. LUK also developed Trauma Informed Leadership Teams, bringing child welfare and community partners together to coordinate care for the most vulnerable children and families impacted by trauma.

Link to Business Plan: CCHP/BH will incorporate relationship development as an essential aspect of our business plan, seeking to increase the number and depth of relationships with community-based organizations that support the psychosocial needs of our Enrollees.

3. Plans to Ensure Staff is Informed of Community Resources

Staff training: We will organize and conduct on-going educational sessions for staff during work hours to support collaboration with community organizations including, community resource information for new staff, periodic staff conferences, invited community guest speakers, training on evidence-based and best-practices, and participation in community events.

Interdisciplinary Care Team (ICT) meetings: The ICT will review Enrollee needs and identify which community-based resources can best support the Enrollee. If Enrollee needs and opinions change, CCHP/BH will engage additional community-based agencies and providers as needed.

C. Community Partner Supports and Activities

1. Outreach and Active Engagement

a. Strategies for Outreaching to and Engaging with Assigned Enrollees Who Are Homeless and Hard to Reach

CCHP/BH subscribes to the Substance Abuse and Mental Health Service Administration's (SAMSHA) philosophy and approach to locate, outreach and engage Assigned Enrollees who have not otherwise been engaged in services. This philosophy begins with our understanding of the Enrollee's current relationships with a BH provider and the importance of meeting the Enrollee's basic needs. As we initiate contact with the Enrollee, we build rapport and trust, thereby increasing our ability to connect Enrollees to services without making them feel uncomfortable, judged or threatened.

Key outreach strategies follow.

Today, CCHP/BH organizations meet consumers at any available location in the community where they are personally comfortable, which may include but not be limited to their home, neighborhood locations, PCP and other medical and behavioral health provider offices, motels, shelters, or congregate meal sites among other locales. CCHP/BH will continue this practice. We seek to truly connect with the Enrollee and build trust, regardless of where we physically meet. We feel strongly that asking the Enrollee to select the location that would be most comfortable for them is an important step toward building the Enrollee's trust and confidence in our service delivery.

Our organization makes the process of building a relationship with the Enrollee as primary, and does so by being highly respectful toward Enrollees and their families. We seek to create a safe, friendly environment that respects their privacy. Upon meeting with the Enrollee, we will obtain their consent to participate and then begin to assess and meet his or her basic needs.

We hire highly qualified, culturally-competent individuals who are trained in evidence-based and best practices such as motivational interviewing, wraparound, psychiatric rehabilitation, and the use of peer supports to engage Enrollees. Our staff are very skilled at interacting with individuals who have SMI and SUD diagnoses. Furthermore, we hire staff who have lived experience, are in recovery and/or who are experienced at serving the target population and understand their needs and preferences, well beyond cultural and linguistic needs. Additionally, we provide training on strategies for mitigating the effects of symptoms that impact engagement such as paranoia, disorganized thinking and behavior, delusions, and hallucinations.

Our primary strategies to outreach Enrollees, including individuals who are homeless, reflect the philosophy and strategies described above. For individuals who are homeless, our efforts

notably include direct community outreach in areas where homeless individuals congregate and live, including shelters, food pantries and parks. An example of our success in this area was highlighted in 2016 when The Bridge was awarded a contract to work with 11 chronically homeless individuals diagnosed with SMI and SUD. In a four-month time period we successfully engaged and housed all 11 participants.

Engagement Process. CCHP/BH's Care Coordination (for individuals with primary SMI issues) or Recovery Support Navigator (for individuals with primary SUD needs) contact will be responsible for engaging individuals in BH CP services. CCHP/BH partners will employ Care Coordinators and Recovery Support Navigators to outreach and connect with Enrollees to schedule in-person contact. We will attempt to make at least one Outreach activity to each Assigned Enrollee within 30 days of Assignment and, to achieve a face-to-face visit within 3 calendar months of Assignment.

If appropriate, CCHP/BH may make the first in-person contact during an acute care event at a local hospital, taking care to ensure that the Enrollee is agreeable. In this manner, CCHP/BH partners will proactively participate in the Enrollee's transition of care at the outset of their enrollment.

Using motivational interviewing techniques, a CCHP/BH Care Coordinator or Recovery Support Navigator will explain how BH CP services can help them achieve their goals and mitigate frustrations with the delivery system. Care Coordinators will explain that the program is intended to help enrollees overcome barriers to care, build a network of support and introduce ways to participate in the community for improved wellbeing.

During the first in-person contact, CCHP/BH staff will employ motivational interviewing to understand the Enrollee's health status, their needs and preferences and, their aspirations and/or frustrations with barriers to care delivery that require attention. The initial meeting will further allow CCHP/BH staff to assess the Enrollee's needs and preferences in their primary preferred language with attention to cultural beliefs. Individuals who choose not to enroll will be provided with contact information should they choose to enroll later, and will be asked if periodic outreach from a Care Coordinator or Recovery Support Navigator is acceptable. We will also explain the anticipated frequency and type of interaction available for CP service delivery.

Before the end of the initial visit, CCHP/BH staff will provide individuals that choose to receive BH CP services with introductory material including information regarding the benefits, design and purpose of CP supports. Such information will be offered in written and verbal formats and, will be available to Enrollees in their primary preferred language for the most commonly spoken languages among the population served. We will provide information regarding the BH CP service delivery process with a focus on helping the Enrollee understand how to engage with our organization. For example, we will provide Enrollees with detailed information regarding how to reach their primary Care Coordinator. Our Care Coordinator or Recovery Support Navigator will explain that the Enrollee can opt out of receiving CP services at any time. Enrollees will also be able to request assignment to a different staff member within our organization or assignment to a different BH CP organization at any point in time. We will also

provide information regarding how to reach CCHP/BH's web site and Consumer Advisory Board, and a Care Coordinator or Recovery Support Navigator.

Where possible and desired by the Enrollee, the individual who performs the initial contact and assessment will serve as the Care Coordinator on an ongoing basis and will take a leadership role in delivering services as part of our BH CP team. If the Enrollee prefers a different Care Coordinator or Recovery Support Navigator, another staff member from the CCHP/BH will be assigned to that individual, based on their preferences and feedback.

CCHP/BH has initiated conversations with potential ACOs that support and enable our ability to obtain notification from a patient advocate regarding an Enrollees' admission or ED registration at local area hospitals. The Bridge and its' Affiliated Partners will work with hospital-based advocates directly (as appropriate and determined by the hospital) when the Enrollee is in the ED, or inpatient. In collaboration with CCHP/BH, Care Coordinators or Recovery Support Navigators, we will partner with hospital based case managers to improve notification to the BH CP, integration, and consistency of care plan implementation while eliminating duplication of effort and confusion for Enrollees.

The success of this program is predicated on sustained and trusting relationships between Enrollees and our Care Coordinators, which are established and cultivated through regular face to-face contact. Given our extensive experience with the population, we are aware that multiple in-person contacts may be required before an individual chooses to engage with their Care Coordinator. Care Coordinators will attempt to schedule an initial appointment telephonically and schedule to meet with the Enrollee in the community and will adhere to Enrollee preference regarding where and when to meet with Enrollees. In addition, the Care Coordinator or Recovery Support Navigator will seek Enrollee input regarding their desire to involve a family member or care giver (or other individual) in their care.

b. Strategies for Outreaching to and Engaging with Assigned Enrollees with Substance Use Disorders (SUD)

We tailor our approach for individuals with an SUD diagnosis to the Enrollee's readiness to engage in a recovery process and take any positive step towards harm reduction by reducing use of substances and achieving abstinence. For individuals who are seeking treatment, our approach will resemble our approach to outreach and engagement described above for individuals with BH needs. Our Material Subcontractor, AdCare, employs motivational coaching and interviewing to engage clients in the assessment, treatment planning and treatment implementation. We will assign staff with expertise in treating SUDs, known as Recovery Support Navigators. We will also hire and deploy Peer Supports with lived experience where appropriate, to support Enrollees with SUD diagnoses. Other specific strategies to outreach and engage individuals with SUDs follow.

A Recovery Support Navigator will meet the Enrollee at any location in the community where they are personally comfortable, which may include but not be limited to neighborhood locations, motels, shelters, or congregate meal sites among other locations. We seek to truly connect with the Enrollee and build trust, regardless of where we physically meet.

If appropriate, CCHP/BH may make the first in-person contact during an acute care event at a local hospital or other levels of acute care to ensure that the Enrollee is comfortable. CCHP/BH will strengthen existing relationships with agencies providing acute levels of addiction care including but not limited to acute treatment services (i.e., detoxification); clinical stabilization services; and transitional support services. In addition, existing collaborations will be strengthened with adult residential programs and Recovery Homes. This is especially critical for individuals struggling with addiction, as discharge from a controlled environment, in which the person does not have access to substances, to life in the community places the person at a higher risk for a lapse or relapse resulting in a setback on his/her road to recovery. In this manner, CCHP/BH partners will proactively participate in the Enrollee's transition of care at the outset of their enrollment.

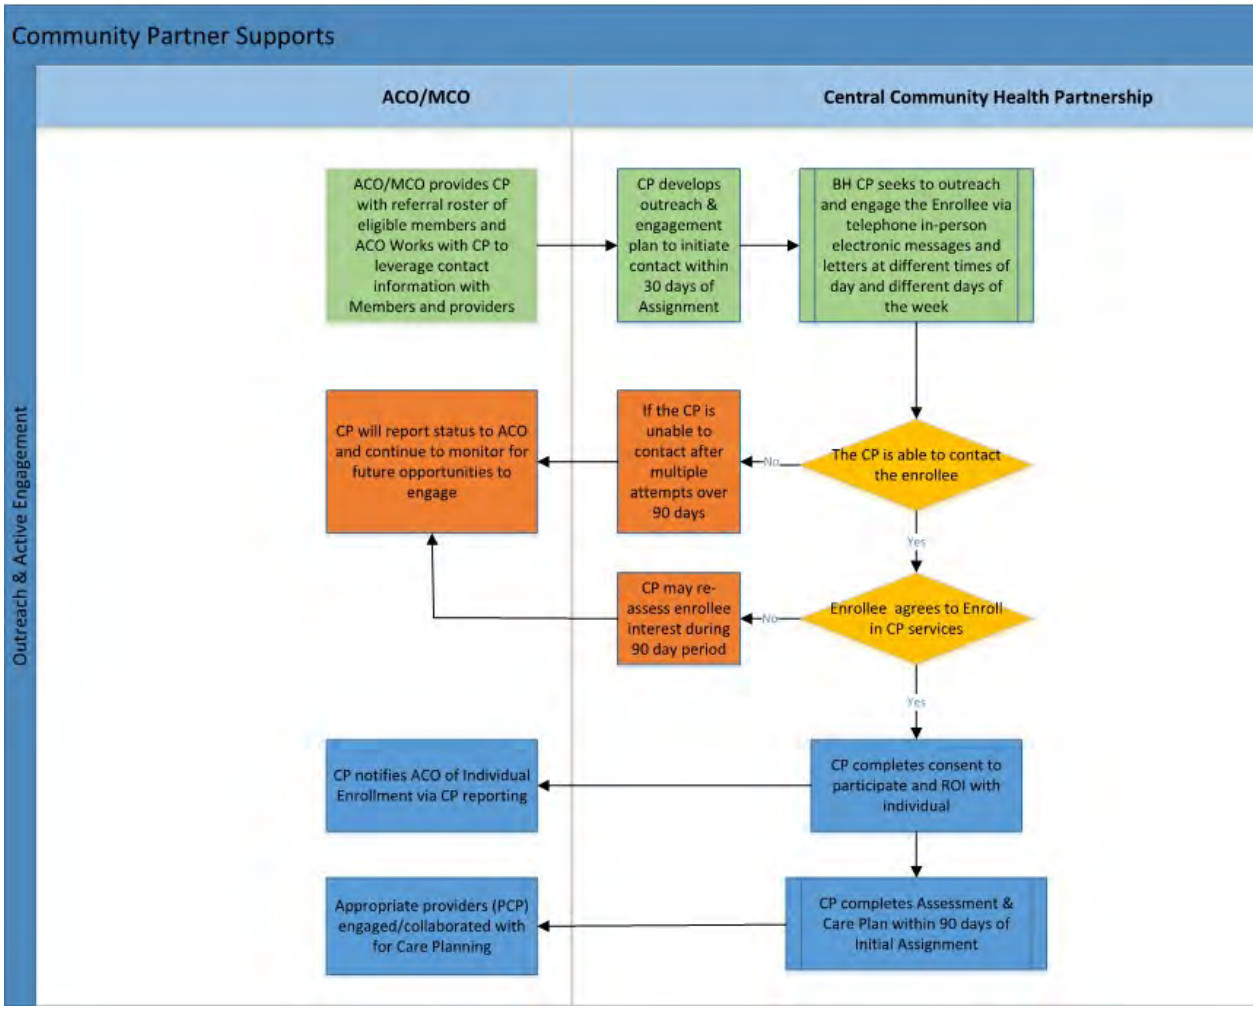
In addition to utilizing acute care events as an entry point for engaging with persons with SUDs, other community connections will be utilized. For persons in recovery a trusting relationship with an existing provider or social support (e.g., primary care physician, outpatient therapist, sponsor) is critical. If enrollees are comfortable and consent, CCHP/BH Recovery Support Navigators will facilitate "warm hand offs" to other providers. These meetings may occur in doctor's offices, outpatient clinics, or community-based recovery support meetings (e.g., AA, NA). In this way staff are truly meeting enrollees where they are in order to enhance effective engagement in care coordination activities.

CCHP/BH will emphasize the relationship development process as primary in the CP service delivery process, for individuals with SUD and other diagnoses, as described above. As is the case today, our staff, using motivational interviewing strategies, will be highly respectful toward Enrollees and their families regardless of the struggles associated with their diagnoses. We will seek to create a safe, friendly environment in which to meet without judgement regarding substance use while respecting the Enrollee's right to privacy, and with their consent. We will immediately attempt to assess and meet Enrollee's basic needs to gain the Enrollee's trust and, to provide immediate and tangible support as needed. We will seek to support housing, food and safety as basic needs from the outset.

c. Process to Obtain and Document Assigned Enrollee's Agreement to Participate in CP Supports Through a Participation Form

At the initial visit, prior to the assessment, each Enrollee will be asked to sign a Consent to Participate and Releases of Information with any other identified providers. We will train our staff carefully to explain the purpose of the participation form to the Enrollee and confirm their desire to participate in BH CP services. We will further explain the concept of Protected Information (PI) and how we intend to gather, store, utilize and protect any information provided by the Enrollee. CCHP/BH's Care Coordinator or Recovery Support Navigator will explicitly inform the Enrollee, in their primary preferred language in a manner that the Enrollee can fully comprehend, our need to obtain the Enrollee's written authorization to use and disclose PI as necessary to provide quality BH CP support services.

Following receipt of the Consent to Participate form, we will formally assign a CCHP/BH Care Coordinator or Recovery Support Navigator within five business days of receipt of the signed participation form. The CCHP/BH Care Coordinator or Recovery Support Navigator will serve as the Enrollee's single point of contact and conduct engagement and enrollment activities. A copy of the form will be maintained in the Enrollee's record. The process to obtain and document the Assigned Enrollee's agreement to participate in CP Supports through a participation form is as follows:



2. Comprehensive Assessment and Person-Centered Treatment Planning

a. Process for Conducting Comprehensive Assessments

We place the Enrollee at the center of the Assessment and treatment planning process, constantly engaging them to identify their needs, priorities and preferences. For the BH CP Comprehensive Assessment, CCHP/BH will utilize the Massachusetts Standardized Documentation Project (MSDP) tool.

Our process begins with a review of medical records and any available documentation regarding the Enrollee's needs and condition by a Care Coordinator or Recovery Support Navigator.

Specifically, CCHP/BH staff will review the Assigned Enrollee's medical history, medical needs and medications and summarizes these needs.

CCHP/BH organizations seek to leverage any information already collected by the Enrollee's MCO or Accountable Care Organization (ACO). We believe this is important to maintaining an Enrollee centered, efficient process that minimizes duplication and demands on the Enrollee. We are already engaged in conversations with ACO and MCOs in our geographic area regarding Information Technology (IT) strategies to leverage and share data to avoid duplication of effort

or strain on the Enrollee. Ultimately CCHP/BH organizations seek to develop a single integrated assessment with the Enrollee's ACO or MCO, building on information already obtained from the Enrollee. The same principle applies to the Person-Centered Treatment Plan (PCPT).

The ACO will gather Initial and Comprehensive Assessment data to evaluate issues that shape care management services and CCHP/BH partners will focus on gathering information to thoroughly plan the delivery of BH services for our Enrollees.

With the Enrollee's permission, we hope to establish connectivity to share relevant and available data from the Enrollee's ACO or MCO and incorporate that data within the MDSP Assessment. Our staff will meet with the Enrollee and administer the complete Assessment, attempting to avoid duplication in the questions asked, unless current information is needed. CCHP/BH's Care Coordinators and Recovery Support Navigators will employ motivational interviewing techniques that specifically assess the Enrollee's immediate care needs, current services, personal and familial medical history, medications, health communications skills, etc. as part of the Assessment.

Beyond collaborating on the Comprehensive Assessment process, CCHP/BH staff plan to participate on each Enrollee's ACO ICT, and will play a critical role in the formation and convening of the ICT for all individuals who are BH CP Eligible. If the Enrollee has an existing relationship with a PCP, state agency care/case managers or other treatment providers, we will engage these key individuals in the Assessment and the PCTP process as described below. Following the completion of the Comprehensive Assessment by the CHCP/BH Care Team, we will communicate the results of the Assessment to the team and jointly determine implications for on-going care planning. Consistent with EOHHS requirements, a qualified CCHP/BH nurse will review each assessment prior to its completion.

CCHP/BH will use a combination of the Massachusetts Standardized Data Project (MSDP) forms to perform Comprehensive Assessments for BH CP Eligible individuals. We agree to meet all EOHHS requirements pertaining to mandatory data elements mandated in the Model Contract. We will select appropriate forms based on adult, SMI or SUD status. Our goal is to maximize person-centeredness, minimize duplication and maximize efficiency. We plan to review and discuss the MSDP tools, included as Attachment 7.3.C.2.A to this RFR submission with local ACOs, prior to sharing our final selection of forms with EOHHS. The attached MSDP forms include: a Comprehensive Assessment for Adults, a Physical Health Assessment (in the event that such information is not available from the ACO); and, an Addictive Behavior and Substance Use History Addendum.

b. Process for Conducting Person-Centered Treatment Plans

1) Planned processes for developing the Person-Centered Treatment Plan, including ensuring the Assigned Enrollee participates in the process. After the Comprehensive Assessment is completed, CCHP/BH's Care Coordinator or Recovery Support Navigator will work with each Enrollee, placing the Enrollee's opinion first and foremost. We will use available data, in combination with Enrollee input to develop a PCTP. CCHP's Care Coordinator or Recovery

Support Navigator will engage the individual through person-centered planning strategies as a foundational element of the PCPT.

CCHP/BH will conduct a collaborative conversation, directed by the Enrollee, in partnership with providers and natural supports to formulate the care plan. In this process, CCHP/BH will employ shared decision-making, understanding and consideration of cultural differences and a recovery orientation. CCHP/BH staff will utilize tools and strategies to help the individual identify both short-term and long-term meaningful and personalized goals. Key components of CCHP/BH's process include: pre-meeting activities; assessment; treatment planning; care plan implementation; and care plan review and revision.

CCHP/BH partners plan to deliver integrated BH care in collaboration with our ACO and MCO partners in our service area. With the Enrollee's consent, we will seek to participate in ACO or MCO ICT meetings and/or will invite the Enrollee's ACO/MCO to any care planning meetings that CHCP/BH organizations schedule. CCHP/BH will play a leadership role in discussing Enrollee needs in an integrated manner, rather than requiring the Enrollee to attend separate meetings with their ACO or MCO and CCHP/BH. If the Enrollee prefers a separate meeting specifically to discuss their BH needs, we will offer a session with the Enrollee's Care Coordinator and other BH CP Team members as requested.

CCHP/BH's PCTP will include but not be limited to: Enrollee goals and objectives, specific action steps to achieve goals, method for tracking goal progress, referral needs to obtain care and services, educational needs, and any other necessary information. PCTPs may also include a crisis plan, especially for individuals with BH needs with a history of crisis service utilization. Our Material Subcontractor, AdCare, currently uses a person-centered approach in developing treatment plans to engage individuals with a range of SUD needs and will extend their expertise to CCHP/BH Enrollees.

CCHP/BH's Care Coordinator or Recovery Support Navigator will review the PCTP and other information with the Enrollee including but not limited to, the Enrollee's right to appeal any denial, termination, suspension or reduction in services or any change in providers, services, treatment recommendations or medications included in the PCTP. Policies and procedures will include steps to inform each Enrollee of their right to approve the PCTP and the mechanism to signify that Enrollee PCTP approval has been given. Upon Enrollee approval of the PCTP, the BH CP will provide the Enrollee with a copy, which we will also share with the ACO.

2) Planned processes for documenting the Person-Centered Treatment Plan. CCHP/BH plans to document the Enrollee's PCPT in our electronic medical record/ centralized care management platform.

3) Planned processes for updating the Person-Centered Treatment Plan. CCHP/BH will update the PCTP in collaboration with the Enrollee, their family members/caregiver, the ACO or MCO and other key stakeholders identified by the Enrollee. Our Care Coordinators and Recovery Support Navigators will update treatment plans at any major change in the Enrollee's condition (e. g. loss of housing, loss of informal caregiver, BH crisis, new BH diagnosis, BH or medical hospitalization, change in health status, multiple

ED visits), progress toward treatment goals, a decline in functioning, or transition between levels of care. If the Enrollee's quality of life is not improving or the Enrollee feels that the plan needs an update, we will also update the PCPT. CCHP/BH will seek to obtain sign-off from the PCP who will receive a copy of the PCTP upon completion. CCHP/BH will coordinate care with the PCP based on the Plan.

The CCHP/BH Care Coordinator or Recovery Support Navigator will share PCTP updates with the Care Team within the Enrollee's ACO or their MCO and, internally. Recognizing that Enrollee's needs are fluid, our Care Coordinator or Recovery Support Navigator will review the PCTP and the Enrollee's progress during each interaction and inform key stakeholders as necessary and appropriate while respecting Enrollee privacy and wishes.

CCHP/BH will complete an annual re-assessment that includes, but will not be limited to: updates that review past progress toward goals, health status, future goals, monitoring of compliance with the PCTP, recommended follow-up and a complete update to the PCTP. Each time a reassessment occurs, or if the PCTP changes because of a review, we will update and distribute the PCTP appropriately. A reassessment and update to the PCTP will be performed at least every six months and following a change in Enrollee status that is self-limiting, impacts their health status and requires a review.

We will implement a process that is consistent with the creation of the original PCTP where the Enrollee and the PCP approve the Plan prior to implementation. We will further review and provide a copy of the Plan to the Enrollee and the PCP upon completion.

4) Planned process for ensuring the Assigned Enrollee and the Assigned Enrollee's PCP or PCP

Designee approve the Person-Centered Treatment Plan. Ideally, the PCTP will be developed by CCHP/BH staff with input from the Enrollee's PCP, ACO-PP or MCO ICT. The Care Coordinator will share the PCTP with the Assigned Enrollee and the Enrollee's PCP to obtain sign-off following a complete review by the registered nurse and/or Clinical Care Manager.

3. Care Coordination and Care Management

a. Identifying all Stakeholders Involved in an Enrollee's Care

CCHP/BH will identify all stakeholders involved in the Enrollee's care through multiple methods. First and foremost, we will ask the Enrollee which individuals they most want involved in their care team and care delivery efforts. Once the Enrollee has been consulted regarding those individuals who they believe are critical to care management and planning efforts, our Care Coordinator will contact the individuals' PCP, involved State agencies and community-based organizations who are involved in the Enrollee's care. The Care Coordinator or Recovery Support Navigator will also contact the Enrollee's ACO or MCO to determine what care management efforts are already underway so that care is fully integrated and coordinated without waste or duplication of efforts. Our Material Subcontractor, AdCare, has expertise in care coordination and recovery coaching for SUD and overdose victims. CCHP/BH partners will assemble a care team that includes, but will not be limited to: The Enrollee, the PCP, the CCHP/BH Clinical Care Manager, the Enrollees' Care Coordinator or Recovery Support

Navigator, their BH clinician and others as appropriate (e. g. family, caregivers, advocates, state agency staff or other care managers).

b. Exchanging Information with Such Stakeholders

In collaboration with potential ACOs, in our service areas, CCHP/BH will develop a process to share information securely in an electronic format with any stakeholders that are also connected with the ACO. For other stakeholders, we will develop a process for securely sharing information using a standardized format.

c. Identifying and Organizing Members of the Enrollee' Care Team

A description of how we will identify members of each Enrollee's care team is described above in Section C.3.a. of this RFR submission. As already stated, CCHP/BH staff will participate in the ACO or MCO's ICT whenever possible. Otherwise, CCHP/BH will facilitate a meeting of the Enrollee's full ICT to participate in the development and implementation of a fully integrated person-centered assessment and care planning process for each individual Assigned to CCHP/BH.

d. Ensuring Effective Ongoing Communication Across Stakeholders

CCHP/BH will ensure effective ongoing communication across stakeholders through multiple means. First, we will maintain close contact with the Enrollee and will further ensure that their needs and preferences are met. In addition, we will maintain close and collaborative contact with the Enrollees' PCP and key agency and community-based caregivers to ensure coordination and integration. While we plan to participate in, or hold, an ICT meeting to initially create a plan to meet the Enrollee's needs, we will reach out to key stakeholders telephonically as needed and initiate meetings when appropriate and necessary. We will collaborate with providers and stakeholders to develop a joint case rounds process to discuss ways to support Enrollees with complex needs, such as those with BH and LTSS needs.

Key to meeting Enrollee's needs, we will communicate closely with the Enrollee and family/informal caregiver, the Enrollee's PCP, specialist and other providers to communicate the PCTP as part of the overall ICT. We will further promote good medical care by coordinating the provision of medical, prenatal, outpatient behavioral health and preventative care reminders with the ACO or MCO. Care Coordinators and Recovery Support Navigators will assist Enrollees in scheduling both medical and BH appointments and, will conduct follow-up, in collaboration with the ACO or MCO, to ensure that appointments are kept and, that the Enrollee does not require additional supports.

4. Care Transitions

CCHP/BH staff are aware that transitions of care represent an important opportunity to ensure quality, Enrollee satisfaction and cost-effectiveness of care delivery, based on the extensive work we do today to support transitions of care. We will deliver transitional services that support the

Enrollee's chosen living situation; and, avoid or decrease unnecessary Emergency Department (ED) visits or hospitalizations. CCHP/BH's goal is to support the Enrollee's ability to live successfully in the community, in the setting of their choice.

We will participate, in collaboration with the ACO or MCO and other providers, in transition planning prior to an inpatient discharge. We will maintain strong relationships with the ACO or MCO, participate in discharge planning meetings and follow-up with hospitalized Enrollees through a face-to-face visit that will occur as quickly as possible following discharge. We feel strongly that visits to Enrollees who were recently hospitalized must be coordinated with the ACO or MCO so as not to overwhelm the Enrollee. Our Material Subcontractor, AdCare, offers robust transitions of care with immediate enrollment into outpatient treatment, post inpatient admission. AdCare also provides expertise in transitions from intensive outpatient treatment to less intensive services such as Structured Early Recovery.

As part of the transition process, we will update the PCTP and will coordinate clinical and support services as needed. We will further assist the Enrollee to access additional supports from providers (with warm hand-offs as needed and appropriate) and follow-up to ensure that the Enrollee attends the appointment. Where Enrollees miss appointments, we will offer transportation assistance to decrease barriers to care delivery.

Throughout the transition, the Care Coordinator or Recovery Support Navigator will share information on the discharge plan and the Enrollee's status with the ACO or MCO, and other providers. CCHP/BH currently has relationships with organizations that have applied to be ACOs that will be administering this program and have begun discussions to refine processes for sharing information with these organizations. For example, we have initiated conversations with potential ACOs that support and enable our ability to obtain notification from a patient advocate regarding an Enrollees' admission or ED registration at local area hospitals, using the State's event notification system. We will develop similar processes for sharing information with other ACOs in our service areas. Similarly, we will collaborate with providers to develop protocols for securely exchanging information to promote continuity of care for enrollees during care transitions.

5. Medication Reconciliation

CCHP/BH adheres to evidence-based and best practices in all aspects of care management, transition planning and medication administration. Following is a description of how we will support individuals in activities associated with Medication Reconciliation.

Our registered nurse, a participant on each Enrollee's ICT, will perform a medication reconciliation as part of transition planning within three days of discharge. As part of that process, CCHP/BH will contact the Enrollee's PCP to verify medication orders. We will verify that all prescriptions are accessible (including over-the-counter drugs) and were filled appropriately. CCHP/BH will help remove barriers to prescription compliance when needed by the Enrollee. The CCHP/BH nurse will directly collaborate with the Enrollee and Care Coordinator or Recovery Support Navigator to monitor medication needs and changes.

The Care Coordinator or Recovery Support Navigator and the registered nurse of the team will identify additional supports to assist the Enrollee with taking their medications appropriately if needed, such as the use of pill planners and visual and/or auditory prompting techniques. If the Enrollee is in a Medication Assistance Program (MAP) the Care Coordinator or Recovery Support Navigator will work with the Enrollee's PCP to update the medication order forms with the MAP provider. Our nurse will be available to review the Enrollee's medication forms and educate the Care Coordinator or Recovery Support Navigator and Enrollee and/or their family or informal support, as needed, to make sure the Enrollee understands, and is willing to follow, their medication regimen.

6. Health and Wellness Coaching

a. Health and Wellness Education, Coaching and Health Promotion Programs

CCHP/BH organizations believe that evidence-based health and wellness promotion activities should be an integral component of mental health services seeking to provide overall wellness and recovery for persons with SMI.

As described in our response to Section 7. 2. D. 2, we have significant experience providing health and wellness to our Enrollees, including an active Health and Wellness Committee, staff training in Executive Order 509 nutrition standards with many programs offered related to nutrition, tobacco cessation programs, self-management of chronic medical conditions and many more.

We will leverage this experience to establish a comprehensive, evidence-based Health and Wellness program that meets or exceeds all of the requirements detailed in Section 2. 3. F of Attachment A.

We recognize, however, that some Enrollees will be in greater need of health and wellness education, coaching, and intervention than others. In some cases, general educational information will suffice. In others – for example, when an Enrollee is significantly overweight, sedentary, or is struggling with tobacco use – more intensive interventions may be required. We understand that wellness programs of longer duration (3 or more months), which combine education and activity, and incorporate both nutrition and physical exercise are more likely to be effective than are programs of shorter duration, those focusing on only one factor (e. g. nutrition or exercise), or unstructured, education-only programs. As a CP organization, we will seek to establish collaborative wellness initiatives with ACOs and MCOs to deliver comprehensive health and wellness initiatives to CP Enrollees, and we expect to partner with the Enrollee's ACO or MCO for higher-intensity wellness programs.

b. Ensuring the Engaged Enrollee's Goals are Recorded and Tracked

Assessment of an Enrollee's need for health and wellness information, coaching, or other intervention will occur as part of the Comprehensive Assessment during which we will identify any high-risk behaviors, including poor nutrition, overweight or obesity, lack of exercise, and other risk factors. Any health or wellness-related need will be shared with the Care Team, and the Enrollee's ACO or MCO, and the Care Team's recommended PCTP – which will reflect the Enrollees' self-identified goals and objectives – will be included in the Enrollee's PCTP. The

Enrollee's participation in the recommended Health and Wellness program(s) and ongoing progress will be monitored by the Care Team, with periodic updates provided to the Enrollees ACO or MCO Care Coordinator or Recovery Support Navigator.

7. Connection to Community and Social Services

a. Plans to Evaluate Engaged Enrollees for Social Service Needs and Screening Tool(s)

As described in response to Section 7. 3. B. above, the CCHP/BH has longstanding existing relationships with community and social service agencies in our service area. We will leverage these relationships to ensure access to needed supports to address the social determinants of health that effect how Enrollees interact with the system.

We currently employ processes to refer and coordinate with community service providers and social service agencies, and will leverage these existing processes to facilitate ongoing communication and information-sharing and ensure that Enrollees have timely access to needed community supports.

Our formal current and planned approaches include:

- Appointing dedicated points of contact for ACOs and MCOs
- Executing memoranda of understanding with providers and community organizations regarding the delivery and coordination of services
- Appointing liaisons to foster relationships and communication with community agencies For the BH CP Comprehensive Assessment, CCHP/BH will utilize the Massachusetts Standardized Documentation Project (MSDP) tool.

b. Ensuring Care Coordinators are Familiar with a Wide Breadth of Social Services and Supports and Providers of these Supports

We will jointly develop processes and procedures with ACOs in our service area to collaborate and coordinate in the delivery or facilitation of access to services authorized by the ACO. Care Coordinators will work with ACO Care Coordinators for Engaged Enrollees to identify such supports (as documented and authorized by the ACO) and jointly establish a plan for providing or arranging for them (as appropriate). Such services will be included in the Enrollee's care plan, and monitored by the Care Team.

c. Strategies for Collaborating with ACOs to Recommend Flexible Services on Behalf of Engaged Enrollees and Following-Up on the Outcomes

Specific strategies for collaborating with ACOs and MCOs include:

- Upon the execution of the partnership, we will provide the ACO or MCO a detailed orientation to our organization, services provided or facilitated, structure and operations of our Care Team model, and contact information;

- Establish and facilitate a joint Care Coordination Planning Committee to develop processes and procedures to ensure communication and collaboration between the two organizations' care management teams
- Establish and maintain a cadence of periodic joint care management meetings (telephonic, WebEx, face-to-face) to ensure appropriate communication, collaboration, follow-up and accountability
- Conduct joint trainings (initial and periodic) with all members of the CP care team
- To the extent allowed by the patient, share care plans, progress reports, status reports, and other pertinent information about Engaged Enrollees with the ACO/MCO

D. Innovative technologies for service delivery

CCHP/BH and its Affiliated Partners are proficient in the use of technology to facilitate consistent and accurate documentation and provide effective and efficient services to Enrollees in their homes and community settings. We maintain electronic medical record systems that will integrate into a centralized care management system to document and track all BH CP qualifying activities and more.

CCHP/BH intends to partner with eHana to develop a statewide Community Partner Care Management platform, built to meet the specific requirements of the Community Partner program. Under this approach, a single "hub" will be provisioned for use by a group of Community Partners, simplifying integration with EOHHS, ACO/MCOs, and other stakeholders, improving collaboration and coordination. CCHP/BH will integrate our Electronic Health Record applications (whether eHana or other) with the Care Management platform. Data related to enrollee Assessments, Care Plans, Services/Qualifying Activities, as well as necessary workflows and approvals, will be managed within the Care Management Platform. This approach provides several benefits: (a) it centralizes and simplifies integrations with EOHHS, ACO/MCOs and other stakeholders; (b) it encourages standardization of workflows and reporting between CPs, reducing overall infrastructure costs and improving sustainability; (c) it provides a centralized hub from which social and flexible support providers may receive referrals, document follow-up, and collaborate on enrollee care.

We will employ tools that enable and support real-time Care Team collaboration, including mobile-optimized chat experiences. Chat is a key emerging technology, both within and outside of healthcare; with enrollee-centered Care Team discussions, members can collaborate in individual enrollee "chat rooms" and track progress, while automated alerts and notifications provide additional context and prompt team member action. We currently equip our Care Coordinators and care management staff with mobile technologies, including tablet computers and smartphone applications to support their ability to engage Enrollees, meet Enrollees where they are to complete assessments, care planning, and to help Enrollees locate providers and local resources. Care Coordinators as well as all members of the BH CP care team will be able to log into the care management platform from tablet computers, enabling them to document Enrollee contacts, clinical information, and services delivered.

In addition, we use a variety of smartphone apps in our clinical/wellness work. They include:

Mood Tracker; Panic Shield: Panic Attack; Recovery Apps (Mental Health Recovery Guide, My Recovery App); Self-esteem Building Guide; Virtual Hope Box, Insight Timer; You Tube, Recovery Record (for eating disorders); and self-soothing apps. For caregivers we use Provider Resilience, Tec-Tec, an evidenced-based app for reducing non-suicidal self-injury and suicidality. These apps will be incorporated into our work with BH CP Enrollees as applicable.

E. Personnel and staffing

1. Organizational Chart

We provide our organizational chart as Attachment 7.3.E-1, identifying personnel who will be assigned to accomplish the Contractor responsibilities described in Attachment A.

2. Sample Staffing Model

These changes in staff positions are also reflected in the revised budgets and budget narrative submissions. We propose serving up to 1703 BH CP Eligible Enrollees within our overall Service Region, as detailed in Section 7.2.A., Attachment D. Our staffing model will include the following positions and number of full-time equivalents (FTEs).

Table 7. 3. E. 2. Staffing Model for at least 1750 BH CP Enrollees

Positions	FTEs
Administration	
Director	. 81
Quality Analyst	.81
Intake Coordinator	. 81
Administrative Assistant	.81
Supervisors	
Senior Clinical Care Manager (Lic. Clinician-Team Lead)	1.0
Senior Nurse Manager (RN -Team Lead)	1.0
Medical Director	.01
RN	2.27
Care Management	
Clinical Care Managers (Lic. Clinician)	2.37
Clinical Care Managers (s) (RN)	2.41
Care Coordination	
Care Coordinators (1:45)	37. 84
TOTAL	51.57

3. Recruitment Plan

Recruitment Plans for the CCHP:

- Upon award, we will begin recruitment for the management, clinical care, nursing and care coordinator positions.
- We will work with the ACO/MCO's to determine Eligible enrollee numbers and geography in our service area to aid in planning for the care management staff needed for program launch in April.
- We will expand partnerships with local colleges to recruit using programs that include career fairs, internships, shadowing, and may include innovative programs like student loan payment stipends.
- We anticipate starting the program with care management staffing that includes: 1 Clinical Care Manager, 1 RN, 4.5 Care Coordinators.
- Recruitment will continue for additional care coordinator and clinical care managers in anticipation of the CBFS eligibility pool becoming Eligible in July.
- We will continue to recruit for positions in advance of program growth, using the budget periods as milestones for assessment of enrollment and attrition rates, so that all staff is appropriately trained before they interact with individuals served.

Position	Begin Recruitment	Target Hire Month
Director	October 2017	December 2017
Clinical Care Manager	December 2017	March 2018
RN	December 2017	March 2018
Care Coordinator	January 2017	April 2018
Referral Coordinator	December 2017	March 2018
Admin Assistant	June 2017	BP1
Quality Analyst	December 2017	February 2018
Sr Clinical Care Manager	December 2017	March 2018

The CCHP/BH recruitment plans for care management positions will seek candidates that possess both academic credentials and or applicable experience in clinical settings, community health work, peer specialists, and or recovery coach along with knowledge and experience of local resources, navigating health, behavioral health and substance abuse treatment systems.

Job descriptions are provided as Attachment 7.3.E-3.

4. Process to Recruit and Hire Staff

The CCHP/BH is committed to ensuring that staff are representative of the communities we serve. We recognize that culture encompasses more than linguistic diversity, and includes racial or ethnic background, national origin, immigration/refugee experience, physical or mental disability, gender and gender identity, and sexual orientation. To that end, we take care to ensure that our providers, staff, and volunteers are responsive to the linguistic, cultural, ethnic, or other unique needs of all Enrollees. We will gather information from each Affiliated Partner to verify their capacity to provide culturally and linguistically appropriate services. We will also utilize existing community needs assessments and studies, and will work with our ACO and MCO partners to maintain ongoing demographic, cultural, and epidemiological profile of the community. This information will be used to identify both hiring priorities and training needs to increase sensitivity to the needs of individuals from different cultural and ethnic backgrounds. We will work closely with community-based organizations (e. g. immigrant and refugee coalitions, advocacy coalitions, LGBTQ advocacy agencies) to identify and leverage opportunities for targeted recruitment activities. We currently have job fairs in communities throughout the region and will partner with ACOs and MCOs to conduct job fairs in specific communities and in languages other than English (where possible).

However, we recognize that recruitment of a diverse behavioral health workforce – particularly though not exclusively for substance use and behavioral health providers – is a nationwide challenge, with numerous systemic barriers that will be difficult to overcome. To that end, we will evaluate utilizing DSRIP funds for short-term workforce development strategies (for example, signing bonuses for employees with specific language skills), and implement a longer-term initiative to review and potentially augment our staff retention programs, including ongoing career development, educational assistance, on-going licensing and credentialing opportunities, and leadership training.

5. Proposed Training, Orientation Plans and Modules for Staff

CCHP/BH organizations manage training programs for our staff that help them better understand the needs of high utilizing individuals with SMI or SUD. As we do today, we will train our CP staff on these topics and will leverage existing training modules to develop comprehensive CP training. We will also provide refresher training, as well as updated training on best practices, at least annually. We will finalize training modules and training schedules prior to the contract effective date. Below are examples of potential training modules:

Listing of Proposed Training Modules	
Understanding and awareness of the needs of high utilizing individuals with SMI or SUD	• Chronic Illnesses and Serious Mental Illness/SUD • Recovery and Resiliency • Overview of Intellectual, Cognitive, and Developmental Disabilities • LTSS Services: What are LTSS Services, Who Provides them, and How Do We Work Collaboratively?

Understanding Community Partner Supports	• Scope of services • Partnership and Collaboration with ACOs/MCOs • Comprehensive Assessment and PCPT • Flexible Service: Resources, referral, follow-up • Collaboration and Communication with community agencies
Cultural Perspectives – Recognizing sensitivities to different cultures, religions, values, and backgrounds	• The Impact of Culture on health and health care (with focus on SMI/SUD) • Health Disparities • Culturally Competent BH Care Delivery • Minority racial, ethnic and other communities (e.g. the LGBTQ Community
Treatment Intervention Approaches	Engagement & Outreach Wellness Coaching Tobacco Cessation Motivational Interviewing

We will partner with ACOs and MCOs to hold periodic conferences for Enrollees, staff, advocates, LTSS-CPs, social service and community agencies to which Subject Matter Experts (including experts from the ACOs, MCOs and ILCs) will be invited to present. We will facilitate staff training by: making work hours available for staff to participate on a mandatory basis; tracking participation; enabling online evaluations and scoring; and, providing resource guides and training materials to reinforce learning. We will also work with ACOs and MCOs to develop and deliver trainings in topics of mutual and common interest, such as care coordination strategies, community collaboration and cultural competence.

We will leverage existing MassHealth training and resources into staff trainings and material, encourage MassHealth training forum attendance and ensure staff interacting with Enrollees with BH needs complete required training on BH competencies.

6. Description of Staff Retention Strategy

As referenced above, there are systemic challenges and barriers to recruiting and retaining qualified, trained and experienced staff. We will address these challenges with a long-range, comprehensive, multi-pronged strategy, including ongoing career development, educational assistance, ongoing licensing and credentialing opportunities, and leadership training.

In the short term, we hope to use DSRIP funds for certain defined workforce development initiatives, including staff retention efforts. We propose collaborating with other BH CPs, ACOs and MCOs to explore opportunities for collaborative efforts to develop and implement staff retention programs, including professional development. Potential areas of focus include:

- Strategies to encourage workforce to continue to earn degrees in higher education and professional credentials

- Provide leadership training and management skills development training to support staff who seek to advance in their careers
- Provide on-going opportunities for continuing education for licensing and credentialing

We recognize that being able to raise salary levels and benefits would likely result in better retention, but we do not believe that the current environment will allow for this. However, there are additional non-financial benefits that can also aid in retention by improving staff experience in the workplace. These include:

- Fostering an enhanced sense of ownership and accountability among staff by expanding our existing mechanisms to solicit, obtain, and incorporate (to the extent appropriate) staff input into program development, administration, and management
- Cultivating a supportive organizational culture by providing more focused and personalized management, supervision, and mentoring
- Exploring opportunities to reduce the administrative burden on staff by streamlining recordkeeping and other documentation requirements including consideration of a work from-home policy or environment

Exploring and implementing creative work allocation and scheduling to allow staff to achieve a healthy work-life balance.

F. Implementation Plan and Timeline

We provide implementation timelines for the Preparation Budget Period and each subsequent Budget Period in Attachment 7.3.F.

G. Budget Report and Budget Narrative

We provide our completed Budget Report and Budget Narrative in Attachments 7.3.G-1 and 7.3.G-2 respectively.

H. Sustainability

CCHP/BH will sustainably fund the proposed infrastructure and capacity building investments for BH CP services during the Contract Term and following the initial Contract Term through:

- DSRIP Dollars (initial investment and ongoing funds distribution associated with volume
- Developing shared savings initiatives with the ACOs/MCOs
- Selling services to MCOs for non-CP eligible individuals who can benefit from CP services to manage the Total Cost of Care (TCOC) for more Enrollees
- Managing fixed costs associated with IT, licensing, fees and general expenditures over time
- Identifying and developing new services for ACO, MCO and Commercially enrolled individuals that support consumers remaining independent in the community and decrease TCOC associated with avoidable hospital utilization.

I. Quality Management and Performance Monitoring ()

1. Quality Improvement Program

CCHP/BH will collaborate with our Affiliated Partners to create a Quality Management/Quality Improvement (QM/QI) Program that supports our mission to deliver integrated, quality, cost effective BH CP services that enhance outcomes and decrease the Total Cost of Care. CCHP/BH will measure and improve multiple aspects of BH CP services including, but not limited to: clinical quality of care, care coordination, access and availability, continuity and Enrollee experience. We will apply a data-driven, evidence-based approach to BH CP service delivery and analyze and compare data against internal, local, and state benchmarks to identify opportunities for improvement. We will establish goals, processes, and include an interdisciplinary committee structure that includes Enrollees, family members and CCHP/BH representatives.

Applying Principles of Continuous Quality Improvement

CCHP/BH's QM/QI Program will build on current CCHP/BH QM/QI activities including continuous monitoring of quality performance measure indicators and clinical practice guidelines. Our goal is to deliver quality care that helps Enrollees maintain and improve health and wellness. Our objectives are to: improve clinical quality; improve coordination of care; improve access to services; and, enhance all aspects of the Enrollee experience. We will achieve our goal and objectives by relying on data-driven decision making, evidence-based practices and expert advice to drive improvement. We will improve care by: using data to identify and address anomalies in care and outcomes; developing interventions to ensure that goals are achieved; and completing objective measurement processes and implementing improvement initiatives.

We will obtain information for quality monitoring and improvement from several sources including but not limited to: medical record review, Enrollee and/or provider complaints, utilization review, and survey data. We will use this information to inform our quality initiatives and establish target goals. We will measure progress toward those goals and modify interventions as appropriate to ensure effectiveness.

The QM/QI Program will define: clear assignment of roles and responsibilities to each Affiliated Partner; performance benchmarks in alignment with program goals and contractual requirements; and Enrollee satisfaction measures. The program will include meaningful roles for Enrollees and their families in QM/QI activities on advisory councils; monitoring processes to review medical record-based studies; and, plans to monitor Care Management service delivery. Consistent with our current approach, we will compare outcomes across CCHP/BH partners individually and in the aggregate, comparing results to baseline to assess our performance in meeting goals, and to advance performance by establishing outcome objectives.

QM/QI Plan

Our QM/QI Plan and Annual Work Plan provide a blueprint to achieve quality goals and document our activities to address all contractual QM/QI requirements. We will continually

update the QM/QI Plan based on stakeholder input and data analysis. We will also maintain an Annual Quality Workplan that delineates a core set of performance metrics and is updated based on the annual review of systems. We will define strategies to address QM/QI priorities.

Annually, we conduct a comprehensive program assessment that examines QM/QI program effectiveness, service utilization, cost, quality data and the prior year's outcomes. We will continue this approach for the BH CP Contract. Progress toward goals will be reported to the Quality Committee, which will determine opportunities for improvement, design interventions, and track the effectiveness of interventions. In this way, we will ensure our QM/QI program is relevant to the population we serve, and results in better Enrollee care.

2. One Proposed Quality Initiative

CCHP/BH is committed to improving Enrollee care by enhancing the quality of services we provide. To that end, we propose to implement a quality initiative related to enhancing Care Coordination and Care Management for high-cost, high-risk Enrollees served by the MassHealth program. Specifically, we propose to increase the number of BH CP Eligible Enrollees who receive fully integrated BH CP services in collaboration with an ACO Partner.

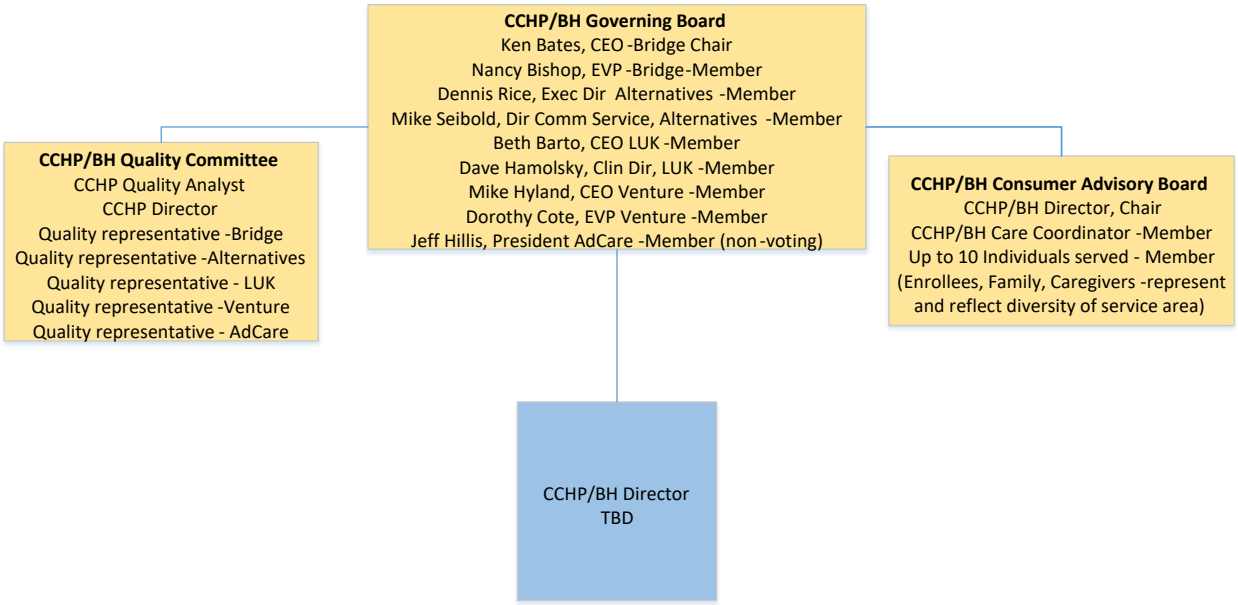
Description: For this QM/QI effort, CCHP/BH will develop a joint process with at least one ACO Partner in our geographic area to perform a Comprehensive Assessment and to develop a joint Interdisciplinary Care Plan (ICP) for at least 50% of the engaged BH CP Eligible Enrollees who are served collaboratively by the BH CP and the ACO. Under this process, the BH CP will work with the ACO to implement a joint person-centered process where data elements that are required by both the ACO Comprehensive Assessment and the MSDP Comprehensive Assessment are shared, based on which organization obtains the data first, with the Enrollee's permission. Then, CCHP/BH will either participate on the ACO's ICT or, we will invite the ACO to participate in our ICT. The joint ICT will include the Enrollee's PCP, family and/or informal caregivers, the ACO Care Manager, the CCHP/BH Care Coordinator or Recovery Support Navigator and any other individuals who the Enrollee wishes to participate on the Team. CCHP/BH will develop and document an integrated ICP in collaboration with the ACO. The BH CP will then implement the ICP and continue to work with the ACO to integrate care.

Target Population: The target population for this initiative includes high-risk, high-cost actively engaged ACO Enrollees who are BH CP Eligible.

Measures for Success: We will measure the percentage of actively engaged BH CP Eligible Enrollees who are jointly served by the ACO and CCHP/BH who receive a fully integrated Comprehensive Assessment prepared jointly by the CCHP/BH Care Coordinator or Recovery Support Navigator and the ACO (divided by the total number of actively engaged BH CP Eligible individuals). For the first year of the Contract, we propose a 60% success rate for this measure. We will implement this initiative in Budget Period 1 and continuously evaluate the effectiveness of this initiative in meeting established goals with monitoring through our Quality Committee.

3. Functions of Quality Committee and Composition and Reporting Structure

CCHP/BH will maintain a Quality Committee that drives improvement through the review of data and incorporates Enrollee and family feedback. Building on quality structures within each of the CCHP/BH partners, our Quality Committee will meet monthly and will be responsible for: identifying quality improvement opportunities; finalizing intervention strategies to improve quality and cost effectiveness; establishing timeframes for interventions; and tracking the effectiveness of interventions and making modifications to improvement strategies, as needed. The Quality Committee will report to the Governing Board as illustrated in Figure 7.3.I.3.



Our Committee structure will include:

Governing Board: The Governing Board will include two representatives from The Bridge as the Lead Agency with its Affiliated Partners and the CCHP/BH Director, all of whom have voting rights. This committee will serve as the decision-making authority for the BH-CP and provide strategic direction and programmatic oversight. The Governing Board will be chaired by the CEO of the Lead Agency. AdCare, as a Material Subcontractor, will have one non-voting member.

Quality Committee: Performance data will be reported to the Quality Committee which analyzes data against program goals and develops performance improvement initiatives. The Quality Committee will meet monthly and include one representative from each CCHP/BH partner. The Committee will be chaired by the CCHP/BH Director and will report to the Governing Board.

Consumer Advisory Board (CAB): The CAB will ensure that services delivered are consistent with CCHP/BH's mission and values, identifying service gaps and solutions to address them, and gathering direct feedback regarding service delivery from individuals served, staff and other direct care workers. We will inform changes in policy and practice based on information and

feedback provided by the CAB. The CAB will be comprised of up to ten consumers and two staff, one of whom will be the Director.

J. Coordination with ACOs and MCOs

CCHP/BH is aware that an essential part of the success of the BH CP contract relies on our shared ability to coordinate key elements of our infrastructure with ACOs and MCOs in our service area. We believe that Enrollees will be best served by the ACO or MCO sharing a single, modular Comprehensive Assessment and ICP that supports complete, up-to-date integrated Enrollee information across organizations, including state agencies and community-based organizations. Such sharing of information is crucial to the delivery of integrated care management and represents an opportunity to achieve savings on infrastructure and IT resources. We will begin with a compliant, functioning solution to support care integration; however, over time, our desire is to have a fully integrated system capable of supporting shared assessments, care plans, reporting and quality management functions. We are already collaborating with ACO and MCO partners in our service area and will continue to support such collaboration.

1. Communication of Skills Expertise and Value to Potential ACOs and MCOs

We have met with Reliant/Fallon and UMass to discuss our skills, expertise and value to care integration efforts. Such discussions will continue as BH CP, LTSS CP, ACO and MCO contracts are awarded by EOHHS. We are communicating with, and educating ACOs and MCOs regarding:

- Our shared responsibility in caring for MassHealth consumers with the greatest needs and level of risk, given their SMI and/or SUD diagnosis
- The contribution that the CCHP/BH can make to delivering quality care for individuals with SMI and SUD diagnoses including, integration, patient satisfaction and Total Cost of Care (TCOC) among other measures, all of which will be vitally important to our Enrollees and to our organization, ACOs and MCOs in our joint efforts to deliver care
- The breadth and depth of BH CP services available to Eligible Enrollees including, the specialized nature of the BH CP component of the Comprehensive Assessment, the Individualized Care Plan and ongoing care plan implementation and monitoring
- The importance of primary care delivery for individuals with SMI and SUD, many of whom go without primary care services for a variety of reasons. One of our goals is to ensure that individuals with significant BH diagnoses receive primary care services, given that such individuals die, on average, 25 years earlier than their peers without an SMI diagnosis.
- Collaborative strategies to integrate primary care and BH care for BH CP Eligible Enrollees in the assessment, care planning and care delivery process.
- Strategies to engage individuals with an SMI or SUD diagnosis and build upon existing relationships with providers
- The use of evidence-based practices to teach self-management skills and promote wellness

2. Branding and Marketing Plans the Bidder Has Regarding Its Relationship with ACOs and MCOs

The CCHP/BH branding and marketing plans will be guided by MassHealth policy and procedure, which clearly prohibits MassHealth vendors from directly marketing to Enrollees. Our priority will be to serve Assigned Enrollees who have a pre-existing relationship with our organization. For Marketing and Branding, we plan to:

- Develop a consumer awareness campaign to communicate the value and enhance access to BH CP services for individuals with significant BH needs. Materials will be made available to ACOs and MCOs in the most commonly spoken languages in the service area and can be distributed to Enrollees as part of the Enrollment process.
- Educate ACO and MCO partners regarding our services, our approach to Enrollee services and the nature of integration we offer, which will benefit Enrollees.
- Meet with ACO's and MCO's in the Central Region to coordinate and align our branding and marketing strategies including the development and implementation of successful ACO / MCO educational materials and presentations to key stakeholder groups, including but not limited to the following: ACO enrollees and their families; providers and clinicians; staff; and strategic partners. These materials and presentations will be designed to communicate the specialized experience, skills, expertise and value the CCHP/BH possesses and how we will enhance the coordination and management of service delivery for Enrollees.

3. Strategy to Engage and Collaborate with Multiple ACOs and MCOs

The CCHP/BH will provide information and reach out to develop relationships with all ACO and MCO partners in the Service Areas for which this bid applies.

4. Strategy for Conflict Resolution

The CCHP/BH will partner closely with ACOs and MCOs in the Service Region to serve the needs of BH CP Eligible individuals. We will leverage and build upon the strengths that our organization, and our partner organizations, bring to this engagement. While we do not anticipate disagreements in areas of shared responsibility, we recognize that differences of opinion may arise, specifically related to care management decisions that affect Enrollees or, the way the Contract is managed. Our mutual intention is to resolve those disagreements in a timely manner that causes no harm whatsoever to Enrollees and, maintains compliance with the terms of the contract. In general, the forum for resolving disagreements and conflicts between CCHP/BH and an ACO or MCO will be addressed by the Governing Board. Going forward, we will create a structured process to escalate issues of significant financial impact or other major strategic issues. Consistent with the principles guiding the work of the Governing Board, the decision-making processes will be transparent, and all decisions must be supported by data. The Governing Board will solicit input from each organization and, if necessary, other stakeholders using any available data (e.g. financial, quality, contractor performance, etc.) to inform its decisions. Any disagreement or conflict that cannot be resolved at the staff level will be escalated to the Governing Board. We anticipate that this escalation will rarely be necessary.

Community Partner Program Budget Report

Brien Center

	Program Revenue	Prep Budget Period	Budget Year 1	Budget Year 2	Budget Year 3	Budget Year 4	Budget Year 5	Total Revenues
	Estimated Enrollees- Start of Period (All Enrollees)		0	1,025	1,200	1,250	1,350

Ramp-up costs in Prep Budget Period, Budget Year 1, 2 and 3 can be covered by Infrastructure Funding

Community Partner Program Budget Report - Prep Budget Period

Only complete this Program Budget Narrative using amounts anticipated for PBP.

Lines may be added to the Program Budget Narrative tables as necessary

Row 1 - Salary

Position	Annual Salary	FTEs	# Months	Total
Director of Care Coordination	$ 62,000.00	1	4.8	$ 24,800
Care Coordinator	$ 54,230.00	2	2	$ 18,077
BH CP Nurse	$ 53,450.00	2	2	$ 17,817
BH CP Nurse	$ 53,450.00	1	1	$ 4,454
				$ -
				$ -
				$ -
				$ -
				$ -
Total Salary (Program Budget Line 1)		**6**		**$ 65,148**

Row 2 - Fringe

Fringe Item	Total Salary	Fringe Rate	Fringe
Fringe Item	$ 65,148	23%	$ 14,984
Total Fringe (Program Budget Line 2)			**$ 14,984**

Total Personnel*	**$ 80,132**

* Should align with Personnel Costs row in Program Budget

1. Director of Care Coordination: Primary program management responsibility for BH-CP contract and primary programmatic contact with ACO and ACO partners. Oversight of staff at 2 locations.
2. Care Coordinator- Coordinate client care and access to services and supports with client. Works with BH RN, Community Health Workers, Recovery Coach Navigators , primary care, behavioral health and LTSS service providers and other ACO partners.
3. BH CP Nurse - Provides initial and follow up assessments, develops care plans based on comprehensive clinical assessments, provides client medication reconciliation, coordinating care information with ACO and primary care and necessary service providers. Salaries are estimates

Row 3 - Training and Professional Development

Description of Service	Unit Cost (if applicable)	# Staff (if applicable)	Total Cost
general expenses for training		10	$ 5,000.00
Total Training and Professional Development (Program Budget Line 3)			**$ 5,000.00**

General cost estimate for staff training on CP care model, ACO referral and tracking process, policies and procedures, cultural competencies, LTSS services, implementation of care management model, ACO and eHana care management software.

Training for Director (1), care coordinators (2) and RNs (3) , quality (1), intake coordinator (1), information systems (1) and support staff (1) = 10 positions

training modules will include:
1. Understanding and awareness of the needs of high utilizing individuals with SUD or SMI.
2. Understanding community partners supports
3. Cultural perspectives/ cultural awareness with a focus on SMI/ SUD

This will involve bringing in resources on multicultural practices, professionals in LTSS services and care management. Will also include involvement with peer CP programs .

It is anticipated that EOHHS or lead provider groups will offer some centralized training on

Row 4 - Travel

Position	Est miles per month	# months	Mileage reimbursement rate	Total Cost
Director of Care Coordination	200	5	0.43	$ 430
Care Coordinators	200	2	0.43	$ 172
Care Coordinators	200	2	0.43	$ 172
BH CP Nurse	142	2	0.43	$ 122
BH CP Nurse	142	2	0.43	$ 122
BH CP Nurse	143	1	0.43	$ 61
			Total Mileage	$ 1,080

Travel Expense Description	Cost
Total Mileage	$ 1,080
Parking and tolls	
Public transportation	
Enrollee travel	
Total Travel (Program Budget Line 4)	**$ 1,080**

Estimate of mileage during prep period visiting primary care and other ACO partner offices, meetings and trainings with ACO and other resources travel between clinical offices in northern, central and southern Berkshire county. It is expected that the director will attend regional EOHHS and peer CP meetings for coordination and implementation of the program.

117
118
119
120 ***Clinical support supplies include form prep and printing of client related forms, gloves, BP and O2 monitors, scales and protective supplies for RNs (3) and care coordinators (2)= 5 FTE.***
121
122
123 ***Outreach supplies include preparation of handouts and material to inform clients of available services, health promotion and other materials. Will include preparation of material for mailing to eligible clients on the program.***
124
125
126
127
128 **Row 7 - Contract Services**

129	Name of Contractor	Contractor Type	Goods and Services Provided	Cost
130				
131	Donna Mattoon, Assoc	community relations	marketing	$ 1,200.00
132	Health Policy Matters LLC	care mgmt. policy	prog tech ass	$ 4,000.00
133	Cohen Kinne Valicenti & Cook LLP	legal	legal	$ 2,000.00
134				
135	**Total Contract Services (Program Budget Line 7)**			**$ 7,200.00**
136				

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Donna Mattoon Assoc. - developing community relations / marketing strategy assistance with making general public aware of program, developing strategies to do outreach to prospective clients and families . This will include media information on program and services and follow up . 14 hours @ $75/ hr.

Health Policy Matters- technical assistance in developing in implementation and roll out plan based on national best practices. 20 hours @ $250/ hr.

Cohen Kinne Valicenti & Cook LLP - legal advisor for ACO and EHR contracting ; 8 hours at $250.0

Row 8 - Software Licensing

Description of Software	Cost per License	# Licenses	Cost
		Total Software Licensing (Program Budget Line 8)	

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

software licensing for eHana care management software is covered within the software development expense on the infrastructure budget. Any licensing fees by the ACO are unknown at this time. An general estimate of ACO connect fees is included in the infrastructure budget

Row 9 - Telecommunications

Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
Director 5 months	60	1	$ 300.00
RN s 2 months x 2	60	2	$ 240.00
Care coordinators-2 months x 2	60	2	$ 240.00
		Total Telecommunications (Program Budget Line 9)	**$ 780.00**

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

Smartphone data access for staff .

Data card access for online access to EHR and other resources while in client homes and remote sites will be added in

Row 10 - Occupancy

Occupancy Expense	Total SqFt	Cost/SqFT	Cost
Rent	900	20	$ 7,500.00
Utilities			
Repair and Maintenance			
			$ -
			$ -
Total Occupancy (Program Budget Line 10)			**$ 7,500.00**

Provide a brief description of how each Occupancy line item listed above will support the CP's performance and how the costs were determined:

While some of occupancy expenses will be absorbed during the start up period, a preliminary amount is being budgeted to secure and reallocate space near the Brien Center main 333 East Street clinic facility.

9 FTEs using this space x100 sq ft x estimate of $20/ sq ft=$18,000/12 months x5 months = $7500
IT staff person will be based in IT office and not the program area.

Row 11 - Other

Other Direct Expense Description	Cost
meeting expenses / outreach exp	$ 2,500.00
Total Other (Program Budget Line 11)	**$ 2,500.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Hosting group meetings / focus discussions in northern, central and southern Berkshires with primary care physicians, LTSS and other area providers of and general members of the community to foster collaboration and

Row 12 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 12)	**15.00%**	**$16,934**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

	A	B	C	D	E	F
232						
233	***updated indirect rate as of 9/30/17 for general administrative, management, IT and fiscal support to the program .***

	Total FTE	20	

	Staff Ratios - Please calculate the following ratios:		
15	Ratio of RN and Clinical Care Manager (RN) to Assigned and Engaged Enrollees	1:256	*Estimated number of Assigned and Engaged Enrollees at the end of BP1 divided by total FTEs of (RN+RN Clinical Care Managers)*
16	Ratio of Care Coordinator Supervision to Care Coordinators	1:11	*Total Care Coordinator FTEs divided by Total Care Coordination Supervision FTEs*

The BH CP Director will directly supervise community health workers as well as RNs, Clinical Care Managers, and recovery coaches . Staff numbers represent staffing at end of budget period 1

Section 7.3 Initial DSRIP Participation Plan

A. Executive Summary

1. Goals, Identified Challenges, and Proposed Solutions

The Brien Center for Mental Health and Substance Abuse Services is a community-based, non-profit agency with an over 95-year history of providing a continuum of care for children, adolescents, adults and families with serious and persistent Behavioral Health (BH) disorders. Each year, Brien serves approximately 10,000 Berkshire County residents, including 4,000 children. Our approach to treatment uses a comprehensive care model that incorporates recovery, resiliency, and rehabilitation principles; promotes individual and family choice; is evidence based; and uses family, team, and natural supports that promote stabilization, recovery, and wellness within the person's community setting whenever possible. With 27 locations throughout Berkshire County, treatment and services are accessible to residents. *Brien's model features the same services that the State is seeking to purchase under the Behavioral Health Community Partner (BH CP) Request for Responses (RFR).*

The Brien Center has developed a long-standing collaboration with Berkshire Health System (BHS) and Community Health Program (CHP), both of which are very important to meeting the holistic needs of consumers within our community. Also, we have a long-term partnership with Berkshire Children and Families (BCF) to provide intensive services to children with serious emotional disorders. Brien has collaborated with Berkshire Medical Center (BMC) since 1993, offering the opportunity for care integration that is not otherwise available. Our organizations share psychiatric staff and have woven hospital and community services together, offering a continuum of inpatient psychiatric, detox and Clinical Support Services, crisis care, outpatient therapy and residential and day treatment services.

The Brien Center's ongoing clinical collaboration with BHS, BMC and the Department of Psychiatry and BH, CHP and BCF allows us to provide the full spectrum of BH services in Berkshire County. Our clinical collaboration provides quality care; long-standing and valuable partnerships like these minimizes duplication of services and offers the promise of quality, cost-effective care.

Goals. The Brien Center's goals align closely with the State's goals to:

- Help individuals with Severe Mental Illness (SMI) and/or Substance Use Disorder (SUD) navigate BH care
- Strengthen and enhance access to services for individuals and families through strategic community relationships
- Assist individuals in becoming valued community members by helping them attain meaningful community roles as active participants locally and establish valued relationships
- Employ evidence-based practices and data-driven decision-making process to guide care
- Support Community-First values and SAMHSA recovery principles through a person-centered approach that emphasizes cultural competence and respect
- Address social determinants of health through integrated care delivery

Challenges and Proposed Solutions. We describe challenges and solutions associated with meeting the State's BH CP Contract requirements in the following table.

Challenges	Solutions
Developing Information Technology (IT) solutions that support the unified presentation of assessment data, Person-Centered Treatment Plans (PCTPs) across BH CP, PCPs, Model A ACO Contractors and other stakeholders that support true care integration	Support data integration; Collaborate with ACO Partnership Plans (ACOs) to employ a single Comprehensive Assessment and PCTP
Promoting integrated delivery of medical and BH Care, as well as psychosocial supports	Promote access to primary care for individuals who are BH CP eligible. Develop IT solutions that support care integration.

2. Anticipated Number of Enrollees

The Brien Center currently serves an estimated 1,430 BH CP eligible Enrollees and can support a total of 1,547 within the proposed Pittsfield and Adams Service Area. We are prepared to add capacity over the Contract period. See **Attachment 7.2.A.**

3. Service Areas

The Berkshires is unique in its' relative geographic isolation; the service area truly stands alone. As a result, The Brien Center is submitting this RFR submission to participate with EOHHS as a BH CP for our current Service Areas, Pittsfield and Adams (encompassing Berkshire County), without artificially crossing a geographic barrier to the Connecticut River Valley of Western Massachusetts. We provide services in the geographic area that we know best.

The Brien Center proposes to serve MassHealth Enrollees in the Adams and Pittsfield Service Areas which includes all of Berkshire County; located on the western edge of Massachusetts bordering Vermont to the north, New York to the west and Connecticut to the south. It is the second largest county by land area in the state with a total of 946 square miles of rural countryside.

4. Plans to Operationalize the CP Program

To operationalize the BC CP program, we will engage in the following crucial implementation activities, based on time frames indicated in our Implementation Plan, included in this RFR submission in **Section 7.3.F.**

B. Supporting Populations and Community Engagement

1. Connections to the Community

We meet the needs of Enrollees through a plethora of longstanding connections to a diverse set of organizations described below.

Community Organization	Description of Partnership
Jones (inpatient psych), McGee (detox) and CSS at BMC **MATC and WATC, Highpoint**	Section 35 client referral source to Keenan House for consult before discharge

Community Organization	Description of Partnership
Treatment Center	
MBHP	Clinical collaboration with providers through MBHP training, monthly meetings w/ regional directors
Spectrum Health Services	Referral of clients for methadone treatment if other MAT options are declined/not appropriate
Ad Lib	Assistance with SSI/SSDI, peer counseling, housing, PCA
Advocacy for Access	Assistance with MassHealth
Berkshire Children and Families	Provides CBHI Family Partners; parenting skills development
Berkshire Community College and Mass College of Liberal Arts	Frequent linkage thru case management for post-secondary education purposes—can involve consultation, transport
Berkshire Pathways	Mental Health/clubhouse, employment assistance
DCF	Referrals made to SUD treatment programs for adults and youth
DTA	Assistance with Food Stamps
Elizabeth Freeman Center	Referrals to The Brien Center for females with addiction problems; provide domestic violence services
Mass Rehab Commission	Vocational evaluation, career placement, and assistance with education
N Berkshire Community Coalition	Sharing information to provide services to the community
Adult Learning Center, Adult Basic Education Collaborative	Frequent referrals thru case management and can involve transport, calls, consultation, mutual training
Pittsfield Prevention Partnership-Berkshire United Way	Community-Based SUD collaboration. The Brien Center provides staffing for community activities and is member of the governing board
Railroad Street Youth Project	Provide groups to youth at the program and education
Schools: Pittsfield; Lenox; C. Berkshire; Monument Mountain; Mt Everett; Hoosac; Mt Greylock	The Brien Center staff provide school-based substance abuse prevention services at local schools
Suit Yourself (Goodwill)	Job readiness skills, interview & workplace attire
Pregnancy and Postpartum Support Coalition	Mothers share experiences in access while experiencing perinatal emotional complications
Food Bank, Salvation Army	Emergency groceries; mobile distribution center
Barton's Crossing—ServiceNet	Onsite CSP CM to discuss SOAP and OBOT
Berkshire Housing	Housing needs for unification with family and children
Berkshire and Pittsfield Regional Housing Authorities	Referrals to shelters and assistance with permanent housing
Berkshire District Attorney	Provide free services to victims of OUI and homicide crimes through MOVA grants awarded to The Brien Center
Berkshire House of Corrections	The Brien Center addiction pre-release IOP program M-F
House of Correction /Chicopee	Referrals made to The Brien Center for women being discharged from incarceration and returning to Berkshire County
Mass Alcohol and Substance Abuse Center and Mass Correctional	Referral source of Section 35 clients to The Brien Center's Keenan House—consult before discharge

Community Organization	Description of Partnership
Institution (MCI)	
MA Department of Probation	Referrals, Monitoring of treatment outcomes and progress
Hillcrest Better Breathers	Smoking cessation
Community Health Program	Embedded The Brien Center clinicians in Pittsfield, Lee, Adams and G. Barrington refer patients w SUD to The Brien Center O/P programs
Primary Care/Family Medicine	Primary Care Doctors
Project Empowerment	HIV/AIDS Support, referrals to BH treatment
State Labs Clinic	HIV, Sexually Transmitted Infections, Hepatitis Testing and Treatment
Tapestry Health Systems	Family planning, reproductive health, Narcan overdose training, referrals
Women Infants and Children	Nutritional supports, immunization services, health screening

2. How We Will Grow our Connections to the Community

The Brien Center will leverage and build on existing relationships and collaborations as one means to enhance access, integration, and continuity for Enrollees. One of our organizational goals is to grow our collaborative efforts with community-based organizations over the course of the BH CP Contract.

To meet this goal, we will implement initiatives that address social determinants of health by enhancing our ability to address needs such as housing, food, safety and other issues, breaking down existing silos and delivering integrated care. For example, we participated in BHS' Community Health Needs Assessment to inform efforts to meet the needs of the communities we serve. As we have done, we will continue to work side-by-side with community organizations and stakeholders to find ways to help children and families achieve their recovery goals.

3. Plans to Ensure Staff is Informed of Community Resources

Our plans to inform and update staff include the development of a community resource guide, staff training, and interdisciplinary care team meetings. We will maintain current information on all community resources and regularly update staff regarding this information.

C. Community Partner Supports and Activities

1. Outreach and Active Engagement

a. Planned Strategies for Outreaching to and Engaging with Assigned Enrollees, Including Individuals Homeless and Hard to Reach Individuals

The Brien Center provides key access points to services in the Pittsfield and Adams Service Area. We will identify and engage many Enrollees through our provided services as a part of our daily operations. For these cases, personnel within each agency will work closely with the BH CP Care Coordinator. The Brien Center subscribes to Substance Abuse and Mental Health Service Administration's (SAMSHA) philosophy and approach to locate, outreach and engage Assigned Enrollees who have not otherwise been engaged in services. This philosophy begins with our learning about the Enrollee's current BH provider relationships and the importance of meeting the Enrollee's basic needs. As we initiate contact with the Enrollee, we begin building rapport

and trust, focusing on strategies to connect Enrollees to services without making them feel uncomfortable, judged or threatened. Key outreach strategies are as follows:

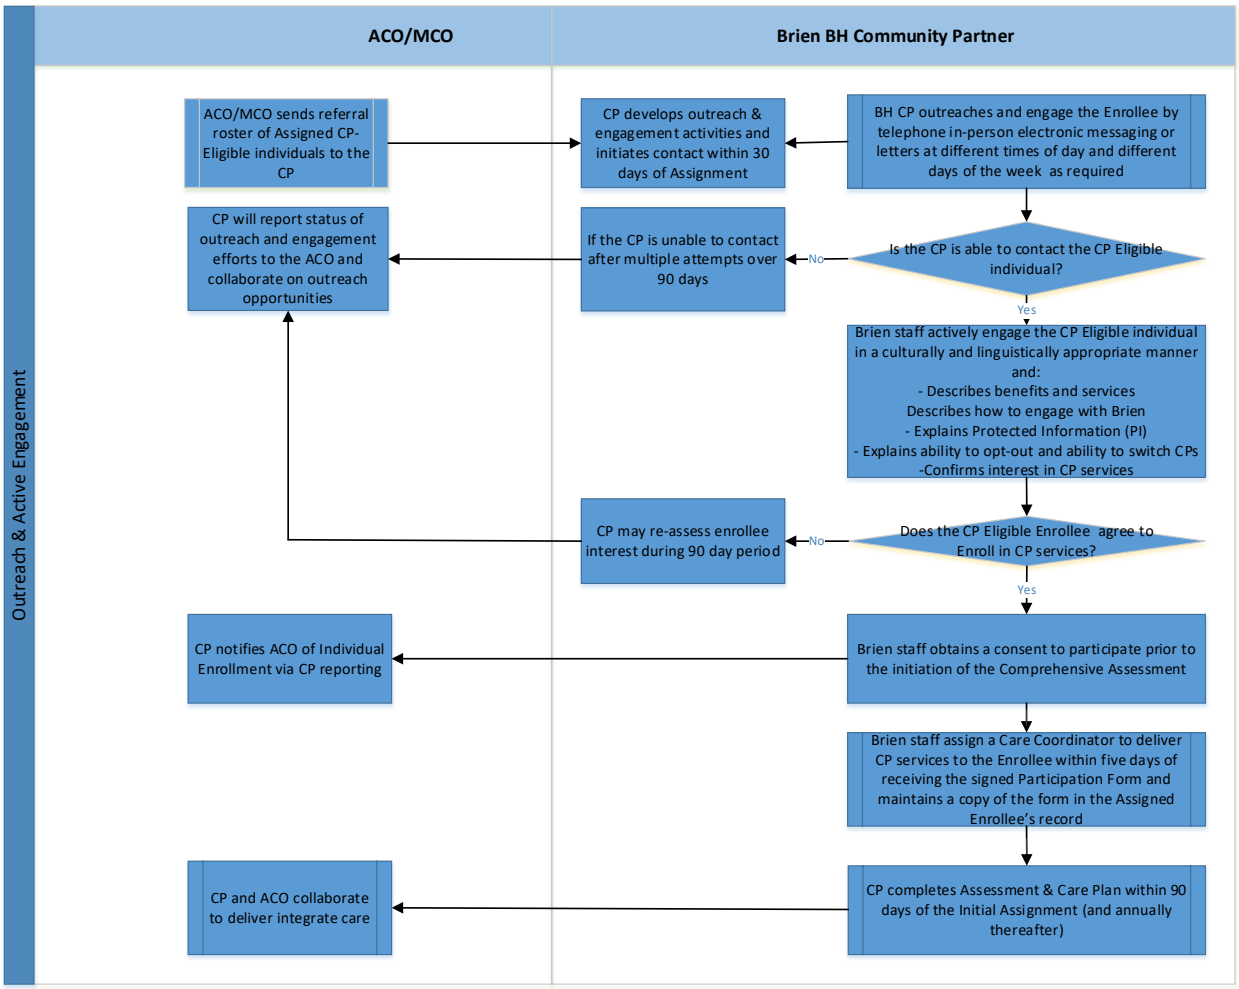
The Brien Center meets the Enrollee at any available location in the community where the individual is personally comfortable, which may include but not be limited to their home, neighborhood locations, tent cities, motels, shelters, or congregate meal sites among other locales. We seek to truly connect with the Enrollee and build trust, regardless of where we physically meet. We feel strongly that asking the Member to select the location that would be most comfortable for them is an important step toward building the Enrollee's confidence in the BH CP and trust. Our knowledge of the Pittsfield and Adams community and culture is a great asset in approaching this important strategy.

Our organization makes the process of building a relationship with the Enrollee as primary and does so by being highly respectful toward Enrollees and their families. We seek to create an open, safe, friendly environment that is trauma-sensitive in which to meet. Moreover, we immediately seek to assess and meet Enrollee's basic needs.

We hire highly qualified, skilled individuals who are trained in motivational interviewing and are very skilled at engaging and interacting with individuals who have SMI and SUD diagnoses. Furthermore, we hire staff who are experienced in serving the target population and understand their needs and preferences that go well beyond cultural and linguistic needs.

The following Figure C.1 illustrates the Outreach and Engagement process.

Figure C.1. Engagement Process



Our primary strategies to outreach and engage Enrollees, including individuals who are homeless, reflect the philosophy and strategies described above. For individuals who are homeless, our efforts notably include direct community outreach in areas where homeless individuals congregate and live, including tent cities, under bridges, in downtown areas, outside shelters.

The Brien Center will employ BH CP Care Coordinators and Community Health Workers to conduct outreach, and connect with, Eligible Enrollees to schedule the first in-person contact, with a minimum of one outreach activity to each assigned Enrollee within one month of receiving an Assignment from the ACO. In practice, we will attempt to reach the Enrollee by phone within less than 30 days of Assignment. While we will normally contact Enrollees in the community, if an Eligible Enrollee is hospitalized, we will attempt to make the first in-person contact during an acute care event at the hospital, taking care to ensure that the Enrollee is comfortable. In this manner, we will proactively participate in the Enrollee's transition of care at the outset of their enrollment. Whenever possible, based on the Enrollee's willingness to meet,

we will meet with the individual face-to-face within the first three calendar months of the Enrollee's assignment. If the Enrollee is not willing to meet, we will continue to identify opportunities to introduce BH CP services. Enrollees will also be able to request assignment to a different staff member within our organization or assignment to a different BH CP organization at any point in time.

We will make every effort to contact Enrollees who cannot be reached telephonically by going to community locations where we know we may locate the individual (e.g., at home, at a congregate meal site). We will make at least three attempts to establish contact and anticipate that we may need to make several attempts to contact an Enrollee to schedule a time and location for an initial meeting.

Our staff will meet with the Enrollee in a location, and at a time that is most comfortable for the individual with a family member or caregiver, if desired by the individual. If agreed to by the Enrollee, we will meet with him/her in their home to obtain insight into the Enrollee's social determinants of health and home safety.

At our initial meeting, The Brien Center staff will provide Enrollees with introductory materials including information regarding the benefits and the design and purpose of BH CP supports. This information will be offered in written and verbal formats and will be available to Enrollees' in their primary preferred language for the most commonly spoken languages among the population served.

We will provide information regarding the BH CP service delivery process to help the Enrollee understand how to engage with our organization and will explain that the Enrollee can opt out of receiving BH CP services at any time. We will further provide information regarding how to reach our website, participate in the Consumer Advisory Board, and contact a BH CP Care Coordinator or Community Health Worker or Community Health Worker.

During the first in-person contact, The Brien Center staff will employ motivational interviewing to understand the Enrollee's health status, their needs and preferences and, their aspirations and/or frustrations with barriers to care delivery that require attention. At a minimum, the Care Coordinator will describe benefits and services, describes how to engage with Greater Lowell BH CP staff, explains Protected Information (PI) and the purpose of this practice; explain the individual's ability to opt-out of BH CP services as well as the ability to switch CP agencies entirely. Ultimately, the Care Coordinator will confirm the Enrollee's interest in CP services and obtain a signed Participation Form, and file it in the Enrollee's records.

After the Participation Form is signed, we will perform the Comprehensive Assessment and work to truly understand the Enrollee's needs and preferences in their primary preferred language with attention to cultural beliefs. We will provide individuals who choose not to enroll with contact information should the individual choose to enroll later, and will be asked if periodic outreach from an advocate is acceptable.

Where possible, and when desired by the Enrollee, the individual who performs the initial contact and assessment will serve as the BH CP Care Coordinator or Community Health Worker

and take a leadership role in delivering services as part of our BH CP team. If the Enrollee prefers a different Care Coordinator or Community Health Worker, another staff member from our organization will be assigned based on the Enrollee's preferences.

b. Planned Strategies for Outreaching to, and Engaging with, Assigned Enrollees with SUDs

We will tailor our approach to outreaching Enrollees with a SUD diagnosis based on his/her readiness to participate in treatment, utilizing a harm reduction approach. We will engage Enrollees with SUD diagnoses by assigning staff with appropriate expertise including cultural and linguistic alignment, and using staff who have lived experience and are in recovery using a process that resembles the contractually required process described above.

2. Comprehensive Assessment and Person-Centered Treatment Planning

a. Process for Conducting Comprehensive Assessments

We place the Enrollee at the center of the assessment and treatment planning processes and constantly engage them to identify their needs, priorities, and preferences. Our assessment process will begin with a review of medical records and any available documentation regarding the Enrollee's needs and condition by our registered nurse, who is a part of our clinical team. Specifically, staff will review the Enrollee's medical history, medical needs, and medications and will summarize them for our BH CP Care Coordinator or Community Health Worker, before completion of the full Comprehensive Assessment. Our Clinical Care Manager will review the final assessment upon completion.

If the Enrollee has an existing relationship with a Primary Care Provider (PCP), state agency care/case managers or other treatment providers, we will engage these key individuals in the Comprehensive Assessment and the PCTP processes at the outset.

The Brien Center's goal is also to leverage any information already collected by the Enrollee's ACO partner. We believe this is important to maintaining a person-centered, efficient process that minimizes duplication and demands on the Enrollee. We are already engaged in conversations with the potential ACO in our geographic area regarding information sharing strategies to inform the Comprehensive Assessment and other processes. We hope to work with the ACO in our Service Area to develop a single integrated assessment that builds on information already obtained from the Enrollee. Gathering the same information from the Enrollee or other sources could be disruptive to the Enrollee as well as wasteful and inefficient.

Ideally, with the Enrollee's permission, we will incorporate any available data from the ACO into the BH CP Comprehensive Assessment. Our Care Coordinator will then meet with the Enrollee to complete the BH Assessment and specifically assess the Enrollee's immediate care needs, current services, personal and familial medical history, medications, health communications skills, existing primary care utilization and emergency department utilization history with a specific focus on BH and SUD needs and preferences.

Our Care Coordinator or Community Health Worker will also reach out to the ACO Care Manager to integrate across physical, BH and other care needs together, in a team-oriented manner. We will participate on the Enrollee's ACO Care Team if possible, with the goal of jointly preparing a truly Comprehensive Assessment.

Following the completion of the Comprehensive Assessment by the Enrollee's Care Team, ACO and other key providers, we will communicate the results of the assessment to the Team and jointly determine implications for on-going care planning.

The Brien Center will use a combination of the Massachusetts Standardized Data Project (MSDP) forms to perform Comprehensive Assessments for BH CP Eligible individuals. We agree to meet all EOHHS requirements pertaining to mandatory data elements mandated in the Model Contract. We will select appropriate forms based on adult, child/adolescent, SMI or SUD status. Our goal is to maximize person-centeredness, minimize duplication and maximize efficiency. We plan to review and discuss the MSDP tools, included as **Attachment 7.3.C** to this RFR submission with local ACOs, prior to sharing our final selection of forms with EOHHS. The attached MSDP forms include: a Comprehensive Assessment for Adults, a Physical Health Assessment (in the event that such information is not available from the ACO); a Child and Adolescent Assessment; and, an Addictive Behavior and Substance Use History Addendum.

b. Process for Conducting Person-Centered Treatment Plans

After the Comprehensive Assessment is completed, our BH CP Care Coordinator will use the assessment data, combined with other available information (e. g. medical records information and other relevant data) to develop the PCTP with the Enrollee. We will seek to develop a truly integrated PCTP that addresses each Enrollee's medical, behavioral, substance use and psychosocial support needs. The Brien Center will employ specialized staff to serve individuals with SUD diagnoses including Recovery Coach Navigators.

The BH CP Care Coordinator and/or Community Health Worker will collaborate with the Enrollee and their family member or informal caregiver to create a truly person-centered plan that reflects the Enrollee's needs, preferences, and goals. We will encourage the Enrollee to take a lead role and making sure they can develop their PCTP goals.

As stated above, we will seek to participate in the Enrollee's ACO Care Team or Interdisciplinary Care Team (ICT) meeting and, will consistently invite the ACO to participate in BH CP Enrollee care plan meetings. Regardless of who requests the meeting, a Brien Center Care Coordinator will seek to lead an integrated discussion of BH CP needs, rather than requiring the Enrollee to attend separate meetings with their ACO and our BH CP staff.

If the ACO does not plan to hold a meeting to discuss the Enrollee's PCTP, we will hold a separate meeting to discuss the Enrollee's BH needs and will invite the ACO or MCO to participate. If the Enrollee prefers a separate meeting specifically to discuss their BH needs, we will offer a session with the Enrollee's BH CP Care Coordinator or Community Health Worker and other BH CP Care Team members as requested. Regardless of when this initial meeting is held, we will complete the PCTP within three months of the Enrollee's assignment to The Brien Center.

The BH CP PCTP will include, but is not limited to: Enrollee goals and objectives, specific action steps to achieve goals, a method for tracking goal progress, referral needs to obtain care and services, educational needs, and any other necessary information. PCTPs may also include a crisis plan, especially for individuals with BH needs with a history of crisis service utilization. The PCPT will include actionable steps, responsible parties and timeframes for implementation.

Planned processes for documenting the Person-Centered Treatment Plan. To document the Enrollee's PCTP, The Brien Center plans to use Fallon Health Plan's TruCare system, if they are selected as an ACO. Access to TruCare will allow The Brien Center and the ACO (if Fallon is selected) to share an interoperable record fully.

Planned processes for updating the Person-Centered Treatment Plan. The Brien Center Care Coordinator will update the PCTP in collaboration with the Enrollee, their family member/caregiver, the ACO and other key stakeholders identified by the Enrollee. Our BH CP Care Coordinator will be responsible for updating PCTPs at any major change in the Enrollee's condition (e.g., loss of housing, loss of informal caregiver, BH crisis, new BH diagnosis, BH or medical hospitalization, multiple ED visits) progress toward treatment goals, a decline in functioning, or transition between levels of care. If the Enrollee's quality of life is not improving or the Enrollee feels that the plan needs an update, we will also update the PCTP.

The BH CP Care Coordinator or Community Health Worker will share PCTP updates with the Care Team within the Enrollee's ACO and, internally within the BH CP. Recognizing that Enrollee's needs are fluid, our BH CP Care Coordinator or Community Health Worker will review the PCTP and the Enrollee's progress during each interaction and inform key stakeholders as necessary and appropriate while respecting the Enrollee's privacy and wishes.

The Brien Center will complete thorough re-assessments which will include, but are not be limited to: updates that review past progress toward goals, health status, future goals, monitoring of compliance with the PCTP, recommended follow-up and a complete update to the PCTP. Each time a re-assessment occurs, or if the PCTP changes because of a review, we will update and distribute the PCTP appropriately. We will conduct reassessments and update to the PCTP at least every six months and following a change in Enrollee status that is self-limiting, impacts their health status and requires a review.

We will develop a process that is consistent with the creation of the original PCTP where the Enrollee and the PCP approve the PCTP before implementation. We will further review and provide a copy of the Plan to the Enrollee and the PCP upon completion.

Ensuring the Assigned Enrollee and PCP or PCP Designee approve the PCTP**.** Ideally, the PCTP will be developed by the BH CP with input from the ACO ICT. The BH CP Care Coordinator will review the PCTP and other information with the Enrollee including but not limited to, the Enrollee's right to appeal any denial, termination, suspension or reduction in services or any change in providers, services or medications included in the PCTP. They will inform the Enrollee of their right to approve the PCTP and make sure that the Enrollee approves the PCTP. The Brien Center will work to obtain sign-off from the PCP who will receive a copy of the PCTP upon completion.

Upon Enrollee and PCP approval of the PCTP, the BH CP will provide the Enrollee and the full team with a copy. The Brien Center will coordinate care with the PCP and Care Team based on the PCTP.

If the ACO is unable to develop the PCTP directly in collaboration with the Enrollee and the BH CP, the BH CP Care Coordinator or Community Health Worker will share the PCTP with the Assigned Enrollee. The PCPT will be reviewed with the Enrollee's PCP to obtain sign-off, following a complete review by The Brien Center's registered nurse who will be responsible for PCPT sign-off.

3. Care Coordination and Care Management

a. Identifying All Stakeholders Involved in an Enrollee's Care

The Brien Center will identify all stakeholders involved in the Enrollee's care through multiple methods. First and foremost, we will ask the Enrollee which individuals they most want to be involved in their ICT. Our BH CP Care Coordinator or Community Health Worker will contact the individuals' PCP, involved State agencies and community-based organizations who are involved in the Enrollee's care. The Brien Center staff will also contact the Enrollee's ACO to determine what care management efforts are underway so that care is fully integrated and coordinated and, no duplication of service delivery occurs.

The Enrollee's Care Coordinator will assemble an ICT that includes, but is not limited to: the PCP, The Brien Center's Clinical Care Manager, the Enrollees' Care Coordinator and Community Health Worker, and their BH clinician and others as appropriate (e.g., family, caregivers, advocates, state agency staff or other care managers). We will also include LTSS providers who are aware of the Enrollee's LTSS needs and preferences and will counsel the Enrollee regarding LTSS options, including a choice of at least two LTSS service providers. Likewise, our BH CP Care Manager will facilitate access to, and the delivery of LTSS for eligible individuals and will assist in servicer navigation.

b. Exchanging Information with Such Stakeholders

The Brien Center will share information with stakeholders verbally and in writing. We will hold community meetings and visit key community partners to explain the use of BH CP services. Each time we integrate care for an Enrollee, we will educate stakeholders regarding the relationship between BH CP services and the services that they provide.

c. Identifying and Organizing Members of the Enrollee' Care Team

The Brien Center describes our process to identify members of the Enrollee's Care Team in response 7.3.C.3.a. above. Our goal is to be available to the ACO or MCO's team and/or to facilitate a meeting of the Enrollee's full team (e.g., including not just our BH CP Care Team but the entire ICT, including the Enrollee and family or caregivers, if appropriate) to participate in the development and implementation of a fully integrated person-centered assessment and PCTP for each BH CP eligible Assigned Enrollee.

d. Ensuring Effective Ongoing Communication Across All Stakeholders

The Brien Center will ensure effective ongoing communication across stakeholders through multiple means. First, we will maintain close contact with the Enrollee to ensure that their needs and preferences are met. Also, we will regularly communicate with the Enrollees' PCP and key agency and community-based caregivers to ensure coordination and integration. While we plan to participate in, or hold, an ICT meeting to initially create a PCTP to meet the Enrollee's needs, we will reach out to key stakeholders telephonically as needed and initiate ICT meetings when appropriate and necessary.

To make sure that Enrollee's needs and preferences are addressed, we will share the PCTP with the Enrollee and their family or informal caregiver, the Enrollee's PCP, specialist and other providers or key stakeholders. We will further coordinate medical, prenatal, outpatient BH and preventative care reminders with the ACO. We will assist Enrollees in scheduling medical and BH appointments and, will conduct follow-up in collaboration with the ACO or MCO, to ensure that appointments are kept and that the Enrollee's situation has not changed.

The Brien Center will employ Fallon's TruCare Care Management System to share information with PCPs, Fallon and other providers. Fallon has agreed to grant access to TruCare to any individual who is responsible for managing an Enrollee's care; as a result, information sharing is simplified. The Brien Center will look at additional solutions to promote technology interoperability to enhance our connectivity and sustainability as a BH CP provider.

4. Care Transitions

The Brien Center is aware that transitions of care represent an important opportunity to promote quality, Enrollee satisfaction and cost-effectiveness of care delivery. We will deliver transitional services to assist the Enrollee in effectively transitioning from a hospital, skilled nursing facility or rehabilitation stay to their chosen living situation. In establishing a strong transition to the community, we will further seek to proactively plan services and supports and avoid or decrease unnecessary Emergency Department (ED) visits or hospitalizations. Our goal is to support the Enrollee's ability to live successfully in the community, in the setting of their choice.

We will participate, in collaboration with the ACO or MCO and other providers, in transition planning before an inpatient discharge. We will maintain strong relationships with the ACO or MCO, participate in discharge planning meetings and follow-up with hospitalized Enrollees through a face-to-face visit that will occur within three business days following discharge. We feel strongly that visits to Enrollees who were recently hospitalized must be coordinated with the ACO or MCO so as not to overwhelm them.

As part of the transitions process, we will update the PCTP and coordinate clinical and support services as needed. We will further assist the Enrollee to access additional supports from providers (with warm hand-offs as needed and appropriate) and follow-up to ensure that the Enrollee attends the appointment. Where Enrollee's miss appointments, we will address any barriers to care, such as providing transportation assistance.

5. Medication Reconciliation

The Brien Center adheres to evidence-based practices in all aspects of care management, transition planning, and medication administration. Our registered nurse, an active member of the Enrollee's Care Team, will perform medication reconciliation as part of transition planning upon discharge, and at appropriate times when delivering BH CP services. We will contact the Enrollee's PCP to verify medication orders and will review with the Enrollee, whether all prescriptions were filled appropriately.

Our BH CP Care Coordinator or Community Health Worker will review medications during the transition visit within three days of discharge and will assist the Enrollee in adhering to their medication regimen. The BH CP Care Coordinator or Community Health Worker and the registered nurse will identify additional supports to assist the Enrollee with taking their medications appropriately. If the Enrollee is in a Medication Assistance Program (MAP) the BH CP will work with the Enrollee's PCP to update the medication order forms with the MAP provider.

6. Health and Wellness Coaching

a. Health and Wellness Education, Coaching and Health Promotion Programs

The Brien Center believes that evidence-based health and wellness promotion activities are an integral component of improving the overall wellness and recovery for individuals with SMI.

As described in our response to Section 7.2.D.2, we have significant experience providing health and wellness education to our Enrollees. For example, we maintain an active Health and Wellness Committee, provide staff training in Executive Order 509 nutrition standards with programs offered related to nutrition, connect Enrollees to tobacco cessation programs, and educate Enrollees on self-management of chronic medical conditions. We will leverage our experience and existing processes to establish a comprehensive, evidence-based Health and Wellness program that meets or exceeds the requirements detailed in Section 2.3.F of RFR Attachment A.

In our experience, some Enrollees have a greater need for health and wellness education, coaching, and intervention than others. In some cases, general educational information will suffice. In others, such as when an Enrollee is significantly overweight, sedentary, or is struggling with tobacco use, more intensive interventions may be required. For these Enrollees, we will offer wellness programs of longer duration (three or more months), which combine education and activity, and incorporate both nutrition and physical exercise are more likely to be effective than are programs of shorter duration, those focusing only one factor (e.g., nutrition or exercise), or unstructured, education-only programs. As a BH CP, we will establish collaborative Health and Wellness programs with ACOs.

b. Methods for Ensuring the Engaged Enrollee's Goals for the Health and Wellness Programs Are Recorded and Tracked

As part of the Comprehensive Assessment, we will evaluate the Enrollee's need for Health and Wellness information, coaching, or other interventions. We will identify any high-risk behaviors,

including poor nutrition, overweight or obesity, lack of exercise, and other risk factors and share this information with the Care Team, and the Enrollee's ACO. The Enrollee's self-identified goals and objectives for addressing these needs will be documented in the Enrollee's PCTP. The Care Team will monitor Enrollee's participation in recommended Health and Wellness program(s), and periodic updates will be provided to the Enrollee's ACO Care Manager or Care Management Team.

7. Connection to Community and Social Services

a. Plans to Evaluate Engaged Enrollees for Social Service Needs

The Brien Center employs a person-centered approach that considers the total care needs of Enrollees with SMI or SUD. As a BH CP, we will foster an integrated system of care by collaborating with medical providers, Care Managers, ACOs, and other stakeholders, beginning with a Comprehensive Assessment to identify, among other needs, social service needs that can be met by social services and supports agencies.

Our assessment tool, which will be approved by EOHHS before use, will assess such needs as housing, utility assistance, social and cultural engagement, employment services, transportation, child care, food and nutrition supports, physical security, and any additional Flexible Supports that an ACO partner identifies.

As described in response to Section 7.3.B. above, The Brien Center's has long-standing relationships with community and social service agencies in our service area and will leverage these relationships to ensure Enrollee access to needed supports and Flexible Services.

b. Ensuring Care Coordinators are Familiar with a Wide Breadth of Social Services and Supports, and Providers of These Supports

The Brien Center currently has processes in place to refer to and coordinate with community services providers and social service agencies. We will use these existing processes to facilitate ongoing communication and information-sharing and ensure that Enrollees have timely access to needed community supports.

Our formal current and planned approaches include:

- Developing comprehensive referral and community resource guides for Engaged Enrollees and ACO staff
- Appointing dedicated points of contact for ACOs and MCOs
- Executing memoranda of understanding with providers and community organizations regarding the delivery and coordination of services
- Appointing liaisons to foster relationships and communication with community agencies

c. Planned Strategies for Collaborating with ACOs to Recommend Flexible Services

We will jointly develop processes and procedures with ACOs in our service area to coordinate access to Flexible Supports authorized by the ACO. Care Managers will work with ACO Care Managers for Engaged Enrollees to identify supports (as documented and authorized by the

ACO) and jointly establish a plan for providing or arranging for them (as appropriate). These services will be included in the Enrollee's PCTP and monitored by the Care Team. Specific strategies for collaborating with ACOs and MCOs include:

- Upon the execution of the partnership, we will orient the ACO to our organization, services provided or facilitated, structure and operations of our Care Team model, and provide contact information
- Establish and facilitate a joint Care Coordination Planning Committee to develop processes and procedures to ensure communication and collaboration between the two organizations' care management teams
- Establish and maintain periodic joint care management meetings (telephonic, WebEx, face-to-face) to ensure appropriate communication, collaboration, follow-up and accountability
- Develop and maintain a common community resource directory for use by Enrollees and staff
- Conduct joint training (initial and periodic) for care management, care coordination staff
- To the extent allowed by the Enrollee, share care plans, progress reports, status reports, and other pertinent information about Engaged Enrollees with the ACO.

D. Innovative technologies for service delivery

The Brien Center intends to partner with eHana to deploy a care management platform technology to meet or exceed BH CP program requirements in conjunction with our existing EHR and billing system. This will include forms, workflows, processes, reports, and data extracts:

- Tracking Enrollee assignment, engagement, disengagement, and overall capacity
- Capturing appropriate signatures and document approvals
- Surfacing alerts, reminders, and tasks as necessary to prompt Care Team action
- Tracking enrollee events, admissions, referrals, and prompting for necessary follow-up
- Tracking, reporting, and billing Qualifying Activities to EOHHS in specified formats

Care Coordination – The Brien Center will leverage current and future tools based on eHana's technology platform to support effective communication across all stakeholders including, eHana Secure Care Team Messaging, enrollee tagging, QuickNotes, Notifications, and chart exports; and anticipates adopting other technologies (Enrollee Portal, Real-Time Care Team Chat, advanced interoperability) as necessary to effectively coordinate care. We anticipate that eHana will have an information exchange with The Brien Center's ICentrix software.

Mobile Enrollee Engagement Technologies – The Brien Center anticipates deploying mobile apps, synchronized with the centralized care management platform, to be used by Care Coordinators to identify Enrollees requiring outreach, access contact information, and document services.

Social Outreach and Engagement - We are exploring the use of social networking tools, such as Facebook Messenger to engage with Enrollees. Techniques could include leveraging Facebook's Messenger Platform Application Programming Interface (API) to supply Enrollees (or their authorized representatives) with the Contractor's chat name as well as a unique code, which would automatically associate their Facebook Messenger account with their care management

record. Enrollees or their representatives could then outreach to the Care Team at any time via the Messenger app already installed on their phone, notifying their team and prompting engagement in real-time (providing appropriate consents were in place, and with necessary checks to ensure no PHI was exchanged).

System Security and Access Controls – The Brien Center intends to follow the industry-standard best practice to comply with HIPAA requirements restricting unnecessary access to or disclosure of protected health information.

EOHHS Billing - Qualifying Activities/CP Support Services will be tracked in the care management platform and appropriate rules applied (ensuring the minimum necessary number of activities in the billing timeframe). Billing transactions will be batched and submitted in a format to be specified by EOHHS. The Brien Center anticipates billing requirements will bear a resemblance to those of the DMH Community Based Flexible Supports (CBFS) program, which both The Brien Center and eHana have significant experience managing.

E. Personnel and staffing

1. Organizational Chart

We provide our organizational chart as **Attachment 7.3.E-1**, identifying personnel who will be assigned to accomplish the Contractor responsibilities described in Attachment A of the RFR.

2. Sample Staffing Model

We propose serving 1,547 BH CP Eligible Enrollees within our overall Service Area, as detailed in Attachment D of the RFR. Our staffing model will include the following positions and number of full-time equivalents (FTEs).

Positions	FTEs
Administration	**9.5**
Chief Executive Officer	1
Vice President, Administration, and Finance	1
Vice President, Service Operations	1
Medical Director	1
Director of Care Coordination	1
Director of Compliance, Quality, and Nursing	1
Director of IT Operations	1
Information Systems Coordinator	1
Support Staff	.5
Billing Manager	1
Supervisors	**3**
Quality Manager/Compliance (RN-level)	1
Senior Care Coordinator (to supervise care managers, as # eligible enrollees increase)	2
Care Management	**6**

Nurse Care Manager	6
Care Coordination	13
Intake Coordinator	1
Care Coordinator (licensed clinicians--2 with SUD specialty)	3
Community Health Worker	5
Recovery Coach Care Coordinator or Community Health Worker	4
TOTAL	31.5

3. Recruitment Plans, Including Timelines to Recruit Staff

The Brien Center will recruit staff during "Year O," staffing up to develop and implement the BH CP initiative before the implementation date. Our goal is to bring staff on in a manner that is consistent with our Year O budget and staffing. Job descriptions are provided as **Attachment 7.3.E-2.**

4. Recruiting and Hiring Staff from the Cultural and Linguistic Communities They Intend to Serve

The Brien Center is committed to ensuring that staff is representative of the communities we serve. We recognize that "culture" encompasses more than linguistic diversity, and includes racial or ethnic background, national origin, immigration/refugee experience, physical or mental disability, gender and gender identity, and sexual orientation.

To that end, we take care to ensure that our providers, staff, and others are responsive to the linguistic, cultural, ethnic, or other unique needs of all Enrollees. We will assess our current capacity and competencies through an initial survey of provider and staff about Community Partner Supports and cultural diversity. We will also use existing community needs assessments and studies, and will work with our ACO partner to maintain ongoing demographic, cultural, and epidemiological profile of the community. This information will be used to identify both hiring priorities and training needs to increase sensitivity to the needs of individuals from different cultural and ethnic backgrounds.

We will work closely with community-based organizations (e.g., Multicultural Bridge, immigrant and refugee coalitions, advocacy coalitions, LGBTQ advocacy agencies) to identify and leverage opportunities for targeted recruitment activities. We will also partner with ACOs and MCOs to conduct job fairs in specific communities and in languages other than English (where possible).

However, we recognize that recruitment of a diverse behavioral health workforce, particularly for substance use treatment, is a nationwide challenge with numerous systemic barriers that will be difficult to overcome. To that end, we will evaluate the possibility of using DSRIP funds for short-term workforce development strategies (for example, signing bonuses for employees from underrepresented communities). We will also implement a longer-term initiative to review and potentially augment our staff retention programs through ongoing career development, educational assistance, ongoing on-going licensing and credentialing opportunities, and leadership training.

5. Proposed Training, Orientation Plans and Modules for Staff

The Brien Center's training programs are designed to provide staff with an understanding and awareness of the needs of Enrollees with SMI or SUD, available BH CP supports, social services and supports available in the community, and strategies for delivering culturally competent care. We will train Care Teams and other key staff on these topics by enhancing our existing training modules. We will provide refresher training, as well as updated training on best practices at least annually. We will finalize training modules and training schedules before the contract effective date. Below are examples of potential training modules:

Listing of Proposed Training Modules	
Understanding and awareness of the needs of high-utilizing individuals with SMI or SUD	• Chronic Illnesses and Serious Mental Illness/SUD • Recovery and Resiliency • Intellectual, Cognitive, and Developmental Disabilities • LTSS Services: What are LTSS Services, Who Provides them, and How Do We Work Collaboratively?
Understanding Community Partner Supports	• Scope of services • Partnership and Collaboration with ACOs/MCOs • Comprehensive Assessment and Treatment Plan • Flexible Service: Resources, Referral, Follow-up • Collaboration and Communication with community agencies
Cultural Perspectives – Recognizing sensitivities to different cultures, religions, values, and backgrounds	• The Impact of Culture on Health and Health Care (with focus on SMI/SUD) • Health Disparities • Culturally Competent Behavioral Health Care Delivery • The LGBTQ Community

We will seek to partner with the ACO to hold periodic conferences for Enrollees, staff, advocates, BH-CPs, LTSS-CPs, social service and community agencies to enhance their knowledge through sessions delivered by Subject Matter Experts (including experts from the ACOs, MCOs and Independent Living Centers).

We will facilitate staff training by 1) making work hours available for staff to participate on a mandatory basis; 2) tracking participation electronically through a learning management system (LMS); 3) enabling online evaluations and scoring; and 4) providing resource guides and training materials to reinforce learning.

Whenever possible, we will work with ACOs to develop and deliver training on topics of mutual and common interest, such as care coordination strategies, community collaboration, and cultural competence.

We will incorporate existing MassHealth training and resources into staff training and material, encourage staff to attend MassHealth training forums and ensure staff interacting with Enrollees with BH needs complete required training.

6. Description of Staff Retention Strategy

As referenced above, there are systemic challenges and barriers to recruiting and retaining qualified, trained and experienced staff. We believe that addressing these challenges requires a long-range, comprehensive, multi-pronged strategy, including ongoing career development, educational assistance, ongoing on-going licensing and credentialing opportunities, and leadership training.

In the short term, we will explore using DSRIP funds for defined workforce development initiatives, including staff retention efforts. We propose to collaborate with other BH CPs, and ACOs to explore opportunities to develop and implement staff retention programs, including professional development. Potential areas of focus include:

- Encouraging staff to earn degrees in higher education and professional credentials
- Providing leadership training and management skills development training to support staff who seek to advance in their careers
- Providing on-going opportunities for continuing education for licensing and credentialing

We recognize that raising salary levels and benefits will likely result in better retention, but we do not believe that the current environment will allow for this. However, there are additional benefits that can also aid in retention by improving staff experience and morale. These include:

- Fostering an enhanced sense of ownership and accountability among staff by expanding our existing mechanisms to solicit, obtain, and incorporate (to the extent appropriate) staff input into program development, administration, and management
- Cultivating a supportive organizational culture by providing more focused and personalized management, supervision, and mentoring
- Exploring opportunities to reduce administrative burden by streamlining recordkeeping and other documentation requirements, and
- Exploring and implementing creative work allocation and scheduling to allow staff to achieve a healthy work-life balance

F. Implementation Plan and Timeline

Implementation timelines for the Preparation Budget Period and each subsequent Budget Period are provided in Attachment 7.3.F.

G. Budget Report and Budget Narrative

We provide our completed Budget Report and Budget Narrative in Attachments 7.3.G-1 and 7.3.G-2 respectively.

H. Sustainability

The Brien Center will sustainably fund the proposed infrastructure, capacity building investments, and BH CP support services during the Contract Term and following the initial Contract Term through:

- DSRIP Dollars (initial investment and ongoing funds distribution associated with volume
- Shared savings initiatives developed over time with the ACOs/MCOs
- The ability to sell services to MCOs for non-CP eligible individuals who can benefit from CP services to manage the Total Cost of Care for more Enrollees
- Managing fixed costs associated with IT, licensing, fees and general expenditures over time
- Identifying and developing new services for ACO, MCO, and commercially enrolled individuals to help individuals live independently in the community, decreasing the total cost of care associated with avoidable hospital utilization.

I. Quality Management and Performance Monitoring

1. Quality Improvement Program

The Brien Center will build on our existing Quality Management and Quality Improvement (QM/QI) Program to manage all QM/QI functions for any Contract that may arise from this BH CP RFR submission.

Our QM/QI program, which supports our mission, will measure and improve: clinical quality of care; care coordination; access and availability; continuity; and Enrollee experience. Through our QM/QI program, we will apply a data-driven, evidence-based approach to service delivery and analyze and compare data against internal, local, and state benchmarks to identify opportunities for improvement. Our QM/QI program will establish goals, processes, and include an interdisciplinary committee structure that includes Enrollees and family members and representatives.

Applying Principles of Continuous Quality Improvement

The Brien Center's QM/QI Program will be based on continuous monitoring of quality performance measure indicators, clinical practice guidelines and activities. Our goal is to deliver quality care that helps Enrollees maintain and improve health and wellness. Our objectives are to: improve clinical quality; improve coordination of care; improve access to services; and, enhance all aspects of the Enrollee experience. We will achieve our goal and objectives by relying on data-driven decision making, evidence-based practices, and expert advice – all of which will be used to drive improvement. These goals will form the basis of our QM/QI program and provide areas of focus that drive our improvement strategies. We will work to improve care continuously by:

- Using data to identify and address anomalies in care and outcomes
- Developing interventions to ensure that goals are achieved
- Completing objective measurement processes and implementing improvement initiatives

The information used for quality monitoring and improvement derives from several sources including but not limited to: medical record review, Enrollee and/or provider complaints, utilization review, and survey data.

The QM/QI Program will define: clear assignment of roles and responsibilities to the governance functions and staff within the Center; create performance benchmarks in alignment with

program goals and contractual requirements; and Enrollee satisfaction measures. Further, the program will include meaningful roles for Enrollees and their families in QM/QI activities on advisory councils; monitoring processes to review medical record-based studies; and, plans to monitor Care Management service delivery. Using a continuous quality improvement approach, we will compare our outcome results to prior year results to assess our performance in meeting goals, and advance performance by establishing outcome objectives for the next year.

QM/QI Plan

Our QM/QI Plan and Annual Work Plan will constitute the blueprint for all quality goals and describe the activities that we will undertake to address all contractual QM/QI requirements. As outlined in the QM/QI Plan, we will collect and analyze qualitative and quantitative data to drive quality improvement initiatives. The QM/QI Plan will be a responsive, dynamic document and we will continually update it based on stakeholder input and data analysis. We will also maintain an Annual Quality Workplan that delineates a core set of performance metrics and is updated based on the annual review of systems. The Work Plan will define strategies to address priorities outlined in the QM/QI Plan.

Annually, we will conduct a comprehensive program assessment that examines QM/QI program effectiveness, service utilization, cost, quality data, the prior year's outcomes, and compliance with contractual requirements. Progress toward goals will be reported to the Quality Committee, which will determine opportunities for improvement, design interventions, and track the effectiveness of interventions. In this way, we will ensure our QM/QI program is relevant to the population we serve and results in better Enrollee care.

2. Description of at Least One Quality Initiative The Brien Center Proposes to Undertake in Budget Period 1

The Brien Center is committed to improving Enrollee care by enhancing the quality and integration of services we provide. To that end, we propose to implement a quality initiative related to enhancing Care Coordination and Care Management for high-cost, high-risk Enrollees served by contracted MassHealth ACOs. Specifically, we propose to increase the number of BH CP eligible Enrollees who receive fully integrated services in collaboration with an ACO Partner.

Description

For this QM/QI effort, The Brien Center will develop a process with at least one ACO Partner in our geographic area to jointly conduct a Comprehensive Assessment and to develop a single PCTP. All BH CP Enrollees will receive a Comprehensive Assessment and a PCTP; however, for this QI/QM initiative, we will develop a joint PCTP for at least 50% of the Engaged Enrollees who are jointly served by the BH CP and the ACO. The PCTP will be developed by a Care Team that includes the PCP, family and/or informal caregivers, the ACO Care Manager, the BH CP Care Coordinator and any other individuals whom the Enrollee wishes to participate on the Team.

The Brien Center will work with the ACO to implement a person-centered process where data elements that are required by both Comprehensive Assessments are shared, based on which organization obtains the data first, with the Enrollee's permission. Then, we will either

participate on the ACO's Care Team or, we will invite the ACO to participate in a BH CP Care Team. The Brien Center will develop and document an integrated PCTP in collaboration with the ACO. We will then implement the PCTP and continue to work with the ACO to integrate care.

Target Population

The target population for this initiative includes high-risk, high-cost actively engaged ACO Enrollees who are BH CP eligible.

Measures for Success

We will measure the percentage of actively engaged BH CP eligible Enrollees who are jointly served by the ACO and BH CP for whom the BH CP provides a fully integrated Comprehensive Assessment and PCTP (divided by the total number of actively engaged BH CP eligible individuals). For the first year of the Contract, we propose a 60 percent success rate for jointly developed Assessments and PCTPs; however, all Enrollees will receive an Assessment and a PCTP.

We will implement this initiative in Budget Period 1 and continuously evaluate the effectiveness of this initiative in meeting established goals. Data related to this initiative will be continuously monitored through our Quality Committee structure as described below.

3. Functions of The Brien Center's Quality Committee

The Brien Center will maintain a multidisciplinary committee structure that drives quality improvement through the review of quality data and will incorporate Enrollee and family feedback. Our Quality Committee will meet monthly and be responsible for: 1) identifying quality improvement opportunities; 2) finalizing intervention strategies to improve quality and cost-effectiveness; 3) establishing timeframes for interventions; and 4) tracking the effectiveness of interventions and making modifications to improvement strategies, as needed. The Quality Committee will report to the Governing Board.

Our Committee structure will include:

- Governing Board: The Governing Board will serve as the decision-making authority for the BH CP and provide strategic direction and programmatic oversight.
- Quality Committee: Performance data will be reported to the Quality Committee, which will analyze data against program goals and develop performance improvement initiatives. This committee will meet monthly and be chaired by The Brien Center Executive Director.
- Consumer Advisory Board: The Consumer Advisory Board will be responsible for ensuring that services delivered are consistent with our mission and values, identifying service gaps and solutions to address them, and gathering direct feedback regarding service delivery from individuals served and direct care workers. Information gathered from our Consumer Advisory Board will be used to inform changes in policy and practice.

J. Coordination with ACOs and MCOs

The Brien Center is aware that an essential part of the success of the BH CP contract relies on our shared ability to coordinate with ACOs and MCOs in our service area. We believe that

Enrollees will be best served by sharing a single, modular Comprehensive Assessment and PCTP and communicating complete, up-to-date integrated Enrollee information across organizations, including state agencies and community-based organizations. In our experience, information-sharing is crucial to the delivery of integrated care management and represents an opportunity to achieve savings on infrastructure and IT resources.

At the outset, we will a have a compliant, functioning solution that supports care integration; however, over time, our desire is to have a fully interoperable system capable of supporting shared assessments, care plans, reporting and quality management functions. We believe that creating a fully integrated IT system is the State's responsibility; however, we are already collaborating with ACO and MCO partners in our service area and will do everything possible to support such collaboration.

1. Communicating Our Skills, Expertise, and Value to Potential ACOs and MCOs

The Brien Center has already initiated discussions with ACOs and MCOs in our service area to discuss our skills, expertise, and value to care integration efforts. We will continue these discussions over the next several months as BH CP, LTSS CP, ACO and MCO contracts are awarded by EOHHS. We are communicating and will continue to educate ACOs and MCOs regarding:

- Shared responsibility in caring for MassHealth Enrollees with the greatest needs and level of risk, given their SMI and/or SUD diagnosis.
  - The contribution that The Brien Center can make to delivering quality care for Enrollees with SMI and SUD diagnoses. We will impact integration, Enrollee satisfaction and total cost of care among other measures, all of which will be vitally important to Enrollees, our organization, ACOS and MCOs, and our joint efforts to deliver care.
- The breadth and depth of BH CP services available to eligible Enrollees. For example, we will discuss the specialized nature of the BH CP component of the Comprehensive Assessment, the PCTP, and ongoing care plan implementation and monitoring.
- The importance of primary care delivery for individuals with SMI and SUD, many of whom go without primary care services for a variety of reasons. One of our goals is to ensure that Enrollees with significant BH diagnoses receive primary care services, given that individuals with SMI diagnoses die, on average, 25 years earlier than their peers without an SMI diagnosis.
- Collaborative strategies to integrate primary care and BH care for BH CP eligible individuals in the assessment, care planning, and care delivery process.

2. Branding and Marketing Plans Regarding Relationship with ACOs and MCOs

The Brien Center's Marketing and Branding plans will be guided by MassHealth policies and procedures, which clearly prohibit MassHealth vendors from directly marketing to Enrollees. Our

priority will be to serve Assigned Enrollees who have a pre-existing relationship with our organization.

For Marketing and Branding, we plan to take an approach that is educationally focused on health and wellness in the community including:

- Developing an awareness campaign of the value of BH CP services for Enrollees with significant BH needs. Our goal is to enhance access to services by making materials available to ACOs and MCOs in the most commonly spoken languages in the service area and distributing them to Enrollees as part of the enrollment process.
- Educating ACO and MCO partners regarding our services and the benefits of our integrated approach.

3. Strategy to Engage and Collaborate with Multiple ACOs and MCOs

The Brien Center will provide information and reach out to develop relationships with all ACO and MCO partners in the Service Areas for which this bid applies.

4. Strategy for Conflict Resolution

The Brien Center will partner closely with ACOs and MCOs in the Service Area to serve the needs of BH CP eligible Enrollees. We will leverage and build upon the strengths that our organization brings to this engagement. While we do not anticipate disagreements in areas of shared responsibility, we recognize that differences of opinion may arise, specifically related to care management decisions that affect Enrollees or, the way the Contract is managed. Our mutual intention is to resolve those disagreements promptly that causes no harm to Enrollees and maintains compliance with the terms of the contract.

In general, the forum for resolving disagreements and conflicts between the BH CP and the ACO or MCO will be addressed at the Board of Directors. Going forward, we will create a structured process to escalate issues of significant financial impact to the ACO or MCO, or other major strategic issues.

Community Partner Program Budget Report - Prep Budget Period

Only complete this Program Budget Narrative using amounts anticipated for PBP.

Lines may be added to the Program Budget Narrative tables as necessary

Row 1 - Salary

Position	Annual Salary	FTEs	# Months	Total
Program Director	$ 75,000.00	1	4	$ 25,000
Clinical Care Manager (RN)	$ 67,500.00	1	4	$ 22,500
RN	$ 67,500.00	1	4	$ 22,500
Supervisor	$ 45,000.00	2	2	$ 15,000
Care Coordinators	$ 35,000.00	12	2	$ 70,000
Recovery Support Navigator	$ 35,000.00	1	2	$ 5,833
Certified Peer Coordinators	$ 35,000.00	1	2	$ 5,833
Medical Director	$ 250,000.00	0.05	2	$ 2,083
				$ -
Total Salary (Program Budget Line 1)		**19.05**		**$ 168,750.00**

Row 2 - Fringe

Fringe Item	Total Salary	Fringe Rate	Fringe
Fringe Item	$ 168,750.00	20%	$ 34,089
Total Fringe (Program Budget Line 2)			**$ 34,089**

Total Personnel*	**$ 202,839**

* Should align with Personnel Costs row in Program Budget

For each position listed above, provide a brief statement of the position's responsibilities:The Program Director will oversee the CP sites, spending 100% of their time with program management, supervision and training staff. The Clinical Care Managers will spend 100% of their time reviewing and signing off on the comprehensive assessment of Enrollees and providing supervision of the Supervisors, the Clinical Care Manger (RN) will be a backup to the program RN and provide the same functions as the RN as required. The Registered Nurse in each site reviews any information on medications, treatment for chronic medical conditions and potential drug interactions and enter any additional findings into the field on Medical History and Medications for Enrollees. S/he will consult with a CCBC psychiatrist as needed.

Supervisors will oversee the activities of approximately 8 Care Coordinators. Supervisors may carry a small caseload and will assist in the hiring, supervision and support of the Care Coordinators.

Care Coordinators will work with the clients directly, complete Comprehensive Assessments and Person-Centered Treatment Plans, supporting the needs of the clients and completing all required case documentation.

Recovery Support Navigators will support Enrollees with their recovery from Substance Use or Co-Occurring Disorders by connecting them to recovery focused activities in the community and developing recovery oriented action plans.

Certified Peer Specialists will assist the Enrollee in developing an individualized WRAP plan to address the Enrollee's recovery needs and use their lived experience to support the Enrollee to move forward in their own recovery.

Medical Director will be available to the Team to aid as a clinical resource. During the Prep Period the Medical Director will be included in planning meetings to determine the flow of clients into the BHCP .

Row 3 - Training and Professional Development

106	Public transportation	
107	Enrollee travel	
108	**Total Travel**	**$ 250.00**
109	**(Program Budget Line 4)**	

110

Please describe how mileage estimates and other travel expenses listed above were determined . If including enrollee travel expenses above, please explain how these expenses will be used by enrollees.

Mileage estimates includes travel to trainings and meetings to prepare for startup. Mileage is also estimated for recruitment events and interviewing candidates in various CCBC site offices.

129 **Row 5 - Equipment**

130	**Description of Equipment**	**Unit Cost or Cost/FTE**	**#units or FTEs**	**Cost**
131	Copier Rental	124		$ 248.00
132	Safety Device Monthly Monitoring	14.99	19	$ 284.81
133				$ -
134				
135				
136				
137				
138	**Total Equipment (Program Budget Line 5)**			**$ 532.81**

139

Provide a brief description of the intended use for each Equipment line item listed above and how the estimated costs were determined:

A copy machine will be rented for 2 months for a total cost of $248, based on actual cost of like machine.

CCBC utilizes a safety device that connects staff immediately to a live operator and allows for a GPS locator to the position of the device. The live operator can call for any type of police, fire or EMS response directly to the staff location. The live operator can also bring a supervisor online to speak to the staff member to help with the situation the staff member is facing. The cost is based on actual expenses that CCBC currently is contracted. There are 19 staff members that will need the monitoring of the devices set up and ready to use on June 1, 2018. The cost of the device is an initial price to purchase the device and then a monthly monitoring fee, somewhat like a monthly cell phone subscription. In the PBP there is not cost for the initial cost of the devices as they will be transferred from another department, therefore, no cost will be incurred to purchase the device. However, in

transferred from another department, therefore, no cost will be incurred to purchase the device. However, in the PBP there will be a monthly cost incurred to monitor the device, equal to one month of service. We do not want to wait until June 1, 2018 to start the monitoring service as we want all devices programed and tested prior to June 1, 2018. Each staff member creates a profile of information that is able to be accessed when the device is activated, this is how a staff member can get immediate response from their supervisory support network at CCBC. CCBC currently use this device in all of our outreach programs and believe it is an important piece of the safety protocol for our staff members.

Row 6 - Supplies

Description of Supplies	Unit Cost or Cost/FTE	# Units or FTE	Cost
Office Supplies			$ 2,000.00
Total Supplies (Program Budget Line 6)			**$ 2,000.00**

Provide a brief description of the intended use for each Supply line item listed above and how the estimated costs were determined:

CCBC will supply the CP sites with office supplies for organization of staff, training, clients information. CCBC expects CP staff to be located in at least two separate office locations. The projected expense is $2,000 supplies will be shared between sites.

The cost projected is consistent will like programs that CCBC is currently running. The types of supplies purchased as associated costs are listed below. CCBC expect to have 23 staff in the PBP and will expand to more than 30 staff in year 1 and over 70 staff in year 2. While CCBC projects the cost in the PBP of $2000 for 4 months of readiness, it expects the costs to stabilize as the program goes into year 1 and 2 even though the number of staff is expanding. Costs are associated with office start up and include the following costs at the current prices. Office supplies will be an ongoing expenses for all years of the BHCP.

Pens $1/dozen, 15 = $15
Color Copies 10 cents each 1000 = $100
Toner $70/unit, 4 = $280
Paper $30 per case, 6 = $180
Note Pads $6/dozen, 4 = $24
Folders $5/100, 4 = $20
Post It $17 per pack, 6 = $102
2" Binders $12/each, 20 = $240
Tabs for Binders $3/each, 20 = $60
Desk set, stapler, tape dispenser, staple remover $17/set, 5 =$ 85
White Boards $35, 4 = $140
Envelopes $14/box, 4 = $56
Protector sheets $9/box, 2 = $18
Binder Clips, sum, med, large $10/3 boxes, 8 = $80

Folders for clients box 25 $15, 40 = $600

Total $2000

Row 7 - Contract Services

Name of Contractor	Contractor Type	Goods and Services Provided	Cost
Sensible Computer	IT Support		$ 1,000.00
Total Contract Services (Program Budget Line 7)			**$ 1,000.00**

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Sensible Computer provides hardware and software integration as well as computer training on a contracted basis. Sensible Computer will support the CP performance by preparing the staff to utilize the technology to completed patient records. The cost was determined by past experience and an estimate of number of hours required to complete tasks.

Row 8 - Software Licensing

Description of Software	Cost per License	# Licenses	Cost
No software licensing in the Prep Period			
		Total Software Licensing	

	A	B	C	D	E	F	G
252			**(Program Budget Line 8)**				

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

Row 9 - Telecommunications

	Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
287	Land Lines and Fax Line	$900	1	$ 900.00
288	Cell Phone Lines	16	12	$ 192.00
289	Cell Phone Lines 1/2 month	8	19	$ 152.00
290				
291				
292			**Total Telecommunications**	
293			**(Program Budget Line 9)**	**$ 1,244.00**

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

Using the cost for a similar site office the estimate for the necessary fax and phone lines is projected at $900 per site per month in the prep budget. There will be one month of cost for two sites. These lines will allow for the communication necessary to set up the program.

The cost of the cell phone on a monthly basis in CCBC current phone plan is $16. Three staff members will have cell phones for 4 months and 19 staff members will have cell phones for 1/2 month during the Prep period. This communication will allow for staff to be ready to outreach clients at the start of year 1.

Row 10 - Occupancy

Occupancy Expense	Total SqFt	Cost/SqFT	Cost
Rent	2200	14.5	$ 6,645.83
Rent	1500	17.5	$ 5,468.75
Utilities			$ 695.00
Cleaning			$ 468.00
Total Occupancy (Program Budget Line 10)			**$ 13,277.58**

Provide a brief description of how each Occupancy line item listed above will support the CP's performance and how the costs were determined:

The cost in the Occupancy line will allow the staff to have a cohesive work unit in which to attend meetings, supervision and begin preparation to work with clients. In the PBP the number of staff in each site will be eight staff. At the end of year 1 there will be approximately 20 staff members in each site.

The Rent for the 1st sites is projected to be $2,658.33 per month, the Rent for the second site is projected to be $2,187.50 per month. It is expected that the property will be rented for 2.5 months of the prep period.

Cleaning and utilities are an expense attributable to the CP site office and is based on current payments to cleaning companies.

Row 11 - Other

Other Direct Expense Description	Cost
Advertising Brochure Design and Printing	$ 875.00
Business Cards for Staff	$ 925.00
Shredding Services	$ 130.00
Internet Connections	$ 200.00
Security System for Site	$ 20.00
Answering Service for Program	$ 40.00
Total Other (Program Budget Line 11)	**$ 2,190.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Advertising Brochure Design and Printing - CCBC will design and print a brochure to use with physicians and potential clients to highlight the BHCP service. This brochure will aid in the promotion and understanding of the process to help engage PCPs and office staff on the process and how to work with a BHCP. Expenses are based on recent production of similar service brochures.

Business Cards - CCBC will print individual business cards for each staff member working on the BHCP Team. This is essential as it provides direct contract information that will be shared with PCPs offices to assist in the enrollment process. The cost is consistent with current expenses.

Shredding Services, Internet Connections, Security and Answering Service - All of these expenses are necessary for the operation of a BHCP site. These expenses will allow for an efficient and safe BHCP site. These expenses are direct to each site and consistent with current expenses.

Row 12 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 12)	**10.00%**	**$ 22,333.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

The leadership team at CCBC is committed to the successful launch of the BHCP. This expense will cover the cost of the CEO, CFO, COO and department VPs to plan and activate the activities of the launch of the BHCP over the preparation period. The expense will also cover the necessary liability insurance coverage necessary, additional patient billing supports. A portion of costs associated with normal business function such as auditing, payroll, legal, telephone, postage, association memberships will be attributed to the BHCP based on acceptable accounting practices. These costs are based on current projections of expenses.

Community Partner Infrastructure Budget Report - Workforce Development - Prep Budget Period

Row 5 - Workforce Development Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
			4	$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
	Total Salary	0		$ -
	Fringe rate	24.0%	Total Fringe	$ -
			Total Workforce Development Staffing including Fringe (Infrastructure Budget Line 5)	**$ -**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

The Program Trainer will work exclusively with the BHCP Team to formalize training plans and then train the staff that will be joining the team. This training will ensure that all staff are prepared to fulfill the duties of their positions.

Row 6 - Recruitment Expenses

Description of Expense	Cost
Indeed Direct Hires	$ 3,000.00
Indeed Sponsored Ads	$ 5,000.00
Bayard Advertising	$ 10,000.00
Total Recruitment Expenses (Infrastructure Budget Line 6)	**$ 18,000.00**

Provide a description of each recruitment expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

CCBC will use multiple avenues for staff recruitment, it is imperative that CCBC recruit motivated engaged staff for the successful implementation of the BHCP. CCBC will utilized Indeed' s Direct Hire product that performs the aspects of a job placement service with a much lower cost per hire than a traditional recruiting firm. CCBC will also sponsor ads on the Indeed website which allow for our advertising to stay at the top of the searches for an extended period of time highlighting the jobs BHCP CCBC has open. CCBC will also use the services of Bayard, Bayard optimizes the internet exposure of the BHCP jobs available at CCBC. These costs are all estimates based off the actual costs of the most recent large hiring project CCBC just completed.

Projection of Bayard Costs
Landing Page Creation $2,900
Facebook Postings $800/ month for 2 months = $1600
Landing Page Hosting $750 / month for 2 months = $1500
Application Feeder $1000 / month for 4 months = $4000

Row 7 - Training Expenses

Description of Expense	Cost
Community Health Worker Training	$ 3,900.00
Total Training Expenses (Infrastructure Budget Line 7)	**$ 3,900.00**

Provide a description of each training expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

CCBC will send staff to a Community Health Worker Training to aid in the training of the direct care staff and is based on the known cost of the training. The cost per person of the training is $650, CCBC will make serval payments of $650 training a total of six staff during the PBP.

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

Row 13 - Other Operational Expenses

Description of Expense	Cost
Data Analytics	$ 5,000.00
Project Management	$ 15,891.00
Total Other Operational Expenses (Infrastructure Budget Line 13)	**$ 20,891.00**

Provide a description of each retention expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

CCBC plans to utilize consultants to handle Data Analytics and Project Management. These consultants will work with CCBC to manage and implement the necessary steps to set up and be ready to accept assigned enrollees on June 1, 2018. These consultants will work in concert with CCBC leadership. The consultants will help drive the phases of implementation forward from ACO Contracting to software integration, and reporting capabilities. CCBC plans to use Systematics to assist CCBC with Data Analytics, reporting capabilities and electronic interfaces. These costs are estimates based on like projects that CCBC has recently implemented. All costs are solely related to the process of establishing the systems necessary to the BHCP project. No funds will be spent on non-BHCP activities.

It is expected that the cost per hour of the Project Management portion will be $160 per hours for approx 99 hours. It is expected that the cost per hour of the Data Analytics will be at $100 per hour for approx 50 hours.

Community Partner Infrastructure Budget Report - Indirect Cost/Administrative Overhead- Prep Budget Period

Row 14 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 14)	10.00%	$ 18,576.00

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

CCBC applied its most recent overhead rate equally to the Program Budget and the Infrastructure budget. This percentage is a total of 10% of all costs of the contract and will cover the following. This expense will cover the cost of the CEO, CFO, COO and department VPs to plan and activate the activities of the launch of the BHCP over the preparation period. The expense will also cover the necessary liability insurance coverage necessary, additional patient billing supports. A portion of costs associated with normal business function such as auditing, payroll, legal, telephone, postage, association memberships will be attributed to the BHCP based on acceptable accounting practices. These costs are based on current projections of expenses.

15	Ratio of RN and Clinical Care Manager (RN) to Assigned and Engaged Enrollees	1 : 235	*Estimated number of Assigned and Engaged Enrollees at the end of BP1 divided by total FTEs of (RN+RN Clinical Care Managers)*
16	Ratio of Care Coordinator Supervision to Care Coordinators	1 : 8	*Total Care Coordinator FTEs divided by Total Care Coordination Supervision FTEs*

Please describe which Program staff listed in lines 2 through 8 above directly supervise Care Coordinator staff: The Supervisor Team Leader will directly supervise the Care Coordinators.

7.3 Initial DSRIP Plan

A. Executive Summary

Describe five year business plan for implementing the CP program

Community Counseling of Bristol County (CCBC) is pleased to submit this Request for Response to MassHealth to become a Behavioral Health Community Partner (BH CP). CCBC is applying as an individual provider and seeks to serve Enrollees in the areas of Attleboro, Brockton and Taunton in the Southeast Region. Our projected volume will be 2,432 enrollees.

CCBC is well positioned to serve MassHealth members in these areas who present with Serious Mental Illness, Substance Use Disorders, have complex co-occurring medical conditions, and have been affected by or at risk of losing access to health care due to a host of social determinants.

Our agency has a long history of providing service to these communities since 1970: We are the largest provider of outpatient behavioral health services in these communities. We serve the most DMH clients in our PACT and CBFS programs in Attleboro, Brockton and Taunton. CCBC is the Community Service Agency (CSA) serving children with Severe Emotional Disturbances and their families in the Taunton/Attleboro area. Our Community Support Program (CSP) works with primary care providers, hospital Emergency Departments and Inpatient psychiatric units in these areas and across the Southeast. CCBC is able to engage 75% of the referrals we receive, a key competency for the Behavioral Health Community Partners.

These services are complemented by a wide range of other social services provided by CCBC, including Emergency Services, partial hospital and day treatment, HIV Services, specialty housing, Elder Mobile Outreach, and an active community presence on initiatives related to health and wellness, prevention of opioid overdoses, and suicide prevention.

The agency's capacity to perform as a BH CP is also enhanced by our close working relationship with Steward Health Care in five ICB contracts that include care coordination activities that resemble much of what is required in this RFR.

Our five-year business plan under this model will start upon notification of award. During our preparation period, we will design and install the care management module and recruit key staff, including enough Care Coordinators to begin activities with 640 referrals on June 1, 2018.

We view program years one and two as a time to implement the program fully, establish working relationships with the ACOs in these areas, primarily Steward, BMC BACO, BMC-Signature, and the Community Care Collaborative, while developing an alignment with these stakeholders and community providers to understand the population identified by MassHealth.

Year three will be a year to implement targeted population health interventions based on the strengthened alignment that includes population health analysis to address gaps in care among all of the stakeholders. In years four and five CCBC envisions consolidation of the program model and a transition to shared savings and shared risk with the ACOs and MCOs as the value of the BH CP is identified.

Within this plan, we recognize the many challenges, including engaging persons who have not yet reached the stage of change where they will accept help, or who only intermittently touch behavioral health services. We have built the culture of the agency to be responsive to referral sources, individual clients, and other providers to be of service when requested. CCBC will be ready to stand up as the BH CP on day 1 with a skilled, trained, and competent workforce backed by an agency with a strong reputation in these communities.

Another challenge is the perception of behavioral health as a second-class health care diagnosis, along with the providers who deliver the services. CCBC has been addressing this obstacle through our strengthening partnership with Steward Health Care, our collaboration with Brockton Neighborhood Health Center as a supporter of our program in Brockton, and our continuing relationship with Greater New Bedford Community Health Center.

The longer-term challenge for this program is to align the stakeholders (MassHealth, MCOs, MBHP, ACOs, and providers) towards a common understanding of the population in terms of gaps in care and outcomes that can be achieved; a common perspective on how to drive care towards efficiencies in service delivery and improved management of the care; and alignment of payment methodologies to reward stakeholders less for volume and more for outcomes. This is a long-term goal. If common methods of profiling the population's patterns of care, service utilization, and formula for Total Cost of Care are developed by Year 3, we will be prepared for assuming some type of risk with the ACO partners in graduated levels in years 4, 5 and beyond.

CCBC will address the workforce shortage in behavioral health care by drawing from our staff of CSP workers to become Care Coordinators. We expect to add between 300 and 450 more Enrollees each quarter to reach our full capacity at the end of year 2. Our DSRIP funding will allow for hiring, training and orienting these staff over the course of four months prior to implementation, allow for sufficient investment in our Care Management module, and related operational costs.

We recognize the challenges of recruiting up to 74 Care Coordinators that a fully implemented program will entail as well as the technological challenges of starting up a new Electronic Care Management module that can improve communication with the ACOs. However, we are gaining invaluable experience in our current project with Steward Health ACO Pilot, our CSP program, and our growing community presence in prevention, education, housing support and outreach activities in these communities.

These are some of the challenges and opportunities of "Incremental Care" as described by Atwul Gawande that will become more of a focus of health care delivery, especially for Medicaid populations and especially for persons who are affected by social determinants of health and also have the complex, co-occurring conditions described by MassHealth in this RFR. CCBC is well positioned to address these challenges and build strong partnerships with ACOs, MCOs and other providers to chart a path to improved outcomes and reduced total cost of care.

B. Supporting Populations and Community Engagement

1. For each Service Area describe connections to the community, including current/planned collaborations/partnerships with community-based organizations, advocacy groups, BH service providers, housing/shelter providers, and social service organizations in order to support the focus population.

Taunton and Attleboro: CCBC has been delivering community-based mental health and substance use disorder services in the Taunton-Attleboro Service Areas for over 45 years. CCBC's service array has expanded to address the homeless population, veterans, persons with HIV, the elderly, and prevention and education programs over the past 20 years. Our connections to these communities are broad and deep and will continue to grow as a BH CP. Below is a list of the key collaborations that will be integrated with the BH CP care coordination activities:

- Greater Bristol County/Attleboro/Taunton Coalition to End Homelessness. In addition to providing a number of housing programs for Veteran's, homeless and those with substance use disorders, CCBC serves as lead agency for the region's HUD grant that brings close to $1 million to the area each year. EEs will have access to these resources to secure stable housing. The Taunton and Attleboro Housing Authorities are active members providing valuable resources available to EEs.
- Taunton Mayor's Office. CCBC participates in the Mayor's Opiate and Substance Use Task Force focusing on the reduction of opioid overdoses and participates in a host of community education and prevention programs that will be a resource for the BH CP population with substance use disorders or at risk of disorders.
- The regional Prevention and Wellness Task Force (CHNA 24) convened by DPH that covers area wide health, prevention and community public health programs. CCBC staff has been active with this group for 25 years.
- Attleboro YMCA and the Old Colony YMCA. CCBC works with the Attleboro and Taunton YMCA's as the site of health education, wellness activities and group exercises for clients in the CBFS and PACT programs incorporating the In-Shape Evidence-based practice.
- Community Crisis Intervention Team. Over the past 10 years in partnership with the Taunton Police Department, CCBC has trained 600 police officers, with a major focus on Attleboro and Taunton police, probation officers and other human service professionals in understanding serious mental illness and effective crisis intervention methods. Program goals include fostering safe/productive encounters between those with SMI and law enforcement and diverting those with SMI from the criminal justice system when appropriate.
- Elder Mobile Outreach Team (EMOT). With support from Bristol Elder Services, the local Aging Services Access Point, for the past 10 years CCBC has operated EMOT, which offers a collaborative case model of mobile treatment services through eight local Council's on Aging and the regional ASAP.
- Suicide Prevention Services. CCBC is an active member of the Bristol County Regional Coalition for Suicide Prevention and coordinates the DPH grant for Southeastern MA.
- Safe Neighborhood Initiative (SNI). CCBC is a member of the SNI which is comprised of public safety, probation, community development, and human services personnel addressing a broad range of public safety concerns for the City of Taunton.
- MassHealth, Taunton and Brockton office. CCBC is a Designated Certified Application Counselor Organization in Taunton, Attleboro, and Brockton on behalf of the Health Connector.

- National Alliance Mental Illness. CCBC has a longstanding relationship with NAMI as a training resource and local partner.
- Transformation Center. CCBC has utilized the consultation services of the Transformation Center with respect to its development of the role of peer specialists in service delivery.

Brockton:

- Brockton Neighborhood Health Center. this CHC, which is one the founding members of the Community Care Collaborative, will be a partner with CCBC for the BH CP clients receiving primary care services at their CHC.
- Cape Verdean Social Club. The CCBC CSP program has worked with this organization when members are referred to help with access to health care services. The BH CP will continue that relationship and engage the members of the social club as natural community supports for EEs who identify the CVSC as a resource.
- Haitian Social Club. The CCBC CSP program has worked with this organization when members are referred to help with access to health care services. The BH CP will continue that relationship and engage the members of the social club as natural community supports.
- Good Samaritan Hospital. The Hospital first approached CCBC six years ago to assist with over utilization of the ED through its Community Support Program.
- Mainspring Homeless Shelter. The BH CP will initiate monthly meetings on EEs who are homeless and living at the shelter as a renewal to similar case review meetings conducted by the CCBC CSP programs in 2010-2015.
- Brockton Police. CCBC will provide Crisis Intervention Training (CIT) to the police to help intervene in psychiatric emergencies under the auspices of the ESP.

2. Describe how CCBC will grow its connections to the community in Service Areas.

CCBC's currently operating CSP and PACT programs provide a strong presence in Brockton, and a solid reputation and foundation of expertise that will allow the BH CP to build customized models of care coordination, health and wellness activities, seamless transitions of care from hospital ED's, and inpatient med-surgical units. The connections will also grow as CCBC implements the ESP program in Brockton, replacing the state-operated program.

To promote a strength-based, recovery-oriented approach to serving Engaged Enrollees CCBC's BH CP will recruit Certified Peer Specialists who have been trained by the Transformation Center as well as Recovery Coaches as potential BH CP staff. The BH CP will also develop collaborations with the RLC's and the RSC's to train members of the ACO and BH CP Care Teams on recovery principles and to encourages EE's to utilize the supports of these services.

3. Describe its plans to ensure staff is informed of community resources over the course of the Contract Term.

CCBC's has already established a number of programs and community partnerships in Taunton, Attleboro and across Bristol County to ensure that all staff, including newly hired BH CP staff, are aware of community resources in the Taunton and Attleboro areas. In Brockton, the ESP will have nearly 12 months of experience by the time of the start of the BH CP program in providing much needed interventions to vulnerable populations many of whom will be identified as potential Enrollees for the BH CP. Combined with the CSP, CCBC will have a host of community resources that are updated through the work of CSP and ESP programs to ensure their effectiveness.

C. Community Partner Supports and Activities

1. Outreach and Active Engagement

Outreach: CCBC understands the challenges of outreach and engagement of persons with severe and persistent mental illnesses and persons with substance use disorders in community settings. We have a proven track record with this population, linking 2,500 members annually through our Community Support Program (CSP) to needed services for primary care, outpatient and diversionary behavioral health services along with community based supports for housing, shelter, basic needs, training and employment. CCBC will adopt the best practices of the Community Support Program by using multiple methods of contacting the client, including at their home, in the hospital emergency department, and through the ACO's provider network by using phone, email and texting as preferred by the Assigned Enrollee.

At the time of initial engagement, the CP staff will provide necessary information about the Community Partner program, the benefits, supports, and advocacy for the Assigned Enrollee should s/he decide to participate. The CP will also inform the Assigned Enrollee that they may opt out of the program at any time. As part of the initial conversation, the CP will also explain the Enrollee's right to privacy around disclosures of Protected Information and help the Enrollee choose which disclosures to allow.

Engagement: Assessing what concerns the Enrollee may have is critical in the initial period of engagement. Care Coordinators need to be empathic active listeners in order to help the Enrollee feel comfortable to share their personal needs. Although the BH CP program will focus on the care coordination of a host of healthcare and social services, the Enrollee may also be dealing with other areas that are causing stress that may be a barrier to engagement in services.

However, also at this stage, CP's role is one of collaboration with referring agency, providers, and the client to assure access to coordinated services including diagnostic, pharmacological, emergency, recovery, and other treatment and community services. Successful early engagement is vital to reversing the path towards a destructive loss of functioning, increased incidence of substance use or relapses, return to homelessness, or involvement with criminal justice.

a – b Planned Strategies of Outreach and Engagement.

One successful strategy is to respond to a client request or a request from a referral source such as a PCP or ED personnel as quickly as possible. CCBC practices this strategy engagement by its established practices of Centralized Intake and Open Access models which are practiced in Community Support Program (CSP), Community Service Agency, and Outpatient treatment programs with great success. CCBC will incorporate those models into the BH CP program. In addition to timely appointments with the Enrollee, the CP worker will deploy another strategy: *to be assertive with the client by using statements such as "When we meet, what do you want to discuss about your needs and goals?" Or, "At your meeting next week, we will discuss how the program works and ask you about your dreams, preferences and cultural affiliations."* This approach contributes to the 75% engagement rate in the CSP program in the past five years.

A second successful strategy of engagement in the first meetings with the Enrollee is to establish their needs, wants, and dreams that are based on their strengths and preferences. This approach is an evidence base in the Wraparound Model of Care. Other areas of exploration of the enrollee's

strengths include natural community supports in their social circles, such as close relatives and local clergy.

A third strategy maintains the Enrollee's involvement in providing small *"wins"* for the Enrollee that is easily achievable at the outset, especially for those who are homeless. *"Small wins"* include helping the Enrollee obtain food stamps and transportation vouchers. These successes act as a bridge to larger goals, such as permanent housing, linkage to their assigned PCP, and appointments for behavioral health treatment.

From operating a CSP that is successful in engaging members who are referred from other providers, several procedures have produced very positive results in outreach and engagement across the agency:

- Using text messaging to hospital ED staff provides direct and timely information and allows the hospital employee to respond when time becomes available;
- Planned strategies for outreaching to and engaging with Assigned Enrollees with Substance Use Disorders, such as assigning Recovery Coaches to support the client at the initial stage of engagement; and applying the principles of *"Seeking Safety,"* a trauma-informed treatment approach that focuses on the development of safe coping behaviors for veterans and others who have substance use disorders and have experienced trauma.
- CCBC is the only provider in the Southeast region who has been trained in the evidence based practice of Illness, Management and Recovery (IMR) in the work with the Community-Based Flexible Supports (CBFS) program. CCBC has experience in outreaching and engaging Assigned Enrollees through their contracts with DPH-BSAS for Section 35 and BSAS Supported Case Management programs. BH CP staff will be trained in the Motivational Interviewing (MI) evidence-based practice for engaging persons with substance use disorders as described in the SAMHSA Treatment Improvement Protocols (TIP) #42. The key strategies of MI to be incorporated are: Express Empathy, Develop Discrepancy, Roll with Resistance, and Support Self-Efficacy (from SAMHSA TIP #42, p.114). In other words, work in partnership with Assigned Enrollees to begin to develop their path to recovery on their own terms at a pace they are comfortable with, using the support of staff to explore their potential to make lasting change.
- Three CCBC staff have recently been ordained as Motivational Interviewers and are certified to train other staff in this evidence-based practice that is especially effective for persons with SMI, substance use disorders and co-occurring substance use and mental health disorders.

c. Planned process to obtain/document AE's agreement to participate in CP Supports through a participation form:

The BH CP program will emulate the CCBC CSP program's successful model of engagement of members:

- Outreach via telephone the Enrollee and Enrollee-identified supports;
- Timely response to a request from referral sources or primary contacts for the Assigned Enrollees via a centralized phone intake;
- Timely follow through to a face-to-face within 30 minutes of request during business hours;
- Explaining the BH CP program to the client in context with their identified needs, hopes, dreams and goals and explaining the process of developing a plan to reach the goals that includes signing a participation form and releases of information to get information from

other providers and to involve them in the planning – all with the Assigned Enrollee's written consent.

- Assigning a Care Manager at the completion of the first meeting and establishing an appointment for the next meeting to review goals established;
- Obtaining written consents and other points of contact – family, relatives, friends and natural community supports that provide an alternative means of contacting the client;
- Including the signed permission and initial information in the AE's record.

2. Comprehensive Assessment and Person-Centered Treatment Planning
Include attachment A (section 2.3.B) of Assessment Tool(s)
Describe plans to satisfy Comprehensive Assessment and Person-Centered Treatment Planning requirements using evidence-based or emerging practices.

CCBC understands that a complete and thorough Comprehensive Assessment is the foundation to effective intervention with the Enrollee in the BH CP program. CCBC's experience with this population in the CBFS, PACT, Outpatient and CSP programs has validated this approach in developing feasible and effective client-centered, strength-based and recovery-oriented interventions.

a. Process for conducting the Comprehensive Assessment (CA):

The assigned Care Coordinator schedules a face-to-face meeting with the Assigned Enrollee to: identify Assigned Enrollee's needs, describe process, confirm their willingness to participate, explain the rationale for signatures to participate, explain the rationale for need to gather information from other providers and obtain signed consents for release of information. During this process, the Care Coordinator will explain the steps to completing the CA and will offer help with the Assigned Enrollee's immediate needs as steps to completing CA. Before setting up the next meeting to continue the assessment if needed, the CP staff person will "check in" with the Assigned Enrollee to see if this process has met his/her needs and ask or any suggestions to make it better. This "check-in" is an emerging best practice in the CCBC Program for Assertive Community Treatment (PACT) and CBFS programs.

At each subsequent meeting, the Care Coordinator will explore goals, level of functioning, family, natural supports and review information that has been obtained from other sources such as PCP's and behavioral health providers. Once all information has been obtained and reviewed by the Care Coordinator and registered nurse as needed, the completed assessment will be reviewed with the Enrollee. At the end of each meeting the Care Coordinator will again complete the "check in" process described above. During these meetings, the staff person will deploy the Guiding Principles of Motivational Interviewing to support continued engagement of the member: Express Empathy, Develop Discrepancy, Roll with Resistance, and Support Self-Efficacy.

The BH CP staff will all participate in the gathering of information by following up with other providers, scheduling appointments and consulting with registered nurses on the medical information. CCBC believes that engagement with the Assigned Enrollee will be most effective when the Enrollee works with one consistent Care Coordinator during this process. This practice addresses a common frustration from members that they have to repeat their story to many different parties in order to get service.

CCBC's Electronic Health Record for this program will contain fields for 21 domains contained in Attachment A. As needed, the BH CP nurse will review any information on medications, treatment for chronic medical conditions and potential drug interactions and enter any additional findings into the field on Medical History and Medications. S/he will consult with a CCBC psychiatrist as needed. In the final step, the Clinical Care Manager will review this assessment and sign off on its completion within three calendar months of the Assigned Enrollee's assignment to the BH CP program and make the assessment available to members of the Assigned Enrollee's Care Team, ACO and MCO, state agency representatives and other case managers as consented to by the Assigned Enrollee.

a. The process for conducting Person-Centered Treatment Plans shall include:

1) Planned processes for developing the Person-Centered Treatment Plan.

CCBC's approach to developing the Person-Centered Treatment Plan will be built upon the Best Practices the agency uses in their PACT program for Adults and the Wraparound Model of Care for Children in their Community Services Agency (CSA). The plan will be developed during the course of the meetings between the Enrollee and the Care Coordinator. S/he will begin with the Assigned Enrollee's original reason for referral and become more informed by their answers to questions about the Assigned Enrollee's dreams, needs, strengths, and preferences that will help to clarify their personal goals. The Assigned Enrollee's care goals will emerge from the sum of information gathered from the assessment of their treatment history, level of functioning, medical history, and history of mental health and substance use disorder treatment, including medications. The Care Coordinator will frame the plan within a recovery-oriented, strength-based approach to the Assigned Enrollee, his/her family and other supports they identify and include acknowledgement of the barriers that contributed to housing instability , food insecurity, and social isolation and how they affect health outcomes. The Recovery Support Navigator and/or Certified Peer Specialist will assist the Assigned Enrollee in developing an individualized plan to address their recovery needs. The CC will ask the Assigned Enrollee for permission to get input into the Care Plan from other involved parties such as the PCP, Specialty Healthcare provider, and representatives from other behavioral health, social service and community organizations and case managers whom the Assigned Enrollee has identified.

Once the plan is completed, the CC will review the content with the Clinical Care Manager for approval and send to the PCP and/or ACO representative for his/her sign-off before assembling the full team to review and plan for next steps.

CCBC has staff that are trained facilitators in the Person-Centered Planning, a DMH-approved model for development of a care plan that will be deployed in the BH CP.

2) Planned processes for documenting the Person-Centered Treatment Plan.

CCBC will establish a Person-Centered Treatment Plan (PCTP) that will be customized for the BH CP program. It will incorporate all of the elements of the strength-based, recovery-oriented elements of CCBC's plan for CBFS, PACT, CSA and Outpatient clients, and will have fields that can measure client progress and outcomes. These models are Evidence-Based Practices in the Children's Behavioral Health and Adult Mental Health service delivery arenas.

The treatment plan will include fields for approval from the Assigned Enrollee; his/her identified supports, PCP, medical specialty provider, outpatient behavioral health provider, Care Coordinator, CP Clinical Care Manager and ACO liaison.

A Care Coordinator will be in charge of completing the CA and PCTP within three calendar months of assignment. CCBC's design will assign one individual to the AE, so that s/he can avoid the problem of discussing intimate details of his/her personal medical and behavioral health history to more than one person. CCBC has found that this policy greatly increases the percentage of CSP referrals that engage with the program and stay involved for the duration of the service.

The individualized PCTP will include: types, frequency and duration of services, how they will be integrated and coordinated among health care providers and how Recovery Support Navigators, Certified Peer Specialists and the Enrollee's natural community supports can enhance service delivery. Short-term goals that can provide "small wins" in the CP process as well as long term goals related to improved health outcomes, stabilization of chronic conditions and overcoming barriers imposed by social determinants of health; a crisis plan based on the Assigned Enrollee's self-identified triggers for relapse or mental health decompensation and a contact list of all involved parties with their preferred method of contact (email, text message, phone call), including the PCP and primary care giver if one is identified.

For a sample of Assigned Enrollee's, an independent member of CCBC's BH CP, a designated "Treatment Plan Facilitator," will call the Assigned Enrollee directly to ask if s/he has thought of any other need that s/he may have been reluctant to identify during the planning that the Assigned Enrollee would like to be included in the Care Plan. This emerging best practice has become standard procedure in CCBC's PACT program in order to ensure active consumer participation and ownership of their care. Any additional needs or goals that the AE identifies will be added to the Person-Centered Treatment Plan.

CCBC recognizes that some Assigned Enrollee's will have special needs and will have the capacity to translate the treatment plan into the preferred language of the Assigned Enrollee, transcribe into audio format to increase their understanding of the plans, and provide an interpreter at the meeting to communicate the content in the preferred language of the Assigned Enrollee.

3) Planned processes for updating the Person-Centered Treatment Plan.

At the conclusion of the initial PCTP meeting, the parties will agree on a follow up time frame as approved by the Assigned Enrollee. CCBC's BH CP specialized medical record will have an automated system of reminding the CP staff, PCP and Assigned Enrollee at the time that the plan needs to be updated. In routine cases, that review will be completed every 6 months. The review will include progress towards goals, reassessment of Enrollee's health status, reassessment of goals, monitoring of compliance with the PCTP, updating any new recommendations and updating the PCTP as needed based on the reassessment. The updated will be approved by the Enrollee, PCP, or designee, outpatient behavioral health provider, and any specialty providers as identified by the Enrollee.

The plan will be updated within 30 days of any inpatient admission, ED episode or major change in the Enrollee's living circumstances involving other family members, housing status, or legal involvement. The CC will emphasize the goal of supporting the Enrollee in a "continuum of stability" across all domains of the PCTP and encourage the Enrollee, providers and supports identified by the Enrollee to contact the CC if they are concerned of increasing risk to the stability of the member in any facet of the Enrollee's life, especially including areas where social determinants to care present an emerging obstacle to achievement of goals in the PCTP.

The plan will also be updated with any change in the Enrollee's status related to a progressive disease, functional decline, or resolution of a problem in compliance with section 2.3.B.2.f 1-3.

4) Planned process for ensuring the AE and the AE's PCP or PCP Designee approve the Person-Centered Treatment Plan.

CCBC will work with the Assigned Enrollee's PCP and assigned ACO to develop the most efficient means of documenting approval of the PCTP. Of course, the Assigned Enrollee's approval is paramount and will occur ideally in the meeting where all parties meet to review the plan, its implementation, and follow up. Methods of PCP approval include secure email, secure transmission through the Mass HIway, and secure texting. CCBC's EHR vendor, eHana, will have a mechanism of sharing data in place at the start of the BH CP program to expedite such communications.

3. Care Coordination and Care Management

Describe plans to satisfy the CC/CM requirements using evidence-based practices.

a. How the Bidder will identify all stakeholders

CCBC will organize the Care Team in compliance with the contract requirements in Attachment A, Section 2.3.C. We will combine our successful experience operating CBFS, PACT, CSP and CSA programs to coordinate care for enrollees with ACOs, MCOs, other health care providers, and social service agencies in a broad Care Management framework for all Assigned Enrollees referred in the Brockton, Taunton, and Attleboro areas. CCBC will use a combination of evidence based and emerging practices to address the multiple needs of Enrollees who participate in the behavioral health community partner program.

The process of assembling the list of members of the Care Team begins with the first contact with the Enrollee referred for the BH CP program. The Care Coordinator begins the initial assessment by identifying the member's strengths and preferences that include providers and other individuals whom they trust and value to help them with medical care, behavioral health treatment and community supports. The Care Coordinator will follow the practice principles of Motivational Interviewing: Express Empathy, Develop Discrepancy, Roll with Resistance, and Support Self-Efficacy: During the course of the comprehensive assessment that follows the initial meeting, the Care Coordinator will explore the Enrollee's preferred providers who are involved with the Enrollee such as his/her PCP, any specialty medical providers who are treating chronic medical conditions such as COPD, their therapist and prescriber and other community supports in the community, including relatives and friends.

If a provider of Long Term Services and Supports (LTSS) or a need for LTSS is identified, the Care Coordinator will explore the service options with the Enrollee, offering at least two LTSS resources and helping the member to choose a provider and invite that member to participate on

the Care Coordination team. The Care Coordinator will document that the Enrollee was counseled on the options for at least two LTSS providers.

The Care Coordinator will review the list of individual stakeholders with the Enrollee to help select the members of the Care Team. With a focus on the recovery orientation, the Care Coordinator and Enrollee will then list the specific roles that each member of the team can play to support the Enrollee in the execution of the PCTP. For example, a neighbor or friend can participate to accompany the Enrollee to the PCP appointment. The Recovery Support Navigator can remind the Enrollee to attend self-help meetings for substance use disorders. The PCP can review the medications to ensure that there are no contraindications.

The Care Coordinator will reach out to the potential members of the team and identify their preferred means of participating on the team and the best way of communicating with the Enrollee and all of the members of the Care Team.

b. How the Bidder will exchange information with such stakeholders.

The means of exchanging the key information among members of the Care Team will be a key component of the success of the BH CP. Timely and accurate exchange of focused information of the Enrollee's progress, transitions in care from inpatient to community settings, newly identified needs, changes in mental health status, physical health and social determinants will contribute to developing coordinated and effective interventions to address the Enrollee's complex needs. CCBC recognizes that the success of such an information exchange will be successful only if the information is easily accessible, concise and useful to the members of the Care Team. A host of options will be used including individual and group text messages, Group Chat Apps, distribution of the Continuity of Care standardized document and secure emails. CCBC will devise a method of secure communication to team members using the Electronic Highway that is compatible with the systems of the other members of the team. Absent other interface, the Care Team will devise a secure email transmission process.

c. How will the Bidder identify and organize members of the Enrollee' care team.

The final selection of members of the Care Team will emerge as the CA is completed and the PCTP is developed to ensure the role of each member promotes a recovery orientation for the Enrollee. The Care Coordinator will review the potential members of the team and their role in supporting the Enrollee and ensure that the roles of the team are aligned to encourage and develop the Enrollee's strengths, and preferences, life goals and improvement of his/her health. The follow up with the members of the Care Team will include the PCTP, the role of each member, the preferred means of communication, and the scheduled dates for follow up.

d. How the Bidder will ensure effective ongoing communication across all stakeholders, including exchanging essential documentation.

The execution of the PCTP will rely on effective communication and essential information among the members of the team who are providing the direct face-to-face services. The Care Coordinator will make sure s/he informs members of the team when the plan is implemented. This exchange assures the parties that the PCTP is being followed as planned while also inviting feedback from the members. These exchanges will take place no less than monthly and will be shared via a reminder system in CCBC's EMR.

What is even more critical is the timely exchange of information when the member's medical or behavioral health status changes, when there is a significant change in the Enrollee's life circumstance or when there is a transition of care following an inpatient admission. CCBC will establish an "Alert" communication to direct the members of the team to a secure portal such as the Continuity of Care document process via the Mass HIway, where clinical information – admission to inpatient or ED, assessment of the crisis, discharge summary and test results, revised list of prescribed medications, for example, can be shared and focused feedback from the members of the team can be solicited to strengthen the PCTP.

These exchanges will be informed by the daily triage meetings that the BH CP team will convene to review members who are at risk or whose status has recently changed. The Clinical Care Manager will work with the Care Coordinator to make sure that these updates are shared with the members of the Enrollee's Care team.

For members who are at risk of psychiatric decompensation based on prior history, the Care Coordinator will also develop a Wellness Recovery Action Plan that includes concrete steps developed by and with the Enrollee to avert a psychiatric crisis and restore the Enrollee to stability. The Care Coordinator will update the WRAP as needed following any psychiatric emergencies.

4. **Care Transitions**
   Describe plans to satisfy Care Transitions requirements using evidence-based practices, including steps to ensure EE's stability/satisfaction following transition in care.

CCBC has gained valuable experience in facilitating timely and effective Care Transitions with clients referred from their CBFS, PACT, Community Support Program (CSP) and children and families involved with CCBC's Community Services Agency (CSA). The CSP has built strong working relationships with Emergency Department staff in all four general hospitals in the Brockton, Attleboro, and Taunton areas that will mature with the implementation of the ESP in May, 2017. CCBC has assigned a dedicated onsite liaison to the discharge planning staff at several psychiatric inpatient and detox facilities in Southeastern Massachusetts. This experience provides a strong foundation for the BH CP program and will ensure that effective transitions occur for the Engaged Enrollees served by CCBC from the outset.

Planning for transitions of care from an inpatient setting begins with the Enrollee's inpatient admission. The CCBC BH CP will be able to identify admissions to inpatient psychiatric unit through reports from the CCBC ESP (that covers Brockton, Taunton and Attleboro) to the BH CP. Following the admission, the Enrollee's status will be reviewed at the daily triage meeting and the Care Coordinator/Hospital Liaison for the facility will follow up with the inpatient contact at the hospital. CCBC will expand the model from the existing relationships with Arbour Fuller Hospital in Attleboro, Morton Hospital ED, and Good Samaritan Hospital ED to ensure that a BH CP worker is available at other hospitals for transition planning. The extension of this activity at the outset will be of immediate value to the ACOs.

The lessons learned from these relationships will be incorporated into the Care Transition activities of the BH CP that meet all of the requirements of Attachment A, Section 2.3.D:

- Successful Care Transitions rely on client engagement based on the strengths and recovery-oriented treatment plan develop with the Enrollee.
- Established methods of communication build on continued relationships and timely follow up with the Enrollee within three days of discharge.
- The trust with an inpatient program grows with a staff person from the BH CP designated as the transition of care contact for each hospital. This designated individual aligns with the Health Home licensing standards in Rhode Island, an emerging best practice, where the required staffing model includes a Hospital Liaison.
- Timely sharing of information by the community-based provider with the inpatient provider becomes a foundation for timely transitions of care.

CCBC will enhance the lessons learned by incorporating the use of the Continuity of Care document that is part of the Mass HIway data exchange into the BH CP. The program will also have improved communication with the Steward Health system that operates Good Samaritan and Morton Hospitals as part of CCBC's role as an ESP in the Brockton and Taunton-Attleboro areas and five separate ICB grants with Steward, the last two with Steward as a pilot ACO. The BH CP will assign a hospital liaison to the medical surgical units at these hospitals to meet the requirements of Attachment A, Section 2.3.D. The assigned liaison will be able to participate in the discharge planning from the Medical-Surgical units at these two hospitals.

In order to meet the other requirements of Attachment A, Section 2.3.D., the Care Coordinator will take the following steps following the admission:

- Inform the members of the Care Team of the admission, including the trigger for the admission;
- Work with the inpatient providers to identify their intervention and preliminary discharge plan;
- Send a follow up a communication to the members of the Care Team identifying needs for the transition of care as it affects the team members including appointments following discharge;
- Attend the discharge planning meeting;
- Communicate the transition plan to the members of the team and the follow up appointments, including a face-to-face meeting with the Enrollee within three days of discharge;
- Ensure that the Enrollee has access to needed community resources at the time of discharge; and,
- Work with the Enrollee to revise the PCTP as informed by the inpatient admission and discharge plan

The Care Coordinator will also act as the liaison to the ACO (already established if the Enrollee is at a Steward facility, including Steward inpatient psychiatric units at Norwood Hospital Carney Hospital, St. Elizabeth's Hospital, or Holy Family Hospital. CCBC will work with Steward on adapting the "Steward Transitions Follow up Assessment" form for BH CP members who transition from inpatient or ED utilization back to community settings.

The Care Coordinator will prepare a brief summary of the inpatient episode that will be distributed via the Mass HIway or by secure email to the members of the team. The summary will include:

- Reason for admission including precipitant;
- Stabilization interventions during the admission, including any new findings from the inpatient assessment;
- Plans for discharge and revised roles for members of the Care Team;
- Updates in medications, including verification of a review by the RN on the BH CP team;
- Schedule for appointments at discharge and links to flexible and natural community supports;
- Enrollee strengths and resources identified to enhance stability at discharge;
- Updates in the crisis plan section of the EE's PCTP to prevent future escalations and admissions.

The BH CP will assess the effectiveness of the Enrollee's adherence weekly in the first six weeks after discharge, then monthly if the Enrollee is accessing supports, demonstrating adherence, and showing no negative side effects or complications. Any issues will be brought to the community prescribers and an Ad Hoc Care Team meeting will be called to address the preferences of the Enrollee around any changes.

5. **Medication Reconciliation**
   Describe plans to satisfy the MR requirements using evidence-based practices.

CCBC views strong working relationships with the ACOs as a key fundamental to meeting the contract requirements in 2.3A. CCBC's working relationship with the Steward Health System's ACO already will include methods of communicating to the BH CP when an Enrollee is discharged from one of Steward's inpatient psychiatric units, inpatient medical-surgical units or one of Stewards Emergency Departments. Working closely with Steward, CCBC will adapt the medical record to allow for secure electronic communication from the Steward EHR to CCBC BH CP on the medications prescribed at discharge as well as the prescriber who will follow up on the medications: the Steward PCP, the outpatient psychiatrist, or the specialty medical provider in the Steward system.

CCBC will seek to establish the degree of electronic exchange with the BMC, BMC-Southcoast and Community Care Collaborative ACOs for members of their ACO who are hospitalized in their facilities.

CCBC recognizes that supporting the Enrollee's adherence with the prescribed medications can be a challenge. Barriers to medication adherence are complex and varied; solutions to improve adherence must be multifaceted. The CCBC CBFS and PACT programs have developed best practices to ensure compliance that will be adapted for the Enrollees in the BH CP. They include:

- working with providers to simplify complex dosing and medication regimes,
- clear directions to the Enrollee on the purpose of the medications;
- support for the Enrollee to follow the regimen;
- connecting enrollees with full service pharmacies;
- coordinating simplified medication management packaging with organized medications delivered each month;

- associating enjoyable activities with the medications using techniques of CBT, DBT, and person-centered, recovery-oriented engagements, and,
- aligning the practices of the MAP with the reconciliation at discharge.

The CCBC BH CP will establish the following program standards to meet the requirements of Attachment A, Section 2.3.E.:

- As part of the follow up within three days of discharge, the Care Coordinator will verify that the medications received at the time of discharge aligned with the discharge summary and the prescriptions have been filled. The clinical nurse of the BH CP will be available for any back-up consultation if needed
- The discussion with the Enrollee will also include a review of the methods of administration of the medications – amount, time of day of administration and other conditions such as with or without food – to make sure any questions are addressed.
- The BH CP Nurse will address any contraindications with the prescribers by the BH CP Clinical Nurse and addressing the issues with the Enrollee
- Developing a follow up plan to support the Enrollee's adherence to the regimen with natural community supports, home health providers, and the Enrollee's preference for communication with the Care Coordinator (via text or Chat App, for example) to maintain communication in a manner preferred by the Enrollee
- Communicating with CBFS providers who are using a Medication Assistance Program (MAP) model to complete the required forms from the Enrollee's PCP or discharging prescriber.

6. Health and Wellness Coaching

Describe plans to satisfy Health and Wellness coaching requirements using evidence-based practices.

a. Health and wellness education, coaching and health promotion programs the Bidder intends to utilize or follow

CCBC recognizes the shortened life expectancy of persons with SPMI who will be among the populations participating in the BH CP. Co-Occurring chronic medical conditions such as COPD, Diabetes and Obesity are common among clients in CCBC's CBFS, PACT and outpatient programs. Psychopharmacological treatments often add to the burden of these conditions. Smoking, poor diet and infrequent exercise are part of the lifestyles that exacerbate these conditions and increase risk.

The BH CP will provide a wide range of health and wellness education, health promotion and client activities that address Enrollees' chronic health conditions and lifestyles. The BH CP will incorporate Enrollees into two Evidence-Based Practices that CCBC already operates:

- The evidence-based "InSHAPE" program that introduces Health mentoring and coaching to clients in the DMH-contracted CBFS program. The In-Shape program is a nationwide study organized by the Giesling School at Dartmouth's School of Medicine. Enrollees will have access to Health Mentors who can work with the PCP to customize an assessment as that can identify health and wellness goals as part of the Enrollee's overall Person Centered integrated plan of care. The BH CP will identify barriers and opportunities to improve health and wellness, work with the Enrollee to identify coaching opportunities and develop a plan for

participation in the InSHAPE program. InSHAPE participation focuses on wellness group opportunities and peer-run programs that will include mall walks, use of the local YMCA's in Brockton, Taunton and Attleboro for a range of activities based on individualized needs, sporting groups (basketball leagues, softball groups) healthy cooking groups, and on-site nutrition education including seasonal visits to the Brockton, Taunton and Attleboro Farmer's Markets which specialize in locally grown, fresh fruit and vegetables.

- The evidence-based Illness Management and Recovery program, currently in operation at CCBC, will use the stress vulnerability model to educate the BH CP Enrollees on the impact of exercise, nutrition, and sleep on both intensity and frequency of symptoms. Poor nutrition, sedate activity, and poor sleep hygiene are identified as barriers to reaching personal goals. Through Motivational Interviewing techniques and psychoeducation, EE's are provided with support, information and tools to develop and implement wellness plans and make incremental changes to allow for improved physical and psychiatric health. Through the encouragement and support of peers and trained staff, EE's implement and progress through self-defined wellness goals.

The BH CP staff will engage the Enrollees in these Health and Wellness activities using a variety of different methods: group education sessions, individual coaching sessions, "learn by doing" activities involving cooking, shopping and gardening, and exercising, viewing videos, and presentation of written materials.

- The Enrollees will also have access to the nutritional counseling and wellness programs at area hospitals – Morton in Taunton, Good Samaritan in Brockton, and Brockton Hospital in Brockton – and similar activities at the Brockton Neighborhood Health Center, a provider who has agreed to host activities involving their clients enrolled in the BH CP. These programs include smoking cessation and weight loss.

- CCBC will include the BH CP Enrollees in the supplemental SNAP purchasing program that incentivizes purchases at participating local Farmer's markets in Brockton, Taunton and Attleboro where EEs can purchase fresh fruits and vegetables, and support cooking and eating habits. Access to Farmers Markets is important in Brockton and Taunton, which have been designated as Food Deserts by DPH.

CCBC will set up new programs for the BH CP Enrollee that follow the fidelity standards of the existing In-Shape and IMR group activities where the peer to peer engagement has proven to be a more sustaining and successful tool in engaging other clients.

The CCBC BH CP will train the RSNs, CPSs and Care Coordinators in health and wellness coaching the Enrollees as distinct from counseling, therapy or case management.

b. Methods for ensuring EE's goals for the health and wellness programs are recorded and tracked in EE's Person-Centered Treatment Plan.

The individualized needs of each Enrollee for health and wellness coaching will be identified in the PCTP. The Care Coordinator and Clinical Coordinator will match the psychiatric symptoms to their lifestyle, including nutritional habits, use of leisure time and approach towards exercise.

The Coach will work with him/her to select a set of health and wellness goals that are based on their preferences, lifestyle, learning style and community supports.

The PCTP includes a section that addresses healthy activity, nutrition awareness, wellness promotion, and use of leisure time. Care Coordinators will be trained to link any recommendations in the PCTP to the Engaged Enrollee's identified preferences in from the different program option listed above.

During the quarterly review of the Enrollee's participation in the program, the Care Coordinator will consult with them and his/her health and wellness Coach to assess his/her participation in the health and wellness activities. The Care team will take notice of accomplishments and revise the plan if necessary to accommodate the Enrollee's changing needs and provide additional support where needed. The CC will also work with the Enrollee's PCP to reinforce the EE's progress and success. CCBC has found that the PCP's are active participants in the planning, design and delivery of health and wellness programs for the current population of In-Shape and IMR participants.

The coaching activities will be provided by Care Coordinators, Recovery Support Navigators and Peer Specialists as developed and identified in the comprehensive assessment where the natural supports, lifestyle, cultural identify with food and lifestyle of the Engaged Enrollee will be considered in an individualized plan for health and wellness.

7. **Connection to Community and Social Services**
    a. **Plans to evaluate EEs for social service needs.**

CCBC's mission and vision are directly connected to addressing the social service needs of its clients and connecting them to such resources as part of the client's plan of care. As a community agency, CCBC has evolved its mission to address broader community needs related to homelessness, HIV and opiate abuse among others. Through this community participation and leadership, CCBC has earned a strong reputation as a community leader by initiating coalitions to address homelessness, opioid overdoses, and the spread of HIV. By seeking funding and implementing programs in the area of affordable housing, as one example, CCBC earned an award from the Association of Behavioral Health Providers (ABH) as a best practice provider. The inclusion of evaluation of the members of the BH CP for social service needs is integral to CCBC's entire program and will continue with the BH CP.

It is standard practice in all of CCBC's clinical and social service programs to assess the client's social service needs through a person-centered focus. The assessment will explore the Engaged Enrollee's (EE's) connections to his/her community, including identified culture, religion and family, client and family safety, goals for independence, including employment, education and financial independence, and access to natural community supports. CCBC recognizes the importance of social determinants in improving a member's mental and physical health and from its perspective as a community mental health provider has undertaken a substantial role to develop resources to address other community issues such as affordable housing, substance use disorder prevention services, and elder outreach. Through these efforts CCBC managers and staff are very visible in the community as participants in coalitions, task forces and advisory groups at the city, county and regional level.

CCBC's assessment tool for BH CP will address the bio-psychosocial factors in the client and his/her family including social determinants such as cultural background, lack of secure and safe housing, domestic violence, involvement with the criminal justice system. The presence of any one of these can be barriers to accessing and receiving adequate health care and can interfere with a client's recovery from mental health and substance use disorders. CCBC's assessment will identify barriers and aids in the EE's social environment, especially natural community supports.

b. How CCBC will ensure CCs are familiar with a wide breadth of social services and supports, and providers of these supports.

A key element of the orientation for a new CCBC employee is exposure to the full range of CCBC programs and local affiliations. The BH CP staff will be part of all staff meetings and managers' meetings where these programs are discussed, data shared about their performance, and improvements in operation are developed. The BH CP program will provide another perspective on how to connect CCBC clients to these resources.

All new employees are oriented to the full spectrum of CCBC's programs and community presence on task forces and coalitions related to housing, prevention of overdoses, community education about HIV, and diversion from the criminal justice system of persons with mental health or substance use disorders and how they can access supports and resources for the Enrollees in the BH CP program. A successful strategy that has been used in our CSP program will also be the opportunity for Care Coordinators to shadow current CCBC CSP staff to observe their techniques for engagement and relationship building with clients as well as developing resources in the community as a part of their initial training.

c. Planned strategies for collaborating with ACOs to recommend Flexible Services on behalf of EEs, and following-up on the outcomes of such supports.

CCBC has already developed and implemented strategies of collaboration with the Steward Pilot ACO in an ICB grant in 2016. The working relationship to address members' social services will be strengthened in the current round of ICB that is operating from March-July, 2017. In this engagement, CCBC's CSP workers are focusing on 100 clients who fit the profile of potential BH CP Enrollees or members at high risk as identified by Steward. A key outcome measure for this program will be to assess how the participants accessed flexible supports identified in the plan of intervention jointly developed among the client, CCBC staff and Steward PCP's.

CCBC's CSP program is also an active participant in a number of forums in Brockton that strategize on providing social and flexible supports to community members that include:

- "Citizen X" forum convened among ED staff, DMH, outpatient providers, the Brockton police department, and the CCBC CSP program.

- Other areas of collaboration include the Veteran's Forum that focuses on homeless veterans and other community members, CBFS and PACT Client Forums, convened by DMH's Brockton Area Multi-Service Center.

- Informal client-specific interventions with the Brockton Haitian Club and Cape Verdean Society to provide support and assistance to specific members' needs related to housing, enrollment in MassHealth, and legal representation on immigration matters.

In these settings, CCBC staff join Good Samaritan Hospital, Brockton Hospital and Brockton Neighborhood Health Center in solving individual member issues. These relationships will provide a solid foundation for the CCBC BH CP to help EE's from Steward ACO, BMC ACO at Brockton Hospital and CCC at Brockton NHC access flexible community services. The BH CP Care Coordinators will join these meetings. CCBC is also Designated Certified Application Counselor Organization for MassHealth and The Health Connector in Brockton, Taunton and Attleboro.

7.3 D. Innovative technologies for service delivery

- CCBC was one of the first providers in MA to adopt the eHana Electronic Health Record and has partnered with them in the evolution of the clinical record that incorporates the MA Standard Documentation Plan (MSDP) for clinical assessments, treatment planning and documentation of client progress.
- CCBC and eHana will partner with the BH CP initiative to create a care management module customized for the BH CP program. It will feature seamless information sharing with ACOs, with other BH CP's who use eHana, and with the Care Managers from the MCOs.
- Configurations to send CA, PCTP, and client status updates via secure email to members of the Care Team over the Mass HIway;
- The Care Management module will incorporate the Continuity of Care document that is critical to Transitions of Care. It will contain and include medication and direction from administrator.
- An event notification system that serves "Alerts" from an ACO provider to the BH CP. An Engaged Enrollee will be "tagged" so that when the Enrollee is entered into the ACO hospital ED, the BH CP or other member of the Care Team will receive an electronic alert so that on-call staff can mobilize/collaborate with the ED and CCBC ESP or other programs to intervene. After 8 p.m. and weekends the alert will go to the ESP which has 24/7 awake staff.
- Linkage between BH CP clients with the CCBC ESP database, so ESP staff can notify the BH CP when a BH CP client presents for an ESP evaluation.
- Mobile Outreach and Engagement: CCBC anticipates deploying mobile "apps" to support its staff in the enrollee outreach process. Such apps could be used by Care Coordinators to (a) identify enrollees requiring outreach and follow-up, (b) access contact information (phone, address), and (c) document service activities. Activity would be synchronized with the centralized Care Management platform for review by supervisors and Care Team members.
- Social Outreach and Engagement: CCBC is exploring leveraging social networking tools to engage with Enrollees. Techniques could include leveraging Facebook's Messenger Platform Application Programming Interface (API) to supply enrollees (or their authorized representatives) with our chat name and a unique code, which would automatically associate their Facebook Messenger account with their Care Management record. Enrollees could then outreach to the Care Team at any time via the Messenger app already installed on their phone, notifying their team and prompting engagement in real-time (providing appropriate consents were in place and with necessary checks to ensure no PHI was exchanged).
- CCBC will develop customized phone applications, or "apps" that the Engaged Enrollee will be able to adapt to his/her needs in support of the goals of the PCTP. These apps include "My Strength" that focuses on the needs of individuals with SMI. For clients with special needs for Health and Wellness identified in PCTP, CCBC will have FitBits to help Engaged Enrollee track physical activity and provide reminders on established goals.
- In two focus groups with CCBC clients, there were preferences for dedicated smart phones that allowed direct lines to CCBC staff and programs, the ESP, and other community supports. Another application was a link to de-escalation protocols related to breathing, finding a quiet space in the midst of confusion, repeating from a list of affirmations, or helping the Engaged Enrollee find a 12-Step Group, DRA Group, or other identified group.
- CCBC will also work with the Engaged Enrollees, ACO's and other community providers in developing customized Facebook pages, Twitter accounts and Instagram applications to offer opportunities for informal, collegial peer communication to support health lifestyles, crisis support and shared group activities.

7.3 E. Personnel and Staffing

Provide a proposed staffing plan to perform Contractor Responsibilities, including implementing the scope of CP Supports and administrative aspects of the Contract.

1. **An organizational chart that identifies personnel, senior managers, and other staff by title to be assigned to accomplish Contractor Responsibilities.**

   (See attached)

2. **A sample staffing model for the number of EEs in each Service Area, including number of full-time equivalent (FTEs) for supervision, administration, and Care Management and Care Coordination positions.**

CCBC has designed a sample staffing model to serve 1,000 Engaged Enrollees in the combined Taunton-Attleboro Service Areas and 1,000 Engaged Enrollees in the Brockton Service Area. The qualifications for the Care Coordinators will be Bachelor Degrees in human services or related fields with relevant experience and duties similar to the CCBC CSP staff. Among these Care Coordinators CCBC will recruit at least two Recovery Support Navigators and two Certified Peer Specialists for each program to ensure a peer support capacity for the Engaged Enrollees.

The BH CP supervisors will each manage eight Care Coordinators. While a Master's degree and an independent license are preferred, they are not required. However, CCBC will hope to fill at least one of the supervisory positions with an R.N. or a Masters level clinician. The Clinical Care Manager will be an R.N. or an independently licensed behavioral health clinician with principal responsibility for all PCTPs, CAs, and compliance with all of the program requirements for Care Coordinators. The BH CP Program Director will be responsible for quality management and reporting and represent the BH CP to the ACOs and MCOs who share Engaged Enrollees, and to MassHealth. The Program Director will report to the Vice President of Integrated Care.

Most of the administrative duties of the BH CP such as scheduling, billing, IT management, data entry and reporting will be incorporated into CCBC's existing administrative structure after start up. However, an administrative staff person will be on site at the Brockton program to compile site-specific information that will be forwarded to the CCBC's administrative office. CCBC maintains a site-based scheduling system to match client requests with available staff to ensure prompt response to requests from Engaged Enrollees, PCP's, hospital emergency departments and inpatient units, representatives from community agencies, and other behavioral health providers. If one site is not available, the phones will switch to the other site for live voice response.

CCBC will assign a half-time data analyst/quality manager to the BH CP to oversee the implementation of the customized care management module with CCBC staff, incorporate information sharing with the ACO and MCO data profiling and utilization history information systems, and facilitate information sharing with other providers including PCP's, hospitals, other behavioral health providers and social service organizations. The analyst will also work with CCBC's Director of Compliance and Quality Management to set up the data entry and reporting for the quality metrics.

As the Care Management module becomes streamlined and as BH CP staff develop competencies in timely exchange, service gap identification and population health analysis that are all aligned with the operation of the ACO, CCBC expects that this position will be integrated into the analytical activities of the ACOs by Year 3.

The BH CP will have access to psychiatric consultation from Paul Weiss, M.D., the Medical Director at CCBC, or his designee. CCBC maintains 24/7 psychiatric coverage as well as on call back up from program managers and CCBC senior clinical managers.

3. **Description of recruitment plans, including timelines to recruit staff for personnel positions not filled, and job descriptions/qualifications for each personnel position.**

Recruitment Plan: CCBC is experienced with new program implementations of this size and scope. We have had success in recruiting and retaining Care Managers for the Community Support Program (CSP), Family Partners and Individual Care Coordinators for the Community Support Agencies, and line staff for the CBFS and PACT programs. CCBC recognizes that this recruitment effort will require a detailed staffing plan that involves CCBC managers, HR staff, and CCBC recruiter, with active outreach to the pools of applicants in Bristol County, Attleboro, Taunton and Brockton, and postings on employment Web Sites used by CCBC. It should be noted that the workforce will ramp up over time as Engaged Enrollees are assigned to the program. Our understanding is that this process would take up to 15 months.

Local resources with potential pools of applicants include:

- Massasoit Community College in Brockton and Bristol County Community College campuses in Fall River, Taunton and Attleboro, to recruit among current students and recent graduates with AA degrees in human services.
- Bridgewater State University
- University of Massachusetts, Dartmouth
- Stonehill College
- DES Offices in Brockton, Taunton, Fall River and New Bedford
- DMH Recovery Learning Communities (RLCs) in Brockton and Taunton
- Outreach to coalitions in which CCBC is involved in Taunton, Attleboro, Brockton and Bristol County.
- Web sites where CCBC posts open positions include: Indeed, Indeed OnLine, and Monster.com. CCBC also retains Bayard Consulting to create landing pages and draft job descriptions for on-line recruitment and for CCBC's Facebook page recruiter for management level positions. CCBC will retain Robert Half Recruiting Agency to identify candidates for the data analyst position.

Timelines to Recruit Staff:

Upon notification of award:: Informal Recruiting for Program Directors and Supervisors
1/2/2018: Formal Recruiting–posting on websites, notices at local colleges and DES offices
1/9/2018: Interviews begin
2/2/2018: Offers extended and accepted

3/1/2018: Initial group of staff hired. Target hiring is one clinical care manager, , one BH CP Program Director and one RN.

3/1/2018-3/31/2018: Interviewing and hiring remaining prep budget period staff. Target hiring is two supervisors, 16 Care Coordinators, one Recovery Support Navigator, one Certified Peer Coordinator and one Data Specialist.

6/1/2018 –

3/1/2019: Ongoing recruiting, interviewing, and hiring to build capacity for providing BH CP services. CCBC expects to start the month of June 2018 by receiving a total of 640 assigned clients. The projection for new assigned clients for July 2018 is 283 and 80 assigned clinets for August. September and October 2018 assignment will increase to an average of 120 per month. November and December assignment will increase to an average of 160 per month. Assignments per month from January 2019 to June 2019 is expected to be at 200 per month. Assignments per month from July to December 2019 are expected to be 160. With this volume of assignments and the expected level of enrollments CCBC projects to have to reach 2,000 enrollees by December 2019.

CCBC will hire this initial complement of Clinical Care Manager, RN and a Program Director by February 1, 2018. Together they will work to design a BHCP Orientation Plan, develop workflows, program planning and interview and train new staff. They will begin outreach on June 1, 2018. The staff that are hired after March 1, 2018 will be orientated to the BHCP, begin training; some staff will receive CHW training. These staff member will begin outreach on June 1, 2018.

CCBC will scale up staffing as potential enrollees are identified, contacted and engaged. Our estimated targeted is 640 new assigned clients beginning on June 1, 2018. CCBC will be hiring Care Coordinators over a two month period (April and May 2018) therefore the budget reflects a total FTE of 12. However on June 1, 2018 CCBC will have a staff of 16 Care Coordinators who have been trained and oriented to conduct outreach and engagement activities, complete Comprehensive Assessments, PCTPs and Care Coordination activities. By hiring staff up to two months before implementation, the BH CP staff will develop competencies in operating the care management module, establish working protocols with the Care Management representatives at the ACOs and MCOs, and develop a common clinical understanding of the BH CP members identified by MassHealth.

7.3 E. 3 Attachments: Job Descriptions and qualifications for BH CP Program:

- Program Director
- Clinical Care Managers
- Supervisor of Care Coordinators
- Care Coordinator
- Recovery Support Navigator (RSN)
- Certified Peer Specialist (CPS)
- Nurse

4. A description of how the Bidder will recruit and hire staff from the cultural and linguistic communities they intend to serve.

CCBC has a strong record of hiring staff that represent the diverse communities in Taunton, Attleboro and especially Brockton. CCBC's working relationships with adult education organizations, the YMCA, the Cape Verdean Association in Brockton and the Haitian Center in Brockton, will provide a foundation for grass roots, outreach approach to potential candidates for the BH CP program positions. CCBC will develop materials for both a presentation and brochures in Spanish, Portuguese, and French Creole as part of the recruitment effort to these diverse communities. Informal outreach will also occur through CCBC's participation on community-based task forces related to housing, suicide prevention, opiate abuse prevention and the Prevention and Wellness Network.

5. Proposed training, orientation plans and modules for staff.

CCBC has established a process for training and evaluating all staff based on a set of core competencies for each program type. CBFS, PACT, and Supportive Housing have developed core competencies that are centered on case management, rehabilitation and recovery services. A specific training program for the BH CP program staff will be developed, incorporating many of the modules used for these programs along with the agency's comprehensive orientation process.

The Care Coordinator Orientation and Training Program would include CCBC's Relias online system which offers over 600 courses, in person onsite training, and offsite external trainings.

An overview of the modules is presented below:

Agency Orientation

- CCBC Orientation-one full day completing Human Resources and policy and procedures
- CCBC Mission, Vision, Values
- Completion of new hire requirements
- Orientation to electronic health record

Program Orientation and Training

- Developing the Comprehensive Assessment
- Documenting the Person-Centered Treatment Planning Process
- Principles of Supportive Case Management
- Principles of recovery from addictions/co-occurring disorders
- Maintaining effective/appropriate boundaries with clients
- Overview: Principles of psychiatric rehabilitation/recovery (in-person)
- Overview: Serious Mental Illness for paraprofessionals (Relias)
- Overview: Substance Use Disorders (Relias)
- Co-Occurring Disorders: Overview for paraprofessionals (Relias)
- Relapse Prevention Services: Treatment Best Practices (Relias)
- Suicide Screening/Risk Factors (Relias)
- Advanced Suicide Prevention (in-person)
- Seeking Safety (in-person)

- Motivational Interviewing (Relias)
- Person Centered Planning (Relias)
- Opioid Overdose Prevention (in-person)

Safety Training:
- Risk management and safety protocols
- Use of 5 Star safety devices
- CPI Training (in-person)
- CPR/First Aid (in-person)

6. Description of staff retention strategy.

CCBC's staff retention strategy includes the following:
- A generous benefits package
- Access to Relias Training for a broad menu of free trainings for CEUs, career advancement and related professional and career topics.
- An active policy of recruiting from within to encourage staff to apply for higher level positions.
- An Employee Assistance Program that is independent and confidential for all CCBC employees
- Opportunities that CCBC can offer as an employer of over 500 delivering a range of behavioral health care services.
- Fidelity to an exit interview process that provides CCBC managers with important feedback on how to manage their workforce more constructively and promote retention.
- Support to continue education and annual support through tuition reimbursement to underwrite the cost for those pursuing undergraduate and graduate education.

7.3. F. Implementation Plan and Timelines – Attachment

Attach timelines that display monthly implementation plans for Preparation Budget Period, and quarterly plans for each subsequent Budget Period. (Included Below)

Implementation Plan and Timeline: Preparation Budget Period

CCBC's implementation plan reflects a dynamic process encompassing start-up and ongoing operations activities. The agency has an established, proven model for effective program implementation which mobilizes senior management, finance, human resources, medical records, facility, and consultative resources all working toward a successful launch of the Behavioral Health Community Partner (BH CP) services. By moving forward with the implementation plan outlined in this section, CCBC will be able to achieve a fully operational service by June 1, 2018.

Human Resources:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Staffing and recruitment plan	Review and enact hiring plan • Activate hiring strategies including range of advertising mediums	Upon award of contract	May 2018
Job descriptions and qualifications	Review and finalize	Upon award of contract	February 2018
Training and orientation plan	Review and finalize	Upon award of contract	March 2018
By position recruitment and hires:	Program Director	Upon award	February 2018
	Clinical Care Manager (1 FTE)	Upon award	February 2018
	RN(1 FTE)	Upon award	February 2018
	Supervisor(2 FTE)	Upon award	May 2018
	Care Coordinators (16 FTE)	Upon award	May 2018
	Recovery Support Navigator (1 FTE)	Upon award	May 2018
	Certified Peer Coordinators(1 FTE)	Upon award	May 2018
	Data Specialist (.5 FTE)	Upon award	May 2018

Quality Management:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Quality Improvement Committee	Convene committee • Review BH CP Operational elements	May 2018	Ongoing
Quality Measures	Review, train, and test	May 2018	August 2018
Performance Results	Review outputs	September 2018	Quarterly
Consumer satisfaction survey	Develop survey tool	August 2018	Semi-Annual Starting Dec 2018

Billing and Financial Accounting:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Ensure Readiness of Billing and Accounting Structures	Review billing and EHR systems	Upon Award	May 2018
Supplier Diversity Plan	Review and enact	Upon Award	May 2018

Information Technology:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Review EHR readiness	• Hardware • Billing • Customer Service • Care Planning • Provider Rosters • Financial Systems • Quality Measurement • Reporting	Upon Award	May 2018
Output and Access Review • ACOs • MCOs	• Receiving info • Creating Info • Accessing Info • Storing	Upon Award	March 2018

• EOHHS • Other Providers	• Transmitting		
Mass Hlway integration via DirecTrust HISP"	Assess readiness	Upon Award	May 2018
System Security	Review and test	Upon Award	May 2018
Review of tech tools and adaptive technologies	Implement	Upon Award	May 2018

Consumer Advisory Board:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Membership	Approach and secure commitments from identified members	Upon award of contract	June 2018
Meeting Schedule	Convene first meeting	September 2018	Ongoing
Meet with Leadership	Review how board input will be incorporated into planning and operations	September 2018	Ongoing

Training Plan:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Training Schedule	Finalize Agenda Topics: • Orientation • Outreach and Engagement • Comprehensive Assessment • Person-Centered Treatment Planning • Care Transitions • Medication Reconciliation • Health and Wellness Coaching • Community Connections • Integrated Care • Community Resources • Evidence-Based and Emerging Practices • Other Topics as listed in the Training Section 7.3E	May 2018	Ongoing

Implementation Plan and Timeline: Quarterly

Following the enactment of the Preparation Budget Period Implementation Plan, CCBC's Quarterly Implementation Plan will naturally follow the outlined areas from the original plan, ensuring completeness, quality control, efficacy, and stakeholder satisfaction while setting the stage for operational sustainability going forward. Each area will be reviewed on no more than a quarterly basis following the completion of the 7 month initial period ending December 2018.

Human Resources:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Staffing and ongoing recruitment	Review and hiring to date and remaining positions to fill. Positions will be added as indicated by client additions and staffing ratios.	January 2019	ongoing
Training and orientation	Update training and orientation plan	January 2019	Semi-annual
By position recruitment and hires:	Care Coordinators: Additional to original 16: July 2018: 1 hires August 2018: 3 hires September 2018: 4 hires October 2018: 3 hires November 2018: 2 hires December 2018: 4 hires Supervisors: June 2018: 1 hire September 2018: 1 hire December 2018: 1 hire RNs: June 2018: 1 hire August 2018: 1 hire November 2018: 1 hire		December 2018

Quality Management:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Quality Improvement Committee	Quarterly committee meetings • Review BH CP Operational elements		Ongoing
Quality Measures	Review and update		Ongoing
Performance Results	Review outputs		Quarterly
Consumer satisfaction survey	Develop survey tool		Semi-Annual Starting 12/18

Billing and Financial Accounting:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Monitor Billing and Accounting Structures	Continuous review of billing and EHR Systems		Ongoing
Supplier Diversity Plan	Continue to implement		Ongoing

Information Technology:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Review EHR Performance	• Hardware • Billing • Customer Service • Care Planning • Provider Rosters • Financial Systems • Quality Measurement • Reporting	January 2019	Quarterly and ongoing
Review Output and Access Review • ACOs • MCOs • EOHHS • Other Providers	• Receiving info • Creating Info • Accessing Info • Storing • Transmitting	January 2019	Quarterly and ongoing
Review Mass Hlway integration via DirecTrust HISP"		January 2019	Quarterly and ongoing
Review and update System Security		January 2019	Quarterly and ongoing
Review and update use of tech tools and adaptive technologies		January 2019	Quarterly and ongoing

Consumer Advisory Board:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Membership	Update membership	January 2019	Quarterly and ongoing
Meet with Leadership	Review how board input will be incorporated into planning and operations	January 2019	Quarterly and ongoing

Training Plan:

Tasks	Operational Action Steps	Start Timeframe	Completion Timeframe
Training Schedule	Update and Assess Agenda Topics: • Orientation • Outreach and Engagement • Comprehensive Assessment • Person-Centered Treatment Planning • Care Transitions • Medication Reconciliation • Health and Wellness Coaching • Community Connections • Integrated Care • Community Resources • Evidence-Based and Emerging Practices • Other Topics as listed in the Training Section 7.3 E	January 2019	Quarterly and ongoing

7.3. G. Budget Report and Budget Narrative – Attachments
Budget Report – Attachment B
Budget Narrative – Attachment C

7.3. H. Sustainability

Provide a description of plan to sustainably fund proposed infrastructure and capacity building investments and CP Supports over the Contract Term and after the initial Contract Term. Such description shall include a description of any tools, resources, or processes the Bidder intends to develop using DSRIP funds and continue to maximize after the initial Contract Term.

CCBC recognizes the requirement from CMS to demonstrate long-term sustainability of the BH CP program as an integral component of the 1115 waiver and the ACO initiative. CCBC believes that its five-year business plan will put the BH CP program on a strong footing to maintain the infrastructure investments, reduce overall administrative burden, strengthen the BH CP program's capacity to improve Enrollee outcomes, reduce total cost of care and sustain the BH CP program beyond the five-year window.

DSRIP funding will be focused on three areas of infrastructure development:

- Adding a BH CP Care Management EMR as a compliment to the current eHana Electronic Health Record for CCBC clients. This module will have the capacity to send and receive information with ACOs, MCOs and individual practitioners who participate in the BH CP Care Teams.
- Developing analytic capability to track member utilization, health outcomes, and patterns of care that can predict risk for high utilization or trend towards recovery and stability.
- Training for BH CP staff on Motivational Interviewing, Bidirectional Health Care Navigation, Health and Wellness Coaching, and Recovery Supports.

CCBC expects substantial one-time cost for software and hardware related to the infrastructure development with declining licensing and maintenance costs over time. After the care management software is fully operational and meets all specifications, the cost will become part of CCBC's administrative overhead and incorporated into the current maintenance agreement with eHana. Also, part of the DSRIP Business plan will be the hiring of staff and contractors to assist with the data analysis required for reporting to MassHealth and tracking utilization with the ACOs and MCOs. However, as the program managers gain competencies and strengthen relationships with the ACOs and MCOs, the analytical resources will be reduced and ultimately assumed by the health population analysts within the ACOs and MCOs. CCBC will maintain analytic competencies among BH CP managers and quality management staff.

The training costs are relatively inexpensive per staff, so as the BH CP achieves full staffing the training costs for the program will be reduced. A goal is to standardize training of the ACO staff with the BH CP staff and deploy subject matter experts within the BH CP to implement the Train the Trainer Model after in Year 2 of the program.

The key to ongoing sustainability will be the degree to which the BH CP, ACO, MCO and community providers embrace the transformation of the care delivery model. As a key participant CCBC will contribute to the sustainability through the re-organization of its practice model and by taking advantage of new technologies, APM's, and data analytics to streamline care and improve outcomes. Elements of the sustainability plan include:

Improved efficiency of sharing timely information to engage and treat the EE at the right time with the right providers and according to the needs identified in gaps of care in a way that expands competency in interpreting the patterns across all the providers.
Improving efficiency of scheduling to reduce missed appointment, repeat tests, minimization of duplicate prescriptions, and increased triage of EE's to outpatient and urgent care on a routine basis as alternatives to the ED\ and inpatient.

Through demonstrated value of improved client outcomes and reductions in total cost of care, CCBC's BH CP will negotiate with the MCO's for expanded delegation to the BH CP program as a Practice-Based Care Management program, shifting the capitation paid to the MCO for these care management services to the CCBC BH CP, resulting in a reduction of MassHealth's overall cost. As research has shown, a competent practice-based program will have the highest rate of member engagement resulting in the delivery of cost-effective and timely interventions. This model is more successful than plan-based care management programs that rely mostly on telephone contact with members with as low as an 8% engagement rate.

Finally, the sustainability will be ensured with more flexible and less burdensome reimbursement mechanisms that evolve towards bundled payments around episodes of care and away from fee-for-service billing for individually authorized services from the MCO. The flexibility in these arrangements will allows the behavioral health providers to allocate staff according to EE need as opposed to which provider and service are reimbursable. For example, 30 minutes of individual therapy is commonly billed in an outpatient clinic, but weekly peer support contacts and monthly check-ins with a clinician may be better suited to the EE's needs.
Through alternative payment mechanisms the ACO will also promote sustainability with alignments towards shared savings and eventually, shared risk. These contractual agreements will reduce administrative overhead and maintain a focus on reducing total cost of care for increasing numbers of the BH CP and larger ACO population.

Community Partner Program Budget Report

		Clinical and Support Options					
Program Revenue	**Prep Budget Period**	**Budget Year 1**	**Budget Year 2**	**Budget Year 3**	**Budget Year 4**	**Budget Year 5**	**Total Revenues**

Ramp-up costs in Prep Budget Period, Budget Year 1, 2 and 3 can be covered by Infrastructure Funding

Community Partner Program Budget Report - Prep Budget Period

Only complete this Program Budget Narrative using amounts anticipated for PBP.

Lines may be added to the Program Budget Narrative tables as necessary

Row 1 - Salary

Position	Annual Salary	FTEs	# Months	Total
CP Director	$ 83,000.00	0.75	3	$ 15,563
CP Director	$ 83,000.00	1	4	$ 27,667
Nurse Manager	$ 75,000.00	1	3	$ 18,750
Care Manager Supervisor	$ 55,000.00	1	3	$ 13,750
Clinical Care Manager	$ 40,000.00	4	2	$ 26,667
Care Coordinator Supervisor	$ 50,000.00	2	3	$ 25,000
Care Coordinator	$ 33,000.00	6	2	$ 33,000
Peer Coach	33000	2	2	$ 11,000
Administrative Assistant	30000	1	2	$ 5,000
Total Salary (Program Budget Line 1)		**18.75**		**$ 176,395.83**

Row 2 - Fringe

Fringe Item	Total Salary	Fringe	Fringe
Fringe Item	$ 176,395.83	23%	$ 40,571
Total Fringe (Program Budget Line 2)			**$ 40,571**

Total Personnel*	**$ 216,967**

* Should align with Personnel Costs row in Program Budget

For each position listed above, provide a brief statement of the position's responsibilities:

1. The CP Director has overall responsibility for the direct operation of the program; during the preliminary period, she will be engaged in recruitment, establishing relationships with ACOs and other parties, establishing workflows and procedures, learning/advising about the EHR use, etc. The CP Director will start 0.75 time in the program on 11/1/17 and will go to full-time on 2/1/18. *A significant role for the director and all staff during this period will be team-building.*
2. Nurse Manager during PBP will assist in establishing workflows and procedures, recruiting additional staff, learning/advising about the EHR use.
3. Care Manager Supervisor during PBP will be responsible for recruitment of Clinical Care Managers, learning/advising about the EHR use, orienting new staff.
4. Clinical Care Managers during the PBP will receive orientation to all aspects of the program and will begin to review and manage referrals as they arrive from Mass Health/ACOs.
5. Care Coordinator Supervisors during the PBP will recruit Care Coordinators and Peer Coaches, become oriented to the EHR and all apects of the program, orient new staff.
6. Care Coordinators during PBP will receive orientation to all aspects of the program and will begin to connect with other providers, review referrals as they arrive from Mass Health/ACOs.
7. Peer Coaches during PBP will receive orientation to all aspects of the program and will begin to connect with other providers and peer organizations, review referrals as they arrive from Mass Health/ACOs.
8. Administrative Assistant will provide administrative support to the team during the PBP.

JSK - Medical Director time indicated on Staffing model but not included here --that is because we would not charge the program for the medical director during the PBP.

Row 3 - Training and Professional Development

Description of Service	Unit Cost (if applicable)	# Staff (if applicable)	Total Cost
Total Training and Professional Development (Program Budget Line 3)			

Provide a description of each Training and Professional Development line item included in the table above:

Row 4 - Travel

Position	Est miles per month	# months	Mileage reimbursement rate	Total Cost
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
			Total Mileage	

Travel Expense Description	Cost
Total Mileage	$ -
Parking and tolls	
Public transportation	
Enrollee travel	
Total Travel (Program Budget Line 4)	**$ -**

Please describe how mileage estimates and other travel expenses listed above were determined . If including enrollee travel expenses above, please explain how these expenses will be used by enrollees.

Row 5 - Equipment

Description of Equipment	Unit Cost or Cost/FTE	#units or FTEs	Cost

Total Equipment (Program Budget Line 5)				

Provide a brief description of the intended use for each Equipment line item listed above and how the estimated costs were determined:

Row 6 - Supplies

Description of Supplies	Unit Cost or Cost/FTE	# Units or FTE	Cost
Total Supplies (Program Budget Line 6)			

Provide a brief description of the intended use for each Supply line item listed above and how the estimated costs were determined:

Row 7 - Contract Services

Name of Contractor	Contractor Type	Goods and Services Provided	Cost
Total Contract Services (Program Budget Line 7)			

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Row 8 - Software Licensing

Description of Software	Cost per License	# Licenses	Cost

Total Software Licensing (Program Budget Line 8)		

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

Row 9 - Telecommunications

Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
Total Telecommunications (Program Budget Line 9)			

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

Row 10 - Occupancy

Occupancy Expense	Total SqFt	Cost/SqFT	Cost
Rent			$ -
Utilities			$ -
Repair and Maintenance			$ -
			$ -
			$ -
Total Occupancy (Program Budget Line 10)			

Provide a brief description of how each Occupancy line item listed above will support the CP's performance and how the costs were determined:

Row 11 - Other

Other Direct Expense Description	Cost

Total Other (Program Budget Line 11)	

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Row 12 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 12)	**11.60%**	**$ 27,130.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

CSO's federally approved indirect cost rate is 11.6%. This rate covers the cost for all indirect expenses (executive management, finance, liability insurance, organizational infrastructure and the like) for CSO programs.

40	**Management System**	$62,000					
41	**(Infrastructure Budget Line 2)**						
42							
43	***Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's***						
44	***contract and how the costs were determined:***						
45							
46	1. Case management functionality will be developed on Credible EHR by in-house IT/Business Systems staff. We must purchase an						
47	additional module to support capacity to accept, store and share lab reports electronically						
48	2. Fast Healthcare Interoperability Resources software is needed for Mass HIway (and any other HIE) connectivity.						
49	CSO is in the final stages of its process with Credible to get securely connected to the Mass HIway.						
50							
51							
52							
53							
54							
55							
56							
57							
58	**Row 3 - Technology for Service Delivery**						
59	**Description of Expense**	**Cost**					
60	New switches at two sites	$ 4,000.00					
61	Additional wifi licenses at two sites	$ 2,000.00					
62							
63							
64							
65							
66	**Total Technology for Service Delivery**	$ 6,000.00					

	A	B	C	D	E	F	G
67	**(Infrastructure Budget Line 3)**	$ 6,000.00					

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

1. PoE switches are required for adding new devices (e.g. computers, phones) at each site.
2. We must add licenses for each wifi devise added to our network.

Row 4 - Other Technology Expenses

Description of Expense	Cost
Total Other Technology Expenses (Infrastructure Budget Line 4)	

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Community Partner Infrastructure Budget Report - Workforce Development - Prep Budget Period

Row 5 - Workforce Development Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
Human Resources Administrative Coordinator	$ 33,000.00	0.25	5	$ 3,439
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
	Total Salary	0.25		$ 3,439
	Fringe rate	23.0%	Total Fringe	$ 791
			Total Workforce Development Staffing including Fringe (Infrastructure Budget Line 5)	**$ 4,230**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

HR Administrative Coordinator is the key HR staff member for "onboarding" new hires for the CP program.

Row 6 - Recruitment Expenses

Description of Expense	Cost
Monthly fee for Indeed postings - CP positions (Nov - Dec) @ $3,100 per month	$ 6,200.00
Monthly fee for Indeed postings plus sponsored positions premium visibility - CP positions (Jan - May) @ $3,700 per month	$ 18,500.00
Total Recruitment Expenses (Infrastructure Budget Line 6)	**$ 24,700.00**

Provide a description of each recruitment expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

CP manager and clinical positions, which we are anticipating will be challenging to recruit, will be allocated premium positions on Indeed, at additional cost. (Indeed has a monthly charge for premium placement of ads online. This budget will allow us to get premium placements for hard-to-recruit positions in this very competitive environment.

Row 7 - Training Expenses

Description of Expense	Cost
Most CSO training expenses are included in our	
indirect costs, which is why they are not shown here	
Total Training Expenses (Infrastructure Budget Line 7)	

Provide a description of each training expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

BH Community Partner - Staffing Model

Clinical and Support Options

line #			
1	Estimated number of Engaged Enrollees (including CBFS if applicable) at the end of Budget Period 1	1200	*Should align with Program Budget*

	BH CP Program Staff	FTEs (Do not duplicate FTE - FTE's may be allocated across staffing positons as applicable)	Comment
2	BH CP Director and Assistant/Deputy Director	1	*Total management oversight of BH CP*
3	Medical Director	0.1	*Portion of Medical Director allocated to BH CP for the number of enrollees shown in line 1*
4	RNs	5	
5	Clinical Care Managers (RN)		*Do not include FTEs listed in line 4*
6	Clinical Care Managers (LPHA)	10	*LPHA includes LICSW, LMHA, LADC I*
7	Supervisors/Team Leaders	4	*Do not include FTEs listed in lines 4, 5 or 6*
8	Other Licensed Staff		*Do not include FTEs listed in lines 4, 5, 6 or 7*
9	Care Coordinators	27	*FTEs providing Care Coordination (may include Health Outreach Workers, Community Health Workers, Peer Specialists, Recovery Support Navigators providing care coordination)*
10	Peer Specialist/ Recovery Coaches (non-Care Coordination)	8	*Do not include FTEs of Peer Specialists or Recovery Coaches included in line 9*
11	Intake Coordinators/Engagement Specialists		
12	Administrative Support		
13			
14			
	Total FTE	55.1	

	Staff Ratios - Please calculate the following ratios:		
15	Ratio of RN and Clinical Care Manager (RN) to Assigned and Engaged Enrollees	1:240	*Estimated number of Assigned and Engaged Enrollees at the end of BP1 divided by total FTEs of (RN+RN Clinical Care Managers)*
16	Ratio of Care Coordinator Supervision to Care Coordinators	1:9	*Total Care Coordinator FTEs divided by Total Care Coordination Supervision FTEs*

Please describe which Program staff listed in lines 2 through 8 above directly supervise Care Coordinator staff: There are three Supervisor positions for care coordinators. In addition, care coordinators will work in teams with clinical care managers, who will be able to advise and coach the care coordinators. We may also designate Senior Care Coordinators at some sites, to provide case consultation and coaching for their peers. We anticipate having significant clinical staff resources to mentor and coach our Care Coordinators.

SECTION 7.3 INITIAL DSRIP PARTICIPATION PLAN

7.3.A. EXECUTIVE SUMMARY

Goals*: CSO's service goal* as a CP will be to effect greater collaboration and coordination across the spectrum of healthcare providers--inpatient medical and BH, primary and specialty medical, outpatient and community-based BH, residential, LTSS and emergency care. We share Mass Health's expectation that this effort will achieve the triple aim—improving health status, providing quality care, and reducing the total cost of care—and we are aligned with this purpose. *CSO's operational goal* is to implement this program efficiently, expeditiously, and sustainably. We will approach operations with a clear plan and model set forth for the entire implementation team, with the flexibility and agility to adapt our plans and process in response to changing conditions, consumer feedback, and feedback from ACOs, MCOs and Mass Health.

Service areas: CSO proposes to act as a BH CP in five service areas: Northampton, Greenfield, Pittsfield, and North Adams (in western Mass) and Athol (in central Mass). CSO currently provides treatment and support services for BH clients in all of these areas.

Number of enrollees to be supported: Based on Mass Health's projections of targeted members in these service areas, we expect to be assigned approximately 3,200 members who live in the service areas for which CSO is applying. Based on the number of Mass Health members CSO currently serves, we expect that a high percentage of the assigned members will be individuals already familiar to CSO, which will ease the engagement process and leads us to estimate a 60% engagement rate.

Challenges: These geographic areas are comprised of small, generally under-resourced cities and rural towns. There are many challenges to providing care in this environment, including these three key issues:

- a shortage of primary care providers--the ratio of residents to PCPs in Franklin County is 51% higher than for the state as a whole;
- small private primary care practices, unaffiliated with a hospital system or ACO, with the result that BH providers have many more practices with whom they must maintain relationships;
- public transportation is very limited, leaving low income households isolated and/or facing significant barriers to accessing care and support services.

In CSO's 60+ years of working in these communities, we have developed a service culture with high levels of community outreach and home-based services to accommodate isolated clients. We have an intensely relational style of collaborating, working with dozens of independently practicing healthcare providers, as well as more sizeable groups like Baystate Health and Valley Medical Group. We have a long history of working closely with a broad range of community-based organizations—it is the only way to function effectively in this small city/rural culture.

Operational plan: We will be able to accept 3,200 assignments in the first eleven months of the program (year one plus two months of year two) by accepting 300 assignments per month from Mass Health, while providing ongoing services to the members who actively engage. By the end of year one, we expect to have approximately 1900 actively enrolled and we project to reach scale of 2,000-2,200 enrolled members (including both assigned and referred Members) in year two.

We project to sustain this level of service for the duration of the five-year period. While CSO could develop greater capacity, we believe this volume is a proportionate share of Mass Health's total capacity for BH CP slots for these service areas.

CSO is in the advantageous position of having a fully operational, optimally flexible EHR in place. Working with the vendor, Credible, our IT and Business Systems team will be working through the rest of 2017 to refine the care management capacity of the system. Every player in the re-designed Mass Health system—ACOs, MCOs, CPs and providers—will be challenged by incompatible record systems and the need to move clinical and utilization from one entity to another in a timely, accurate and secure manner. We are confident that we are in a better-than-most position to both import and export information with Credible.

CSO has an able and experienced executive team to manage the implementation of this program; each member has a focused plan for this important endeavor. The VP overseeing the CP will be Sandi Walters, LICSW, who brings over ten years' experience managing MH and SUD programs, along with demonstrated skills at collaboration. She will be assisted by Deborah Ekstrom, who has nearly 40 years of experience in the field, including eight years of managing integrated primary care and BH service delivery, as well as public sector care management.

Staff recruitment is always a challenge in this market. CSO's plan includes a significant investment of DSRIP infrastructure funds on aggressive recruitment efforts throughout the duration of the project. A recent revision of our recruitment strategy has increased our candidate pool four-fold and resulted in high quality new hires. We will continue (and continually revise) this strategy to sustain the workforce needed for the CP program. We project to open the program with 4 RN's, 4 Clinical Care Managers, 12 Care Coordinators and 6.5 Peers and will get to scale in year two with 5.5 RN's, 12 Clinical Care Managers, 35 Care Coordinators and at least 8 Peers.

As indicated in our DSRIP budget, infrastructure investments will be most substantial in the prep phase (exceeding the resources available) and year one, tapering slightly in year two. By year three, we expect our ongoing infrastructure investment to level out to a maintenance level.

7.3.B. SUPPORTING POPULATIONS AND COMMUNITY ENGAGEMENT

1. As a leader in the community mental health movement, CSO has a long history of community partnership and collaboration, which is deeply embedded in our agency culture. CSO maintains both region-wide and area-specific relationships that serve to enhance support for our focus population. In addition to the rich array of services and supports we offer directly, **CSO maintains the following collaborations that spread across all service areas (Northampton, Greenfield, Athol, Pittsfield, North Adams):**

Department of Mental Health	Providers meeting to collaborate and coordinate care; Clubhouse and Respite regular quarterly meetings; collaboration on referrals and DMH case management
Department of Public Health - BSAS	core provider for BSAS; regular meeting with BSAS staff to collaborate and coordinate care; ensure access to service delivery throughout region
Department of Transitional Assistance	collaboration around benefit application for consumers; cross-referral to CSP programs
Massachusetts Rehabilitation Commission	core provider of MassRehab evaluation and employment services; collaboration and referral relationship
NAMI	consumer support groups; resource library; advocacy activities
Veterans Administration (VA)	outreach and HUD housing support; coordination of care for veterans
Western Mass Network to End Homelessness	CSO is on leadership committee; coalition of homeless service agencies across 4 western Mass counties
Providence Hospital	SUD treatment; Inpatient psych; coordination of care and disposition planning
Brattleboro Retreat	Inpatient and stepdown SUD treatment; coordination of care and disposition planning
Behavioral Health Network	Material subcontractor BHCP; Care Coordinaton; Substance Abuse Provider

Area-specific collaborations that will enhance BH CP service delivery system include:

In Northampton area:

Cooley-Dickinson Hospital	ESP service collaboration; CSO provides medical/surgical patients w/ BH evaluation and care coordination; disposition planning; step-down and inpatient referrals and collaboration on transitional services; CARES collaborations
PCP Practices: Valley Medical Group, Baystate, Cooley Dickinson	coordination and collaboration re: primary and specialty medical care; cross referrals
ServiceNet	Transitional housing program; CBFS; Home Care services
Hampshire County House of Corrections	provide care transitions for people released; SUD recovery coaching, CARES & CSP support; monthly meeting to address continuum of care opportunities & coordination of referrals/reintegration process for persons with BH needs
Council of Social Agencies	Hampshire county service provider network; coordinate and collaborate on community services; address service gaps; provide information regarding new services and resources
Gandara Center	SUD programming, including residential SUD services
Amherst Homeless coalition	community planning to address homeless and housing needs
Community Action	entitlement enrollment; community programming
Tapestry Health	Training; health education; overdose prevention

In Greenfield area:

Baystate Franklin Medical Center	ESP service collaboration; disposition planning; step-down and inpatient referrals and collaboration on transitional services; CHART care coordination collaborator/subcontractor; ED navigation; CARES peer support collaboration
Primary Care Practices of Valley Medical Group & Baystate Health	coordination and collaboration re: primary and specialty medical care; cross referrals
Behavioral Health Network	Detox/TSS/CSS provider; collaborator and subcontractor
Franklin County Community Health Center	Coordination and collaboration re: primary care; cross referrals; health insurance enrollment; MOU for primary referral relationship; health

	screenings provided on site at CSO
ServiceNet	Transitional housing program; CBFS; Home Care services
NELCWIT	Domestic violence support; referral and resource
Community Action	Communities that Care Coalition; entitlement support and enrollment; social services support
LifePath	LTSS provider; cross referrals; Adult protective services
Recovery Learning Center	Peer run groups; shared resources; cross referrals
Opioid Task Force	Collaboration re: SUD resources
YMCA	Wellness programming and collaboration
Seeds of Solidarity	Gardening and nutrition supports
Clean Slate	Provider of MAT; collaborate on treatment coordination/cross referral
Community Substance Abuse	Collaboration and cross referrals

In Athol area:

Athol Memorial Hospital/Heywood Health System	ESP provider; CHART grant collaborator; ED navigator; disposition planning; regular meeting to coordinate care and collaborate on services; planned co-location in new medical arts building in 2018
Franklin County Community Health Center – Orange	Coordination and collaboration re: primary care; cross referrals; health insurance enrollment; MOU for primary referral relationship; health screenings provided on site at CSO
North Quabbin Physician's group	coordination and collaboration re: primary & specialty care; cross referrals
North Quabbin Community Coalition	Community provider network to plan for gaps in services; development of resources; collaborate on care; subcontractor for CSA Systems of Care
LifePath	LTSS provider; cross referrals; Adult protective services
YMCA – Athol	Wellness programming and collaboration
NAMI	Host WM AMI meetings on site; collaborate with local chapter
Clean Slate	Provider of MAT; collaborate on treatment coordination/cross referral

In Pittsfield and North Adams areas:

Brien Center	ESP, SUD provider; detox referrals to CSO CSP; Inpatient services; CBFS
North Adams Regional Hospital	Outpatient and specialty services; collaboration and coordination of care
The Louison House	N Adams family shelter
Berkshire Medical Center	McGee Detox; CSS; Inpatient and medical care coordination & collaboration
NAMI Pittsfield	Advocacy; cross referrals, resource library
Construct/Project HOME	Homeless/shelter support
Community Health Programs of Berkshire County	coordination and collaboration re: primary and specialty medical care; cross referrals; entitlement and insurance enrollment
Experience Wellness Center	Collaboration and coordination of referrals
Right Choice	Suboxone and Vivitrol provider; collaboration of treatment resources
MA Committee for Public Counsel Services	Legal support and public advocacy
Berkshire Community Action Council (BCAC)	Public entitlement enrollment; social service supports; collaboration and coordination of services
Kindred at Home	LTSS provider; home health aides; coordination of services

2. For all service areas, CSO will work with other service providers, the consumer advisory board, and community stakeholders to identify areas to strengthen relationships and expand connections to the community. BH CP Supervisors will engage in community outreach activities and be charged with following through with linkages to needed resources. Further planned Collaborations are described in 7.3.C.7.

3. BH CP staff will participate in regular staff meetings, of which community resources and connections to stakeholders will be regularly reviewed and shared. Supervisors also hold the

responsibility of reviewing community needs and collaborators. Resource guides will be made available at each site, and web based search libraries will be encouraged as resources.

7.3.C. COMMUNITY PARTNER SUPPORTS AND ACTIVITIES

CSO's vision and principles reflect commitment to community based care. CSO has experience in building new program models, experience that will allow us to expand our services on a rock-solid foundation of experience, tradition, expertise and readiness. The CSO philosophy is to provide services in natural settings whenever possible. Policies and procedures to support in-home and community based services include the regular outposting of staff to community sites, financial support for mileage reimbursement and portion of auto insurance related to business use; and written personnel policy and procedures that include home/community based service delivery locations. The following programmatic policies, procedures and activities will be incorporated into the contractual provisions of any agreement with ACOs and MCOs.

1. OUTREACH AND ACTIVE ENGAGEMENT

During initial engagement of each participant, the Care Coordinator will collect demographic information, risk factors, and locator information. Care Coordinators will have a high level of skill in soliciting information needed to locate an individual regardless of whether the person is homeless or living in transitory or vulnerable conditions. In addition, training is provided related to negotiation and sophisticated seek-and-find strategies for locating a difficult-to-reach individual to provide community based care and encouraging an individual to return for other clinic-based care.

Building on this initial engagement, Care Coordinators will foster continuous communication with participants by phone, email, text, and regular face-to-face contact to provide one-to-one support, remind participants of upcoming medical and behavioral health appointments, and make transportation arrangements. Because of the large number of individuals already served by CSO, we expect many of those referred for CP services to already be engaged with a CSO staff person. In those cases, a warm-referral introduction will be made by the primary staff at CSO to the Care Coordinator to ensure collaborative care and not duplication of effort.

Outreach to referred Enrollees will be aimed at contacting and helping Assigned Enrollees learn about CSO and the BH CP program. In order to achieve this aim, CSO will develop, implement, maintain, and adhere to a protocol for Outreach and Active Engagement of Assigned Enrollees, to be submitted to and approved by EOHHS.

We will contact the Enrollee within 30 days of ACO referral, arrange for a face-to-face meeting and will conduct a home visit or visit at a community venue (depending on Enrollee's preference) in order to actively engage the Enrollee. All activities conducted in relation to CP Care Coordination will entail a "warm handoff" in person by CSO staff to one another and to other providers and consultants involved in assessment, treatment planning, care coordination and service delivery.

CSO has specific expertise engaging with hard to reach individuals, including homeless members and individuals with SUD. Extensive training in EBP's such as Motivational Interviewing (MI) and Strength Based Case Management (SBCM) will be utilized to support staff in reaching and engaging such members. Creative approaches such as street based outreach, technology enhanced supports, and wraparound principles of persistence, trauma informed care, and empowerment will be utilized to ensure positive engagement.

Orientation: The CSO Care Coordinator will provide written information on the CSO program and how it works and will provide direct contact information. At this point, the Care Coordinator

will give the individual a clear and direct choice to opt out of the CSO program of supports as well as seek assignment of another provider. If the Enrollee opts to continue, he/she:

- Will be given a Consent for Participation form to sign, with an explanation from the Care Coordinator about what participation entails;
- Will be informed as to how CSO might use Protected Health Information and be given authorization forms to sign; and
- Will be signed up for Text4 Recovery (see Section 7.3.D) and will be educated on and signed up for the CSO Credible Patient Portal. Staff will train the member on access and use of the Portal.

Accessibility: CSO will provide care coordination and coaching services during times that ensure accessibility and meet the needs of the Enrollee to be served, including nights and weekend hours and at locations that ensure accessibility and meet the needs of the consumer population to be served. To the extent possible within the state Medicaid program CSO may provide transportation or transportation vouchers for Enrollees and will utilize mobile in-home, telehealth/telemedicine, and on-line connections to ensure that Enrollees have access to all services.

Retention and engagement in treatment is particularly difficult when participants experience co-occurring SUDs/SMI and other co-morbid conditions. To address this challenge, CSO employs a multidisciplinary approach, identifying participants at high-risk for relapse, maintaining close and continuous contact with participants, mitigating risks for drop out through effective transitional care, and engaging family members and other social supports as allies all part of our retention strategy. However, long-term engagement in care is built on the success of the initial identification and engagement process.

Thorough assessment and planning procedures as well as Care Team meetings will help identify individuals at high-risk for dropout and implement appropriate interventions in a timely manner. The MI approach to all Enrollee interactions focuses on building motivation to stay in treatment and the availability of integrated, accessible primary care, psychiatric services, and treatment ensures timely access to essential services in a single location. Family team meetings, when consented to and appropriate, will help educate family about how to best support their loved one in remaining in care and help them get the support and care they need.

2. Comprehensive Assessment and Person-Centered Treatment Planning

Comprehensive Assessment Process

Attachment: CSO Comprehensive Assessment is attached at the end of 7.3.C.

All new clients being referred for behavioral health care coordination will, at the time of first contact, receive a preliminary screening and risk assessment to determine acuity of needs. That screening may occur telephonically. The preliminary screening will be followed by: (1) an initial evaluation, and (2) a comprehensive person-centered treatment planning evaluation. Each evaluation builds upon what came before it. If the screening identifies an emergency/crisis need, appropriate action is taken immediately, including any necessary subsequent follow-up.

If the screening identifies an urgent need, clinical services are provided and the initial evaluation competed within one business day of the time the request is made. If the screening identifies routine needs, services will be provided and the initial evaluation completed within 10 business days. For those presenting with emergency or urgent needs, the initial evaluation may be conducted telephonically or by telehealth/telemedicine but an in-person evaluation is

preferred. If the initial evaluation is conducted telephonically, once the emergency is resolved, the Enrollee will be seen in person at the next subsequent encounter and the initial evaluation reviewed. Enrollees will receive the comprehensive person-centered treatment planning evaluation to be completed within 90 calendar days of the first request for services.

CSO will refine a Comprehensive Assessment tool to be approved by EOHHS. The current CSO Comprehensive Assessment is attached, and will be updated as required in the implementation phase of BH CP planning. The elements of this tool will be reflected in domains set up in the Credible health record so the Credible's Care Plan functionality can be used to contain the goals of the Treatment Plan and to track it's progress. In addition, CSO will use standardized and validated screening and assessment tools and, where appropriate, brief motivational interviewing techniques. CSO uses culturally and linguistically appropriate screening tools, and tools/approaches that accommodate disabilities (e.g., hearing disability, cognitive limitations), when appropriate. If initial screening identifies unsafe substance use including problematic alcohol or other substance use, CSO conducts a brief intervention and the individual is provided or referred to Behavioral Health Network for a full assessment and treatment.

The Care Coordinator will assemble a Care Team, a group of individuals that work with the Engaged Enrollee to identify the Enrollee's status on the domains below and any other issues the Enrollee feels are important.

Each Care Team member will have a defined role appropriate to his or her licensure or training and relationship to the Engaged Enrollee. CSO will document the names and contact information of each member of the Care Team which will be immediately available to the Enrollee/LAR, the PCP and all members of the Care Team.

The assessment will address:

- Immediate care needs;
- Current services, including but not limited to any care coordination or management services and any services being provided by state agencies;
- Medical history, family medical history, and medical needs;
- Medications;
- Ability to communicate concerns, symptoms, or care goals;
- Functional status, including needs for assistance with any Activities of Daily Living (ADLs);
- Self-identified strengths, weaknesses, interests, care goals, wellness goals and personal goals;
- Current and past mental health and substance use including treatment history (e.g. medication assisted therapy, detoxification, residential treatment);
- Accessibility requirements, including but not limited to preferred language and specific communication needs, transportation needs, and equipment needs;
- Housing and home environment, including but not limited to risk of homelessness, housing preferences, and safety;
- Employment status, professional interests, and professional goals;
- Current use of and goals for leisure time;
- Legal status for individuals involved in the justice system;
- Education;

- Income and financial support;
- Available informal, caregiver, or social supports, including peer supports;
- Risk factors for abuse or neglect;
- Food security, nutrition, wellness, and exercise;
- Advance directives status and preferences and guardianship status;
- Current and relevant acute care plans for medical and behavioral health conditions; and
- Other domains and considerations identified by EOHHS as required elements.

The interdisciplinary Care Team is composed of individuals who work together to coordinate the medical, psychosocial, emotional, therapeutic, and recovery support needs of Enrollees. The Care Team includes the Enrollee, the family/caregivers, the adult's family to the extent the Enrollee desires, and any other person the Enrollee chooses. All treatment planning and care coordination activities are person-centered and family-centered. The Care Team includes a Registered Nurse to review medical and medication history and a Clinical Care Manager (who will be a LICSW or LMHC) to give final review and approval of the Comprehensive Assessment. The Care Team as a whole will give a final review of the Assessment. The CSO Care Team will complete a Comprehensive Assessment within 3 months of the Enrollee's consent to participate in support services, which will be submitted for approval by the Enrollee's ACO PCP or designee, and the Enrollee/legally authorized representative (LAR) and state agency representatives that are involved in the individual's case management or care.

The comprehensive assessment is updated by the Care Team, in agreement with and endorsed by the Enrollee and in consultation with the primary care provider, when changes in the consumer's status, responses to treatment, or goal achievement have occurred.

Person-Centered Treatment Plan

Treatment planning is carried out by the Care Team including the Enrollee and desired caregivers and includes needs, strengths, abilities, preferences, and goals, expressed in a manner capturing the Enrollee's words or ideas and, when appropriate, those of the family/caregiver. The treatment plan is comprehensive, addressing all services required, with provision for monitoring of progress towards goals. The treatment plan is built upon a shared decision-making approach. Where appropriate, consultation is sought during treatment planning about special emphasis problems, including for treatment planning purposes (e.g., trauma, eating disorders). The treatment plan documents the Enrollee's advance wishes related to treatment and crisis management and, if he/she does not wish to share their preferences, that decision is documented. The Care Plan will address the following components:

- Types, frequency, and duration of services needed by the Enrollee
- How services and care will be integrated and coordinated among the Enrollee's health care providers, Recovery Support Navigators and other community and social service providers;
- The individual's long and short-term goals, including wellness and social goals and specific barriers to achieve those goals;
- Crisis/Safety Plan that carefully considers risks to the individuals optimal health and well being and offers prevention/intervention strategies; and
- Any cultural or ethnic considerations and individual's preferences in type of support services or in how services are delivered.

Each element will be documented and entered into the Enrollee's health record in Credible where it can be made available through electronic information exchange. The Care Plan itself may be formatted as a video, written or recorded in a preferred language or presented in another digital format in addition to a written plan, according to the individual's need or preference. The Enrollee will be asked to formally approve the Plan in writing before it goes to the ACO's PCP for approval.

The Care Coordinator will share the Treatment Plan that has been approved by the Enrollee, CSO RN, CSO Clinical Care Manager and the Enrollee's PCP (or designee) with parties who need the Plan in connection with their treatment of the Enrollee, provision of coverage or benefits to the Enrollee, or related operational activities involving the Enrollee, including members of the Engaged Enrollee's Care Team, ACO, or MCO, and other providers who serve the Engaged Enrollee, including state agency or other case managers.

The Care Team will re-convene and review the individual's Care Plan every six months or more frequently if obstacles or barriers arise to prevent achievement of the Enrollee's stated goals or if there has been a change in the functional or heath status of the individual. The Care plan will be review in the event of a request by the Enrollee, family member, clinician, advocate, state agency case manager or informal caregiver.

All treatment planning and care coordination activities are person-centered and family-centered and aligned with the requirements of Section 2402(a) of the Affordable Care Act. All treatment planning and care coordination activities are subject to HIPAA (Pub. L No. 104-191, 110 Stat. 1936 (1996)), 42 CFR Part 2, and other federal and state laws.

Once the Treatment Plan has been approved by the Enrollee or LAR, the Plan will be submitted to the PCP/ACO for approval.

Safety Planning: Our concept of safety planning is dynamic rather than the conventional—and static—"safety contract." Effective safety planning involves multiple staff, family members and collateral supports in which the all parties have a role in supporting and monitoring safety and mitigating risk. To address higher risk, we provide layers of support and oversight for our staff including collegial, supervisory, psychiatric and administrative. CSO staff share safety plans with appropriate collaterals and key stakeholders in the case. All staff have access to psychiatric consultation as a part of doing regular business as well as on an emergency basis, accessed through clinical supervisors and a 24/7 on call psychiatrist as part of the ESP team.

Duplication of effort/services: Where appropriate, CSO use an existing Comprehensive Assessment for an Enrollee rather than conducting a new Comprehensive Assessment, where the existing assessment has been conducted within three (3) calendar months prior to the individual's assignment. Likewise, existing Treatment Plans will be reviewed for responsiveness to the Comprehensive Assessment and for current relevancy for the Enrollee's status.

3. Care Coordination and Care Management

Care coordination services will assist individuals in sustaining recovery, and gaining access to needed medical, social, legal, educational, and other services and supports including meeting basic social needs. As part of its Wraparound philosophy, CSO coordinates care across the spectrum of health services, including access to behavioral health care, as well as social services, housing, educational systems, and employment opportunities as necessary to facilitate wellness and recovery of the whole person. Care coordination activities are carried out in keeping with the

Enrollee preferences and needs for care and, to the extent possible and in accordance with the Enrollee's expressed preferences, with identified family/caregiver and other supports.

The responsibility of CSO care coordination is to be informed by community providers and resources, and to reach out and connect in meaningful ways with other sources of service and link with them, so that information is communicated appropriately, consistently, and without delay and patients needs are fully addressed. CSO will organize care activities on behalf of Engaged Enrollees to facilitate the appropriate delivery of health care services and improve health outcomes, including organizing care and facilitating communication across medical, behavioral health, LTSS, social, and pharmacy providers, agencies, and supports.

Care Coordinators, will "meet participants where they are at" both physically and emotionally, providing frequent, mobile, one-to-one support in a range of community and care settings, including motivational, relapse prevention, harm reduction counseling and crisis intervention measures to maintain participant contact and facilitate engagement or reengagement in any level of care that is of interest to participants to keep them connected to services, and maintain participant safety.

When participants are referred to other service providers, the Care Coordinator will determine whether it is appropriate to accompany participants to provide support, translation, and advocacy working one-to-one with participants to help them build their own capacity for self-management. (Of course, this will only be done if the Member wants this level of support.)

Peer coaches will be hired as care coordinators – and can be matched to clients based on best fit, appropriateness, services needed and the capacity of the peer to offer those. Peer services that will be available as appropriate include peer crisis support services, peer bridge services to assist individuals transitioning between residential or inpatient settings to the community, peer trauma support, peer support for older adults or youth, and peer-led wellness and skill development groups.

Communications: Each external agency who may provide services to the Enrollee identified by the Care Team as part of the Treatment Plan will be contacted by the CSO Care Coordinator to discuss the services needed by the Enrollee and to plan how best to make the warm hand-off from the Care Coordinator to service providers, including who at the direct care agencies will be the ongoing liaison to CSO's BH-CP. The duly approved Treatment Plan will be shared with parties who need the Plan in connection with their treatment of the Enrollee, provision of coverage/benefits to the Enrollee and the Care Coordinator will personally discuss their role in the Plan with them. The Plan will be shared also members of the Enrollee's Care Team, ACO, or MCO, and other providers who serve the Engaged Enrollee, including state agency or other case managers. Again, the Care Coordinator will be the designated liaison for ongoing contact about the Enrollee.

As described in Section 7.2.E and 7.3.D, CSO's system is able to interface with external providers, ACOs and MassHealth/TPA to provide and receive information electronically (in HIPAA and 42 CFR compliance) on an individual's Care Plan progress against its goals—service utilization, individual demographics, medical history, current medical status, problem lists, medication information, utilization of other service providers and community supports as well as documentation of these elements.

In terms of care management, CSO will develop a collaborative process of assessment, planning, facilitation, care coordination, evaluation, and advocacy for options and services to

meet an individual's and family's comprehensive health needs through communication and available resources to promote quality and improve health outcomes. Care will be managed among CSO, community support settings, labs, specialists and hospitals. High-intensity care management will provide supports for persons deemed at high risk of suicide, particularly during times of transitions such as from an ED or psychiatric hospitalization.

Our experience has shown us that, in order to be effective, Community Partner services must be assertive—continually reaching out to other care team members and providers for updates on their involvement with Members, to share information that CP staff has gathered and identified as important to share, to prompt other providers about reports or eligibility changes, etc. The CP role must be an active leadership role in order to be effective in system transformation. It is important to note that this leadership function is *facilitative,* not authoritarian.

4. CARE TRANSITIONS

The CSO Care Coordinator will ensure that he/she is notified if the Enrollee is hospitalized for any reason or if there is a major change in the individual's treatment setting (e.g. inpatient, partial hospitalization, crisis/respite, rehabilitation facility, residential treatment, SNF, etc.) CSO has, or will have agreements with hospitals, including emergency departments, residential crisis settings, medical detoxification inpatient facilities and ambulatory detoxification providers. This includes procedures and services, such as peer bridgers, to help transition individuals from the ED or hospital. CSO will track when Enrollees are admitted to such facilities as well as when they are discharged.

CSO will work with ACO partners to set up notification systems between CP and ACO for all hospitalizations/discharge and follow-up. In the service areas where CSO is the ESP, we can track and notify any client hospitalized for psychiatric reasons. The CSO Business Systems team will work on an electronic notification exchange system that will include other facilities in addition to hospitals.

Comprehensive Transitional Care will be provided by the Care Coordinator with support from the Care Team, the Nurse, and the Clinical Care Manager to effectively support participants in mitigating crises, accessing appropriate levels of care, moving successfully between care environments and incorporation of strategies to reduce and prevent future hospitalization and Emergency Room utilization. Using ICM and medical interpretation, the Care Coordinator will ensure ongoing communication between hospital providers and Care Plan clinicians will provide on-site clinical services and consultations. The Care Plan will review all discharge summaries, conduct participant assessments, and develop a short-term transitional plan to address immediate needs related to housing, transportation, pharmacy, and family/other supports to assure participant will be capable of managing their care within their home environment. The Care Team will review and revise the PCTP, with emphasis on goals related to disease management and crisis prevention to reduce or prevent future hospitalizations, and will focus on increasing participant, and family caregiver skills through family support services, self-management strategies and Care Coordinator coaching and support.

CSO will make and document reasonable attempts to contact all Enrollees discharged from these settings within 24 hours of discharge. For anyone that may be a potential suicide risk, the care coordination agreement between these facilities and CSO includes a requirement to coordinate consent and follow-up services with the consumer within 24 hours of discharge, and continues until the individual is linked to services or assessed to be no longer at risk. The Care

Coordinator will conduct a face-to-face visit with the individual within 3 days of discharge from one of these settings and will initiate with the individual and his/her Care Team a review and update of the Treatment Plan.

5. MEDICATION RECONCILIATION

As part of care coordination, CSO make reasonable attempts to determine any medications prescribed by other providers for Enrollees and, upon appropriate consent to release of information, to provide such information to other providers if necessary. For each Enrollee who is discharged from an inpatient stay, CSO will conduct medication reconciliation within three (3) business days of the date of discharge. The CSO RN on the Care Team will conduct the medication reconciliation as follows:

- Contacting the Engaged Enrollee's PCP to verify that medication orders from discharge are appropriate;
- Verifying that medication orders are filled accurately;
- Ensuring that the Enrollee understands specific medication administration;
- Checking for any discrepancies and issues of medication non-compliance, particularly in cases of multiple prescribers;
- Supporting the Enrollee's adherence to medication regimen;
- Identifying supports that are available or could be made available to support the Enrollee in medication administration.
- For clients participating in a program with MAP, the nurse will collaborate with the MAP provider to ensure that communication between the prescribing physician and the MAP provider has been accurate and complete.

For enrollees discharged from an inpatient stay, CSO's CP team will arrange a nurse visit to the patient's home within 72 hours of discharge. If appropriate, a care coordinator will accompany the nurse to support engagement and prepare to provide follow up support. The nurse will have already reviewed discharge orders and have contacted the enrollee's PCP to have an accurate list of medication orders. S/he will reconcile the medications in the home with the orders. If there are any discrepancies, s/he will contact and review the situation with the prescriber and the pharmacy to resolve the discrepancy and either adjust the records (if, for example, 10 mg has been prescribed and 20 mg has been dispensed and patient has been re-instructed to take a half dose) or secure the appropriate medication.

The nurse will discuss each medication with the patient, to ascertain that the patient understands the purpose of each medication and the correct schedule and procedure for taking the medication (e.g., time of day, with or without food, etc.). If s/he determines that the patient will require further support to correctly take the medication, the nurse and care coordinator will make a plan for adherence to the medication regimen. Such support might come from the care coordinator, another staff member from the CP team, a household member, or another provider. The plan will be confirmed with any other involved party and documented. The plan will be entered in the enrollee's CP record and distributed to Care Team records. Other Care Team members may be consulted, as appropriate, about the plan for providing ongoing medication support.

6. HEALTH AND WELLNESS COACHING

Individuals with a diagnosis of mental illness not only suffer significant disparities of health status, especially for chronic health conditions, but also derive great physical and psychological benefits from a shift to healthier life habits. Health promotion is a key principle in our Wellness programming and is realized through comprehensive health education on the most common issues that act as barriers to our clientele's good health and well being. Sessions and activity groups are coordinated and scheduled at CSO and community sites and attendance will be encouraged and promoted for each Enrollee. CSO is currently utilizing the evidence based InShape model of health and wellness coaching, as described in 7.2.D.2., along with general health and wellness initiatives integrated into programming.

The CSO Wellness Initiative focuses on good nutrition, regular exercise, stress reduction techniques and symptom management support as components of a comprehensive wellness program. There is a focus on teaching members the behavioral skills to manage their chronic medical condition, and encourages reduction of high risk behaviors, establishment of linkage to accessible health promotion activities, and the integration of health and wellness goals into each members Person-Centered Treatment Plan. The CSO initiative provides a range of wellness activities (fitness, nutrition counseling and education, yoga, acupressure and smoking cessation supports). Wellness activities will include tobacco cessation groups, stress management, nutrition, goal setting, hiking and WRAP groups. Peer Mentors will be "exercise buddies" and trainers, perform outreach and follow up with other individuals and work with Enrollees on issues related to safe housing environments and stability within their community. In this way, wellness is fostered through trusted peer support relationships. CSO has an agency-wide smoke-free policy for all programs. Where meals and snacks are provided, they are highly nutritional; junk food is discouraged in all programs

Fitness: CSO operates a number of health and fitness programs in its Green River and Orange Clubhouses, on-site in the Greenfield outpatient center and has collaborative relationships with the Greenfield and Athol YMCAs. CSO has set up a system of YMCA membership that supports the use of facilities by up to 15 clients at a time with staff supervision. "Regular use" individuals can either opt to apply for their own YMCA membership and apply for the financial aid or can go to the YMCA with a peer support staff through the Wellness Program or with a peer support staff. Walking groups utilizing community trails are conducted at all of our site locations, including out of our Pittsfield, Greenfield, Northampton and Athol offices.

CSO Wellness Coordinators will conduct wellness and health coaching that is easily accessible and responsive to the Enrollee's Care Plan goals. This may entail fitness programming in the community at CSO's wellness facility, and/or enrolling in InSHAPE. The Enrollee will make choices among the available fitness options that are deemed to be most likely to lead to Plan goal fulfillment. The Wellness coach will link the Enrollee to community fitness programming which may include being mentored by a Peer Coach. The use of smart phone app's to track progress and provide motivational messaging will be encouraged and part of the training for individual's wishing to enhance their physical activity at any level. CSO Wellness Coordinators will work with our ACO partners to encourage fitness tracking incentives through the flexible dollar pool, such as distribution of Fitbits and pedometers to members.

Smoking Cessation: CP staff will use a Motivational Interviewing approach to discussing tobacco use with clients. As appropriate, they will be referred to smoking cessation programs, for evaluation by their PCP for medication-assisted cessation, to other support groups (e.g., NicA)

and/or to smoking cessation groups held by CSO at the clubhouses in Greenfield and Orange. It is important to recognize that, as with other substances, nicotine users are likely to move through various stages of change regarding their addiction. Our staff must differentially refer for care, depending on the client's readiness for change.

Health Education Sessions: These sessions run by the CSO Nurses will include topics like symptoms management, medication education and nutrition. Care Coordinators and Peer Coaches will offer groups to help members develop and enhance skills in money management, coping and stress management, interpersonal relationships, and self-advocacy.

All Health and wellness goals will be identified with the enrollee at onset of BH CP engagement, and goals updated with member guidance throughout the members participation. Health and Wellness goals will be integrated into the Person Centered Treatment Plan, and reviewed and updated as part of the regular Plan review. Progress on physical health indicators will be tracked and documented in Credible.

7. CONNECTION TO COMMUNITY AND SOCIAL SERVICES

CSO will develop and maintain collaborative relationships with community-based organizations in the five Service Areas in order to make referrals of Enrollees to the community support they need. We will maintain collaborative relationships with and have knowledge of the services and specialties offered by local providers, specifically BH and LTSS providers in the Service Areas; social and Flexible Services providers in the Service Area; and Primary Care Physicians and other specialists working with Enrollees.

Planned Collaborations: CSO has had a long-term partnership with the Department of Mental Health and has worked closely with the Department of Children and Families and Department of Public Health. These close relationships help ensure positive community-based outcomes for people who access services at more than one agency. We have experience in forming IAP treatment teams including stakeholders in agencies, community organizations and the individual's natural support systems and will continue this process as a Community Partner.

CSO maintains active linkages with other mental health, substance use, primary care, hospitals and ancillary services providers in all the targeted service areas. All of the collaborations described below and in 7.3.B will operate to support the Community Partner Program, along with Behavioral Health Network as our Material Subcontractor. CSO's experience in wraparound, person-centered programming, peer-to-peer support, community coalition building, and network development will contribute to a responsive and effective system of wraparound support.

CSO plans to connect Enrollees to social services and community resources by using its wraparound and warm handoff strategies. We have specific procedures for communication between levels of care, implementation of crisis plans and access to information across programs utilizing electronic medical records, voicemail, email and fax. Many of our community collaborators, too, have extensive experience in wraparound; we share a common perspective and underlying philosophy about service delivery. As part of wraparound, CSO actively moves individuals "up and down" service levels based on need. Not all Enrollees will need the same set of services in the same sequence.

CSO Care Coordinators, in collaboration with the Clinical Care Manager or the primary treatment provider, will screen all Enrollees for social service needs during initial engagement and Assessment, and may refer Enrollees to any of the entire range of external community-based programs. The Clinical Care Manager will utilize the "Assessed Needs Checklist" within the

MSDP Comprehensive Assessment to guide discovery and screening for social services and flexible supports needs of the Enrolled member. These range from job development and coaching to education to psychotherapy and medication services. In our service areas we are connected to a host of community options for ancillary or enabling services through referral: housing, legal services, child care, YMCAs, etc. CSO has a history of active linkage to wellness and support services including securing YMCA memberships, representation on housing boards, and the use of recovery groups. Our staff are skilled in assessing eligibility for other benefits: housing, child care vouchers, food stamps, fuel assistance, benefits eligibility, violence support programs, wellness programming, etc. In addition, individuals will have access to the array of CSO's programs.

Based on the individual's Treatment Plan, the Care Coordinator will identify community-based, social resources that will support the health and well being of each Enrollee. These may include:

- Services that support transitions from institutional settings into community settings;
- Home and Community-Based Waiver Services to divert individuals from institutional placements;
- Housing audit to maintain a safe and healthy home environment;
- Fitness and nutrition programs;
- Housing placement and supportive housing programs;
- Support programs for survivors of violence (crime, sexual assault domestic violence, etc)
- Flexible Services
- Other individual goods and services that address the Enrollee's needs and provide direct benefit and support specific outcomes related to the health and safety of the Enrollee in his or her home or community.

The Care Coordinator will provide information to each Enrollee on the available community-based, social and Flexible Services and assist each individual in accessing community-based and social services and resources as well as recommend Flexible Services to the Enrollee's ACO. We will ensure a continuing connection by monitoring and documentation of community service utilization in the Care Manager fields of the Credible electronic health record.

CSO will coordinate the provision of community supports with any other case management services an Engaged Enrollee receives to ensure that the CP activities supplement, but do not duplicate, other services provided. In particular, we will coordinate with each Enrollee's CBFS provider, if any, to inform the Enrollee's CBFS provider about the Enrollee's routine and specialty medical care including identifiable symptoms that may require routine monitoring and to develop the Enrollee's crisis plan to prevent use of emergency departments, hospitalizations and criminal justice involvement and coordinate activities for improving the Enrollee's health and wellness so that CBFS providers may reinforce the Enrollee's health and wellness goals

We will work closely with state agencies regarding services, care coordination, and agency case management as needed. This may include the Executive Office of Elder Affairs (EOEA), the Department of Children and Families (DCF), the Department of Mental Health (DMH), the Department of Developmental Services (DDS), the Department of Public Health (DPH), the Massachusetts Rehabilitation Commission (MRC), the Massachusetts Commission for the Deaf and Hard of Hearing, and the Massachusetts Commission for the Blind (MCB).

We will collaborate on individual service issues and treatment planning very closely with the *ServiceNet* CBFS Teams, whose members are "regular visitors" to the Respite program in Greenfield and Northampton, and with the *Brien Center* CBFS teams in Berkshire County. This will become an even more powerful collaboration as we deal collectively in a more structured way with the CBFS Teams. In addition, we have well established working relations with the key agencies in Franklin County and North Quabbin including the *ServiceNet* TAY program for young adults, *Life Path* (the former Franklin County Home Care) for elders, *ServiceNet* Emergency Shelter and Transitional Housing, *NAMI* for family members of individuals with SMI, *STAVROS* for individuals with physical disabilities (CSO has been formally recognized by STAVROS for having accessibility within our Franklin Respite Program), and the *Community Substance Abuse Clinic* and *Total Wellness Centers* providing recovery services for individuals with substance use, dependency or co-occurring disorders--all in addition to the collaboration with BHN as our Material Subcontractor.

We also have formal affiliations with Baystate Franklin Medical Center, Athol Memorial Hospital, Cooley Dickinson Hospital and Berkshire Medical Center. In Berkshire County, we have a close working relationship with the Brien Center for detox services, Emergency Services, and collaboration around CBFS clients. We are a member of the *"Collaborate This!"* collaborative in the Berkshires, which includes the Christian Center, Committee for Public Counsel Services, DMH, Advocacy for Access, the Brien Center, Smith College, AdLib and BCAC. We recently held a "Roadmap to Services" event at the Christian Center at which we coordinate services for potential clients, accept referrals, and conduct intakes on site.

CSO is a primary referral source with regular meetings for aftercare planning and step-down services with *Baystate Franklin Medical Center* Partial Hospital Program and has direct admission privileges with prearranged intake to that program. *Providence Hospital Inpatient facility:* CSO regularly receives referrals and attends discharge planning meetings about treatment and discharge plans for shared clients.

We have an Affiliation Agreement with *Western Mass Training Consortium's* Recovery Learning Center to provide peer specialist training and a client support network for ESP and Respite Services. *United ARC:* CSO provides CCS services to clients with developmental disabilities who are also mentally ill, in collaboration with the ARC. CSO frequently serves TAY clients in collaboration with *Dial-Self* in order to keep these youth out of homeless shelters.

To ensure BH CP staff are familiar with all available community resources that will benefit Enrolled members—including knowing community organizations and understanding the services they provide—CSO will (1) continually update our electronic resource directory; and (2) use supervisory and program meeting structures to continually share information. Care Coordinators will participate in regular staff meetings, at which community resources and connections to stakeholders will be regularly reviewed and shared. Supervisors also hold the responsibility of reviewing community needs and collaborators as part of their job descriptions. Resource guides will be available and web based search libraries will be encouraged as resources.

CSO staff are accustomed to thinking about clients' needs in a broad way, and not just limited to potential clinical interventions. We have experience working with DMH and DCF flex dollars and flexible supports and negotiating on behalf of clients needs to support transitions, client self-management and community tenure. We will seek to establish communication and administrative systems with each ACO that include appropriate controls, but minimal barriers, to appropriate and expeditious use of flexible funds and flexible supports for our Members.

7.3.D. INNOVATIVE TECHNOLOGIES FOR SERVICE DELIVERY

Through a SAMHSA HIT grant, CSO developed a set of technology tools to support clients in a variety of recovery programs. These have achieved national recognition and were presented in a 2014 White House Drug Conference.

Video conferencing: The use of videoconferencing for treatment allows CSO clinicians to provide two major types of services from any of our outpatient treatment hubs to any other CSO site in outlying areas: Direct clinical services and training/supervision. The interventions will involve therapy directly with clients. In addition, we will establish support groups targeted toward those in treatment and recovering from substance abuse for interactive televising. Specialty consultation for clinical care management staff and care coordinators can be accessed throughout the region utilizing this equipment.

Text4Recovery - Use of technology to enhance treatment collaboration: We have a text-messaging platform to serve multiple functions: 1. Chat: patients send in a question and have it answered by a clinician or case manager. 2. Motivational messaging: A motivational message is sent out to all subscribers on a daily basis. This messaging serves to enhance engagement and maintain connections to clients. To protect patient confidentiality, questions sent via text come to a password protected on-line platform. Text messages can either be sent at the time of writing or be programmed by staff for delivery at a predetermined date and time through Credible.

Web Site services and interactive health portal:

Resources Inventory: Listings of services, support groups, and personal advocacy resources in catchment area communities; CBOs for housing employment, legal services, etc.; schedules and directions to NA/AA meetings, inspirational literature; will have semi-annual updating.
Linkages: Links directly to recovery-related Websites and discussion groups, on line meetings, community based recovery supports.

Credible Client Portal: In the Credible Client Portal, a client, family member, or other client contact, with appropriate consents can view different parts of the client's record such as treatment plans, service history and summary, medications, and family members. Using the Messaging function in the Client Portal, a client user can send a refill request for a current medication, a message about a scheduled appointment, or a general message. The Client Portal is slated for innovations that will allow us and clients to update their demographic information, contacts, complete assessment tools, complete administrative paperwork, participate in Quality Assurance surveys, and receive clinical support documents from their providers.

Credible Care Management Tools: The Credible Care Management tools are described in 7.2.E. They will enable multiple members of the Care Team track the Care Plan and progress toward goals and provide input. This systems allows staff to reconcile medications for prescribing staff. It provides us with the ability to report on internal and external case coordination.

Smart Phone and Tablet/iPad apps: The Care Management team and Wellness coordinator will utilize appropriate, existing smart phone and tablet app's to enhance motivation for adherence to programs and help encourage interactive participation in health and wellness activities; activities related to self-management of symptoms and behavioral tracking; and other related tools. The Wellness coordinator will keep an ongoing "top list" of app's to be shared with Care Coordinators, Nurses, Clinical Care Managers and Enrolled Members so there is consistency in training and tracking of recommended tools.

7.3.E. PERSONNEL AND STAFFING

Programmatic Organizational Chart and Job Descriptions for program staff are attached at the end of 7.3.E.

CP Program Director will be a full-time position in the program; a licensed behavioral health clinician with significant management experience in community-based programs, demonstrated skill at inter-agency collaboration and a strong commitment to the CP role. The Director will supervise all other managers in the program.

Medical Director will be a psychiatrist assigned 0.2 FTE to provide case consultation to teams or individual CP staff concerning Members, as well as participating with the CP management team in establishing policies and procedures for the programs.

Nurse Managers – We will open the program with 3 FTE nurse managers, shared among the 5 service areas, proportionally to volume. We will increase to 4 FTEs by the end of Year 1 and to at least 4.5 FTEs during Year 2. These staff will have at least an RN license and may have additional degrees or credentials.

Outreach Nurse – At the start of the program, we will have one full-time nurse to do transition-of-care outreach to Members discharged from inpatient care; if volume indicates, we will add to this position over the course of the program. In times when the outreach nurse is absent or volume is unpredictably time, the outreach nurse will be backed up by the nurse managers.

Clinical Care Manager (CCM) Supervisor – We will start the program with one FTE CCM supervisor and add a second supervisor in Year 2. These individuals will be senior licensed clinicians, with supervisory experience.

Clinical Care Managers – At the start, we will have 4 CCMs, adding staff throughout Year 1 to meet demand. We expect to have 10 FTEs by the end of Year 1 and add 2 more FTEs during Year 2, continuing at that level through the 5-year contract period unless volume requires an adjustment up or down. CCMs will meet the license and other credential requirements of Attachment A, as amended.

Care Coordinator/Peer Coach Supervisors – We will open the program with 2 FTE supervisors, adding a third FTE in Year 2. These supervisors will be Masters-level behavioral health clinicians with experience supervising para-professional staff in community-based services. They will also have training specific to supervision of peer staff.

Care Coordinators – We will open the program with 12 Care Coordinators, adding staff throughout Year 1 to reach 27 FTEs by the end of Year 1. We will continue to add staff through Year 2, reaching up to 35 FTEs if volume requires. This level of staffing will remain through the 5-year contract period unless volume requires an adjustment up or down. Care Coordinators will individuals who are trained in working with adults who have SMI and/or SUD. They may have experience as Community Health Workers, outreach workers, CSP workers, recovery coaches or related work.

Peer Coach is a term we use broadly to include any para-professional staff who brings his/her lived experience to the work of supporting clients. They may serve as recovery coaches, wellness coaches, crisis or trauma specialists, or more generally as Care Coordinators. We plan to open the program with 4.5 FTEs and add staff during Year 1, ending with at least 8 FTEs. During Year 2 we expect to continue to add peer staff, reaching 9.5 FTEs. We will retain a flexible roster of Peer Coaches, depending on the availability of qualified candidates for hire (i.e., some of the Care Coordinators indicated above may be peers, so that we have more peers, but the same combined number of FTEs

The Director will also provide individual or small group supervision to the managers on a periodic basis, with a schedule that fits the program's and staffs' needs. The Director, in turn, will be supervised by CSO Vice President Sandi Walters, LICSW. Ms. Walters will also attend the CP Management Team meetings as the prep begins, in the early phase of operations, and intermittently as appropriate both to monitor the ongoing work and to help address specific issues that may arise. Ms. Walters will be easily accessible to the Director at all times by cell phone, text and email.

Staff Supervision: Each supervisor will be responsible for overseeing assigned staff in two or three service areas. They will be physically present at each assigned site on at least a weekly basis—adjusting their schedules to accommodate volume of staff and cases and any particular circumstances that warrant a greater or lesser volume of supervision (e.g., seasoned staff v. less experienced staff).

The CSO supervision process includes skill assessment, individual and group sessions reviewing current work, coaching, records review, grand rounds participation, and probationary period performance reviews, followed by annual performance evaluations. There are regularly scheduled team meetings, at least monthly, for collaboration and coordination among all BH CP staff. It is expected that there will be regular ad hoc team meetings and dyad supervision between Care Managers and Care Coordinators to collaborate on shared cases.

Performance Improvement coaching is a tool that may be used to identify performance deficiencies and specify corrective actions to facilitate that employee's improvement and, hopefully, his or her ultimate success within the organization. Performance reviews are used not only as a step in performance evaluation, but also to jointly create performance goals and professional development plans for all staff relating directly to needed core competencies.

Staff Recruitment and Retention

Beginning immediately at the notification of award, CSO will begin aggressive recruitment strategies to fill all BH CP positions. Recruiting will begin with Leadership positions, and move to recruitment of direct care and nursing positions over the initial ramp up period. Our goal would be to have the base staff in place at least 30 days prior to accepting assignments, to ensure adequate time for orientation, training, community outreach and policy and procedure development. We are accustomed to staffing to volume after program start-ups, and will closely monitor volume of assignments, referrals and need for adding staff throughout the life of the BH CP program, adjusting upwards or downwards accordingly.

Recruitment strategies include:

- Internal promotion and advancement opportunities for current staff, especially those already trained in the Integrated Care and Care Coordination modules;
- Web-based classified advertising (this includes Indeed.com, Craigslist, and industry-related websites like National Council for Behavioral Health, NQCC and Human Service Forum). We have had very good experience in 2017 with an enhanced presence on Indeed.com. We intend to replicate this strategy that has been used agency-wide, specifically for the CP program during the prep phase and Year 1, when we will be continuously recruiting a large number of staff. Our budget provides for this enhanced cost of online recruitment.
- CSO website – vacancy posting and online application
- Online and on-site position vacancy postings at area colleges and universities
- A robust internship program – CSO has approximately 20 interns at any given point in time, which results in hiring of many interns upon successful completion of internship and schooling.

- Tuition reimbursement for CSO staff to pursue advanced degrees, with a commitment to stay at CSO for a minimum period of time post-completion.
- Robust training availability, including free CEU's for social workers, LMHC's and LMFT's.
- Word of mouth and employee referral bonus – mostly from employees (internal referrals, including a referral bonus paid to CSO employees who refer a candidate who is hired for targeted positions).
- Job fairs and college recruitment events;
- Use of specialized recruitment firms for targeted positions (ie; Nurse managers, etc).

CSO has a system of "growing our own" clinicians and conducting aggressive recruitment of qualified clinicians and staff. Our first priority is to promote from within so that supervisory staff are oriented to CSO and steeped in its philosophy. We also provide an extensive training program to prepare staff to work in their programs. CSO has developed a cross-training and resource sharing strategy of training outpatient and CBHI clinicians for crisis work to add depth of capacity and flexibility in staffing patterns.

CSO has an agency-wide Internship Program. Currently we have formal intern placement agreements with over 10 area Colleges and Universities. We have up to 20 second year Masters level interns and multiple PhD candidate interns at any given point in time serving placements within our Outpatient, Family Support and Crisis services programs. We have a history of retaining over 70% of our interns for permanent employment in CSO programs.

CSO has a long history of recruiting clinical and direct care staff that represent the population we target both culturally and with expertise in areas of trauma and working with high risk Members. We also observe a policy to recruit and promote from within the organization. Generally we give preference to applicants who have lived experience. Many CSO staff live in the community they serve, and are aware firsthand of the challenges and opportunities that our clients' face. CSO recruits staff qualified to work with culturally and linguistically diverse people, and we emphasize hiring staff that mirror the cultures and languages of families in the program.

Staff retention strategies: CSO has been very successful in retaining staff. Many of CSO's current staff have longevity with the program and come to us with previous experience. Most of our current supervisory team have been with the agency for over 10 years, with several over 15. Our staff tenure rate has steadily increased each year over the last 5 years.

CSO's employs innovative as well as traditional retention strategies. Our extensive training program facilitates the acquisition of new skills and certifications in order that staff may seek higher levels of professional attainment. Cross training is one means of creating flexible staffing resources. Our staff can move from program to program and have found it an excellent strategy for professional development. Being part of a supportive team environment contributes to high staff morale. CSO offers a competitive pay scale and generous benefits compared to other agencies in the region. CSO attends to staff morale with incentives and financial support for further professional education and an employee recognition program, awards and events.

CSO's track record of staff continuity supports program stability and consistency in staffing patterns and scheduling. CSO invests in benefit structures and morale activities to encourage retention. Staff have generous time off policies including vacation, personal and sick leave; vast training opportunities (over 450 hours of on site, free training with free CEU's was offered to staff last year); generous staff referral bonus; guaranteed annual salary increases; premier health and dental plans paid by the agency at 75%; training and tuition reimbursement opportunity; on

site morale budgets; agency-wide morale activities like company picnics and a staff appreciation celebration with Annual Staff award honorees; and a culture of continuous quality improvement that is invested in staff and consumer feedback and multi-level QI workgroups. Over 60% of CSO's current management team was derived from internal promotions.

Staff Training

All newly hired staff at CSO undergo both group and individual new hire orientation that includes topics such as agency history, mission and values; orientation to CSO programs; ethical and legal compliance; policies/procedures; benefits overview; HIPAA; safety.

In addition to the general new employee orientation, all CP staff will go through an exhaustive training that includes program specifications and requirements; Credible orientation and utilization; conducting comprehensive assessments; Individual Action Plan and the role of the Care Team; Risk Management and safety planning; area specific community resources; Principles of Rehabilitation & Recovery; Peer Support; Engagement, Building Relationships & Boundaries; Cultural competency and serving linguistic minority populations (including Deaf/Hard of hearing); and the four CSO Integrated Care Modules (see below), and Nonviolent Crisis Intervention using CPI (Crisis Prevention Institute).

CP staff will also be encouraged to attend EBP trainings such as Motivational Interviewing, Seeking Safety, SBIRT administration and interpretation, and others as offered.

CSO assesses the skills and competence of each staff member and, as necessary, provides in-service training and education programs. Our Human Resources department has written policies and procedures describing CSO's methods of assessing competency and maintains documentation of the in-service training provided to each employee. CSO documents in the staff personnel records that the training and demonstration of competency are successfully completed.

CSO has implemented an innovative staff training program for all CSO staff. I*ntegrated Health Treatment Education and Training* (IHTET) is a program of education and training to develop general skills for mental health practitioners/professionals in engaging patients, promoting their self-efficacy to improve their own health, using general medical knowledge to be able to connect them to appropriate services, to address questions and to support client-directed integrated treatment planning that include physical health and wellness goals. BH CP staff will be required to attend all of the IHTET modules, described below, as part of their orientation and ongoing training.

The modules of the IHTET program are:
Module I: Introduction to Integrated Behavioral Health Practice
Module 2a: Mini Medical School for the Behavioral Health Provider
Module 2b: Basic Principles of Psychopharmacology; Cultural Competence in Integrated Care
Module 3: Improving Health and Wellness Behaviors – Clinical Strategies
Module 4: Coordinated and Integrated Behavioral Health Practice

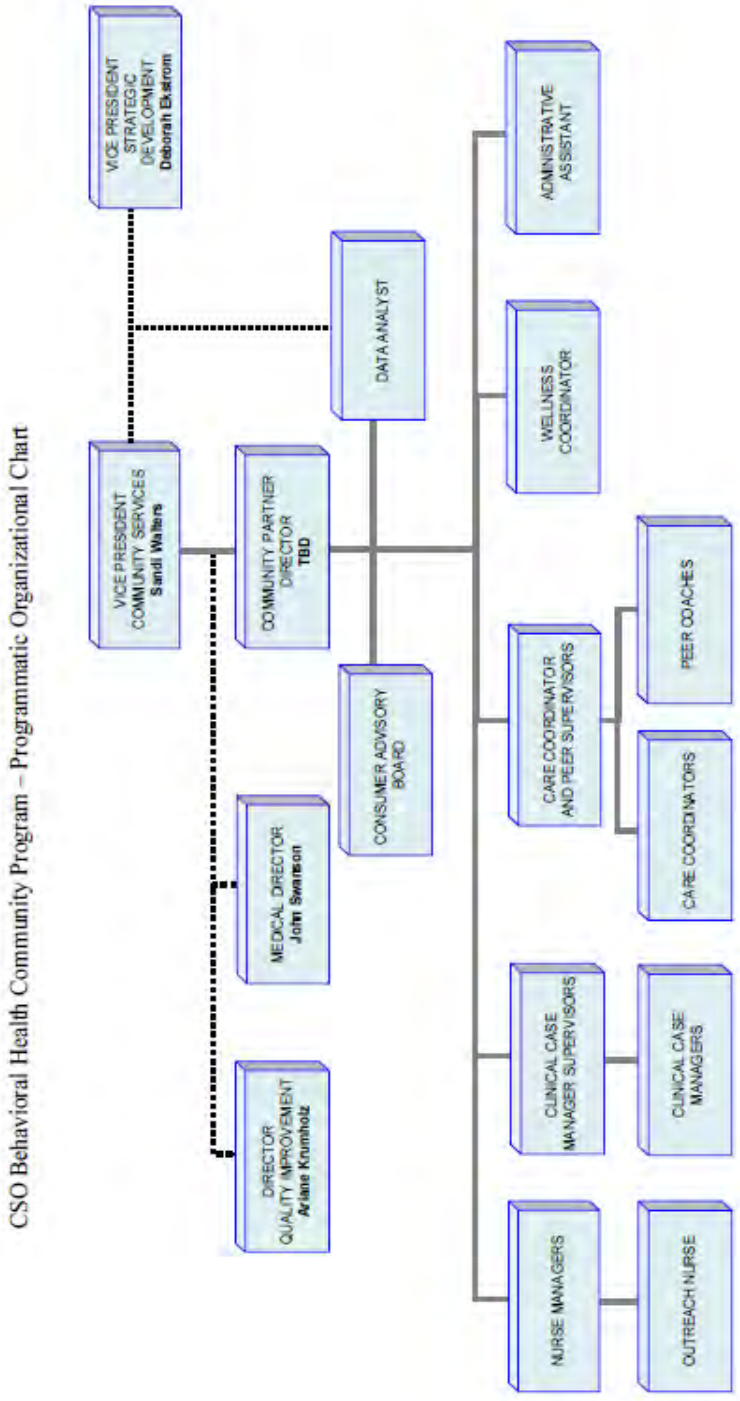
The training program enables CSO staff to (1) support people who are coping with chronic illnesses that put their health and/or social functioning at risk; and (2) use an integrated approach to addressing health problems and finding solutions. The course offers certification at two levels: basic, for all CSO staff; and advanced practice, for those who have care coordination or care management responsibilities.

Through IHTET, CSO staff are trained to offer:

- Development of hierarchy of client needs, physical and mental, to help clients to make a plan that they can follow through to address these needs;
- Support for clients in "buying in" to their own self-care;

- Help for clients to overcome fears concerning meds, procedures, surgeries, etc., helping them attain a healthy point of view about their bodies and medical conditions and understanding the relationship between physical and mental health;
- Client education on how to talk to their doctors and feel heard, to be aware of their medical conditions and to be proactive in preventive care;
- Encouragement to use their PCP and not the ER for routine health care needs;
- Documentation of Client medical profile fields and ensure medical/wellness goals are addressed in an Integrated treatment plan.

ATTACHMENT: PROGRAMMATIC ORGANIZATIONAL CHART



ATTACHMENT: JOB DESCRIPTIONS FOR PROGRAM STAFF

JOB DESCRIPTION

TITLE: Director of Community Partner (CP) program

PURPOSE: To provide overall administrative and programmatic oversight of the Community Partner (CP) program including program leadership; maintaining relationships with external stakeholders, including ACOs, MCOs, other CPs, providers across the medical/BH/LTSS spectrum, other community and human services organizations, and client/family advocacy groups; supervision of CP managers. Additionally, the Director is primarily responsible for the design and implementation of orientation and training of CP program staff; staffing the CP Consumer Advisory Board; and ensuring compliance with all aspects of the Mass Health CP contract.

LINE OF RESPONSIBILITY: The Director of CP reports to the Vice President for Community Services.

ESSENTIAL RESPONSIBILITIES:

1. Provide administrative, clinical, and operational management of CP program.
2. Provide supervisory support to Nurse Managers, Care Management Supervisors, Care Coordination/ Peer Supervisors, Wellness Coordinator and Administrative Assistant. Assist each in creating effective workflows, processes and performance standards.
3. Work collaboratively to coordinate program development and teambuilding with all CP staff.
4. Provide clinical consultation and guidance to CP staff/supervisors. Assist in resolving issues with other providers, ACOs, MCOs, other stakeholders.
5. Facilitate management team and program staff meetings.
6. Maintain regular communication with contacts at ACOs, MCOs and subcontractors.
7. Provide continual program monitoring to assure that program is meeting quality standards, targeted volume/productivity, and financial metrics.
8. Facilitate quarterly meetings of the CP Consumer Advisory Board (CAB); ensure that CAB members are appropriately oriented to the CP's role and receive timely data and qualitative reports necessary to fulfill their responsibilities.
9. To oversee orientation of new staff to Wraparound in the first four weeks of employment and to work closely with site ICC supervisors to train and credential new ICC and FP staff within 6-9 months of employment.
10. Ensure staffing of the program, consistent with contract and service needs. Work with HR and program supervisors on timely recruitment and hiring.
11. Facilitate quarterly meetings of area providers to discuss CP work, advise about status of healthcare delivery system reform, and share information across programs and services.
12. Be available to work flexible schedule which may include evening and weekend work and availability by phone or pager to supervise and assist with plan implementation, as required by the needs of the program.

13. Utilize clinical and training expertise to provide leadership and guidance to staff, families and care planning teams for complex family presentations requiring advanced clinical management skills.
14. Act as a resource to ICC Supervisors during the CSA credentialing process.
15. Maintain complete, accurate and timely records.
16. Maintain regular communication with ACO's, MCE's, material subcontractors, and providers throughout the region.
17. Attend staff and Agency Management meetings as directed.
18. Adhere to the philosophy of "customer satisfaction" and consistently follow the same by providing reliable, responsive, consistent and high quality service in a timely manner to staff and external customers.
19. Support and maintain a high performance environment characterized by positive leadership and a strong team orientation as an added value member of the Agency Management team; support CEO-approved goals and philosophies, sharing a fundamental philosophy that enhances the agency's global reputation within the community.
20. Communicate regularly with staff on progress toward defined goals of Agency Management team; if required, complete and conduct annual performance evaluations in a timely fashion, providing specific feedback and work with HR to initiate corrective action when defined goals and/or required results are not met.
21. Motivate staff to embrace the philosophies and goals of the Agency Management team.
22. Attend all scheduled individual and group supervision.
23. Follow all agency policies and procedures.
24. Perform other duties as assigned by supervisor.

QUALIFICATIONS: Masters Degree in Psychology, Counseling, Social Work or closely related field from an accredited program. The Director will have experience in care management/care coordination, supervision of both clinicians and paraprofessional staff, and managing inter-agency relations. Demonstrated experience working with adults with SMI and SUD, navigating systems of care and supports within the community. Good listening skills, nonjudgmental ability to develop staff strengths, capacity to create and lead an effective team. Demonstrated sensitivity to the needs of individuals from diverse cultural or linguistic backgrounds. Ability to establish trusting relationships through compassion, empathy and insight. Computer proficiency required including ability to work with email, electronic health record and word processing software.

JOB DESCRIPTION

Title: CP MEDICAL DIRECTOR

Purpose: To collaborate in the development of clinical policies and procedures for the CP program; services; to provide consultation on individual Member issues or program clinical issues as requested by the CP Director, a Nurse Manager, or CCM Supervisor; to communicate with other physicians, clinicians, or administrators regarding patient or policy issues, upon request; to provide in-service training or coaching to CP staff; to provide other clinical support to the program as needed.

Line of Responsibility: The Medical Director is responsible to the Chief Executive Officer.

CP Responsibilities:

1. Collaborate with CP managers in the development of clinical policies, procedures and protocols for the CP program.
2. Provide consultation regarding clinical policies, practices and interactions with other providers, ACOs or MCOs.
3. Provide review and assessment of individuals' medications, treatment recommendations and/or Care Plans, upon request of the CP Director, a Nurse Manager, or a CCM Supervisor.
4. Communicate with medical staff of other providers, ACOs or MCOs as requested to provide consultation or resolve differences.
5. Maintain complete, accurate and timely records.
6. Represent the agency in a positive manner and maintain good working relationships with other agencies and professionals.
7. Attend job related meetings.
8. Other related duties as determined by the Chief Executive Officer or designee.

Qualifications: Must be Board certified in psychiatry. Must hold a valid Massachusetts license to practice medicine. Experience working with adults who have serious mental illness and substance use disorders is required. Computer proficiency required including ability to work with email, electronic health record and word processing software.

JOB DESCRIPTION

TITLE: CP NURSE MANAGER

PURPOSE: To provide clinical assessment, evaluation and planning services for Mass Health Members; participate in Care Teams and Care Plan development; provide consultation to CCMs and other CP staff as needed to evaluate medical needs and treatment plans for enrolled Members; assist in communication with medical providers, Members and families as needed; provide in-service training and coaching for CP staff; participate in development of transition plans for Members discharged from inpatient care; conduct medication reconciliation and other transition support activities as needed.

LINE OF RESPONSIBILITY: The Nurse Manager reports to the CP Director.

ESSENTIAL RESPONSIBILITIES:

1. Collaborate with CCMs in the Comprehensive Assessment and care planning of engaged Members, providing expertise in medical assessment and treatment planning.
2. Participate in Care Teams as appropriate for individual Members.
3. Provide in-service training for CP staff on common medical issues and appropriate treatment, intervention and support strategies.
4. Provide case consultation pertaining to medical issues for CCMs and other CP staff as requested.
5. Communication with non-CP members of Care Teams (e.g., hospital staff, PCPs, nursing

home staff) as needed to support and advance appropriate care for Members.
6. Participate on CP management team in the development of clinical policies and procedures, service protocols, workflows and other operational matters.
7. Conduct medication reviews and monitoring as needed.
8. Participate in the development of transition-of-care plans for Members discharged from inpatient care.
9. Collaborate with Outreach Nurse in the development, adaptation and execution of transition plans, including medication reconciliation and patient education as appropriate. Provide back-up/replacement for Outreach Nurse as needed.
10. Maintain regular communication with ACOs, MCOs, providers and other stakeholders, as appropriate to duties.
11. Maintain complete, accurate and timely records.
12. Participate in CP management and staff meetings.
13. Participate in individual and group supervision.
14. Follow all agency policies and procedures.
15. Perform all other duties as assigned.

QUALIFICATIONS: Must be licensed in Massachusetts as a Registered Nurse, and have a minimum of three years' experience treating adults. Related degree preferred. Experience treating individuals with serious mental illness and substance use disorders preferred. Primary care experience strongly preferred. Must be familiar with community resources and possess good communication and interpersonal skills. Ability to establish trusting relationships through compassion, empathy and insight. Capacity to be an effective member of a Team. Demonstrated sensitivity to the needs and perspectives of individuals from diverse cultural or linguistic backgrounds. Computer proficiency required including ability to work with email, electronic health record and word processing software.

JOB DESCRIPTION

TITLE: CP OUTREACH NURSE

PURPOSE: To provide clinical assessment, evaluation, monitoring and education to Mass Health Members on an outreach basis—in their own homes or other residential settings. Collaborate with Nurse Managers, Clinical Care Managers and Care Coordinators to ensure optimal planning and support for Members discharged from inpatient care. Provide outreach to other Members as assigned.

LINE OF RESPONSIBILITY: The Outreach Nurse reports to the Nurse Manager.

ESSENTIAL RESPONSIBILITIES:
1. Collaborate with Nurse Managers, Clinical Care Managers (CCMs) and Care Coordinators (CCs) in the development of transition-of-care plans for Members who are discharged from inpatient care and other patients in need of in-home CP nurse visits.
2. Conduct nursing visits to assigned Members in their homes or other residential settings. Visit shall include brief assessment and evaluation, provision of planned care, medication reconciliation, and patient education and support to assist them with self-management of

their care.
3. During outreach visit, communicate with family members or other caregivers regarding the patient's care as appropriate and permitted by the patient.
4. Following (or during) outreach visit, coordinate with CCM and/or CC as appropriate regarding further care and support for the patient.
5. Participate in Care Teams as appropriate for individual Members needing ongoing outreach.
6. Provide in-service training for CP staff on common medical issues and appropriate treatment, intervention and support strategies.
7. Provide case consultation pertaining to medical issues for CCMs and other CP staff as requested.
8. Communicate with non-CP members of Care Teams (e.g., hospital staff, PCPs, nursing home staff) as needed to support and advance appropriate care for Members.
9. Conduct medication reviews and monitoring as needed.
10. Maintain complete, accurate and timely records.
11. Participate in CP staff meetings.
12. Participate in individual and group supervision.
13. Follow all agency policies and procedures.
14. Perform all other duties as assigned.

QUALIFICATIONS: Must be licensed in Massachusetts as a Registered Nurse, and have a minimum of three years' experience treating adults. Related degree preferred. Experience treating individuals with serious mental illness and substance use disorders preferred. Primary care experience strongly preferred. Must be familiar with community resources and possess good communication and interpersonal skills. Ability to adapt to a variety of environments and make decisions when faced with unplanned circumstances. Ability to establish trusting relationships through compassion, empathy and insight. Capacity to be an effective member of a Team. Demonstrated sensitivity to the needs and perspectives of individuals from diverse cultural or linguistic backgrounds. Computer proficiency required including ability to work with email, electronic health record and word processing software.

JOB DESCRIPTION

TITLE: CARE MANAGEMENT SUPERVISOR (COMMUNITY PARTNER PROGRAM)

PURPOSE: To provide daily administrative and programmatic supervision of Clinical Care Managers (CCM), including development of Care Teams, coordinating the development of Care Plans, risk management/safety plans, and transition of care plans. The Supervisor ensures that the program's clinical policies and procedures are followed; that CCMs are adequately oriented, trained and supported; conducts individual and group supervision; monitors and evaluates CCM performance; works with the program management team to ensure effective and efficient workflows and operations in adherence to contract.

LINE OF RESPONSIBILITY: The Care Management Supervisor reports to the CP Director.

ESSENTIAL RESPONSIBILITIES:
1. Provide regular administrative, clinical, and care management supervision of CCMs.

2. Recruit, orient and train qualified clinicians to serve as CCMs, maintaining staffing level appropriate to volume of enrolled Mass Health Members.
3. Work collaboratively with CP management team to coordinate program development and teambuilding among all CP staff. Establish workflows for CCM duties, in collaboration with the CP management team.
4. Provide clinical consultation and guidance to CCM staff (and other staff, upon request), ensuring clinically informed care plans Enrollees.
5. Facilitate care planning team (CPT) meetings as necessary and educate staff on the facilitation of meetings.
6. Provide direct CCM services when a CCM is absent and Member services are needed during the absence.
7. Provide assistance to staff and community participants with systems navigation and coordination.
8. Assist staff in resolving issues with other providers, ACOs, MCOs, other stakeholders.
9. Be available to work flexible schedule which may include evening and weekend work and availability by phone or pager to supervise and assist with plan implementation, as required by the needs of the program.
10. Utilize clinical and training expertise to provide leadership and guidance to staff, families and care planning teams for complex family presentations requiring advanced clinical management skills.
11. Maintain complete, accurate and timely records.
12. Maintain regular communication with ACOs, MCOs, providers and other stakeholders, as appropriate to duties.
13. Attend staff and Agency Management meetings as directed.
14. Adhere to the philosophy of "customer satisfaction" and consistently follow the same by providing reliable, responsive, consistent and high quality service in a timely manner to staff and external customers.
15. Support and maintain a high performance environment characterized by positive leadership and a strong team orientation as an added value member of the Agency Management team; support CEO-approved goals and philosophies, sharing a fundamental philosophy that enhances the agency's global reputation within the community.
16. Communicate regularly with staff on progress toward defined goals of Agency Management team; if required, complete and conduct annual performance evaluations in a timely fashion, providing specific feedback and work with HR to initiate corrective action when defined goals and/or required results are not met.
17. Motivate staff to embrace the philosophies and goals of the Agency Management team.
18. Attend all scheduled individual and group supervision.
19. Follow all agency policies and procedures.
20. Perform other duties as assigned by supervisor.

QUALIFICATIONS: Master's Degree in Psychology, Counseling, Social Work or closely related field from an accredited program. Mass. licensure required. Experience required in working with adults with SMI/SUD and in supervising clinical staff. Must possess skills in providing education and planning regarding treatment access and service needs, conflict resolution, risk management/safety planning, client advocacy and support. Good listening skills, nonjudgmental ability to develop staff strengths, capacity to create and lead an effective team.

Ability to establish trusting relationships through compassion, empathy and insight. Capacity to be an effective member of a Team. Demonstrated sensitivity to the needs of individuals from diverse cultural or linguistic backgrounds. Computer proficiency required including ability to work with email, electronic health record and word processing software.

JOB DESCRIPTION

TITLE: CP CLINICAL CARE MANAGER (CCM)

PURPOSE: To engage assigned and referred Mass Health Members in CP services; to conduct Comprehensive Assessments of engaged Members; to facilitate Care Teams and the development of Care Plans for Members; to make referrals and linkages to services and supports for the Member, in accordance with the Care Plan and the Members' wishes; to maintain connection with the Member at a frequency and in a manner that meets the Member's preferences and expectations. CCMs work in collaboration with Nurse Managers, Care Coordinators, Peer Coaches and other Care Team members to provide the best possible services for Members.

LINE OF RESPONSIBILITY: The Clinical Care Manager reports to the Care Management Supervisor.

ESSENTIAL RESPONSIBILITIES:

1. Provide telephone or other electronic outreach to assigned and referred Members, as cases are assigned, to determine whether they wish to enroll in CP services. Use Motivational Interviewing approach and other established engagement strategies to help Members engage.
2. In collaboration with current primary care, BH and other providers, develop Comprehensive Assessment and establish Care Team for each Member, supporting the care planning process.
3. Facilitate the development of an individualized Care Plan for each Member, reflecting the input of all Care Team participants and the Member's wishes.
4. Make referrals and linkages to appropriate services along the continuum of care, consistent with the Care Plan.
5. Develop and manage transition-of-care plans for Members discharged from inpatient care.
6. Maintain regular contact with Members, in a manner and at a frequency that is consistent with the Care Plan and the Members' preferences and expectations.
7. Provide wellness resources for Members.
8. Assist members (and families, as appropriate) with system navigation.
9. Work collaboratively with all members of Care Teams and CP teams (including Nurses, Care Coordinators, Peers).
10. Maintain complete, accurate and timely records.
11. Meet and maintain expected caseload/productivity level.
12. Participate in all staff meetings as required.
13. Participate in all scheduled individual and group supervision.
14. Follow agency policies and procedures.
15. Perform all other duties as assigned.

QUALIFICATIONS: Master's Degree in Psychology, Counseling, Social Work or closely related field from an accredited program. Mass. licensure required. Experience required in working with adults with SMI/SUD. Must possess skills in providing education and planning regarding treatment access and service needs, conflict resolution, risk management/safety planning, client advocacy and support. Good listening skills, nonjudgmental ability to develop staff strengths, capacity to create and lead an effective team. Ability to establish trusting relationships through compassion, empathy and insight. Capacity to be an effective member of a Team. Demonstrated sensitivity to the needs and perspectives of individuals from diverse cultural or linguistic backgrounds. Computer proficiency required including ability to work with email, electronic health record and word processing software.

JOB DESCRIPTION

TITLE: CARE COORDINATION/PEER SUPERVISOR (COMMUNITY PARTNER PROGRAM)

PURPOSE: To provide daily administrative and programmatic supervision of Care Coordinators (CC) and Peer Coaches, including outreach to and engagement of assigned and referred Mass Health Members, coordination with providers of services and support, participation in the development of Care Plans, risk management/safety plans, recovery coaching, ongoing support and wellness education, and transition of care plans. The Supervisor ensures that the program's policies and procedures are followed; that CCs and Peers are adequately oriented, trained and supported; conducts individual and group supervision; monitors and evaluates CC and Peer performance; works with the program management team to ensure effective and efficient workflows and operations in adherence to contract.

LINE OF RESPONSIBILITY: The Care Coordination/Peer Supervisor reports to the CP Director.

ESSENTIAL RESPONSIBILITIES:

1. Provide regular administrative, clinical, and relational/logistical supervision of CCs and Peers.
2. Recruit, orient and train qualified individuals to serve as CCs and Peers, maintaining staffing level appropriate to volume of enrolled Mass Health Members.
3. Work collaboratively with CP management team to coordinate program development and teambuilding among all CP staff. Establish workflows for CC and Peer duties, in collaboration with the CP management team.
4. Provide clinical consultation and guidance to CC and Peer staff (and other staff, upon request), ensuring clinically-informed and recovery-based care plans Enrollees.
5. Provide direct CC services when a CC is absent and Member services are needed during the absence.
6. Provide assistance to staff and community participants with systems navigation and coordination.
7. Assist staff in resolving issues with other providers, ACOs, MCOs, other stakeholders.

8. Be available to work flexible schedule which may include evening and weekend work and availability by phone or pager to supervise and assist with plan implementation, as required by the needs of the program.
9. Utilize clinical and training expertise to provide leadership and guidance to staff, families and care planning teams for complex family presentations requiring advanced clinical management skills.
10. Maintain complete, accurate and timely records.
11. Maintain regular communication with ACOs, MCOs, providers and other stakeholders, as appropriate to duties.
12. Attend staff and Agency Management meetings as directed.
13. Adhere to the philosophy of "customer satisfaction" and consistently follow the same by providing reliable, responsive, consistent and high quality service in a timely manner to staff and external customers.
14. Support and maintain a high performance environment characterized by positive leadership and a strong team orientation as an added value member of the Agency Management team; support CEO-approved goals and philosophies, sharing a fundamental philosophy that enhances the agency's global reputation within the community.
15. Communicate regularly with staff on progress toward defined goals of Agency Management team; if required, complete and conduct annual performance evaluations in a timely fashion, providing specific feedback and work with HR to initiate corrective action when defined goals and/or required results are not met.
16. Motivate staff to embrace the philosophies and goals of the Agency Management team.
17. Attend all scheduled individual and group supervision.
18. Follow all agency policies and procedures.
19. Perform other duties as assigned by supervisor.

QUALIFICATIONS: Master's Degree in Psychology, Counseling, Social Work or closely related field from an accredited program. Experience required in working with adults with SMI/SUD, supervising paraprofessional staff, and working with peer staff. Must possess skills in providing education and planning regarding treatment access and service needs, conflict resolution, risk management/safety planning, client advocacy and support. Good listening skills, nonjudgmental ability to develop staff strengths, capacity to create and lead an effective team. Ability to establish trusting relationships through compassion, empathy and insight. Capacity to be an effective member of a Team. Demonstrated sensitivity to the needs and perspectives of individuals from diverse cultural or linguistic backgrounds. Computer proficiency required including ability to work with email, electronic health record and word processing software.

JOB DESCRIPTION

TITLE: CP CARE COORDINATOR

PURPOSE: To engage assigned and referred Mass Health Members in CP services; to participate in Care Teams and the development of Care Plans for Members; to coordinate services and supports for the Member, in accordance with the Care Plan and the Members' wishes; to maintain connection with the Member at a frequency and in a manner that meets the Member's preferences and expectations. Care Coordinators work in collaboration with Clinical

Care Managers, Peer Coaches and other team members to provide the best possible services for Members.

LINE OF RESPONSIBILITY: The CP Care Coordinator reports to the Care Coordination/Peer Supervisor.

ESSENTIAL RESPONSIBILITIES:

1. Provide telephone, other electronic, or in-person outreach to assigned and referred Members, as cases are assigned, to determine whether they wish to enroll in CP services. Use Motivational Interviewing approach and other established engagement strategies to help Members engage.
2. Assist CCM in development of Comprehensive Assessment and Care Team for each Member, supporting the care planning process.
3. Provide care coordination among providers, according to the Care Plan and Member's wishes.
4. Provide logistical and practical support to Member in accessing services and meeting needs.
5. Provide wellness resources, including training and assistance with activities, for Members.
6. Maintain regular contact with Members, in a manner and at a frequency that is consistent with the Care Plan and the Members' preferences and expectations.
7. Make referrals and linkages to appropriate services along the continuum of care, consistent with the Care Plan.
8. Assist members (and families, as appropriate) with system navigation.
9. Be available to work flexible schedule which may include evening and weekend work, as required by the needs of Members receiving services.
10. Work collaboratively with all members of Care Teams and CP teams (CCMs, CCs, Peers).
11. Maintain complete, accurate and timely records.
12. Meet and maintain expected caseload/productivity level.
13. Participate in all staff meetings as required.
14. Participate in all scheduled individual and group supervision.
15. Follow agency policies and procedures.
16. Perform all other duties as assigned.

QUALIFICATIONS: Bachelors degree from an accredited college or university preferred. Certification as a Community Health Worker is a plus. Experience providing services and supports to adults with SMI/SUD. The care coordinator is skilled in providing education and planning regarding treatment access and service needs, parenting skills, conflict resolution mediation, risk management/safety planning, family advocacy and support. Good listening skills, nonjudgmental ability to foster self-sufficiency. Ability to establish trusting relationships through compassion, empathy and insight. Capacity to be an effective member of a team. Demonstrated sensitivity to the needs and perspectives of people from diverse cultural or linguistic backgrounds. Computer proficiency required including ability to work with email, electronic health record and word processing software.

JOB DESCRIPTION

TITLE: CP PEER COACH

PURPOSE: The CP Peer Coach provides hope, mutual peer support, advocacy, purposeful sharing of lived experience, and education to Mass Health Members receiving CP services. Peer staff also model and inform other CP staff about recovery. Peers provide care coordination services, advocacy, crisis support, wellness information and support, and participation on Care Teams.

LINE OF RESPONSIBILITY: Reports to the Care Coordination/Peer Supervisor.

PEER STAFF RESPONSIBILITIES:

1. Provide telephone, other electronic, or in-person outreach to assigned and referred Members, as cases are assigned, to determine whether they wish to enroll in CP services. Use Motivational Interviewing approach and other established engagement strategies to help Members engage.
2. Assist CCM in development of Comprehensive Assessment and Care Team for each Member, supporting the care planning process.
3. Provide peer recovery support to persons served. This includes willingness to share his/her own recovery story in intentional ways for the purpose of connection building, resource sharing, education, etc.
4. Provide care coordination among providers, according to the Care Plan and Member's wishes.
5. Provide logistical and practical support to Member in accessing services and meeting needs.
6. Provide wellness resources, including training and assistance with activities, for Members.
7. Maintain regular contact with Members, in a manner and at a frequency that is consistent with the Care Plan and the Members' preferences and expectations.
8. Make referrals and linkages to appropriate services along the continuum of care, consistent with the Care Plan.
9. Assist members (and families, as appropriate) with system navigation.
10. Provide peer support to Members in crisis, as appropriate.
11. Be available to work flexible schedule which may include evening and weekend work, as required by the needs of Members receiving services.
12. Work collaboratively with all members of Care Teams and CP teams (CCMs, CCs, Nurses).
13. Maintain complete, accurate and timely records.
14. Represent and advocate a recovery perspective in staff settings including team meetings. Promote and reinforce easy to understand recovery-oriented language.
15. Complete required documentation including maintaining neat, accurate, and timely records in accordance with agency policies and procedures along with all regulatory bodies.
16. Attend agency wide Peer Staff support meetings.
17. Participate in agency-wide and inter-agency meetings, required in-services, trainings and

committees as possible to build skills and support further integration of peer and recovery values into the organizational culture.
18. When required, attend trainings relevant to care coordination, recovery advocacy and peer support.
19. Participate actively in regular individual and group supervision and staff meetings.
20. Comply with all applicable agency clinical and administrative policies, protocols and procedures.
21. Perform other duties as assigned by supervisor.

QUALIFICATIONS: Lived experience as someone served by the mental health/addiction treatment service system and a willingness to share knowledge and experience of recovery. High school diploma and minimum of one year of sustained recovery required. Completion (or willingness to complete) the Massachusetts Certified Peer Specialist and/or the Recovery Coach Academy training is strongly preferred. Must be able to work in both community and clinical settings, relate well to a range of individuals, and promote a philosophy of recovery. Will possess strong interpersonal skills, including patience and a nonjudgmental approach. Will have ability to adapt to changing needs and responsibilities and personal resiliency in high-stress, 'crisis' situations. Will be able to document activities in a manner that meets agency requirements. Computer proficiency required including ability to work with email, electronic health record and word processing software. MA driver's license and reliable transportation required.

JOB DESCRIPTION

Monthly calls with BHN contact; if stabilized, these calls can become prn; if not, continue monthly	Review activities; address concerns	CP Dir, BHN designee	Regular time TBD
Prepare mid-year reports	Ensure Mass Health reporting requirements are on track	CP Dir, w/ support of SW, DE, Analyst	By end of Qtr 2
Review caseloads with ACOs	Assess whether cap on "slots" is close; develop plan re referrals appropriately	CP Dir, w/ SW, DE & supervisors prn	By end of quarter
Activities specific to Qtr 3	***Key Action Steps***	***Person Responsible***	***Timeframe***

Review caseloads with ACOs	Assess whether cap on "slots" is close; develop plan re referrals appropriately	CP Dir, w/ SW, DE & supervisors prn	By end of quarter
Bi-monthly in-service training; as staffing gets to scale, reduce to quarterly or prn	Provide scheduled training for new hires; refreshers and new information or practices for all staff	Managed by HR team, with designated trainers	Schedule TBD
Monthly calls with BHN contact; if stabilized, these calls can become prn; if not, continue monthly	Review activities; address concerns	CP Dir, BHN designee	Regular time TBD
Activities specific to Qtr 4	***Key Action Steps***	***Person Responsible***	***Timeframe***
In-service training	Provide scheduled training for new hires; refreshers and new information or practices for all staff	Managed by HR team, with designated trainers	Schedule TBD
Calls with BHN contact	Review activities; address concerns	CP Dir, BHN designee	Regular time TBD
Review caseloads with ACOs; if process is stabilized, calls may become prn; if not, continue quarterly	Assess whether cap on "slots" is close; develop plan re referrals appropriately	CP Dir, w/ SW, DE & supervisors prn	By end of quarter
Begin prep of year-end reports	Review readiness status of all necessary internal & external reports; develop specific schedule & assignments	CP Dir, SW, DE w/ AK, Business Systems team	By end of month 11
Year Three - ***by year three, we will be operating at scale and many activities will be routinized***	***Key Action Steps***	***Person Responsible***	***Timeframe***
Activities that recur each quarter/month/week throughout Year Three:			
1. Meeting with ACO/MCOs 2. Group Meeting with Referral Partners 3. Executive Mtg with BHN 4. CAB meeting 5. Internal review of metrics (monthly) 6. CQI Exec team review of QI metrics, reporting 7. Report submission to Mass Health (as required)	ACO/MCO agendas will explicitly address sustainability plans Agendas for all these meetings include standing items and ad hoc items, responsive to current issues	1. SW, DE, CP Dir 2. CP Dir (SW prn) 3. KJ, DE, SW, CP Dir 4. CP Dir 5. Executive team & CP Dir 6. AK, CP Director 7. CP Director, w/ support prn	All these activities will have a regular quarterly (or monthly) schedule, TBD Per contract requirements
8. Monthly review of operations	Identify workflow issues, technical issues, problems & promising practices	CP Management team, with SW and/or DE prn	Regular meeting TBD

	Develop action plans to address issues/problems Review progress on plans	CP Mgt team, with others prn	Identified issues are triaged & action planning scheduled
9. Monthly review of metrics	Identify actual v. planned results; analyze variance; create action plan to address if needed	CP Dir, SW	Regular meeting TBD
Activities specific to Qtr 1:	***Key Action Steps***	***Person Responsible***	***Timeframe***
Complete annual reports for Year Two	Prepare & submit all required internal & external reports	CP Dir, SW, DE w/ support of Exec team & Bus Systems team	Per contract requirements
Review caseloads with ACOs	Assess whether cap on "slots" is close; develop plan re referrals appropriately	CP Dir, w/ SW, DE & supervisors prn	By end of quarter
Monthly calls w/ ACO & MCO contacts	Review any outstanding issues—assignments, clinical issues that have not been resolved through regular channels, etc.	CP Director, with support prn	Regular time TBD
Calls with BHN contact	Review activities; address concerns	CP Dir, BHN designee	Regular time TBD
In-service training	Provide scheduled training for new hires; refreshers and new information or practices for all staff	Managed by HR team, with designated trainers	Schedule TBD
Activities specific to Qtr 2:	***Key Action Steps***	***Person Responsible***	***Timeframe***
Monthly calls w/ ACO & MCO contacts	Review any outstanding issues—assignments, clinical issues that have not been resolved through regular channels, etc.	CP Director, with support prn	Regular time TBD
Calls with BHN contact	Review activities; address concerns	CP Dir, BHN designee	Regular time TBD
In-service training	Provide scheduled training for new hires; refreshers and new information or practices for all staff	Managed by HR team, with designated trainers	Schedule TBD
Prepare mid-year reports	Ensure Mass Health reporting requirements are on track	CP Dir, w/ support of SW, DE, Analyst	By end of Qtr 2
Review status of Year three Mass Health quality metrics	Data analysis, corrective action planned as necessary	CP Dir, w/ support of SW, DE, Analyst	By end of Qtr 2
Activities specific to Qtr 3:	***Key Action Steps***	***Person Responsible***	***Timeframe***

7.3.G. BUDGET REPORT AND BUDGET NARRATIVE

CSO's Budget report and Budget Narrative are submitted separately, using revised templates provided by Mass Health.

7.3.H. SUSTAINABILITY

While sustainability is a challenge for any non-profit organization that is highly dependent on public funding, CSO has some advantages in place:

- Our cloud-based Electronic Health Record does not require high ongoing maintenance fees. We have already completed the substantial initial investment and expect that future investments, beyond the term of the CP contract, will be small enough to be covered by ongoing program revenue.
- Our administrative infrastructure, currently undergoing improvement to state-of-the-art technology for financial and HR management, is stable and sized to sustain reasonable growth in capacity.
- We are not heavily invested in real estate, preferring to lease property to house most of our sites. This limits our need for property-related capital investment and affords greater flexibility to move or to increase/decrease square footage in a location as our needs change.

CSO's executive management has demonstrated its strategic agility to grow and adapt services with the changing healthcare landscape, growing the organization from a budget of $5 million in 2005 to $35 million in FY 2017. This growth can be attributed:

- to having sights set on the future;
- cultivating and sustaining relationships with key organizational stakeholders locally and at the state level;
- having both the framework of a strategic plan and the flexibility to quickly move on strategic opportunities that arise unexpectedly; while
- continuously, vigorously attending to the quality and continual development of services; and
- cultivating and sustaining a high quality administrative management team and infrastructure.

We anticipate that this approach will continue to serve CSO in the next five years and beyond. To get to the juncture of this competitive procurement, CSO has:

- Established itself as a core provider for all the Mass Health MCOs and BH carve-out companies in western Mass. We expect to maintain our excellent reputation for service quality and responsiveness through the delivery system reform. As the MCOs manage their own new roles and challenges, we expect to continue to be a valued partner. As paradigms shift over the course of the 5-year DSRIP program, we will work with them and other organizations in the region to plan for the post-DSRIP service system and sustaining the gains and improvements that will have been made.
- Met on multiple occasions with local representatives of ACO bidders, including the Cooley Dickinson PHO leadership; the leadership team at Valley Medical Group, a large medical practice that covers the Greenfield and Northampton service area and is the largest primary care provider for CSO patients; leaders at Bay State Health, who are

candidates to play a key role in an ACO in Greenfield; and the executive team at Heywood Health, which is the largest provider (through Athol Memorial Hospital) and likely ACO partner in the Athol service area.

- Participated extensively in Mass Health's BH CP process, contributing to the design of the program and carefully coming to an understanding of the Commonwealth's goals for the CPs.

We expect that all these efforts at relationship building and achieving shared understanding will serve CSO well over the course of what is sure to be a challenging implementation and development process. Collectively, the Commonwealth, its members, health plans, and providers have great ambitions for this endeavor and must continue to work together—recognizing our interdependence—to succeed. In the course of that process, CSO expects to remain a vital and valued partner. We will work together with other system stakeholders, as we all approach the end of the 5-year project, to develop adapted financing plans, contracts and risk-sharing arrangements that are based on our collective experience—for both better and worse.

We expect that all involved will learn a lot over the coming years and that we will use those new ideas and insights to sustain an effective system of care for our clients. We will encourage our local system partners (ACOs, MCOs, LTSS CPs, providers and consumer organizations) to meet with us (individually or collectively) regularly to work on meeting performance goals and earning performance incentives. We believe that the system will improve by having stakeholders' financial incentives be well-aligned to meet the aims of improved health care and health quality. We will seek—consistent with any standards or models developed or permitted by Mass Health—to establish financial interdependency, so that financial sustenance of the CP services is an organic transition off of the DSRIP funding stream, rather than an abrupt disruption.

7.3.I. QUALITY MANAGEMENT AND PERFORMANCE MONITORING

CSO holds that its mission can be realized through the delivery of high quality programs and services in combination with advocacy efforts within a multi-level systematic approach. Quality Assurance and Continuous Quality Improvements are essential elements of CSO's operations. To support clinical best practice and innovation, CSO has established structures and processes that cultivate continuous learning. We support an organization-wide climate where feedback is freely exchanged. Employees have a clear, shared vision of the organization's goals and values. Staff get time to inquire and reflect about what they are doing and why, as well as having access to a broad range of training and professional development options.

CSO has the capacity to collect, report, and track encounter, outcome, and quality data, including but not limited to data capturing: (1) Enrollee characteristics; (2) staffing; (3) access to services; (4) use of services; (5) screening, prevention, and treatment; (6) care coordination; (7) other processes of care; (8) costs; and (9) individual outcomes. Our internal Quality Improvement process begins with the data and information we collect related to our outcome measures and targets. We perform reviews of regulatory compliance and compliance with clinical standards and develop corrective measures if needed. We administer consumer satisfaction surveys annually by program to help identify issues coming out of consumer experience. Adherence to program policy and regulatory compliance are part of ongoing

monitoring of quality. Treatment plans are reviewed regularly and charts reviewed during weekly MDT meetings. Systems to identify high-risk clients have been developed and implemented that trigger a high-risk case review, associated safety plan and updated treatment plan. In the Crisis and CCS programs, supervisors perform daily reviews of client records to check for consistency of diagnosis with presentation, clinical quality, and accuracy of records and thoroughness of documentation. We use weekly executive team meetings and department head meetings, and monthly reports to the Board of Directors meetings, consumer/staff planning committees and consumer program evaluations to evaluate our progress toward established benchmarks.

CSO has established and maintains a Qualified Patient Care Assessment Program (QPCAP) in compliance with the requirements of the regulations of the Massachusetts Board of Registration in Medicine as set forth in 243 CMR 3.00 et seq. to monitor the quality of direct care services provided by the agency, with the aim of minimizing risk of injuries and incidents to patients/clients regarding care and quality of medical services, and to make recommendations for internal quality improvement. CSO's Patient Care Assessment Committee (PCAC) reviews all incidents involving patients/clients on a quarterly basis to monitor quality of direct care services. Each incident is analyzed for overall level of risk, root cause, appropriateness of preventive and/or corrective action, and analysis of statistics for trends/patterns and making recommendations for quality improvement. Members of the PCAC are multi-disciplinary and include the following listed personnel: Medical Director, program Vice Presidents (including the VP of Community Services who oversees the BH CP program), President/CEO, Director of Quality Improvement, and Vice President of Human Resources. Documentation of corrective actions or changes to programs or processes, including assessment for effectiveness, is shared with CSO's Board of Directors on a quarterly basis.

CSO develops, implements, and maintains an effective, agency-wide data-driven continuous quality improvement (CQI) plan for clinical services, care management and care coordination. The CQI projects are clearly defined, implemented, and evaluated annually. The number and scope of distinct CQI projects conducted annually are based on the needs of the CSO population and reflect the scope, complexity and past performance of CSO services and operations. The CQI plan addresses priorities for improved quality of care and client safety, and requires all improvement activities be evaluated for effectiveness. The CQI plan focuses on indicators related to improved behavioral and physical health outcomes, and takes actions to demonstrate improvement in CSO performance. CSO documents each CQI project implemented, the reasons for the projects, and the measurable progress achieved by the projects.

QI/QM planning, oversight and response belongs with the CEO and the Senior Management Team, and is facilitated by our Director of Quality Improvement, a dedicated position established in 2010. In early 2010, CSO management began orientation to the JURAN Method and put together program dashboards on quality and utilization indicators. These provide the discipline throughout the organization to identify quality issues, diagnose and remedy the causes, and to improve the outcomes. CSO's CQI Committee is vested with responsibility for project evaluations and progress toward established benchmarks, while the VP of Community Services holds quality and risk management responsibility for the BH Community Partner program. For quality control, chart audits are conducted by clinical teams periodically. To monitor quality benchmarks, we use bi- monthly executive team meetings, staff meetings, and quarterly reports to the Board of Directors.

CSO considers it essential to measure outcomes that are consistent with recovery-oriented care in the least restrictive setting. The BH-CP CQI Team will consist of the VP of Community Based Services and Director of Quality Improvement and CP staff. Quality management tools and outcome indicators are examined and mechanisms are built in to track the success and benefits of community-based diversion. We work with program managers and staff to reach goals developed as benchmarks for each outcome.

Fidelity to practice: When complex dynamics exist as in wraparound, a robust shared vision allows organizational members to align their practices. Training, supervision, and monitoring tools help to insure fidelity to the proven wraparound systems. CSO designs and re-designs program based on evidence-based models, evaluation studies and program outcome data. Peer observation and feedback, reflective practice and debriefing, and feedback loops based on data will help ensure fidelity as well.

We conduct "Grand Rounds" weekly where all staff are invited to attend. Senior program and clinical directors facilitate discussions and guide treatment planning coordination among direct care staff. Program staff are invited, even where they are not involved with the cases presented, as a learning vehicle. Training is comprehensive, regularly scheduled and all-inclusive of CSO personnel. New staff will have the benefit of training on the clinical issues that will tend to be prevalent in our target populations though the "Grand Rounds" process. We also use coaching as part our training and supervision processes. Research shows that fidelity improves significantly when training is accompanied by coaching.

Technological Support for QI: Data captured by Credible to be analyzed for CQI purposes will be used for population based reporting, quality indicators and registry reporting. Through the following capacities of Credible, we will gather and analyze the data starting Q1 and ongoing to establish regular quality initiatives and establish measures of success:

- Tracking of critical client/consumer information
- Consumer outcomes, including medical and BH metrics
- Seamlessly view documentation, treatment plans, ISPs, and demographic data
- Set up to prioritize integrated care, with medical history, medical records, problem lists and medication information
- Data captured is both live and historical for key factors needed to support needs of medically complex individuals, support co-occurring diagnosis, including SUD and across diverse populations
- Reporting on access benchmarks, utilization benchmarks, and clinical quality indicators (e.g.; ER utilization; cost utilization; time between intake and assessment; risk assessment for those diagnosed with major depression; risk analysis; etc).

The BH CP leadership team, together with CSO's Director of Quality Improvement, will include at least one QI initiative annually based on data collected from Credible and consumer satisfaction surveys specific to the BH CP Members and services. The annual QI initiative will address, at a minimum, the following domains:

- Quality of Life
- Chronic Disease Management
- Caregiver stress
- Community tenure, isolation and social connectedness;
- Care Coordination and Care Management activities and efficacy;
- Care transitions.

For the initial QI project during the Budget Period 1, CSO will implement the MHSIP standardized consumer satisfaction survey to glean data from Consumers about satisfaction with services, perceptions related to effectiveness of care coordination and care management activities, and general quality of life feedback. The MHSIP has four primary domains that are measured: General Satisfaction; Access; Appropriateness of Services; and Outcomes. The Director of QI will provide an analysis across all four domains, and work with the BH CP team and consumer advisory board on implementing a QI project that reflects opportunity for improvement based on the data and feedback collected.

ACO/Funder Reporting: Adherence to funder requirements, program policy and regulatory compliance are part of ongoing monitoring and assessment of quality of service activities. We perform reviews of regulatory compliance and compliance with clinical standards and contract provisions. We identify areas where we are falling short and develop corrective measures.

We gather a considerable amount of data to meet state requirements for program monitoring and performance contracting, to monitor internal performance and redesign/redirect programming where performance standards are not met and to document and support billing to MassHealth (MBHP) and other third party insurers. We have 2 full time Business System team staff dedicated to EHR and systems development to ensure regulatory and reporting compliance and functionality. We will be able to adapt our systems to report to ACO and or MassHealth on any outcomes and process measures are required.

7.3.J. COORDINATION WITH ACOS AND MCOS

CSO will vigorously market Community Partner services to ACOs/MCOs, as we have already begun to do in a preliminary way throughout the development of this system reform initiative in our five service areas. Post-award efforts will include more definitive work with ACOs and MCOs, since decisions about roles in the system will have been made by Mass Health and we will be able to begin to forge real, rather than hypothetical, working relationships. CSO will negotiate contracting with the ACO's and MCO's at the Executive Level of CSO, and then share expectations and implementation plans with key BH CP leaders. CSO is already contracted as a primary network provider of multiple levels of care across with all of the MCE's and MCO's across our service region, and holds contracts with the Hospital systems as well. We don't expect any challenges in negotiating and finalizing contracts with the ACO's or the MCO's related to the BH CP contracting. Significant energy will focus on discussions around assignment of BH CP members in our service area, and negotiating communication and bilateral expectations of the partners from Executive to front line workers. As part of our strategy, it will be important for ACO's and MCO's to understand and appreciate the value of having a community based BH CP as part of their service delivery and management umbrella.

To that end, our marketing approach will make five key points:

- Market wellness focus on preventive health and strategies that encourage patients to take care of themselves.
- Study the patient base: Conduct thorough research on the patient base, including prevalent chronic conditions, services frequently used and where most patients access care
- Communicate the benefits: High-quality, coordinated care is a benefit that is worth explaining and promoting.
- Build the marketing around solid analytics: Demonstrate our success with solid outcome data.

- Education to the ACO and MCO partners about the value and expertise of the Community Based system, and specifically the BH CP role, in achieving true behavior change among the most difficult, often highest cost, Enrolled Members.

As part of the role of ACOs to develop high value, clinically integrated provider partnerships, we expect to achieve coordinated care by using the lines of communication and coordination that increase BH integration and linkages to social services in the individual ACO model through explicit requirements in the partnership with CSO as a BH Community Partner. Where an MCO is involved, we expect to work with MCOS and ACOs to improve care delivery and to support integration of care. We expect to collaborate with the MCO in using analytics for population health management. We would expect that these will take place through regularly scheduled meetings and the development of electronic communication methods.

CSO will accept Enrollees Assigned by EOHHS, an ACO, or an MCO to the full extent of the Contractor's Capacity. CSO will notify EOHHS/ACO/MCO within one business day of the Assignment to confirm receipt of the Assignment from EOHHS/ACO /MCO. For each Assigned Enrollee, CSO shall create an Enrollee record in accordance with record keeping requirements specified in the contract. CSO will submit a "Person-Centered Treatment Plan complete" Qualifying Activities. CSO will report on disengagements and reasons for those disengagements. CSO will provide EOHHS/ACO /MCO with data on the Clinical Quality Measures and any further requested data in the requested form and format no later than ninety (90) days after receiving such request.

Our plan for managing the project is intended to maximize program continuity and coordination among those delivering services and to achieve smooth transitions for Enrollees. The management for the project will be conducted on two levels. The first is where Executive Committee ensures that program staff adhere to the timetable outlined in 7.2 Section C.3.. Executive staff will be responsible for 1) liaison with senior staff at ACOs/COs; 2) briefing the Board of Directors; 3) identifying and or responding to resources needs for the project; and 4) convening for the purpose of higher level policy analysis/planning/brokering; and 5) internal and external conflict resolution, review evaluations and other functions that require senior leadership and authority. The second level is the Project Team—program and clinical staff involved in the project—will review the accomplishments in monthly team meetings as well as leading the development of initiatives internal to their departments. Reporting and coordinating communication are the key functions of program staff.

CSO's expertise is well known to the local Community Stakeholders, medical community, and hospital systems. We work closely with all of them currently, and are encouraged by the opportunity to have better funded care coordination and partnership structures formalized through the BH CP program. Upon award, we will meet with all ACO and MCO partners in our service area to bring specific data about the services available through the BH CP for the target population. The close collaboration and bilateral subcontracting relationship with CSO and BHN on the BH CP project will provide opportunity for both agencies to meet across the region with the ACO's and MCO's to build similar structures for communication, marketing, implementation activities and quality initiatives. This collaboration will streamline management of the BH CP system for the ACO's and MCO's who will likely have multiple CP's to work with as well, and enhance the regional collaboration of the overall ACO/MCO/BH CP system.

Both CSO and BHN have a long history of engaging and collaborating with multiple MCO's and MCE's, and are confident that this success will apply to engagement with multiple

ACO's as well. We will work with all BH CP stakeholders, the ACO systems, MCO's and the State to help standardize processes as much as possible. We will mutually develop conflict resolution strategies (to be included in the negotiated contract agreement) before any potential conflict arises, to assist in working through potential differences. We will have well established executive level communication channels, and well developed policies and procedures for the program, designed to minimize and prevent conflict. We will collectively strive to achieve all quality reporting measures throughout the life of the BH CP program, while collaborating to meet total cost of care standards across the population.

Ramp-up costs in Prep Budget Period, Budget Year 1, 2 and 3 can be covered by Infrastructure Funding

Community Partner Program Budget Report - Prep Budget Period

Only complete this Program Budget Narrative using amounts anticipated for PBP.
Lines may be added to the Program Budget Narrative tables as necessary

Row 1 - Salary

Position	Annual Salary	FTEs	# Months	Total
Executive Director	$ 150,000.00	0.2	4.5	$ 11,250
Psychiatrist	$ 200,000.00	0.15	0.5	$ 1,250
Administrative Assistant	$ 50,000.00	1	1.5	$ 6,250
Intake Specialist	$ 47,500.00	1.5	0.5	$ 2,969
Customer Service	$ 47,500.00	1.5	0.5	$ 2,969
Assessment/Engagement Team Leader	$ 76,500.00	2	1	$ 12,750
Program Director/ Dir. of Care Coordination	$ 95,000.00	2.55	5	$ 100,938
Assistant Program Director	$ 87,500.00	2	2.7	$ 39,956
Care Team Leader	$ 76,500.00	7	1.5	$ 66,938
				$ -
				$ -
				$ -
Total Salary (Program Budget Line 1)		**17.9**		**$ 245,269**

Row 2 - Fringe

Fringe Item	Total Salary	Fringe Rate	Fringe
Fringe Item	$ 245,268.65	24%	$ 58,864
Total Fringe (Program Budget Line 2)			**$ 58,864**

Total Personnel*	**$ 304,133**

* Should align with Personnel Costs row in Program Budget

Row 3 - Training and Professional Development

Description of Service	Unit Cost (if applicable)	# Staff (if applicable)	Total Cost
ongoing employee training			$ 2,182.09
Total Training and Professional Development (Program Budget Line 3)			**$ 2,182.09**

Provide a description of each Training and Professional Development line item included in the table above:

Based on the experience of the Member organizations, $546/year/FTE has been allocated to support the administration of ongoing training and professional development. This will cover the administration of ongoing training and development.

The $2,182.09 represents approximately 4 FTEs.

Row 4 - Travel

Position	Est miles per month	# months	Mileage reimbursement rate	Total Cost
Executive Director	350	2.25	0.535	$ 421.31
Assessment/Engagement Team Leader	200	2	0.535	$ 214.00
Program Director/ Dir. of Care Coordination (2.55 FTEs, about 4.7 or 5 months)	200	12	0.535	$ 1,284.00
Assistant Program Director	200	5	0.535	$ 535.00
Care Team Leaders (7FTEs, each 1.5 months)	200	10.5	0.535	$ 1,123.50
				$ -
			Total Mileage	$ 3,577.81

Travel Expense Description	Cost
Total Mileage	$ 3,577.81
Parking and tolls	$ 1,564.19
Public transportation	
Enrollee travel	
Total Travel (Program Budget Line 4)	**$ 5,142.00**

Please describe how mileage estimates and other travel expenses listed above were determined . If including enrollee travel expenses above, please explain how these expenses will be used by enrollees.

In the Prep Budget Period, the Program Directors, Assistant Program Directors and Executive Director will travel to meetings with ACOs and MCOs leaders across Eastern Massachusetts from Cape Cod to Attleboro to Lowell to Salem and across Boston. The Engagement Team Leaders and Care Team Leaders will travel to locall-based care team offices for interviews and for meetings with providers. Some staff will also attend MassHealth meetings. Travel expenses include mileage and parking costs.
Please note: There are 7 Care Team Leaders who will each work 1.5 months in the Prep budget period adding up to 10.5 months total. Program Director/ Dir. of Care Coordination is 2.55 FTEs and will be for about 4.7 or 5 months.

Row 5 - Equipment

Description of Equipment	Unit Cost or Cost/FTE	#units or FTEs	Cost
Total Equipment (Program Budget Line 5)			

For each position listed above, provide a brief statement of the position's responsibilities:

Executive Director: responsible for the oversight and operations of EMCP. The role collaborates with the governing board and the member organizations and is responsible for all administrative and related activities including management of the human, fiscal and community resources necessary to ensure that the Community Partners program is planned and managed to the highest standards of the industry. The Executive Director represents EMCP to all external constituencies.

Psychiatrist/ Medical Director: Provides clinical supervision to care teams through case reviews and ad hoc consultations.

Administrative Assistant: supports central EMCP team and coordinates with care team staff

Intake Specialist: helps process electronic and telephonic referrals from ACOs and other providers, families or potential Enrollees, refers Enrollee to appropriate local BH CP care team for engagement.

Customer Service: takes calls from providers or Enrollees acting as first line of information; receives and processes grievances

Assessment/Engagement Team Leader: In start up phase of the program, as large numbers of Assigned Enrollees enter the EMCP program, 2 Assessment/Engagement Team Leaders will supervise dedicated Assessment/ Engagement staff.**

Program Director/ Director of Care Coordination: Bay Cove and Vinfen will each hire a Program Director to manage the Team Leaders and have overall responsibility for development of the programmatic and clinical functions of the BH CP program. Bridgewell's Director of Clinical Services will serve as Director of Care Coordination for Bridgewell's BH CP care teams.**

Assistant Program Director: for the Member organizations with larger number of Enrollees, this position will support the Program Director in supervising teams and providing project management support to get the program off the ground developing standardized processes within care teams. These positions will be hired as early as possible in March 2018 that funding allows. They will initially engage in hiring team leaders and the first care coordinators/clinical care managers. **

Care Team Leaders: The Team Leader provides clinical and programmatic oversight to a local care team. This role directly supervises Care Coordinators, Clinical Care Managers, and Recovery Support Navigators in the provision of care coordination and clinical care management. Based on projected membership volume, Bay Cove and Vinfen will each hire 3 Care Team Leaders and Bridgewell will hire 1 Care Team Leader.

** For the above positions of Engagement Team Leader, Program Director and Assistant Program Director, Vinfen and Bay Cove are each allocated 1 FTE based on membership volume. Bridgewell is allocated a portion of a Program Director that is the equivalent of all 3 above positions (Engagement Team Leader, Program Director and Assistant Program Director) based on its projected membership.

Executive Director – This role will support EMCP and BLTSSCP and is a centralized function. The role is allocated 20% to EMCP and 80% to BLTSSCP because in the prep budget period we are developing the program infrastructure and BLTSSCP has 7 organizations involved whereas EMCP has 3 organizations involved.

Intake and customer service – allocated only to EMCP, rather than to multiple Consortium Entities, because it's a centralized function;

Psychiatrist – allocated only to EMCP, rather than to multiple Consortium Entities, because it's a centralized function

Provide a brief description of the intended use for each Equipment line item listed above and how the estimated costs were determined:

Row 6 - Supplies

Description of Supplies	Unit Cost or Cost/FTE	# Units or FTE	Cost
Office supplies, printing, copying, postage			$ 1,870.37
Total Supplies (Program Budget Line 6)			**$ 1,870.37**

Provide a brief description of the intended use for each Supply line item listed above and how the estimated costs were determined:

Based on the experience of the Member organizations existing care coordination programs, $39/month/FTE has been allocated for supplies including office supplies, printing, copying, and postage for approximately 4 FTEs.

Row 7 - Contract Services

Name of Contractor	Contractor Type	Goods and Services Provided	Cost
Total Contract Services (Program Budget Line 7)			

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Row 8 - Software Licensing

Description of Software	Cost per License	# Licenses	Cost
Total Software Licensing (Program Budget Line 8)			

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

Row 9 - Telecommunications

Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
Total Telecommunications (Program Budget Line 9)			

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

Row 10 - Occupancy

Occupancy Expense	Total SqFt	Cost/SqFT	Cost
Rent			$ 9,363.75
Utilities			$ 2,247.30
Repair and Maintenance			$ -
			$ -
			$ -
Total Occupancy (Program Budget Line 10)			**$ 11,611.05**

Provide a brief description of how each Occupancy line item listed above will support the CP's performance and how the costs were determined:

The member organizations have extensive experience renting and purchasing both office and residential space in communities across Massachusetts. The members' experience is that $269.85/FTE month is an adequate amount for rent and $64.76/FTE month for utilities although rates vary across Massachusetts. In row 1, there are 34.7 FTE months in the Prep budget year. We commit to not allocating more than $25/square foot for rent.

This funding will support the three care coordination organizations to lease work space for 7 locally based care teams. The space will provide flexible work stations for care coordinators who spend the majority of their time in the community but need a place to dock for supervision, documentation, copying, printing, etc. In addition, EMCP will lease work space for the management team at a central, Boston location.

Row 11 - Other

Other Direct Expense Description	Cost
Total Other (Program Budget Line 11)	

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Row 12 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 12)	**12.08%**	**$ 39,246.44**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

This administration line includes all non-direct administrative functions to support the program including human resources at each Member for recruitment, HR management and training, accounts payable, payroll, IT maintenance and support, and building/location/real estate functions. It has been an appropriate amount based on experience.

Row 13 - Other Operational Expenses

Description of Expense	Cost
Financial software (setup, mgmt, licenses)	$ 2,700.00
Total Other Operational Expenses (Infrastructure Budget Line 13)	**$ 2,700.00**

Provide a description of each retention expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

As part of standing up the financial system for the program, it will be necessary to license, set up, and expand the users of the software for all the payors and payees. This is more financial set up and management than IT.

344							
345							
346	EMCP is choosing not to include an administrative overhead rate in the infrastructure budget for two reasons:						
347	1) EMCP is the management company for administering the BH CP program on behalf of Bay Cove, Bridgewell and Vinfen. We						
348	consider EMCP itself as administrative overhead for the BH CP program.						
349	2) In the infrastructure budget, there are costs that are not within the EMCP organization itself. For example, financial services						
350	are contracted out to Bay Cove and IT services are contracted out to Vinfen. Our assumption is that the administrative overhead						
351	rate within the program budget will cover administration of those additional services.

BH Community Partner - Staffing Model

Community Care Partners, LLC

line #			
1	Estimated number of Engaged Enrollees (including CBFS if applicable) at the end of Budget Period 1	2,580	*Should align with Program Budget*

	BH CP Program Staff	FTEs (Do not duplicate FTE - FTE's may be allocated across staffing positons as applicable)	Comment
2	BH CP Director and Assistant/Deputy Director	4.6	*Total management oversight of BH CP*
3	Medical Director	0.15	*Portion of Medical Director allocated to BH CP for the number of enrollees shown in line 1*
4	RNs		
5	Clinical Care Managers (RN)	15.0	*Do not include FTEs listed in line 4*
6	Clinical Care Managers (LPHA)	17.0	*LPHA includes LICSW, LMHA, LADC I*
7	Supervisors/Team Leaders	8.3	*Do not include FTEs listed in lines 4, 5 or 6*
8	Other Licensed Staff		*Do not include FTEs listed in lines 4, 5, 6 or 7*
9	Care Coordinators	44.0	*FTEs providing Care Coordination (may include Health Outreach Workers, Community Health Workers, Peer Specialists, Recovery Support Navigators providing care coordination)*
10	Peer Specialist/ Recovery Coaches (non-Care Coordination)		*Do not include FTEs of Peer Specialists or Recovery Coaches included in line 9*
11	Intake Coordinators/Engagement Specialists		
12	Administrative Support	5.3	
13			
14			
	Total FTE	94.2	

	Staff Ratios - Please calculate the following ratios:		
15	Ratio of RN and Clinical Care Manager (RN) to Assigned and Engaged Enrollees	172.0	*Estimated number of Assigned and Engaged Enrollees at the end of BP1 divided by total FTEs of (RN+RN Clinical Care Managers)*
16	Ratio of Care Coordinator Supervision to Care Coordinators	9.19	*Total Care Coordinator and Clinical Care Manager FTEs divided by Total Care Coordination Supervis*

Please describe which Program staff listed in lines 2 through 8 above directly supervise Care Coordinator staff:
All Care Coordinators and Clinical Care Managers (lines 5, 6 and 9) are supervised by Team Leaders. At this point in time, at the end of Budget Period 1 (2018), 2 of the Team Leaders will oversee special Assessment/Engagement teams that will work with the high number of Assigned Enrollees being referred to the program throughout 2018 and 2019. An estimated 21 employees (3 RN Clinical Care Managers, 7 LPHA Clinical Care Managers and 11 Health Outreach Workers) will be dedicated to engaging and assessing Assigned Enrollees in this time period.
Note: line 16 - we divided total Care Coordinators and Clinical Care Managers by the Team Leaders

7.3 A Executive Summary

Eastern Massachusetts Community Partners (EMCP) is a newly formed organization that brings together three Community-Based Organizations ("Members") to provide BH CP services to people with SMI/SUD. Each Member, on its own, is a leader both in its local communities and in its field of service. Bay Cove is one of the state's premier SUD providers with a full continuum of care for people with addictions. With blended expertise in SMI and SUD, Bay Cove has a reputable track record of meeting the most challenging needs of people with Dual Diagnoses in the Commonwealth. Bridgewell is a major outpatient mental health provider in the Northern region with four practices and is known as an innovator in SUD programs, embedding Recovery Coaches in a local hospital Emergency Department to engage people who have overdosed. Vinfen is the largest DMH contractor and CBFS provider in Massachusetts and is known for its adherence to recovery and rehabilitation based services, adoption of evidence based practices, and technology innovation. Together the Members have a presence in most communities in Eastern Massachusetts including relationships with social service providers, hospital systems, local government, police and BH providers. This local presence is the foundation for developing locally based care teams that will perform the functions of the BH CP program.

EMCP is committed to the integration of BH, medical and LTSS in order to better serve people with SMI/SUD. Evidence of this commitment is apparent in the programs launched by each Member: CBFS, One Care Health Homes, SUD Treatment Center, Young Adult Diversion and Homeless Outreach. EMCP fully supports the goals of EOHHS' proposed delivery reforms as described in EOHHS' 1115 Waiver Extension Request and the BH CP goals in particular to 1) integrate medical and BH care for people with SMI/SUD and 2) strengthen linkages to social services and LTSS. The larger MassHealth demonstration will create the necessary structure for the BH CP program to be successful by holding providers accountable for total cost of care. This shift to accountable care will encourage providers to expand their programs and resources to focus on people with SMI/SUD that has only previously occurred on a much smaller scale.

People with SMI face significant barriers to accessing health care services and to partnering with their health care providers to improve their health. The result is a higher disease burden and greater use of costly health services such as Emergency Department and inpatient. The health delivery challenges faced by people with SMI are widely recognized in the literature and illustrated in their greater disease burden: 50% more likely to be obese and twice as likely to be smokers than average. The barriers they face to accessing services and to partnering with their health care providers include: interpersonal ones such as a history of trauma and/or cognitive impairments; non-existent or poorly functioning support networks; housing instability; and stigma. In addition to these challenges, in many communities, there are gaps in certain types of BH services including outpatient mental health, day programs and crisis stabilization.

To address these challenges, EMCP will provide services in the seven domains of BH CP supports: outreach and active engagement; Comprehensive Assessment and Person-centered Treatment Planning; care coordination and care management; support for care transitions; medication reconciliation; health and wellness coaching; and connection to community and social services. Although all seven domains are important and EMCP will provide supports to address all, in the first year of the program, a key focus will be on Enrollee engagement. Many people with SMI/SUD have never been enrolled in outreach or care coordination programs before and may be hesitant to participate for all the reasons listed above. Individuals served in the DMH system have often not been engaged in managing their physical health. Without

successful Enrollee engagement, the rest of the BH CP support services cannot be of benefit to Enrollees. EMCP will create an Enrollee Engagement Library of best practices, it will be an important principle of training for Care Coordinators and Clinical Care Managers, and it will be infused throughout the Learning Collaborative that will be created. Enrollee Engagement will also be the focus of EMCP's Quality Improvement program in the first year of the program.

EMCP recognizes that to be effective, the core BH CP services must be provided in close partnerships with ACO/MCOs, the entities at risk for Total Cost of Care in the new MassHealth delivery system. As a result, EMCP will invest considerable staff resources to develop ACO collaborations to coordinate care, reduce duplication of services, and target limited resources to the right Enrollees at the right time. In service areas demanding more than one care team, teams will be organized, as much as possible, to align with not more than one or two ACO/MCOs.

EMCP will support 5,400 Enrollees when at its designed Capacity, after a 16-month ramp-up period. EMCP has developed enrollment projections that take into account estimated numbers of ACO/MCO referrals and existing clients in specific Service Areas as well as estimated participation rates. EMCP will serve all of Greater Boston and eight of the ten Service Areas in the Southern Regions and six of the nine Service Areas in the Northern Region (Haverhill, Lawrence, Lowell, Lynn, Malden, Salem).

EMCP will employ a central management team that is responsible for overall performance and contract management with EOHHS, ACO/MCOs and Member organizations. The central management team will be responsible for developing certain operational and programmatic elements of the BH CP program including training curriculum for Care teams, a regular learning collaborative for Care Coordinators, a central intake process for accepting ACO/MCO referrals and assigning them to care teams, and Consumer Advisory Boards. Each Member will develop locally based care teams that build on each organization's community-based relationships to provide the core BH CP services. Other central administrative functions will be delegated to Members: Vinfen will provide IT, Marketing and Quality Management functions and Bay Cove will provide financial management and HR services to the EMCP central management team. Below are key milestones with timeframes for operationalizing the BH CP program:

- ACO relationship development – EMCP Members began planning sessions with several ACOs/MCOs nine months ago; these will continue until contracts are final in Spring 2018;
- Intake/referral system – EMCP will develop a system for accepting Enrollees from ACO / MCOs and assigning them to local care teams for engagement;
- Central management team start – key leadership positions including the Executive Director will begin in January 2018;
- Information Technology systems – EMCP will select a CCIT in September and configure the system for the following 6 to 9 months;
- Care team start up – Team Leaders will begin by May 2018; CCs and CCMs will begin by May; additional staff will be hired based on Enrollment volume.

In operationalizing the BH CP program, EMCP will develop infrastructures and capacities that will sustain the program over the Contract period and beyond. These structures include IT systems, a financial management system, a Quality Management program, a workforce trained in integrated care, a marketing platform for engaging Enrollees, an organizational governance

structure that facilitates the collaboration of three separate Member organizations under one umbrella, and integrated care relationships with ACO and MCOs.

7.3 B Supporting Populations and Community Engagement

1. As community based organizations providing care coordination services for decades to people with behavioral health challenges in Eastern MA in all the Service Areas (SAs) included in this proposal, we have extensive experience seeking out, using the resources of, and maintaining strong and enduring relationships, collaborations and partnerships with a wide and deep variety of municipal, state and federal social service agencies and community based organizations. In addition to the examples in the chart below, our relationships extend to local civic associations, faith based and community development organizations, municipal leaders, local housing authorities, elected officials, and academic institutions. Examples of our connections include:

Region/SAs *=Partnerships	Social Service / Municipal / Community Organizations	Behavioral Health Service Providers	Housing & Homeless Services
Northern: Haverhill	Community Action of Haverhill, Pettingill House, Buttonwoods, Sarah's Place	Holy Family Hospital, Whittier Pavilion, Anna Jaques Hospital	Community Teamwork, Ruth's House, Emmaus Inc.

2. We will use our expertise in seeking out and developing partnerships to further enhance our resources, provide supports that reflect the needs of those we serve in All Service Areas, and strengthen our collaborations in All Service Areas by:

- Tasking Program Directors with developing and strengthening future collaborations
- Targeting the needs of high users of services to coordinate care plans with Enrollees and their network of helpers to optimally address their needs
- Marketing the benefits of Care Coordination based on our previous experiences
- Using written materials and face to face meetings to establish networks with community, social, and health care providers our Enrollees identify as valuable in their lives

3. After decades of developing and sustaining community collaborations, EMCP will bring comprehensive regional resource toolkits to our staff to which they will be oriented as part of

their initial training. EMCP Members will maintain these specific and up to date resources with contact information online to be accessible to all staff. As we identify new community resources, these resources will be routinely shared in supervision, staff meetings, email, and in-service trainings.

7.3 C Community Partner Supports and Activities

EMCP's work will be predicated on effective practices in eight domains: 1) Outreach and active engagement, 2) Comprehensive assessment and person-centered treatment planning, 3) Provision of care coordination and care management, including enhancement of Enrollees' access to health care, 4) Support for people through critical transitions in care, 5) Provision of safe medication reconciliation, 6) Provision of health and wellness coaching, 7) Connection to Community and Social Services, and 8) Community Collaboration and Coordination. EMCP Members bring extensive and demonstrated expertise in all these activities.

To provide the CP supports and activities described in this Section 7.3 C, each Member will develop one or more locally-based Care Teams that include Care Coordinators (CC), Clinical Care Managers (CCM) and a Project Coordinator. Each care team will be supervised by a Team Leader who is a Licensed Professional of the Healing Arts (LPHA). Care Coordinators are Health Outreach Workers (HOW) or Recovery Support Navigators (RSN) and may also be a Certified Community Health Worker, Certified Peer Specialist and/or filled by someone with lived experience. EMCP estimates hiring two HOWs for every one Recovery Support Navigator based on the assumption that about one-third of Enrollee will require people with SUD expertise. The Care Teams will also include Clinical Care Managers (CCM) who are licensed as an LMHC, LICSW or LMFT or RN. EMCP estimates hiring an equal number of LMHC/LICSW/LMFT staff as RNs to serve as Clinical Care Managers. Section 7.3 E further describes the care team staffing.

1. Outreach and Engagement

EMCP will begin outreach efforts to engage Assigned Enrollees with an appreciation that care management through the BH Community Partner (CP) program can be of great benefit to them and their overall health. In many ways, the current health care system falls short in attending fully to the needs of people who are poor and live with the daunting challenges of Serious Mental Illness (SMI) and/or Substance Use Disorder (SUD). People are challenged by significant cognitive impairments, symptoms related to their psychiatric conditions or SUD, and side effects of medicines. People with SMI and/or SUD have a higher prevalence of exposure to interpersonal trauma which is recognized as interfering with engagement of helpers. Housing instability, homelessness, hunger and food insecurity are commonplace. Many people also find their natural support networks lacking. Overall, these collective and limiting factors lead to health disparities and create formidable barriers that impede people's chances of engaging with providers and embracing health promotion strategies and tools.

The ultimate goals of delivering improved health outcomes and containing costs for MassHealth's prioritized population are dependent on successful outreach and engagement activities. Without successful engagement, an Enrollee will not have access to or benefit from

key CP functions such as care coordination, health and wellness coaching, connection to social services, and care transitions supports. Thereby, EMCP will prioritize engagement in the first year of the program through the development of an Engagement Strategies Library and in targeting Engagement as the first year's Quality Management program initiative. As discussed in Section 7.5 I, EMCP will closely measure progress on particular steps in the engagement process to determine how the work can be improved.

EMCP will receive referrals of Assigned Enrollees from ACOs, MCOs and EOHHS directly. Upon receipt, EMCP will notify the referring organization within one business day to confirm receipt and will open an Enrollee record in EMCP's CCIT. Anticipating a high volume of referrals in the first 18 months of the program, EMCP will develop dedicated Assessment Teams responsible for the initial outreach, engagement, consent, assessment and care planning work with Assigned Enrollees. Two of the three Consortium Entities, those two with the higher capacity, will each have an Assessment Manager to oversee these start up teams. Upon assignment to EMCP, the Assigned Enrollee will be assigned to a member of the Assessment Team. Assessment Teams will remain in place through the high-volume referral periods. As referral volume decreases and EMCP's designed Capacity is reached, designated Assessment Teams may no longer be necessary, and Assessment staff will be included in the Care Teams.

An extraordinary strength of EMCP is our collective proficiency in engaging and partnering with people with excessive vulnerabilities and supporting them in building healthier lives and better futures. This expertise, as informed by evidenced based and promising practices as promoted by SAMHSA-HRSA's Center for Integrated Health Solutions (www.integration.samhsa.gov) and the National Health Care for the Homeless Council's Outreach & Enrollment Quick Guide: Promising Strategies for Engaging the Homeless Population (www.nhchc.org), will steer the efforts of our Assessment Teams. EMCP's initial and ongoing outreach and engagement campaign as launched by CP Assessment Teams will employ a variety of honed techniques and practices, including:

- **Meet people where they are.** EMCP teams will accommodate an individual's preferences in location, frequency, and duration of meetings in an effort to build trust and be supportive.
- **Describe and demonstrate usefulness of BH CP services to encourage Enrollee participation**. In that some Enrollees will be reluctant to engage, EMCP will provide concrete information on the practical ways the BH CP program will provide support.
- **Ensure communications meet the person's cognitive and language skill level**. EMCP teams understand how nuanced communication must be and will tailor speech (pace, pitch, cadence) and language to meet that of an Enrollee's.
- **Address concerns that people bring up in a hopeful and non-judgmental manner.** Some people experience confusing or troubling thoughts, symptoms, and triggers that emerge when meeting new people or considering changes. EMCP teams will respond respectfully and kindly to such experiences, paving the way for the individual to focus on accessing and using health care services.
- **Bring experience that addresses the cultural and linguistic needs of the population prioritized by EOHHS**. EMCP takes great pride in our commitment and ability to employ teams that reflect the cultural and linguistic needs of those we serve. EMCP meets both the cultural and linguistic needs of the populations who will be served. EMCP will tailor outreach materials to meet the predominant languages and prioritizes hiring team members who reflect the richness and diversity of those communities.

- **Understand that predicting who will engage in services is not possible.** EMCP suspends assumptions that can be commonplace for many professionals. EMCP will provide all Assigned Enrollees with the opportunity to engage in the BH CP program at their pace.
- **Customize engagement strategies to address interests and needs.** EMCP will tailor engagement to different populations. Care Coordinators receive ongoing training and support that identifies engagement best practices based on distinct needs in relation to gender differences, LGBTQ status, homeless status, and those overwhelmed with addiction. EMCP will develop an *Engagement Strategies Library* based on Members' experience prior to the start of the program and will update the library throughout the Contract obtaining input from Care Coordinators.
- **Support enrollees to identify and cope with those who interfere with engagement**. Sometimes family members, friends, neighbors, landlords and others can be intrusive or disruptive to people facing choices. EMCP teams will manage people who pose challenges to an Enrollee's capacity to embrace services, and teach people how to access health care despite these challenges.

a. Planned strategies for outreaching to and engaging with Assigned Enrollees, including individuals who are homeless and hard to reach

Health care providers and insurers describe "patient finding" as a practical obstacle they face in engaging people in services. EMCP brings pragmatic skills and flexibility to community engagement efforts, particularly for people who are homeless. We meet people where they live, whether in a temporary housing situation or unsheltered situation. In this endeavor, we will:

- Find people through local homeless outreach teams, shelters, homeless services, and drop in centers.
- Collaborate with other providers in Assigned Enrollees' care networks.
- Engage in street outreach, approaching people on the street in a safe and respectful way.
- Outreach to people in unique environments, such as a homeless encampment or non-traditional housing. If a particular living situation is unsafe, Care Team Members will arrange to meet an Assigned Enrollee at a local coffee shop, park, or public building.

b. Planned strategies for outreaching to and engaging with Assigned Enrollees with Substance Use Disorders (SUD)

EMCP teams have extensive experience reaching people who may be actively using substances. As such, in addition to the above mentioned engagement practices, our teams are well versed in employing strategies specific to those with SUD. We will approach outreach and engagement activities informed by: our current and ever evolving knowledge of SUD; our understanding of the impact these disorders have on the overall health, wellness, and quality of life of those we serve; and the widely implemented engagement strategies as employed within the field of SUD services.

- **Employ and deploy Recovery Support Navigators**: When EMCP Enrollment is at its designed Capacity, EMCP local Care Teams will include 18 Recovery Support Navigators (RSN) to serve people with SUD. If EMCP learns that there is a higher prevalence of SUD among Enrollees than is currently projected, EMCP will employ more RSNs and fewer Health Outreach Workers.
- **Address stigma**: EMCP teams are well trained in recognizing such biases, in oneself, in others, and in our institutions, and in recognizing the negative impact such biases have on

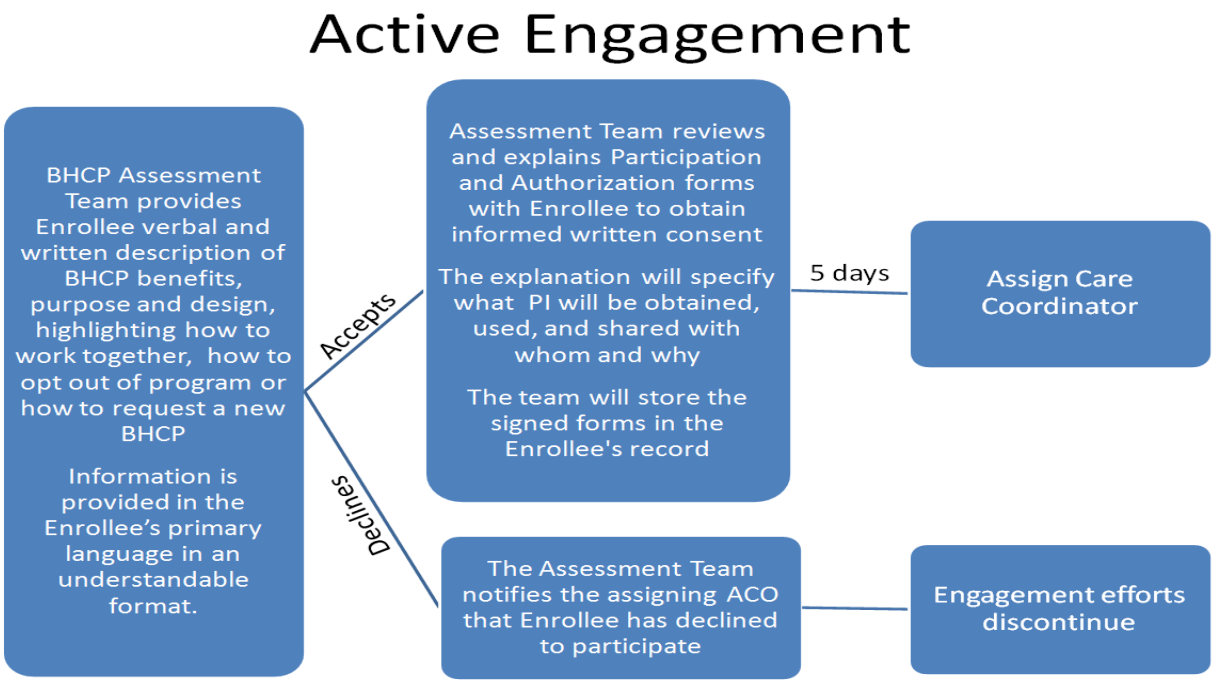
persons served. This code of ethics is crucial in our work with people living with SUD. It reflects EMCP's mission, promotes authentic connections, drives engagement and leads to more effective treatment relationships.

- **Inclusion of people in recovery on Care Teams:** EMCP promotes the inclusion of people in recovery on our teams. In addition to other skills team members in recovery bring, personal perspectives and experiences promote a unique level of trust and maximize the opportunity for both engagement and recovery.
- **Flexibility**: EMCP teams are practical in altering appointment schedules to engage people who may keep atypical hours, or who may be clean and sober for short periods of time on a given day.

c. Planned process to obtain and document Assigned Enrollee's agreement to participate in

CP Supports initiated through participation form and assignment to an Assessment Team

Anticipating a high volume of referrals, EMCP will develop Assessment Teams responsible for the initial outreach, engagement, consent and assessment work with Assigned Enrollees (Enrollee). Upon assignment to EMCP and no later than 30 days, Assessment Teams will outreach to Enrollees though phone, electronic means, home visits, and/or community based visits to describe the benefits of EMCP involvement. Teams will prioritize meeting Enrollees in person in order to most effectively explain the BH CP program and enhanced opportunities, and to thoroughly address questions and concerns an Enrollee may have. Teams will make multiple attempts to conduct at least one in person visit for each Enrollee within 90 days of assignment. At these initial meetings with Enrollees, Assessment Specialists will assess an Enrollee's expressed needs for pragmatic help, discuss potentially useful solutions, describe EMCP's benefits and follow the engagement protocol as outlined in the Active Engagement Chart below.



2. Comprehensive Assessment and Person-Centered Treatment Planning

a. **Process for conducting Comprehensive Assessments**
The Comprehensive Assessment (CA) and Person-Centered Treatment Plan (PCTP) serve as an essential foundation for the work EMCP will do in partnership with each Enrollee and their designated team. As such, we will implement protocols that will promote the level of an Enrollee's engagement necessary to capture a comprehensive summary of what they might want and need from the program. Similarly, we will seek to connect with the Enrollee in a manner that best fosters their active engagement in both the development and implementation of their PCTP.

Anticipating a high volume of referrals in the first 18 months of the program, EMCP will develop dedicated Assessment Teams responsible for the initial outreach, engagement, consent, assessment and care planning work with Assigned Enrollees. The Assessment Team's Clinical Care Manager will complete the first annual Comprehensive Assessment (CA) and PCTP with each Assigned Enrollee within 90 days of assignment. The Comprehensive Assessment will be completed with Engaged Enrollees annually thereafter. A Clinical Care Manager RN will review the Enrollee's medical history, medical needs and medication sections of the Comprehensive Assessment.

EMCP acknowledges that the most meaningful assessments and effective PCTPs are driven by the full participation of the Enrollee in the process. To this end, our teams will embrace the opportunity during assessment and planning meetings with the Enrollees to assure them of the full team's support, to lay the groundwork for engagement in health improvements and to highlight the impact that change can have on their health and quality of life. We will get to know each person, learning first-hand their life experiences and perceptions of the world, what they recognize as barriers to living a more healthy life, and what they identify as strengths and supports. We will make repeated efforts tailored to each individual to promote input into the assessment and planning process as much as possible or desired by the Enrollee.

As during the Active Engagement phase, EMCP Assessment Teams will capitalize on existing staff relationships with Enrollee's involved in organizational BH services to promote participation in the assessment and planning process with "warm handoffs." Additionally, the team will rely on other sources for information for the Comprehensive Assessment as permitted by the Enrollee, or Legal Authorized Representative (LAR) when applicable, with informed consent.

Senior program staff of EMCP Members, informed by their collective experience in Behavioral Health Homes, CBFS, and SUD programs, have drafted a Comprehensive Assessment Tool and a Person Centered Treatment Plan (PCTP). Please reference **Attachment 3**, which represents our proposed Comprehensive Assessment (CA) tool, at the end of this Section. Of note, EMCP Members are currently piloting the CA tool to assess how long it takes to complete and whether there are any areas that can be improved.

b. Process for conducting Person-Centered Treatment Plans (PCTP)
It is imperative for an Enrollee to participate in the care planning process. EMCP will promote a flexible environment that respects an Enrollee's process while making every effort to engage them.

Process for developing with Enrollee active participation: EMCP will use the results of the CA, and any other assessments conducted for the Enrollee, to inform the development of the PCTP. To promote active involvement by the Enrollee in this process, each Enrollee will be offered the opportunity to designate from his or her circle of family, friends, caregivers, and health care providers a Care Team of their choice. The Enrollee's Care Coordinator will then invite members of the designated team to participate in the initial care planning. The Enrollee will be encouraged to consider and develop specific goals that align with his/her interests and needs. As appropriate, CCs will partner with other known providers in an effort to locate and engage a hard to reach Enrollee and/or will make repeated efforts to engage him or her in this crucial process. And we will meet with an Enrollee as many times as indicated to facilitate active participation and approval of the PCTP. PCTPs will be prepared in the format understandable to the Enrollee and presented with a translator when necessary. As needed, the CC/CCM will seek input from the Member's Medical Director in assessing risk for the Enrollee and in developing a crisis plan.

Process for documenting: Following the approval of the PCTP by the Enrollee or LAR, the PCTP will be sent to the Enrollee's PCP or designee for approval. Upon PCP or designee approval, the Care Coordinator will document in the Enrollee's EHR. EMCP will use a Care Coordination Information Technology (CCIT) to document CP supports. This process will be completed within 90 days of the Enrollee's assignment to EMCP.

Process for updating: PCTPs will be reviewed and updated accordingly every six months, or as needed if major changes in functional or health status occur. The now Engaged Enrollee (Enrollee) may include any care team member in this review. Following Enrollee approval of the updated PCTP, it will be forwarded to the PCP or designee for approval.

Process for ensuring all approvals: EMCP will establish relationships with ACOs in EMCP's service area. As described in Section 7.3 J, EMCP will work with ACOs to develop communication and coordination protocols with primary care practices that are part of the ACOs. We will use these protocols for PCTP input and approval and ensure timely authorization of treatments for urgent needs. EMCP Care Teams will follow the protocol below for Person Centered Assessment and Treatment Planning.

3. Care Coordination and Care Management

There is emerging literature recognizing care coordination and care management practices that render improved health care access, patient experience, and outcomes. These include previously referenced practices such as ensuring that: roles, responsibilities, and goals across the care team are clear; the Enrollee is central to the PCTP development, approval, implementation and ongoing refining of goals relevant to their health conditions and wellness; the PCTP honors the cultural and linguistic values and needs of the Enrollee; and that important information is shared in real time across health practitioners and other key members of the care team. EMCP Members embrace these principles and will actualize them in the BH CP program.

Formation and Operation of the Care Team

During the outreach and engagement phase, an Assessment Team Member will interview the Enrollee and review the ACO referral information in order to determine all stakeholders involved in his/her care and those that could be included in the Care Team. The Enrollee will be encouraged to include others they rely on for support and assistance in their Care Team. Team members will at a minimum include the PCP or designee, the Clinical Care Manager (CCM) and Care Coordinator (CC), behavioral health practitioners and the Enrollee. Upon the Enrollee's wish, their team may also include advocates, natural support network members, specialists, community service providers and other members of relevant state agencies.

The CC will contact identified Care Team members to notify them of the Enrollee's assignment and participation in BH CP services, and the Enrollee's request for their participation on the Care Team. Individual roles and responsibilities appropriate to licensure and relationship to the Enrollee will be outlined. The CC will assume full responsibility for making and documenting efforts to address the Enrollee's health needs and treatment goals with the Care Team, and for maintaining and distributing team members' contact information.

The CC will focus coordination efforts on ensuring that an Enrollee accesses primary, specialty and behavioral health care and that their identified goals on their PCTPs are addressed. The CC will support the Enrollee to schedule and keep their health-related appointments and access transportation as needed.

The CC will remain the responsible person for coordinating with other members of the Enrollee's Care Team and ensuring that team meetings occur when necessary to address significant changes to health status or areas of need during time of care transitions. Options for care coordination modalities will include: multi-party conference calls, emails, shared documents through secure portals and in person meetings or as a larger group to emphasize efficiency for all parties involved.

Our efforts will operate within HIPAA requirements when coordinating services outside of the Care Team; for example, with the judicial system, Social Security Administration or other areas where Enrollees often benefit from assistance and coordination.

Coordination of LTSS needs

For Enrollees who have LTSS needs, EMCP Care Teams will provide LTSS coordination. Care Coordinators (CC) will coordinate routinely with involved service providers (often LTSS or CBFS providers) to ensure contracted community based services remain in place to address the Enrollee's needs and goals as outlined in their PCTP. Modalities for communication include options noted previously.

When Enrollees develop new need areas which require LTSS services, the CC will explain how a particular type of service can help to meet these identified needs and will provide the Enrollee with a choice of at least two providers, whenever possible, for that service to support personal choice. This service will be documented in the CCIT.

As Enrollees seek to access LTSS services, the CC will provide links, names and contact information for those Enrollees who are able to establish contacts independently. For Enrollees

requiring more assistance, an enhanced referral process will be expedited, including more detailed instructions regarding what a service entity provides, how to initially access the service, how to use it and how best to sustain ongoing communicate with the service. This information will be provided to the Enrollee in their primary language and in their preferred modality to ensure for their understanding. In the absence of the necessary skill base, a team member will accompany the Enrollee in person to access the services or care they require and to teach the Enrollee how to manage making service connections over time. The CC will add newly accessed service providers to the Care Team, establishing contact at time of referral and maintaining communications as previously detailed.

Coordination of Social Determinants of Health needs

EMCP Care Teams recognize that Social Determinants of Health (SDH) needs are considerable within the MassHealth prioritized population. Given that so many of those within this population face ongoing challenges as associated with poverty, unemployment, food insecurity, unstable housing, and poor access to health care, our care teams will assess SHD needs in an ongoing way and prioritize these needs with an Enrollee and their Care Team. Attention will be paid to a range of SDH need such as:

- Economic Stability: Our teams are well versed in supporting people in securing all benefits for which they are entitled, including utility assistance and cell phone assistance, and in achieving food security and housing stability.
- Education/Employment: As needed, our teams support people in seeking educational opportunities, vocational training, job placement services, employment opportunities as well as language and literacy classes.
- Health Literacy/Health Care Access: For many, a crucial support in this area relates to ensuring that the cultural and linguistic needs of people served are met as they access their health care providers. Our teams prioritize the health literacy of those we serve, and promote engagement in preventative health measures such as physical activity and balanced nutrition.

Person-Centered Care Coordination

Care Coordination efforts will be tailored based on each Enrollee's individualized needs.

- For Enrollees who are proficient at accessing care, participating in decision making and following health care provider recommendations independently, CC's will routinely communicate with the Enrollee and provide guidance and information as needed to ensure successful health care use, including properly following prescribed medication regimens.
- For Enrollees less capable of doing so, CC's will provide a greater level of assistance and coordination. For example, this may include providing reminders for attendance at scheduled appointments; assistance in arranging for transportation; or teaching Enrollees how to prepare for appointments and the skills central to shared decision making.
- Enrollees who lack the primary skill base required to access and use care will receive comprehensive interventions which may include more routine in person coaching by a team member, appointment scheduling, and instruction regarding how to practically apply provider recommendations in the environment in which they are performed and/or to follow prescribed medication regimens.
- For those Enrollees who have a Legal Guardian involved, CC's will additionally work with the guardian and involved care team members to facilitate their access to care.

Medication Adherence

A key factor in improving an Enrollee's health, and health outcomes overall, is medication adherence. EMCP Care Teams will employ a number of strategies to support Enrollees in adherence to their individualized medication regimen, including:

- Developing relationships with local pharmacies to expand abilities to provide quick response to medication changes, unique packaging solutions and delivery.
- Identifying people or organizations that can support the Enrollee in taking medications including visiting nurse associations.
- Coordinating with the Enrollee's Medication Assistance Program (MAP) provider
- Utilizing medication reminders via calls or text messages as helpful to an Enrollee. Of note, per arrangements with ACOs/MCOs, EMCP hopes to designate DSRIP funds to evaluate technologies such as "MedMinders" to support individuals with medications rather than rely on more costly VNA visits for simple medication administration (see Section 7.3 D).

Also of note, as delineated in Section 7.3 D, EMCP will, in collaboration with select ACOs, use a modest amount of DRSIP funds to evaluate the cost effectiveness of remote patient monitoring tools, to engage individuals with complex problems who have the capacity to use systems to connect with caregivers and self-manage specific health problems. EMCP will implement a pilot program with 20 Enrollees in Budget Years two and three.

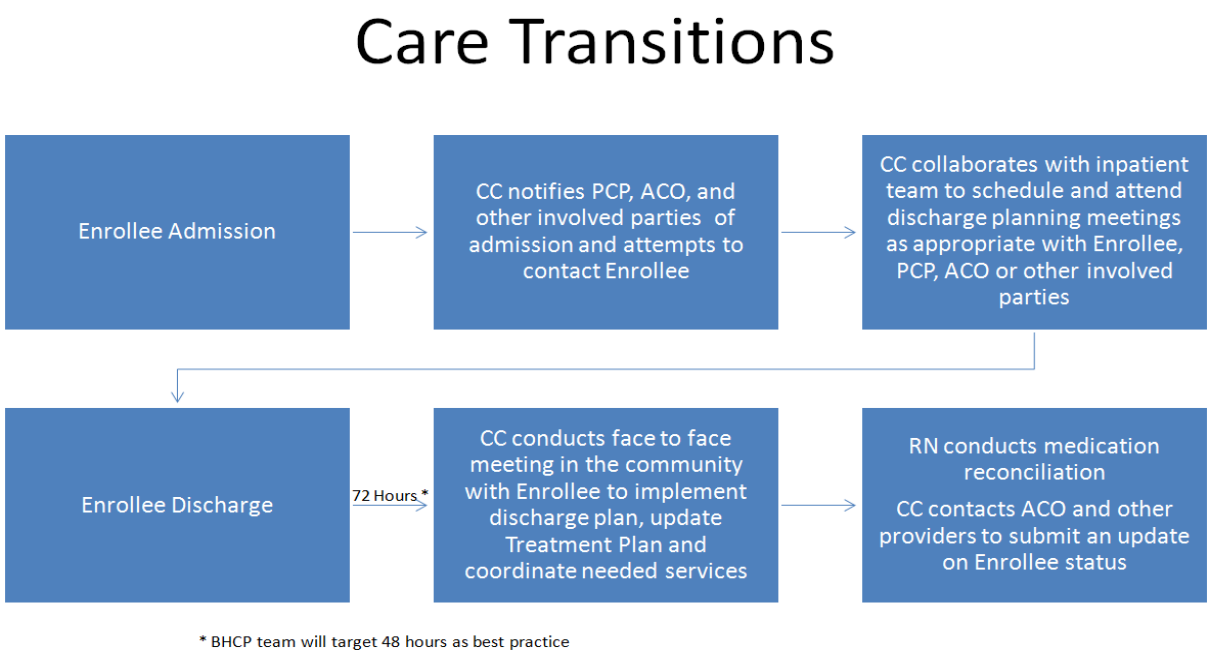
4. Care Transitions

It is critical to provide Enrollees well-coordinated and optimal care during times of admissions and discharges. Care Transitions represent a time of great vulnerability for people experiencing an exacerbated physical or behavioral health condition. Conversely, when people's conditions stabilize and improve, they again often faces challenges as they make adjustments upon returning home. Depending on the nature of an Enrollee's health concern, they may require medications, changes in health practices and diet, and likely require follow up care. Many factors affect the success of care transitions: time available for transition planning; when and where the transition occurs; the Enrollee's health status and personal resources and supports; the Enrollee's perception of the transition; and communications and cooperation across different systems and organizations. Common care transitions within this population include:

- Admissions to or discharge from higher levels of care in Behavioral Health settings such as inpatient psychiatric hospitalizations, detoxification programs, crisis stabilization units and respite programs
- Admissions to and discharges from inpatient medical hospitals for acute medical conditions
- Transitions of care between inpatient settings and skilled nursing facilities (SNF)
- Discharges from correctional facilities that require re-entry planning and supports
- Discharges precipitated by a person's behavioral concerns, as can occur in many voluntary treatment programs, should a person violate safety rules that compromise care for others (if the individual uses illegal substances or engages in problematic behaviors)
- Transitions in care that occur when a service requires immediate evacuation

Regardless of the nature of a care transition, the Care Coordinator will assist the Enrollee in navigating through all changes associated with the transition from one setting to another. EMCP Care teams will:

- Prior to inpatient discharge, coordinate with facility discharge planners, and other Members of the care team as appropriate to develop a discharge plan.
- Attend discharge planning meetings that include the Enrollee and facility staff.
- Conduct a face–to-face visit with the Enrollee within three business days of the inpatient discharge that includes medication reconciliation and an update of the PCTP.
- Assess whether the Enrollee's home environment is safe for return and will arrange for additional LTSS or social services that may be needed upon the Enrollee's arrival home.
- Review Activities of Daily Living (ADL) and Instrumental Activities of Daily Living (IADL) to identify new LTSS and/or social service supports that need to be arranged. Following a Care Transition, the Enrollee may return home and need to pay bills, secure groceries, necessary medical supplies and medications, and attend to laundry.
- Provide important resources and assistance to the Enrollee to support use of existing or newly referred providers.
- Support new providers in connecting with the Enrollee and relevant members of Enrollee's natural support network, capitalizing on "warm hand-offs" as often as possible and role modeling to new providers regarding how best to engage the Enrollee.
- Offer transportation coordination and skills training to supplement organizational strategies required to ensure attendance at scheduled follow up appointments.
- Exchange relevant information with involved parties to coordinate care.
- Prioritize discussion with Enrollee to assess level of satisfaction following transition and current stability to prevent further upheaval.



5. Medication Reconciliation

Psychiatric and medical symptoms, substance use, chaotic lifestyles, and fragmented care with multiple prescribers all compound the challenge of providing proper medication regimens for people living with complex, co-occurring behavioral and medical health issues. Therefore, it is critical to complete medication reconciliations and to establish systems to help Enrollees access newly prescribed medications. Utilizing effective Medication Reconciliation procedures ensures for safety and can reduce the need for readmissions and emergency room utilization. A Clinical Care Manager (RN) will perform medication reconciliation for Enrollees who have been discharged from an inpatient setting including coordinating with the Enrollee's PCP to ensure that any new orders from the inpatient setting are appropriate, verifying that the prescriptions were filled accurately, ensuring that the Enrollee understands how to take the medications, and reviewing any discrepancies or issues with multiple prescriptions. The Care Coordinator will employ methods discussed in Section 7.3 C 3 to support Enrollees to adhere to medication recommendations. The three major steps will drive the medication reconciliation process:

- **Verify:** RN contacts prescribing providers to obtain Medication Orders
- **Review and Reconcile:** RN reviews medications in person with the Enrollee to ensure that they are filled accurately; if there are discrepancies, RN will coordinate with the pharmacy and/or prescribers to reconcile.
- **Educate Enrollee:** RN discusses medication regimen with Enrollee and checks verbally for understanding; RN provides instructions to support the Enrollee to follow; RN identifies supports for the Enrollee including technologies as discussed in Section 7.3.D and/or people who might support the Enrollee. If Enrollee is unable to follow the regimen, RN will notify prescribers and make recommendations for changes to improve adherence. RN will notify the Enrollee's MAP program if applicable.

6. Health and Wellness Coaching

a. Health and wellness education, coaching and health promotion programs to be utilized
Making changes in everyday practices that align with improving health and wellness is a challenge for the majority of individuals and families in the Commonwealth. EMCP is well versed in best practices that will inform our health and wellness coaching with Enrollees and will bring to Enrollees resources and supports that build on industry expertise: Motivational Interviewing, Cognitive Behavioral Therapy Breathing Retraining, WRAP (Wellness Recovery Action Plan), SAMHSA Integrated Treatment for Co-Occurring Disorders, utilization of DBT practices, Seeking Safety, employing emerging cultural adaptations to EBPs, Integrated Illness Management and Recovery materials, WHAM (Whole Health Action Management), WRAP for Addictions, and Trauma Informed Care.

Joan Kenerson King of the National Council of Community Behavioral Health attests that health change is potentiated when a person has: a support system comprised of people who believe in you and your capacity for change even before you did; knowledge and education to approach change; a person to help you make small – tiny – steps toward change; a way to monitor change and someone to hold you accountable; celebration of small achievements in the change process. ("Inciting Health Behavior Change through Consumer Engagement" SAMHSA- HRSA Center for Integrated Health Solutions, www.integration.SAMHSA.gov)

As noted previously, an important ingredient of EMCP Care Coordinators' orientation will be to partner with Enrollees in an affirmative, respectful, and hope carrying manner. Wellness coaching is predicated on being able to genuinely communicate a belief in a person's potential, regardless of their limitations. Care Coordinators will offer information, resources, and generous support to reinforce all efforts made in the service of healthy change. Additional Health and Wellness coaching activities will include:

- Utilizing SAMHSA's Eight Dimensions of Wellness as a starting point for treatment planning and wellness coaching activities. Principles may be referenced with Enrollee and other care team members in an ongoing way.
- Addressing lifelong patterns of unhealthy behaviors by identifying Enrollee barriers or misconceptions, providing education and skills training, addressing lack of resources and using motivational interviewing to promote behavioral change with a primary focus addressing high risk behaviors and health risk factors.
- Utilizing resources through promising practices such as SAMHSA's Program to Achieve Wellness (PAW).
- Supporting Enrollees to address high risk behaviors and health risk factors by encouraging participation in smoking cessation, nutrition programs, exercise, safe sexual health practices, sleep hygiene and weight loss.
- Focusing on small steps that Enrollees can take that can have a big impact on health. Care Coordinators will support Enrollees working on weight loss and share the value of the "Less is More" initiative. ("Inciting Health Behavior Change through Consumer Engagement" SAMHSA-HRSA Center for Integrated Health Solutions, www.integration.SAMHSA.gov). This initiative promotes the valuable benefits that a 5% weight loss can bring to overall health.
- Assisting Enrollees to access primary health care more effectively in order to reduce overreliance on emergency rooms. CCs will provide coaching that is individualized to address each person's specific barriers to accessing care and communicating with providers effectively.
- Improving implementation of healthcare provider recommendations into daily practice by addressing barriers and clarifying expectations with Enrollees. CC's will teach Enrollees how to employ recommended health practices in their homes, when they are with family or friends, and at work or other environments.
- Expanding capacity for Enrollees' self-management of chronic health conditions and routine use of preventive health care through coaching, attendance at workshops in local community settings, and increased access to information and supports on line on issues such as stress reduction and relapse prevention. CCs will support Enrollees to address and manage symptoms of chronic illnesses to improve their quality of life.
- Encouraging Enrollee's consideration of and participation in community based recovery supports such as 12 Step, dual recovery groups, use of the activities that are most helpful to them, faith communities, meditation groups and other personal practices that support spiritual wellness.
- Encouraging Enrollees to connect in area of interests such as playing sports, joining local reading groups, walking/running groups, partaking in local activities (RLC, drop in educational/learning opportunities) that both reduce isolation and enhance joy and a sense of purpose.

b. Methods for ensuring that the Enrollee's goals for health and wellness programs are recorded and tracked in the Enrollee's PCTP/Plan

In an effort to advance the health and wellness of Enrollees, it will be important not only for EMCP to offer all the supports delineated above, but to promote the inclusion of an Enrollee's specific health and wellness goal within their respective PCTP. As such, progress made towards a PCTP goal will be recorded within the Enrollee's Health and Wellness component of their EHR in the program's Care Coordination Information Technology system (CCIT) and reviewed regularly with an Enrollee. In partnership, the CC and Enrollee will track steps being made towards a goal, as well as goal achievement, and any revisions indicated to an Enrollee's PCTP will be made accordingly. These progressions will be tracked within an Enrollee's EHR.

7. Connection to Community and Social Services

The Institute of Medicine emphasizes the importance of integrating community and social services as they are requisite to Care Management planning and compliment the effectiveness of Care Coordinators' roles in addressing both health outcomes and cost concerns. Likewise, the National Quality Forum identifies preferred practices that further reify the merits of including community based non-clinical and social supports in addressing healthcare quality. They promulgated the National Voluntary Consensus Standards for Care Coordination which argue for inclusion of housing, social services, environmental, public health, and transportation to be identified as resources essential to an individual's health. (NQF, *Preferred Practices and Performance Measures for Measuring and Reporting Care Coordination: A Consensus Report,* Washington DC: NQF; 2010).

As discussed in Section 7.3 B, EMCP Members have extensive partnerships with a rich array of community organizations and resources that we will leverage to address health access, equity, and outcomes on behalf of EMCP Enrollees.

a. Plan to evaluate the Enrollees need for social services

There are several points in our relationship with Enrollees where we will identify whether the Enrollee has service needs that cannot be met through a MassHealth covered service or can be more effectively met through a Flexible Service. Those opportunities include:

- the initial in-person CA and PCTP development process
- the re-assessment / PCTP update
- care transitions and in particular discharge planning and post-discharge home visits
- through coordination with Enrollee's existing service providers including staff in other programs operated by EMCP Members (e.g. CBFS or residential staff), the Enrollee's PCP, the Enrollee's BH provider
- through communication with the family members of the Enrollee's care team

At these times, we will partner with the Enrollee to determine current needs for community based, social or Flexible Services and as indicated, will address these needs and services within

Enrollee's initial PCTP or updated PCTP. In turn, our CC's will partner with enrollees to tailor supports that best promote an Enrollee's capacity to function as independently as possible. When an Enrollee needs to access necessary community based services, we will provide links, names and contact information to Enrollees who are able to establish contacts independently. For Enrollees who need more help, an enhanced referral process will be provided, including more detailed instructions about what a service entity provides, how to access it, how to use it and how best to communicate. This information will be provided to the Enrollee in their primary language and by preferred modality to ensure understanding. If the Enrollee is assessed as unable to navigate the needed service, a team member will accompany the Enrollee in person to access the services or care and to teach the Enrollee skills necessary to access services over time.

b. Plan to ensure Care Coordinators are familiar with a wide breadth of social services and supports, and providers of these supports

EMCP Care teams will be trained to identify services that can be provided through the ACO's Flexible Services fund that are substitutes for more expensive services. Through our contracts with Commonwealth Care Alliance (CCA) for One Care Health Home services, we have extensive experience conducting assessments and developing care plans that identify and arrange for services that are outside of MassHealth's Covered Services. And as previously described, our teams will be oriented to a full array of community-based social services as part of their orientation and training. Resources available are specific to: housing stability (securing affordable, safe housing if homeless, housing retention, having heat and electricity), transitional support for Enrollees moving into the community from institutional settings; personal safety (should the Enrollee require supports to address domestic violence, for example), wellness (in varied wellness domains), nutrition and food security, securing/retaining benefits and entitlements, securing needed caregiver or family supports, getting help with money management or legal assistance, and utilizing as needed harm reduction supports.

EMCP Care teams will maintain updated lists of services on our web portal, with specific descriptions of these services, contact points, phone numbers, and emails and a list or link to eligibility requirements. As resources change, they will be updated on our web-based portal and staff will be notified of changes though team meetings, supervisions, and/or email communications. We will coordinate with community service providers to deliver services with the focused intention of teaching the Enrollee to manage independently, thereby decreasing the Enrollee's reliance on paid supports over time. These health and safety oriented services will be maintained to extend Enrollees' community tenure, to address social determinants of health, and avoid or reduce over reliance on acute and emergency services. We will inform the ACO, PCP and Care Team of community based, social or Flexible Services obtained to ensure comprehensive Care Coordination and will follow up with Enrollees to ensure services are properly provided.

c. Planned strategies for collaborating with ACOs to recommend Flexible Services on behalf of Enrollees, and following up on the outcomes of such supports

In initial conversations with ACOs/MCOs Bidders, EMCP has identified Flexible Services access as an area for which we will need to develop protocols. We will continue discussions to determine how EMCP can partner with ACOs to arrange for Flexible Services when it is the most effective way to serve an Enrollee and when it substitutes for a more costly medical

service. EMCP anticipates a process where a Clinical Care Manager or Care Coordinator identifies a Flexible Service need, submits a request to the ACO/MCO, ensures that the Service is purchased and implemented, and tracks the impact / effectiveness of the service. EMCP Member's Bay Cove and Vinfen have arranged for and authorized Flexible Services for One Care Enrollees through their One Care Health Home contract with CCA. The below are examples of Flexible Services that may support Enrollees:

- Companion services to help Enrollees who need support to attend appointments, shop, or learn how to use public transportation
- Non-medical transportation to/from the grocery store or a Clubhouse (DMH funded).
- Heavy chore services for people who are at risk of eviction
- Home supports that improve health outcomes such as room darkening curtains, special lamps to address depression, bedding/pillows for people with COPD, lumbar chairs
- Medical supplies such as a heating pad, knee brace, or adult diapers
- Technologies such as those described in Section 7.3 D for remote patient monitoring

8. Community Collaboration and Coordination

EMCP will collaborate and coordinate with community-based and state agencies on behalf of Enrollees. Please reference previous Section 7.3 B for a summary of many of these types of community based organizations and state agencies and PCP practices with whom we have developed effective partnerships that we will leverage as a BH CP.

Additionally, EMCP Care Teams will:

- Coordinate with any other case management services an Enrollee receives to eliminate duplication of efforts, a critical element to good care coordination efforts. We will provide verbal and written explanations to other existing case management providers regarding the role of the Care Coordinator, the benefits and design of the BH CP model to assess duplicative efforts, and we will make recommendations for changes to services to allow the BH CP model to supplement rather than duplicate existing services.
- Include CBFS, PACT, MAT providers in the Enrollee's Care Team to ensure effective communication aligned treatment goals and a unified approach to care. We will assume all responsibility for establishing and maintaining these relationships and collaborations.
- Partner with the Enrollee and the CBFS provider to ensure the Enrollee has access to routine and specialty medical care and the tools or services required to follow recommended actions, to develop a Crisis Plan to improve community tenure and decrease involvement with the criminal justice system and acute care services, and to establish shared treatment goals to improve health and wellness.

7.3 D Innovative Technologies for Service Delivery

Since 2011, EMCP Members Vinfen and Bay Cove have partnered in several projects evaluating the potential contributions of innovative technologies to improve the health of clients with SMI and/or SUD and to reduce health care costs.

- In a Behavioral Health Home program, funded by a three-year Centers for Medicare and Medicaid Services Innovation award, Vinfen and Bay Cove embedded nursing and outreach

staff into Community Based Flexible Supports (CBFS) teams. The Behavioral Health Home clients were also provided with a Health Buddy, remote patient monitoring technology developed by Bosch. The results of the combined intervention significantly reduced Emergency Department (ED) visits and psychiatric hospital days. The program was evaluated by Stephen Bartels, M.D., of The Dartmouth Institute.

- Bay Cove and Vinfen are working with The Dartmouth Institute in a 5-year, National Institute of Mental Health (NIMH) funded study to understand the benefits of deploying the Phillips Telestation with CBFS clients. At the two and a half year point and about 80% of the intervention group enrollment, Emergency Department visits and hospital days for the Telestation group are at rates of about one third of the control group.
- Vinfen has also evaluated a Wellframe smart phone application for remote monitoring and self-management coaching which showed sustained engagement (70% over one year) with young adults and improved self efficacy. A follow up three year evaluation funded by the Blue Cross Blue Shield Foundation of Massachusetts is showing positive results using an expanded self-management library.
- Vinfen and Bay Cove have deployed MedMinders with the goal of helping clients take their medications on time and reducing unnecessary visits by Visiting Nurse Associations (VNA). Pharmacies pre-package medications in trays, and an RN inserts and locks the trays in the MedMinder device, which alerts the user to access medications at the appropriate time. Data is fed to an internet based dashboard for staff. This program has been part of Vinfen's contract for One Care Health Home services and has contributed to a 15% reduction in VNA spending.

In the BH CP program, EMCP will use several types of innovative technologies. As discussed in **Section 7.2 E**, all care team staff will be assigned a laptop computer, will use a smart phone and will document in EMCP's Care Coordination Information Technology (CCIT). In addition, EMCP is committed to evaluating and pilot-testing technologies which improve Enrollee self-management and reduce Emergency Department and inpatient costs. EMCP has had preliminary discussions with ACOs about adoption and funding of innovative technologies in the BH CP program. EMCP is currently evaluating technologies which have the following characteristics: address both psychiatric and complex medical conditions; cost $50-60 per member per month (which means they are cost-effective if they save one Emergency Department visit per year and/or one hospital day); and they have robust data systems which can be integrated with Electronic Health Record systems. EMCP proposes to implement the remote-monitoring technologies in Budget Periods two and three. If the results of the NIMH-funded study continue to show promise, EMCP will deploy the Phillips Telestation to 20 BH CP Enrollees each year at a cost of $720/Enrollee/year. EMCP will fund half the costs of this technology and will ask ACOs to contribute the other half.

7.3 E Personnel and Staffing

Describe proposed staffing plan to perform CP Contractor Responsibilities and fully implement required scope of CP Supports and administrative aspects of the Contract

Members of EMCP have extensive experience developing new programs that must be launched and staffed within short time frames. For example, in 2009, Bay Cove and Vinfen each implemented the newly awarded DMH CBFS programs on time, re-designing jobs of existing

employees and hiring hundreds of new staff. As well, Bridgewell is an organization embedded in the community and has experience developing new programs as needs arise. In March 2017, in response to the opioid epidemic, Bridgewell partnered with North Shore Medical Center to place Recovery Coaches in the Emergency Room to engage and support people presenting for overdoses. The urgent nature of the program required a quick start hiring on-call Recovery Coaches and case managers and developing workflows with the hospital system.

EMCP's care teams will be informed by this collective experience and employ an outreach model where in each care team will have an office as a home base though will accomplish much of their work outside the limits of an office: in an Enrollee's home or preferred location in the community, in some cases on the street, very often at locations of other community support and social services providers as well as ACO/MCO medical and behavioral health clinics. Decisions on care team locations and the number of Enrollees assigned to each team will be based on several factors: the number of attributed Enrollees who are existing clients and ACO/MCO Assigned Enrollees, where Enrollees live, location of the referring ACO/MCOs, accessibility of physical office location to key roads and practical considerations as related to the most cost effective design.

As discussed in **Section 7.2 B,** key administrative functions will be performed by a small ECMP central management team, and others will be delegated to either Bay Cove or Vinfen.

1. Provide organizational chart that identifies personnel, senior managers, and other staff by title to be assigned to accomplish Contractor Responsibilities described in Attachment A

See **Attachment 4:** EMCP Organizational Chart, **Attachment 5**: EMCP Organizational Chart of Contracted Services; and **Attachment 6:** EMCP Care Team Organizational Chart.

2. **Sample staffing model for number of Engaged Enrollees in each Service Area, including number of FTEs for supervision, administration, and Care Management/Coordination**
EMCP has developed care team models that will be adapted by each Member and support from 250 to 450 Enrollees per team. Each Member will hire or appoint a staff person to serve as Director of Care Coordination to provide oversight for their respective care teams of the BH CP program. Bay Cove and Vinfen will each hire into this role, (role of Program Director), and will each hire an Assistant Director to partner with the Program Director in providing direction supervision to care team across three regions. Bridgewell will appoint their existing Director of Clinical Services to serve in this role, as they will serve one region only.

Larger teams will be supervised by a CP Team Leader while smaller teams will be combined to share administrative and supervisory staff. Each team will consist of Clinical Care Managers, Recovery Support Navigators, and Care Coordinators, each carrying a caseload of 45 to 50 Enrollees. Clinical Care Managers will be licensed clinicians including licensed mental health counselors (LMHC), licensed registered nurses (RN), licensed independent clinical social workers (LICSW), licensed marriage and family therapists (LMFT), or licensed alcohol and drug counselors I (LADC I). See **Attachment 6:** EMCP Care Team Organizational Chart.

The table below summarizes the number of FTEs for each position that will be required when EMCP Enrollment is at its designed Capacity (5,540 Enrollees). Staffing will be adjusted based

on number of Enrollees as care teams are starting up. Anticipating a high volume of referrals in the first 18 months of the program, EMCP will develop dedicated Assessment Teams responsible for the initial outreach, engagement, consent, assessment and care planning work with Assigned Enrollees. As referral volume decreases and EMCP's designed Capacity is reached, separate Assessment Teams may no longer be necessary, and Assessment staff will join Care Teams.

Position	**Number of FTEs** [assumes 5,540 Enrollees]
Director of Care Coordination	2
Assistant Director of Care Coordination	2
Team Leader	11.7
Clinical Care Manager (RN)	23.5
Clinical Care Manager (LMHC, LICSW, LMFT)	15.3
Care Coordinator (Health Outreach Worker)	49
Care Coordinator (Recovery Support Navigator)	18.9
Program Coordinator (Administrator)	10.5
Total	**132.9**

For administrative functions, EMCP will employ a central management team to provide EOHHS contract oversight and manage central operations such as intake of Enrollees, referral to care teams, grievances, marketing, ACO/MCO contract development, and management of care team contracts. The EMCP management team will include an Executive Director, Director of Quality and Analytics, Director of Operations, CP Project Manager, Intake Specialist, and Customer Service Specialist. The central management team will also include a fraction of a Nurse Practitioner and Psychiatrist to serve as Consultants to our Care Teams with regard to clinical risk cases. The central management team will contract with Bay Cove for financial services and human resources, and with Vinfen for information technology services, website and quality management. The staff positions required for those contracted services are detailed in **Attachment C**: Budget Narrative.

3. Describe recruitment plans, including timelines to recruit staff for any personnel positions not currently filled, job descriptions and qualifications for each personnel position. Job descriptions shall contain information regarding education, background, qualifications, credentials, and relevant recent work experience

Each Member of EMCP has a professional Human Resources Department responsible for meeting the recruitment needs across service types while promoting staff retention. The Members have a combined workforce of more than 5,800 employees. Each has extensive experience at both "staffing up" new programs and new service types, and sustaining a capable, active and engaged workforce.

As soon as EMCP learns of its BH CP award, the Members will launch both internal and external recruitment plans in order to fill Care Coordination management positions such as Program Directors and Team Leaders, as well as key administrative and programmatic positions. With job descriptions developed and finalized in advance (**Attachment 7:** Care Team and Contracted Services Job Descriptions), recruitment of these key positions will be in full swing by November 2017. We will prioritize these leadership positions so that they may in turn hire their respective care team members. The following is the timeline for filling key positions:

Recruiting	Start Date	Key Positions
Sept 2017 – Mar 2018	Nov 2017 – Mar 2018	EMCP Executive Director, Directors of Care Coordination (Bay Cove and Vinfen), EMCP Project Manager, IT Systems Administrator, Financial Analyst
Dec 2017 – Apr 2018	Feb 2018 – Apr 2018	EMCP Director of Operations, EMCP Director of Quality & Analytics, Assistant Directors of Care Coordination (Bay Cove & Vinfen); Care Team Leaders (7), CCIT Systems Support
Mar 2017 – Jun 2018	May 2018 – Jun 2018	Assessment Team Managers (Bay Cove and Vinfen); EMCP Nurse Practitioner and Psychiatrist; Clinical Care Managers (7), Care Coordinators (7), EMCP Quality Manager, EMCP Intake Specialists, EMCP Customer Service Specialist

Our recruitment campaigns will include widespread advertising: outreach to career fairs, trade organizations, community based organizations and cultural centers; college and certification program outreach; and by sourcing through online resume mining. Our campaigns will also benefit from sourcing internally. Each Member promotes a robust employee referral program as well as a commitment to promoting from within. Each has demonstrated experience in launching new programs through the promotion of qualified candidates and expects to make the most of this practice to staff CP care teams. This multi-pronged approach to recruitment will yield both internal and external candidates in a more timely way. And with the ongoing support of human resources, candidates will be interviewed with the goal of moving them through the process quickly. Drug testing, background and reference checks will be expedited for selected candidates. Our goal will be to have official offers made within 4-6 weeks of initial screening, pending second round interviews and how quickly drug testing, background and references checks can be secured. Through multi-faceted recruitment approaches and expedited hiring processes, we will ensure for sufficient staffing capacity to be hired, oriented and trained so that we can effectively begin outreach / engagement activities on June 1, 2018.

4. Describe strategy for recruiting and hiring staff from the cultural and linguistic communities they intend to serve

Members of EMCP are committed to hiring staff that are reflective of those we serve. To exemplify this principle, in April 2017 Vinfen launched a new recruitment and retention campaign "My Job, My Community, My Vinfen." This tagline was selected not by Vinfen leadership, but by direct care staff and front line managers. Extensive focus group review further reinforces that our employees identify strongly with the programs, clients, and communities with which they work. As such, EMCP will target its advertising specific to the geographic and demographic communities our Community Partner services will reach in order to meet our staffing needs.

As noted above, each Member will use a variety of strategies and sources to recruit and on-board personnel needed, including some combination of internet advertising, social media, print media, billboards, and advertisements on public transit. As in past campaigns, Members will use newspapers, websites, and radio spots that reach ethnic and cultural communities of those we serve; attend Boston's Annual Diversity Employment Day Career Fair as well as Boston's Bilingual and Diversity Job Fair; advertise in print media such as Bay Windows; and outreach to cultural organizations such as the Haitian Multi-Service Center and to colleges and universities

with diverse student populations. Through these efforts, we intend to hire staff who are bilingual and bicultural to match the needs of targeted populations.

5. Describe proposed training, orientation plans and modules for staff

As noted earlier, each Member of EMCP has a centralized HR Department serving a combined workforce of more than 5,800 employees. Each Member holds new employee orientation weekly. New employee orientations are comprehensive and inclusive of: agency history and mission, organizational structure, overview of populations served, agency policies and procedures, employee relations, professional ethics, diversity, communication systems, culture of caring, and training and advancement opportunities. Mandatory trainings such Compliance, Universal Precautions, and Sexual Harassment are included in this initial new employee orientation.

After completing new hire orientation, employees begin their program-specific orientation and training. While each Members' Training department is staffed with full time trainers, each also benefits from a cadre of Subject Matter Experts - operational staff within each service type that offer specialized training complimentary to the training department courses. For BH CP teams, program specific modules will include the following required trainings:

- Overview of the Community Partner model of integrated care management including care coordination functions, care transitions, and medication reconciliation
- Comprehensive Assessment process, PCTP development and implementation
- MassHealth state plan LTSS services and eligibility criteria, choice counseling and person centered care planning
- Independent living movement and recovery principles including accessibility and accommodations
- Orientation to Enrollee Engagement strategies including Motivational Interviewing as well as Promising Strategies as outlined in National Health Care for the Homeless Council and guidelines offered through SAMSHA –HRSA's Center for Integrated Health Solutions
- Orientation to Evidence Based Practices including Cognitive Behavioral Therapy (CBT), SAMSHA Integrated Treatment, Dialectical Behavior Therapy (DBT), Illness Management and Recovery (IMR), WRAP for Addictions, and Trauma Informed Care
- Orientation to Health and Wellness Coaching tools including Whole Health Action Management (WHAM), Wellness Recovery Action Plan (WRAP), Program to Achieve Wellness (PAW), and SAMSHA's Eight Dimensions of Wellness
- Overview of Health Disparities and Social Determinants of Health
- Cultural Competencies overview
- Enrollee Rights and Protections
- Conflict of Interest policies
- Orientation to Care Coordination Information Technology (CCIT) system

6. Describe staff retention strategy

EMCP Members have dedicated strategies for effectively promoting retention of talented personnel. The Members' collective experience validates that staff retention is highly correlated with Mission, as employees seek to make a meaningful contribution, to make a difference, and to positively impact people served. Leadership teams value their employees and the day to day contributions they make to those served. Retention strategies employed by each Member promote such cultures of dignity and respect. They promote cultures of flexibility, of team work, and they embrace diversity. They enable employees to attend to both their professional

responsibilities and their commitment to home and family. They invite ongoing dialogue between management and direct care staff through a variety of avenues including direct care roundtables and town meetings with the CEO, suggestion boxes, and promotion of an open door policy. Formal retention strategies employed by each Member are outlined below:

Competitive wages within the Human Services Industry: Each Member continually assesses how its wages compare to those of its competitors. Through careful financial stewardship, each has been able to remain competitive within the industry.

Outstanding Employee Benefits: Employees of each Member regularly cite generous benefits as something important to them and as something that factors into their decision to maintain their tenure. Each Member offers a package that supports an employee's personal and family needs, and may include any combination of: health insurance, dental insurance, vision; retirement plan; 403(b) Tax-deferred annuity plan; generous vacation, sick, holiday and personal time; life insurance; Long-term Disability Insurance; Commuter Benefits; Employee Assistance Program; Flexible Spending Plans; Professional Development and Educational Assistance; Compassionate Relief and Natural Disaster Programs.

Training / Staff Development: Each Member promotes and embodies the principles and practices fundamental to Learning Organizations. Each is committed to doing their part to promote the development of our workforces, personally and professionally. Whether through refresher or recertification courses or newly developed classes to promote evidence based practices, the Members' collective workforce is continually receiving the information they need to perform most effectively and advance in their careers. New Managers are offered training specific to the administrative functions of their new role while Basic and Advanced Supervisory Skill Trainings offer modules specific to becoming an effective supervisor; employee coaching, conflict resolution; diversity in the workplace; interviewing and hiring; and tough issues. All Employees are given the opportunity to attend external trainings, workshops, CEU's (as applicable) and conferences to further their professional development.

Employee Recognition: Each Member promotes employee recognition in a variety of ways. Sample Employee Recognition programs include: years of service awards, gifts (monetary or items); quality of care awards; monthly themed awards by job category; peer recognition programs; employee newsletters; scholarships; for employees pursuing higher education, fee reimbursements; holiday and seasonal celebrations highlighting staff contributions.

Effective Retention Strategies are particularly essential for long term growth at a time when the landscape of the human services industry is overwhelmed with challenges, from the consequences of over three decades of level funding, to high employee burn out rates, to losing a percentage of the workforce to higher paying opportunities in the for-profit world. With a balanced approach to recruitment and retention, EMCP Members are prepared to meet the scope and capacity of the Community Partner Program.

7.3 H Sustainability

EMCP will use DSRIP funds to develop the important capacities and infrastructure necessary to operate a BH CP program. The capacities and infrastructure that EMCP develops will serve to

sustain the program throughout the five year Contract Term and after. Certain investments will be tangible: a system to support care coordination, a data warehouse, and marketing materials including a website. Other investments will develop capacities: a workforce that is trained in care management for people with SMI/SUD; workflows for coordinating care across BH CP and ACO/MCO care teams; and a new organization that brings together three leading Community Based Organizations into a structured collaboration – Eastern Massachusetts Community Partners (EMCP). Below are specific capacities and structures that EMCP will develop to live beyond the five year term of the Contract:

- **ACO/MCO relationship development**: As described in **Section 7.3** J, EMCP will invest staff resources to develop relationships with ACO/MCOs in our service areas. The relationships needed to coordinate care for Enrollees go beyond a simple contract. EMCP will develop in collaboration with each ACO/MCO, specific protocols workflows, policies and procedures to address the areas of collaboration including: Enrollee referrals, notification of admissions, discharges and Emergency Department visits, Flexible Services processes, EHR data sharing to complete a Comprehensive Assessment and Person Centered Treatment Plan (PCTP), service arrangement and authorization protocols, and transitions of care.
- **Marketing to ACO/MCOs:** EMCP believes that the most important marketing work with ACOs/MCOS is the above-described relationship development work. In addition, EMCP will conduct trainings for ACO/MCOs, and will create a website and written materials.
- **Organizational structure to facilitate the collaboration of three Consortium Entities**: Each EMCP Member has invested, and will continue to invest, the time of key personnel of its Executive and Clinical teams to agree to a governance structure, operating agreement and key administrative functions in support of the BH CP program. To date, each Member's CEO, CFO, General Counsel, CIO, and Senior Vice Presidents of programs has invested significant time in developing the new organizational structures. Each Member has also devoted project management, business development and administrative staff to developing the EMCP structures and policies.
- **Workforce Development:** EMCP Members have existing workforces that perform care coordination responsibilities through CBFS and SUD case management programs, and care management / LTSS coordination through One Care Health Home programs. An additional 164 FTEs will be recruited by Members and trained to support the BH CP program. The new workforce will have a higher proportion of licensed clinical staff such as RNs, LICSWs and LMHCs as well as a higher proportion of Recovery Support Specialists than existing programs. Not only will this workforce be trained in the principles and practices of integrated care management, they will also be developing relationships with their ACO/MCO counterparts to better coordinate care and better serve Enrollees. Although Care Coordinators (CCs), Clinical Care Managers (CCMs) and Team Leaders are supported through the base PMPM ($180 PMPM and $250 PMPM for CBFS), DSRIP supports hiring staff in advance of having full caseloads and supports the BH Directors of Care Coordination in each Member in the Prep Budget Period.
- **Training curriculum**: EMCP will invest in the development of a training curriculum for all EMCP central and Member staff. CCs and CCMs will have more training than staff that do not have Enrollee contact. The curriculum will have all BH CP required elements. Some elements will be delivered by each respective Member and some elements that are unique to the BH CP program will be delivered centrally by EMCP central staff.

- **Enrollee Engagement:** Success of the program will be determined in part by the care teams' successes in engaging Assigned Enrollees. In addition to staff training and coordination with ACOs, EMCP will invest in the following Enrollee engagement strategies: development of an Enrollee Engagement Library of best practices, a quality improvement program that evaluates and iterates the Enrollee Engagement practices, a website and marketing materials for Enrollees, development of a video for Enrollees, and funds to be used to support initial engagement including paying for Enrollee transportation to a care team meeting or paying for snack or coffee at an initial meeting. Although Enrollee engagement will be required throughout the Contract term, more Engagement work will be required in the first two Budget Years to reach EMCP's Enrollment Capacity.
- **Resource directories and networks of community-based organizations:** EMCP care teams will build on existing community-based networks to develop directories for the BH CP program.
- **Care Coordination Information Technology (CCIT) and Data Warehouse systems:** EMCP will select, configure and develop a specialized care coordination system for the BH CP program. The CCIT will be used by all Care Coordinators and Clinical Care Managers to perform care management functions. It will also be used by financial, quality and programmatic staff to manage the performance of the program. The CCIT will be supported by a Data Warehouse that will store BH CP Enrollee data and will allow for aggregation of other data such as EHR data from ACOs and/or claims data from MassHealth and/or MCO/ACOs. DSRIP funds of over $650,000 over the five Budget Periods and the Preparation Budget Period will be spent on Information Technology solutions to support the development, implementation, and sustainability of the program.

Except where otherwise noted, all above described capacities and infrastructure will be supported through the investment of DSRIP funds. Some investments occur in the first few months of the program and other investments require sustained management over the five years of the program but will require less funding to sustain after the BH CP Contract term. For example, Information Technology requires an up-front investment of over $650,000. These costs are capitalized and spread across the five year Contract term. On an ongoing basis, EMCP's Program Budget proposes spending $270,000 per year to manage the IT systems which includes the cost of user fees, a User Support Specialist (one FTE) and Systems Administrator (one FTE). Another example is the ACO/MCO relationship development work. In the Preparation Period and Year one, several staff will be dedicated to documenting workflows, protocols, policies and procedures with ACO/MCOs but in later years as the BH CP program is more established, those staff will focus on contract management and program improvement work.

The DSRIP investments are detailed in **Section 7.3 G** Budget and Budget Narrative. EMCP's Budget proposes significant investments in infrastructure in the first few years. In later years, the base PMPM subsidizes more of the administrative functions needed to sustain the program with less support required from DSRIP funds. Sustainability of the BH CP program beyond the Contract Term will ultimately depend on EMCP's relationships with ACO/MCOs and whether the services that EMCP has provided lead to better health at reduced costs for the highest cost ACO Enrollees.

7.3 I Quality Management and Performance Monitoring

1. Describe Bidder's quality improvement program

EMCP plans to leverage the Members' years of experience managing robust Quality Management (QM) systems to develop and implement quality improvement programs targeting the integrated health domains in the new ACO system. Each EMCP Member employs QM systems which include: annual objectives derived from the organization's mission, long term goals, environmental scans, and data and needs identified from prior year performance; data collection across a wide range of behavioral and physical health measures, including process and outcome data across the domains listed in Attachment A of the RFR; processes for data analyses to shape the implementation and modification of annual and multi-year initiatives and improve performance and outcomes. Examples include:

- Prevention and Wellness: tracking and improving adherence to annual physical exams, and participation in wellness activities, such as walking clubs, fitness club participation, and smoking reduction programs.
- Chronic Disease Management: tracking claims and metrics data, and developing initiatives to improve blood pressure, weight and BMI, and management of diabetes with tracking of A1c levels.
- Behavioral Health/Substance Use Disorder: assessment of symptoms of psychiatric conditions, such as anxiety and depression, and functional measures of use of illegal or addictive substances such as K2 and opiods; and development of clinical and rehabilitation interventions to address these.
- Member Experience: satisfaction surveys from individuals served, as well as families; surveys are used to develop staff training or other interventions to improve satisfaction.
- Integration: tracking of data on both behavioral and health symptoms to develop and evaluate initiatives in which integrated services (such as the One Care Health Homes operated by Vinfen and Bay Cove) improve process, outcome, and value-based measures. Community tenure (healthy days in the community vs days in psychiatric or medical hospitals, or Skilled Nursing Facilitys, is measured, as this metric is increasingly recognized as a key indicator of effective integrated care and overall health.
- Avoidable Utilization: tracking avoidable Emergency Department visits, hospital readmissions within 30 days, and unnecessary home health services (e.g., multiple skilled nursing visits per day for simple medication administration).
- Engagement: tracking participants' adherence to attend scheduled appointments and participation in and approval of person-centered treatment plans.

EMCP's Quality Improvement Plan will be developed with the participation of all community partners, and input from partnering ACOs/MCOs, and will be submitted to MassHealth for approval. The Plan will then be implemented and evaluated monthly by each Member and the EMCP Quality Committee for the first year. If trends are stable, it will be evaluated quarterly thereafter throughout the Contract Term, and will be submitted to EOHHS on an annual basis. EMCP members' organizational leadership and Care Team staff will be responsible for collecting data and implementing initatives. Adherence to the plan ensure that EMCP is providing services that meet the expectations of Engaged Enrollees, partnering ACO/MCOs, and the requirements of MassHealth and CMS.

2. Describe at least one quality initiative the Bidder proposes to undertake in the first year including measures for success

In the first year of the award, EMCP will develop a quality management (QM) initiative to address *Care Coordination with a particular focus on Enrollee Engagement.* EMCP views care coordination and Enrollee engagement as essential to the success of the BH CP program.

A Care Team's success at engaging an Enrollee in the benefits of the Community Partner program can be measured by specific required milestones reached in the new partnership, as described in **Attachment A, Section 2.3 A**:

- Active engagement with Assigned Enrollees (AE): reaching the AE via phone, in-person or electronic means; completing an in-person visit with AE; providing AE with information on the BH CP program
- Confirming an Enrollee's interest in the new services through a signed participation form
- Completing, in partnership with an Enrollee, a Comprehensive Assessment (CA) that will inform the Enrollee's Care Plan goals
- Partnering with the Enrollee and their designated team in the development of Person Centered Treatment Plan (PCTP)

Engagement: The EMCP QM program will include documentation of each step of the Enrollee engagement process to understand which steps are being completed successfully, when they are completed, and where there are challenges. Care Coordinators (CC) and Clinical Care Managers (CCM) will document in Care Coordination Information Technology (CCIT) each step in the engagement process including attempts, contacts made, provision of information on the BH CP program, signing the participation form, Comprehensive Assessment completion and PCTP completion. Care Teams, on a weekly basis, will identify Enrollees who are difficult to engage, and will plan additional actions to improve engagement using tactics from a developing EMCP Engagement Strategies library. Based on the Members' significant collective experience prior to the start of the BH CP program, EMCP will develop a Library of Engagement Strategies by population to be continuously expanded and refined throughout the CP program. Care Teams, Members, and the EMCP QM Committee will review overall performance in Enrollee Engagement, as well as relative successes in using Engagement Strategies for targeted populations.

Timely completion of CA and PCTP: The EMCP Year One QM program will also track timely completion of the CA and PCTP. EMCP's CCIT will contain alerts that notify the Care Coordinator and the Care Team Leader about upcoming documentation deadlines. Delays in the completion of the Assessment and development of the PCTP will be documented in the CCIT system along with the reason for the delay. QM processes at the Care Team, Member, and EMCP level will review these data monthly and, as needed, EMCP will develop and implement initiatives to improve timeliness and completion of CAs and PCTPs. These data will also be reviewed for their relationships with outcomes and Enrollee experience over the entire Contract Term.

Care management and care coordination outcomes: EMCP Care Teams will also receive detailed productivity reports containing data from the CCIT specific to Care Management and Care Coordination outcomes. These weekly reports will be used by the Care Teams to identify gaps in services and requirements. As noted above, the data will also be reviewed monthly by the EMCP QM Committee to identify areas or Care Teams needing improvement and to inform process improvement activities.

EMCP anticipates that within the First Budget Year, ACOs will provide claims data to BH CPs. QM activities will use Claims data to refine its care coordination activities to ensure it is adequately targeting the highest users of acute care services, individuals with high pharmacy costs, those who have not seen a PCP in over one year or those who inconsistently refill medications.

3. Describe functions of the Bidder's quality management committee including the composition and reporting structure within the Bidder's organization

EMCP will establish a Quality Management (QM) Committee chaired by Vinfen's Vice President of Quality and Compliance. Membership of the Committee will consist of the Executive Director, Deputy Director and Program Manager, the Directors of Quality Management for each Member, and those serving as Director of Care Coordination for each Member. The QM Committee will meet monthly for the first budget period, then at least quarterly thereafter and will report to EMCP's Board of Directors. EMCP may determine more frequent meetings are needed for the first 1-2 years of the contract. The QM Committee will be responsible for the establishment, maintenance and continuous review of the Quality Improvement Initiative as well as the ongoing review of reports on all Quality Measures. The Executive Director of EMCP will: conduct monthly reviews of quality data with ECMP and Members' staff; engage in management actions to improve data as needed; participate in the QM Committee, and report on actions taken to improve processes and outcomes as planned with the Committee.

EMCP will collaborate with EOHHS, and with ACOs as needed, to establish performance benchmarks for all the Quality Measures. EMCP will review the Quality Score and a DSRIP Accountability Score detailed data from EOHHS for each Budget Period. All Quality Measures, including the claims-based measures, chart review measures, and member care experience surveys across the seven quality domains, will be reviewed by the program leaders for each Care Team, Member, and the EMCP QM Committee. Although Budget Period one and two are "pay-for-reporting," EMCP will implement improvement plans for any domain area that is trending or falls below the "attainment threshold," and will analyze reasons for all preventable Emergency Department visits and all cause readmissions in preparation for Budget Period 3 Outcomes Based Payments. The QM Committee will review the assigned achievement points as well as the overall Domain score in each category against the "attainment threshold" and "excellence benchmark" set by EOHHS as well as the overall Quality Score. For any domain that falls below the attainment threshold, EMCP will conduct a review and determine a plan of action to implement needed improvements. Since the DSRIP score is in part based on improvements from the previous Budget Period, close monitoring of progress will be imperative to maximize possible Improvement Over Self Points. In the event that EMCP does not achieve a 100% DSRIP Accountability Score, EMCP will provide EOHHS with a corrective action plan that includes steps to regain any at-risk funds.

7.3 J Coordination with ACOs and MCOs

1. Describe how CP's skills, expertise, and value will be communicated to ACOs and MCOs
Eastern Massachusetts Community Partners (EMCP) recognizes that to be successful in serving Enrollees in the BH CP program, it is important to develop robust coordination with ACOs and MCOs resulting in better care for people with SMI/SUD. To that end, EMCP Members have

reached out to all fourteen ACO/MCO bidders in EMCP's proposed service area (Greater Boston, Northern and Southern regions) to commence a planning process. To date, EMCP Member leaders have had at least one meeting with eleven of the fourteen ACO/MCO bidders. Additionally, Member leaders have met with four regional entities that are part of larger ACO bidding entities. EMCP views all initial ACO meetings as the first step in a longer planning process that will culminate in contracts by March 1, 2018.

EMCP uses the following planning process to develop ACO/MCO relationships and contracts:

Information gathering: This phase involves one or more meetings to 1) connect EMCP program leaders with key ACO/MCO clinical and business leaders; 2) provide background information on the BH CP program; 3) obtain information from the ACO on population, care management approach, information systems, plans for flexible services funds, identify BH and SUD service gaps in the region (e.g. outpatient mental health, alternatives to inpatient hospitalization, detoxification); 4) provide information on EMCP's care management experience and approach, BH and SUD service offerings, and current population served.

Case reviews: EMCP will promote the review five to ten cases of current shared clients/patients to develop an understanding of the specific services EMCP and ACO each provide and identify service gaps, redundancies and opportunities for improved coordination.

Roles, responsibilities and workflows: EMCP will promote agreement and alignment on each entity's roles and responsibilities, document workflows and points of coordination.

With one Greater Boston ACO bidder, EMCP has begun a pilot program to implement the program elements of the BH CP program for four EMCP clients who are also primary care patients of the ACO bidder. The pilot program serves to develop relationships between the key points of contact at the BH CP and ACO/MCO Bidders to promote the development of a contract that accurately reflects the roles and responsibilities of each organization so that EMCP and ACOs will be prepared to go-live with a larger program in Spring 2018. Specifically, the pilot program tests the comprehensive assessment and care plan that EMCP has developed for the BH CP program; designs workflows; and defines roles for EMCP care team staff and ACO primary care, psychiatry and care management staff. EMCP has proposed pilot programs with additional ACO/MCO bidders in the Northern, Southern and Greater Boston region and plan to launch those this summer.

2. Describe branding and marketing plans to be implemented with ACOs and MCOs
As described above in **Section 7.3 J.1**, EMCP's marketing will start with meetings with ACOs. In those meetings. key points of contact will be identified within the ACO, MCO and, when relevant, the BH management contractor such as Beacon or MBHP. We will conduct presentations for the key points of contact within the ACO or MCO to ensure that all are aware of the BH CP program and the role that EMCP plays in supporting patients with SMI/SUD.

ECMP will develop its own brand including logo, letterhead, and style templates. This brand will be used to support the in-person relationship development work. EMCP will develop the following types of media: a website, PowerPoint presentation, succinct leave-behind materials

for the key audiences at ACO/MCOs, and collateral materials such as pens or magnets. EMCP will also develop a video targeted to either the ACO audience or potential Enrollees.

3. Describe strategy to engage and collaborate with multiple ACOs and MCOs in the Services Areas for which you are bidding

EMCP will continue with the planning process described in **Section 7.3.J.1** to develop relationships with all ACO and MCO bidders in the Greater Boston, Northern and Southern regions. EMCP will develop pilot programs with two additional ACO/MCO Bidders that have expressed interest in doing so beginning June 2017.

EMCP will seek to develop care teams oriented to an ACO whenever possible. Exceptions will be made where there are existing relationships or geography outliers. This structure will promote and facilitate relationship and communication between the BH CP care team and the ACO's clinical staff. This structure will recognize that although many aspects of the BH CP program are be standard, some elements may need to be customized to work with a particular ACO.

4. Describe strategy for conflict resolution, should any conflicts arise between the Bidder and an MCO or ACO

In that the MassHealth ACO and BH CP program initiatives bring entities together into new types of relationships, there are several areas that have the potential for conflict: overlap in care coordinator roles, difference in the comprehensive assessment or care plan formats, differences in Information Systems used for documentation of care coordination activities, and difference approaches to use of flexible services. The most important strategy for conflict resolution is prevention. Most conflicts arise when roles, responsibilities and expectations have not been clearly defined. EMCP will invest time in developing contracts and operational relationships with ACO/MCOs prior to March 1, 2018 to avoid conflicts as much as possible. In addition, EMCP will develop regular coordination meetings with ACOs to check in on our work together and will outline escalation paths for conflicts that occur in the field.

We have found that, to date, there is uneven information among ACO/MCO Bidders about the BH CP program. The extent to which all ACO/MCO and BH CP Contractors can be provided the same information on program design from MassHealth will serve to prevent potential conflicts. With that said, EMCP has been providing ACO/MCO bidders with BH CP program documents in introductory meetings to ensure that we are starting with the same program assumptions.

71	**(Infrastructure Budget Line 3)**						
72							

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

This is a new program that will have all new staff so equipment will be purchased that is compatible with the new EHR and that can be used in the field for assessments and treatment planning. We will purchase ***24 laptops*** *for the RN, LPHA and Care Coordinator staff (including LPNs). These are $1400/per person. Price based on current purchases of similar equipment*

Portable Printers*. The program will purchase 5 portable printers so that staff can print documents in the field and leave a copy with the Enrollee or with a provider. $300/ per printer* Based on the *average cost for HP OfficeJet 200 Portable Printer with Wireless & Mobile Printing with cartridges.*

4 Desktop computers with screens and printer *will be purchased for intake worker, Administrative Assistant, Program Director and Director of Care Management $1350/per person based on current similar purchases.*

4 IPADS *that can be used for video translation and are compatible with our video translation service. $1000/per IPAD*

We will need to provide initial and ongoing training in a conference room and will purchase a ***an LCD flat screen*** *for that purpose.*

$2,500 for a 75 inch Sony Ultra HD and $150 for a wall mount totaling $2,650.

Description of Expense	Cost
Total Recruitment Expenses (Infrastructure Budget Line 6)	

Provide a description of each recruitment expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Row 7 - Training Expenses

Description of Expense	Cost
Training	$ 10,000.00
Total Training Expenses (Infrastructure Budget Line 7)	**$ 10,000.00**

Provide a description of each training expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

We are contracting with Center for Health Impact for 6 days of training. The Center has experienced trainers and developed curriculum. They currently hold a contract to train CHWs as well as medical interpreters. They will provide 6 days of training with a Facility member and CHW at each training; course materials, pre and post course assessments. General topics for the sessions:

Principles of Recovery
Introduction to Motivational Interviewing
Day 3 and 4 Systems thinking approach for Person-Centered Care and Transition across the Health Care Continuum
Days 5 and 6 Successful supervision of Care Coordinators

The training selected covers key topics for the Care Coordinators, nursing and LPHA staff. There are components focused on nursing around transitions of care and for supervision. Approximately 29 staff would attend the first 4 days of training. The supervision training would be for approximately 9 staff. The 5 managers would attend and in addition to the 4 RNs.
The training cost is $1541.67 per day
Curriculum customization 8 hours @ 93.75/ hour = $750

Row 8 - Retention Expenses

Description of Expense	Cost
Total Retention Expenses (Infrastructure Budget Line 8)	

Provide a description of each retention expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

BH Community Partner - Staffing Model

Insert Contractor Name Here

line #			
1	Estimated number of Engaged Enrollees (including CBFS if applicable) at the end of Budget Period 1	1080	*Should align with Program Budget*

	BH CP Program Staff	FTEs (Do not duplicate FTE - FTE's may be allocated across staffing positons as applicable)	Comment
2	BH CP Director and Assistant/Deputy Director	1.6	*Total management oversight of BH CP*
3	Medical Director	0.05	*Portion of Medical Director allocated to BH CP for the number of enrollees shown in line 1*
4	RNs		
5	Clinical Care Managers (RN)	4	*Do not include FTEs listed in line 4*
6	Clinical Care Managers (LPHA)		*LPHA includes LICSW, LMHA, LADC I*
7	Supervisors/Team Leaders	3	*Do not include FTEs listed in lines 4, 5 or 6*
8	Other Licensed Staff		*Do not include FTEs listed in lines 4, 5, 6 or 7*
9	Care Coordinators	18	*FTEs providing Care Coordination (may include Health Outreach Workers, Community Health Workers, Peer Specialists, Recovery Support Navigators providing care coordination)*
10	Peer Specialist/ Recovery Coaches (non-Care Coordination)		*Do not include FTEs of Peer Specialists or Recovery Coaches included in line 9*
11	Intake Coordinators/Engagement Specialists	1	
12	Administrative Support	1	
13			
14			
	Total FTE	28.65	

	Staff Ratios - Please calculate the following ratios:		
15	Ratio of RN and Clinical Care Manager (RN) to Assigned and Engaged Enrollees	1 to 270	*Estimated number of Assigned and Engaged Enrollees at the end of BP1 divided by total FTEs of (RN+RN Clinical Care Managers)*
16	Ratio of Care Coordinator Supervision to Care Coordinators	1 to 6	*Total Care Coordinator FTEs divided by Total Care Coordination Supervision FTEs*

Please describe which Program staff listed in lines 2 through 8 above directly supervise Care Coordinator staff: In our model the team leaders/LPHA provides supervision to the care coordinators. The RN oversees the LPN work as required by their scope of practice.

Section 7.3: Initial DSRIP participation plan

A. Executive summary

CHL's goal in being a Community Partner provider is to support and coordinate services across the continuum of care for adults on MassHealth in the Worcester and Fitchburg-Gardner areas who suffer from serious mental illness and/or substance use disorders. We have proposed to provide this service in the Gardner area through Clinical and Support Options (CSO) as a Subcontractor because of their strong presence as an agency in that community.

As behavioral health and primary care providers, CHL and CSO are closely connected to the rural towns and to the cities of these communities. CHL has over 50 years of experience providing a continuum of primary care and behavioral health services including care coordination throughout the region. We know that both the BH and medical systems of care are complex, that our BH clients die on average 10-20 years earlier than the general population and that conditions of homelessness, victimization, poverty and social isolation negatively impact their ability to navigate and benefit from traditional care. Therefore, our CP staff, following best practices, will support individuals to navigate systems and will coordinate services so that our clients receive holistic, quality and preventative care. We believe our outcomes will show that clients report better health and quality of life. We believe our model will help to break down silos of practice and will address social determinants of health. Our hope is that through collaboration with ACOs, MCOs, Primary Care Practices and BH providers that we will create a system of truly integrated care and reduce or slow down the increase of health care cost.

We have designed CHL's CP to grow from 200 Engaged Enrollees on June 1, 2018 to a capacity to serve 2440 Engaged Enrollees by December 2019. We have mapped out a growth plan for each year of the project. Our plan assumes referrals of 200/month and an attrition rate of 40% (individuals we were unable to contact/locate after multiple attempts, those that declined the CP service and those who choose another CP provider, etc.) each month for Budget Periods #1 and 2. We have a predicted a stable caseload size for years 3-5.

Our CP model is to have multidisciplinary teams linked to specific BH or PCP practices. Each team is designed to provide care coordination for approximately 270 individuals. We will **begin in June 2018 with three teams** with a caseload capacity of 810 Engaged Enrollees. Two teams will cover Worcester and one team, North Central (with CSO staff located in Gardner and CHL staff in Leominster). We believe that being embedded in the practices, the Care Coordinators will have an increased ability to engage the Enrollees. They will have regular access to staff to obtain information for the Comprehensive Assessment or the Person-Centered Plan. They can share updates and outcomes of referrals and linkages and join in staff meetings.

Each team is led by a licensed BH clinician supervisor. Each team is staffed with one full time RN and 6 Care Coordinators. During year one the program is supported by a Full Time Program Manager, Administrative Assistant, Intake Coordinator and .05 Medical Director. In addition, the CSO team sited in Gardner will be supported by the CSO CP Director. We expect five Care Coordinators on each team to have caseloads of approximately 55-60. One Care Coordinator on each team will be an LPN. Each team will also have outreach specialist- Community Health Worker (CHW) - to carry a smaller caseload of more difficult-to- engage individuals. The RNs and Licensed Clinician will carry a caseload of 5-10. We will maintain an RN ratio of 1:270.

In Budget Period #2 (2019) we will hire four additional teams (two in January and two in May) with training and start-up costs funded by DSRIP. We will add a Nursing/Assistant Director and data/administrative support. The final team will be hired in 2020 and with that 8th team we will have reached the staffing necessary to provide Care Coordination services for approximately 2680 individuals. We will continue to have the capacity to both add staff to teams as well as to add full teams if the number of Engaged Enrollees exceeds 2680.

Our DSRIP budget plan for each year supports the following initiatives:

- The start-up of the eight teams over the first three budget periods: The Program Manager and Licensed Clinical Care Managers and RNs, will be hired in March and April 2018 so they are able to develop materials for ACOs MCOs and Enrollees, work on standard work formats for intake, engagement, assessment, treatment planning, care coordination, medication reconciliation, wellness and care transitions. These staff will meet key Stakeholders and establish communication protocols. DSPIP funds will support the first month of all Care Coordinators' and RN's employment with CHL (training) and portions of their salary for the next three-four months as caseloads build.
- The implementation of an EHR: DSRIP funds will be used toward costs related to our new EHR, Qualifacts. The EHR will allow Care Coordinators to communicate with all CHL programs through a single record. (Currently CHL uses three EHRs and has paper records). Qualifacts has significant reporting capacity, as well as tasking and messaging functions, alerts, and dashboard configurations. Qualifacts will be part of the DSRIP request beginning in Budget Period 1.
- The purchase of laptops/tablets and smart phones: This technology is necessary for staff to provide the Care Coordination service effectively in the field.
- DSRIP funding will be used in years 2-4 for a data analyst who will work with the team on our population health data and develop Quality Management initiatives geared to improve the wellbeing of our Enrollees based on the data we have collected.
- Funding will support IT consultation, training and support for both software and hardware.
- We are using funding to support training and CHW certification that will be provided by The Center for Health Impact.
- Purchase of equipment and furniture for new staff.
- Time of a Recruiter in the Prep time and Year 1.

The greatest challenge CHL has identified in our CP planning is work force development. We compete with hospitals, insurance companies and the State for trained, experienced human service and nursing staff. Already our HR team is utilizing our Quality Improvement tools of "Lean Thinking" to address recruitment challenges. Secondly, we acknowledge that there are still many unknowns. We look forward to participating in the "learning community" as CP providers, BH and PC providers along with the ACOs, MCOs, and EOHHS come together to provide coordinated integrated care for this vulnerable population. Finally, there are many assumptions in setting up budgets for 5 years. We will count on many forms of data, from ACOs and our EHR and from EOHHS to continually assess our plan and progress.

B. Supporting populations and community engagement

1. Community connections and collaborations

Community connections and linkages are at the core of Community Healthlink's (CHL's) services, and have been since our inception – so much so that this is reflected in our name. In both the Worcester Service Area and Gardner-Fitchburg Service Area, we maintain connections to a wide variety of other community entities, including other behavioral health organizations, health care entities, anti-poverty agencies, services for victims of domestic violence, legal services, housing and shelter providers, and more.

In the Worcester Service Area, we work closely with: LUK, Inc. (a behavioral health provider with whom we partner on four contracts); the YWCA of Central Mass., New Hope, and Pathways for Change (all providers of services for victims of domestic violence, dating violence, or stalking); Spectrum Health Systems (provides methadone maintenance for CHL clients); Ascentria Care Alliance (provides services to newly arrived immigrant and refugee clients); AdCare Hospital (provides inpatient substance abuse treatment); AIDS Project Worcester; the City of Worcester's Office of Human Rights and Disabilities; the Worcester Probate and Family Court; the Worcester Probation Department; the Worcester Police Department (who work closely with us to divert people in mental health crisis from jail); Worcester Public Schools; UMass Extension (nutrition trainings); Worcester County Continuum of Care; Central MA Housing Association (CMHA) and South Middlesex Opportunity Council. CHL works closely with and referred individuals to the Parent/Professional Advocacy League PPAL, the Recovery Learning Center (RLC), AA, Learn-to-Cope. and National Alliance on Mental Illness (NIMH). Genesis Clubhouse (and CHL' Westwinds in Fitchburg) are resources for our SMI clients looking for help in furthering education and developing work skills.

We have developed a referral network to assist with obtaining food and housing for our clients. We have posted the schedules of local food pantries and of the Salvation Army, Mustard Seed and Our Father's Table (Fitchburg) which serve hot meals. Additionally, the Center for Living and Working and Elder Services of Worcester provide LTSS for clients in need of those services.

We partner and work closely with Family Health Center of Worcester and Edward M. Kennedy Community Health Center the two Worcester Federally Qualified Health Centers. Staff work closely with Primary Care Providers within the UMass and Reliant systems as well as private PCPs. We regularly refer clients to South Bay, Arbor, Island Counseling and Multicultural Wellness and YOU, Inc. for specialized behavioral health services.

CHL has been a part of the fabric of North Central MA since 1957. In the Gardner/Fitchburg Service Area, we work closely with: Alternatives, Inc. and Bridge of Central MA (CBFS providers); Nizhoni Health Systems (short-term, in-home health care services); and Spectrum Health Systems, GAAMAH and Habit OPCO for SUD services. Through the Health Policy Commission we have contracts with both Heywood and Health Alliance Hospitals aimed at decreasing ED utilization. CHL meets weekly with members of the change teams in each hospital and with our partner Family Health Connections (FQHC). FHC and Lunenburg, Fitchburg and Heywood Family Practices are NC Primary Care sites with whom we share a majority of patients. Montachusett Opportunity Council (MOC) contracts with CHL to provide care coordination services at their Family Resource Center and consultation to their Head Start

programs. MOC is also a key housing resource in NC. Both the Center for Living Working and the Montachusett Home Care are key resources for our clients in need of long-term support services.

We are active participant in community collaboratives. CHL is the lead agency for Together for Kids Collaborative and the Worcester System of Care. We participate as members in the Domestic Table Round Table, Central Massachusetts Regional Suicide Prevention Coalition, and Promised Neighborhoods. CHL provides leadership in the NC through the Joint Coalition on Health a community health advocacy organization made up of over 30 agencies. Through the CHART projects we are part of the North Central Regional Behavioral Health Collaborative. CHL participates in the CHNA's CHIP initiatives in both the Worcester and North Central areas within their Behavioral Health priorities.

CHL works collaboratively and holds multiple contracts with the Massachusetts Department of Mental Health, Department of Children and Families, Department of Public Health, Department of Early Education and Care, Massachusetts Office of Victim Assistance. We also work closely with the Department of Housing and Community Development, through which we are contracted to provide tenancy preservation services. Our program staff in both the Worcester Service Area and the Gardner-Fitchburg Service Area work regularly with their respective Department of Transitional Assistance offices and U.S. Social Security Administration. We often use Workforce Central in Worcester and the North Central Career Center for employment support.

2. How we will grow connections

Staff from CHL programs continually foster and grow connections within the communities in the Worcester Area and in north central Massachusetts. Active participation in coalition activities expands our network of referrals. Newly hired staff from the communities we serve add their experience and knowledge of resources. Staff attend community events – particularly ones that celebrate diversity and culture – and these add resources to our base of connections. CHL is on the email list of many organizations who weekly compile updates and list of events in the community for distribution – most notably CHNA 9 and JCOH in North Central and the Family Resource Center in Worcester. We expect through the process of this procurement to learn more about the services of the ACOs and MCOs as well as those of other Community Partnerships. In all these ways we will grow the network of community connections to better serve the individuals receiving the CHL's CP service.

3. Plans to ensure staff is informed of community resources

The CHL Community Partner program staff will ensure staff are aware of new community resources through training, supervision and weekly staff meetings. The resource guide is updated regular following staff meetings when new resources or identified or contacts at agencies change. Staff use HelpPro which is an interactive guide to community resources developed by the NC Regional Behavioral Health Collaborative. CHL management is working closely with UMMHC's Integrated Care Department which is working on the development of a resource guide that will help to not only connect Care Coordinators to the community but also increase the community's ability to navigate the health care system. While current staff do use resources on the Web or through 211, they have found that the most effective way to keep informed is through keeping an annotated list of resources.

C. Community Partner supports

1. Outreach and active engagement

a. Outreach and engagement strategies for homeless or hard to reach Assigned Enrollees

Community Healthlink's (CHL's) Community Partner program model is designed to enhance our ability to outreach and to engage Assigned Enrollees. Our Community Partner structure and subcontract with Clinical and Support Options (CSO) has a structure to ensure the right mix and number of staff to fit the work in our catchment areas. Teams are embedded, whenever possible, within primary care and behavioral health sites. Our system will have real-time communication to increase responsiveness and agility. We have designed a workflow to maximize efficiency and avoid duplication. We understand that from the beginning it will be important for the primary care providers (PCP) and of behavioral health providers (BHP) as well as community social service agencies to understand the CP role and responsibilities. During the start-up phase, the CHL CP team will develop materials in a variety of formats – in-person meetings, video, screen savers, handouts, and social media – which describe community partner supports, activities, and collaboration and which can be used with the ACOs or MCOs as well as with Assigned Enrollees and community. The materials for Enrollees will be translated into multiple languages.

CHL's CP program will receive referrals of individuals aged 21 or older; enrolled in an ACO or MCO and who have Serious Mental Illness (SMI) and/or Substance Use Disorder (SUD). Young adults ages 18-20 may be referred if the individual has SUD. Within one business day of Assignment, CHL will confirm the receipt of the Assignment with EOHHS or the MCO or ACO.

After confirming the receipt of the assignment, the CHL Community Partner Intake Coordinator will enter initial information into CHL's Electronic Health Record (EHR) system to start the tracking and data collection for each Assigned Enrollee. We expect that most of individuals referred will have CHL or CSO behavioral health or primary care connections. The Intake Coordinator will check CHL/CSO's behavioral health and primary care EHRs to see what services the individual has received. If there has been recent involvement, the Intake Coordinator will refer the Assigned Enrollee to the CHL Community Partner Team connected to and embedded within his or her[1] PCP or BHP. We will enter CHL Community Partner referral information into CHL's behavioral health record and the Assigned Enrollee will be "flagged" in the EHRs (eClinicalWorks for primary care and NetSmart CMHC/ CareLogic for Behavioral Health) as a Community Partner referral so that all providers are aware. CSO will document the referral in their BH record, Credible, as well.

At intake we will begin to assess any language or access needs the individual may have. We want to make sure from the start that we provide the service in the language and location that best meets the Enrollee's needs. We will have individuals on staff that speak multiple languages and have medical interpreters and video interpreting available as well as telephonic interpreting. We will have telecommunication available for those who are deaf or hard of hearing.

[1] Although we use "his or her" and "he or she" in this response as singular pronouns (the style still endorsed by the APA Publication Manual, the Associated Press Stylebook, and the Chicago Manual of Style), we recognize the need for a new singular pronoun to respect the fact that gender is not binary. At CHL, we support the APA's guidance that providers should, "Respect people's preferences; call people what they prefer to be called." APA Publication Manual, 2010, p. 72.)

We expect to receive an initial number of referrals through EOHHS's Analytical Identification Process. The Intake Coordinator will work closely with the My Link Management Team on this first group of referrals to ensure processes are efficient and meet reporting requirements. The program leadership in addition to the Intake Coordinator, will assist in the review, process, and assignment of these first referrals.

We have organized the CHL CP staff into teams. CHL/CSO will initially have three teams. Each team works with about 270 Enrollees and has a RN, Licensed Clinician, five Care Coordinators and one CHW. As the referrals and caseloads increase, the teams will expand and we will create more teams. We will organize the first CHL Community Partner teams geographically and attach them to (1) CHL's Homeless Outreach and Advocacy Project (HOAP), which is a Federally Qualified Health Center; (2) CHL's Worcester Primary Care and Behavioral Health; and (3) CHL's North Central Primary Care and CSO/CHL Behavioral Health.

All Enrollees will receive a letter and information in the mail introducing the program. Whenever possible, however, Care Coordinators will use existing relationships with providers to make initial connections with the Enrollee. Overwhelmingly, our experience is that "warm-handoffs" make a significant difference in being able to successfully engage individuals in the community. For clients involved with CHL behavioral health or primary care, Care Coordinators will contact the PCP, psychiatrist, clinician, CBFS program, or PACT team working with the individual and set up a time for a teamed contact. Similarly, the assigned Care Coordinator will contact non-CHL/CSO PCPs and behavioral health providers to set up times to meet the Assigned Enrollee at the practice when possible. Staff will arrange to be present for the next appointment and with the client's permission, will make a connection with the client at that visit. The CHL Community Partner program will also be alerted if the Assigned Enrollee comes into one of CHL's Urgent Care or Open Access sites for an unscheduled appointment – either for Primary Care or Behavioral Health. Care Coordinators assigned to those teams will be available to be introduced to Assigned Enrollees, with permission, during these visits.

Our goal will be to have attempt at a face-to-face initial contact with the Assigned Enrollee within the first 30 days. We will use our EHR to track efforts toward that goal. While our preference is to have the first face-to-face Care Coordination encounter occur with a warm-handoff, when this is not successful, our Intake Coordinator will call the Assigned Enrollee or use text messaging to contact the individual to introduce the program and make that first contact. We have found that calls of this nature do not have a high percent of success because clients have caller ID and screen calls, clients have limited minutes on their phones, and because often, contact numbers given to us are incorrect. When individuals are involved in the CHL/CSO systems or have a connection with a community PCP, the Intake Coordinator can coordinate the call with the behavioral health or primary care staff so the call is coming from familiar staff.

As the Emergency Service Provider (ESP) in both North Central and Worcester, we also have the ability for a warm handoff in Emergency Departments. Because the EHR "flag" will be in place, the Emergency Services Communication Center will alert CHL's Community Partner program when they receive a call from an ED regarding a client assigned to the program. Our current care management staff work closely with ED and CHL's Emergency Services in Worcester and North Central. They are comfortable in the settings, have relationships with the ED staff, and are seen

as respected members of the ED teams. We expect that many of our current care managers will move into the role of Care Coordinator or CHW in CHL's Community Partner program.

If the Assigned Enrollee has not had recent contacts with his or her PCP or BHP or is not responding to calls, texts, or the mailing, the team will make an outreach visit. These first visits will be conducted by two CHL Community Partner program staff after a safety assessment and case specific protocol is in place to ensure staff members' safety in the community. The safety assessment includes assessing, for example, the severity of threatening or assaultive behavior and how recent it was, severity of criminal activity in the home or neighborhood, non-adherence with medications or other needed treatment, time of day, and cell phone reception. Each safety assessment is reviewed by a manager and will inform decisions about the visit such as: single or double staff visit; credentials/experience of staff making the visit; time of visit; procedure for checking in with supervisor during or after visit; and developing a plan with the individual or family regarding animals or the presence of other people in the home.

Staff will use the knowledge gained through the years of experience in providing outreach care management and case management to individuals in the Worcester and north central Massachusetts areas to remove the barriers encountered in initial meetings with individuals with complex mental health, substance use, and medical challenges. We have found that homeless individuals who also suffer from mental illness and substance use disorders are often the most difficult to engage and need more extensive outreach. While we will strive to have an initial meeting within our Primary Care settings or with a behavioral health clinician or in Urgent or Emergency care, sometimes we will need to go into the community to find the most at-risk and vulnerable individuals. Our staff are experienced in homeless outreach. We know, for example where individuals in Worcester go for meals: breakfast at St. John's Food for the Poor program or Everyday Miracles, lunch at the Salvation Army, and dinner at the Mustard Seed. The staff know to find homeless individuals at the "triangle" in Fitchburg which is located at the intersection of the train station, Dunkin Donuts and drop-in center. The staff also know the individuals who frequent these locations and the individuals trust them. Homeless individuals know to look for our care management staff to get help. Equally important, our staff know the areas where they should not go. There are wooded areas and tunnels as well as buildings that are known for drug traffic that CHL staff do not enter.

In our experience, a warm-handoff and meeting is the key to successful engagement. It allows us to make a connection is a known setting and often with a provider whom the individual trusts. In these initial meetings, the Care Managers will share information about the CHL Community Partner program and begin to learn about the client and his or her needs. The goal of the visit is to build rapport and engagement. Staff do that by being understanding and empathic; by using body language that shows respect; and by talking with the individual, not "at" them. Staff are trained to be flexible in their approaches depending on the individual. For example, staff find that having a "streetwise" stance and approach works well with some homeless individuals and in other situations, a caring, warm interaction is more successful.

Our staff know the community and in a very first meeting can often provide concrete help or make a needed referral. We often make connections on the first visit to food pantries and to behavioral health providers. These concrete services help the engagement process because we

help the client with something he or she cares about in the very first encounter. In this way, we begin to get an idea of what the client's goals may be even though we most often will not formally complete an assessment or care plan in this first encounter. In all cases, the staff in this and other early visits convey the ideas that "I am willing to help you if you want to engage" and that "you are in charge of your plan."

b. Outreach and engagement strategies for Assigned Enrollees with SUD

In our current Care Management and Community Support Programs (CSP), 67% of the individuals with whom we work have a diagnosed substance use disorder (SUD). CHL provides a continuum of care for individuals with SUD including: Acute Treatment Service (ATS) (Detox), Clinical Stabilization Services (CSS), Transitional Support Services (TSS), Medication Assisted Treatment (MAT), as well as substance abuse outpatient and residential services.

Our Care Management and CSP staff provide follow-up community based interventions with individuals referred from all levels of SUD care. Staff receive extensive training in SUD and in Motivational Interviewing (MI). Staff practice with role playing in team and supervision to learn ways to work most effectively with this population.

CHL uses the SAMHSA guiding principles of recovery as a base for our work with individuals suffering from SUD and mental illness. Our work is person-driven and we understand that recovery occurs via many pathways and is highly individualized. Our staff are trained in providing trauma-informed care as so many of the individuals referred are victims of trauma. The services and supports we provide are trauma-informed to foster safety and trust. Our person-centered plans will reflect our view of recovery as holistic and will address self-care, family, housing, employment, transportation, education, health care, faith supports, social networks, and recreation – which are all aspects of recovery.

The staff use MI effectively in their planning with individuals who are in the pre-contemplation stage of treatment and recovery. If "being there for my kids" is important, for example, then the staff help the individual identify what is getting in the way of the individual's parenting. Similarly, if housing is a goal because the individual is continually being evicted, staff work with the individual to help him or her list what he or she sees as the barriers to housing. The staff "plant seeds" which eventually take hold and become embraced by the client as their own. Staff use motivational interviewing strategies to help individuals move from ambivalence to action.

We currently have a team of community outreach staff that work with individuals being discharged from Detox. The CSP team encounters individuals who have had multiple recent admissions yet continue to state that drugs or alcohol is not a problem for them when they are working on the collaborative care plan. One outreach staff described an individual with three admissions to Detox in four months. While he was still pre-contemplative and would not list decreasing substance use as a goal, he did agree that he was depressed. The outreach worker connected him with a CHL therapist who engaged with him around the depression and over time, the individual acknowledged the impact drugs were having on him, and eventually included that in his care plan. He has now been drug-free for 6 months after having had a few starts and stops.

Many of those with a SUD are also homeless, and we would follow the outreach process described above in 1.a. We keep staff as safe as possible by having them outreach as a team when necessary and not going into areas when drug deals are likely to be happening. Staff always check in and out with a supervisor. We have also found that engagement of this population often takes multiple tries over longer stretches of time and therefore in our staffing pattern we have engagement specialists – Community Health Workers – who will carry smaller caseloads and provide more intense outreach in order to reach this vulnerable population.

c. Obtaining and documenting Assigned Enrollees' agreement to participate

In the first "warm handoff" visit, staff will verify contact information, find the best ways to contact the individual and set up a time and place to work on an assessment. Staff also have business cards which they distribute so that clients have contact information for the Care Coordinators. In this first visit, CHL staff will provide information about the benefits and purpose of the CHL Community Partners program and on the community partner supports available. Included in the brochure each individual will receive is information about choosing to opt-out of the CP Support and about the ability to request to be assigned to a different CP. In addition, the brochure will have information about Client Rights and Privacy.

Based on our experience, we expect that it may take 2-3 attempts to engage – sign a participation form. We will plan with the client a second visit in their home, at a CHL office, or at a community site. At that next visit staff will: (1) Provide additional information about the benefits and purpose of Care Coordination; (2) explain and obtain the signed participation form; (3) explain what Protected Information is and have the Assigned Enrollee give written authorization (ROI) in order to contact current providers and newly identified referrals as necessary; and (4) will begin the Comprehensive Assessment and Person-Centered Plan.

When the participation form is signed, it is returned to the Intake Coordinator to be scanned into the Care Management Record. The form triggers a reminder that we need to assign a Care Coordinator within 5 business days. The form will also trigger a notice to be sent to the Primary Care and Behavioral Health providers showing that the individual is now enrolled in CHL's Community Partner program. It will also list the assigned Care Coordinator and his or her contact information. PatientPing will be updated with the Care Coordinator's name. Whenever possible, we will assign the Care Coordinator (CC) who connects with the client and obtains the participation form as the Care Coordinator for the Enrollee.

We currently participate in PatientPing, a web-based, HIPAA-compliant platform which began in 2016. Five of the seven hospitals in our catchment have or will have PatientPing in place by the end of the year. We will expand our current use of PatientPing through this initiative so that the system will flag all Enrollees as patients of CHL's Community Partner program. This will allow our staff to receive real-time information (through text, with no PHI, and secure email) when an emergency department admits a CHL CP patient. PatientPing's clinical event notification platform sends real-time messages ("pings") to Care Coordinators who are then able to meet Enrollees in the emergency department.

Because we see Engagement (completion of a signed participation form) as key to the on-going work of Care Coordination we have chosen the Engagement process as our first quality Using

the Lean approach and tools, staff and managers will review data together and look at ways that policies, procedures, staffing, case assignments, etc., might be revised to meet the goal of engaging 60% of referred individuals within three calendar months from referral.

2. Comprehensive assessment and person-centered treatment planning
a. Process for conducting comprehensive assessments (CAs)
After the Engaged Enrollee has agreed to participate and releases are in place, the Care Coordinator conducts the Comprehensive Assessment (CA) within three calendar months of assignment to CHL's Community Partner program. The assessment is a collaborative effort. For our CA tool, we are using the Massachusetts Standard Documentation Project (MSDP) forms with a few additions so that it contains all the required domains. It is the Assessment CHL and CSO currently use. This tool is in our current EHR and will be in CareLogic as well.

The Care Coordinator collaborates with the CP team on the assessment and will review information from both Primary Care and BH providers. When appropriate, and when there is a CA that has been completed within the three months prior to the CP assessment that includes all domains, we may choose to use that CA rather than complete a new assessment. In this case, assessment information will be reviewed with the Enrollee during the assessment interview(s).

Staff will set-up times and locations to meet based on the Enrollee's preference and will take into consideration any language or access needs in planning for the assessment. Staff will have tablets or laptops so they have the ability to record information collaboratively with the Enrollee.

Staff will conduct interviews to learn about each individual's biopsychosocial history, presenting problems, current use of available resources and assess the clients' strengths and needs as well as presence of natural supports. The staff will gather data about the Enrollee's medical history, health status and medication. Staff will pay particular attention to social determinants of health in the assessment process. Staff will establish a means of contact between the Enrollee and CHL's Community Partner program. As appropriate, the Care Coordinator will review concerns about identified risk factors and assist the Enrollee in writing a crisis prevention or safety plan. In all interviews, staff will ensure that the individual has information about accessing urgent and emergency behavioral health and medical care.

During the assessment we will also complete an SF-12 with the Assigned Enrollee. The SF-12 is a multipurpose short-form (SF) generic measure of health status. It was developed to be a much shorter, yet valid, alternative to the SF-36 for use in large surveys of general and specific populations as well as large longitudinal studies of health outcomes. The 12 items include one or two items from each of eight health concepts: physical functioning, role limitations due to physical health problems, bodily pain, general health, vitality (energy/fatigue), social functioning, role limitations due to emotional problems and mental health (psychological distress and psychological well being). We will redo the SF-12 at six month intervals and use the outcome data to inform our practice moving forward.

After the CA has been completed by the Care Coordinator and the Enrollee and the medical history, medical needs, and medications are reviewed by the RN on the Care Team, the full CA is then reviewed by the team's clinical manager. The signature of the Clinical Care Manager

signals completion of the Assessment within the EHR. It also gets communicated – electronically when possible - to those involved in the Care Team (with releases from the Enrollee). This assessment will be updated annually. The EHR alerts staff when updates are due.

For individuals that are most vulnerable – homeless individuals, dually-diagnosed individuals, and substance users in a pre-contemplative stage of recovery – the assessment process may not be completed in this face-to-face visit. We expect multiple outreach efforts may be needed with these individuals before the assessment is completed. CHL's Community Partner teams may choose to have their engagement specialists – Community Health Workers (CHW) – work with these individuals and complete the assessment. See Attachment I: Assessment Tool.

b. Process for conducting person-centered treatment plans (PCTP)

1) Processes for developing the PCTP

As part of the Comprehensive Assessment, the Care Coordinator and the Assigned Enrollee will begin the Person-Centered Treatment Planning process. The PCTP will be completed within three calendar months of the Enrollee's Assignment to CHL.

CHL sees person-centered planning as a collaborative process, directed by the client in partnership with the care providers and natural supporters. Because "person-centered planning is a process directed by the participant, intended to identify strengths, capacities, preferences, needs and desired outcomes of the participant" (Centers for Medicare and Medicaid) the plans are, by definition, unique to each individual.

In some cases, we will be able to develop the plan with the Assigned Enrollee, members of the CHL Community Partner team (Care Coordinator, RN, Clinical Care Manager), the PCP (or designee), the behavioral health provider, and natural or family supports. In most cases, the Care Coordinator, the individual and a smaller team will work on the plan. Plans developed by the LPN Care Coordinators will be reviewed and cosigned by the team's RN or Licensed team leader. When the Assigned Enrollee has approved the plan by signing it, the plan it will be sent to the PCP (or designee) for approval if he or she was not in attendance. Plans address the individual's health and social needs and the process asks questions related to integrated care: How does this individual's behavioral health condition affect this medical condition? How does the treatment of medical symptoms affect the individual's behavioral health? How does living on the street affect the individual's health? The need to make adjustments based on the response to these types of questions is why all team members need input.

In all PCTP meetings we use shared decision making, embrace cultural preferences, and encourage individuals to think about their life and health in all aspects. Staff are trained to listen, promote hopefulness, be creative and flexible, and have clear communication. Many CHL staff have been trained and certified by the Transformation Center in person-centered planning. Our staff will also be trained in treatment team facilitation by Tuyet Tran, the Director of Integrated Care Management for CHL and Dr. Anthony Irsfeld who is our CSA Director and a skilled state-wide recognized trainer in person-centered treatment planning.

Plans are purposefully designed around the individual's strengths and abilities with an underlying theme of fostering empowerment, independence, wellness, and improved level of

functioning. Staff encourage clients to identify skills and abilities they already possess that will help them achieve their goals while also specifying how the care team will support these efforts with solution-focused interventions. Listening to understand the Enrollee's culture and the ways it may affect health and wellness is key to a successful plan. As with the assessment, the Care Coordinator will ensure that the Plan process takes place in an accessible location and is conducted in the enrollee's preferred language.

Each plan includes statements by the Assigned Enrollee about goals in his/her own words. The individual also prioritizes what he or she thinks is most important. Our staff are trained in writing SMART goals – Specific, Measurable, Attainable, Realistic, and Time Sensitive. Writing specific objectives (short-term) within each longer-term goal toward health has been effective in helping our clients to see and celebrate even small increments of improvement as well as to help manage complex health conditions.

The plan includes not only the individual's action steps but also identifies what each provider on the team will do to assist the Enrollee in moving toward his or her goal. The types, frequency, and duration of services are listed. Any barriers to meeting the goals are addressed and listed with actions to remedy or mitigate those barriers.

Each plan includes the list of contact information for members of the team including names, telephone numbers, email addresses. A key part of the plan is the description of how the team will coordinate care on an ongoing basis, including determining when the team meetings will be held and how will the members of the team will communicate with one another.

All PCTPs contain emergency contacts and information on how to access both medical and behavioral health urgent and emergency care. Some individuals may have crisis plans developed by the BH provider or by the CC under the supervision of the Licensed Clinician that may include warning signs, coping strategies, and community and natural supports in addition to the contact information for the Care Team. The Enrollee receives a copy of the crisis plan (if necessary) and contact information as part of the Treatment Planning document.

2) Processes for documenting the PCTP

Both our current and new EHR have PCTP formats following the MSDP standards that we will edit to meet the CP requirements. The Care Coordinators will have tablets/laptops with signature pads so the Plans can be completed and signed by the Enrollee during the TP meeting.

The CP staff will then forward the PCTP to the PCP (or designee) for their signature. Our CareLogic vendor is working with both eClinicalWorks and EPIC (UMMHC's record) to connect the EHRs so that documents and some data can be easily exchanged. The completed, PCP signed plan will be mailed or delivered to the Enrollee or available through their portal.

Once the plan has been signed by the Enrollee and by the PCP - the PCTP then becomes a part of the EMR and will be shared with other members of the Enrollee's Care Team, when appropriate releases are in place, including the ACO or MCO, state agencies, and other community providers. It will be sent securely electronically whenever possible. The EHR reminds the team through an alert system that the PCTP is due for update six months after it has been approved.

3) Processes for updating the PCTP
The PCTP is a living document and therefore may be reviewed at any time there is a change in the Engaged Enrollee's status or at least every six months.

The team will gather as possible and will together review and update the plan. At the six-month review and any time the plan is updated, the Care Team will review the individual's health status and progress toward goals, and will assess and add new goals and recommendations based on reassessments. The Care Team will again look at ways to decrease barriers to care if any are identified in the process. Next, the actions are updated to reflect new frequency and duration, and team members are assigned tasks. The contact list and crisis plan is reviewed and updated as needed. The team reviews its communication plan and makes improvements. The updated plan will be approved with signatures from both the Enrollee and the PCP (or designee) and entered into the EHR. Members of the Care Team will receive copies of the up-dated plan.

4) Process for ensuring Enrollee's approval of PCTP
The plan needs approval from the Enrollee and the PCP (or designee). Staff will obtain the Enrollee's signature during the PCTP meeting with a signature pad. Other members of the Care Team may sign the plan if they are present during the planning meeting.

When the Care Coordinator is embedded in the Enrollee's PCP practice we may obtain the approval signature during weekly huddles. We also may obtain the PCP signature through our EHR data exchange and the PCP (or designee) will receive an EHR alert that a Care Plan is awaiting signature. In some cases, we will fax or email (secure) the Plan to the PCP site for the signature. The program administrative assistant will follow-up if there are delays.

CHL and CSO sees this process as a challenge given the fast pace of PCP practices. We will work closely with the PCPs to have this process be efficient as well as informative. We believe that providing early and regular information about Community Partners, having clear role definition, and communicating regularly in-person will be key to this approval process.

3. Care coordination and care management
a. Identifying stakeholders
During the engagement process and through the assessment, the Care Coordinator and the CHL Community Partner program team will work with the Engaged Enrollee to identify the members of his or her Care Team. The Care Coordinator will meet with the Enrollee and make a list of those individuals the Enrollee identifies. In our experience, individuals are more likely to easily identify professionals: doctors, therapists, case managers, etc. Our staff will encourage the Enrollee to think beyond the professionals and add to their team when possible natural supports - family members or other caregivers, friends, or community supports.

From the initial meeting when we talk about the program we will begin talking about the Care Team and our expectation that the Care Coordinator and the Clinical Care Manager will be standard Care Team members and that in addition, the Enrollee's PCP or Designee and Behavioral Health Clinician will be part of the team. When an Enrollee is involved with other community supports such as CBFS or PACT the Enrollee will be encouraged to consider inviting

support members of those teams to participate. Enrollee's receiving case management or other services from a State Agency may choose to include those supports as well. In addition, if he or she is involved with another community agency such as a Clubhouse, peer recovery program, or CSA, staff from those supports can be invited by the Enrollee. CHL's Community Partner program staff will also encourage Enrollees to add natural supports to their team.

Many of the Enrollees will present with complex needs, including trauma histories, poverty, homelessness, and domestic or community violence. By using Care Teams that include community and professional expertise, Care Coordinators do not have to be the experts in all cultures or problems or conditions. For example, a CHL client who is an African refugee invited members of their mosque to participate in the team in order to help the staff understand some of the challenges he faced.

Once the team is identified by the Enrollee, the Care Coordinator will ensure that each member of the team receives information about the role of the CP and Care Coordinator, about the PCTP process, and about the expectations of the Care Team members. We will include information for each identified member about his or her role based on their licensure, training, and relationship to the Enrollee. We will also convey our philosophy that Care Teams should reflect: 1) cultural and linguistic competence; (2) individuals and family, and community involvement at all levels of service delivery; and (3) a strong belief in the importance of positive expectations. The latter cannot be overestimated. For change to occur in complicated situations there must be a sense of hope and a belief that things can get better. For this to occur, Enrollees have to feel understood by, comfortable with, and trusting of professional staff. They must have a sense of their own empowerment – that they by their actions can make a difference.

CHL and CSO have extensive knowledge about gathering and working with Care Teams through our four Community Service Agencies, Care Teams for our high ED users in the CHART programs, and through our team experience with our current managed care contracts with Medicaid and Medicare. In our experience, we also know that Care Teams change and evolve over time based on the Enrollee's needs and preferences. Enrollees, for example, may need a long-term supportive services (LTSS) which would mean bringing information about LTSS providers to the meeting and eventually involve an LTSS provider as part of the care planning.

b. Exchanging information with stakeholders

We see the Care Coordinator as the **hub for communication** between stakeholders. Regular communication with each member of the Enrollee's Care Team is a primary responsibility of the team. It is also a challenge because all members of Care Teams have high caseloads and demands. Our goal is to have the information exchange be a value-add for all the members of the team so that we can count on their participation in the Enrollee's plan. Communication across disciplines, geography, and electronic records is complicated and we expect to continually review and improve our information exchange process through our QI processes.

We do have some immediate capacity for information exchange through the electronic record. CHL's Community Partner program staff will have access to the Primary Care Record of CHL clients and to the CHL Behavioral Health record. These two records will have linkages so that there is real time communication between the two record systems. Both systems have "tasking"

and "messaging" functions. Both systems will have CHL's Community Partner program Enrollees flagged so that Care Coordinators can be notified both when a patient is scheduled to come to an appointment and when a patient arrives. PCPs and BH clinicians will be able to read contact notes and Care Plan updates from the Care Coordinators in the EHR. We have capability of sending information from our electronic record to other entities through the MassHIway and Continuing Care Documents.

Our embedded model lends itself to face-to-face communication. Care Coordinators will participate in daily or weekly team meetings or "huddles" with the PCP and BH staff. The huddles which we currently have in place for CHL's OneCare Case Management have proven to be an efficient way to regularly communicate. Multidisciplinary staff are present and it is an opportunity to talk about challenges, risks, wellness opportunities, upcoming appointments and to review progress toward goals.

For community agencies, state agencies, and natural supports, we will also exchange information and updates thorough regular telephone contacts, secure email, and by fax. In all situations, we will ensure that we have in place appropriate and valid ROIs.

c. Identifying and organizing Enrollee's care team

CHL's care management is flexible and mobile. Its primary aim is to help individuals with complex needs better manage their health and wellbeing by coordinating care with PCPs and BH clinicians and addressing barriers to health care. This includes challenges related to social issues such as housing, benefits, transportation and food insecurity. We find that working closely with the multidisciplinary Care Team – even without physically meeting – enhances the care.

Care Coordinators meet with Enrollees in homes, shelters, community doctors' offices or speak by phone. They communicate with doctors and help coordinate the agreed upon plan. They participate in interdisciplinary care meetings and daily or weekly huddles. Staff in the home and community are aware of the physical behavioral social and environmental conditions in the Enrollee's personal life and living environment that may affect their health and welfare and safety. Staff can help to articulate in the Enrollee's voice their preferences and strengths. Therefore, they are in a key position to organize and coordinate the Care Team.

When there are Care Team meetings – in person or virtually – the Coordinator will:

- Define roles: With multiple agencies and providers involved with service planning, it can be difficult to know who should be doing what. To avoid confusion and conflict roles of all key providers and stakeholders need to be defined from the onset of the program.
- Enrollee participation: Person-Centered Planning is not simply about inviting an Enrollee to a meeting. Too often they can feel intimidated or unappreciated. The Care Coordinator will support the individual and ensure that their point of view is respected, valued, and heard.
- Meeting preparation: All participants – providers and family members, formal and informal community partners – must understand the purpose of the meeting, its goals and objectives, the process by which decisions are made, and the importance of everyone expressing her/his opinions, perspectives and suggestions.

- Record Attendance and Decisions: The Care Coordinator will list contact information for those in attendance. All members of the team including the Enrollee will receive a copy of this sheet and it will become a part of the electronic record.

When it is not necessary or possible for the team to meet or members of the team are missing from a meeting, the Care Coordinator ensures that all members receive updates regarding the care of the Enrollee. Team members will all have contact information and understand Care Team roles and relationships. As the hub, the Care Coordinator can make certain that an update from DMH, for example, is communicated by phone, email or electronic exchange of information to all members of the team. All these encounters and communication exchange are logged into CHL's BH EHR and are reportable.

d. Ensuring effective ongoing communication

We see Care Coordination as a dynamic process rather than a defined set of tasks -- it involves need identification, assessment, prioritizing, and monitoring of outcomes. The Care Coordinator's primary job after engagement is to communicate, network, educate, and advocate.

A core competency of both CHL's Community Partner program itself and of the individual members of the Community Partner team is the establishment of relationships with outside entities and the development of clear expectations on both sides – particularly around communication. During the development phase and during the first year, we will develop "standard work" around communication with and between Care Team members. We will base decisions on feedback from stakeholders and Enrollees. Results will be shared with our CAB and we will seek their recommendations for improvement.

CSO and CHL will use data from our Care Coordination experience to improve our practice overtime. We are looking at tools that identify risk factors, running reports that target high users and looking at ways to separate high but non-preventable costs from those that are more preventable. CHL's current care management programs follow the principals set forth in the CareOregon model which has been identified by CMS (information bulletin 7/24/13) as a successful model for "super-users". They have created a "community of practice" environment linking the Care Managers to the PCPs and BH providers through: 1) weekly multidisciplinary huddles to discuss challenging cases; 2) standardized tools, workflows, and documentation guidelines; 3) competency-based trainings; and 4) centralized supervision and performance monitoring. In addition, CareOregon uses dashboard reports which contain information on utilization, engagement, caseload capacity, turnover, as well as performance on quality metrics. We will use dashboards with our new EHR. This data will be shared with our primary Stakeholders - along with Enrollee specific information - so that our "community of practice" evolves through data and experience.

4. Care transitions

While the Enrollees receive varying levels of care coordination over time - care coordinators will always prioritize oversight and monitoring of transitions across care settings and from one level of care to another. Transitions, particularly from inpatient stays, are critical times for Care Coordinators to be actively involved with the Enrollee to ensure success in the community.

Our team has relationships with all the local inpatient medical hospitals, ATS programs, substance use continuum programs, and CBFS and PACT programs. In addition, through our ESP, CSP, and CHART programs, we have relationships with staff and units at most inpatient psychiatric facilities throughout the state. Through PatientPing we will be notified when our patients go to an ED or are hospitalized.

The Enrollee's Care Coordinator or another member of their CHL's CP Team will attend treatment team and discharge meetings at the hospital whenever possible (and by phone call if necessary) and be responsible to inform the other members of the Engaged Enrollee's Care Team – the PCP, behavioral health providers, ACO/MCO and others - about the discharge plan. Current staff have countless examples of the importance of attending discharge meetings. Inpatient units are frequently not familiar enough with the community to make effective referrals e.g. they are often not aware of barriers such as transportation or challenges with in-home referrals. Therefore, inpatient units want to consult with staff about possible plans.

While Care Coordinators will have been in contact with the inpatient hospital and will have been part of the discharge planning process, follow-up in the community is key. When possible, after an inpatient stay, the RN and Care Coordinator will visit the Enrollee **together** in order to complete the Medication Reconciliation and review the PCTP . They will update and then distribute the Treatment Plan following the process in 2.b.3) above.

CHL's Care Coordinators will work with clients who have been recently discharged to make direct face-to-face warm handoffs of care when that is appropriate and necessary. They will bring clients to the Partial Hospitalization programs, introduce them to staff at the Clubhouses, take clients to first appointments when necessary and then arrange for transportation for follow-up appointments. Making these "warm handoffs" increases the success in the community.
In all cases the Enrollee's Care Team will be informed about the discharge meeting, transition visit in the community, and the updated Plan. With permission, the Care Coordinator arranges for the sharing of information between the Care Team and any new providers.

5. Medication reconciliation
Within three days of discharge from an inpatient unit, Engaged Enrollees' CHL Community Partner program team will conduct a face-to -face visit. Whenever possible the RN or LPN will attend with the Care Coordinator so that as a team with the Enrollee, they update Enrollee's treatment plan and discuss the coordination of additional support services. The RN or LPN will review discharge orders and contact the Enrollee's PCP to verify that the orders are appropriate. In the visit, the nurse will ensure that the medication orders have been filled accurately. In addition, the nurse will review each medication with the Enrollee and make certain the individual understands the medication regimen and is knowledgeable about side effects and has his or her questions answered. If applicable, the nurse, with the Care Coordinator, will assist the individual in contacting staff or natural supports that may support the individual. When the Engaged Enrollee is an individual in a Medication Assistance Program (MAP), the RN or LPN will share the updated order forms with the MAP provider and make certain there is communication regarding any changes.

Within our CHL Community Partner program team structure, we will have staff that work closely with the CBFS program specifically. Whenever possible it will be that RN or LPN and Care Coordinator that responds within the three days of discharge. The team will be organized in such a way that the discharge visits can occur in a timely fashion on long weekends and holidays. In addition, the Care Coordinator will follow-up with the Enrollee after the visit to make sure that any additional questions or concerns are addressed. The RN will consult as needed.

6. Health and wellness coaching

a. Plans for conducting health and wellness education and coaching

Research indicates that the average life span of individuals with severe mental illness is 10 to 20 years shorter than that of the general population (National Council for Behavioral Health). Factors contributing to this are complex and include; greater risk for diabetes, hypertension and cardiovascular disease often due to weight gain that results from poor nutrition and adverse side effects of medication; individuals with mental illness are frequently forced into poverty; become addicted to tobacco alcohol and other drugs, etc.

Recognizing this, in 2015, CHL and CSO began agency-wide wellness and integrated care initiatives beginning with a series of two-day trainings provided by the National Council for Behavioral Health. Through a "train the trainer" program eventually all staff were trained in material by the National Council. As a result of this initiative, CHL clients have a wellness goal in their plans which is tracked and measured. It is one way we are integrating health and wellness into our day to day behavioral health and primary care practice.

Care Coordinators will work with each Enrolled Enrollee to match them with a wellness goal that works for them. For some, it will be to participate in CHL's PCP Wellness coaching or Wellness classes. For others it will be to take advantages of our YMCA memberships or of local recreation programs. CBFS has gym and hiking groups which are highly successful. CHL Community Partner program staff will be knowledgeable about wellness opportunities in the community many of which are free, for example: nutrition consultation at the Tuesday Farmer Market; Stress Reduction seminars at PCP practices; and local recreation programs. Staff will also be aware of any wellness programs within the ACO/MCO that members my take advantage of such as weight management services or access to fitness programs and nutrition counseling. There are also self-health guides and resources available through UMMHC's website and Wellness Resource Library which staff will use with Enrollees.

CHL Community Partner program staff will help make connections - including attending a first class with a reluctant client - in order to ensure that each client is matched with a wellness goal that is both attainable and a stretch for them.

One of our wellness programs is In SHAPE, (Individualized Self Health Action Plan for Empowerment) which was developed by Monadnock Family Services and Dartmouth University. It is proving to be highly successful in our integrated primary care clinic in Leominster. Clients are assigned with a mentor who is an individual cheer leader and coach. Care Coordinators will assist clients who participate in the InSHAPE program. In addition, staff will be trained in MyPlate (USDA nutrition best practice) and QuitWorks (which is the MA smoking quit line that our Enrollees can be referred to for smoking cessation and which offers

free patches and counseling). We expect that a variety of EBP modules using smart phone apps will be developed over the upcoming year. Currently we use "Craving to Quit" which is a smart phone app developed by Judson Brewer MD at UMass Medical School's Center for Mindfulness.

Our CSA nurse consultant developed a series of wellness trainings for staff and materials in a readable format on each topic that the staff use with families. We have found this to be effective and will follow this model with the CHL' CP program.

b. Methods for tracking Enrollee's health and wellness goals

Health and Wellness goals are a component of all Treatment Plans at CHL and will be for individuals in CHL Community Partner program. Staff will work with the Enrollee and the Care Team to identify a measurable wellness goal(s). The goals will be listed in SMART format on the Treatment Plan and tracked through the treatment plan reviews. The PCPs will be aware of the wellness goals through the Treatment Plan approval process. During regular weekly huddles with PCPs the goals and progress can be discussed and plans modified as needed.

7. Connection to community and social services

CSO and CHL's strength is in effectively connecting individuals to community and social services. Staff are recruited from the communities, they are orientated and updated around resources, they make personnel connections within the provider communities, they have experiences which they report back to the team and then use that information to assist in future connections. The team has a regularly reviewed an updated service directory. They use online resources including HelpPro in north central Massachusetts and 211 in other areas to assist in finding unique new resources. Staff receive emails from various coalitions which list upcoming events and new services. Weekly team meetings include an agenda item to share any new resources or connections. Pre-service training includes going to community agencies with seasoned staff and learning about the service and meeting individuals at the agency.

When staff are asked what is the most important about making an effective referral, they would include three items. First, the Enrollee needs to be in agreement with the plan. Second, there needs to be a good match between the Enrollee's identified need and the resource and third, there needs to be a warm handoff. Staff attending the first appointment at a behavioral health clinic or at primary care or at a Salvation Army lunch, or a meeting at Work Force Central is key to success. A simple phone call and referral is rarely enough, in our experience.

For the CHL CP program, the collaborative PCTP will be the guide to the community connections that the staff will network with on behalf of the Engaged Enrollees. Individuals will identify for their Care Coordinator and care team which goals are most important for them. Staff will try to ensure that food, housing, safety and access to benefits are met first if they are on the list of Enrollee needs.

Through our current work with Medicaid, skilled nursing, and with the CHART programs, staff are developing skills in working with high and super users to decrease ED visits and prevent inpatient hospitalizations. While it has been more difficult to reduce the reliance on paid support – particularly VNA services - our trend line with OneCare patients is slowly dropping in that measurement as well. We believe that the key drivers of success to preventing the risk of

readmission will be the receipt of timely notification of admission to hospitals, using standardized tools to determine the Member's risk and level of need, the ability to leverage technology to improve communication, a strong discharge and transition plan, warm handoffs to community services and post-acute care medication reconciliation.

D. Innovative technologies for service delivery

Community Healthlink (CHL) currently uses several forms of adaptive technologies including apps, devices, software and three key medical records systems including **1) Netsmart CMHC-MIS** paired with "Order Connect" for e-Prescribing for Behavioral Health related care 2) **Advanced Data Systems** (DocAssist/Premier) for Inpatient substance abuse programs and 3) **eCW** for primary care clinics. CHL has enhanced wireless connectivity throughout several locations to enhance the use of eCW including e-Prescribing on iPads and smartphones. All providers at our FQHC are currently using eCW on iPads. Dictation software is widely used and is supported by our EHR's. Several devices used at our primary care practices like EKG and vital sign monitors are inter-faceable with eCW. eCW has the capability of using robo-calls for appointment reminders as well as text messaging in different languages. The use of Robo-calls will be widely expanded for appointment reminders/reminders once our new Qualifacts EHR is implemented. CHL is currently devoting a considerable effort to implementing several aspects of Advancing Care Information, (ACI) to satisfy MACRA requirements by working with the UMass ACO.

Electronic signature pads are used in several CHL sites (inpatient and clinic sites) which cuts down on the use of paper. This will expand even more with the implementation of the new Qualifacts HER. Paired with hotspot connectivity and built-in data plans, CHL will extend the use of mobile devices (e.g., iPads, tablets, SurfacePro, Bluetooth keyboards and portable printer) to community based and in-home programs such as CHL's CP..

Recently, CHL has submitted a request to UMass Memorial Healthcare to purchase automatic pill counters for some programs through and a Pyxis for our substance abuse continuum (3 inpatient programs) through UMMHC innovation fund. Additionally, CHL is currently working on making remote conferencing available to its managers by implementing join.me and WebEx.

Among the innovative security applications that CHL has in scope for implementation, we have launched a mobile device management application called Maas360. The application secures all texting, corporate emails, web-browsing and all forms of corporate communication via mobile devices. CHL has full control over erasing all confidential from mobile devices that use Maas360 once lost or stolen.

CHL has experience using care management software through our OneCare Program (eClinical Works) and through our CHART program with HealthAlliance Hospital (NetSmart).

CHL works with Omnicare pharmacy. We currently use handheld scanners to refill prescriptions for high volume programs. This ensures the highest level of accuracy and ensure faster delivery of medication. Staff utilize Mindfulness, Meditation, Carving to Quit (tobacco cessation) and other patient education apps with clients. Qualifacts will have educational materials available in the Enrollee's portal access. We are working closely with UMMHC to increase our use of Telepsychiatry. We are also piloting the use of video interpreting using iPads.

E. Personnel and staffing

1. Organizational chart

Please see the CP Organizational Chart, which reflects the **proposed staffing plan for June 1, 2018**. CHL's Director of Integrated Care Management, Tuyet Tran, LICSW, is the senior leader who will oversee the program. She reports to CHL VP Carolyn Droser, LICSW. As her resume indicates, Ms. Tran has years of experience not only managing CSP, MyLink and OneCare programs but also in program start-up. Dr. Marie Hobart, CHL's Chief Medical Officer, will serve as the Medical Director. The other staff and management positions on the organizational chart and described below will be filled between January 1, 2017 and May 1, 2018.

The CP's Program Director will be a licensed clinician and have responsibility to supervise the team leaders (also licensed clinicians). RNs and LPNs will be supervised by the team leaders on day-to-day operations. They will initially be supervised on nursing functions by CHL Director of Nursing, Audrey Hunter. In January 2019 we will hire an RN as an Assistant Director who will work closely with the Program Director on all aspects of the CP and will supervise nursing staff. We will begin in 2018 with program support provided by two FTEs, an administrative assistant and Intake Coordinator. We will expand by two additional administrative positions in 2020.

CHL's CP will have the support of all CHL's administrative departments; IT, HR, Finance, Billing, Quality Management, Data Analysis, Development and Communication and Facilities to meet the requirements of the contract.

2. Sample staffing model

CHL has designed a multidisciplinary team model to meet the scope of the CP supports. Each team will be led by a licensed clinician. Each team is staffed by an RN and six Care Coordinators one of which is an LPN. One of the Care Coordinators will be designated as a Community Health Worker. The CHW will work with individuals with complex health and social needs who are not engaged in services. Each team of eight is organized to work with approximately 270 clients.

The teams will be assigned where possible to specific PC and BH practices. For example, in Worcester we expect to assign a team(s) to our Homeless Outreach Primary Care FQHC and another team(s) to our OP BH clinic where we serve hundreds of Worcester area CBFS clients about 30% of which currently have a MassHealth product for insurance.

We will begin in June 2018 with three teams and the capacity to serve 810 Enrollees. We plan to hire another two full teams to begin January, 2019 bringing our capacity to 1350 by February, 2019. More teams will begin in May, 2019 and by June our capacity expands to approximately 2360. An 8th team will be hired in January 2020 and our capacity will be 2680.

We expect that by January 2020, CSO will have a full team in the Gardner area and be serving 270 clients. We will have teams working out of the Leominster-Fitchburg area serving 680 clients. The remaining five teams we expect to have in the Worcester area. The teams can move between sites as the demand requires and smaller teams may be necessary. For example, we will start the CSO Gardner team with a part-time licensed clinician and RN and two Care Coordinators and grow that team over the next year as we receive referrals.

3. Recruitment plans

CHL will be aggressive in recruiting for the new positions in the CP program and follow successful strategies that have been deployed in previous start-up efforts. CHL will use electronic job boards, email list and announcements sent through our coalition connections.

We currently have recruitment staff attend job fairs at colleges and heath related facilities which we will continue with a focus on this program. CHL also holds Job Fairs annually and have had great success – recently as a result of a 2 hour afternoon Job Fair we hired 5 BA level staff.

Another component of the strategy is to recruit from local colleges and universities including Assumption College, Clark University, Worcester State University, Quinsigamond Community College, Mount Wachusett and Fitchburg State to identify qualified and interested candidates. This program offers an additional attraction to mental health professionals interested in working in an integrated care model. CHL managers and human resource staff will emphasize this feature in published recruiting efforts for the program.

We have current experienced employees interested in the Integrated Care model whom we may recruit for the Care Coordinator and clinical supervisory positions. In addition, we will work closely with the Center for Health Impact to hire graduates from their Community Health Worker classes.

All of these strategies will be used during the recruitment process with a goal that all employees are hired within the following timeframes. Once staff is hired, their pre- service training will begin. Below is a hiring plan.

Task	**Timeframe**
Post all positions within CHL, Monster Board, CHL website, identified colleges and universities	Initial Notification from EOHHS (November 2017)
Networking by CHL managers with potential recruits/ Application and resumes screened by HR/ Interviews of candidates	November 2017- May 2018
Hire CP Program Manager	March 2018
Hire 3 RNs, 3 Clinical Care Managers, Administrative Assistant, and Intake Coordinator	April 2018
Hire 18 Care Coordinators (includes CSO staff)	May 2018
Second Round of Hiring- Post all positions within CHL, Monster Board, CHL website, identified colleges and universities	October 2018
Networking by CHL managers with potential recruits/ Application and resumes screened by HR/Interviews of candidates	November -December 2018
Two more full teams of Clinical Care Managers, RNs and Care Coordinators begin training	January 2019
Recruitment of two additional administrative staff and the RN Assistant Director	January 2019
Networking by CHL managers with potential recruits/ Application and resumes screened by HR/Interviews of candidates	February 2019
Assistant Director, RN and Administrative staff begin training	March 2019

Third Round of Hiring- Post all positions within CHL, Monster Board, CHL website, identified colleges and universities	March 2019
Networking by CHL managers with potential recruits/ Application and resumes screened by HR/Interviews of candidates	April 2019
Two more full teams of Clinical Care Managers, RNs and Care Coordinators begin training	May 2019
Fourth Round of Hiring- Post all positions within CHL, Monster Board, CHL website, identified colleges and universities	November 2019
Networking by CHL managers with potential recruits/ Application and resumes screened by HR/Interviews of candidates	December 2019
One team of Clinical Care Managers, RNs and Care Coordinators begin training	January 2020

4. Recruiting and hiring diverse staff

CHL strives to maintain a diverse workforce that mirrors the diversity of our clients and community. In July 2014, in response to one of CHL's strategic initiatives, we established a CLAS Task Force including staff from all departments and levels and representing the diversity of the organization. The currently employed staff who would serve as the Program Director of the CP Program is an active member of this Task Force. The Task Force as two of its goals to (1) Recruit and retain a culturally diverse workforce at all levels of the organization that is reflective of the populations we serve and (2) Maintain accurate demographic data to monitor and evaluate the impact of CLAS-related activities. We monitor the demographic data of our community, of our clients and of our staff. We have been successful across the agency in recruiting from the cultural and linguistic communities we serve. For example, of the 24 staff including supervisors in our MyLink and CCA OneCare programs 33% are White; 17% are African American; 17% Africans (from Ghana); 20% Latino/a/s and 13% are Vietnamese. This diversity reflects the community in which we work and allows clients to receive services in both their own culture and language.

As a result of the identified diversity and our CLAS TaskForce strategies, CHL, when hiring our program staff, will strategically seek to hire individuals from diverse communities who are bilingual in the top languages spoken by our clients. Staff who speak a language in addition to English receive additional compensation We post the job positions with linguistic or culturally-based affinity groups for individuals in those professions, including (but not limited to):

- The Latino Social Workers Organization (http://www.lswo.org/)
- The National Association of Puerto Rican Hispanic Social Workers (http://www.naprhsw.org)
- The National Association of Black Social Workers (http://nabsw.org/)
- The Asian and Pacific Islander Social Work Educators Association (http://www.apisocialwork.org/)

We will also work closely with the Center for Health Impact which trains individuals from Central MA's diverse communities for medical translation and Community Health Work.

5. Proposed training and orientation plans

We have set-up our hiring plan and budget and use of DSRIP funds so that every multidisciplinary in CP will receive a full month of training in advance of working with clients in the community. We are hiring and creating teams in order to build trust, promote collaboration and thus enhancing care as team members tend to connect overtime. A cohesive team creates shared responsibility and support. We believe that this will help in retention. The initial training outline includes orientation to the agency, the population CP will serve, the community resources, skill development, documentation and safety. All staff will receive the basic orientation and each discipline will receive specialized training. RN's for example will receive training from CHL's nursing director on nursing policies and procedures including documentation and medication reconciliation. The supervisors will receive training from HR on CHL supervision and management protocols.

Our plan is to use Center for Health Impact trainers for 40 hours of training. Since 2005 they have provided a career focused college supported educational pipeline for CHWs and supervisors. Their program is based on standards from the National Community Health Advisory Study titled "Weaving the Future". We have partnered with CHI because of their history of work in this field and our previous collaborations. Their mission statement, "To enhance access to quality health care, eliminate health disparities, and promote workforce development", is an excellent match to our CP program and vision. CHI will train all staff in the core competencies of Community Health. Their training will be tailored to the discipline. Nurses will and supervisors will receive CHI's supervision and nursing modules, for example. We will utilize their Care Transitions Education Project (CTEP) curriculum (initially developed for nurses), for example, in skill development around care transitions. CHI has curriculum in specialized health areas including the opioid crisis. The training listed below is an outline of our training plan.

We know that we will have staff leaving positions and that we will have vacancies to fill when we are not training a whole cohort. At those times, we will, when possible, link new staff to CHI trainings at the CHI site; supervisors and the Program Manager will provide training; and we plan to have all the training available online and through videos so that the training program is sustainable overtime. Information about CHI and the outline of their curriculum and CHW toolkit funded through the Health Care Work force Transformation fund is available on the CHI website for review.

Agency Orientation CHL programs Quality Management/Lean training Compliance	Infection Control Privacy and HIPPA regulations Reporting Abuse/neglect
Program Orientation Introduction to Community Partnerships Program vision	Health Care reform Roles of team members Team Building activities
Population: Serious Mental Illness Substance Use Disorders	Chronic Medical Conditions Service Continuum
Social Determinants of Health Understanding interface between poverty, mental illness, substance use and health	National Council on Behavioral Health training on Integrated Care Models Community Resources: food, housing, benefits
Introduction to Chronic Medical Conditions and Medications/side effects	Asthma Obesity

Diabetes COPD Metabolic syndrome	Tobacco cessation resources Overview of common medical and psychiatric medications and side effects
Community Introduction to social service system	Review of resource guides Meeting key community resources
Skill Development Motivational Interviewing Writing Assessments	Person-Centered Treatment Planning Wraparound model Transitions of Care Safety Planning
Safety Know your community Safety policies and procedures	De-escalation training CHL Violence Prevention Protocals
Documentation Orientation to Electronic record Logging of activities	Writing assessments/plans Writing activity notes
Boundaries	
Self Care and use of Supervision	

6. Staff retention strategy

CHL's staff retention efforts are multi-faceted in nature. Our overall approach is an increased focus on employee diversity, inclusion, and engagement. If staff feel more included and respected in their work environments, then they are more likely to be engaged and less likely to leave the organization. Approximately, three years ago, CHL developed an Inclusion Initiative that involves 30 diverse staff members across the organization from various programs, levels, and backgrounds. Over time, the group, cohesively and in smaller sub-committees has identified, emphasized, and addressed the important topic of "taking care of the people, who take care of the people." These committees have taken two of our most recent staff engagement survey data and developed plans to create a work environment that is more welcoming and inclusive. The team developed, for example a Holiday Tool Kit to ensure that holiday celebration activities are inclusive and respectful for all. They have begun a Mentoring Program which offers staff the opportunity to be paired with a manager and learn skills that will help the staff grow professionally. The Inclusion initiative has also developed Team Building Resources for program managers to encourage connections within and across programs and have fun while doing it. Finally we are in the process of training all our managers in the Diversity and Inclusion training developed by our consultants.

In addition, CHL provides salary increases, CEU and certification opportunities and excellent supervision. CHL is a large agency with opportunities for individuals to advance and grow professionally. Our Quality Management Department has trained all staff in Lean thinking and every program has weekly huddles in which line staff share ideas about how to improve (1) client care (2) the support staff receive in their jobs and (3) the financial health of the program.

F. Implementation plan and timeline

Please see Attachment L: Implementation Plan and Timelines.

G. Budget report and budget narrative

Please see:

- Attachment M: Program Budget Report;
- Attachment N: Program Budget Narratives;
- Attachment O: Infrastructure Budget Report; and
- Attachment P: Infrastructure Budget Narrative.

H. Sustainability

Although the future of health care payments is uncertain, we plan to work towards making this model sustainable by focusing on two goals: 1) increasing our value-based payment contracts across CHL and 2) strengthening our ability to evaluate our care through analytic means.

CHL has been a pioneer in receiving value-based contracts in our behavioral health work, particularly through our OneCare contract and our Primary Care Payment Reform (PCPR) project. Through these and other value-based payment programs, we have learned how vital it is to be able to access quality data about our services.

To that end, we are investing significantly in upgrading our infrastructure to be able to keep up with these data-driven programs. Our new EHR, CareLogic, is part of that investment. Additionally, we continue to add data analyst staff positions to the organization. The money being used to fund infrastructure payments are time-limited, finite costs that won't continue beyond the pilot project (IT infrastructure, startup staffing costs that will be taken over by the PMPM payments). We expect to be able to financially support the ongoing costs to maintain this infrastructure.

Additional value-based payment contracts, combined with a more agile data management system and our organization's commitment to continuous quality improvement, makes us hopeful that we will be well-positioned to sustain this program after the initial 5-year time period is over.

I. Quality management and performance monitoring

1. Quality improvement program

CHL is committed to the ongoing improvement of the quality of care its clients receive, as evidenced by the outcomes of that care. We continuously strive to ensure that:

- The treatment we provide incorporates evidence based, effective practices;
- Treatment and services are appropriate for each client's needs, and available when needed;
- We minimize risk to clients, providers, and other, and we prevent errors in the delivery of services;
- Clients' individual needs and expectations are respected; clients – or those whom they designate – have the opportunity to participate in decisions regarding their treatment; and we provide services with sensitivity and caring;
- We provide procedures, treatments, and services in a timely and efficient manner, with appropriate coordination and continuity across all phases of care and all providers of care.

Quality Improvement Principles. Quality improvement is a systematic approach to assessing services and processes and improving them on a priority basis. CHL's approach to quality improvement is based on the following principles:

- ***Customer Focus***. Quality driven organization CHL focuses on our internal and external customers and on meeting or exceeding their needs and expectations.
- **Recovery-oriented**. Services are characterized by a commitment to promoting and preserving wellness and to expanding choice. This approach promotes maximum flexibility and choice to meet individually defined goals and to permit person-centered services.
- **Employee Empowerment**. Effective programs involve people at all levels of the organization in improving quality. Everyone one at CHL should see their function as to not only do the work but improve the work.
- **Leadership Involvement**. Strong leadership, direction and support of quality improvement activities by the governing body and CEO are key to performance improvement. This involvement of organizational leadership assures that quality improvement initiatives are consistent with provider mission and/or strategic plan.
- **Data-Informed Practice**. Successful QI processes create feedback loops, using data to inform practice and measure results. Fact-based decisions are likely to be correct decisions.
- **Statistical Tools**. For continuous improvement of care, tools and methods are needed that foster knowledge and understanding. CQI organizations use a defined set of analytic tools such as run charts, cause and effect diagrams, flowcharts, Pareto charts, histograms, and control charts to turn data into information.
- **Prevention Over Correction**. Continuous Quality Improvement entities seek to design good processes to achieve excellent outcomes rather than fix processes after the fact.
- **Continuous Improvement**. Processes must be continually reviewed and improved. Small incremental changes do make an impact, and providers can almost always find an opportunity to make things better.

Continuous Quality Improvement Activities. Quality improvement activities emerge from a systematic and organized framework for improvement. This framework, adopted by CHL leadership, is understood, accepted and used throughout the organization. Staff at all levels of the organization are involved in continuous improvement activities. Training and systems that

support improvement activities enable staff to more fully participate in ongoing improvement efforts. Quality Improvement at CHL involves these primary activities:

- Alignment of quality improvement efforts with CHL's True North Metrics (CHL's strategic goals and metrics)
- Engagement of all staff in continuous quality improvement through access to idea systems and training in LEAN thinking, methodology and tools.
- Measuring and assessing the performance of clinical and support services through the collection and analysis of data.
- Conducting quality improvement initiatives including the design of new services, and/or improvement of existing services.

Problem solving using an A-3 approach (a LEAN process/ tool that is based on a deep understanding of the problem) to address larger problems and the use of idea systems and PDSA cycles to address smaller problems

2. Proposed quality initiative

Care coordination and management starts with the engagement of the assigned enrollee. Our experience has shown us that many mitigating factors such as homelessness, chronic substance use disorders, ongoing mental health challenges, etc. significantly increase the complexity of the outreach necessary to effectively maximize an enrollee's participation in services. Our first quality initiative will be to determine the most effective outreach strategies that will result in enrollee engagement.

Objectives within this goal are: outreach to all assigned enrollees within 30 days of assignment and at least one face-to- face contact within 3 months of assignment.

We will use contract specifications to define measures for success. Engagement is defined as obtaining a signed participation form from the enrollee and the assignment of a care coordinator.

Our initial goal of the quality initiative is to have 60% of the assigned enrollees actively engaged within 90 days of assignment.

Using a "lean" problem solving approach and tools, CHL Community Partner program staff and managers will use idea systems to solve small engagement process problems and will work with the Quality Resource Group to develop PDSA cycles to develop standard work for the engagement process by on the ongoing assessment of the data related to the key success measure.

3. Functions of quality committee

The Senior Leaders and Clinical Policies & Operations Committee (CPO) both provide ongoing operational leadership of continuous quality improvement activities at CHL. Both groups meet at least monthly or not less than ten (10) times per year. The Senior Leader group consists of Vice Presidents and other executive level leaders. CPO consists of senior leaders and clinical managers from throughout the organization. The responsibilities of these Committees include:

- Developing and approving CHL's True North Scorecard (Organization's strategic goals and metrics).
- CHL Quality Management Plan (As part of the Plan the establishment of measurable objectives based upon priorities identified through the use of established criteria for

improving the quality and safety of clinical services).
- Developing indicators of quality on a priority basis.
- Periodically assessing information based on the indicators, taking action as evidenced through quality improvement initiatives to solve problems and pursue opportunities to improve quality.
- Establishing and supporting specific quality improvement initiatives.
- Reporting to the Board of Directors on quality improvement activities of the organization on a regular basis.

The Board of Directors also provides leadership for the Quality Management process by:
- Supporting and guiding implementation of quality improvement activities of the organization.
- Reviewing, evaluating and approving the Quality Management Plan annually.

Leaders, through a planned and shared communication approach, ensure the Board of Directors, staff, recipients and family members have knowledge of and input into ongoing QI initiatives as a means of continually improving performance. This planned communication takes place through the following methods;
- Annual dissemination of CHL True North priorities and Scorecard
- Participation in program QI projects
- Management participating in the CPO Committee reporting back to recipient groups
- Sharing of the clinic's annual QM Plan evaluation
- Newsletters and or handouts
- Visual Management Systems and tools such as story boards, A-3s and other posters displayed in administrative offices and common areas.

J. Coordination with ACOs and MCOs

1. Communicating skills and expertise to potential ACOs and MCOs

We plan to use a multi-pronged approach to ensure that all ACOs and MCOs in the Worcester and Gardner-Fitchburg Service Areas are aware of our skill, expertise, and value.

Through face-to-face introductory meetings, we plan to both learn about each ACO and MCO's particular needs as they relate to Behavioral Health Community Partners (BHCPs) and share with the ACOs and MCOs information about who we are and the ways in which we can help meet their needs.

Through written materials such as brochures and pamphlets, we will provide attractive, easy-to-understand information about how the ACOs and MCOs can benefit from a relationship with CHL.

We also plan to create a website that will provide similar information with an easy-to-remember address – so ACOs and MCOs will find it easily.

2. Branding and marketing plans

Our branding and marketing plans to ACOs and MCOs are in their nascent stages, but will build on the simple idea that as a BHCP, Community Healthlink is "here to help." We want ACOs and MCOs to know that we see our role as one that is essential not only to helping them provide the very best care for their patients, but essential to helping them provide the very best care for their patients with the most ease.

3. Strategy to engage with multiple ACOs and MCOs

As one of the largest and most comprehensive behavioral health service providers in Massachusetts, we have a rich history of working with an array of different types of partners in care. We recognize that although the basic structure of two organizations might be similar, in practice our relationship with each will be distinct from the other.

In order to engage and collaborate with multiple ACOs and MCOs in the Worcester and Gardner-Fitchburg Service Areas, we plan to hold introductory meetings with the administrative teams of each of the ACOs and MCOs to learn about their health care services and each organization's distinct needs.

We pride ourselves on being flexible and responsive in collaborative relationships, and that will be no different with this model.

4. Strategy for conflict resolution with ACOs or MCOs

CHL has been collaborating with other health care organizations across our service area for decades. We have worked with other organizations to solve conflicts related to everything from clinical matters to payment structures. With regard to ACOs or MCOs, if our program staff aren't able to resolve an issue with the front line staff of an ACO or MCO, we expect each entity to use program supervisors to try and eliminate the conflict.

Each contract that CHL signs with an ACO or MCO will have conflict resolution language agreed upon by both parties. Typical conflict resolution processes we engage in allow for a process that begins with meetings between the two parties and can end in arbitration if absolutely necessary.

With regard to the Tufts Health Public Plans, Inc and Central Massachusetts Accountable Care Organization ACO, of which we will already be a partner, we will use the governing structure of the ACO to help resolve conflicts. For issues that can't be resolved at that level, we will use the ACO's Behavioral Health Advisory Committee. The ACO's Joint Operating Committee will be the final arbitrator of conflicts that cannot be resolved at lower levels.

Ramp-up costs in Prep Budget Period, Budget Year 1, 2 and 3 can be covered by Infrastructure Funding

Community Partner Program Budget Report - Prep Budget Period

Only complete this Program Budget Narrative using amounts anticipated for PBP.

Lines may be added to the Program Budget Narrative tables as necessary

Row 1 - Salary

Position	Annual Salary	FTEs	# Months	Total
Program Director	$ 90,000	2	1.5	$ 22,500
Nurse	$ 80,000	8	1	$ 53,333
Clinical Care Manager	$ 70,000	4	1	$ 23,333
Care Coordinator	$ 50,000	24	1	$ 100,000
Engagement Specialist	$ 50,000	4	1	$ 16,667
				$ -
				$ -
				$ -
				$ -
Total Salary (Program Budget Line 1)		**42**		**$ 215,833.33**

Row 2 - Fringe

Fringe Item	Total Salary	Fringe Rate	Fringe
Fringe Item	$ 215,833.33	10%	$ 21,583
Total Fringe (Program Budget Line 2)			**$ 21,583**

Total Personnel*	**$ 237,417**

* Should align with Personnel Costs row in Program Budget

For each position listed above, provide a brief statement of the position's responsibilities:

Program Director: Each Program Director will be a Senior Manager responsible for the implementation, startup, organization, and engagement process of the CP teams.

Nurse: The Nurses will be responsible for medication reconciliation, supervision, engagement with enrolleees, coordination with PCPs, oversight/completetion of comprehensive assessment and treatment plan, and coordination with other medical providers.

Clinical Care Manager: The Clinical Care Managers will provide supervision, support with care cooridnation, clinical guidance, clinical intervention, expertise within the behavioral health system of care, oversight/completetion of comprehensive assessment and treatment plan, and engagement with enrollees and providers.

Care Coordinator: The Care Care Coordinators will provide direct care coordination services to enrollees, work direct with an enrollee's treatment team, assist in the completion of the comprehensive assessment and treatment plan, engagment with enrollees,provide peer support when applicable, and interventions relation to treatment plan

Engagement Specialist: Each Specialist will provide active engagment to potential enrollees to explain CP services, ensure consitent understanding of ACO/CP processes, review choices of enrollment, and enroll individuals into the CP.

Eliot is estimating approximately 2,000 clients arereferred during the start of the service. The staffing above reflects 75% of Eliot's model staffing per 1,000 enrollees.It is anticiapted that the remaining 25% of staffing model will be hired during the first month of budget period 1 to ensure adequate staffing and adherence to Eliot's staffing model.

Row 3 - Training and Professional Development

Description of Service	Unit Cost (if applicable)	# Staff (if applicable)	Total Cost

	A	B	C	D	E	F
41						
42						
43	**Total Training and Professional Development**					
44	**(Program Budget Line 3)**					

Provide a description of each Training and Professional Development line item included in the table above:

Row 4 - Travel

	Position	Est miles per month	# months	Mileage reimbursement rate	Total Cost
78	Program Director	128	1	0.535	$ 68.48
79	Nurse	400	1	0.535	$ 214.00
80	Clinical Care Manager	400	1	0.535	$ 214.00
81	Care Coordinator	1600	1	0.535	$ 856.00
82	Engagement Specialist	400	1	0.535	$ 214.00
83					$ -
84				**Total Mileage**	$ 1,566.48

	Travel Expense Description	Cost
87	Total Mileage	$ 1,566.48

	A	B	C	D	E	F
88	Parking and tolls	$ 43.52				
89	Public transportation	$ -				
90	Enrollee travel	$ -				
91	**Total Travel**					
92	**(Program Budget Line 4)**	**$ 1,610.00**				
93						

Please describe how mileage estimates and other travel expenses listed above were determined . If including enrollee travel expenses above, please explain how these expenses will be used by enrollees.

Eliot has utilized our historical estimates for other program statups to estimate the range of mileage for new staff members in the prep budget period. We are estimating that some mileage expense will be related to training, meeting wtih ACOs, meeting with PCPs, meeting with internal Eliot resources, meeting with community programs, and engagement with enrollees.

Row 5 - Equipment

	Description of Equipment	Unit Cost or Cost/FTE	#units or FTEs	Cost
114				
115				
116				
117				
118				
119				
120				
121	**Total Equipment (Program Budget Line 5)**			

Provide a brief description of the intended use for each Equipment line item listed above and how the estimated costs were determined:

Row 6 - Supplies

Description of Supplies	Unit Cost or Cost/FTE	# Units or FTE	Cost
Total Supplies (Program Budget Line 6)			

Provide a brief description of the intended use for each Supply line item listed above and how the estimated costs were determined:

Row 7 - Contract Services

Name of Contractor	Contractor Type	Goods and Services Provided	Cost
Total Contract Services (Program Budget Line 7)			

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Row 8 - Software Licensing

	A	B	C	D	E	F
230	**Description of Software**	**Cost per License**	**# Licenses**	**Cost**		
231						
232						
233						
234						
235				**Total Software Licensing (Program Budget Line 8)**		

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

Row 9 - Telecommunications

	Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
270	Cellular Phone Plan/Services	30	42	$ 1,260.00
271				
272				
273				
274				
275				
276			**Total Telecommunications (Program Budget Line 9)**	**$ 1,260.00**

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

This expenses is for mobile/ cell phone services for CP staff.

Row 10 - Occupancy

Occupancy Expense	Total SqFt	Cost/SqFT	Cost
Rent	6000	12	$ 72,000.00
Utilities	1400		$ 16,800.00
Repair and Maintenance	600		$ 7,200.00
			$ -
			$ -
Total Occupancy (Program Budget Line 10)			**$ 8,000.00**

Provide a brief description of how each Occupancy line item listed above will support the CP's performance and how the costs were determined:

Eliot has plans to lease two properties for the intial prep budget period to support the CP teams during the start up and intial implementation phases. Eliot will be leasing the properties for one month during the prep budget period and we have included estimated utility and repai/maintenance costs for a one month period.

The total square footage in the budget is 6,000 sq feet. Our budget assumes that we will continue to hire staff beyond the 43 staff hired during the prep budget. It is not feasible to incrementally add square footage to a lease while hiring staff that will work in the space. The size of the space is to accommodate hiring of additional staff

through year 1.

Row 11 - Other

Other Direct Expense Description	Cost
Total Other (Program Budget Line 11)	

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Row 12 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 12)	**11.50%**	**$ 28,553.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

The Agency's current allocation of indirect costs at 11.5% which is a calculation based on an analysis of our last 3 years of agency administrative expense as well as our projections for agency administration costs for the fiscal year. These costs include those non-program specific reimbursable resources necessary for policy making, management, oversight and administration of Eliot as a whole. In this category are general agency administrative expenses such as HR, Finance, Executive Management, and general infrastructure.

41	**(Infrastructure Budget Line 2)**	

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Eliot has purchased eHana's Care Management Platform to ensure full integration with out current eHanna EMR. The eHana platform will ensure Eliot is able to meet all of integration and technology goals we set for our CP service.

Row 3 - Technology for Service Delivery

Description of Expense	Cost
Mobile Technology	$ 15,000.00
Total Technology for Service Delivery	$ 15,000.00

	A	B	C	D	E	F	G
67	**(Infrastructure Budget Line 3)**	$ 15,000.00					

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Eliot has budgeted $15,000 for the purchase of mobile technology for the 38 full time employees we plan to hire during the prep budget period. This technology includes the purchase of encryted chromebooks for each of staff members as well as a number of desktop computers for our CP hub offices. . It is estimated that we will purchase 6 desk tops computers which will cost approximately $4,800 and 32 Chrome Books whcih will cost approximately $10,200.

Row 4 - Other Technology Expenses

Description of Expense	Cost
Total Other Technology Expenses (Infrastructure Budget Line 4)	

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

Row 6 - Recruitment Expenses

Description of Expense	Cost
Recruitment and sign on bonuses	$ 16,000.00
Total Recruitment Expenses (Infrastructure Budget Line 6)	**$ 16,000.00**

Provide a description of each recruitment expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

We have budgeted $16,000 for recruitment and sign on bonuses based on our analysis of recruitment costs over the last two years. Eliot will be utilizing a sign on bonus for Nurses and Clinical Care Managers to assist in our recruitment efforts in a competetative hiring market for qualified licensed individuals. Eliot will also implement a multimedia recruitment effort .

The expenses are anticipated to break out as follows $2,000 for 2 regional job fairs . All other multimedia recruitment will be absorbed through Eliot's current recruitment budget. The remaining $14,000 will be used for recruitment bonuses . $10,000 will be provided to Clinical Managers (approximately $750 per position.) $4,000 will be provide d to Nurse Managers (approximately $1,000 per position).

Row 7 - Training Expenses

Description of Expense	Cost
Training	$ 1,500.00
Total Training Expenses (Infrastructure Budget Line 7)	**$ 1,500.00**

Provide a description of each training expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Eliot has a robust training department and we have done signficnat work to develop training material for our CP services. We anticipate training 38 staff members in the prep budget period at a cost of $1,500. This expense will mainly be utilized fo development of program specific traiing and orientation.

Row 13 - Other Operational Expenses

Description of Expense	Cost
Marketing	$ 5,000.00
Legal Fees	$ 3,800.00
Total Other Operational Expenses (Infrastructure Budget Line 13)	**$ 8,800.00**

Provide a description of each retention expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

We have budgeted $5,000 for the prep budget period to develop marketing materials for Eliot's CP service. We anticipate that our intial investment in marketing materials will assist enrollees inthe prep budget period with understanding how Eliot's CP can assist them in navagating the healthcare system.
Marketing materials will consist of brochures and informational material outlining the Eliot's BHCP service , related services and collaborating partners. In addition, Eliot will be updating our website to incorporate BHCP Services . It is anticiapted that approximately $3,000 will be used for Brochures and $2,000 for the website.

We have budgeted $3,800 for legal fees, to assist Eliot in finalizing contracts with ACOs, meeting HIPPA and PHI requirements, and

We have budgeted $3,800 for legal fees to assist Eliot in finalizing contracts with ACOs, meeting HIPPA and PHI requirements, and other complaince issues.

Community Partner Infrastructure Budget Report - Indirect Cost/Administrative Overhead- Prep Budget Period

Row 14 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 14)	**11.50%**	**$ 49,696.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined: The Agency's current allocation of indirect costs at 11.5% which is a calculation based on an analysis of our last 3 years of agency administrative expense as well as our projections for agency administration costs for the fiscal year. These costs include those non-program specific reimbursable resources necessary for policy making, management, oversight and administration of Eliot as a whole. In this category are general agency administrative expenses such as HR, Finance, Executive Management, and general infrastructure.

Behavioral Health Community Partners

Section 7.3 Initial DSRIP Participation Plan

A. Executive Summary

Eliot is an organization that is constantly on the move; expanding and retooling services to further its mission and values. We are passionate about improving the quality of lives for the people we serve which fuels our dedication to continuous service improvement, evidence based practice and program enhancement. It is through this construct that Eliot embraces the new Medicaid care delivery system in Massachusetts. Eliot has developed a comprehensive business plan for implementation and sustainability of the Behavioral Health Community Partner program that encompasses organizational change in tandem with community engagement, coordination and partnership.

As an organization that does not sit still, Eliot has woven together and incorporated many of the threads of the evolving health care system into its existing programs. Building on this process, Eliot is steadfast in its commitment to developing a state-of the-art Behavioral Health Community Partner program with an overarching goal of improving the lives of the people we serve through improved health outcomes, recovery and resiliency. This goal is achievable in an environment where consumers, health care, and community service providers partner together with a shared vision and mission. Eliot will meet this goal through implementing clear and detailed plans for ACO, MCO and consumer and community engagement, IT and communication infrastructure, data collection and analytics, protocols for information sharing and service delivery expectations. We know this process will be challenging. However, using the Commonwealth's vision for the Medicaid health care system as a framework for system and organizational integration will propel partnerships and collaborations.

Eliot is proposing a comprehensive holistic behavioral health case coordination service to serve individuals with SMI and/or SUD in the Somerville, Revere, Beverly, Gloucester, Lowell, Lynn, Malden, Salem, Woburn, Framingham, and Waltham Service Areas. Eliot has selected these service areas based on our experience and knowledge of serving individuals in these communities and relationships with other service providers, social service agencies and community partners in many of these cities and towns. We have built a program model that will serve at least 6,000 individuals across the aforementioned service areas. While we are able to serve at least 1000 individuals in each area, for planning purposes, we have built a model based on serving at least 6,000.

Eliot's business plan and preparations will begin upon submission of this proposal. Prior to the selection and contract negotiations, Eliot will begin the process of restructuring its Behavioral Health Division to align all services in a regional approach to service delivery. This approach will

strengthen our service access, integration and eliminate duplication and redundancy. We will also participate in eHana's Care Management Steering Committee providing input and feedback related to platform architecture. Senior management and executive staff will also further our discussions with potential ACOs, MCOs and community partners. In addition, Eliot will bolster its administrative infrastructure by hiring a Behavioral Health Project Manager and additional Quality Assurance staff. These positions will assist executive and senior management with all activities related to program start up and implementation. The Project Manager will be responsible for coordinating all communication and meetings with ACOs, MCOs and other community providers. Eliot will also begin meeting with our Consumer Advisory Board to assist with program planning and implementation. We believe this Advisory Board will be extremely important in providing input for program development, consumer engagement and outreach, as well as the development of branding, marketing materials and social media. We know that timely and active engagement will be extremely important to the success of this program and improved health outcomes for the people we serve. Continuous analysis of service gaps will be a crucial component of successful engagement, integration and service delivery. To that end, Eliot will provide employees with "service dashboards" to track specific sets of data that inform services. This will ensure our leadership team can redeploy and refine services in a proactive and fluid manner.

Upon award, Eliot will immediately begin to complete the tasks outlined in the Implementation Plan and Timeline. For the first year of the contract Eliot will devote the preparation time and first budget year to hiring and training qualified staff, outlining and monitoring program benchmarks and expectations, developing and refining billing, reporting and other administrative functions, intensive marketing, implementation of care management software, consumer engagement, and communication systems with ACOs, MCOs and other service providers. The focus of this time period will be seamless implementation and building a lasting foundation for program success and effectiveness.

In subsequent years, Eliot will seek to build on the foundation of the first year of operation. Much will be learned through the first year that will inevitably shape future years. Through analysis of program utilization, engagement, population demographics, Eliot will identify best practices and potential barriers. It is anticipated that our analytic capacity will develop and evolve over the course of time. As our IT systems become more enhanced and our staff become more accustom to service delivery our services will develop and thrive. We believe that each year will be a building block to a more refined system of care that will meet quality indicators and outcome measures which will provide a clear path to recovery.

B. Supporting Populations and Community Engagement

1. Current and Planned Connections to the Community

Eliot is devoted to maintaining and continuing the development of community connections; building sound partnerships to better support the people we serve and the larger community. Eliot has numerous long standing relationships with community based organizations, homeless and shelter providers, low income housing providers and housing authorities, social service organizations, substance abuse services providers, medical providers, and other behavioral health agencies. The chart below includes our current community partners:

2. Growing Community Connections

We have seen firsthand the positive impact of our community partnerships and we plan to continue the growth of these connections. Eliot will utilize its marketing strategy, current connections, and sustained outreach to new partners to build upon our robust network. We plan to make each of our CP hubs resource centers to the community and will offer community education and community behavioral health supports. Additionally, we plan to involve our CP staff members in the development and growth of these partnerships by demonstrating the value to the enrollees and the services we provide. We are committed to growing these relationships to ensure a more efficient, focused, and supportive CP program.

3. Ensuring Staff are Informed of Community Resources

Access to our community resources is available to all of staff through our shared G Suite system and all additions are immediately shared with all staff members. CP staff/teams will be trained on use of this system.

C. Community Partner Supports and Activities

1. Outreach and Active Engagement

The most important principle of Eliot's Community Partners Teams is developing an engagement strategy with each enrollee that leads to a lasting and sustainable therapeutic connection. We have found that most behavioral health consumers have experienced a fragmented system of care and often do not obtain the access to services they need to improve their overall wellbeing. Given this experience of fragmentation, these individuals with comorbid behavioral health and medical conditions have reduced health outcomes.[i] Through our experience with the SPMI population, we have learned the techniques and evidenced based practices to ensure engagement. Motivational Interviewing (MI) is at the cornerstone of all aspects of our outreach, engagement, and care coordination for enrollees. We set out to discover with enrollees what they want, and we listen to their desires for treatment to ensure successful outreach and engagement with all individuals.

a. Strategies for Outreach and Engaging Assigned Enrollees

Recent research has demonstrated emerging practices focused on overcoming barriers to engagement strategies in care coordination programs.[ii] Specifically, relationship building with enrollees is paramount to effective care coordination. At Eliot, our feet-on-the-street approach to care coordination engagement not only embraces the current research, but is the backbone to all of our work with individuals and families in all of our programs. Eliot's CP teams are designed to meet the specialized needs of every community we will be operating within. We are committed to serving all assigned enrollees: enrollees who have not had success with traditional services, have had significant hospitalization, are homeless, have a substance abuse disorder, and those who have involvement in the criminal justice system. Our success in developing and building a relationship with enrollees starts upon enrollment and quick, sustained, and supportive engagement to ensure a solid foundation for a longer relationship with every enrollee.

Upon receiving information on an assigned enrollee, within 72 business hours, Eliot's CP Engagement Specialists will begin outreaching and engagement strategies. Engagement Specialists will meet enrollees where they are; meeting potential enrollees in our office will be the exception, not the rule. Our protocol and procedures, starting within 72 hours, will include face to face outreach attempts, phone calls, emails, text messages, social media, other electronic methods, and face to face meetings to engage a potential enrollee. We will also utilize both our extensive service system as well as the service systems of our partners and enrollee's current service providers to outreach and engage enrollees.

Our Engagement Specialists will outreach and engage enrollees at their places of residence. This may include shelters, inpatient settings, community settings, friend's residences, or other places where the enrollee is comfortable. Our protocol ensures that our Engagement Specialists make a sustained effort to meet every enrollee face to face within 7 days of assignment with the goal of demonstrating to the potential enrollee our CP teams are a fundamental support to assist the enrollee in improving their health. Understanding that all potential enrollees are unique, our Engagement Specialists procedures will be flexible to ensure each person receives the outreach and engagement that works for their preferences. To this end, our goal will be to meet face to face with every assigned enrollee at least once in the first thirty days, with sustained attempts at face to face meetings weekly, and no less than one attempt in the first 3 months of assignment.

We have a profound understanding of the SPMI population, individuals and families living in homelessness, and those individuals that are hard to reach or may be suspicious of providers. The most important principle of Eliot's CP teams is developing an engagement strategy with each individual that leads to a lasting and sustainable therapeutic connection. We have found that most individuals in these aforementioned populations are often the consumers that many providers do not fully understand or find it difficult to serve. At Eliot, we have developed an engagement strategy focused on meeting individuals where they are literally "at". We have learned that these individuals have strengths that are often unrecognized by other providers, and our Engagement Specialist will utilize these strengths to develop the basis for CP services.

b. Strategies for Outreaching and Engaging Assigned Enrollees with Substance Abuse

Eliot recognizes and plans to provide CP care coordination to a high percentage of enrollees with substance use disorders. Eliot's Engagement Specialists will utilize motivational interviewing to empower enrollees to engage in Community Partner care coordination no matter the extent of the current substance abuse or history of abuse. We fully embrace the Stages of Change approach to substance abuse treatment and we see our CP teams as critical in improving the health of this population. To this end, we will employ Engagement Specialists that are Recovery Coaches who will solely focus on outreaching and engaging this population. While our protocols and procedures for other enrollees will be the same, we believe having Recovery Coaches providing the early engagement to these enrollees will be key in successfully serving this population.

We have utilized Peer Specialists and Recovery Coaches in other Eliot services and programs, and we have seen firsthand the success of this evidence based approach. This strategy gives our Engagement Specialists and the enrollees the opportunity to explore their motivations for

change and to develop supportive therapeutic connections. We understand that enrollees with substance abuse disorders are often ambivalent about making changes in their lives regarding substance use. Often, an individual expresses a desire for change but is afraid to work towards that goal for a multitude of reasons. Our Engagement Specialists recognize the continuum of motivational readiness to change that an enrollee experiences, and focuses on the aspects of services, treatment or any goals the individuals would like to pursue. Through motivational interviewing engagement, Eliot has a proven track record of supporting individuals in making successful changes in their lives as part of the recovery process. In addition, Eliot has a fundamental belief in harm reduction techniques towards coordination and in providing services. Our approach, similar to the more general CP population, will be strength based and rely developing a therapeutic connection to each individual.

c. Processes for Documentation and Agreement of Enrollee Participation

Our Engagement Specialists will actively engage enrollees in conversations on the design, benefits, and supports of Eliot's CP teams. These conversations will occur face to face in whatever setting the enrollee prefers, through phone calls, electronic communication and social media. We understand that these conversations and communications will be the building blocks for the enrollees experience with our CP program and for us the entry point for forming a lasting relationship. To this end, we will utilize printed material to explain the CP program, mobile device videos/presentations, an interactive website, and social media to ensure flexible and relevant information on CP supports. We understand that communication and access are crucial to successful engagement and we will employ several strategies to ensure every enrollee has a method they can easily utilize with an Eliot CP. Along with face to face engagement, we will ensure every enrollee has their Engagement Specialist's phone number, email, and phone number for the Eliot CP hub. We will walk through the process of contacting and engaging the Eliot CP with every enrollee and provide them with quick and simplified material summarizing this process. As part of educating the enrollee on the engagement process and benefits of the CP, we will educate them on opting out of CP supports or obtaining a different CP provider. We will provide each enrollee with access to a patient portal.

Engagement Specialists will review and explain the Eliot CP agreement of services with each enrollee and obtain a signed participation form from those agreeing to services. Enrollees will be provided with a copy of the participation form and an electronic version will be placed in the Eliot record. The Engagement Specialist will also review the Eliot Privacy Notice and obtain relevant consents from the enrollee to obtain Protected Health Information (PHI) and contact providers and others the enrollee consents to having involved in their care coordination. The Engagement Specialist will review, and provide written material, with the enrollee on the uses

and disclosure of any and all protected information. Upon obtaining the enrollee's signed participation form, the Engagement Specialist will provide the enrollee with the contact information for the Eliot Care Coordinator. The Eliot Care Coordinator will contact the enrollee in no more than five business days. The Engagement Specialist and the Care Coordinator will work in tandem to continue to engage the enrollee in CP services.

2. Comprehensive Assessment and Person-Centered Treatment Planning

In Eliot's experience providing services to the SPMI population, we have learned that individuals do not respond well to clinicians or other staff members attempting to sit with them for long stretches of time to complete assessments. We have found that having a fluid approach to the assessment process both ensures well developed assessments and sustained connection between team members and a consumer. A growing body of research continues to demonstrate that assessments, treatment planning and interventions that only focus on the removal of symptoms falls far short of promoting mental health and recovery and reducing long term relapses.[iii] At Eliot, our assessment process includes multiple face to face contacts with an individual to complete one assessment and team members often engage in conversations with individuals that center around assessment topics rather than presenting the person with multiple questions. Based on the individual's goals for their life, their desires for treatment, and a recovery oriented assessment, a person-centered treatment plan can be developed that is person centered, time limited, measurable, observable, behavioral, realistic, and contains attainable goals and objectives. In a person centered environment we are exceedingly aware of the unique issues, life circumstances and values of each person we serve. To that end, all aspects of the assessment process and person-centered treatment planning process account for family structure, life style choices, culture, ethnicity, linguistic preferences, sexual orientation and gender. We foster an environment of acceptance which respects and values the unique heritage, background, lifestyle and experiences of everyone in services.

a. Process for Comprehensive Assessment

Eliot firmly believes that a sustained connection between an enrollee and the Care Team is the cornerstone of service delivery. Upon completion of a participation form, a Care Coordinator and a Clinical Care Manager will meet with an enrollee to identify the immediate needs of the individual, determining any urgent health or safety issues that will require immediate attention. A Crisis and Critical Risk Plan will be created that addresses the nature and intensity of serious health and/or safety risks as well as steps that should be taken to address these issues and

support the individual in managing their immediate goals. The Crisis and Critical Risk Plan will be shared with the enrollee's Care Team, ACO or MCO, and other providers as appropriate (*See Crisis and Critical Risk Plan in Attachments*). We believe that having an initial plan of care developed with the enrollee prior to the completion of the comprehensive assessment will not only support the enrollee's immediate goals and needs but will be vital to sustained engagement and the development of a meaningful comprehensive assessment.

After completion of the Crisis and Critical Risk Plan, the Care Coordinator will collaborate with the enrollee and other members of the Care Team in the completion of a comprehensive strengths-based assessment within 3 calendar months of enrollment. The Care Coordinator will work with other members of the CP team, such as Engagement Specialists, other Care Coordinators, Nurses, Peer and Recovery Specialists, and Clinical Care Managers to ensure continuity of care, direct involvement and feedback from the enrollee, and the incorporation of all relevant information. The assessment will be conducted face to face with the enrollee over several meetings and may include phone contact and use of other technologies such as secured email and patient portals. The enrollee will be central to the completion of the assessment and CP team members will utilize motivational interviewing techniques to engage enrollees to ensure their perspective is fully embraced within the assessment.

Members of the CP team will utilize their various expertise to engage the enrollee and gather relevant information related to their discipline. Peer and Recovery Specialists, trained in Whole Health and Action Management (WHAM), will obtain from enrollees their perspective on the 10 Resiliency Factors and ensure this is incorporated into the assessment.[iv] Information obtained utilizing WHAM will assist the team in best understanding the enrollee's strengths and current and past self-management tools. A nurse from the CP team will conduct a current Physical Health Assessment which will be incorporated into the Comprehensive Assessment and includes last medical visit and contact information for providers, current and past medication history, current and past medical conditions, family medical history, use of medical equipment and direct contact with medical providers.

The Care Coordinator and the Clinical Manager will focus their contributions of the assessment on all other aspects but not limited to history, functional status, mental health substance abuse, and care management needs. Enrollees will review the draft assessment with the Care Coordinator and the Clinical Care Manager to ensure the enrollees' participation is well reflected and to obtain their approval. The Clinical Care Manager will conduct the final review and approval of the comprehensive assessment. An example of the Eliot Comprehensive Assessment, leveraged from our current MSDP Comprehensive Assessment, is mapped to all CP requirements in the attachments (*See ACA in Attachments*). The approved Comprehensive

Assessment will be provided to the Care Team, relevant ACOs or MCOs, and other providers involved with the enrollee as appropriate. The Comprehensive Assessment will be updated on a minimum of an annual basis, however the CP team will updated the Comprehensive Assessment when the enrollee experiences significant changes in their life related to their behavioral health, medical conditions, wellness or other life circumstances.

b. Process for Person-Centered Treatment Plans

1. Development of Person-Centered Treatment Plan

The CP team will develop the Person-Centered Treatment Plan concurrently with the Comprehensive Assessment and will ensure the enrollees are at the center of the treatment plan and that the assessment is incorporated into the plan. Need areas are prioritized according to the enrollee's preferences, wellness goals, and life goals. The whole treatment planning process is a flexible and dynamic one which changes according to consumer needs and preferences. All Eliot Peer and Recovery Specialists have been trained in Intentional Peer Support (IPS) and this will extend to the CP teams. IPS is a well-developed peer and recovery approach where the notion of mutuality redefines interventions and help as a co-learning and growing process.[v] CP Peer and Recovery Specialists will utilize IPS techniques to engage enrollees in developing goals and also identifying barriers.

We foster an environment of acceptance which respects and values the unique heritage, background, lifestyle and experiences of each consumer. We encourage family participation in treatment planning and other aspects of service delivery with the goal of maintaining positive relationships and/or family reunification (as appropriate). We understand the cultural and ethnic influences that can impact service delivery, utilizing community organizations, our own staff, consumers, families and other sources to provide a comprehensive understanding. All assessment and treatment planning will be conducted in the enrollee's preferred language. To further our commitment to cultural and linguistically competent services we are able to translate all written documentation (treatment plans, assessments, service information) into the enrollee's preferred language. If an enrollee prefers or needs their treatment plan to be in a format other than writing, such as a recording or a video, Eliot will provide that to the enrollee. The enrollee, the CP team, Care Team members and other service providers, supports and family invited by the client, will meet to review the treatment plan prior to approval.

2. Documenting Person-Centered Treatment Plan

The initial Person Centered Treatment Plan will be completed in no more than 3 calendar months from enrollment. The CP team and Care Team interventions and supports are identified for each goal and the corresponding objectives. Interventions and supports outline the specific actions and frequency that the identified team member will need to support, encourage, and assist the enrollee in achieving treatment goals and objectives. In addition, the treatment plan will identify community linkages and other natural supports that may be utilized for goal attainment and support. Goals will be both long and short term and will focus on supporting the enrollee in managing their experiences of the complex medical and clinical conditions.

The process of evaluating the progress that has been made toward clearly defined goals is a collective and collaborative effort with the enrollee and the Care Team. The goal planning process forms the focus and basis for enrollee and team member's interactions. To that end, both the enrollee and Care Coordinator monitor functioning and discuss progress on a regular basis (*See Treatment Plan in Attachments*). The Crisis and Critical Risk Plan developed with the client during the early stages of enrollment will be reviewed with the enrollee and the Care Team at the time of documenting the treatment plan to also finalize the Crisis Plan.

3. Updating Person-Centered Treatment Plan

CP team meetings to review progress will occur at least quarterly. The enrollee will be encouraged to set the agenda for these meetings, rather than the team determining what will be discussed. This process allows the enrollee to receive immediate recognition and reinforcement for achievements and make modifications for plans that have not been completed. Eliot believes that this collaborative approach to monitoring the Person Centered Treatment Plan empowers the enrollee to assume self-monitoring and control of his or her plan. The Person Centered Treatment Plan will have quarterly objectives and bi-annual goals. CP team members will record progress, interventions, and barriers in monthly notes. Quarterly and annual reviews to the treatment plans will be documented to both acknowledge the progress but also to make revisions as needed. This documentation assesses the enrollee's progress toward meeting his or her goals and objectives, and evaluates the effectiveness of each intervention in the plan. CP team members will problem solve with the enrollee and Care Team members on barriers to achieving objectives and goals and find solutions to support the enrollee in being successful. This may include changes in the enrollee's functioning or medical conditions which impact the enrollee's progress in the treatment plan. When updating the

treatment plan, the Clinical Coordinator will collaborate with the enrollee and the Care Team to ensure all progress is reflected, current assessment of health functioning, update on goals/objectives, and developing an updated plan where applicable to support the enrollee. The treatment plan will be reviewed and updated no less than bi-annually.

4. Enrollee and PCP Approval

The enrollee will review and approve the treatment plan prior to finalization or distribution to any other members of the Care Team. The final version of the plan will be reviewed with the Care Team and will be approved by the enrollee's PCP. Any updates to the treatment will be approved by the enrollee and the PCP. The enrollee and the PCP will be provided copies of all treatment plans upon approval, including any and all updates to treatment plans. Additionally, the Eliot CP team will share the finalized treatment plans with the Care Team, ACOs or MCOs, and other providers involved in supports and treatment of the enrollee.

There is a growing body of research and evidence related to care coordination and care management in health to achieve the triple aim of improving quality, improving the health of populations, and reducing the cost of health care.[vi] Recent studies[vii] have demonstrated promising practices that Eliot will employ in our CP teams in their delivery of care coordination and care management including:

- Integrating care to achieve patient-centered health care,
- We will have developed flexible protocols and procedures to work with enrollees and stakeholders,
- Our CP teams will be comprehensive and robust to provide the foundation for integration,
- We will utilize continuous evaluation and change management to achieve outcomes, and
- We will use data collection to drive coordination improvement.

Our CP teams will focus on these five emerging best practices to develop a fully integrated Care Team that represents all of the stakeholders and providers involved in an enrollee's treatment and services.

3. Care Coordination and Care Management

a. Stakeholders Involved In Care

All members of Eliot's CP teams will utilize motivational interviewing techniques to engage enrollees in identifying all providers, family members, individuals, advocates, and other community supports involved in the enrollee's life to participate in an enrollee's Care Team. The CP Care Coordinator will provide care coordination by serving as the primary conduit to the larger Care Team ensuring that each member of the Care Team has an appropriately defined role and that all Care Team members' contact information is documented and shared. At a minimum, the Eliot CP team will ensure every Care Team includes the enrollee's PCP or designee, the Care Coordinator, the CP Clinical Care Manager, and behavioral health clinician(s). Additionally, our Care Coordinators will explore with enrollees their motivations to include family members, community supports, other clinical staff, other providers involved in care, State agencies or contracted services, and any advocates representing their interests.

b. Exchange of Information

The Eliot Care Coordinator working with each enrollee on the CP team will be the primary liaison in communicating and exchanging information with the stakeholders on the Care Team. Other Eliot CP team members will provide communication when their expertise is needed such as the CP nurses being involved in medical communication or the Clinical Care Manager taking a lead role in complex behavioral health conditions. The Care Coordinator will use all available technologies such as phone calls, text messages, emails, and patient portals to facilitate information exchange with the enrollee, the PCP, other providers, and any other individuals or providers on the Care Team.

In the event that an enrollee receives LTSS services, the Eliot Care Coordinator will provide the primary communication and coordination with any and all LTSS services. The Care Coordinator will actively work with the enrollee to ensure they receive information on LTSS services, are able to make informed choice on LTSS services and consistently have at least two choices of LTSS providers. The Care Coordinator will assist the enrollee in not only making choices regarding LTSS services but will also assist enrollee in accessing LTSS services. The Care Coordinator will document in the Eliot record the interaction with the enrollee on LTSS services. In addition to the Care Team and LTSS providers, the Care Coordinator and/or the Clinical Care Manager will communicate and exchange information, when applicable, with an ACO or MCO.

c. Identifying and Organizing Care Team

Each Care Coordinator, CP nurse, and Clinical Care Manager develops a therapeutic relationship with each of her or his enrollees to provide care coordination and care management related to all of the enrollee's services. We believe that it is essential that each Care Coordinator develops

a continuous and lasting therapeutic connection with each of his or her clients as this is an important building block within the CP model to ensure the enrollee is able to access all pieces of Care Team's services. The Care Coordinator is responsible for working with the enrollee to monitor her or his person centered treatment plan and to ensure that Care Team members are providing interventions that the enrollee finds helpful in achieving goals and improved health outcomes. To this end, the Care Coordinator will assist and advocate for the enrollee to receive access to primary care, specialty care, LTSS services, and behavioral health care. The Care Coordinator will convene regular care team meetings and communication with PCP, ACO and other service providers. The Care Coordinator will work with the CP nurse and the Clinical Care manager to ensure each enrollee understands both services available and recommendations from his or her PCP, specialists, and other providers. The Care Coordinator will provide assistance with scheduling appointments, accessing transportation, and reminders of appointments with any services of the Care Team. The CP team will also provide check-in calls, text messages, emails and face to face visits with the enrollee to assess and support their adherence to Care Team services and recommendations for treatment. The CP nurse and Peer Specialist will engage the enrollee on medication adherence and assist the enrollee in making a shared decision with all of the prescribers providing medications to the enrollee.

Eliot will ensure that enrollees feel true support by their CP team in their overall treatment with the Care Team. This will include the Care Coordinator advocating on behalf of the enrollee to the larger Care Team and ensuring that they are well represented in all aspects of treatment. The Care Coordinator will provide education to both the enrollee and to the Care Team regarding illness management and the needs for changes in treatment based on the enrollee's motivations and readiness to adhere to recommendations. Eliot will ensure that the multi-disciplinary Care Team is providing the support to an enrollee and ensures that an enrollee receives all available services. The CP team will keep the Care Team oriented to ensure that services are continuous, well-coordinated and lead to successful outcomes.

d. <u>Ensuring Effective Communication and Exchanging Documentation</u>

Eliot intends to leverage standardized technology frameworks to facilitate data exchange with EOHHS, ACOs, MCOs, and other stakeholders. eHana's Meaningful Use-certified EHR provides validated support for healthcare interoperability standards and standardized transactions formats. Eliot also recognizes that specific infrastructure and technology investments will be necessary to fully support the information sharing requirements of EOHHS and ACOs, including extracts and integrations. Technologies to be used to support care management include: Standards-based transactions including CCD over Mass HIway/Direct Project; Importing

eligibility files and enrollment rosters from EOHHS and ACOs; Bespoke reporting and data extracts in formats specified by EOHHS and ACO partners; Standardized HIPAA billing transactions (837p) of Qualifying Activities to EOHHS; Future use of EOHHS Event Notification System (ENS) or, where possible, event data integration directly with healthcare stakeholders. We will work closely with ACO partners throughout the Preparation Budget Period to determine mutually-agreeable datasets for information exchange to improve care coordination efforts. We also understand that a responsive, engaged Care Team is critical to running an effective care management program. Chat is a key emerging technology, both within and outside of healthcare; with enrollee-centered Care Team discussions, members can collaborate in individual enrollee "chat rooms" and track progress, while automated alerts and notifications provide additional context and prompt team member action. We will engage enrollees using mobile technologies, including smartphone applications. For highly engaged enrollees, mobile applications will provide a mechanism for communicating with the Care Team, tracking basic mood and other data, and alerting the Care Team of potentially adverse events.

4. Care Transitions

We know that public healthcare is often delivered in silos and that 20 percent of individuals discharged from hospitals have an adverse event within 30 days.[viii] Eliot is well accustomed to providing face to face supports to behavioral health clients during periods of transitions from emergency rooms, from acute psychiatric facilities, and from medical facilities. We have learned that being present with individuals during these periods not only provides them with feelings of support and care, but ensures that we can better provide interventions to support their community tenure and receive community and home based interventions to manage symptoms related to mental illnesses and/or medical conditions. Recent studies have demonstrated intervening at times of transitions with at least one home visit can reduce suicidal ideation[ix] and re-hospitalization due to a chronic medical condition[x]. Our Eliot CP teams will be present during all discharge and transitions of care to ensure an appropriate plan is developed and is well supported by the enrollee, the CP team and the Care Team.

Eliot's CP team staff members will be present at discharge planning meetings and depending on the nature of the transition, this may include multiple members of the team such as the Care Coordinator, the Clinical Care Manager or a nurse. At the time of discharge planning, the CP team will coordinate with the enrollee's PCP, ACO, MCO, and other providers and members of the Care Team. Knowing that transitions of care are crucial in reducing adverse outcomes, Eliot CP team members will provide every enrollee with a face to face follow up within 3 business days of discharge. The CP team will work with the enrollee to update their treatment plan to

ensure interventions and supports are in place to support the enrollee in staying in the community, rather than suffering from an acute episode. The CP team will ensure the updated person-centered treatment plan is shared and collaborated with the Care Team and the CP team will coordinate all medical, clinical and other supports for the enrollee. Post transition, the CP team will provide updates to the enrollee's PCP, the ACO and the MCO.

In the event an enrollee is not discharged from a hospital or treatment setting and is instead referred to other levels of care, other programs, an ACO or MCO, or any other provider, Eliot's CP team will provide the primary coordination and support to the enrollee. Eliot's CP team members will coordinate, and be present when appropriate, for face to face contacts with any new provider, program, service, or higher level of care and the enrollee. The Eliot Care Coordinator working with an enrollee will coordinate transportation and assistance so that the enrollee can attend any appointment, engage in a new service, or a new program. If an enrollee is unable to attend an appointment or misses a transition date, the Eliot Care Coordinator will follow up with the enrollee to either reschedule or find a new date for transition. When needed, the Eliot CP team will coordinate and share all records with the provider that the enrollee has been referred for services.

5. Medication Reconciliation

Eliot is committed to training enrollees to be self-medicating and learning to advocate for themselves to ensure their medications are effective, accurate and they are motivated to adhere to a medication regimen. To this end, an RN from the Eliot CP team will conduct medication reconciliation for enrollee's discharged from any type of inpatient setting or within at least 3 business days. This will include verifying medication orders and medication plans with an enrollee's PCP, medical specialists, behavioral health prescribers, and any other medication providers. The CP RN will meet face to face with the enrollee, coordinate with pharmacies, or service providers to verify discharge medications are filled properly. In the event that an enrollee receiving MAP supports or VNA services, the CP RN will share and coordinate medication orders between the PCP, other providers, and discharging hospital. Additionally, the CP RN will assess every enrollee's ability understand their medication regimen, non-adherence, discrepancies in medications, and any contraindications; this process will also occur at times of discharge from an inpatient setting. The CP RN will provide training to enrollees on self-medication and may utilize medication minders, medication dispensers, and specialty packing from pharmacies (Medication on Time, Bubble Packing etc.) to increase an individual's adherence and understanding of their medications. Training occurs at multiple levels depending on each enrollee's demonstrated skills and preferences, training will include:

- The name of each medication prescribed, dosage and frequency,
- The reason each medication is prescribed and common side effects,
- Advocacy skills to communicate medication effectiveness/usefulness,
- Skills to independently take medication, as prescribed,
- Remembering to refill medication before it runs out,
- The way to take medication responsibly and without misuse or abuse, and
- How to utilize supports when problems or concerns arise

The CP RN will utilize, and train if needed, other members of the CP team and supports from the Care Team to support an enrollee in understanding and adhering to their medication plan.

6. Health and Wellness Coaching

Eliot believes that the foundation of wellness and physical health begins with services, supports and environments that foster and promote healthy living. Eliot has established several wellness initiatives which have improved the overall wellbeing of the populations we serve and our workforce. These initiatives are guided by the Eliot Health and Wellness Committee which is comprised of the Eliot Medical Director, Program Nurses, an Eliot Nutritionist, Clinical staff, Peer Specialists, and clients. This committee meets monthly and provides a forum for those attending to discuss issues and concerns relevant to consumer nutrition, exercise, smoking cessation and other health areas. These meetings are opportunities to provide education on various health topics and help steer policies and practices related to wellness in all Eliot programs.

a. Health and Wellness Education, Coaching, and Promotion

Eliot recognizes that many CP enrollees are diagnosed with severe medical conditions requiring consistent monitoring and specialized treatment. We understand that prevention, wellness, and intervention are keys in supporting enrollees in improving their overall health and reducing time spent in emergency rooms and inpatient medical settings. Eliot will utilize Peer Support Whole Health and Resiliency (PSWHR), or WHAM, to provide enrollees with a person-centered MI approach to making positive health and wellness choices in their lives. All Eliot CP team members will be trained in PSWHR by Eliot's certified PSWHR trainers. PSWHR rests on three principles:

- Individuals do not make health or life-style changes when they feel coerced,
- Individuals are more likely to make healthier choices when MI is utilized and services focus on an individual's interest,

- Individuals are more successful at forming new habits and choices to make healthier choices rather than focusing on "bad" habits.

PSWHR includes comprehensively assessing an enrollee's health and life style choices, utilizing an enrollee's strengths and interests to make healthier choices, utilizes peer supports for motivation and encouragement, and creates resiliency in managing chronic illnesses. Eliot CP teams will offer PSWHR individual interventions as part of an enrollee's person-centered treatment plan and the CP teams will offer PSWHR groups at our hub offices focusing on the 10 week PSWHR curriculum.

In addition to utilizing PSWHR techniques and interventions, Eliot's CP teams will provide health education to enrollees on their medical conditions, on risk factors such as smoking, nutrition and the benefits of exercise. In the event an enrollee is in need of smoking cessation, the Eliot CP team will work with the Care Team or an Eliot smoking cessation group to provide the service to an enrollee. The CP team will collaborate and coordinate with an enrollee, when indicated, and the enrollee's PCP on weight loss and nutrition goals.

b. Tracking and Recording Goals for Health and Wellness Services

All goals, interventions, supports, and services related to health and wellness will be part of an enrollee's person-centered treatment plan at Eliot's CP programs. Health and wellness providers, beyond the Eliot CP team, will be incorporated into an enrollee's Care Team and communication, tracking, and sharing of information will follow the same process with other Care Team members. Eliot CP team members providing health and wellness education as well PSWHR interventions and supports will document and record services in the Eliot enrollee record. Recording and tracking will include participation in interventions, response to interventions, and progress towards health and wellness objectives and goals. This information will be shared by Eliot with the enrollee's PCP and other Care Team members as appropriate.

7. Connection to Community and Social Services

Eliot is committed to providing enrollees with support in both developing new community and social relationships and in sustaining existing community and social relationships. Addressing an enrollee's desires and needs in this area often is driven by the enrollee, the CP team, and the assessment process. We have learned that the relationships with Eliot staff become the conduit for individuals to pursue greater social connections and break feelings of isolation. Building social capital and encouraging participation in community life as a citizen - rather than as someone with multiple medical and behavioral health diagnoses - is an essential aspect of a person-centered approach to care. To that end, CP team members will provide interventions

and supports that occur in all parts of the enrollee's life environment and context. By providing face to face interventions in the community, at the enrollee's home or wherever services are needed, CP team members can have a better understanding of the individual. Face to face interventions will allow enrollees and CP staff to practice skills together and allow team members to tailor interventions in real time and in the context of the enrollee's social experience.

Eliot's CP team members will support enrollees in both developing new relationships and sustaining relationships. As part of the assessment and person-centered treatment planning process, CP staff will assist each enrollee in determine his or her desires and needs for increased social connection. In other services, we have seen an individual we are serving have goals solely focused on making new friends and building a larger social net of friends to support them. We know that the relationship staff members have with an enrollee can become the conduit for an enrollee to pursue greater social connections and break feelings of isolation. Building social capital and encouraging participation in community life as a citizen - rather than as a behavioral health consumer – will be an essential aspect of Eliot's CP services. CP interventions will focus on all parts of the enrollee's life environment and context. By providing side by side interventions in the community, at the enrollee's home or wherever services are needed, CP staff members can have a better understanding of the social needs and potential interventions. Often this includes assisting individuals in identifying or participating in leisure activities such as going to sporting events, museums, community centers, places of worship and other areas of interest. All CP team members will assist enrollees in developing skills related to developing and maintaining social relationships. This often occurs with individuals' families, friends, and other individuals the enrollee may identify. Behavioral health consumers often need support and assistance developing ways to communicate their feelings and accessing their wants and desires from those closest to them. We have found that by assisting consumers in building and sustaining these relationships with family and friends has a profoundly positive effect and can often change the trajectory of treatment in a positive direction.

D. Innovative Technologies for Service Delivery

At Eliot we have found that technologies can be a useful tool in supporting individuals with SPMI in maintaining their wellness and mental health stability and treatment in the community. Currently, we utilize several technologies in the community to engage individuals in treatment and we provide individuals with adaptive technologies. We have provided smart phones to some individuals who have had difficulty engaging in behavioral health services or suffer from severe isolation. The smart phones have allowed us to text and face time with these individuals to improve their engagement in services, provide follow up, and to provide remote interventions. We have also utilized various apps depending on the individual's need such as Pacifica which is a self-management tool to assist with Anxiety and Depression, Lantern which provides assistance with individuals engaged in CBT, and the Mood Network which allows people to communicate in an open forum on bipolar illness and other mood disorders to access supports.

We have also provided many individuals with electronic and automatic medication dispensers and medication reminder dispensers to assist them in adherence to a medication plan and to simplify the process. We have found that some individuals simply need assistance in preparing the medication reminder system. We also found some individuals need their medications dispensed to them and are unable to take their medications independently. For these individuals, we have utilized the Med Ready dispensers which automatically dispense medications. We have also partnered with several pharmacies on purchasing packaging systems that adapt to the needs of the people we serve. We have also used the Medication on Time system, which provides daily packed medications that are individually labeled so the people we serve do not have to pack and can easily access their medications.

We plan to continue to invest in tools to allow for protected telemedicine focused on behavioral health. We have contacted several vendors and we are in the process of demoing systems with Eliot providers. We also anticipate utilizing mobile apps to support CP staff the outreach process. We envision that these apps will identify enrollees requiring outreach and follow-up, and would be synchronized with the centralized eHana Care Management platform for review by Care Team members. We are also exploring leveraging social networking tools with enrollee consent, such as Facebook Messenger, to engage with enrollees. Techniques could include leveraging Facebook's Messenger Platform Application Programming Interface (API) to supply enrollees with our Eliot chat name as well as a unique code, which would automatically associate their Facebook Messenger account with their Care Management record. Enrollees and Eliot could maintain or initiate contact at any time via the Messenger app already installed on their phone

E. Personnel and Staffing

1. Organizational Chart and Personnel Responsibilities

Eliot's commitment to infusing clinical expertise into its services is unsurpassed in the community behavioral health arena. Clinicians are integrated throughout our service delivery structure at multiple levels in order to provide supervision and to provide services. The Eliot CP model provides an ordered balance and mix between clinicians, medical staff, engagement workers, those with lived experience, specialized staff, and care coordinators. Our system is predicated on team members working collaboratively with enrollees to meet their unique needs. Team members are able to support enrollees by providing coordinated interventions in their various areas of expertise while shouldering the overall workload at the same time. Eliot will provide flexible, fluid, and coordinated services that meet the current needs of enrollees and to meet all of our contractor responsibilities in each Service Area. Our CP model is comprehensive and collaborative, with an intrinsic devotion to flexibility and quality care. Below is a brief summary of CP team members, senior managers, and clinical and medical leadership (*See Organizational Chart in Attachments*).

Title	Essential Responsibilities
Engagement Specialists (Recovery Coaches Incorporated)	Conduct outreach and engagement of newly assigned enrollees. Conduct face to face visits, phone calls, and use other technologies to engage with assigned enrollees. Explain benefits, purpose, design and process of services of the CP. Obtain participation form from assigned enrollees and assist in engagement with the CP team. Provide administrative support.
Care Coordinator	Coordinate all aspects of service delivery specific to the needs and preferences of the enrollee. Provide person-centered Comprehensive Assessment and person-centered treatment planning. Provide primary coordination and contact with the enrollee, PCP and Care Team. Utilize MI to support and assist enrollee's in achieving their goals. Utilize WHAM and PSWHIR to develop and support wellness goals
Care Coordinator (Peer Specialists and Recovery Coaches)	All essential responsibilities of Care Coordinator as above. Utilize Individualized Peer Supports and Recovery Coaching to support enrollees in achieving goals and advocacy.
Clinical Care Manager	Provide clinical supervision and support to assigned Care Coordinators and Engagement Specialists. Participate and provide supervision of the person centered comprehensive assessment and treatment planning process, provide approval. Support Care Coordinators and provide collaboration to enrollees and members of the Care Team in achieving enrollee's goals. Ensure coordination with PCPs, Care Teams, and active engagement with enrollees under assigned Care Coordinator. Ensure communication, collaboration and coordination ACOs and MCOs.
Nurse	Provide and ensure medication reconciliation. Assist and provide medical care coordination. Engage medical providers as a liaison for enrollees and assist enrollee's in engagement with medical providers, recommendations, and other types of health/medical supports. Provide education and consultation to enrollees and CP team members regarding medical, health

	and medication related topics. Perform medical tasks as needed and direct interventions to enrollees related to their treatment plan. Provide motivational interviewing, wellness coaching, and care management.
CP Director	Oversee all administrative functions of the CP and is responsible for the overall oversight of services for enrollees. Provide leadership and supervision to Clinical Care Managers and Nurses. Monitor service delivery and utilization of services. Provide clinical consultation to the Care Teams and coordinate as needed with ACOs and MCOs.
Director of Clinical Consultation	Manage and oversee implementation of clinical initiatives, evidence based practices, and motivational interviewing coaches. Supervise field clinicians providing evidence based practices, risk management, and clinical assessment.
Director of Peer and Recovery Services	Provide support and supervision to Peers and Recovery Coaches. Provide coaching and training in IPS, PSWHIR and WHAM. Provide supervision to Peers and Recovery Coaches. Assist in ensuring CP's are recovery oriented and focused on person centered planning.
Medical Director	Provide leadership and oversight of all behavioral health, medical, and clinical services. Provide direct supervision over all prescribing staff at Eliot. Provide medical consultation to CP teams. Provide guidance and supervision to Nurses on CP teams. Act as a liaison when needed to ACOs, MCOs, PCPs, and other medical professionals.

2. Sample Staffing Model

Below is a sample staffing model for an Eliot CP team based on serving 1,000 actively engaged enrollees. In Service Areas where the number of the estimated population of enrollees is less than or more than 1,000, Eliot will proportionally adjust the number of team members:

Title	Caseload/Supervision	Total FTE Per 1000 Enrollees
Engagement Specialists	Up to 70 newly assigned enrollees per month.	3
Care Coordinators (Either with lived exp. or without)	Average 60-80 actively engaged enrollees.	16
Clinical Care Manager	Will provide direct clinical supervision, administrative support, and management to 4 Coordinators and 3 Engagement Specialists	4
Nurse	Support 4 Care Coordinators and 1 Clinical Care Manager	4
Community Partner Director	Provide Supervision to 4 Clinical Care Managers and 4 Nurses.	1

3. Recruitment Plan and Job Descriptions

Eliot has focused on workforce development for several years, honing recruitment techniques, training capacity, retention strategies, and implemented an expanded internship program. We have had a Workforce Development Department for over the past 15 years including a

recruitment team dedicated to recruiting highly qualified candidates. Our internal resources have made a significant impact on Eliot's vacancy rate, as well as our proven ability to develop and manage new programs, services, and initiatives. Currently, Eliot's vacancy rate is less than 5%, far below the industry standard. In conjunction with these resources the Behavioral Health Division employs a dedicated Workforce Coordinator who works collaboratively with Eliot's Workforce Development, Human Resources and Quality Management Departments to facilitate and streamline hiring and recruitment of vacant positions as well as staff training. This position is utilized to coordinate, track, interview and screen potential applicants, track vacancies, participate in recruitment efforts as well as conduct and facilitate trainings. Mobilizing these resources, as well as other managerial staff, clinical staff, and staff who currently work at Eliot, we are able to ensure the hiring and deployment of qualified staff who can be utilized upon inception of the contract. We anticipate that upon award, we will begin our recruitment efforts both internally, through social media, job fairs, and individualized recruitment to highly qualified individuals outside of Eliot. It is anticipated that a number of our clinical staff, working within our continuum, will transfer into clinical positions, peer positions, and coordinator positions within our CP teams. We have also identified a number of employees who will be able to be redeployed and reclassified as a result of the new service model. Below is our proposed timeline for recruitment of staffing positions:

Activity	Start Date	Anticipated Completion Date
Identify current staff, resources, and restructuring to fully incorporate CP model into Eliot continuum	Current	Upon Award
Identify and redeploy internal administrative, clinical staff and coordinators within Eliot to work on the CP teams	Upon announcement/award of CP team contracts	October 2017
Redesign Eliot website, social media tools, and recruitment tools to include CP teams to begin recruitment outside of Eliot	Upon announcement/award of CP team contracts	Within 2 weeks of award
Recruit/hire CP Directors either within Eliot or from outside of Eliot	Upon announcement/award of CP team contracts	Hire 2 CP Directors April/ May 2018
Recruit/hire all CP Clinical Care Manager	Upon announcement/award of CP team contracts	Hire 3 CP Clinical Care Managers 2/15/18
Recruit/hire all CP Nurses	Upon announcement/award of CP team contracts	Hire 2 CP Nurses 2/15/2018
Recruit/hire all Care Coordinators(with lived experience or without)	Upon announcement/award of CP team contracts	Hire 15 Clinical Care Coordinators no later than 3/1/2018
Recruit/hire all Engagement Specialists	Upon announcement/award of CP team contracts	Hire 2 Engagement Specialists no later than 3/1/2018

Please see *Job Descriptions in Attachments.*

4. Cultural and Linguistic Competency

Eliot is dedicated to ensuring that CP services are culturally competent and address the cultural and linguistic needs of the population we service in every CP community. We are committed to hiring and retaining staff that will provide culturally and linguistically competent supports that reflect the population we serve. Eliot is constantly assessing cultural and linguistic needs of our populations we serve and developing recruitment strategies designed to hire staff with these expertise. As noted earlier, Eliot employs over 200 staff who speak 20 different languages, all of which reflect the communities we currently provide services within and those in which we anticipate operating CPs. Eliot's commitment to the employment and retention of culturally competent staff members, is demonstrated by offering a 6% salary differential for qualified applicants who possess bi-lingual capabilities. Over the years we have found a number of productive avenues to recruit staff such as cultural centers, social media outlets, and our own staff. When internal resources are not available, Eliot utilizes interpreter services to ensure that we are able to communicate with our members in their primary language. As Eliot staff and consumers have become increasingly diverse, so have our services. In an effort to further support an atmosphere that embraces cultural diversity, Eliot has established an Inclusion and Diversity Council comprised of a cross section of staff. This Council was established to build upon our foundation and is meant to communicate our ongoing commitment to being a culturally competent, inclusive and diverse organization where everyone feels welcomed and respected regardless of any real or perceived difference. This Council has been instrumental in not only supporting our diverse staff members, the populations we serve, but also in assisting the organization in recruitment efforts.

5. Training and Orientation Plan

Eliot's week long New Staff Training is held at our primary Training Center in Lexington. This training is completed before beginning work in any of our service elements. Pre-service training is the foundation upon which all other training is built. The primary purpose is to expose the staff members to core competency training, service elements, service continuum, and population needs. Staff members receive training on the importance of a strengths based approach to treatment and how to manage behavioral risk. New Staff Training promotes a quality approach to service delivery. New staff members on the CP teams will complete an additional 40 hours of comprehensive orientation training in Complex Care Management and Coordination with their respective team through our online training and educational suite, eLAN. Our Workforce Development Department and the Director of Clinical Consultation are currently developing this 40 hour curriculum which will be based on the University of Vermont's research and outcomes from the Patient-Centered Outcomes Research Institute (PCORI).[xi] The PCORI research and outcomes is not only at the forefront of person centered care

management, but there is clear evidence on strategies and interventions that work for the SPMI population. Each CP team will also include as part of the team orientation a review of available community resources, introductions to key staff and programs, modeling of clinical interventions and engagement, and approach to service delivery. All new staff receive 160 hours of training in their first year of employment at Eliot. A 40 hour course on Leadership is offered on a quarterly basis. It is designed to provide the participants with the theory and concepts of leadership that they can apply directly to the duties and responsibilities at their programs. Eliot has developed a partnership with Boston College whereby staff who complete Eliot trainings in established clinical domain areas can receive an Advanced Clinical Certificate from BC. These trainings include DBT, CBT, Harm Reduction, Recovery Oriented Practice, Illness Management and Recovery, Person Centered Planning, Motivational Interviewing (I-III) and CBT for PTSD (I and II). Eliot has devoted considerable resources to ensuring clinical staff have adequate training and maintain their licensure. Clinical staff are encouraged to attend sponsored continuing educational opportunities to increase skill sets and maintain licensure. Eliot also dedicates considerable resources annually to bring in outside clinical experts to provide specialized skills training.

6. Staff Retention Strategy

It is our belief that staff members that who feel empowered, valued and respected take pride in their work, are more productive, provide quality services and are retained by the organization. This is a fundamental practice of our change management philosophy based on LEAN and continuous improvement. Eliot is dedicated to ensuring a work environment and organizational culture that communicates with, listens to and recognizes the accomplishments of its staff. The agency employs a comprehensive strategy for employee retention which includes a number of communication vehicles that keep staff up to date with agency news. We obtain feedback from staff through annual satisfaction surveys, forums, committees and program visits from executive staff. Our staff are included in making service and agency decisions both to be empowered and to ensure informed decision making. We also have a progressive bonus and incentive system for recruitment, longevity, referring friends/family to work at Eliot, and performance incentives/bonuses. Eliot offers a robust training calendar as well as tuition reimbursement program. Based on data gathered in the HRIS system in calendar year 2016, managers average tenure was 5.87 years, direct care staff 3.43 years, and clinicians 4.37 years. These figures are either equal to or greater than industry standards. A deliberate focus on successful management practices provides staff confidence and a greater range of knowledge. Managers strive to teach, and train staff in all facets of their respective positions. The benefit of successive management is staff has a broader range of knowledge, stronger pool of internal candidates to choose from, career ladders, and more effective service delivery.

F. Implementation Plan and Timeline

Eliot's Implementation Plan and Timeline is attached.

G. Budget Report and Budget Narrative

Eliot's Budget Report and Narrative is attached.

H. Sustainability

Eliot is fully committed to the successful implementation of our CP programs, achieving outcomes measures, and the sustainability of the service. Our goal in providing CP services is to support and coordinate services across the existing continuum of care and the newly created ACO continuum for enrollees with severe mental illnesses and those with substance use disorders. We are committed to partnering with EOHHS, ACOs, MCOs, and all of our partners to achieve full integration of care for enrollees for all of their medical, behavioral health, and life needs. Our system of care, services, and the technologies we are planning to implement will not only achieve this integration but will ensure the highest quality of care and improve the wellness of the enrollees we serve.

The partners and technologies we have chosen to build our CP infrastructure and our CP capacity with have demonstrated successful implementation and sustainability in other projects and development of integration of systems. Eliot's utilization of the infrastructure DSRIP funds will be maximized over the preparation budget period and through the five budget periods to ensure sustainability without the need for continued development and funding. Our conversations with our partners, and our vision, are to utilize the higher levels of funding from the initial preparation funds and sunset those costs throughout the DSRIP budget periods. Many of our investments will be fully paid for by the end of the first budget period, while others will have expected maintenance fees that Eliot will absorb both within our internal operations budget and administrative overhead budget.

As noted in our Budget Report and Budget Narrative, Eliot intends to partner with eHana to develop a statewide CP Care Management platform, and these dollars represent the largest percentage our technology investment. The costs related to the related to our investment in the eHana system fully sunset by the end of budget period five. By the end of this period, our investment will include all: of the programmatic interfaces and requirements; the analytics needed for reporting; full integration across ACO and MCO partners and providers; and include any Eliot specific enhancements or changes to the eHana system. We expect to include a nominal software maintenance fee beyond budget period 5, and as we have worked with eHana on the development and implementation of our EHR, we have firsthand knowledge that this is a realistic expectation and fully sustainable through our sound organizational financial practices. Our investments into other technologies including telehealth, mobile technology, hardware, and phone systems and monitoring, will also wind-down by the end of budget period five. We anticipate needing to replace some hardware overtime, continue with maintenance fees of software, and invest in some upgrades of these systems. However, our experience in start-ups and other investments in projects demonstrates our clear ability to not only achieve

implementation but also achieve sustainability of robust cutting edge technologies in behavioral health.

Our investments in workforce development projects will also be fully operationalized and paid for by the end of budget period five. As noted, we expect to invest in developing both in person and online training within our current training programs, including our web based ELAN system. This will include costs associated with implementing the 40 hour Complex Care Management training based on the University of Vermont's research and outcomes from the Patient-Centered Outcomes Research Institute (PCORI). Additionally, we anticipate added staff training investments for PSWHR during the preparation budget and first budget period. We have implemented similar training plans for our CBFS programming, Motivational Interviewing, and clinical trainings such as CBT, DBT, Cognitive Restructuring, and Trauma Informed Care. By utilizing the DSRIP funding early to invest in the development of internal expertise and training ability, we will ensure sustainability of our workforce development within the CP programs beyond budget period five.

Eliot expects that investments made in business start-up and operational infrastructure will be fully absorbed both within the CP operational budgets and Eliot's administrative overhead budget by the end of year five. These investments include LEAN system change resources, staffing start-up, a dedicated Project Manager, and nominal operational changes and supports.

I. Quality Management and Performance Monitoring

Quality Management (QM) practices are a focal point at Eliot in guiding service delivery, ensuring person centered planning and developing sound management decisions. Eliot takes great pride in establishing high standards of care and continuously reviewing our operations to identify opportunities to enhance service delivery. Eliot's QM systems are well developed, make use of current technology, utilize consistent data, are outcome driven and focus on continuous quality improvement and our change management philosophy of LEAN. Eliot's QM department provides the infrastructure and institutional knowledge required to ensure that Eliot is achieving its performance improvement goals and is providing quality data to inform decisions and meet the requests of our funding stakeholders. We anticipate that our QM department will spearhead the effort to develop new data collection, reports, and statistical analysis to assess the efficacy and ensure performance improvement of the new CP model. Eliot will ensure our QM plan is submitted to EOHHS no less than annually. Our QM team works in harmony with our IT department to deliver meaningful data analysis, outcomes reports, and trend analysis.

1. Description of Quality Improvement Program

Eliot's quality improvement plan for our CP services will be based on our LEAN philosophy and tools for continuous improvement. Our first step will be to provide our CP staff members specific goals as a means to give them a purpose to achieve. By setting goals for the teams at the onset of services we will provide the teams with a sense of ownership over the CP service model and build buy-in to process improvement. In being clear on the CP's goals and purpose, we can then focus on creating and improving the process to achieve these goals. We anticipate that our initial goals will focus on the overall CP process:

Goal	Purpose
Contact newly assigned enrollees within 72 hours	Immediate engagement of population in significant need of services
Meet newly assigned enrollees face-to-face within 7 days	Demonstrate the flexibility of the service and the utility to the assigned enrollee
Complete comprehensive assessment for every engaged enrollee within 90 days	Ensure an understanding of the enrollee and their needs and desires for service
Complete PCP treatment plan for every engaged enrollee within 90 days	Ensure the enrollee's goals for health and wellness improvement are driving force and motivation for treatment. Ensure full CARE Team is engaged
Maintain 1 contact with engaged enrollees every 7 days	Demonstrate compassion and support to the enrollee and sustained effort on the treatment plan
CP staff present at discharge/care transition planning meetings for engage enrollee	Ensure a well facilitated and feasible plan is in place to support the enrollee in improving their wellness in the community
CP staff meet with engaged enrollee face-to-face 3 days post discharge from a facility/service	Ensure the discharge/care transition plan is supported, effective, and assess for other services needed

Nurse provided medication reconciliation post inpatient stay	Ensure medication changes are correct and will be maintained in the community
CP staff facilitating mental health practitioner appointment/follow up within 7 days post acute hospitalization	Ensure there is mental health and community support to continue to maintain the enrollee's mental health in the community rather than in an inpatient setting

Once we have set goals, given the CP teams' purpose, we can then use Visual Stream Mapping (VSM) to map out the CP process and the team members responsible for each goal above. VSM allows us to engage team members in assessing both the processes needed to achieve goals but also the resources needed to achieve the. While VSM typically utilized to improve a process or meet a new challenge, we have found that it is extremely useful in planning and mapping before a new program and service start. Once we have a baseline VSM, we will then work with our teams over time to continue to use VSM to improve each process, move resources, and create efficiencies to achieve each goal.

Another fundamental approach we utilize within our LEAN framework is Plan-Do-Check-Act (PDCA). We have found that combining VSM and PDCA are keys in engaging staff members with our QM to make improvements to a service, a process, and ultimately in achieving a goal. We envision that within the Eliot CP system, we will use PDCA to make continuous improvements in conjunction based on VSM. Our PDCA method will focus on truly understanding a problem or goal we are trying to address, making sure we understand the barriers to the goal, and that our plan addresses it. We will then implement action steps (the DO) that we can measure/check to ensure we have addressed our original goal or problem. The Act in PDCA is the final step in creating a standardized system or protocol that is based on the planning, doing, and checking already completed. We will document these PDCA continuous improvements by updating our protocols and by completing VSMs with CP teams on the process improvements and changes. The LEAN tools of VSM and PDCA allow for rapid changes and improvement in achieving goals, which will be paramount in the CP goals we have set as well as in ensuring our workforce in purposefully engage in the CP work.

In conjunction with our QM team facilitating LEAN with our CP teams, QM will utilize our EHR, data systems, and analytics to track services and produce meaningful reporting to ensure continuous feedback to the CP teams as a means to quality improvement. This data is analyzed by QM staff to control for such variables as diagnoses, team members, specific interventions/service provided, and demographics. Our QM utilizes Statistical Package for the Social Sciences (SPSS) to run regression analysis as well as correlation analysis. Eliot anticipates the QM team will collect and analyze the following data elements beyond the required data/outcomes to ensure continuous quality improvement within our CP programs: Quality of Life Scale (QOL);[xii]Tracking reporting on medical diagnoses and comorbid conditions including COPD, Diabetes; Tracking of medical hospitalizations, psychiatric hospitalizations, emergency

room visits, and other facility/institutional placements; Tracking of coordination of AOD treatments, placements, and services; Tracking of care coordination activities related to warm hand offs.

2. Planned QM Initiatives

As noted, our first QM initiative within the newly created CP model will be to implement LEAN to ensure a culture of problem solving and continuous improvement. Our LEAN process with the CPs will begin prior to implementation and will be a meaningful QM and CP team approach towards standardization, goal achievement, and improving engagement and outcomes for enrollees. Beyond our planned initiative focused on LEAN, Eliot has committed to implementing the expanded version of the Quality of Life Scale (QOL). The tool is easy to understand, user friendly and only takes a short amount of time to administer. We plan to administer the QOL at the beginning on CP services and on a quarterly basis. Research demonstrates the average total score for healthy populations is about 90 with varying lower indication for a group with chronic illness.[xiii] Eliot seeks to improve enrollees' quality of life to be that of at least 75% of the healthy population within their first full year of CP service. Eliot also aims to see individual progress with enrollees scores rise by 5 points within their first full year of CP services. The QOL Scale also provides opportunities to leverage the identified subsets that exist within the tool to identify specific need areas, use to track the efficacy of specific interventions. These subsets include: Material and physical wellbeing; Relationships with other people; Social, community, and civic activities; Personal development and fulfillment; Recreation; Independence. We envision that tracking these subsets will lead to other QM initiatives, along with leveraging other collected data, within the CP model to improve Quality of Life and Chronic Disease Management.

3. Quality Management Committee

It is imperative that the QM team be integrated with consumers and family members to ensure that any QM plan or activities is person centered. Consumer and family involvement is vital to help steer the QM team in the improvement process. To this end, Eliot has a Quality Management Committee that reports directly to a subcommittee within our Board of Directors. The Committee includes: QM team, consumers, family members, stakeholders from the community, Eliot's Compliance Officer, Eliot's Medical Director and several clinicians and administrative staff members throughout each division and service element. The committee participates in the development of QM initiatives and review QM data, outcomes and reports. The committee focuses on assisting QM staff in achieving QM goals and initiatives throughout the organization and that the organization is in support of each division and service QM plans. Once awarded CP programs, Eliot will ensure CP participation within the committee.

J. Coordination with ACOs and MCOs

1. Communication and Value to ACOs and MCOs

As a large behavioral health provider, Eliot has a vast amount of experience and knowledge engaging and serving SMI and SUD populations. Understanding this population we are able to successfully implement an integrated care management program that successfully addresses the complex needs of this specialized population that translated to lowering health care costs while improving care and quality of life for the people we serve. Eliot has begun preparing materials that can be utilized for presentations and information sessions with the MCOs and ACOs. This material will outline the need for and advantages of utilizing our behavioral health community partner program as well as the key components of the service. In addition to outlining the value of the program, Eliot will also highlight our specific expertise and experience with this population. Eliot is will also share current outcomes and results of our programs to further illustrate the importance of these services. We have had a long standing history of contracting, piloting and developing new programing with many of the MCOs. Our staff routinely confer with MBHP, Beacon and NHP related to our ESP, PACT, Clinic, CSP, and HFY contracts. Eliot also has a history of working collaboratively and coordinating care with many of the potential ACOs. Utilizing these relationships as a foundation for future partnerships, Eliot began meeting with potential ACOs and MCOs over the past year. To date, Eliot has had discussions with Cambridge Health Alliance, Wellforce, Partners Healthcare, Beacon and Lynn Community Health Center. It is anticipated that we will meet with the remaining ACOs and MCOs in the next month. These meetings have focused on sharing the expertise of each organization, identifying areas where our services currently intersect, vision and goals for coordinated service delivery, as well as methods and systems for communication. Many of these conversations have assisted both organizations in brainstorming key components for successful coordination of BH CP program with a strong emphasis on data/ information exchange and client assignment. Eliot has provided the ACOs and MCOs with its care management approach for the BH CP identifying the expertise of our organization. Using real life examples of current approaches and barriers to care the SMI and SUD population experience has been useful in this process.

2. Branding and Marketing

It is Eliot's intention to partner with the ACOs and MCOs developing a Memorandum of Understanding that clearly outlines our relationship. Through this process a marketing and branding plan will be established with the organizations. In addition, Eliot will create marketing materials and a campaign that will be used to educate primary care, medical and other

treatment providers as well as clients and families. We envision the marketing process will be multifaceted with the ACOs and MCOs as well as other community providers.

3. Strategy to Engage and Collaborate with Multiple ACOs and MCOs

Eliot has begun meeting with the ACOs and MCOs and will continue this process throughout the next several months. Eliot is interested in developing positive partnerships with all parties and identifying a pathway to integrated care. Utilizing the strategy previously outlined, Eliot will present information about Eliot and its vision for coordinated care. We will engage in discussions that outline potential barriers and concerns as well as shared vision for our partnership. For example, a common concern expressed during our ACO meetings is that the BH CP program will steer clients away from their current provider and into their own services. When speaking about this issue openly, all parties realize that this concern is universal to all potential ACOs, MCOs and BH CP programs. We believe that these discussions are important in the development of partnerships and throughout our relationship.

4. Strategy for Conflict Resolution

Developing systems for regular communication, process improvement and conflict management are important components of the MOU agreements with ACOs and MCOs. Over the years we have found that outlining clear lines of communication with designated points of contact along with regularly scheduled meetings and agendas can assist in proactively addressing areas of concerns for both parties. Transforming the Medicaid healthcare system and venturing into new territory will be challenging for all parties. Ensuring there are on-going discussions and work plans related to process improvement will aid in this process. We know that conflict is inevitable in any relationship. However, utilizing a respectful transparent process for negotiating resolutions to conflict, coupled with proactive communication can lead to lead to positive outcomes and improved services.

Community Partner Infrastructure Budget Report - Technology - Prep Budget Period

Only complete this Infrastructure Budget Narrative using amounts anticipated for PBP.

Lines may be added to the Infrastructure Budget Narrative tables as necessary

Row 1 - IT Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
IT Project Manager	$ 80,000.00	1	5	$ 33,333
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
	Total Salary			$ 33,333
	Fringe rate	23.9%	Total Fringe	$ 7,970
			Total IT Staffing including Fringe (Infrastructure Budget Line 1)	**$ 41,303**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

The IT Project Manager represents the value of one FTE and will be allocated to the affiliated partners based on projected FTE's. This position will supervise the development and implementation of the Care Coordination software system. Other duties will include supervision of the help desk and the IT technicians responsible for set-up of desktops.

Row 2 - Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost

	A	B
33	The initial cost of development of the Care Coordination system.	$ 100,000.00
34		
35		
36		
37		
38		
39	**Total Development and Adaptation of EHR and Care Management System (Infrastructure Budget Line 2)**	

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Currently, the search for the Care Coordination system has been narrowed to a few companies. The estimated cost at this time is in the $100,000 range. This total amount is allocated to HPTC since it will be responsible for coordinating and implementation.

Row 3 - Technology for Service Delivery

	Description of Expense	Cost
60	Purchase of approximately 41 computers: $750 per desktop	$ 30,928.00
61	Set-up of approximately 41 computers; $150 per desktop	$ 6,185.55

Total Workforce Development Staffing including Fringe (Infrastructure Budget Line 5)				**$ 15,489**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

The HR Recruiter represents the value of one FTE and will be allocated to the Affiliated Partners based on projected FTEs. This position will be responsible for developing policies and procedures, recruiting and onboarding and developing training materials.

Row 6 - Recruitment Expenses

Description of Expense	Cost
Advertising related to recruitment of staff	$ 12,478.00
Total Recruitment Expenses (Infrastructure Budget Line 6)	

Provide a description of each recruitment expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

To fill the required positions, it will be necessary to use social media to post online job opportunities, in addition to using traditional print media, websites, job fairs etc. The estimated *cost to advertise in these venues is $12,478.
The breakdown is as follows:
ZipRecruiter - 11 Active Unlimited Ads x 6 months = $2,250
Indeed - 11 positions boosted at 125/month x 6 months = $8,250.00
Boston Globe - 2 half page ads at $875/ad = $1,750.00

Total Cost = $12,250.00

~~Total cost – $12, 250.00~~

**** based on current advertising costs, subject to change***

Funds are allocated between Partners based on volume.

Row 7 - Training Expenses

Description of Expense	Cost
Total Training Expenses (Infrastructure Budget Line 7)

BH Community Partner - Staffing Model

Insert Contractor Name Here

line #			
1	Estimated number of Engaged Enrollees (including CBFS if applicable) at the end of Budget Period 1	2740	*Should align with Program Budget*

	BH CP Program Staff	FTEs (Do not duplicate FTE - FTE's may be allocated across staffing positons as applicable)	Comment
2	BH CP Director and Assistant/Deputy Director	1.37	*Total management oversight of BH CP*
3	Medical Director		*Included in contracted services*
4	RNs		
5	Clinical Care Managers (RN)	10.96	*RN*
6	Clinical Care Managers (LPHA)	5.48	*LICSW*
7	Supervisors/Team Leaders		*Do not include FTEs listed in lines 4, 5 or 6*
8	Other Licensed Staff		*Do not include FTEs listed in lines 4, 5, 6 or 7*
9	Care Coordinators	60.28	*Care Coordinators*
10	Peer Specialist/ Recovery Coaches (non-Care Coordination)		*Do not include FTEs of Peer Specialists or Recovery Coaches included in line 9*
11	Intake Coordinators/Engagement Specialists		
12	Administrative Support	4.11	
13	Program Manager	0.274	*The Program Manager overesees more than the BH CP Program. An example of this position would be the VP of Adult Services. The UFR title of the Program Manager is Line 101 and the UFR title of the Program Director is Line 102*
14			
	Total FTE	82.474	

	Staff Ratios - Please calculate the following ratios:		
15	Ratio of RN and Clinical Care Manager (RN) to Assigned and Engaged Enrollees	250	*Estimated number of Assigned and Engaged Enrollees at the end of BP1 divided by total FTEs of (RN+RN Clinical Care Managers)*
16	Ratio of Care Coordinator Supervision to Care Coordinators	11	*Total Care Coordinator FTEs divided by Total Care Coordination Supervision FTEs*

Please describe which Program staff listed in lines 2 through 8 above directly supervise Care Coordinator staff: The Clinical Care Managers (5.48 FTE's) will provide direct supervision to the Care Coordinators.

Section 7.3 A. Executive Summary

Section 7.3 A. Executive Summary (2 pages)

1. The Coordinated Care Network (CCN) is comprised of High Point Treatment Center as the lead agency with 5 Affiliated Partners: Child & Family Services, Duffy Health Center, Steppingstone, Brockton Area Multi Services, Inc., and Bay State Community Services. In addition, we have included 2 Material Subcontractors: Community Health Center of Cape Cod and Brockton Neighborhood Health Center.

Careful thought and consideration were given to which partners would be included in the CCN. In order to be successful and build a 5-year business plan, we needed to partner with strong, dedicated, and quality organizations. Our commitment is to offer the state a Network where all partners are fully engaged, understand the MassHealth population, have proven strengths-based, high quality services, and demonstrates unwavering support to all tenets of DSRIP restructuring.

The DSRIP restructuring comes with both challenges and opportunities. We have identified the following as part of our 5-year work plan. First, we will need to strengthen our technological infrastructure in order to deliver services that our Enrollees deserve. CCN has taken a two-prong approach to meet this goal. We are proposing to use the strength of the system being built by the state, coupled with recommendations from the BHCP system throughout the Commonwealth to develop one robust common care management platform. This unified system will enable Enrollees to move seamlessly among their Community Partners and allow all of us to capitalize on combined financial and technological resources to develop a superior care management system for all Enrollees. CCN has developed a Network Operations Committee that is tasked with developing an infrastructure where our Affiliated Partners and Material Subcontractors will have the ability to efficiently exchange EMR data across the CCN Network, while also readily communicating with the ACOs/MCOs, and EOHHS. We believe this shared technology expertise within our affiliated members will afford a much smoother transmission of data among all organizations involved in the Enrollees' care.

Second, we recognize that workforce is a challenge for all of us throughout the state. There are simply not enough people choosing human services as a profession. The strength of our Network with over 5,000 employees in 200 locations allows us to collectively educate, advocate, and mentor anyone interested in choosing human service as a profession. As part of our 5-year plan, we will reach into our communities, high schools, colleges, and universities to educate students about career opportunities. We will share with them firsthand the experience of a deep satisfaction knowing you are making a difference in the lives of others as a human services worker. CNN will expand all training and internship opportunities to ensure we reach those interested in giving back to their communities.

2. CCN intends to support the following number of Assigned and Engaged Enrollees:

Year One	2,740
Year Two	4,135
Year Three	5,555
Year Four	7,225
Year Five	8,720

3. CCN is bidding on these service areas: Quincy, Attleboro, Barnstable, Brockton, Fall River, Falmouth, New Bedford, Orleans, Plymouth, Taunton, and Wareham.

4. This is an overview of CCN's plan to operationalize the CP program and implementation timeframes. The complete response is elaborated upon in Question 7.3F.
During the early part of the budget preparation period, Aug. 2017-Feb. 2018, attention will be focused on purchase and implementation of the care management software, identifying members for the CCN committees, setting committee meeting schedules, developing staff recruitment plans, and identifying office/meeting space. In addition, the program manager will begin working on the project, and policies and procedures will begin to be developed. During Jan.-May 2018, the latter half of the budget preparation period, the website will be configured, contractual agreements with ACOs/MCOs executed, staff training curriculum developed, care management tool configuration and testing completed; budget report and narrative completed for EOHHS approval. First and second interviews will be conducted; computers, tablets, and telephone configurations will be completed; and identified staff will be working mid-May 2018.

Year 1 (June 1-Dec. 31, 2018): Outreach and intake efforts, qualifying activities begin; EOHHS, ACOs/MCOs notified monthly of capacity to accept new referrals; info. on Consumer Advisory Board participation distributed to Enrollees. Monthly member status reports completed, and feedback sessions held with the care management software vendor to provide input on software enhancements. From Oct.-Dec., additional staff will be recruited; supplies ordered as appropriate, & Quality Improvement Plan developed, incorporating Enrollee feedback from engagement survey. Annual Report completed. All committees meet monthly and as needed, with Consumer Advisory Board meeting quarterly.

Year 2 (Jan. 1-Dec. 31, 2019): Outreach & intake efforts continue, renew contractual agreements with ACOs/MCOs, staff refresher trainings ongoing, EOHHS, ACOs/MCOs notified monthly of capacity to accept new referrals, and semi-Annual Report submitted to EOHHS; Quality Improvement Plan developed, incorporating Enrollee feedback from engagement survey. Supplies ordered as needed. Committees meet monthly & as needed; Consumer Advisory Board meets quarterly.

Year 3 (Jan. 1-Dec. 31, 2020): Outreach and intake efforts continue, renew contractual agreements with ACOs/MCOs, staff refresher trainings ongoing, EOHHS, ACOs/MCOs notified monthly of capacity to accept new referrals, and semi-Annual Report submitted to EOHHS by mid-summer. Committees meet monthly and as needed; Consumer Advisory Board meets quarterly. Quality Improvement Plan developed, incorporating Enrollee feedback from engagement survey. Supplies ordered as needed basis.

Year 4 (Jan. 1-Dec. 31, 2021): Outreach and intake efforts continue, renew contractual agreements with ACOs/MCOs, staff refresher trainings ongoing, EOHHS, ACOs/MCOs notified monthly of capacity to accept new referrals, and semi-Annual Report submitted to EOHHS by mid-summer. Committees meet monthly and as needed; Consumer Advisory Board meets quarterly. Quality Improvement Plan developed, incorporating Enrollee survey feedback. Supplies ordered as needed basis.

Year 5 (Jan. 1-Dec. 31, 2022): Outreach and intake efforts continue, qualifying activities continue; submit record of all qualifying activities, budget report and narrative submitted for approval. Committees meet monthly and as needed; Consumer Advisory Board meets quarterly.

Section 7.3. B. Supporting Populations and Community Engagement

Section 7.3. B. Supporting Populations and Community Engagement (2 pages)

B1. The Coordinated Care Network (CCN) maintains many diverse community connections and collaborations within each service area. In each area, these include state and federal agencies, CBHI systems of care, courts, school systems, shelters, police departments, community health and behavioral health centers, CBFS, CSP providers, Emergency Services programs, Long-term Support Services, and hospitals. In addition to these foundational connections, CCN has developed additional area-specific relationships. In order to include the business community, the CCN are members of several Chambers of Commerce and Rotaries, including Brockton, Middleboro, Hyannis, New Bedford, Plymouth, Taunton, and Quincy. We commit to fostering current relationships and continuing to grow new collaborations within our service areas to deliver the required CP supports. Our collective relationships with state and federal agencies include DMH, DCF, DPH, DYS, DTA, DDS, SSA, VA, OCC and MRC. All of the CCN partners work with peer-led organizations, including Learn to Cope, Parent Information Network, Parent Advocacy League, Recovery Centers and Recovery Learning Communities. Collectively, we operate at 200 locations throughout the service areas we propose to serve, providing a full continuum of behavioral health, SUD, primary care, case management, and housing services.

Please find below a summary of many of our partnerships throughout the communities we serve:

In **Brockton**- CCN is the CSA for the region. CCN also has strong relationships and MOUs with Signature Healthcare Brockton Hospital and Good Samaritan Medical Center, which includes working with Brockton Hospital's CHART program and providing recovery coaches to both Emergency Departments for patients experiencing an overdose. CCN provides the Recovery Coach training for community organizations within the Southeast area. CCN has advisory and board membership with Good Samaritan Medical Center, Brockton Neighborhood Health Center, and Massasoit Community College. We also provide clinical services with the Brockton parole office. We collaborate with housing and advocacy groups, including Brockton Housing Authority (for which the CCN operates a tenant service coordination program), 8 employment and education organizations, and Brockton Area Workforce Investment Board membership.

In **Taunton**- CCN coordinates with Taunton Drug Court (juvenile and adult), is an active member of the Taunton Opioid Task Force and Middleboro Matters (a substance use disorders [SUD] collaborative meeting). CCN attends the DCF/DMH/DYS Southeast interagency meeting, and been utilized as a consultant for interagency youth with complex substance use challenges.

In **Wareham**- Our staff participates on local coalitions and task forces, including the Wareham Chapter for Mass Association for Community Action and the Wareham Community Development and Economic Development Authority, and provides ESP services, in addition to Recovery Coaches in the Emergency Department at Tobey Hospital.

In **Attleboro**- We participate on the Attleboro Opioid Task Force and area CHNA, Systems of Care, Recovery Learning Community, and Parent Information Network.

In **Plymouth**- CCN is the CSA for the region. We are partners in numerous community groups, including the Plymouth Substance Use Disorder Task Force, Plymouth Drug Court, South Shore Partner in Prevention, CHNA 23, Systems of Care, Parent Advocacy League (PAL), Community

Correction Center, and the Plymouth County Outreach Initiative, an interagency program coordinated by multiple police departments, which provides urgent outreach services to SUD clients and their families after experiencing an overdose.

In **New Bedford**- CCN is the CSA for this region as well. CCN staff actively participates on the Homeless Providers Network, Greater New Bedford Allies, CHNA, the Mental Health Providers Network of New Bedford, and the New Bedford Opioid Task Force. CCN is part of the DCF Substance Abuse Consultation Team.

In **Fall River**- CCN is a participant of the Fall River Homeless Service Providers, Mayor's Taskforce 10-year plan to end homelessness, Substance Abuse Task Force, HIV Tobacco Education Coordinator Meeting, Regional Substance Use Disorder, Fall River Youth Violence Prevention Initiative meetings, and the Family Recovery Project Regional Council. Partnerships include the Commission on Grandparents Raising Grandchildren and Opioid Task Force.

In **Quincy**- CCN offers SUD services and BH support at Father Bill's and MainSpring homeless shelters, Manet Community Health Center, Quincy Drug Court, Quincy Mental Health Court, Germantown Neighborhood Center, Impact Quincy, New Way Recovery Center, and Quincy Family Resource Center. Recovery coaches are provided to Quincy Medical Center, Carney Hospital, and South Shore Hospitals. CCN provides SUD education to Quincy Public Schools. We facilitate/coordinate several parent and family supports, including Sober Mommies Group, and Learn 2 Cope (family support for loved ones with SUD). We participate in community forums: 3 SUD task forces (Quincy, Hull, and Scituate), Asian Link Task Force, and CHNA 20.

In **Barnstable County**- CCN maintains relationships with organizations, including housing, legal, and behavioral health and homelessness consortia. Cross-referrals occur with the regional peer-run recovery center, peer housing, and other recovery support groups. Primary care is provided weekly at the emergency adult shelter. CCN is a provider at Barnstable County Correctional Facility for inmates about to re-enter the community. Recovery support navigators and clinicians provide services at the local Emergency Department. Partnerships include Barnstable County Housing Coalition, Grandparents Raising Grandchildren Task Force, and Advisory Board for Child Advocacy Coalition.

B2. CCN will increase connection to communities within service areas by continued attendance at local coalitions, networking activities, and staff meetings to inform the community of CCN services, as well as become informed of their services and how they can assist in the delivery of CP supports and activities. Relationship-building will occur on all personnel levels to address systemic issues to providing direct services. CCN will develop and maintain a comprehensive website; extensive collection of marketing materials, and provide community education forums.

B3. The CCN's leadership team will meet regularly to share information, including new resources and opportunities. Each partner will orient staff about resources. Each partner will have regular staff meetings, trainings, and educational forums that focus on community resources. Care coordinators will be encouraged to share information with colleagues. CCN will ensure staff is provided access to an electronic resource database, as well as a written handbook that identifies community resources. As staff becomes aware of resources, the electronic database and the printed resource handbook will be updated accordingly.

7.3C Community Partner Supports and Activities

7.3C Community Partner Supports and Activities (15-pages)

For many individuals with BH, Substance Use Disorder (SUD), and/or homelessness, navigating the complex and evolving BH system can be overwhelming and at times disheartening. We recognize that these individuals need a clear path, guidance, and direction to access services in order to develop community and clinical supports that are not duplicative. The BHCP initiative provides resources, supports, and critical components to ensure that Enrollees have access to services that best fit their needs.

The BHCP is not one intervention; it is a progression of interventions culminating in a comprehensive partnership to support the whole person. The key components that are offered begin with outreach and active engagement, which result in the completion of a comprehensive assessment and Person-Centered Treatment Plan. Based on the Person-Centered Treatment Plan, the Care Coordinator, with oversight from the Care Manager, will bring together a care team for the Enrollee that will address Care Transitions, Medication Reconciliation, Health and Wellness, Care Coordination and Management, Coaching, and Connections to Community and Social Services. These components provide a clear road map for the Enrollee and his or her team.

The following is a detailed description of how each of the components will be operationalized:

7.3 C1. Outreach and Active Engagement

Effective outreach is critical to the success of the BHCP. Care coordinators and care managers will be the first to reach out to the Enrollee and encourage his or her participation in the BHCP. This first contact must be strengths-based, supportive, and positive, so that the Enrollee understands that this service is unique and unlike other services previously experienced.

In order to accomplish successful outreach, CCN is first and foremost committed to a skilled workforce with comprehensive Care Coordinator training. Research indicates that positive experience with care coordination is directly related to more positive health care appraisal and fewer unmet needs. Satisfied Enrollees are more likely to follow treatment plans, continue regular health care services, seek continuity of care, and disclose critical information.[1] For this reason, staff training will include evidence-based practices including motivational interviewing, recovery coaching, relationship-building, effective communication strategies based in recovery-oriented principles, and trauma-informed care.

We understand that locating and engaging individuals will be a challenge in some cases, and we recognize that we must be fully committed to making that connection with each Assigned Enrollee. We will closely monitor outreach and engagement activities to ascertain the most effective methods. The Care Coordinator with his/her supervisor will discuss creative ways to reach the Enrollees given their history and experience. All outreach efforts will be documented in the electronic care management system (eCMS) and integrated in the outcomes management. CCN seeks to achieve active engagement and is committed to at least one outreach activity within 30 days of referral and one face to face contact within three months**. (See Process Flow Attachment at end of this section).**

[1] Care Coordination Experience of People with Disabilities Enrolled in Medicaid Managed Care, University of Illinois, Department of Disability and Human Development, 2016

a. Strategies to outreach/engage with Assigned Enrollees, including individuals who are homeless and hard to reach, within the specified timeframes:
There are numerous social determinants of health that directly impact the Enrollee's ability to participate; homelessness can be one of the most challenging to effectively address. CCN is fully committed to reaching all Assigned Enrollees and recognizes the challenges that are inherent with the population served. Our first strategy in outreach to those who are homeless and hard to reach is to employ Care Coordinators with lived experience of homelessness, as well as other social determinants of health to bring creativity, confidence, commitment, and ingenuity to reaching and engaging those individuals.

Additional strategies for outreach include telephone contact/texting, social media, visiting locations where the Enrollee may be getting support services (e.g., recovery learning centers and clubhouses, food pantries, soup kitchens, day programs), contacting current or prior providers (if available and known), visiting local shelters, and working collaboratively with state agencies and the ACOs/MCOs. The Care Coordinator will follow the EOHHS-approved protocol for Outreach and Active Engagement with Enrollees.

For individuals experiencing homelessness, we understand that participating in the BHCP may not be a priority when their basic needs are not being met. Assisting Enrollees to access needed resources to assist in meeting their basic needs can be the first step in developing a relationship of trust and subsequently moving toward more formal care coordination. The Care Coordinator will work with other members of the Care Team, as well as access other community resources to address the Enrollee's immediate needs to aid in the engagement process.

Outreach by visiting locations the Enrollee is known to reside or frequent is especially important for persons that are homeless or at risk of homelessness. A significant strength of CCN is our commitment to and understanding of the communities we serve and the relationships that we have built. Together, our network has over 250 years of experience and expertise in the identified area. We will leverage our longstanding community and business relationships, in addition to share and maximize resources to expand our ability to reach those who would most benefit from the BHCP care coordination.

b. Strategies to outreach and engage Assigned Enrollees with SUD:
HPTC as the lead agency of CCN has extensive, broad-based experience supporting individuals with SUD. Its knowledge and expertise combined with that of all CCN partners, makes this population one with which we are confident of our ability to reach and serve. Collectively, we have trained and employed over 100 individuals in recovery as Recovery Coaches. The 5-Day Recovery Coach training that our recovery coaches have participated in has built a solid foundation upon which to assist, support, and engage individuals experiencing SUD.

Offering a recovery coach is our first strategy to support individuals with SUD. Recovery coaches offer outreach through a number of recovery services, including recovery centers, Self-Help/12 step meetings, as well as numerous SUD treatment services. Recovery coach Care Coordinators have a deep working knowledge of these resources, as well as the communities and locations where individuals with SUD reside. Recovery Coaches' lived experience and comfort

in reaching out to this population has proven to bolster the confidence, acceptance, and respect of Care Coordinators. Working in partnership to reach individuals with their own life circumstances in a myriad of locations and doing so without judgment, is of critical importance when attempting to engage with this population.

c. Process to obtain and document agreement to participate, signing Participation Form:

Taking time to carefully explain BHCP services and their unique features and benefits will be the first step in engaging the Enrollee and signing the Participation Form. CCN's brochure and literature will (in preferred language) provide a program description, delineate the process and options, and respond to common questions. These documents will be designed to open dialogue between the Care Coordinator and Assigned Enrollee. Encouraging questions, being transparent and patient, clearly explaining how BHCP support will be different from other/prior services will be instrumental in engaging the Enrollee. We understand that it may take multiple outreach attempts, in addition to face to face meetings with the Enrollee to develop rapport and assist him/her in making a decision to participate. Committing time and making a positive connection is a valuable investment in the relationship, allowing the individual to fully understand available supports and benefits, thus engaging with confidence and remaining engaged to fully utilize the services.

Once this is achieved, the Care Coordinator will have the individual sign a Participation Form, and explain that this confirms agreement to participate in the BHCP program. This step will move the individual from 'Assigned' to 'Engaged' status, allowing the Comprehensive Assessment (CA) to begin. The Care Coordinator will carefully review Protected Health Information (PHI) and how information will be shared. CCN intends to obtain, use, and share PHI as agreed to by the Enrollee, in accordance to its developed plan and pursuant to Section 4.1.A.3.i.with input from EOHHS and the ACOs/MCOs. The signed Participation Form will be scanned and filed in the eCMS. Upon confirming their commitment to participate, the Care Coordinator will begin the CA or based on preference, immediately set up an appointment to do so, bringing together the Enrollee's Care Team.

7.3 C2. Comprehensive Assessment and Person-Centered Treatment Plan

a. Comprehensive Assessment (CA):

The Comprehensive Assessment process begins immediately upon enrollment if the Enrollee has not had an active CA within 3 months prior to enrollment. In all situations, however, members of the Care Plan (CP) Team, which includes the Clinical Care Manager, the assigned Care Coordinator, and others who may be involved/working with the Enrollee with his/her consent, will work collaboratively to either develop the CA or assure implementation of the existing CA. The CCN Team will gather information to get a holistic and inclusive understanding of the individual, his/her life story, and the impact of illnesses on his/her life across a number of domains using the Massachusetts Standardized Documentation Project (MSDP) CA (as approved by EOHHS). To assure an inclusive approach, information is sought from many sources (with consent) including medical record documentation; referral information; narrative from the Enrollee; family members/friends/natural supports, and/or Legally Authorized Representative (LAR), if applicable; and previous and/or current treatment providers. As much as possible, Enrollee information is sought to verify information that has already been documented, as well as to achieve the most complete understanding of current status and life circumstance with regard

to physical, behavioral health, and a number of psychosocial needs. This process is essential in order for the CP Team to assist the Enrollee in navigating the behavioral health and health care system, improve continuity of care, coordinate and integrate care, and support principles of recovery.

Developing rapport is essential to engagement, and active outreach will help facilitate the process to assure a comprehensive view. To begin, a member of the CP Team, best suited to facilitate information-sharing, will meet with the Enrollee face to face. As the process unfolds, methods of communication most effective for the individual and others involved will be utilized, including phone and electronic methods. The CA will be completed within the first 3 months of the Enrollee's admission, with a minimum of one contact within the first 30 days of enrollment and as needed over the subsequent two months to complete the process. Information is collected from current and previous providers, including, but not limited to, the Enrollee's referral source (ACO/MCO), PCP/designee, specialty medical and behavioral health providers, housing providers, case managers, CBFS provider (if applicable), as well as other sources, including state agencies, such as DMH, DDS, DYS, DCF, OCCS, MCB, and MRC. The CP Team RN will review medical documentation/information and medical history, medical needs, and current medication list.

The EOHHS-approved CA tool will consist of information about and evaluation of presenting concerns and immediate care needs: current living situation, housing security/risk of homelessness and housing preference, family medical history, Enrollee medical history, current medical needs and current medications, social support, religion/spirituality, cultural/ethnic information, legal status/legal involvement history, education, employment, and meaningful activities, professional interests and goals, income and financial support, mental health and substance use treatment history and current needs. Current services include but are not limited to services provided by state agencies, ability to communicate care concerns, symptoms, and goals; a functional assessment of ADLs; self-identified strengths, weaknesses, interests, care goals, and personal goals; and accessibility needs, including preferred language, communication style, transportation, and equipment. CCN proposes to use the MSDP Adult Comprehensive Assessment (ACA) in electronic form to be consistent with that typically used across providers. The ACA includes all areas identified. Approval would be obtained from EOHHS prior to implementing this tool.

The CA will be reviewed and approved by the Licensed Clinical Care Manager, Registered Nurse (RN) and the PCP or PCP/designee. The Clinical Care Manager will distribute the finalized assessment to the other CP Team members, as well as PCPs, the ACO/MCO, and other service providers and state agencies involved in Enrollee care. The CA will be updated every six months, and if a significant clinical event occurs such as hospitalization, new/changed diagnosis, and/or change in a major psychosocial area that would impact services. The process is similar to that of the initial CA where the Enrollee and the CP Team work collaboratively to review changes in health status, services, and progress toward goals**. (Please see requested attachments of 'MSDP adult comprehensive assessment,' 'addictive behavior and substance use history addendum,' in addition to assessment tool 'PRAPARE' at the end of this section)**

2b.1-4 Process for Person-Centered Treatment Plans

Central to Person-Centered Treatment Planning is the genuine participation and collaboration with the individual, who has the best knowledge of his/her strengths, needs, and ideas for treatment goals and objectives. Engaging and supporting individuals through a strengths-based, person-centered planning process, unique to the person served, requires listening, understanding, and establishing rapport, maintaining a therapeutic relationship, and working in a collaborative manner. Peer specialists and/or recovery coaches are especially important in the assessment and treatment planning processes and can be extremely helpful when trying to engage the individual in planning and follow-through with his/her individualized plan.

The Person-Centered Treatment Plan is informed by the information gathered during the CA process and from other assessments conducted by current and previous service providers, such as the assessment of social needs. Each treatment plan will include a Personal Crisis Plan, which helps both the Enrollee and providers to understand ways to best support the individual in preventing a health crisis, as well as his/her needs during a crisis, which may be psychiatric, medical, or psychosocial in nature. The Person-Centered Treatment Plan and Personal Crisis Plan will be developed immediately following conclusion of the CA process and within three months of enrollment. As with the CA process, the CP Team works together with the Enrollee, as well as family members/natural supports, LAR (if applicable), and service providers, as appropriate, to develop an individualized, Person-Centered Treatment Plan.

The process of developing an individualized plan demands an environment of effective communication, open discussion, respect, and collaboration. It is not always completed in one session and must be thought of as a process. Meetings will accommodate the Enrollee and his/her support network, when practical. To support engagement and facilitate the individual in steering his/her treatment goals, a positive and hopeful atmosphere is provided throughout the process. A peer specialist or recovery coach can be particularly helpful in helping to solicit ideas from the Enrollee. CP Team members will be responsible for assisting in the development of goals, services, and interventions that are both clinically appropriate and acceptable to the Enrollee. The Person-Centered Treatment Plan will be approved by the Enrollee and his/her PCP. It will then be distributed to the CP Team, the PCP, ACO/MCO, and the Enrollee's service providers.

The individualized Person-Centered Treatment Plan includes several components. Contact information for the Enrollee, his/her PCP, and emergency contact is essential during the initial stage and must be maintained as changes occur. The type, frequency, and duration of services, as well as specific dates for re-evaluation are included. Essential to integrating care, the plan will convey how services will be coordinated among service providers of the Enrollee's Care Team. Short and long-term goals toward health and wellness are fundamental in establishing the treatment plan. Identification of barriers to meeting goals, goals to reduce risk, and manage complexity, and a review of the Enrollee's motivation and ability to adhere to the treatment plan are also crucial elements. As indicated earlier, the treatment plan will include a Personal Crisis Plan to be used by the Enrollee and members of his/her CP Team, as needed. A natural outcome of working collaboratively with the Enrollee during the treatment planning process is to fully understand personal preferences, needs, strengths, and cultural considerations, which will be the underpinning of continued engagement and success.

The written plan will be provided to the Enrollee in his/her primary language. If an LAR or other support is involved, the plan will be translated into the Enrollee's primary language. Translation/interpreter services will be used when a language barrier exists and/or the assigned Care Coordinator is unable to effectively communicate with the Enrollee or others involved. The CCN has access to 32 spoken languages within its network as well as translation/interpretation services of over 50 languages. If needed, alternative formats will be used to convey the content of the treatment plan, such as an audio or videotape. This assures understanding and informed consent and further inspires engagement and continuity of care.

The Person-Centered Treatment Plan will be reviewed at least every 6 months or from date of approval by the Enrollee's PCP, whichever is later. During the review process, the CP Team ascertains success of planned interventions and progress toward identified goals. Treatment plan review includes determining progress toward goals, assessing the Enrollee's health status, and reassessing the plan goals and interventions, in addition to determining the level of compliance with the plan, recommendations for follow-up, and updating the plan as needed. The plan will be rewritten at least annually. As with the initial plan, any revised or rewritten plan will be approved by the Enrollee's PCP and distributed to his/her ACO/MCO, PCP, Care Team, and outside service providers. The plan can be revised or rewritten at the review period or at any time the individual's needs change. During this process, the Enrollee is always asked for input regarding services provided and their impact on Enrollee health and wellness recovery goals. Other members of the CP Team are consulted when reviewing progress toward goals. Changes due to physical health, symptoms of mental illness, or a functional decline would be evident from interaction and communication with the Enrollee, CP Team members, and collateral contacts. If more than one area of the Enrollee's health status changes, the CP Team would be convened to review the plan for needed changes and any changes made would be communicated in a timely fashion to those involved in the Enrollee's care. **(See Process Flow Attachment at the end of this section).**

7.3 C3. Care Coordination and Management

Effective care coordination is the cornerstone of the BHCP program. Research has demonstrated that "care coordination increases efficiency, improves clinical outcomes and patient satisfaction."[2] All CCN partners have experienced individuals served being overwhelmed, frustrated, and frightened by the complexity of navigating the medical, mental health, SUD, and social service systems. In preparing for the submission of this proposal, our network discussed these challenges at length and how best we ensure that those in the Southern region and Greater Boston region would have the support and resources necessary to successfully navigate these often complex systems. The CCN partners have extensive experience and a deep commitment to providing effective care coordination. We recognize that in taking a collaborative approach, our efforts will be all-encompassing and extend to PCPs, other providers/programs, social services, community resources, collaterals, state agencies, peer networks, MCOs/ACOs, and most importantly, to the Enrollees.

a. Identifying all stakeholders involved in an Enrollee's care

The Care Coordinator will use the CA process to identify all stakeholders involved in the Enrollee's care. The assessment is the first step in understanding the Enrollee's treatment

[2] SAMSHA www.integration.samsha.gov

experience, use of natural and peer supports, current/past treatment providers, state services, social services, and most importantly his/her preferences. It is critical that the Care Coordinator takes the time to develop a trusting and supportive relationship with the Enrollee during the outreach and engagement process. Experience has taught us that simply gathering data without developing a strong connection will not build the necessary foundation for effective care coordination and team process. Carefully and thoughtfully identifying all stakeholders, including family, friends and other formal and natural supports will improve collaboration, avoid duplication of care coordination services, and best support the individual.

b. Exchange of information with such stakeholders:

The Care Coordinator will obtain signed Releases of Information that comply with state and federal laws from all identified supports. The Care Coordinator works with the Enrollee to identify individuals and organizations to participate on his/her Care Team. The Care Coordinator will be responsible to notify all stakeholders of the BHCP services and invite their participation in the care planning meeting(s). The eCMS will have functionality to exchange information and care plans with ACOs/MCOs and potentially with other authorized key stakeholders, including Care Team members. The Mass HIway and e-mail encryption will also be used for purposes of secure information exchange with providers and stakeholders. Recognizing the diversity of resources and applications utilized for the hundreds of potential stakeholders, CCN will interface with the stakeholders on behalf of Enrollees. We are poised to exchange information by utilizing an eCMS that is specifically designed to meet all required specifications and is configurable to meet service needs.

c. Identification and organization of the Enrollee's Care Team:

Together, the Care Coordinator and the Enrollee will decide who will participate on the Care Team. The Care Coordinator will strongly encourage the PCP or PCP designee, Clinical Care Manager, behavioral health clinician, and, as appropriate, family members, specialty clinicians, informal caregivers/natural supports, advocates, state agencies, peer supports, and community organizations as well as LTSS and CBFS providers, to be part of the Enrollee's Care Team. However, we respect that the Enrollee is in charge of who participates on his or her team. Honoring preferences is paramount to sustained engagement.

Experience has taught us that Enrollees may be hesitant to initially include multiple people on their Care Teams. The Care Coordinator will continuously work with the Enrollee to understand and address concerns related to who attends their Care Team meetings. These will include inviting others as needed, based on identified needs at any given time, and topics to be discussed. When the Enrollee is ready, the Care Coordinator will invite additional supports to participate. It should be noted that we do not view the Care Team as a static group. It is an evolving and growing support system for the Enrollee and will likely change and develop over time. With positive Care Team meeting experiences, we expect an Enrollee to be more deeply engaged and excited to ad supports to his/her team. It is the balance between careful listening to the Enrollee's needs and preferences and the development of relevant care plan goals that will enable us to build, with the Enrollee, an effective Care Team. Care Team meetings will be scheduled at a convenient time for those participating and be held at easily accessible locations. Conference call capability and electronic communication such as Skype will also be used, when appropriate.

When input from an important stakeholder is needed and the person is either unable to attend or the Enrollee doesn't wish to include him/her, a written report or status update will be requested for inclusion in the planning process, as authorized by the Enrollee.

d. Ensuring ongoing, effective communication across stakeholders, including documentation:
The Care Coordinator will be responsible for ensuring ongoing communication and the exchange of essential, required documentation, including keeping the team and collateral contacts informed of the Enrollee's progress, with the Enrollee's authorization. Consents will be signed at the time of engagement and periodically, as needed. eCMS will be utilized when possible for access to Care Plan updates and alerts as well as access for the Enrollee through the "Enrollee Portal."

7.3 C4. Care Transitions:
Transition between the many types and levels of care within our behavioral health/health care system is often perplexing and confusing for Enrollees and their families. The system is often fragmented, resulting in unintended barriers for Enrollees and those who support them in managing their behavioral health/health care needs. Navigating the system can raise questions about who is responsible for various aspects of care, how and when to take medications, which treatment recommendations are most important, scheduling and accessing transportation, interacting with various communication systems, cultural and language barriers, and/or lack of understanding treatment planning and options available. The goal of effective care transitioning is to assist the Enrollee and his/her family, caregivers, and support network to moving seamlessly from one level of care to another and from one provider to another in a way that prevents unnecessary complications and setbacks for the Enrollee, thereby improving overall care continuity.

Clear communication and effective information transfer is pivotal. Studies indicate that an optimal transition should be well-planned and adequately timed and that communication between settings or providers often fails to supply all of the information needed for optimum care.[3] Care transition plans are therefore an important defense, reducing and preventing medical/medication errors, facilitating prevention and early intervention strategies, avoiding unnecessary hospitalizations/re-admissions, enhancing the efficient use of resources and available support, and most importantly, honoring the Enrollee and improving satisfaction. Care Transition Planning facilitates the coordination of medical and LTSS when an Enrollee has been admitted to a hospital for medical care, discharged from a hospital to a long-term care setting, such as a skilled nursing facility or inpatient rehabilitation facility, or discharged to a community-based long-term care setting.

All CCN partners have utilized Care Transition Plans with individuals and families over the past several years. Initiatives include Community Support Programs (CSPs), Community Service Agencies (CSAs), and other care coordination/case management programs. For example, when an individual is stepping down from an inpatient Clinical Stabilization Service, CSP staff can assist the SMI/SUD individual prior to discharge in stepping down to a less intensive level of care, such as outpatient services. This support can make the transition to outpatient far less stressful and confusing for the individual and family members and increases the likelihood

[3] Improving Transitions of Care: Hospital to Home; National Transitions of Care Coalition; October 2009

he/she will keep the outpatient appointment. Bridge visits for specific MCOs create an opportunity for an outpatient clinician to participate in the inpatient aftercare plan while the Enrollee is still inpatient to address barriers that may inhibit follow-through with recommended services. Transitional services give the individual and family an additional opportunity to address their concerns in taking next steps and identify solutions that result for successful transition to another provider or level of care. High Point Treatment Center, Bay State Community Services, and Brockton Area Multi Services, Inc. are currently involved in two pilot programs that involve four additional agencies, including two local hospitals and community-based BH programs that are collaborating and utilizing Clinical Care Documentation (CCD) electronically transmitted to the subsequent provider for referral and on the day of discharge. Utilizing electronic exchange of data and Protected Health Information (PHI) through transitions will assure and improve coordination of care among and across the Care Team.

Care transition support will be extended to Enrollees as a CP activity. The Care Coordinator will contact the Enrollee's inpatient treatment team, the PCP, ACO/MCO, and participate in the development of an appropriate discharge plan, and be present at discharge planning meetings. The Care Coordinator will work in collaboration with the Enrollee and the ACO/MCO to ensure that potential barriers to following through with behavioral and medical health care needs, including but not limited to medication-related services, rehabilitation, and recovery support services are addressed. The Care Coordinator will assist in ensuring that the Enrollees' needs are communicated in a way that they and their family understand. Cognitive, cultural, and linguistic needs, as well as literacy and health literacy will be incorporated into verbal and written communications with the Enrollee.

The Care Coordinator will conduct a face to face visit with the Enrollee within 3 business days following an inpatient discharge or change in treatment setting, aiding through the transition process, utilizing evidence-based interventions designed to address the Enrollee's needs. The Care Coordinator will utilize motivational interviewing, an evidence-based practice that is designed to assist in engaging the SMI/SUD population. Engagement and establishing trust is an important first step in working with this population. Motivational interviewing emphasizes a person-centered approach, listening and working with individual's unique change talk. In addition to utilizing motivational interviewing, the Care Coordinator will be trained in the evidence-based practice/Stages of Change Model Prochaska and DiClemente[4]. This approach outlines the five stages of change that individuals move through during life transitions. Based on the Enrollee's level of motivation, ability to function in the community, and history of treatment experience, the Care Coordinator will utilize additional evidence-based models, including recovery coaching to assist in making positive changes toward recovery and wellness. A transition checklist will guide Care Coordinators, who will act as a hub to verify and clarify information exchanged between providers.

The Care Coordinator will be responsible for updating the Person-Centered Treatment Plan and documenting and electronically transmitting Clinical Care Documentation (CCD) to pertinent providers, including the ACO/MCO. The Care Coordinator will monitor needs, issues, and concerns and facilitate the coordination of clinical and support services during the care transition. Through consistent communication with the Enrollee, the Care Coordinator will continue to

[4] The Stages of Change Model; Prochaska and DiClemente; 1984

assess his/her motivation and readiness for change in each goal area of his/her Treatment Plan. The Care Coordinator will provide ongoing updates on the Enrollee's progress toward meeting treatment goals, identifying new barriers to accessing care, and challenges to community stability with all involved treatment providers, with regular contact and follow-up every step.

Throughout the engagement and implementation process, the Care Coordinator will have ongoing contact and will meet with the Enrollee based as appropriate. He/she will offer to accompany the Enrollee on initial visits/contact with treatment providers, facilitating a warm hand off and engagement with the new provider. The Care Coordinator will also ensure that the provider has access to health information through the CCD program or eCMS and facilitate additional communication when needed.

Throughout the transition process, the Care Coordinator will work with the Enrollee and his/her family, addressing barriers to ensure a smooth transition between levels of care, services, and providers based on the Enrollee's unique needs and preferences.

7.3 C5. Medication Reconciliation:

According to the U.S. Dept. of Health and Human Services, Agency for Healthcare Research and Quality (AHRQ), communicating changes to medications after an inpatient stay is a major challenge for systems trying to coordinate and integrate care. The effectiveness of a sound medication reconciliation process within and among care settings is an important component of patient safety, improved transitions, and treatment success. AHRQ offers a variety of resources and tools for medication reconciliation. The medication reconciliation process for CCN will utilize components from emerging practices used in acute and community settings.

Medication reconciliation is a collaborative process between the CP RN, Enrollee, PCP, the pharmacist, discharging facility, and other ancillary health care professionals. As stated earlier, the CP RN collects a complete list of medications the Enrollee is taking upon enrollment. This comprehensive list should include prescribed medications, herbal supplements, over the counter medications, as well as any nutritional supplements. Each time an Enrollee is discharged from an inpatient stay, which can be a medical or psychiatric hospitalization, the CP RN will be responsible for conducting medication reconciliation. Discharge planning should be thought of as beginning at the time of an inpatient admission. Ideally, the RN starts the medication reconciliation process before discharge from a facility, so it is concluded upon discharge. The RN should have advance notice of a hospitalization when possible to best facilitate the process. Care coordinators may have knowledge of admissions from the Enrollee or from one of his/her service providers, or ACO/MCO. In this case, the Care Coordinator will assist the RN in attaining a targeted discharge date and a list of discharge medications. The timing of the medication reconciliation is vital so as not to create a gap in changes, additions, and deletions between medications being taken while the Enrollee is in the hospital and actual medications taken upon discharge of the inpatient stay. If full medication reconciliation cannot be completed before discharge, then the process will occur within 3 days of discharge.

Close to or upon discharge from an inpatient stay, the Care Coordinator will help to facilitate obtaining the medication list from the facility/prescriber. The RN reviews and compares the discharge medication list to the list of medications on record, which would be the list of

medications taken prior to admission. If there are no changes during the inpatient stay, the RN simply verifies and assures adequate supplies on hand. If there are medication changes, the RN will provide the Enrollee's PCP with the medication list in order to verify that the medication orders from the discharging facility/prescriber are appropriate given the Enrollee's overall health profile. Unintended discrepancies will be discussed with the physician and any resulting changes documented in a revised medication order. The PCP will review for unwanted medication interactions or side effects. The PCP will be able to identify medications that have been prescribed in the past with limited effect, or medications with which the Enrollee had poor adherence. The PCP will also need to know new medications that require special monitoring through lab work or symptom monitoring.

After the accuracy of the medication list is determined by the CP RN and approved by the PCP and other prescribers, the RN ensures that the medication orders are filled correctly. The RN can do this in a variety of ways, depending on the level of independence of the Enrollee. Some Enrollees who are independent may have already filled their prescriptions upon discharge. In this scenario, the RN would review the medication list and cross-reference with the pharmacist or the Enrollee's medication supply looking for discrepancies, and forward updates or changes to the PCP for further review and approval. At this point, if the prescribers do not want to make any changes, the record is edited, order obtained, and the Enrollee continues using as prescribed. If the prescriber has recommendations for change, the RN and Care Coordinator will facilitate a conversation and/or schedule an appointment between the Enrollee and the prescriber to discuss and come to agreement on changes. If the Enrollee has not filled his/her prescription(s), then the RN oversees the process of filling medication orders with the pharmacy with assistance of the Care Coordinator. Again, depending on the level of independence and functional ability of the Enrollee, the Care Coordinator may assist in the process. The Care Coordinator may also work with the Enrollee's Care Team and identify natural supports or skilled nursing for additional support.

The Enrollee will be counseled on any changes, additions, or deletions that were made to the medications. The new medication list will be provided to the Enrollee in a clear and understandable manner to encourage full medication compliance and prevent confusion or questions that may result in medication errors. The RN will confirm that the Enrollee demonstrates an understanding of what he/she is taking, why, and how he/she is taking it. The RN will review the medications with the Enrollee and discuss ideas to prevent non-compliance and to promote adherence to taking medications as prescribed. There are many effective strategies that the Enrollee can utilize as medication reminders. These include, but aren't limited to calendar reminders, telephone calls/text reminders/alerts, daily medication planners, electronic reminders such as smart phone "apps," and digital pill containers/dispensers, pharmacy provider medication bubble packs, and using natural supports such as family members and friends. Enrollees who require further support will be referred to a home health agency to assist with medication management. CP Team members will assist Enrollees in using one or more of these strategies and evaluate the success of each method during review periods.

Strategies to help organize and remember to take medications are effective and useful. However, research shows that individuals take medications as prescribed when they are motivated to do so. Motivational Interviewing has been widely used and adapted in psychiatric and medical

programs in order to help change behavior, like adhering to a medication regime. Other techniques will be used to encourage and support medication adherence, such as improving education related to diagnoses and medications, patient access to medical records, shared decision-making, and simplifying medication regimes. The RN can spot-check for medication compliance through a review of an Enrollee's blood pressure (if she/he is on medications for hypertension), review of blood sugars (if being treated for diabetes), and other checks, depending on medications and diagnosis. The RN can also confirm with the pharmacy that the medications are being filled and picked up according to the prescribed schedule.

If the Enrollee participates in a program utilizing DPH's Medication Administration Program (MAP), it is imperative that the CP Team provides an accurate, updated medication list and specific medication orders in the format required by MAP in a timely manner. The CP RN will have a working knowledge of MAP policy and procedures. Enrollees who participate in MAP live in residential programs, as well as independently in the community. They receive their medication from MAP-certified staff. For example, not having the correct prescriber's order will prevent staff from administering a needed medication. A delay in medications may not be safe for an individual. Medication occurrences can be prevented by the CP RN collaborating very closely with the MAP staff in these instances. Three of the CCN partners have extensive MAP experience.

7.3.C6. Health and Wellness Coaching:

a. Health and wellness education, coaching and health promotion

The CCN practices a person-centered approach when guiding each Enrollee toward achieving a healthy lifestyle, which is an important part of overall wellness and recovery from behavioral health disorders/SUD. This approach is guided by the MA Department of Mental Health's "Healthy Changes Initiative." This initiative was developed to address modifiable risk factors for chronic illness and health. The framework emphasizes improved health and wellness through screening, assessment, and providing evidence-based treatment planning throughout the system of care for nicotine addiction, obesity, and physical inactivity. The framework can easily be applied to other health and behavioral health conditions and goals. The underlying premise of integrating health and wellness coaching into treatment planning is that everyone benefits when Enrollees reach their optimum level of wellness, self-management, and functional capability, for the Enrollee, their families/support systems, the health care delivery systems, and various payer sources.

The Health Changes Initiative's structure of health and wellness in treatment planning is based on the following concepts:

- Healthy lifestyle is an attainable goal and an important part of overall wellness and recovery;
- Person-centered approach to health and wellness is key; and interventions must be culturally and linguistically sensitive;
- An individual's readiness to take action to move toward a healthy lifestyle is the basis for any goals, objectives, or interventions and is a method for measuring the process that people go through when they successfully make changes in their lives[5];

[5] The Stages of Change Model; Prochaska and DiClemente; 1984

- Motivational techniques can increase an individual's desire to take action, including motivational interviewing and motivational enhancement.

CCN recognizes that assisting an Enrollee in taking small steps toward healthy living is the best way to achieve lifestyle changes. Living a healthy life is a process that does not happen overnight. We are committed to training our care coordinators in this model, as well as other models that will be individualized for the Enrollee.

b. Goals for health and wellness recorded/tracked as part of Person-Centered Treatment Plan.
CCN's Health and Wellness Coaching is a collaborative process of working with the Enrollee and his/her support systems to specify personal wellness goals identified in treatment planning and the approach and means by which the Enrollee can reach his/her goals and reduce risks. Care coordinators trained in the Stages of Change Model will measure the process each Enrollee moves through when successfully making changes in his/her life. The 5 stages include pre-contemplative, contemplative, preparation, action, and maintenance. Care coordinators will utilize the evidence-based practice of motivational interviewing to elicit behavior change, helping members to explore and address potential ambivalence.

Including Enrollee health and wellness goals on his/her treatment plan begins with the CA and identifying the targeted health focus (e.g., increased exercise, improved nutrition, smoking cessation, weight loss, and chronic disease self-management, etc.). Once a health focus is identified, the care coordinator, working collaboratively with the Enrollee and Care Team, will establish long-term health focused goals and will record this in the eCMS. The Care Coordinator then guides the Enrollee with identifying and developing short-term goals with small achievable steps that will ultimately lead toward achievement of the long-term goal(s). Through small actionable steps, risk is progressively reduced, and the Enrollee begins to gain confidence, hope, and improved health and wellness. Goals are always personalized to the individual, considering his/her stage of change, and identify observable, measurable, and quantifiable behaviors the Enrollee will demonstrate, which are recorded/tracked in the Person-Centered Treatment Plan. An example of a short-term goal used to achieve the long-term goal of improving health outcomes may be participation in exercise 3 days/week for 30 minutes each time. The Care Coordinator would support the Enrollee to identify the best intervention to achieve the goal and connect the member to needed resources, such as transportation to/from the YMCA/YWCA or another location, obtain a free or low cost membership, and/or engage a "buddy" for support.

In addition to wellness planning, the Care Coordinator will provide ongoing health education on methods/strategies to reduce high risk behaviors and symptom management harm reduction, as well as assess other health risk factors. The Care Coordinator will provide coaching and education on chronic disease self-management and work with all providers to support coordinated efforts around unified goals.

7.3. C7. Connection to Community and Social Services:
In order to be effective, CCN will incorporate all the Guiding Principles and Elements of Recovery Oriented System of Care published by the Substance Abuse and Mental Health Service Administration (SAMHSA) and the Center for Substance Abuse Treatment (CSAT). These best and promising practices provide us with 12 guiding principles and 17 elements to which CCN is

committed. Recognizing that there are many paths to recovery, these guiding principles prioritize the belief that recovery is holistic and "recovery involves (re) joining and (re) building a life in a community." It is the responsibility of the Care Coordinator to ensure that each Enrollee has a realistic and sustainable plan that includes community and social supports.

CCN will implement a multi-tiered approach to ensure ongoing connections to community resources and social services. To address social determinants of health, we propose to implement the protocol for responding and Assessing Patient Assets, Risks and Experiences (PRAPARE), a social needs assessment developed by the National Association of Community Health Centers. Pending EOHHS review/approval, this tool will be used to identify areas of concern related to social determinants of health and will guide the Care Coordinator in identifying resources, best practices, and lessons learned to aid in the development of appropriate social service goals. A self-report questionnaire will also be used to address the need for community-based, social, and flexible services outlined in Attachment A; 2.3G.

While these tools are helpful, they do not replace the essential dialogue that must take place between the Enrollee and the Care Coordinator. Therefore, the second step in addressing social needs is taking time to explore the Enrollee's experience to best understand which resources would be most helpful and accepted. We know that Enrollees may be wary to access certain community resources. In this case, it may be beneficial to work through concerns, if indicated. To effectively use and benefit from community support/resources, the Enrollee must feel safe and express his/her preference. The Care Coordinator will assess the benefits of working with the Enrollee to return to a previous support or identify new supports based on identified strengths and needs. An important lesson learned is that too many referrals can be overwhelming and counterproductive. Careful selection with the Enrollee and providing choices that directly address care plan needs will serve to increase participation and desired outcomes.

Lastly, once the Enrollee has agreed to access a community support, a warm hand-off will be used. This is critical to ensuring the Enrollee's attendance and best use of the identified resource. The Care Coordinator will join the Enrollee on his/her first visit whenever possible to introduce the Enrollee to the recovery coaches in the recovery centers, staff at day programs, employers, case managers in the housing support programs, community support or health care workers, Self-help group members, and wellness and direct care staff at recreation facilities, to name some. The benefit of a warm hand-off is for the Care Coordinator to return to that location and meet with the Enrollee if appropriate, such as scheduling a meeting at a recovery center or any other community location that will support the Enrollee's continued participation. This also gives the Care Coordinator ability to see how the support is working and whether the needs are met or should be re-evaluated. Care coordinators will facilitate referrals and assist in making appointments, obtain PT 1, or aid in navigating public transportation. The strength of CCN is our extensive knowledge and experience in accessing the community and social services throughout all of our service areas.

7.3D Innovative Technologies for Service Delivery

7.3D Innovative Technologies for Service Delivery (1 page)

The planned use of technological tools pertaining to the CCN will utilize methods like telehealth, tablets, laptops, air cards, billing integrations, and customized interfaces to an Electronic Care Manager System (eCMS). Telehealth encompasses a wide variety of technologies and tactics to deliver virtual medical, psychological, SUD, health, and education services. Telehealth is not a specific service, but a collective means to enhance care and education delivery. The goal of this contract is effective care coordination, which will utilize tools to support Enrollees. In the event a Care Coordinator is not accessible due to unforeseen circumstances (emergency or severe weather), the CCN will utilize technology to maintain service delivery. The technologies for telehealth will include a variety of services, including HIPAA complaint video, secure text, and phone contact. Each of these means of communication carries its own level of privacy safeguards, including encryption at rest, in transit, and anonymous keys used in message decryption. These safeguards pertain to all forms of telehealth using products from Open Whisper System, Doxy.Me, and more.

Other technologies that will be used to support service delivery include a combination of tablets, laptops, and desktop computers. Currently, High Point Treatment Center (HPTC) uses tablets for QR scanning of client bracelets, safety (room) checks, dietary ordering, groups, and patient kiosks for dose change requests, and dosing check-in. Much of this is accomplished using a custom-built interface that links software developed in-house to the SQL database housing all the Electronic Medical Record (EMR) data. Creating such interfaces allows quicker access to information, easier input to the system, and a more streamlined workflow process, all aiding overall patient care. These strategies will be applied to the needs of the CCN Enrollees. Tablets in the scope of the contract will be used for Electronic Care Manager System (eCMS) access, as well as additional applications our eCMS vendor develops to work with the current EMR platforms or the CareManager application. A combination of laptops and desktops will document within the eCMS remotely, internally, or while traveling to see Enrollees. In conjunction with tablets and laptops, a third technology will be introduced for users working while traveling or where wireless Internet is not accessible. Air cards/hot spots will be used to bridge the gap of no connectivity and remote work by using a secure cellular connection to either an eCMS or EMR using VPN service for direct connection.

CCN is researching care management software products and will work to finalize a vendor by 8/15/17 and configuration by 2/1/18 as referenced in 7.3A4 Implementation Plan. Currently, HPTC utilizes Netsmart's TIER application, which offers great flexibility and customization to best suit the needs of its workflow. Due to its customizable nature, several enhancements have been made, helping HPTC to become one of the first customers to utilize the entire company's billing process thru the EMR, using a combination of interfaces and direct messages to payers. In addition to billing, the HPTC Electronic Care Manager System (eCMS) product has been customized to accept custom-built applications such as a medication reminder system, alert notifications, pharmacy medication management, room checks, labels, qr code generation wristbands, and dietary management of clients. Augmented/facilitated communication devices and adaptive equipment will be accessed to support Enrollees' health, mobility, and communication needs. Several partners have experience in these areas. The goal is for the CCN partners to utilize this same care management platform to easily communicate care and support Enrollees.

7.3 E Personnel and Staffing

7.3 E Personnel and Staffing (5 pages)

E1. Organizational chart attached at the end of the section.

E2. A Sample Staffing Model for the number of Engaged Enrollees in each Service Area as indicated in Attachment D, including number of FTEs for supervision, administration, and Care Management and Care Coordination positions.

Service Area	Year 1	FTE Supervisors	FTE Administration	FTE Care Manager/Care Coordinators
Attleboro	500	.35	.75	13.49
Barnstable	740	.52	1.11	19.99
Brockton	1,700	1.19	2.55	45.91
Fall River	640	.45	.96	17.28
Falmouth	350	.24	.52	9.44
New Bedford	2,240	1.57	3.36	60.48
Orleans	100	.07	.15	2.71
Plymouth	750	.52	1.12	20.25
Quincy	650	.45	.97	17.54
Taunton	700	.49	1.05	18.91
Wareham	350	.24	.52	9.44
Total	8720	6.10	13.08	235.44

E3. A description of Bidder's recruitment plans, including timelines to recruit staff for any personnel positions not currently filled, and job descriptions and qualifications for each personnel position.

As a new initiative, we recognize that there will need to be a great deal of time and energy spent recruiting all levels of staff in order to effectively launch the BHCP services as required by the RFR. We will capitalize on the strengths of our partner agencies' reputations, resources, and creativity to ensure that we successfully staff all the positions within the required timelines.

The process of hiring staff will begin as soon as a signed contract is completed. The first strategy for each CCN partner will be to assess current staff and determine if it has the appropriate credentials and the desire to be considered for these new positions. Simultaneously, we will begin the process of advertising, interviewing, and hiring for the positions.

As a Network, we will work collaboratively together to ensure that all interested candidates will be reviewed for credentials, experience, and desired location of work in a timely fashion so that no candidate is overlooked.

Each of the partners will employ a recruiter to support the BHCP Initiative. The following strategies will be employed to find and hire quality staff: Positions will be posted on Smart Recruiters. The platform for Smart Recruiters then filters all the positions to Indeed. In addition, positions will be posted on sites, including but not limited to Idealist, Craigslist, college/university job boards, Facebook, Constant Contact, agencies' websites, as well as LinkedIn. CCN will also have a dedicated website that will have available positions posted for each partner.

In order to address the immediate need for numerous care managers, care coordinators, and management staff, CCN will offer three open house hiring fairs in strategic locations. These open houses will be a collaborative effort to hire employees for any of the CCN BHCP positions.

In addition to media outreach, each of the CCN recruiters will present at career centers, participate in college/university fairs, present in college/university classrooms, and target local colleges, including the University of Massachusetts, Boston University, Simmons College, Lesley University, Quincy College, Eastern Nazarene College, as well as other local colleges/universities with human services-related majors. These aggressive strategies will enable us to reach hundreds of potential candidates every day.

Critical to our staff development is the employment of individuals with lived experience. CCN recruiters will work closely with the local recovery centers, recovery learning communities, DPH-Recovery Coach Training program, DMH Peer Training program, and the University of Massachusetts' Addictions Certificate programs to reach individuals with lived experience. These community-based sites work with hundreds of individuals with lived experience looking to give back to their communities.

Job descriptions for the positions are attached at the end of the section.

Plans for Recruiting Care Coordinators	**Timeline**
Recruit internally from current staff.	December 2017 and ongoing
Present our care coordination services to Bachelor's level college and university classrooms in their psychology, sociology, criminal justice, and human services majors. Target colleges and universities, including Bridgewater State University, Boston College, Boston University, Simmons College, UMASS, Eastern Nazarene, and Lesley University.	February 2018
Attend all job fairs at major Bachelor's level colleges and universities.	Winter/Spring 2018
Use our internal staff to reach colleagues and qualified friends and relatives.	January 2018 and ongoing
Post the care coordinator positions on all major recruiting websites (such as Indeed, ZipRecruiter)	February 2018 and ongoing

Plan to Recruit Master's Level Supervisory Staff	Timeline
Identify qualified Masters level staff to interview.	February 2018 and ongoing
Attend all Masters level job fairs at major colleges and universities, as well as the NASW and LMHC job fairs.	Winter/Spring 2018
Use current supervisory staff to reach out to qualified colleagues to schedule interviews.	February 2018 and ongoing
Advertise in professional journals (NASW, LMHC, LMFT, and BSAS).	February 2018 and ongoing
Post supervisory positions on major recruiting websites.	February 2018 and ongoing

E4. How Bidder will recruit/hire staff from cultural/linguistic communities it intends to serve.

CCN is committed to hiring staff who reflect the communities we serve. We accomplish this by first knowing the needs and demographics of our communities and reaching out to our communities to encourage these individuals to apply for positions.

Our current staff is an excellent resource to recruit colleagues, friends, and relatives with language and cultural capacity, in addition to credentials for the care coordination positions. Several of the CCN partners give current employees a financial bonus for aiding in the recruitment process. We will advertise in local community bi-lingual newspapers, as well as social media, emphasizing our desire to hire a diverse staff. Several of the CCN members also reimburse bi-lingual individuals at a higher rate. In addition, the CCN members will recruit staff for the care coordination positions in and out of the United States, as well as advertise in overseas newspapers and on websites for bi-lingual staff.

E5. Proposed training, orientation plans, and modules:

A well-trained, confident, and qualified staff will be CCN's most valuable resource. Maintaining this type of staffing requires a commitment of the partner agencies to screen, interview, hire, and provide a comprehensive orientation, as well as ongoing training program. All CCN employees will participate in their specific agency's orientation and training program. Each BHCP will train its staff on the core competencies as outlined in 2.4 C and 7.3 C.

Each CCN partner will develop individualized training plans for its staff. All training programs will include intensive training in the following areas: Making Connections with Enrollees; Healthy Boundaries; Effective Outreach and Active Engagement Techniques; Coordinating a Care Team; Completing a Comprehensive Assessment; Developing a Person-Centered Treatment Plan; Effective Care Coordination; Care Management; Care Transitions; Medication Reconciliation; Coaching for Health and Wellness; and Collaborating with Medical Professionals. In addition, each CCN partner will train staff on the documentation requirements of his or her position including maintaining a secure medical record; completing releases of information; care management software; writing strengths-based Person-Centered Treatment Plans; and completing progress notes that will include date of contact, mode of communication or contact, identification of collateral, results of contact, and required signatures and approvals.

In order to be prepared for the June 1, 2018, start date, CCN plans to organize an Implementation Team in accordance with our timeline referenced in 7.3 A4. This team will be comprised of senior level individuals from each of the CCN partners who will be responsible for the oversight of the service. Together, team members will develop policies and procedures, staff curriculum, process systems, and work with the ACO/MCO to finalize implementation requirements.

Each Network partner will hire staff two weeks before program implementation to complete training and orientation. CCN anticipates hiring 82 individuals in order to operationalize the program on June 1st. Having this workforce together and taking this opportunity to offer a comprehensive training with all new employees will allow the Network to have a well-trained and prepared workforce.

In addition, all staff will have the opportunity to participate in the CCN's monthly training. This will ensure that all staff members employed for the Network have a solid understanding of the expectations, are offering consistent service, and have developed the skills needed to be successful in their positions. This will also provide staff members from the different CCN partners an opportunity to meet and understand that they are part of a larger system. These trainings will be offered on a rotating basis at each of the CCN Partners' sites. The trainings will consist of the following training modules:

Module 1- SHARE Curriculum

Developed by The Agency for Health Care Research and Quality (AHRQ) SHARE curriculum. This curriculum offers the best practices of providing care management.

Module 2- Motivational Interviewing

Module 3- Care Management Essentials, including

- Outreach and Active Engagement
- Comprehensive Assessment and Person-Centered Treatment Planning
- Formation of a Care Team
- Facilitation of a Care Team
- Care Transitions
- Medication Reconciliation
- Health and Wellness Coaching
- Connections to Community, Social, and Flexible Supports
- Community Collaboration and Coordination

Module 4- Cultural Competency

- Accessibility and Accommodations
- Independent Living and Recovery Principles
- MassHealth State Plan, LTSS, and Eligibility Criteria

Module 5- Trauma-Informed Care

E.6. Description of Staff Retention Strategies

As part of our staff retention strategy, we outline ways in which an employee can grow in his or her position in the BHCP initiative. Staff that has demonstrated proficiency with the required core competency will be given the opportunity to mentor new staff and/or current staff that may need additional support. Each new employee will be assigned to a team leader, who will provide additional training, shadowing opportunities, and support.

The workforce is the foundation of the BHCP. Retaining qualified staff is essential to providing effective and quality BHCP services. There are several factors that influence an employee's decision to remain in or leave a position. These include job satisfaction, professional development, decision-making process, manageable workload, and reasonable expectations (SAMHSA).

In order to address these issues, the CCN will implement the following retention strategies. The first retention strategy begins with leadership. Having committed, skilled, knowledgeable, and supportive leaders in the BHCP creates an atmosphere for staff to want to learn, grow, and perform to meet the needs of our Enrollees. The CCN has been designed with staff comprising a Program Director (1.37 FTE), Clinical Case Managers (5.48 FTE), Registered Nurses (10.96 FTE), and Care Coordinators with Masters (13.7 FTE). They will support Care Coordinators with Bachelors (46.58 FTE) and Admin./Billing (4.11 FTE).

The CCN's second retention strategy is to build a collaborative team approach. Having a team that the care coordinators can rely on and use for support and resources will reduce isolation and encourage collaboration, while reducing the potential for burn-out. The third strategy is to offer opportunities for growth. A Care Coordinator will have the opportunity to become a team leader, champion for training, or supervisor, depending upon his or her degree.

Another retention strategy is to develop and maintain a robust training program. Experience and research has shown that when staff has training and certification opportunities such as becoming a recovery coach, receiving a trauma-informed certificate, and/or obtaining CEUs to maintain licensure, they are less inclined to leave for other opportunities. In addition, the CCN is committed to hiring individuals on a full-time basis with health, dental, and paid time off benefits.

CCN is also committed to a health and wellness initiative that has been implemented in many of our partner agencies, (e.g. eye doctors on-site, sharing healthy newsletter recipes, walking challenges, annual wellness and needs survey). This model would be adapted for the BHCP program.

7.3 F. Implementation Plan and Timeline

7.3 F. Implementation Plan and Timeline

Preparation Budget Period (Ongoing - May 2018)

August 2017

- Research and select care management software.

September- December 2017

- Meet with Affiliated Partners regularly
- Complete required paperwork from MassHealth

February 2018

- Identify potential office and meeting space in existing provider network of office locations.
- Identify members who will comprise committees, including Executive, Quality, Network Operations, and HR and Training.
- The following committees will begin meeting monthly: Executive Committee, Quality Management Committee, Human Resources and Training Committee, and Network Operations Committee.
- Begin configuring care management tool.

March 2018

- Continue configuring care management tool.
- Complete minor renovations of existing office space as needed. Minimal work is anticipated.
- Program Manager/Senior Manager begins work on project. Program Manager is a current High Point employee who will be reassigned.
- Continue outreach to designated MCO/ACOs to negotiate elements of contractual agreements.
- Further develop staff recruitment plan that utilizes various types of media.
- Develop training curriculum about roles and responsibilities for the Consumer Advisory Board (CAB).
- Develop staff training plan that delineates dates, locations, and instructors.
- Begin creating a website for Enrollee use.

April 2018

- Complete configuring care management tool.
- Develop policies and procedures for information sharing, Electronic Health Record utilization, and Mass HIway connection.
- Enrollee informational material developed in most prevalent languages and alternative formats.
- Staff training curriculum is developed and completed for all required areas.
- Computers, tablets, and telephone configuration completed.
- Ensure full compliance with Readiness Review responsibilities.
- Complete Continuity of Operations Plan.
- Budget report and narrative submitted for EOHHS approval.

- Begin furniture, equipment, office, and program supplies purchases.

May 2018

- Website completed.
- Execute contractual agreements with ACOs and MCOs.
- Conflict of Interest Policy is developed and approved by EOHHS.
- Grievance Policy and Procedure is developed and approved by EOHHS.
- Assigned or Engaged Enrollee Rights Policy is developed and approved by EOHHS.
- Continue recruiting staff positions, utilizing internal and external job postings, career fairs, etc. Complete background checks.
- Develop the following forms: Participation Form, Discharge/Transition Plan, Transitions in Care Checklist, Person-Centered Treatment Plan, Medication Reconciliation Form, and Social Services Assessment. Obtain EOHHS approval for the Comprehensive Assessment and other forms as required.
- Finish Furniture, equipment, office, and program supplies purchases.
- Program Director, Clinical Care Managers, Registered Nurses, Care Coordinators, Administrative Assistant, Intake and Billing Coordinators begin working May 2018.
- All staff receives training in areas required by the contract, attends each respective provider's standard orientation training, and is trained to use the care management tool. Training is completed by May 31, 2018.

Budget Period One (June1, 2018 - December 31, 2018)

June 2018 and ongoing

- Initial referral list provided by MassHealth. CCN acknowledges receipt of referrals within 1 business day. Referrals distributed to designated providers in each service area by May 2018.
- Outreach and intake efforts begin, Qualifying Activities begin, and Enrollees declining services are disengaged throughout the quarter.
- Notify EOHHS/MCOs/ACOs monthly of capacity to accept new referrals.
- Care Coordinator assigned within five business days. Care Plan completed for all Engaged Enrollees within 90 days of signing the Participation Form.
- Information about participating on the Consumer Advisory Board distributed to Enrollees.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.

July-September 2018

- The first Consumer Advisory Board meeting representing the CCN network meets in July/August to develop bylaws, guidelines, and to elect officers.
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Participate in feedback sessions with selected Care Management software vender to provide input for software enhancements.

The Consumer Advisory Board will meet quarterly after the initial meeting.

October-December 2018

- CAB provides an Annual Report for Executive Committee in December.
- Budget Report and Narrative submitted for approval. DSRIP Participation Plan submitted for approval.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Additional staff recruited and trained to accommodate new Enrollees. 120.74 FTEs of staff hired by December 31, 2018 to support 4,135 Enrollees in Budget Period Two.
- Annual Report with CAB input is submitted to EOHHS by October 31, 2018.
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Additional furniture, equipment, office supplies, and program supplies purchased to support increase in staff and Engaged Enrollees.
- Quality Measures Report completed by Quality Management Committee and reviewed by the Executive Committee and Consumer Advisory Board.
- Quality Improvement Plan developed by Quality Management Committee and Performance Improvement Team incorporating feedback from the Member Engagement Survey. New quality measures developed as needed.

The following committees will meet monthly: Executive Committee, Quality Management Committee, Human Resources and Training Committee, and Network Operations Committee. The Consumer Advisory Board will meet quarterly.

Budget Period Two (January 1, 2019 - December 31, 2019)

January-March 2019

- Outreach and intake efforts continue, Qualifying Activities continue, and Enrollees declining services are disengaged throughout the quarter.
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Care Coordinator assigned within five business days. Care Plan completed for all Engaged Enrollees within 90 days of signing the Participation Form.
- Information about participating in the Consumer Advisory Board distributed to Enrollees.
- Monthly Member Status Report completed. Submit record of all Qualifying Activities.
- Renew contractual agreements with MCOs and ACOs.
- Staff complete annual fresher training corresponding to their hire date.

April-June 2019

- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Staff complete annual refresher training corresponding to their hire date.

July-September 2019

- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Participate in feedback sessions with selected Care Management software vender to provide input for software enhancements.

- Semi-Annual Report is submitted to EOHHS in July.
- Staff complete annual refresher training corresponding to their hire date.

October-December 2019
- CAB provides an Annual Report for the Executive Committee in December.
- Budget Report and Narrative submitted for approval. DSRIP Participation Plan submitted for approval.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Additional staff recruited and trained to accommodate new Enrollees. 162.21 FTEs of staff hired by December 31, 2019 to support 5,555 Enrollees in Budget Period Three.
- Annual Report with CAB input is submitted to EOHHS by October 31, 2019.
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Additional furniture, equipment, office supplies and program supplies purchased to support increase in staff and Engaged Enrollees.
- Quality Measures Report completed by Quality Management Committee and reviewed by the Executive Committee and Consumer Advisory Board.
- Quality Improvement Plan developed incorporating feedback from the Member Engagement Survey. New quality measures developed as needed.
- Staff complete annual refresher training corresponding to their hire date.

The following committees will meet monthly: Executive Committee, Quality Management Committee, Human Resources and Training Committee, and Network Operations Committee. The Consumer Advisory Board will meet quarterly.

Budget Period Three (January 1, 2020 - December 31, 2020)

January-March 2020
- Outreach and intake efforts continue, Qualifying Activities continue, and Enrollees declining services are disengaged throughout the quarter.
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Care Coordinator assigned within five business days. Care Plan completed for all Engaged Enrollees within 90 days of signing the Participation Form.
- Information about participating in the Consumer Advisory Board distributed to Enrollees.
- Monthly Member Status Report completed. Submit record of all Qualifying Activities.
- Renew contractual agreements with MCOs and ACOs.
- Staff complete annual fresher training corresponding to their hire date.

April-June 2020
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Staff complete annual refresher training corresponding to their hire date.

July-September 2020
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.

- Participate in feedback sessions with selected Care Management software vender to provide input for software enhancements.
- Semi-Annual Report is submitted to EOHHS in July.
- Staff complete annual refresher training corresponding to their hire date.
- Quality Measures analyzed for implications of pay for performance. Executive Committee develops response to mitigate financial risk.

October-December 2020
- Consumer Advisory Board provides an Annual Report for the Executive Committee in December.
- Budget Report and Narrative submitted for approval. DSRIP Participation Plan submitted for approval.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Additional staff recruited and trained to accommodate new Enrollees. 210.97 FTEs of staff hired by December 31, 2020 to support 7,225 Enrollees in Budget Period Four.
- Annual Report with CAB input is submitted to EOHHS by October 31, 2020.
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Additional furniture, equipment, office supplies and program supplies purchased to support increase in staff and Engaged Enrollees.
- Quality Measures Report completed by Quality Management Committee and reviewed by the Executive Committee and Consumer Advisory Board.
- Quality Improvement Plan developed incorporating feedback from the Member Engagement Survey. New quality measures developed as needed.
- Staff complete annual refresher training corresponding to their hire date.

The following committees will meet monthly: Executive Committee, Quality Management Committee, Human Resources and Training Committee, and Network Operations Committee. The Consumer Advisory Board will meet quarterly.

Budget Period Four (January 1, 2021 - December 31, 2021)

January-March 2021
- Outreach and intake efforts continue, Qualifying Activities continue, and Enrollees declining services are disengaged throughout the quarter.
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Care Coordinator assigned within five business days. Care Plan completed for all Engaged Enrollees within 90 days of signing the Participation Form.
- Information about participating in the Consumer Advisory Board distributed to Enrollees.
- Monthly Member Status Report completed. Submit record of all Qualifying Activities.
- Renew contractual agreements with MCOs and ACOs.
- Staff complete annual fresher training corresponding to their hire date.

April-June 2021
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.

- Staff complete annual refresher training corresponding to their hire date.

July-September 2021
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Participate in feedback sessions with selected Care Management software vender to provide input for software enhancements.
- Semi-Annual Report is submitted to EOHHS in July.
- Staff complete annual refresher training corresponding to their hire date.
- Quality Measures analyzed for implications of pay for performance. Executive Committee develops response to mitigate financial risk.

October-December 2021
- Consumer Advisory Board provides an Annual Report for the Executive Committee in December.
- Budget Report and Narrative submitted for approval. DSRIP Participation Plan submitted for approval.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Additional staff recruited and trained to accommodate new Enrollees. 254.62 FTEs of staff hired by December 31, 2020 to support 8,720 Enrollees in Budget Period Five.
- Annual Report with CAB input is submitted to EOHHS by October 31, 2021.
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Additional furniture, equipment, office supplies and program supplies purchased to support increase in staff and Engaged Enrollees.
- Quality Measures Report completed by Quality Management Committee and reviewed by the Executive Committee and Consumer Advisory Board.
- Quality Improvement Plan developed incorporating feedback from the Member Engagement Survey. New quality measures developed as needed.
- Staff complete annual refresher training corresponding to their hire date.

The following committees will meet monthly: Executive Committee, Quality Management Committee, Human Resources and Training Committee, and Network Operations Committee. The Consumer Advisory Board will meet quarterly.

Budget Period Five (January 1, 2022 - December 31, 2022)

January-March 2022
- Outreach and intake efforts continue, Qualifying Activities continue, and Enrollees declining services are disengaged throughout the quarter.
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Care Coordinator assigned within five business days. Care Plan completed for all Engaged Enrollees within 90 days of signing the Participation Form.
- Information about participating in the Consumer Advisory Board distributed to Enrollees.
- Monthly Member Status Report completed. Submit record of all Qualifying Activities.
- Renew contractual agreements with MCOs and ACOs.

- Staff complete annual fresher training corresponding to their hire date.

April-June 2022
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Staff complete annual refresher training corresponding to their hire date.
-

July-September 2022
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Participate in feedback sessions with selected Care Management software vender to provide input for software enhancements.
- Semi-Annual Report is submitted to EOHHS in July.
- Staff complete annual refresher training corresponding to their hire date.
- Quality Measures analyzed for implications of pay for performance. Executive Committee develops response to mitigate financial risk.

October-December 2022
- Consumer Advisory Board provides an Annual Report for the Executive Committee in December.
- Budget Report and Narrative submitted for approval.
- Sustainability Plan submitted for approval.
- Monthly Member Status Reports completed. Submit record of all Qualifying Activities.
- Annual Report with CAB input is submitted to EOHHS by October 31, 2022.
- Notify EOHHS/MCOs/ACOs monthly with capacity to accept new referrals.
- Quality Measures Report completed by Quality Management Committee and reviewed by the Executive Committee and Consumer Advisory Board.
- Quality Improvement Plan developed incorporating feedback from the Member Engagement Survey. New quality measures developed as needed.
- Staff complete annual refresher training corresponding to their hire date.

The following committees will continue to meet monthly: Executive Committee, Quality Management Committee, Human Resources and Training Committee, and Network Operations. The Consumer Advisory Board will meet quarterly.

7.3 G Budget Report and Budget Narrative

7.3 G Budget Report and Budget Narrative - See Attachments B and C.

7.3 H Sustainability

7.3 H Sustainability (2 pages)

CCN took the issue of sustainability into consideration in the preparation of its program budget and infrastructure budget for the Behavioral Health Community Partner Initiative.

Business Start-up Costs
CCN expects to spend 49% of its infrastructure and capacity-building budget on business start-up costs, which are comprised of one week's salary during the Preparation Budget Period (PBP), anticipated revenue gaps in Years 1-3, and office equipment and furniture in PBP and Year 1.

Revenue Gaps
The CCN revenue for budget Periods 1-3 reflects a projection of Enrollee numbers that is slightly lower than the capacity that we would be able to serve with the number of FTEs built into budgeted salaries. The CCN Enrollee capacity (based on budgeted FTEs) is actually 18.5% higher than the projected Enrollees in Year 1, 12.5% higher in Year 2, and 7.25% higher in Year 3. The reason CCN has built in this gap between Enrollee capacity and projected number of Enrollees over this 3-year period is to allow for the expectation that, during this time, we may not be able to successfully engage all Enrollees as the BHCP model is developed and refined.

With respect to Years 4 and 5, CCN expects to incur losses but is working on developing strategies with EOHHS and our partners to mitigate projected losses.

Technology
CCN expects to spend 18% of its infrastructure and capacity-building budget on technology costs, which are comprised of interface development, care management software, website development, and purchase of computers. The two largest technology expenses are $270,000 for developing interfaces with each ACO and $200,000 for the initial investment in Years 1 and 2 for care management software. In the future, we believe that subsequent technology investments can be absorbed in program expenses, specifically the supply line item, which anticipates ongoing non-capital purchases.

Operational Infrastructure
CCN expects to spend 21% of its infrastructure and capacity-building budget on operational infrastructure, which is comprised of salaries and fringe for a Quality Data Analyst and a Program Function Manager. In the future, we believe these salaries can be absorbed in program expenses.

Workforce Development
CCN expects to spend 6% of its infrastructure and capacity-building budget on workforce development. The major component of this category is the salary plus fringe for an HR recruiter. In the future, we believe this salary can be absorbed in program expenses.

Summation
In summary, CCN will collectively be exploring alternative payment arrangements with both the ACOs and the MCOs as a strategy for long-term sustainability of the Community Behavioral Health Partner Initiative. Due to CCN's comprehensive continuum of care, we believe we are

well positioned to contract for episode of care payments for Enrollees with both mental health and substance use disorders.

7.3 I Quality Management and Performance Monitoring

7.3 I Quality Management and Performance Monitoring (3 pages)

1. Description of the Quality Improvement Program: The CCN is committed to achieving excellence in our coordination and delivery of services, including Enrollee satisfaction and outcomes of the BHCP. In order to accomplish this, we are committed to a comprehensive model of quality management and performance monitoring. All network members have long-established outstanding Quality Assurance/Improvement models. This initiative has afforded us the opportunity to bring together our models, strategies, and lessons learned to develop an advanced, comprehensive, effective, and proven Quality Management Program.

The CCN partners have all utilized some variation of a Continuous Quality Improvement Model (CQI) to assess, monitor, and improve our systems, services, and outcomes. We have adopted the "Quality First" strategy. Although we are not ascribing to one particular theorist in the quality management field, much of our thinking is based on the leaders in the field, including Deming, Juran, Drucker, and Crosby.

We have integrated Deming's 14 points as a guideline for establishing our CQI program. Key to our CQI process is the Plan, Do, Check, Act Cycle (PDCA). By implementing the PDCA process, we study the problem by collecting data, strategize as a team on solutions, implement the intervention, and, most importantly, check to be sure the problem truly is being addressed. In order to respond in "real time," CCN partners plan to implement the Rapid Cycle PDCA. This model strongly encourages full participation of our staff, supervisors, Enrollees, and funding sources to provide feedback and immediately address feedback received through the Rapid Cycle process. We firmly believe that without employee "buy-in," the CQI process is something that others do, and the investment of staff is limited. To truly be an effective CQI program, everyone involved must "own" and take responsibility for the quality of the services.

To achieve this, both our Quality Management Team (QMT) and Performance Improvement Team (PIT) will be comprised of a diverse set of individuals with varying points of view and experience. Management and support staff, care coordinators, Enrollees, and funding sources will all have input to ensure fidelity to the model. The focus of CQI will be on education and training, not blaming, with recognition that quality is not the job of one person, but rather belongs to all.

Obtaining and analyzing data from multiple data sets is critical to the CQI model. Data for the CQI model will be collected in the following way:

Care Management Data Collection Points: The Care Management Software (eCMS) will be utilized to gather and report on the following items: date from contact to engagement, completion of assessment, date of first Care Team meeting, number of participants at the Care Team meeting, number of contacts per month, type of contact and any adverse events including, but not limited to hospitalization, relapse, complaint, or grievance. In addition, the eCMS will be designed with input from EOHHS and the ACO/MCO to include data points for the assessment of the Enrollees: Quality of Life, Chronic Disease Management, Caregiver Stress, Community Tenure, Isolation, Social Connectedness, Care Coordination and Care Management, and Care Transitions.

Documentation Reviews: Each CCN partner will be responsible for thorough and regular audits of its records for programmatic compliance, service, and quality of documentation. These record reviews will be standardized throughout the network, and reviews will be completed in the eCMS. The QMT will meet monthly to review the quantitative data and surveys. Reports will be provided to the Governance Executive Board.

Enrollee Satisfaction Surveys: These surveys administered at least annually will assess the Enrollee's self-report on his/her progress towards his or her identified goals and overall satisfaction with care coordination.

Staff Satisfaction Surveys: These surveys will assess staff satisfaction with the training and resources available to perform their duties and confidence in their skills and tools provided. This measure allows us to assess stability in the workforce and implement strategies for retention.

Incident Reporting: Critical incident reports are completed by staff and reviewed by the Quality Management Team. Depending on the incident severity, the incident may require a review/investigation that is conducted by the Director of Quality or equivalent by each CCN partner. Results from the review/investigation are shared with the appropriate personnel and reported to the Governance Executive Board, as needed.

2. A description of at least one quality initiative Bidder proposes to undertake in Budget Period 1 including measures for success.

The term "transition of care" connotes a dynamic process by which an Enrollee moves from one care setting to another, such as hospital to home, skilled nursing or rehab facility, or detox to a less restrictive/residential setting. It can also describe transitions from one provider to another, such as changes in primary or specialty care or behavioral health provider. Care transitions frequently involve multiple persons, including the Enrollee, family, or caregivers, nurses, social workers, case managers, pharmacists, physicians and others. "An optimal transition should be well planned and adequately timed. Research has shown that communication between settings or providers often fails to supply all the information needed for optimum care."[6] According to a study on Innovations in Care Transitions, "fragmentation of health care services can adversely affect care experiences and outcomes while increasing costs of care. Effective Care Coordination and transitions can help to integrate care and prevent poor outcomes that give rise to avoidable hospitalizations and readmissions." [7]

With this in mind, CCN will focus its first-year quality initiative on transitions in care. We expect those enrolled to experience several transitions in a year. Our approach in providing effective care coordination is to facilitate smooth transitions that involve timely and complete information exchange between those involved, participation in the transition planning process from the outset, and assisting the Enrollee and those providing care/support through and after transition to fully understand next steps and necessary follow-up.

---

[6] Improving Transitions of Care: Hospital to Home; National Transitions of Care Coalition; 2009

[7] The Commonwealth Fund; Gaining Ground: Care Management Programs to Reduce Hospital Admission and Readmission Among Chronically Ill and Vulnerable patients; 2013

Quality Initiative Year 1:

Quality Goal	Methodology /Data	Outcome/Measure of Success
To coordinate effective care transitions that reduce avoidable readmission and/or increases in level of care	Comprehensive assessment/baseline data on number of care transitions in the year prior to enrollment Transition checklist to guide Care Coordinator involvement/activities through the transition process. Dates of admission; discharge; diagnosis & follow up documented; checklist completion; year over year comparative analysis	10% reduction in number of Enrollee hospitalizations/increases in level of care and/or Reduction in number of days in higher level of care 75% Care Transition checklist utilization

3. Function of Bidder's Quality Committee, including composition and reporting structure within the Bidder's organization

The CCN will have the following quality structure in order to support the robust CQI program.

Governance Executive Board: Comprised of the Executive Directors/Chief Executive Officers of the CCN collaboration. The governing body is responsible for reviewing and submitting the annual QM plan to EOHHS for approval. The governing body will meet quarterly, and more frequently if needed, to ensure the quality of the service.

Quality Management Team (QMT): Comprised of the CCN partners' senior level quality management staff. Will be responsible for overseeing the implementation of the CQI program. The QMT will meet monthly to establish compliance and quality standards, oversee training, establish Performance Improvement Teams, and report and submit recommendations to the Governance Executive Board on a regular basis.

Performance Improvement Teams (PIT): These teams are critical to the CQI program and will be developed by the Quality Management Team (QMT). In order to be true to the model of involvement at all levels, the following are the teams that will be proposed: Care Coordination Implementation Team, Human Rights Team, Best Practices Team, Satisfaction Team, Multi-Disciplinary Team, and Information Technology Team. PIT will report to the QMT.

7.3 J Coordination with MCOs and ACOs

7.3 J Coordination with MCOs and ACOs (2 pages)

The success of this initiative will require positive, respectful, and collaborative working relationships between the BHCP and the ACO/MCOs. We will be learning together how best to implement, monitor, initiate, and adjust our systems, so that Enrollees receive the quality services they deserve. The Coordinated Care Network's (CCN) six Affiliated Partners and three Material Subcontractors all have long histories of multiple complementary relationships with health care systems, state agencies, and Managed Care Organizations (MCOs). This extensive experience has laid the foundation for CCN to work successfully and collaboratively in complex systems.

1. How Bidder will communicate its skills, expertise, and value to potential ACOs/ MCOs

CCN is confident that our comprehensive skills will provide significant value to the ACO/MCO. As a Network, we collectively offer considerable years of expertise in working with children, youth, adults and families; substance use, mental health, and co-occurring disorders; homeless individuals and families; intellectual/developmental disabilities and brain injuries; and other complex medical needs.

Our wide breadth of services across a diverse population will be clearly articulated to the ACO/MCO staff. We will provide a comprehensive listing of all services being offered and will continually apprise the ACO/MCO staff of any service additions or revisions. We will use both our website and e-mail notifications to ensure the ACO/MCO always has the most up-to-date information and resources.

2. Branding and Marketing plans Bidder has respect to the relationship with ACOs/MCOs.

In order to ensure that the CCN is widely recognized as a valuable resource to our communities, we will develop and maintain an informative and user-friendly website. The website will primarily provide information regarding the CCN BHCP Care Coordination program. In addition, MCOs/ACOs will be invited to share their information on the CCN website. The website will include resources available by CCN partner organizations in each MassHealth service area.

Marketing brochures will be developed, in partnership with the ACO/MCO, in two formats. One will provide outreach and educational information to encourage Enrollees' participation in programs. The other will be used to publicize and educate the ACO/MCOs and their staff regarding our network capacity. CCN will distribute marketing brochures to the primary care practices associated with our ACO/MCO partners. Moreover, we will make personal visits to the primary care practice offices to open a dialogue regarding this new initiative and answer questions. The CCN is committed to developing a quarterly newsletter and an Annual Report, which will be distributed to Enrollees, MassHealth, ACOs, MCOs, and the community as a whole to highlight the CCN's valuable work.

CCN partners will invite our MCO/ACO partners to participate in health fairs and community events. CCN is an active member of the United Way in all of the service areas we propose to serve. United Way partners and volunteer community events are another venue where we will educate the health systems and their employees about the diverse services CCN provides in the community. In addition, CCN's partners are active participants on many community boards and coalitions (including those concerning local and regional homeless communities), public health local, Rotaries, Chambers of Commerce and regional planning committees, as well as DPH BSAS and DMH regional meetings in all areas we are proposing to serve.

3. Bidder's strategy to engage and collaborate with multiple ACO/MCO in service area.
Upon reviewing the EOHHS list of request for responses for the Accountable Care Organizations' intent to bid document, we have identified existing relationships between agencies in our Network and every potential bidder in our proposed service areas.
Currently, CCN partners have worked with MassHealth members from all six of the previously selected pilot ACOs, providing them with a full continuum of behavioral health services, including crisis evaluations, psychiatric hospitalization, acute detoxification, crisis stabilization, dual diagnosis services, clinical stabilization services, outpatient mental health and SUD treatment, case management services, and residential services. These existing relationships will build the foundation for ongoing engagement and collaboration.

Our strategy to engage and collaborate with multiple ACOs/MCOs in our proposed service areas will be built upon these existing relationships and continue to strengthen them. Our intent will be for the CCN CEOs to personally meet with the management team of each ACO/MCO in our areas to provide them with a comprehensive presentation of the extraordinary depth of our expertise and comprehensive continuum of care. In addition, we will take time to fully understand the needs of the ACOs/MCOs, so we can work with them to meet these needs. To ensure we meet the expectations of the ACOs/MCOs, it is our intent to set quality and performance goals, which will be reported on an ongoing basis. We also plan to extend invitations to all ACO/MCO staff to participate in our training programs. This will not only build a universal fund of knowledge, but nurture these relationships.

Our CCN has over 200 physical locations spread throughout the 11 service areas we are proposing to serve. We are not only a physical presence in the communities where we reside and work, but also an integral part of the safety net for countless MassHealth members- the same MassHealth members who will be the primary population served by the BHCP Initiative.

When working with the operating ACO health systems, CCN will offer the option of embedding behavioral health services from a CCN's partner into their primary care practice.

4. Bidder's strategy for conflict resolution should conflicts arise between Bidder and MCO/ACO
With such a large and expansive initiative, conflicts will likely arise. Our premise is to work with the ACO/MCO in an open, respectful, and supportive manner. We are committed to addressing conflicts immediately to maintain positive and productive relationships with both our partners and our Enrollees. Our strategy for conflict resolution begins with working together to collect and review relevant information and outlining solutions that will bring about a positive resolution for all parties involved. Our experience has been that a non-confrontational approach works best. Providing support for the involved individuals/groups to work things through together not only develops goodwill, but encourages ongoing conflict resolution. We recognize that this approach is not always possible, so our Quality Management and Executive Teams will be brought in as well when appropriate.

Community Partner Program Budget Report

Innovative Care Partners, LLC.

Program Revenue	Prep Budget Period	Budget Year 1	Budget Year 2	Budget Year 3	Budget Year 4	Budget Year 5	Total Revenues

Ramp-up costs in Prep Budget Period, Budget Year 1, 2and 3 can be covered by Infrastructure Funding

Community Partner Program Budget Report - Prep Budget Period

Only complete this Program Budget Narrative using amounts anticipated for PBP.
Lines may be added to the Program Budget Narrative tables as necessary

Row 1 - Salary

Position	Annual Salary	FTEs	# Months	Total
Director	$ 140,000.00	0.6	5	$ 35,000
Assistant Directors	$ 80,000.00	2.5	3	$ 50,000
Clinical Care Mgr (RN)	$ 75,000.00	3	1	$ 18,750
Clinical Care Coordinators	$ 38,000.00	10	1.5	$ 47,500
Enrollment Manager	$ 60,000.00	0.6	4	$ 12,000
Enrollment Specialist	$ 34,000.00	2	1	$ 5,667
Administrative Assistant	$ 30,000.00	0.6	6	$ 9,000
				$ -
				$ -
Total Salary (Program Budget Line 1)		**19.3**		**$ 177,917**

Row 2 - Fringe

Fringe Item	Total Salary	Fringe Rate	Fringe
Fringe Item	$ 177,917	24%	$ 42,597
Total Fringe (Program Budget Line 2)			**$ 42,597**

Total Personnel*	**$ 220,513**

* Should align with Personnel Costs row in Program Budget

For each position listed above, provide a brief statement of the position's responsibilities:

-The Director provides overall management of BH CP program;
-Assistant Directors provide management oversight of one service hub and Care Coordination teams; they also supervise Clinical Care Managers
-Clinical Care Managers (RN) supervise Care Coordinators assigned to CC Team; review and sign off on Enrollee Treatment Plans and conduct medication reconciliation.
-Clinical Care Coordinators conduct assessments, and perform care planning and care coordination services for Assigned and Engaged Enrollees.
-Enrollment Manager designs enrollment plan, manages department, supervises Enrollment Specialists, conducts outreach; provides liaison function with ACOs and MCOs.
-Enrollment Specialist conducts enrollee intake, including outreach to Assigned Enrollees, and assigns enrollees to appropriate Service hub.
-Administrative Assistant provides administrative support to Program Director and is responsible for

Row 3 - Training and Professional Development

Description of Service	Unit Cost (if applicable)	# Staff (if applicable)	Total Cost
			$ -
Total Training and Professional Development (Program Budget Line 3)			

Provide a description of each Training and Professional Development line item included in the table above:

Row 4 - Travel

Position	Est miles per month	# months	Mileage reimbursement rate	Total Cost
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
			Total Mileage	$ -

Travel Expense Description	Cost
Total Mileage	$ -
Parking and tolls	
Public transportation	
Enrollee travel	
Total Travel (Program Budget Line 4)	**$ -**

Please describe how mileage estimates and other travel expenses listed above were determined . If including enrollee travel expenses above, please explain how these expenses will be used by enrollees.

Row 5 - Equipment

Description of Equipment	Unit Cost or Cost/FTE	#units or FTEs	Cost
Copier rentals - monthly fee	210	6	$ 1,260.00
Total Equipment (Program Budget Line 5)			**$ 1,260.00**

Provide a brief description of the intended use for each Equipment line item listed above and how the estimated costs were determined:

Copy machines for offices occupied by CP staff; intended use includes copying clinical and administrative data for files as well as printing documents from computers. Expected rental costs are for one month in the prep period, with two copiers per office (total of 3 offices expected for covered regions) Costs is based on existing provider experience and is apportioned to reflect 60% allocation to BH CP and 40% to LTSS CP, using typical monthly rental fee of $350 per unit.

Row 6 - Supplies

Description of Supplies	Unit Cost or Cost/FTE	# Units or FTE	Cost
Start up office supplies			$ 1,500.00
Total Supplies (Program Budget Line 6)			**$ 1,500.00**

Provide a brief description of the intended use for each Supply line item listed above and how the estimated costs were determined

Routine general office materials to be used in normal course of administration. Estimate is pursuant to provider experience and assumed adequate levels for anticipated prep period staff.

During the Prep period, it is expected that approximately 12 FTEs (non-duplilcated with LTSS) of the overall staffing which is coming in over the 7 month period will require approximately $125 per FTE.

Row 7 - Contract Services

Name of Contractor	Contractor Type	Goods and Services Provided	Cost
Total Contract Services (Program Budget Line 7)			

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Row 8 - Software Licensing

Description of Software	Cost per License	# Licenses	Cost
Total Software Licensing			

(Program Budget Line 8)	

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

Row 9 - Telecommunications

Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
Land lines for 3 sites for 3 months; assume $300 per month/per site, apportioned as 60% for BH CP; remaining 40% is LTSS CP	300	3	$ 1,620.00
Internet data lines for 3 months for 3 sites; assumed $200 cost per site using current experience;	200	3	$ 1,800.00
Total Telecommunications (Program Budget Line 9)			**$ 3,420.00**

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

Land lines will support desk-top activity for communication with clients and other constituents, complimenting availability of cellular communication. Internet data lines are essential for routine communication as well as for web-based access to EHR software.

Row 10 - Occupancy

Occupancy Expense	Total SqFt	Cost/SqFT	Cost
Rent	9000	15	$ 20,250.00
Utilities			$ -
Repair and Maintenance			$ -
			$ -
			$ -
Total Occupancy (Program Budget Line 10)			**$ 20,250.00**

Provide a brief description of how each Occupancy line item listed above will support the CP's performance and how the costs were determined:

Provider will require 3 regional offices in service areas at 3K square feet each for ultimate staffing levels. Rent would begin 3 months prior to 6/1 start of services to support hiring, staffing, training and general program start-up. Rental rate is presumed at $15 inclusive of utilities, housekeeping and common area management. No repairs and maintenance are expected in prep period (general CAM is included in $15/psf rate). Note: costs are allocated 60% to BH CP and 40% to LTSS CP in prep period only. Thereafter, BH CP absorbs full space for commun use with LTSS CP, given financial inability for LTSS funds to share in allocation.

At maximum staffing levels, 140 individuals between LTSS and BH will be employed, office space for which will be provided in regional locations. While all staff are not expeccted to be at each office 100% of their time and many staff can share space (rather than dedicated cubicle/office per person), 9,000 sq feet is based on general allocation of approximately 60 sq feet per work station/area, plus common space such as conference rooms.

Row 11 - Other

Other Direct Expense Description	Cost
Total Other (Program Budget Line 11)	

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Row 12 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 12)	**11.00%**	**$ 27,164.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Administrative overhead required to effectively execute and coordinate the business functions of the community partner services is inclusive of following support services:

A) Finance administration
B) HR management
C) Qualitative performance measurement & reporting
D) Tax and cost report compliance
E) Third party billing and contract management

The 11% rate reflects historical experience of Innovative Care Partner's managing partner (CHD). CHD's current federal allowable indirect rate is 11.7%.

Added note pursuant to assistance/guidance from contract manager:

Certain costs could not be deferred to the following budget year. Therefore, in order to maintain spending within the $450K available, downward cost adjustments were necessary as well as allocations to the LTSS budget. These include reduced spending desired for training, recruitment activities and supplies.

Community Partner Infrastructure Budget Report - Technology - Prep Budget Period

Only complete this Infrastructure Budget Narrative using amounts anticipated for PBP.

Lines may be added to the Infrastructure Budget Narrative tables as necessary

Row 1 - IT Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
				$ -
	Total Salary			$ -
	Fringe rate		Total Fringe	$ -
			Total IT Staffing including Fringe (Infrastructure Budget Line 1)	**$ -**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

Row 2 - Development/Adaptation of EHR and/or Care Management System

Description of Expense	Cost
Development of care management platform	$ 76,000.00

Total Development and Adaptation of EHR and Care Management System (Infrastructure Budget Line 2)	$ 76,000.00

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Development fee for care management platform to include configuration, ACO interoperability, billing and other CP specific platform initiatives. The total cost for development is allocated between BH CP and LTSS CP, for total of $200K. The allocation to BH CP is based on availability of funds within the $450K. A more specific allocation as based on antinipated utilization would be $120K to BH CP and $80K to LTSS CP.

For purposes of the Infrastructure Allocation, this cost is allocated fully to CHD as the services will be part of the general management of the CP. CHD is the managing member of ICP and has responsibility for coordinating general services including EHR.

Row 3 - Technology for Service Delivery

Description of Expense	Cost
Mobile technology devices; laptops	$ 14,000.00
Total Technology for Service Delivery	$ 14,000.00

(Infrastructure Budget Line 3)	$ 14,000.00

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Providing staff with laptop for performance of care coordination and electronic data recording. Prep period budget is sufficient to cover only $14K for staff hired during prep period. Expected costs are based on provider experience and vendor relationship for quantiity purchasing. It is estimated that individual set-ups of lap top and sufficient print devices will cost approximately $1K per individual. Investment in additional devices is delayed to BY 1

In the prep period, accomodations are being made for 14 individuals, building towards full capcity in later years. where FTEs will grow to 100. Number of staff persons exceeds 100 as it is expected that more than one person can comprise an FTE (as some individuals may be hired on part time basis). Total budget over prep and future budget periods is $164K to account for full staffing with laptops and print devices, as well as replacement of devices by BY 2.

The technology models/devicces expected are as follows. Several options/models have historically been used and are easily supported by our tecnolody departments. These are included herein as potential choices. Actual determination of which model is chosen (are chosen) will continue to be driven by availability and cost at time of purchase. Based on volume, ICP expects to leverage its purchasing power.

Type	Brand	Model
Laptop	Hewlett Packard	ProBook 400, 550, 850
Laptop	Hewlett Packard	EliteBook 8460P
Laptop	Lenovo	ThinkPad T530
Tablet	Microsoft	Surface Pro 4
Printer	Hewlett Packard	LaserJet, MFP, Color, BW
Printer/Copier	Canon	IR ADV 4545 I
Cell phones	Apple	iPhone 6s

Row 4 - Other Technology Expenses

Description of Expense	Cost

Total Other Technology Expenses (Infrastructure Budget Line 4)	

Provide a description of each IT line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Community Partner Infrastructure Budget Report - Workforce Development - Prep Budget Period

Row 5 - Workforce Development Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
Recruiter	$ 60,000.00	0.6	6	$ 18,000
				$ -
				$ -
				$ -
				$ -
				$ -

				$	-
				$	-
				$	-
	Total Salary	0.6		$	18,000
	Fringe rate	11.2%	Total Fringe	$	2,015
	Total Workforce Development Staffing including Fringe (Infrastructure Budget Line 5)			**$**	**20,015**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

The recruiter is essential to implementing targeted activities intended to hire staff quickly and effectively. The recruiter is responsible for confirming roles, identifying core competencies and developing attractive, thoughtful job postings. Recruiter will use a number of online resources for advertising, including both broad-based and niche job boards.

For purposes of the Infrastructure Allocation, this position /cost is allocated fully to CHD as the position will be part of the general management of the CP. CHD is the managing member of ICP and has responsibility for coordinating general services including employment of such positions.

Row 6 - Recruitment Expenses

Description of Expense	Cost
Advertisements, job fair expenses, web-based postings, materials	$ 12,000.00
Total Recruitment Expenses (Infrastructure Budget Line 6)	**$ 12,000.00**

Provide a description of each recruitment expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Expensesd reflect routine activities and related costs based on provider experience as well as intentions to target certain markets and bilingual individuals. Costs are determined based on current experience and contracts for services (message boards, web services, newspapers). The total bnudget is broken down as follows:

Internet recruitment board (Indeed.com) $5K
Marketing Materials (professional informational brochures, billboards, general media) $3K
Job fairs & targeted recruitment - cost of venues and services (food/bevrages) & out of area travel $4K
For purposes of the Infrastructure Allocation, this cost is allocated 1/3 ($4,000) to each member of the consortium.

Row 7 - Training Expenses

Description of Expense	Cost
Total Training Expenses (Infrastructure Budget Line 7)	

Provide a description of each training expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Row 8 - Retention Expenses

Description of Expense	Cost
Total Retention Expenses (Infrastructure Budget Line 8)	

Provide a description of each retention expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Community Partner Infrastructure Budget Report - Business Start Up Costs - Prep Budget Period

Row 9 - Office Equipment

Description of Expense	Cost
Total Office Equipment (Infrastructure Budget Line 9)	

Provide a description of purpose for each office equipment expense listed in the tables above, including how the costs were determined:

Row 10 - Office Furniture

Description of Expense	Cost
Total Office Furniture (Infrastructure Budget Line 10)	

Provide a description of purpose for each office furniture expense listed in the table above, including how the costs were determined:

Community Partner Infrastructure Budget Report - Operational Infrastructure - Prep Budget Period

Row 12 - Operational Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
Quality Manager	$ 70,000.00	1	4	$ 23,333
				$ -

				$	-
				$	-
				$	-
				$	-
				$	-
				$	-
				$	-
	Total Salary	1		$	23,333
	Fringe rate	11.2%	Total Fringe	$	2,612
			Total Program Staffing including Fringe (Infrastructure Budget Line 12)	**$**	**25,945**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

Quality Manager is responsible for creating and monitoring the QM plan; the manager will provide data and reports and staff the Quality Committee.

For purposes of the Infrastructure Allocation, this position /cost is allocated fully to CHD as the position will be part of the general management of the CP. CHD is the managing member of ICP and has responsibility for coordinating general services including employment of such positions.

Row 13 - Other Operational Expenses

Description of Expense	Cost
Professional business development advertisement	$ 10,000.00
Total Other Operational Expenses	**$ 10,000.00**

(Infrastructure Budget Line 13)	**$ 10,000.00**

Provide a description of each retention expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Marketing material to educate clients, medical community, ACOs regarding CP services and ICP program. The full amount will be for professional material including brochures in various sizes and detail about the benefits of the CP program and how ICP can provide those services. It is anticipated that the brochures and material which will be mailed and otherwise distrubuted will cost $7K and media placement will cost $3K.

For purposes of the Infrastructure Allocation, this cost is allocated 1/3 ($3,333) to each member of the consortium.

Community Partner Infrastructure Budget Report - Indirect Cost/Administrative Overhead- Prep Budget Period

Row 14 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 14)	**11.00%**	**$ 17,376.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Administrative overhead required to effectively execute and coordinate the business functions of the community partner services

is inclusive of following support services:
A) Finance administration
B) HR management
C) Qualitative performance measurement & reporting
D) Tax and cost report compliance
E) Third party billing and contract management
The 11% rate reflects historical experience of Innovative Care Partner's managing partner (CHD). CHD's current federal allowable indirect rate is 11.7%.

BH Community Partner - Staffing Model

Innovative Care Partners. LLC

line #			
1	Estimated number of Engaged Enrollees (including CBFS if applicable) at the end of Budget Period 1	1,500	*Should align with Program Budget*

	BH CP Program Staff	FTEs (Do not duplicate FTE - FTE's may be allocated across staffing positons as applicable)	Comment
2	BH CP Director and Assistant/Deputy Director	3.6	*Total management oversight of BH CP*
3	Medical Director		*Portion of Medical Director allocated to BH CP for the number of enrollees shown in line 1*
4	RNs		
5	Clinical Care Managers (RN)	5.2	*Do not include FTEs listed in line 4;*
6	Clinical Care Managers (LPHA)		*LPHA includes LICSW, LMHA, LADC I*
7	Supervisors/Team Leaders		*Do not include FTEs listed in lines 4, 5 or 6*
8	Other Licensed Staff		*Do not include FTEs listed in lines 4, 5, 6 or 7*
9	Care Coordinators	31	*FTEs providing Care Coordination (may include Health Outreach Workers, Community Health Workers, Peer Specialists, Recovery Support Navigators providing care coordination)*
10	Peer Specialist/ Recovery Coaches (non-Care Coordination)		*Do not include FTEs of Peer Specialists or Recovery Coaches included in line 9*
11	Intake Coordinators/Engagement Specialists	2.6	*Includes Enrollment Manager and Enrollment Specialist*
12	Administrative Support	0.6	
13			
14			
	Total FTE	43	

	Staff Ratios - Please calculate the following ratios:		
15	Ratio of RN and Clinical Care Manager (RN) to Assigned and Engaged Enrollees	1:288	*Estimated number of Assigned and Engaged Enrollees at the end of BP1 divided by total FTEs of (RN+RN Clinical Care Managers)*
16	Ratio of Care Coordinator Supervision to Care Coordinators	1:6	*Total Care Coordinator FTEs divided by Total Care Coordination Supervision FTEs*

Please describe which Program staff listed in lines 2 through 8 above directly supervise Care Coordinator staff:

The Clinical Care Managers will supervise Care Coordinators.

Section 7.3 Initial DSRIP Participation Plan

A. Executive Summary

1. Program Goals and Challenges: Innovative Care Partner's (ICP's) business plan for the five (5) year period of the BH CP contract reflect the following goals:

a. Supporting Enrollees with high behavioral health needs, i.e. individuals with serious mental illness (SMI) and/or serious substance use disorders (SUD);
b. Improving the care experience, continuity and quality of care for Enrollees by holistically engaging Enrollees in care coordination and care management activities;
c. Facilitating collaboration between ACOs and MCOs and BH community-based organizations to break down silos and promote integrated care so that the social determinants of health are more effectively addressed for members with high BH needs;
d. Working collaboratively with ACOs and MCOs to avoid duplication of care coordination and care management services for the population with high BH needs; and
e. Promoting and supporting the values of Community First, SAMHSA recovery principles, and cultural competence in providing care coordination and care management services to members with high BH needs.

ICP's business plan will incorporate strategies that address anticipated challenges, including, as examples, the following:

Potential Challenge	**Solutions/Strategies**
Enrollee Resistance to BH CP services	1. Effective matching of Enrollees to Care Coordinators in terms of language, cultural affinity, and experience with presenting Enrollee conditions 2. Enrollment Specialists and Care Coordinators trained in Motivational Interviewing (MI) 3. Collaboration with Enrollee's PCP, family members, and other care givers
Personnel Recruitment and Retention	1. Comprehensive staff recruitment plan including creative use of social media and other outreach avenues (See Section 7.3.E below) 2. Apply "Employer of Choice" strategies that have helped earn CHD "Best Non-profit Workplace" awards for the past two years
ACO and MCO Engagement	1. Leverage existing positive relationship of the Consortium Entities with each ACO and MCO 2. Establish collaboration processes, such as monthly Joint Operating Committee meetings, beginning in the Preparation Period (See Section 7.3.J. below)
Risk Sharing	1. Establish effective data analysis and reporting systems to allow timely monitoring of quality and financial measures 2. Maintain adequate cash and liquidity ratios
Technology	1. Devote adequate resources for information system software and hardware that meet contract requirements 2. Maintain active involvement with State and local planning groups working

	toward interoperability among entities and connection to Mass HIWay 3. Involve content experts within ICP's BH CP program with eHana design engineers to continuously improve the CC/CM platform during the Preparation Period and beyond

The Implementation Plan, in Section 7.3.F below, provides a list of business plan activities that will be accomplished in each contract year.

2. Proposed Number of Enrollees: ICP proposes to serve a caseload of ~~6,000~~4,000 Enrollees who reside within the seven Service Areas comprising the Western Region. It is expected that this target would be reached by the middle of Budget Year 2 (See Budget Narrative, Appendix B).

3. The **Service Areas** for which the ICP is bidding are Adams, Greenfield, Holyoke, Northampton, Pittsfield, Springfield, and Westfield.

4. Operational Plan: A summary of significant components of the plan for operationalizing the BH CP program is provided below (For further details please also see Section 7.3.F-Implementation Plan):

November 2017 to ~~March~~ May 2018 – Preparation Period: (1) Hire Program Director by ~~November~~ December 1 and implement staff recruitment plan (See Section 7.3.E below); (2) Work with IS vendor (eHana) to complete customized Care Coordination/Care Management IS platform; (3) Finalize governance policies and procedures with Consortium Entities; (4) Equip Hub offices; (5) establish Quality Committee and Consumer Advisory Board; and (5) Conduct initial outreach meetings with ACOs and MCOs, execute Memorandum of Agreements, and establish referral and communication pathways and protocols.

~~April~~ June to December 2018 – Budget Period 1: (1) Continue to hire, train, and deploy CP personnel to meet member enrollment needs; (2) Implement program and quality data collection and reporting processes; (3) Maintain monthly joint operating meetings with ACOs and MCOs; and (4) Monitor Enrollee assignment process and Hub caseloads and adjust as needed.

Budget Periods 2-5: Continue to monitor all program and quality measures and adjust as needed.

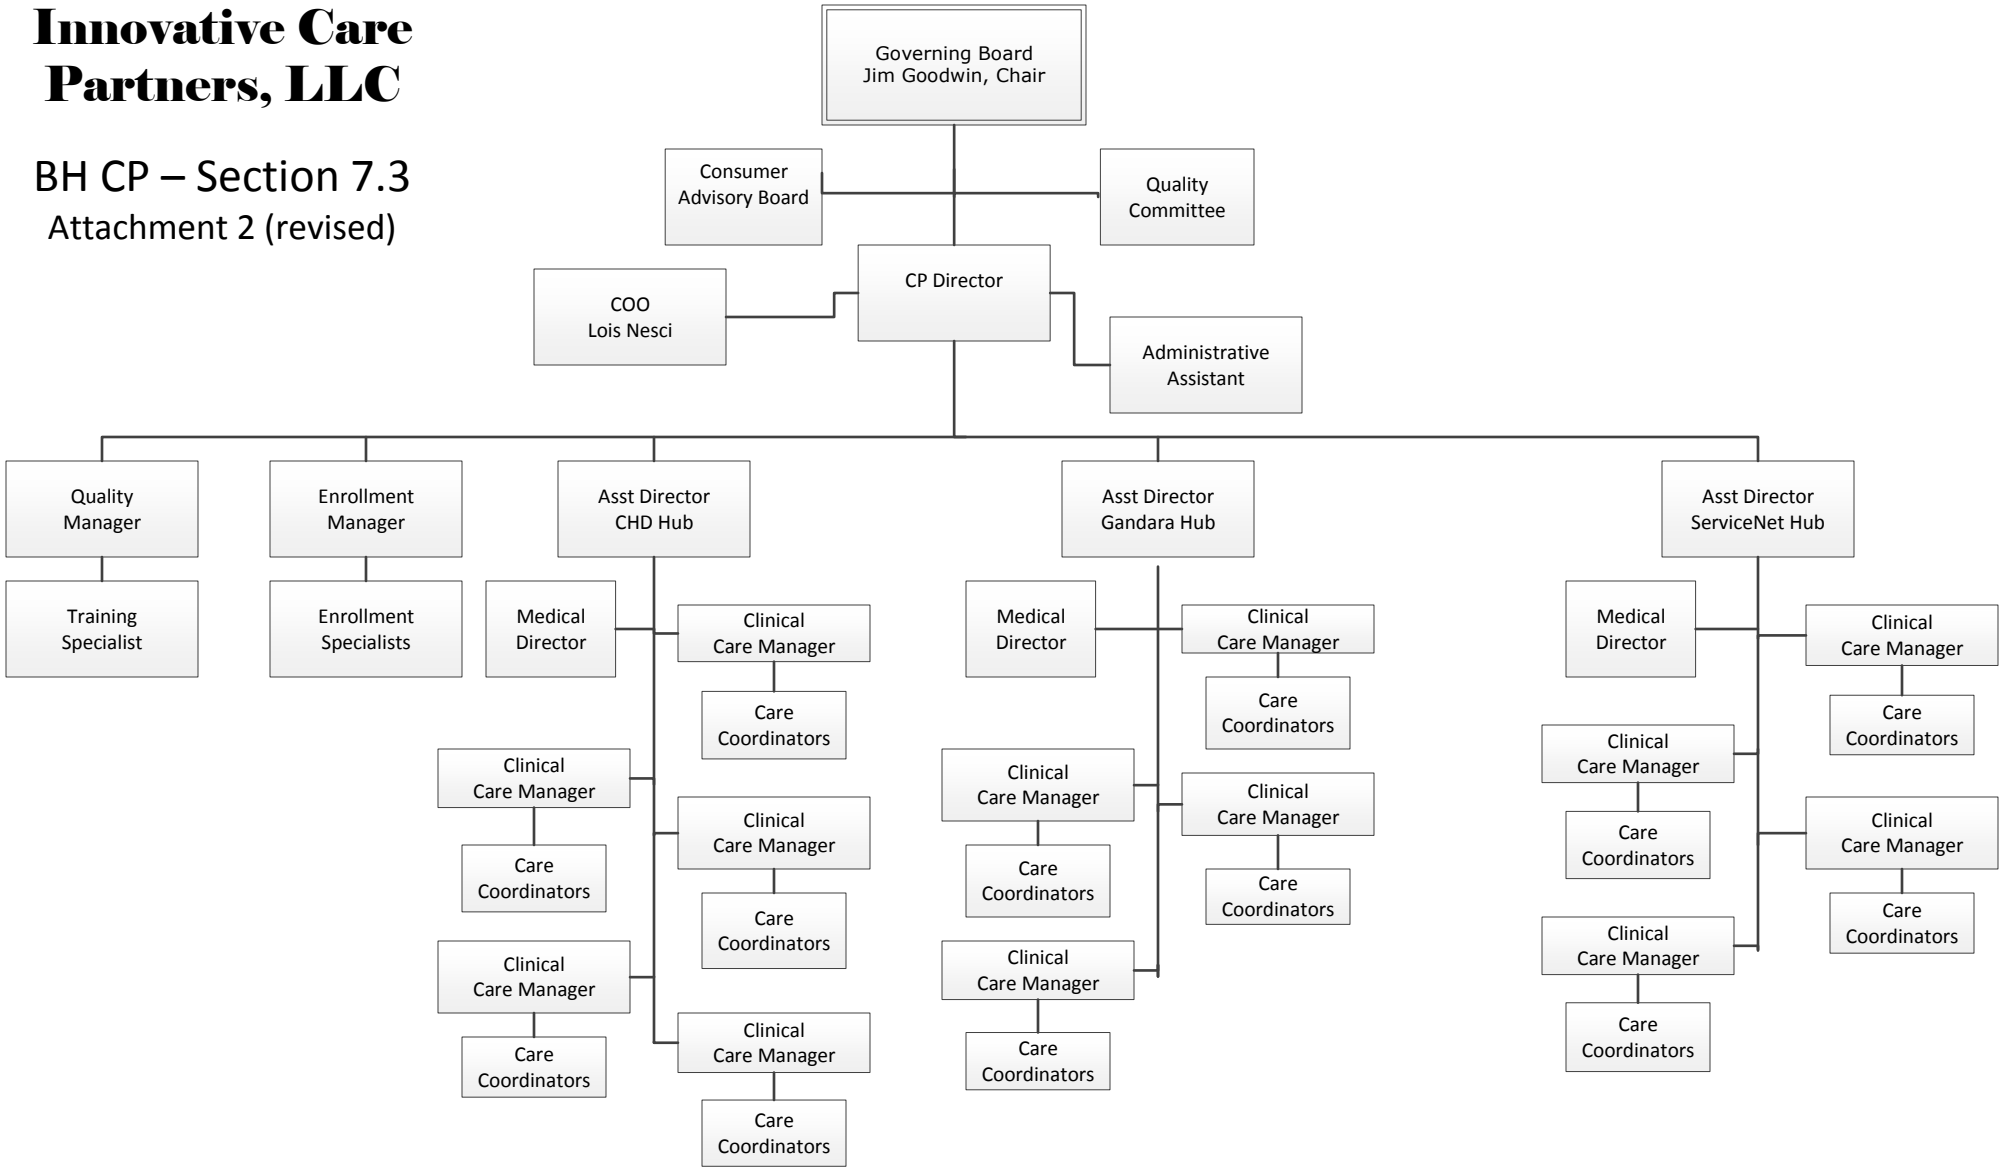
BH CP – Section 7.3

Attachment 2 (revised)



E. Personnel and staffing:

1. An **organizational chart** for the BH CP initiative is included as Attachment 2 (Revised).

2. Sample staffing model: As described in Section 7.2.B above, the CP program will operate three Service Hubs with each Consortium Entity operating one of the three Service Hub to serve Engaged Enrollees in each proposed service area, as delineated in Attachment D. The three Hubs will operate under a single set of program policies and procedures (BH CP Operating Manual).

(Figure 2)

BH CP Staffing ~~Model~~Model (revised)

Service Hubs	Service Areas and # of Enrollees	HUB Supervision	Clinical Care Manager (CCMs)	Care Coordinator (CCs)
Three Hubs:	~~6,000~~4,000 Total Enrollees:	3 FTE Asst Directors	~~21~~ 13 FTE CCMs	~~126~~ 80 FTE CCs

3. Recruitment Plan: Innovative Care Partners (ICP) will implement a robust and dynamic recruitment plan to ensure that all key roles are filled in anticipation of ~~an April 1~~June 1, 2018 start date. The CHD Human Resources Department, which includes dedicated recruitment staffing, will lead recruitment activities with support from HR departments at ServiceNet and Gandara Center, including sourcing, recruitment, and initial screening of candidates for service locations at each of the three Service Hubs. Final interviews and job offers will be made by the hiring Consortium Entity.

The Program Director will be hired by ~~November~~ December 1, 2017 so that they are in place to direct and oversee all aspects of program planning and development during the Preparation Period. Assistant Directors, one for each Service Hub, will come on board in January or February 2018. These positions will then be important leaders in the screening and hiring of all other staff scheduled to be on board and in place by ~~April~~ June 1, 2018.

ICP's extensive recruitment process begins with confirming roles, identifying core competencies and developing attractive, thoughtful job postings. ICP uses a number of online resources for advertising, including both broad-based and niche job boards. Social media is also a successful recruiting forum, so LinkedIn, Facebook, Twitter, etc. will be heavily utilized to reach a broad audience. ICP, through its Consortium Entities, has also had

success reaching out to professional and civic associations to reach those candidates with a specific educational or professional background as well as those in targeted cultural or linguistic communities. For example, ICP will post open positions with the National Association of Social Work, Spanish Nurses Association, Health Care Administrators, Vietnamese American Civic Association, Russian Community Association, National Association of Puerto Rican and Hispanic Social Workers, New North Citizens Council, Recovery Learning Center, and the Transformation Center.

ICP will host a number of job fairs throughout the seven target service areas to highlight the positions they seek to fill. ICP has extensive experience holding on-site job fairs, as well as hosting recruitment activities at local colleges and universities. ICP also has experience using large community venues for recruitment. ICP would have hiring managers available for on-site interviews with the ability to make immediate hiring decisions as needed. The professional Recruitment staff will also be available and includes a bilingual/bicultural (Spanish/English) team member.

Other recruitment strategies also include providing employee referral bonuses to staff and a direct mail campaign to licensed, professional candidates (LICSW, RN) announcing the new service and the exciting opportunities available.

4. Cultural and Linguistic Staff Diversity: Innovative Care Partners (ICP) will actively recruit staff from a variety of cultural and linguistic communities, with a special focus on bi-lingual English- and Spanish-speaking candidates. Gandara Center employs a full-time bilingual/bicultural Recruiter who will lead candidate sourcing and outreach activities, such as organizing and attending job fairs, screening, and conducting initial interviews. Furthermore, ICP staff will travel to Puerto Rico and Spain in order to reach an appropriate pool of candidates. Recruitment at universities on Puerto Rico has been a successful recruiting tool and ICP will host job fairs and other recruiting events there as well. ICP also has had success working with professional and civic associations to reach those candidates in targeted cultural or linguistic communities. Examples of organizations which have access to diverse communities include the Spanish Nurses Association, Russian Community Association, Vietnamese American Civic Association, National Association of Puerto Rican and Hispanic Social Workers, and New North Citizens Council. ICP will also recruit and hire qualified candidates with lived experience, including persons in recovery from mental illness and substance use disorders.

5. Staff Orientation and Training: Innovative Care Partners (ICP) recognizes that planning and implementing a comprehensive staff orientation and training plan is critical to the success of the BH CP program. The components of the proposed plan include: (1) orientation to CP goals, policies, procedures and individual staff position expectations and to relevant Host Hub agency policies and procedures as well as safety, privacy, and other compliance training; (2) specialized care coordination and care management training; (3) orientation to individual CP roles; and (4) management training for CP leaders. A Training Specialist will be hired to plan and oversee the CP Training and Orientation Plan. This position will report to the CP Quality Manager, but will also work closely with the CHD Vice President of Human Resources, Carol Fitzgerald, and the CP Program Director.

All new CP personnel will undergo a standardized four week pre-service provision orientation and training program that will consist of group sessions, individual on-line learning through the Relias Health Solutions Training platform, and job shadowing.

a. Orientation and Universal Training (conducted during the pre-service, orientation period, at CP Central Office and at individual Host Hub):

i. Orientation to the BH CP program: mission, values, policies and procedures, role descriptions, program organization;

ii.Training in eHana Care Coordination/Care Management Information System;

iii.Orientation to Consortium Entity Host Hub: Host agency mission, values, policies and procedures, organization, employment rules and benefit programs;

iv.Relias web-based curriculum: HIPAA, 42 CFR, and other confidentiality/privacy requirements; universal precautions and safety for human service workers; cultural diversity and human rights; and sexual harassment;

v.Human rights training, mandated by the Department of Mental Health; and

vi.First Aid and CPR Certification.

b. Specialized Behavioral Health and Community Partner (CP) Training (Initiated in the pre-service, orientation period and continuing during first year of employment):

i. Motivational Interviewing (MI) – An eight-hour training for Clinical Care Managers, Care Coordinators, Enrollment Manager, and Enrollment Specialists;

ii. Integrated Care Management Certificate Program – A 20-module, on-line learning program, conducted by UMASS Medical Center, for Clinical Care Managers and Care Coordinators. The program develops general skills for engaging Enrollees, promoting their activation to improve their own health, and general medical and behavioral health skills to be able to connect Enrollees to appropriate services, to address questions, to teach healthy living and support patient-centered Treatment Plans;

iii. Non-Violent Crisis Intervention Training:, Eight hour program, conducted by the Crisis Prevention Institute (CPI), for Clinical Care Managers and Care Coordinators to teach de-escalation techniques;

iv. Screening, Brief Intervention, Referral, and Treatment (SBIRT): Offered by the National Council for Behavioral Health, this 1 ½ hour online training in the use of SBIRT tools will assist Clinical Care Managers and Care Coordinators to assist Enrollees with possible alcohol and other substance use issues;

v. Recovery Support Navigation: Two Care Coordinators on each Care Coordination Team will attend five-day Recovery Coach Academy, sponsored by AdCare Educational Institute. The Academy teaches the principles, philosophy, and functions of Recovery Coaches; and

vi. EOHHS-Mandated or Recommended Training: ICP will cooperate with, and support the provision of, CP training programs that EOHHS may develop, sponsor, or otherwise require during the period of the Contract.

c. CP Role Orientation and Job Shadowing (conducted during the pre-service period): Each new CP staff person will spend at least one week working alongside seasoned workers to learn the details of their role. The first "wave" of staff that are hired in the Preparation Period and early part of Budget Year 1 will participate in simulated training, including Enrollee role playing.

d. Management Training: (a) A three-hour pre-service orientation to administrative services, including Fiscal, Human Resources, IT, Organizational Excellence, Development and Marketing; and (b) participation in CHD-sponsored management training programs.

6. Staff Retention Strategies: Staff retention and engagement efforts start from day one at Innovative Care Partners (ICP). ICP's orientation and onboarding efforts connect and ground new staff in the important mission of the organization and make the most of their enthusiasm and energy. Amidst all of the paperwork and policies is the strong message about mission and values that drives the work that we do in the community.

ICP offers highly competitive compensation and benefits, both in traditional and non-traditional ways. Our salaries are at or above market rates and we continually review both internal and external equity to ensure that we can attract and retain the highest skilled and credentialed staff. ICP provides sign-on and referral bonus for difficult to fill positions and offers bonuses and incentives for our clinical staff, along with reimbursement for their professional licensure. ICP has been able to provide regular bonuses, gift cards, and other financial recognition of the good work of its staff.

Insurance benefits are an important part of the benefits package and Innovative Care Partners is committed to contributing toward the majority of the health and dental insurance premiums on behalf of staff. Life insurance as well as both short and long-term disability coverage are offered to staff at full company expense and ICP provides important retirement plan benefits as well. Caring about staff's health goes well beyond insurance coverage – Innovative Care Partners has vibrant wellness activities, incentives, and initiatives in order to support staff in a myriad of ways. From non-smoking support and incentives to health-related trainings to Employee Assistance Programs, ICP supports our staff in their total health and wellness so that they can, in turn, focus on the support of those served.

ICP also recognizes that in this difficult work, it's important for staff to have a break and to have fun. As such, ICP provides generous paid time off benefits so that staff can rejuvenate and recharge and understands the importance of work/life balance. Whenever possible, ICP provides flexibility and appreciation for personal time. While staff are at work, ICP ensures that they are recognized for their good work and ICP highlights its appreciation with a variety of recognition awards and events throughout the year, including employee of the month, Star Awards, work anniversary acknowledgments and staff social events.

Another important retention strategy is ensuring that staff are well trained, well supervised, and well prepared for the next stage in their careers. To that end, ICP supports a strong learning culture with an emphasis on professional development and training. With both extensive in-person and online training opportunities, ICP staff are able to expand their clinical, administrative and management knowledge. On the job training, in-house expertise, clinical supervision and an electronic training module provide staff an array of content areas as well as forums to learn about the latest treatment models, stay abreast of compliance and safety standards, and develop important supervisory and management skills. The size and scope of the ICP member agencies also provides unique opportunities for mobility – both clinical and managerial advancement are common.

Communication and participation are important for staff to feel a commitment to an organization. Innovative Care Partners, through its Consortium Entities, has strong human resources departments to provide additional support and assistance to staff on a number of issues as well as formal open door and grievance policies to ensure that people are heard and listened to throughout their employment. ICP's Consortium Entities actively seek involvement from staff in agency-wide committees that provide guidance and direction to management. There are also a number of communication tools – email, intranet, staff meetings, open forums, etc. – that enable staff to provide input to management and for management to inform staff about issues of importance to the work that we do.

Finally, ICP's Consortium Entities are strong, stable agencies with reputations for quality services. Staff want to be part of creative, mission-driven organizations. And the organizations seek staff that are active participants and truly engaged in the important work and ongoing success of those we serve. ICP is committed to providing staff with a unique employment opportunity based on mutual respect and collaboration. The Consortium Entities have created a culture where joint problem-solving, entrepreneurial service delivery, and positive relationships thrive. All of that takes regular care and attention. Therefore, Innovative Care Partners considers retention strategies in a very broad manner – there are many things that impact someone's experience at work and keep them enthusiastic and excited about the work they do and where they do it. ICP will strive to develop strategies that support a highly engaged staff, foster creativity and enthusiasm, and recognize the individual strengths and collective power of staff to enhance people's lives.

F. Implementation Plan and Timeline (Revised 11/28/17)

Preparation Period:

Nov 2017	• ICP leaders initiate outreach to ACOs and MCOs; hold initial meeting with each ACO in Western Region service areas; • Begin Program Director recruitment.
Dec 2017-Jan 2018	• IT Vendor contract executed and project plan developed; • Bidder/Vendor IT Work Team meets regularly on software customization • Program Director Hired; Begins policy and procedures (P&P) development • Continue ACO/MCO engagement and outreach activities, including discussions toward Agreements execution; Solicits ACO suggestions on Enrollee outreach/engagement; • Program Director develops outreach/marketing materials and strategies w/CHD Marketing department technical assistance and support.
Feb 2018	• Governing Board begins review and approval of initial set of P&Ps; • Program Director establishes monthly joint operating meeting structure with each ACO; • Quality Manager hired; begins working with Program Director to establish Quality Committee; begins work with Consortium Entity QM leaders to design CP CQI Plan; • Governing Board meets, reviews and approves new policies and project plans; • Enrollment Manager hired; begins designing outreach/engagement plan w/ Program Director and CHD Marketing Dept • Program Director and Enrollment Manager bring draft outreach/engagement plan to monthly ACO joint operating meetings for input; • IT Work Team presents test-mode demonstration of customized CC/CM software to Governing Board, Program Director and Consortium Entity personnel; • Program Director initiates active outreach to community resource/collaboration agencies w/support from CHD Marketing Department; • Consumer Advisory Board membership recruitment begins.
March 2018	• An Assistant Director is hired for each Service Hub; • MCO/ACO Agreements are executed; • Training Specialist is hired; • Quality Manager presents draft CQI plan for Committee feedback and approval; • Program Director presents Policy Manual for Governing Board approval (that addresses all requirements of EOHHS Contract); • Program Director and Enrollment Manager finalize outreach/engagement plan and communicates it at each ACO joint operating meetings; • IT Work Team beta tests customized CC/CM software; develops specs for initial report set w/Quality Manager, Program Director and Assistant Directors; • Program Director, Assistant Directors, and Enrollment Director continue outreach to community resource/collaboration agencies w/support from CHD Marketing Department; • Consumer Advisory Board holds kick-off meeting; • Quality Committee holds kick-off meeting; • Business Associate Agreements (BAA) are executed with each Consortium Entity, IT Vendor, and other required third parties.
April 2018	• Two Enrollment Specialists are hired and trained; • Personnel is hired and trained to staff one Care Coordination Team at each Hub:

	• Three Clinical Care Managers (CCM)are hired for each Hub (one for each hub); 18 Care Coordinators (CCs) are hired (6 for each Hub); • IT Work Team installs CC/CM software and trains teams at each Hub; • Enrollment Department w/IT support conducts test with EOHHS and each ACO for transmittal of Assigned Enrollee data; • Consumer Advisory Board holds meets and reviews final implementation plan; • Quality Committee meets and recommends final CQI Plan for Budget Period 1 • Governing Board approves Year 1 CQI Plan.

Budget Year 1:

June 2018	• Enrollment Dept receives initial transmittal of Assigned Enrollees from MassHealth, conducts outreach to members consistent with outreach/engagement plan, and makes assignments to each Hub following approved assignment criteria; • Additional CCMs and CCs are hired and trained each month based on number of new Assigned Enrollees; • IT Team troubleshoots and resolves any system and end user problems; • Continued outreach to ACOs to facilitate and generate Enrollee Assignments; monthly joint operating conference calls with each ACO and MCO to address issues and facilitate coordination; • Continued outreach to community resources; • Quality Manager analyzes Month 1 enrollment and engagement data and distributes first dashboard reports to each Hub; Assistant Directors; • Quality Committee meets monthly to review reports; • Consumer Advisory Board meets to review Program Director report on implementation progress and provides suggestions to address outreach, engagement, and other challenges; • Progress report submitted to EOHHS as required.
July – Sept 2018	• Additional Enrollment Specialist hired and trained; • Additional CCMs and CCs are hired and trained each month based on number of new Assigned Enrollees; • Joint operating conference calls with each ACO and MCO to address issues and facilitate coordination continue on quarterly basis; • Quality Manager analyzes Quarter 1 program performance and quality data and distributes first dashboard reports to each Hub; Assistant Directors implement action plans to address below target measures; • Year 1 CQI initiative to increase Enrollee engagement rate is conducted; results are reported to Quality Committee and Governing Board; • Consumer Advisory Board meets to review Program Director report on implementation progress and provides suggestions to address outreach, engagement, and other challenges; • Progress report submitted to EOHHS as required.
Oct-Dec 2018	• Enrollee mobile app launched on pilot basis; • Additional CCMs and CCs are hired and trained each month based on number of new Assigned Enrollees; • Joint operating conference calls with each ACO and MCO to address issues and facilitate coordination continue on quarterly basis; • Quality Manager analyzes Quarter 2 program performance and quality data and distributes first dashboard reports to each Hub; Assistant Directors implement action plans to address below target measures;

	• Continue tracking data related to CQI initiative and implement action plan as needed; Report results to Quality Committee and Governing Board; • Consumer Advisory Board meets to review Program Director report on implementation progress and provides suggestions to address outreach, engagement, and other challenges; • Progress report submitted to EOHHS as required.

Year 2:

Jan-Mar 2019	• Mobile app pilot results reviewed, IT dept makes changes as needed, and app is rolled out to all interested Enrollees; • Program Director produces Year 1 report for Board and EOHHS, incorporating quality and performance data from Quality Manager; • Quality Committee and Consumer Advisory Board review Year 1 results and provide suggestions to address challenges; • First Year 2 CQI initiative is planned, with input from Quality Committee and Consumer Advisory Board; • Quarterly joint operating meetings with ACOs and MCOs continue; • Consumer and ACO/MCO surveys are designed, with input from Quality Committee and Consumer Advisory Board, approved by EOHHS, and distributed; • Planning for first annual Community Partners conference begins; • Quality Committee and Consumer Advisory Committee meet; • Progress report submitted to EOHHS as required.
April-June 2019	• Consumer and ACO/MCO survey results are analyzed and reported to Quality Committee, Consumer Board ,Governing Board, and EOHHS; action plans are developed to address areas for improvement; • First annual CP conference held; • IT enhancements related to interoperability, data analytics, and predictive analysis are tested and installed on CC/CM platform; • Quarterly joint operating meetings with ACOs and MCOs continue; • First Year 2 CQI initiative is implemented; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Committee meet; • Progress report submitted to EOHHS as required.
July-Sept 2019	• Second Year 2 CQI initiative is planned; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Board meet; • Joint operating meetings with ACOs and MCOs are held; • Progress report submitted to EOHHS as required.
Oct-Dec 2019	• Second Year 2 CQI initiative is implemented; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Board meet; • Joint operating meetings with ACOs and MCOs are held; • Progress report submitted to EOHHS as required.

Year 3:

Jan-Mar 2020	• Program Director produces Year 2 report for Board and EOHHS, incorporating quality and performance data from Quality Manager; • Quality Committee and Consumer Advisory Board review Year 2 results and provide suggestions to address challenges; • First Year 3 CQI initiative is planned, with input from Quality Committee and Consumer Advisory Board; • Quarterly joint operating meetings with ACOs and MCOs continue; • Consumer and ACO/MCO surveys are distributed; • Planning for second annual Community Partners conference begins; • Quality Committee and Consumer Advisory Committee meet; • Progress report submitted to EOHHS as required.
April-June 2020	• Consumer and ACO/MCO survey results are analyzed and reported to Quality Committee, Consumer Board ,Governing Board, and EOHHS; action plans are developed to address areas for improvement; • Second annual CP conference held; • Quarterly joint operating meetings with ACOs and MCOs continue; • Second Year 3 CQI initiative is implemented; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Committee meet; • Progress report submitted to EOHHS as required.
July-Sept 2020	• Second Year 3 CQI initiative is planned; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Board meet; • Joint operating meetings with ACOs and MCOs are held; • Progress report submitted to EOHHS as required.
Oct-Dec 2020	• Second Year 3 CQI initiative is implemented; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Board meet; • Joint operating meetings with ACOs and MCOs are held; • Progress report submitted to EOHHS as required.

Year 4:

Jan-Mar 2021	• Program Director produces Year 3 report for Board and EOHHS, incorporating quality and performance data from Quality Manager; • Quality Committee and Consumer Advisory Board review Year 3 results and provide • suggestions to address challenges; • First Year 4 CQI initiative is planned, with input from Quality Committee and Consumer Advisory Board; • Quarterly joint operating meetings with ACOs and MCOs continue; • Consumer and ACO/MCO surveys are distributed; • Planning for third annual Community Partners conference begins; • Quality Committee and Consumer Advisory Committee meet; • Progress report submitted to EOHHS as required.
April-June 2021	• Consumer and ACO/MCO survey results are analyzed and reported to Quality Committee, Consumer Board ,Governing Board, and EOHHS; action plans are developed to address areas for improvement; • Third annual CP conference held;

	• Quarterly joint operating meetings with ACOs and MCOs continue; • Second Year 4 CQI initiative is implemented; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Committee meet; • Progress report submitted to EOHHS as required.
July-Sept 2021	• Second Year 4 CQI initiative is planned; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Board meet; • Joint operating meetings with ACOs and MCOs are held; • Progress report submitted to EOHHS as required.
Oct-Dec 2021	• Second Year 4 CQI initiative is implemented; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Board meet; • Joint operating meetings with ACOs and MCOs are held; • Progress report submitted to EOHHS as required.

Year 5:

Jan-Mar 2022	• Program Director produces Year 4 report for Board and EOHHS, incorporating quality and performance data from Quality Manager; • Quality Committee and Consumer Advisory Board review Year 4 results and provide suggestions to address challenges; • First Year 5 CQI initiative is planned, with input from Quality Committee and Consumer Advisory Board; • Quarterly joint operating meetings with ACOs and MCOs continue; • Consumer and ACO/MCO surveys are distributed; • Planning for annual Community Partners conference begins; • Quality Committee and Consumer Advisory Committee meet; • Progress report submitted to EOHHS as required.
April-June 2022	• Consumer and ACO/MCO survey results are analyzed and reported to Quality Committee, Consumer Board ,Governing Board, and EOHHS; action plans are developed to address areas for improvement; • Fourth annual CP conference held; • Quarterly joint operating meetings with ACOs and MCOs continue; • Second Year 5 CQI initiative is implemented; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Committee meet; • Progress report submitted to EOHHS as required.
July-Sept 2022	• Second Year 5 CQI initiative is planned; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Board meet; • Joint operating meetings with ACOs and MCOs are held; • Progress report submitted to EOHHS as required.
Oct-Dec 2022	• Second Year 5 CQI initiative is implemented; • Quarterly joint operating meetings with ACOs and MCOs continue; • Quality Committee and Consumer Advisory Board meet; • Joint operating meetings with ACOs and MCOs are held; • Progress report submitted to EOHHS as required.

Row 6 - Supplies

Description of Supplies	Unit Cost or Cost/FTE	# Units or FTE	Cost
Office supplies-initial stock for staff	100	38	$ 3,800.00
Office supplies-resupply for staff	40	4	$ 160.00
Total Supplies (Program Budget Line 6)			**$ 3,960.00**

Provide a brief description of the intended use for each Supply line item listed above and how the estimated costs were determined:

Office supplies to be purchased for new employees is estimated to be $100 per FTE due to higher initial costs per month. As resupply occurs, the monthly amount should settle around $40 per FTE. This includes paper and toner costs for copiers, pens, pencils, notepaper, letter pads, folders, paper clips, staples, maintenance supplies, minor equipment, etc. Total costs did not include additional supplies required for second wave of new employees estimated to start on September 1, 2018 with the estimated additional 600 cases to be under care management on that date.

Row 7 - Contract Services

Name of Contractor	Contractor Type	Goods and Services Provided	Cost
Total Contract Services (Program Budget Line 7)			**$ -**

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Row 8 - Software Licensing

Description of Software	Cost per License	# Licenses	Cost
Netsmart CareConnect	$2.18 PMPM	1600	$ 17,440.00
Total Software Licensing (Program Budget Line 8)			**$ 17,440.00**

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

Netsmart Careconnect requires a per member per month (PMPM) fee for the software license from the date of contract execution at the highest anticipated engaged member amount regardless of level of membership engagement in the earliest months of the BH CP. Accordingly, we estimate that the contract will be signed on January 1, 2018 and have budgeted $2.18 PMPM for six months for the 1,600 estimated engaged members at full operational capacity of the BH CP.

Row 9 - Telecommunications

Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
Verizon Smartphones	$100/month	42	$ 4,200.00
Total Telecommunications (Program Budget Line 9)			**$ 4,200.00**

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

Each employee will be issued a smartphone for care coordination software access as well as for access to CP members and staff while in the community providing care coordination. Average cost per month under the corporate plan is $100 per smartphone. There will be 42 months of this cost (for 38 devices) during the preparation budget period since some employees are expected to be hired up to 5 months in advance of the anticipated June 1, 2018 start-up date.

Row 10 - Occupancy

Occupancy Expense	Total SqFt	Cost/SqFT	Cost
Rent	2250	$1.58	$ 3,562.50
Utilities			$ -
Repair and Maintenance			$ -
			$ -
			$ -
Total Occupancy (Program Budget Line 10)			**$ 3,562.50**

Provide a brief description of how each Occupancy line item listed above will support the CP's performance and how the costs were determined:

Rent costs (includes utilities) is based upon estimated square footage of 250 per employee for the Program Director, Registered Nurses, Engagement Specialist and Administrative Support positions. The square footage has been modified above to reflect the usage from hire date based upon a 12 month period of the lease for the cost per square foot.

Row 11 - Other

Other Direct Expense Description	Cost
Total Other (Program Budget Line 11)	

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Row 12 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 12)	**15.00%**	**$ 40,456.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Indirect Cost/Administrative Overhead is computed at 15% of total direct costs and includes executive level staff who will be involved in the project as well as all other administrative support from Finance, Human Resources, Information Technology, Facilities and Purchasing.

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

Row 6 - Recruitment Expenses

Description of Expense	Cost
Job fair costs	$ 150.00
Contract recruiter	$ 10,500.00
Total Recruitment Expenses (Infrastructure Budget Line 6)	**$ 10,650.00**

Provide a description of each recruitment expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Job fairs will offer opportunity for potential candidates to have face to face discussions of available positions with a recruiter, allow for questions to be answered and to assist in providing viable candidates to hiring managers.

A contract recruiter will be engaged to provide assistance with recruiting activities. The anticipated contract rate is $70 per hour for150 hours, or $10,500 for the length of the contract engagement.

Row 7 - Training Expenses

Description of Expense	Cost
In-house training for all BH CP staff including	$ 5,250.00
orientation to care coordination, etc.	
Total Training Expenses (Infrastructure Budget Line 7)	**$ 5,250.00**

Provide a description of each training expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

In-house training for all BH CP staff including orientation to care coordination. It is expected that this will be a week-long series of meetings which will be held in-house at the administration offices and will feature guest speakers as well as discussions among staff members regarding best practices, lessons learned, etc. from other care management/care coordination activities that management and staff have experienced. Basic medical training and all aspects of the in-house developed Care Management Onboarding orientation will be presented at the week-long training series. Estimated cost includes food for program participants and program speakers. Cost per FTE for this training is $138.15.

SECTION 7.3. INITIAL DELIVERY SYSTEM REFORM INCENTIVE PAYMENT (DSRIP) PARTICIPATION PLAN

7.3.A. Executive Summary

Lahey Health Behavioral Services (LHBS) would like to become a Community Partner (CP) to improve the lives, health and well-being of individuals with SMI and/or SUD, and to be a part of this ground-breaking new program. We will leverage our 60 years of experience as an innovative provider organization to charter this new course in care delivery on behalf of MassHealth members.

The current healthcare system does not work well for adults with high Behavioral Health (BH) needs and lacks the very supports such as care coordination and care transitions that are so critical to outcomes of both cost and quality. High rates of mortality and morbidity, and poor health outcomes indicate a poor use of resources. Further, many of our members with high BH needs experience a range of adverse, economic, social and environmental conditions that weigh negatively upon health and functional outcomes.

As a CP, we will be able to address the full range of needs that MassHealth members face. That includes medical, behavioral health, long-term services and supports and the social determinants of health. With DSRIP funds, we will leverage our previous experience to build a solid program based on emerging and evidence-based practices, and hire a diverse care team with the expertise and the experience needed to provide supports in a person-centered, yet culturally and linguistically competent manner.

Enrollees, Service Areas, and Timeframes

LHBS proposes to serve 1,600 MassHealth members and to operate and provide services and supports to all 9 service areas in MassHealth's northeast region, including Beverly, Gloucester, Haverhill, Lawrence, Lowell, Lynn, Malden, Salem and Woburn. LHBS will comply with all EOHHS requirements to operationalize the CP program and implementing such supports and activities. We will have the capacity to serve 1,000 enrollees on Day 1 and 1,600 by month 4.

Goals, Challenges, Solutions

LHBS has outlined its goals and related challenges and offers several solutions to the challenges in *Table 7.3-1* below. We will continually work to address these challenges over the 5 year contract term.

Table 7.3-1: LHBS Goals, Challenges, and Proposed Solutions

Goal	Description of Goal, and Related Challenges

Table 7.3-1: LHBS Goals, Challenges, and Proposed Solutions	
Goal	**Description of Goal, and Related Challenges**
Goal 1. **Relationships**	Challenge: The current healthcare, BH and social service system is fragmented and both members and providers do not know who to go to for answers or resources. Forming relationships across settings is not easy given resistance and competing priorities. Goal: LHBS will create strong relationships with members, ACOs, MCOs, providers, independent living centers, recovery living centers, communities, housing agencies, food banks, police stations, and others to facilitate success as a CP and to meet members' needs. We will also leverage information technology solutions to support these relationships. Proposed Solution(s): We will emphasize frequent communication with all appropriate community and provider stakeholders regarding member care, and will continually educate community organizations about our role and value. We will leverage information technology (IT) solutions as necessary to meet these goals.
Goal 2. **Workforce**	Challenge: The BH CP program success is highly dependent on recruiting and retaining the right people in a highly competitive market. Goal: LHBS will create a strong workforce of care coordinators, care managers, community health workers, and any other categories needed to implement program and meet the needs of our members. Proposed Solution(s): LHBS will leverage current connections in the community to recruit and retain highly qualified persons of our communities to serve our members. Ramp-up period includes planning for recruitment.
Goal 3. **Protocols/Tools Process.**	Challenge: LHBS needs to ensure consistency and effectiveness across the CP program and with other providers (ACOs and MCOs) to deliver high-quality, accountable care in challenging circumstances. Goal: We intend to deliver consistently excellent care to our members to demonstrate the value to EOHHS and the ACO and MCO partners. Proposed Solution(s): LHBS will leverage our existing protocols, processes and tools to support the implementation of CP services and supports and to achieve the intended outcomes. We will continually search for ways to improve our processes to align with best practices and evidence-based care guidelines.
Goal 4 **LTSS**	Challenge: Integrated care management for members who have BH and LTSS needs can be challenging. Goal: LHBS will bring best practices to serving all BH CP assigned and engaged enrollees with LTSS needs. Proposed Solution(s): We will leverage our experience and relationships with organizations in the community to implement an LTSS management program that is responsive to members' individual needs, inclusive of best practices and financially responsible.
Goal 5. **Value Proposition**	Challenge: Sustainability of the CP program beyond the 5-year contract requires demonstrating value proposition to ACOs, MCOs and other providers. Goal: LHBS will maximize performance on quality, cost and member experience metrics to demonstrate value. Proposed Solution(s): We will work with ACOs and MCOs and other providers during the 5 years to establish a framework and conduct an analysis of the data to demonstrate our value.

7.3.B. Supporting Populations and Community Engagement

LHBS knows that the best way to support our members is to engage the communities in which they live, eat, pray, work, socialize and get care. At the same time, understanding the culture, the strengths and the barriers that members face helps identify and meet the needs in a person-centered manner. LHBS has well-established connections to the community and will grow these connections to the community to serve the person-centered needs of our assigned and engaged enrollees. We will ensure that staff is informed of community resources over the course of the contract term and beyond. We will meet all requirements of the contract including those included in *Section 2.3.H* of the Model Contract to build all required community collaborations and coordination.

Connections to the Community

For 60 years, LHBS has been a community provider of a robust continuum of BH services in the northern region in the communities and service areas in which we propose to operate as a CP. As discussed in section 7.2, LHBS has a strong footing throughout the northern region, where we provide services to MassHealth members with BH needs, and where we have developed collaborative relationships with other community-based providers, social service organizations, housing/shelter providers and social service organizations. We currently provide services to members in all service areas. We are a Community Service Agency (CSA) for Cape Ann and Haverhill. We operate three Emergency Services Programs (ESPs) in four locations in Salem, Haverhill, and Lawrence, serving 37 cities and towns collectively. Our CSP, HFY and CHART care coordinators have developed processes for referral and coordination with a broad array of service providers in order to meet the unique needs of our members. In addition, we have established relationships with housing agencies, fuel assistance programs, faith-based and social-service organizations, in addition to state agencies.

As a CP, we will grow these connections to the communities in all nine service areas within the northern region to ensure that we are have the connections to address the needs of our enrollees, including those needs that are identified in the person's treatment plan and to support the enrollee's health and well-being. Building a strong system of connections is critical to our ability to meet our enrollee needs for community-based social services and flexible services.

See *Table 7.3-2* for an overview of our current connections to the community by the areas of needs.

Table 7.3-2: List of Current Connections to the Community

Area of Need	Active Relationships in all 9 services areas in the Northeast region
State Agencies	Department of Mental Health (DMH), Department of Children and Family (DCF), Department of Youth Services (DYS), Department of Developmental Services (DDS), Department of Early and Secondary Education (DESE), DPH
Local/Municipalities	All city and towns within the service areas
Housing	Shelters, housing support programs, Local public housing entities
Education	Schools, universities
Health Care	Primary care providers, local chapters, community hospitals, urgent care centers

Community-based Organizations	Recovery Learning Communities (RLCs), Independent Living Centers (ILCs), Clubhouses, local chapters of NAMI, YMCAs, faith based groups
Law Enforcement	Local police departments, court clinics

Plans to Grow Connections and to Keep Staff Informed of Community Resources

LHBS is in the process of developing protocols to grow both our relationships with community organizations and our staff knowledge about the resources available in our communities to meet member needs, and the needs we anticipate in our CP assigned and engaged members. Through our experience with members with SMI and SUD, we have learned that diverse engagement strategies are needed to achieve the goals and the vital importance of close coordination between care providers and supportive community resources in achieving treatment goals and preventing relapse. The dramatic ramp-up of our care coordination program from the current HFY portfolio will necessitate that we expand our network consciously to meet the new needs.

We will pursue several strategies to both strengthen and expand our community connectedness:

1. ***Relationships with Care Coordinators*:** Our care coordinators will be on the front-lines of efforts to identify new partners in the communities driven by the needs of individual members. Themselves members of the communities in which we work, we will leverage the personal and professional connections of our new staff to build trusting relationships with community partners.
2. **Expanded resource manual of community resources:** To make sure all new and existing staff are aware of the resources and partnerships we have in the community, we will make expand our current resource manual to include the range of community resources needed by our members.
3. **Identify gaps in our community partnerships:** As care coordinators and other staff identify gaps in the community resources available within our manual, we will document these gaps and work diligently to identify new partners to meet needs.
4. **Work closely with SMI and SUD-focused organizations:** Given their central role in advocacy and service delivery for our target populations, we will coordinate closely with Independent Learning Centers (ILCs) and Recovery Learning Centers to coordinate care for members and ensure our programs are accountable to their expectations on a macro level.

Table 7.3-3 below provides an overview of our community connections, specific to members with SUD.

Table 7.3-3: Community Connections Specific to Members with SUD

#	Description of Connection
1	On our Danvers campus, we offer the evidence-based Allies in Recovery (AiR) program to assist families to understand addiction and learn behavioral strategies to support family members with addictive disorders.

Table 7.3-3: Community Connections Specific to Members with SUD	
#	**Description of Connection**
2	We actively participate in the Danvers and Gloucester Prevention Coalitions, as well as participate in the multi-agency group in Gloucester focused on identifying and coordinating care for high risk persons in the community with acute and chronic behavioral health disorders. We have developed relationships with local police departments to expedite treatment access. Burlington and Tewksbury Police Departments work closely with our detoxification program in Tewksbury to admit individuals. Additionally, LHBS has a clinician embedded in the Danvers Police Department and fiscally and clinically supports a master's level clinician working with the Gloucester Police Assisted Addiction and Recovery Initiative (PAARI).
3	All programs provide overdose prevention education and have overdose prevention plans for the program itself, as well as individualized plans for the people we serve, including providing access to the lifesaving medication naloxone.

7.3.C. Community Partner Supports and Activities

7.3.C.1. Outreach and Active Engagement

LHBS is committed to supporting and coordinating services with and on behalf of members with high behavioral health needs and lived experience of SMI and SUD through collaboration and in partnership with clinicians, providers, ACO and MCOs. Our model is designed to integrate all services and achieve the triple aim: improve the quality of life for members, improve their health outcomes and reduce cost. LHBS has developed a plan and an associated workflow to implement all supports and activities that reflects not only our deep understanding of SMI and SUD progression and treatment processes, but also our long and successful track record program implementation. See *Section 7.3.C.7*, *Figure 7.3-1* for LHBS' workflows in support of providing CP Supports in accordance with the contract.

We are eager to address the needs of assigned and engaged enrollees in a holistic manner and assume responsibility for coordination of activities including outreach and active engagement, comprehensive assessment, care coordination and care management, care transition, medication reconciliation, health and wellness coaching, and in making their connection to community and social services. LHBS' plan includes leveraging innovative technologies, building on our already strong care management staff, and a process for coordinating with ACOs and MCOs that will help to drive our success in meeting all performance requirements and the long-term sustainability of our program.

Leveraging Experience and Evidence-Based Practices to Provide CP Supports

As covered extensively in *Section 7.2*, LHBS brings a breadth and depth of experience, 60 years in the making, in providing services to individuals with high BH needs and lived experience of SMI and/or SUD. We will leverage our experience in providing care coordination and care management to enrollees with high BH needs from the CSP, ICC, HFY and CHART programs. These four programs represent our evolution in care coordination and development of best practices. Our approaches, processes, protocols, and workflows respect our values of person-centeredness and recovery, our respect for the individual, and our deep understanding of the complexity of the diagnostic conditions of SMI and SUD that are often accompanied by other co-morbidities of health, functional needs, and social and economic needs that require additional services and supports to achieve better outcomes. We are committed to achieving the range of quality measures that are included in the model contact and will leverage our vast experience and new learning to do so.

Through all our programs, we have gained experience and expertise in addressing the needs of individuals with complex social determinants that affect health including homelessness.

See *Table 7.3-4* below for a summary description of how LHBS will provide the required CP supports and activities to improve the lives of persons with lived experience of SMI and/or SUD.

Table 7.3-4: How Will LHBS Provide CP Supports and Activities?

CP Services and Activities	Current Exp.	Our Approach, Plan, and/or Process for Meeting Contract Requirements and Leveraging the Evidence Base

Table 7.3-4: How Will LHBS Provide CP Supports and Activities?			
CP Services and Activities		**Current Exp.**	**Our Approach, Plan, and/or Process for Meeting Contract Requirements and Leveraging the Evidence Base**
1	Outreach and Engagement; Signed Participation Form	✓	• Hire an engagement specialist to help assigned enrollees connect with a care coordinator and to engage. Engagement specialists will use our already developed script to inform the process and to help engage persons with high BH needs. • Tailor our outreach and engagement to individuals based on their lived experience of SMI and/or SUD to reflect a person-centered process that accounts for social and economic circumstances, LTSS needs, disability needs, and cultural and linguistic needs of the individual. • Leverage existing LHBS infrastructure and community partnerships to maximize engagement opportunities and find members where they are.
2	Comprehensive Assessment; Person-Centered Care Treatment Plan	✓	• Use an EOHHS-approved tool. • Ensure CP engagement and participation. • Conduct the assessment involving the care team. • Meet all timelines. • Review all information for care plan development, including coordination with medical providers. • Make plans person-centered. • Ensure enrollee, and PCP approval of the plan. • Provide copies of plan to enrollee, and share PCP-approved care plans with all. • Update assessments and/or care plans regularly as circumstances change.
3	Care Coordination and Care Management	✓	• Build a relationship with the CP enrollee. • Leverage the breadth and depth of our experience. • Ensure on-going communication with the member and the entire care team. • Address the comprehensive needs of our members, including LTSS needs. • Address the social determinants of health.
4	Care Transitions	✓	• Be involved in every care transition including transitions across providers. • Be involved throughout the hospital stay. • Be involved after the hospital stay including a visit within 48 hours of discharge to coordinate care • Coordinate, and communicate with ACOs, MCOs.
5	Medication Reconciliation	✓	• Designate an RN on the care team to perform the medication reconciliation. • Use centralized enrollee record and electronic interfaces to ensure medication list is comprehensive and up to date • Create a person-centered process. • Involve and engage the CP enrollee. • Integrate medication reconciliation into workflows.
6	Health & Wellness Coaching	✓	• Develop procedures that reflect our programs and methods. • Leverage our existing network of embedded clinicians and programs to help enrollees with smoking cessation, chronic care management, and diabetes management, which will be included in the person-centered care plans.

Table 7.3-4: How Will LHBS Provide CP Supports and Activities?			
CP Services and Activities		**Current Exp.**	**Our Approach, Plan, and/or Process for Meeting Contract Requirements and Leveraging the Evidence Base**
7	Connections to Community and Social Services	✓	• Assess social needs using a screening tool. • Build an inventory of resources. • Hire people with local knowledge and experience • Make recommendations about Flexible Services • Work with ACOs to monitor and track outcomes to establish a base of evidence around the contribution that Flexible Services make to outcomes. • Assist enrollees in accessing services.

Plans for Outreach and Active Engagement

LHBS has developed a plan for contacting and helping assigned enrollees learn about what LHBS can offer (outreach) and providing supports and activities (engagement) that meets all requirements of the contract, as summarized in *Table 7.3-5*, below. In carrying out this plan, LHBS will leverage its robust portfolio of "best practices" drawn from what we have used in our care coordination programs, what we have learned from others, and what we know works.

Table 7.3-5: Outreach and Engagement			
#	**CP Supports and Activities**	**Our Commitment to CP Goals and Contract Requirements**	**Our Approach for Meeting All Requirements with Evidence-Based, Emerging and Best Practices**
1	Outreach and Engagement	LHBS intends to meet all contract requirements based upon the development, implementation, maintenance and adherence to an EOHHS-approved protocol. LHBS will: (1) conduct at least 1 outreach activity within 30 days of assignment; (2) conduct at least one face to face visit within first 3 months; and, (3) assign a Care Coordinator to assigned enrollee within 5 business days of signed participation form.	LHBS will bring its experience and evidence-based practices in conducting outreach, engaging members and conducting an effective process to obtain and document member agreement, based upon our successful track record in these for programs: CSP, ICC, HFY and CHART.

Best Practices in Outreach and Active Engagement

We have developed a strong portfolio of best practices from our experience in offering care coordination and care management in the CSP, ICC, HFY and CHART programs. These best practices include providing tailored training to our staff, putting "boots on the ground," conducting face-to-face visits, embedding staff in outpatient practices and forging partnerships with providers such as Independent Learning Centers (ILCs).

We have also looked beyond Massachusetts to support and to amplify our approach. A 2014 Center for Health Care Strategies report "Outreach to High-Need, High-Cost Individuals: Best Practices for New York Health Homes" summarizes many of the strategies that we have used in our programs including: hiring the right people for the job and from the communities in which

members live, putting "boots on the ground," tailoring outreach and engagement activities to targeted population groups, being persistent, developing customized marketing materials to give to providers, setting up timely notification processes with partners, leveraging all forms of communication and social media, and using technology.

Finally, a 2016 National Alliance on Mental Illness (NAMI) report on "Engagement: A New Standard for Mental Health Care" brings forth a critical point about engagement that LHBS will bring to this program, which is the need to create a "culture of engagement" based upon trust and recognizing that engagement is not a one-sided relationship for any person, and especially for those with lived experience of SMI and SUD. A relationship is about trust and respect, and many other important intangibles to LHBS.

The Plan to Conduct Outreach and Active Engagement

LHBS will develop, implement, maintain, and adhere to an EOHHS-approved protocol for Outreach and Active Engagement of Assigned Enrollees that meets all contract requirements and is based on best practices. This includes a three-pronged approach to engaging our members.

Engagement Specialists: For the CP program, LHBS intends to hire dedicated Engagement Specialists who will be tasked with connecting with and engaging members who are newly assigned to LHBS. The staff will outreach as soon as possible (within 30 days) by phone, making at least 3 attempts at different times of day and days of the week. If unable to connect by phone, the Engagement Specialist may attempt or arrange for an in-person attempt to connect in the community or at home. Engagement Specialists will receive specialized training in motivational interviewing and other techniques that maximize effectiveness.

We know from our experience in our other care coordination/care management work of HFY and CHART that engagement rates in a medically and behaviorally complex population are a challenge. Specifically, our engagement rate for members served by our HFY CCs is 42 percent. It is markedly lower, at 25%, for our CHART members who are high ED utilizers. We strongly believe that dedicating resources to engagement will improve our overall engagement rate.

Leverage LHBS Infrastructure: Many of the members assigned to the CP program will have additional, trusting relationships with LHBS programs in the community. LHBS will cross-train staff in these programs to identify CP members when they engage in these programs and help make connections to the Engagement Specialists or care coordinator staff. These connections will be especially important upon discharge from detox or from an ESP assessment in emergency departments. By making these connections across the system, LHBS will maximize engagement opportunities.

Leverage Community Relationships: LHBS will outreach to various community organizations in order to boost engagement of high risk individuals, including outreach to needle exchange programs, homeless shelters and ACO providers. Members often have a trusting relationship with these organizations or individuals and demonstrating integration will assist with building trust with our care managers as well.

Once contacted, LHBS will provide assigned enrollee information about the benefits, design and purpose of the CP Supports; providing the assigned enrollee information on the process for

Engaging with the program team and providing opportunities for an assigned enrollee to opt out of receiving CP Supports or to request assignment to a different CP. Engagement Specialists will gain member consent for participation in the program and ensure that a follow-up face to face visit is completed within 30 days.

7.3.C.2. Process for Comprehensive Assessment and Person-Centered Treatment Planning

LHBS has developed a process for conducting comprehensive assessments, for conducting person-centered treatment planning, and for developing/documenting/updating the plan, and ensuring plan approval by the enrollee. Like all LHBS processes, the workflow for assessments and treatment planning recognizes two important principles: that this plan belongs to the person, and as such, must be a living, breathing document that is changed and revised to reflect the changes that take place in that person's life.

LHBS intends to meet all requirements of the contract, as summarized in *Table 7.3-6*, and to leverage its best practices, as well as those from programs around the state and the country, to ensure that we achieve high rates of success evaluated under EOHHS-anticipated quality measures of engagement. (Source: Exhibit 2: Anticipated BH CP Quality Measure Slate.)

LHBS is experienced in conducting comprehensive assessments and in developing person-centered treatment plans that are inclusive of the medical and BH conditions and social determinants of health. LHBS believes that this assessment tool will play a critical role in shaping the development of a person-centered care treatment plan that addresses the medical, behavioral, LTSS and non-medical needs of the assigned enrollee, achieving positive outcomes for the enrollee, and meeting BH CP performance metrics as outlined in the model contract.

Table 7.3-6: Comprehensive Assessment and Person–Centered Treatment Planning

#	CP Supports and Activities	Our Commitment to CP Goals and Contract Requirements	Our Approach for Meeting All Requirements with Evidence-Based, Emerging and Best Practices
2	Comprehensive Assessment and Person-Centered Treatment Planning	LHBS intends to meet all contract requirements including: (1) complete assessment within 3 months of assigned enrollee's assignment; (2) annually develop person-centered treatment plan within 3 months of assignment; and, (3) reassess and update plan at least every 6 months.	LHBS will bring its experience and evidence-based practices in conducting comprehensive assessments of the enrollee's needs across several of its existing programs including, but not limited to: OP, ESP, CBHI, Here For You and CHART. Our experience and evidence-based practices are described in *Section 7.2.*

The Process to Conduct Comprehensive Assessments

1. **Use an EOHHS-Approved Tool.** LHBS will use an EOHHS-approved comprehensive assessment tool that captures all 21 assessment elements, as outlined in the model contract. See *Section 7.3.C.7.2* for our proposed Comprehensive Assessment Tool that encompasses all 21 elements. We have summarized these 21 elements into three categories in *Table 7.3-7* below and into three distinct categories: needs that are medical, needs that reflect a range of personal needs, and needs that reflect a range of social, economic and personal conditions.

2. **Engage CP Enrollee.** LHBS will ensure the participation of assigned enrollees in this assessment process. Nine years ago, LHBS began working directly with MassHealth members to ensure their successful participation in the assessment process. Evidence of success can be found in ICC, CSP, HFY, and CHART.
3. **Conduct Assessment, Involving the Right People.** LHBS Care Coordinators will conduct the Comprehensive Assessment with members of the Care Team; and within all required timeframes. A Registered Nurse (RN) will review all medical history, medical need and medications, connecting with the PCP, other medical or BH providers, or other participants in the member's support structure as needed for completeness. A Clinical Care Manager on the CP Team will complete final review and approval of the entire comprehensive assessment. Additionally, the Team Leader will be responsible for ensuring that the results of the Comprehensive Assessment are communicated to the assigned enrollee's Care Team, ACO and/or MCO, and other providers who serve the assigned enrollee including state agencies or other case managers as appropriate.
4. **Leverage Care Management Tools to Meet Timelines.** We will leverage the care management tools to ensure that all requirements for timely completion of the assessment. (We are currently considering the selection of our care management software tool for this program. We are comparing the benefits of three well-known choices on the basis of cost and quality.)

Table 7.3-7: LHBS Summary of the Assessment Tool

Category	Medical Care	Personal/Required Supports	Social and Economic/Other
Elements	Immediate care needs; Current services; Medical history; Medications.	Ability to communicate concerns, symptoms, or care goals; Functional status; Self-identified strengths, weaknesses, interests, care goals, and personal goals; Current and past mental health and substance use; and Accessibility requirements.	Housing and home environment; Employment status, professional interests, and professional goals; Current use of and goals for leisure time; Legal status; Education; Income and financial support; Available supports; Risk factors for abuse/neglect; Food security, nutrition, wellness and exercise; Advance directives status and preferences and guardianship status; Current and relevant acute care plans for medical and BH conditions; and, Other domains.

The Process to Develop Person-Centered Treatment Plan

LHBS has extensive experience in developing person-centered treatment plans. See *Section 7.3.C.7.3* for a sample plan that reflects the information that is captured in our electronic record systems today for PCPs to access. This plan is always available to the member.

LHBS will develop the person-centered treatment plan within 3 calendar months of the enrollee's assignment to LHBS. We will implement a process that encompasses the following key steps and meet all required timeframes. We will also ensure that plans are always available to CP enrollees and other members of the care team. We consider the plan a living, breathing document that will be updated as needed, and at least every 6 months.

Our approach to care planning and treatment planning is based on bringing together a balance of natural and formal supports that may include family/guardian, supports, providers, schools, state agencies, clergy and others who play a key role in the youth's life. We adhere to the

Wraparound Principles which include: Family voice and choice, Team-based, Natural Supports, Collaboration, Community-based, Culturally-competent, Individualized, Strengths-based, Unconditional, and Outcome-based.

Specific steps in developing the treatment plan include:

1. **Engage CP Enrollee.** Ensure that enrollees have an opportunity to develop his/her person-centered treatment plan that emphasizes the strengths and priorities of the enrollee.
2. **Review All Information.** Collect all information relevant to the development of all person-centered treatment plans include all results, assessments for social services, and include all other required information such as reassessment dates. To the extent that the enrollee may have complex medical conditions co-morbid with SMI or SUD, consult with the PCP on treatment plans and goals.
3. **Make the Plans Person Centered.** Create person-centered treatment plans are unique to each enrollee, in writing, reflect preferences and needs of the individual and meets all other requirements to support a disability-competent and culturally-competent process, and are approved by the assigned enrollee's PCP or PCP designee and the assigned enrollee.
4. **Ensure Enrollee and PCP Approval.** Ensure that all updated person-centered treatment plans are approved by engaged enrollees and the engaged enrolled PCPs or PCP designee.
5. **Provide Copies of PCP-Approved Plans to All**. Provide all engaged enrollees with a copy of the PCP-approved person-centered treatment plan, or updated one. Share person-centered treatment plans with all parties.
6. **Re-assess and update** all person-centered treatment plans, as appropriate including after care transitions and other changes in status.

Highlight on Care Planning and Treatment Plans for Youths: *LHBS has nine years of experience in care planning for MassHealth youth and their families. The Care Team develops a clear mission statement that articulates the overarching goal of the service provision, examine the youth and family's needs, identify several different ways to meet those needs that match up with our strengths. During care plan meetings, the team will: review accomplishments (what we have done and what's been going well); assess whether the plan has been working to achieve the goals; adjust things that aren't working within the plan; and assign new tasks to team members. In the words of one reviewer of Youth and Family Engagement, "regardless of the outcome in terms of family reunification, the ICC made herculean efforts to engage all three potential family caregivers (with neutrality despite custody battles) as well as the foster family."*

7.3.C.3. Care Coordination and Care Management

LHBS will provide care coordination and care management services in accordance with all requirements of the model contract, as summarized in *Table 7.3-8*. LHBS believes that–as an organization–the key to providing effective care coordination and care management is to hire

the right staff and to train them well, to value communication and the exchange of information, and to establish a strong relationship with the enrollee.

1. **Leverage Our Experience.** Honing these skills takes experience, which LHBS can offer in abundance. LHBS provides care coordination services to children and adults today across a range of programs including ICC, CSP, ESP, HFY, and CHART. As a CBHI provider for almost a decade, we are experienced in ensuring that families and their children with significant behavioral, emotional, and mental health needs obtain the services necessary for success in home, school, and community. LHBS has developed an expertise in being able to identify all stakeholders who should be involved in the care coordination and care management process. LHBS will leverage this experience to: (1) identify all stakeholders who should be involved in the care coordination and care management process; (2) exchange information with all stakeholders; (3) identify and organize members of the enrollee's care team; and (4) ensure effective on-going communication across all stakeholders.
2. **Engage Our Enrollees.** As a CP, we will encourage enrollees to identify the key members of the care team, in addition to the required members of the Care Team as outlined in the contract. We will encourage the exchange of information by offering to attend meetings with the enrollees, and ensuring that their needs are met in a culturally and linguistically appropriate manner. We will remove any barriers to the exchange of information.
3. **Ensure On-Going Communication.** To ensure effective and on-going communication, we rely upon a variety of methods including engaging our multi-disciplinary teams in clinical rounds, requiring that care managers review every client in their caseload, and establishing interoperability of record systems. Furthermore, in the CP program we will expand this regular communication to include the member's PCP and other medical and social service providers. This routine communication will ensure our members' experience integrated, high-quality care while also preventing issues from falling through the cracks.
4. **Address LTSS Needs.** As a BH CP, we must ensure that we address the LTSS needs of our engaged enrollees. It is our understanding that nearly 60 percent of our assigned and engaged enrollees may have LTSS needs. It is critical that we go above and beyond the requirement to ensure that enrollees know that their choices are, that we provide enrollees with assistance in navigating and accessing needed LTSS and LTSS-related services, and that we identify LTSS providers that served or might serve the enrollee.
5. **Address the Social Determinants of Health.** As a BH CP, we must ensure that we address the underlying economic and social conditions facing our engaged enrollees. These themes feature prominently in our assessment form and will also be addressed regularly and comprehensively by our care managers working with members. We will use a screening tool specific to social determinants of health. LHBS will create a tool that leverages the types of questions that have been recommended by organizations with expertise in addressing these social and economic needs. We will leverage the Protocol for Responding to and Assessing Patients' Assets, Risks, and Experiences (PRAPARE), and many questions that have been created by other states and organizations.

Table 7.3-8: Care Coordination and Care Management

#	CP Supports and Activities	Our Commitment to CP Goals and Contract Requirements	Our Approach for Meeting All Requirements with Evidence-Based, Emerging and Best Practices
3	Care Coordination and Care Management	LHBS intends to meet all contract requirements including: (1) form and operate a Care Team around the needs and preferences of the engaged enrollee (including provide encouragement to engaged enrollee to identify all care team member, assemble all required care team members); (2) facilitate communication with all including enrollee, PCP, and all other providers including RSNs, CBFS providers, LTSS providers, and other providers for the express purpose of promoting service delivery coordination and improved outcomes; and, (3) facilitate and coordinate LTSS services by informing engaged enrollees about his/her choice of specific LTSS services and programs and providers, assisting engaged enrollees, and identifying providers; and, (4) execute the activities necessary to support the engaged enrollee's person-centered Treatment Plan including ensuring that the engaged enrollee has timely and coordinated access to primary, medical specialty, LTSS and behavioral health care.	LHBS, learning from past experience, intends to implement a care management program that prioritizes member-centeredness, communication and strong trusting relationships.

7.3.C.4. Care Transitions

For persons with lived experience of SMI and/or SUD, all transitions of care are important: transitions to another provider, another PCP, to this new CP program, a move from one home to another or from one program to another or from one job to another or none, and finally, from community to hospital or hospital to community. LHBS will not focus exclusively on transitions of care from hospital to community, although these transitions of care are particularly critical to individuals with high BH needs.

Building on decades of experience as emergency service providers and inpatient psychiatric providers in the community, LHBS CP will provide a robust program of support for members who are hospitalized that starts from the moment they enter the facility. Leveraging our current presence within the emergency departments and inpatient units–both medical and psychiatric–LHBS CP staff will be aware of the admission and will communicate important clinical information that can improve care. We will be involved in every step of the discharge planning,

In coordination with the enrollee and all other stakeholders, including the PCP, ACO, MCO and family, and will ensure appropriate supportive services are in place prior to discharge.

We will also be there on the other side of the hospital and in the community to ensure that we support all types of care transitions. This includes a contact with the care manager within 48 hours of discharge and a home visit as needed. Following best practices for post-discharge engagement, LHBS care coordinators will re-confirm or update the treatment plan, review medications and confirm supports are in place. The RN will conduct medication reconciliation. If there has been a change in status, the care coordinator will arrange for a new assessment during that post-discharge contact to ensure the information and treatment plan are current.

Information gained from the post-discharge contact will be communicated to the PCP and other specialty providers including at follow-up visits.

LHBS will meet all requirements of the contract to ensure that our enrollees receive every form of assistance in our capacity as a CP to help the enrollee make a smooth transition back to the community. LHBS will satisfy all care transitions requirements in accordance with the model contract, and as summarized in *Table 7.3-9*. We will use evidence-based or emerging practices as appropriate. We will include all the necessary steps to ensure engaged enrollee's stability and satisfaction following a transition in care.

Table 7.3-9: Care Transitions

#	CP Supports and Activities	Our Commitment to CP Goals and Contract Requirements	Our Approach for Meeting All Requirements with Evidence-Based, Emerging and Best Practices
4	Care Transitions	LHBS intends to meet all contract requirements including: (1) assist in the development of a discharge plan; (2) ensure that the CP team is present at the discharge planning meetings; (3) ensure that follow up is provided within 3 business days of inpatient discharge and all minimum requirements are met including a face to face visit and updated person-centered Treatment Plan; (4) provide updates to enrollee's ACO or MCO: (5) assist engaged enrollees in accessing all supports.	LHBS will bring its experience with care transitions with our CSP and RSN meeting with members prior to discharge from Inpatient (IP) and Acute Treatment Services (ATS). LHBS will also bring its successful experience from CBHI, which involves meeting with their enrolled members prior to discharge from a 24-hour level of care.

7.3.C.5. Medication Reconciliation

LHBS will satisfy all medication reconciliation requirements in accordance with the contract, and as summarized on *Table 7.3-10* below, including meeting the requirement that a RN on the Care Team perform the medication reconciliation. Our plans to develop this program of medication reconciliation are based on the goal of developing "one source of truth." (Source: Agency for Healthcare Research and Quality (AHRQ).)

Table 7.3-10: Medication Reconciliation

#	CP Supports and Activities	Our Commitment to CP Goals and Contract Requirements	Our Approach for Meeting All Requirements with Evidence-Based, Emerging and Best Practices
5	Medication Reconciliation	LHBS intends to meet all contract requirements including: (1) ensure that medication reconciliation is performed by an RN on the Care Planning Team.	LHBS will bring its experience using technology to facilitate medication reconciliation in acute care settings to the more difficult, but equally, vital task of ensuring that each member's medication regimen is up to date at home and in community-based settings.

Medication reconciliation is a process to ensure that the latest medication regimen is communicated to and implemented in new settings. For example, when a member returns home from an acute care setting, it is vital that any discontinued medications are removed from the active medication list and any dosage changes are updated. The Lahey Health System hospitals have sophisticated medication reconciliation systems in place, facilitated by embedding in the electronic medical record. However, such systems are generally less routine and less refined in the community, where a patient may, for example, have medications changed by multiple outpatient providers and the patient may move between subacute care settings. LHBS will utilize both technology and clinical skill to make sure that members are on the correct medications as they make such transitions. The software we are evaluating will enable the LHBS CP to have for each member a list of medications that will be reconciled after each care transition and outpatient provider appointment. The RN will review the regimen for medication interactions and any other concerns. The RN will be supported by the CHW workforce who will be trained in collecting information from BH CP members on their medications.

In addition, LHBS will leverage well-established toolkits in medication reconciliation such as *Medications at Transitions and Clinical Handoffs (MATCH) Toolkit for Medication Reconciliation* that is comprehensive and recognizes the complexity of the reconciliation process. (Source: AHRQ.) MATCH provides a list of several effective strategies to use in creating a strong program of medication reconciliation including: (1) establish the process around the singular goal of "one source of truth," or the goal of generating an accurate list of medications; (2) ensure that this list is communicated to all relevant individuals; (3) create a person-centered process, involving the CP enrollee, and family members, as appropriate; (4) involve all relevant providers in the process; (5) communicate roles and responsibilities clearly; (6) integrate medication reconciliation into workflows; and, (7) design the process to account for the setting of care.

All LHBS protocols for member engagement will require addressing medications at all contacts, and especially during transitions. Care Coordinators will communicate about medications with PCPs, other medical and BH providers and additional appropriate stakeholders routinely via the Mass HiWay or other secure information sharing platform.

7.3.C.6. Health and Wellness Coaching

LHBS will satisfy all health and wellness coaching requirements in accordance with the contract, and as summarized on *Table 7.3-11* below. LHBS will develop procedures for conducting "Health and Wellness Coaching." These procedures will include: (1) programs of health and wellness education, coaching and health promotion that LHBS will utilize and follow; and, (2) methods for ensuring that engaged enrollee's goals for the health and wellness programs are recorded and tracked in the engaged enrollee's person-centered treatment plans. We provide health coaching through several of our programs today.

Under HFY, we provide health coaching and we track these health and medical outcomes through regular communication with PCPs, who are tracking the medical conditions and outcomes of our members. Our Care Coordinators are aware of the health issues, and medical needs, or our members. These health issues and related goals around health and wellness are

reflect in the care plans. Our Care Coordinators receive an overview of the following health conditions as a part of the onboarding training:

- Overview of Diabetes (Core)
- Heart Disease or Circulatory Disorder (Core)
- High Blood Pressure (Core)
- Sexually Transmitted Infections
- Cancer
- Lung Disease (asthma, COPD, etc.) (Core)
- Kidney Disease
- Stomach or Intestinal Disorder
- Liver Disease
- Seizure Disorders (Epilepsy)
- Traumatic Brain Injury/Head Injury
- D.T.s (Delirium Tremens)
- Headaches, Migraines
- Disability Overview: Memory, Visual and Hearing Impairment
- Tuberculosis
- Eating Disorder

Table 7.3-11: Health and Wellness Coaching

#	CP Supports and Activities	Our Commitment to CP Goals and Contract Requirements	Our Approach for Meeting All Requirements with Evidence-Based, Emerging and Best Practices
6	Health & Wellness Coaching	LHBS intends to meet all contract requirements including: conduct health and wellness coaching in accordance with the treatment plan.	LHBS will bring its experience and evidence-based practices in addressing health and wellness in a variety of our care management programs.

Plans to Connect Engaged Enrollees to Community and Social Services

LHBS has developed a robust plan to connect engaged enrollees to community and social services in accordance with the contract, and as summarized on *Table 7.3-12* below. Through this program, LHBS will have the opportunity to address the non-medical needs of our enrollees by creating connections to the community and social services.

Table 7.3-12: Connection to Community and Social Services

#	CP Supports and Activities	Our Commitment to CP Goals and Contract Requirements	Our Approach for Meeting All Requirements with Evidence-Based, Emerging and Best Practices
7	Connection to Community and Social Services	LHBS intends to meet all contract requirements including: assess engaged enrollee for community-based social and Flexible Services' needs using EOHHS-approved social services assessment tools; and, identify community-based, social and Flexible Services and resources to support the enrollee's health and well-being.	LHBS will bring its experience and evidence-based practices to create strong connections to community and social services for CP enrollees. LHBS current has long-standing relationships with stakeholders, social services in the communities we serve in all 9 services areas in the northeast region.

Given our rich history of community involvement, LHBS has developed a breadth of knowledge about community and social services, and understands the value of these services to healthcare access, use, and costs. We will build upon this experience for our BH CP members.

As a CP, LHBS will operate at the center of the system, with relationships with the clinical providers and community and social service providers to help members navigate the complex

system of healthcare, improve their experience and quality of life. We will do by investing DSRIP funds to build a stronger infrastructure, by collaborating across ACOs, MCOs, CPs, and community organizations to address the social determinants of health, and across delivery systems to deliver integrated care. Leveraging our experience, we will connect engaged enrollees to community and social services and establish a process that encompasses the following key components:

1. **Evaluate Engaged Enrollees with the Use of Screening Tool for Social Services.** LHBS will use a screening tool for social services that reflects emerging practices in screening of individuals covered under Medicaid. Across the country, there is a widespread focus on learning more about the individual needs across all domains of the social determinants of health. LHBS will create a tool that leverages the types of questions that have been recommended by organizations with expertise in addressing these social and economic needs. We will leverage the Protocol for Responding to and Assessing Patients' Assets, Risks, and Experiences (PRAPARE), and many questions that have been created by other states and organizations.
2. **Hire and Develop Staff with Knowledge and "Know-How."** LHBS will hire staff that have the knowledge and "know how," and have a breadth of knowledge about social services and supports, and providers of these supports. We will hire people who bring with them a portfolio of knowledge about what exists within the communities in the Northeast region.
3. **Assist Enrollees in Accessing Services.** We will assist enrollees in any way possible by making referrals, by attending meetings, and by making recommendations about the use of Flexible Services.
4. **Develop an Inventory.** We will develop an inventory of social services and supports by provider, by community and by type of social service and support that is easy to use. We will ensure the breadth of programs and its accuracy and completeness through outreach to social service and support agencies across an array of needs. We will also notify organizations within all service areas to generate their interest in being listed.
5. **Collaborate with ACOs on Flexible Services and Outcomes.** LHBS will collaborate closely with ACOs to ensure that the use of DSRIP funds used on flexible services drive improved outcomes for engaged enrollees. We will work closely with ACOs to develop a framework for measuring outcomes that is data driven, and examines both cost outcomes from reducing emergency department visits, for example, and improving health based on both process and outcomes measures.
6. **Examine the Feasibility of a Financial Relationship.** LHBS will review the feasibility of establishing a financial relationship with organizations to facilitate a stronger and value-driven relationship.

15.5 Do you sometimes drink beer, wine or other alcoholic beverages?		○ YES ○ NO *If yes, complete the remainder of the table*
15.5a	How many times in the past year have you had 5 of more drinks (4 or more for women and men over 65) in a day?	Choose an item.
15.5b	On average, how many days a week do you have an alcoholic drink?	Choose an item.
15.5c	On a typical drinking day how many drinks do you have?	Choose an item.

15.6 How many times in the past year have you used an illegal drug or prescription medication for non-medical reason? *(If asked what a non-medical reasons means you can say because of the experience or feeling the drug caused.)*	Choose an item.

15.7 History Substance Mis-use, Nicotine/Tobacco Use *For pharmaceutical drugs prescribed for the client, only code misuse (more than the recommended dosage) or non-medical use. (Example - If the client was prescribed a benzodiazepine for a mental health disorder and used per instruction, do not list on History Table.)* *Note: For the safety of the client all drugs used must be recorded in the client record.*		Have You Ever Mis-Used		Age of First Use	*Last Use	**Freq of Last Use	***Route of Admin Code
		Y	N	Codes for these below this table			
A	**Alcohol** *For Alcohol, enter first age of intoxication:*						
B	**Cocaine**						
C	**Crack**						
D	**Marijuana / Hashish**						
E	**Heroin**						
F	**Prescribed Opiates** *Misuse/non-medical use of pharmaceutical opiates which were prescribed for the client.*						
G	**Non-prescribed Opiates** *Non-medical use of pharmaceutical opiates which were not prescribed for the client*						
H	**PCP**						
I	**Other Hallucinogens**						
J	**Methamphetamine**						
K	**Other Amphetamines**						
L	**Other Stimulants**						
M	**Benzodiazepines**						
N	**Other Tranquillizers**						
O	**Barbiturates**						
P	**Other Sedatives / Hypnotics**						
Q	**Inhalants**						
R	**Over the Counter**						
S	**Club Drugs**						
T	**Other**						
U	**Nicotine/Tobacco** *Includes cigarettes, cigars, chewing tobacco, inhalers*						

*Code	Last Use Substances
1	12 or more months ago
2	3-11 months ago
3	1-2 months ago
4	Past 30 days
5	Used in last week

**Code	Frequency of Last Use
1	Less than once a month
2	1-3 times a month
3	1-2 times a week
4	3-6 times a week
5	Daily
99	Unknown

***Code	Route of Administration
1	Oral (swallow and/or chewing)
2	Smoking
3	Inhalation
4	Injection
5	Other

15.8 Number of cigarettes currently smoked per day. *(Indicate number of cigarettes, not number of packs: 1 pack = 20 cigarettes* *If client uses another type of nicotine/tobacco product, mark Zero (0).*	Choose an item.
15.9 Have you had periods of recovery? When, and what was helpful during that time?	
Click here to enter text.	

XVI. HEALTH AND WELLNESS

16.1 Do you have enough food to eat?	○ YES ○ NO
16.2 Where do you shop for food?	Click here to enter text.
16.3 Do you have SNAP benefits?	○ YES ○ NO
16.4a If you run out of food, do you know where to find free meals or emergency food boxes?	○ YES ○ NO
16.4b Food Secure:	○ YES ○ NO
16.5 Do you exercise regularly?	○ YES ○ NO

7.3.D. Innovative Technologies for Service Delivery

Under the CHART and HFY programs, LHBS uses many innovative technological tools, which we will use as a BH CP. In addition, we will build a geo-mapping resource finder. See *Table 7.3-13* below for a summary of these tools.

Table 7.3-13: Summary of Technological Tools Used Currently and Future Use Plans

	Technological Tools	HFY/CHART	BH CP
1	Care management software: Use to match patients to intervention programs designed to proactively drive improved clinical outcomes and lower costs.	X	X
2	Telehealth: Use VIDYO, a secured teleconferencing application, for the facilitation of tele-psychiatry services in the ED.	X	X
3	Laptops and tablets: Use to communicate with clients. *	X	X
4	Smartphones: Use for communication. *	X	X
5	Innovative applications: Use as care extenders	X	X
6	Video Remote Interpretation: Use CyraCom to communicate with clients; CyraCom provides language interpretation and translation services.	X	X
7	Geo-mapping Resource Finder: Use for locating resources, community programs and services mapped to a client's geographic location. Examples of services that would be included in this resource finder include, but are not limited to, self-help group locations, food assistance, and cooking classes for individuals with eating disorders.		X
	* Technological Tools: *Each of our CHART and Here For You team members have been equipped with laptops, mobile internet hotspot capability, and smartphones. We will equip care coordinators in the same manner under the BH CP program.*		

Use of Technological Tools to Support Clients

Under CHART specifically, we use a care management application**,** VIDYO - a secured teleconferencing application, for the facilitation of tele-psychiatry services in the ED; and GoToMeeting Web-Based to broadcast the view of our host computer from our main Program Management Office (PMO) to a group of computers connected to the host computer through the internet. Under CHART and HFY, we use Smartphones to support connections to social supports for our clients; CyraCom for video remote interpretation services, when needed; and, we use many mobile applications to support clients, including the Department of Transitional Assistance (DTA) Application to facilitate the application for job, cash and food assistance; the Social Security Administration Application to facilitate the application for benefits; the Monitoring High Blood Pressures Application to support blood pressure monitoring; the Managing Nutrition Application **(**Calorie Counter and Food Diary can be downloaded at no cost). We are also piloting an enhanced patient engagement initiative with care coordinators using a tablet. In the future, we will develop a Geo-Mapping Resource Finder, or a comprehensive listing of resources, community programs and services that is geographically mapped to a client's location and filter by their needs.

This page intentionally left blank.

7.3.E. Personnel and Staffing

LHBS has a current workforce of 1,400 employees; nearly **40 percent of our workforce is an ethnic minority**, many have lived experience of SMI and/or SUD, and our care coordinators are bicultural and bilingual. We are very proud of our diverse and experienced workforce and look forward to building the same for the BH CP program.

LHBS has developed a Staffing Plan that will meet all responsibilities of the Contractor including all CP supports, as well as administrative aspects of the contact. This Staffing Plan is comprehensive of all elements including an Organizational Chart, a sample staffing model, recruitment plans including plans to recruit and hire staff from the cultural and linguistic communities that we will serve, training and orientation plans and modules, and strategies to retain staff.

As a CP, we know that building a strong CP program is nearly 100 percent dependent upon the staff whom we hire to provide the required supports, and then to go above and beyond those requirements. We will seek out staff with a positive attitude towards accomplishing the goals of the CP program and carry out the responsibilities despite the hard work and the challenges. (Source: SAMHSA, 2017.) We will hire staff from a diversity of backgrounds with connections to the community (Source: CHCS, 2017). And most importantly, we will hire staff who will advance our values of community first, SAMHSA recovery principles and cultural competence, all values that we live by today.

In fulfillment of this RFR requirements, see also: (1) *Section 7.3.E.2.1*: LHBS CP Organizational Chart; (2) *Table 7.3-15*: LHBS Sample Staffing Model and, (3) *Section 7.2.B.4.2*: LHBS Job Descriptions.

7.3.E.1. Organizational Chart

As the organization chart provided in *Section 7.3.E.2.1* demonstrates, LHBS has created an organization that reflects the structure and staffing required to achieve a level of excellence in our management and delivery of CP supports and activities to eligible CP enrollees covered under MassHealth and enrolled in an ACO program.

Sample Staffing Model

The LHBS' proposed staffing model is based upon three key assumptions, including: (1) that we must hire a diversity of staff in terms of skills and background, including cultural and linguistic backgrounds, to achieve our goals around quality and to recognize the degree of work involved; (2) that we must establish ratios of staff to enrollees that are effective; and, (3) that we clearly define roles and responsibilities for this staffing model.

LHBS has proposed a staffing model based on our understanding of the needs of the population today. We will review this staffing model as we move forward with implementation to ensure that we have an adequate balance of clinical staff and CHWs and to ensure that one RN is sufficient for our expected enrollment.

We have established a ratio of one care coordinator to every 40 BH CP enrollees, based upon our experience in other programs. We believe that a 1:40 ratio can best be met through a combination of eight Lead CHWs with a staffing ratio of 1:20, and 36 CHWs with a 1:40 staffing ratio. Together, these staff will offer a 1:40 staffing for 1,600 CP enrollees. This will create a

supportive environment for CHWs, prevent "burn out," and promote a career path by establishing Lead CHW positions. CHW teams will be located in geographically similar areas to the extent possible to support cross-sharing of local resources and learnings.

Table 7.3-15 below shows staff will support enrollees across service areas.

Table 7.3-15: Proposed Staffing Ratio By Service Area

	1	2	3	4	5	6	7	8	9

Recruitment Plans

LHBS has developed an effective Recruitment Plan that we believe will also lead to high rates of performance and high rates of retention. Upon notification of the award, LHBS' Human Resources Department will kick off our Recruitment Plan for this new program.

We have adopted many effective strategies to start up new and innovative programs such as CBHI, HFY and the CHART grant program, three successful programs whom success is highly related to the staff performing the jobs. As an organization, we are not only proud of the track record of our Human Resources Department in bringing the right people to the roles of care coordinators and care managers, but the collectivist culture that we have developed that is essential to retaining well-qualified staff. We do everything we can to provide a supportive environment through learning collaboratives. However, it must be said that being a CHW is a demanding job. On the positive side, we often see, given the age and interests of our staff, CHWs move on from LHBS to pursue a master's level program and promotional opportunities, which is why we have created eight Lead CHW positions.

LHBS utilizes many of the best practices for recruitment as set forth in the Toolkit's CHW Program Functionality Matrix, which is to recruit CHWs from "within the community through

community participation, meeting all selection criteria when possible." (Source: Recruitment of Community Health Workers, 2013.)

Our plan includes the following two key components:

Engage Human Resources. We have a strong Human Resources Department that we will leverage to hire the right people for this new program, in the face of a competitive environment where many other organizations are already seeking to recruit a strong CHW workforce. We have already enlisted our human resources staff to develop a timeline to recruit positions based on the position and job requirements.

Leverage our portfolio of recruitment strategies, including: (1) attending career and job fairs in the spring and fall in a variety of location in Massachusetts and in New Hampshire; (2) utilizing employee referral bonus program, including sign-on bonuses; (3) developing marketing materials through Lahey Health's contract with TMP Worldwide, a marketing firm. TMP also assists us with targeted recruitment strategies including direct mail, open house advertising, etc. We have a regular presence in the following media, including: Indeed, Glassdoor, LinkedIn, and Direct Employers Association, which offers postings to many diverse websites; and, (4) leveraging our internship program. This year alone we brought in 100+ interns into various programs. We have a Director of Student Internship Training to coordinate all interns through LHBS and to support our practice of aggressively recruiting interns upon graduation. We strongly believe that this is a key strategy for work force development.

LHBS will be ready for 1,000 enrollees on Day 1. Additional details of our recruitment plan include ramping up to support our growth trajectory of 1,600 BH CP enrollees by month four, or by September ~~July~~ 2018. See *Figures 7.3-2* and *7.3-3* for a look at the enrollment targets by month, and goals for hiring staff.

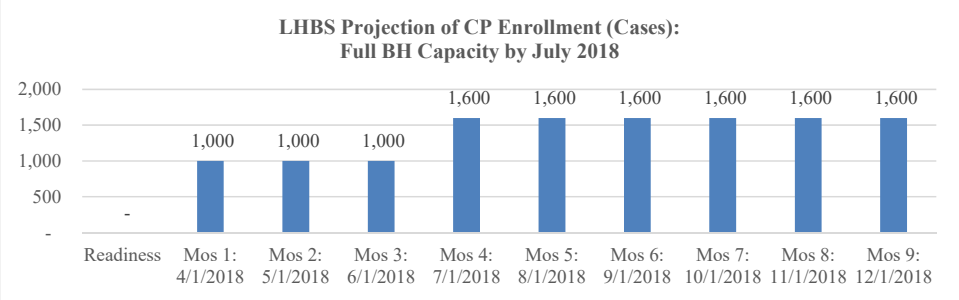

Figure 7.3-2: Enrollment Targets

This will be modified to reflect the June 1, 2018 start date. June will be Mos. 1

Formatted: Normal

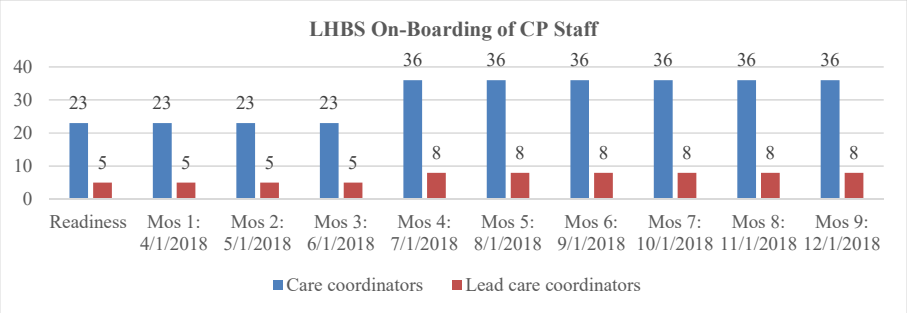

Figure 7.3-3: LHBS On-Boarding of CP Staff

This will be modified to reflect the June 1, 2018 start date. June will be Mos. 1

Formatted: Normal

Highlight on LHBS Plans to Retain CHART Community Health Workers*: CHWs are the bedrock of many of our programs. We will be able to "hit the ground running" on Day One because we will retain our CHWs who currently work in the CHART program when the CHART program ends on December 2017. They are excellent, well-trained, experienced CHWs, who are both bilingual and bicultural, and are ready to become our Lead Care Coordinators.*

Hiring and Recruitment: Cultural and Linguistic

Cultural and linguistic competency is critically important for individuals with high BH needs and need this level of competency throughout all CP supports and activities without which communication barriers would take hold. LHBS will ensure that our BH CP enrollees receive access to culturally and linguistically competent CP supports and activities. We are eager to collect more statistics on our BH CP enrollees to ensure that our hiring and recruitment process is as effective as possible. We have been successful in our current recruitment strategies. Our current staff of Care Coordinators are bicultural and bilingual, speaking German, Spanish, French, Portuguese, and Cape Verdean Creole. We also have a staff that includes many persons with lived experience of SMI and/or SUD.

For the BH CP program, LHBS will recruit and hire from the cultural and linguistic communities of our enrollees.

Training, Orientation Plans and Modules for Staff

LHBS intends to leverage and enhance our current training programs, orientation plans, and modules for Care Coordinators. But we will also enhance these programs to reflect the exciting development of a new payment and care delivery system under DSRIP that now includes CPs and the opportunities that come along with this new program. This includes additional training on medical care management, medication reconciliation, health and wellness coaching, the

identification and provision of flexible services, post-discharge follow-up, using the EHR and all protocols and workflows.

LHBS uses a care planning and care coordination curriculum that was developed by a social worker at the LHBS Program Management Office to: (1) standardize competencies; (2) provide staff with core skills to perform their responsibilities effectively; (3) promote staff professional growth; and (4) have on-going learning collaborative throughout the life of the program. This training curriculum uses best practices in the BH field Care Coordination Model and Adapted Competencies from the Massachusetts Board of Certification of Community Health Workers and incorporates other research from:

- Health Research and Services Administration (HRSA) Community Health Workers Evidenced-Based Models Toolbox
- Community Health Worker Initiative of Boston
- Arizona Area Health Education Centers Program's Community Health Worker National Education Collaborative

The core competencies curriculum (part of orientation) is covered over the course of two days and the remaining topics throughout the year at team meetings and monthly learning collaborative. Each session focuses on a specific training competency. The training emphasizes skills and tools necessary to engage with complex members including individuals with lived experience of SMI and SUD as well as complex medical co-morbidities and social determinants. The core competencies are led mainly by LHBS medical and behavioral health experts, as well other subject matter experts, experienced managers or program coordinators in the Commonwealth. The training is delivered primarily in person, and uses various learning approaches, including didactic lectures, as well as active learning techniques involving role playing, skits, brainstorming sessions, problem-solving games, and small group discussions.

Our current training programs for Care Managers and Care Coordinators is five full days. The five days include a combination of training and shadowing of a Senior Care Coordinator to ensure that care coordinator is ready to manage clients. Upon hire, the care coordinator attends the LHBS all-day organization orientation. The remaining four days are designed to orient the new staff person to program model and provide the tools, resources, knowledge and skills needed to provide care coordination to the target population. The training was created with the success of the care plan in mind as the frontline public health worker will interact with the client on a regular basis.

Staff Retention Strategy

LHBS has developed–and relied upon for years now–a strategy for staff retention that is fundamentally tied back to hiring the right people. At LHBS, however, we know that we must do our part to facilitate success:

1. **Collectivist Culture.** LHBS works hard to create a culture that promotes the sharing of values and resources. This culture of "we" has many beneficial effects on the LHBS organization and workforce including creating buffers again isolation, depression, and frustration.

2. **On-Going Training and Learning.** LHBS offers on-going training and support; our support for our staff is not limited to the on-boarding process. For example, we provide and encourage staff to participate in monthly Learning Collaboratives with peers.
3. **Remunerative Benefits.** Finally, LHBS is committed to offering our staff competitive salaries and benefits. Our health care benefit is based upon a tiered system, with varying levels of cost discounts within certain tiers. We offer tuition assistance and other incentives from seminars to discounts in health insurance costs for Wellness Programs.

7.3.E.2. Attachments for Section 7.3.E

7.3.E.2.1 *Organizational Chart*

An executive-level organizational chart is provided in *Figure 7.3-4* below.

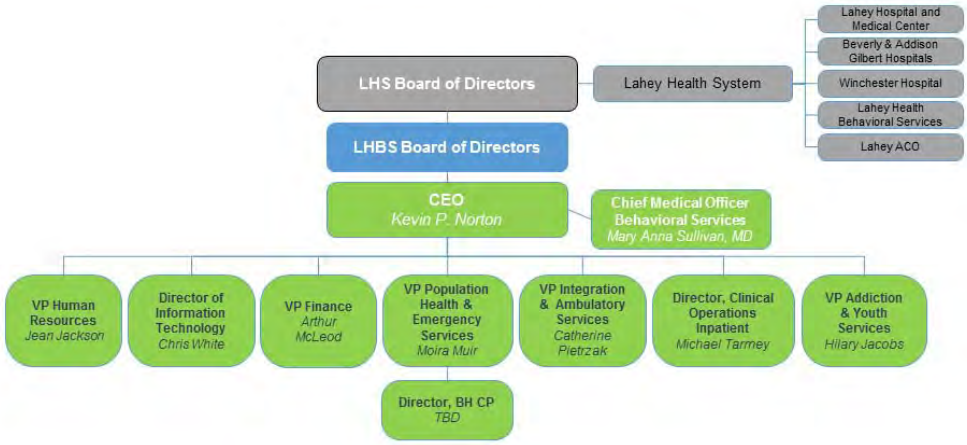

Figure 7.3-4: Organizational Chart

7.3.F. Implementation Plan and Timeline

LHBS has a long history of successfully implementing new programs. The implementation of the BH CP program will be led by the VP of Population Health and the Director of BH CP. LHBS's Director, Innovation and Strategic Planning has taken the lead for several strategic initiatives (CHART, Electronic Health Record Implementation, etc.) and is available to provide tools, guidance and support, as needed during program implementation.

The BH CP program implementation will be under the oversight of a cross-functional BH CP Implementation Oversight Committee (BHCP IOC). Members of the BHCP IOC include at a minimum, the LHBS CEO, CMO, CFO, CNO and Chief Quality Officer, as well as the Director of IT. The committee will be let by the VP of Population Health and supported by the Director of BH CP. The role of the Committee is to ensure that implementation activities are progressing according to schedule and to resolve issues and eliminate barriers to success.

The five major components of work required to operationalize the BH CP program include Onboarding, Training, Program Readiness, Program Governance, and Operational Readiness activities. The Implementation Plan provided on the following pages is structured to reflect these categories of work and uses a Gantt view to display activities by month for the preparation budget period and by quarter for subsequent budget periods. This plan will be expanded to include additional details in late summer/early fall as implementation activities begin in earnest.

Several assumptions have been made in creating the Implementation Plan:

- ACO contracts executed 8/1
- CP awards made in August
- CP Contract start date 1/6~~1~~/17
- Program start date (new members enrolled) is ~~April~~ June 1, 2018
- Internal readiness activities will begin in August
- BH CP Director will be on board by 1~~1~~/1/18~~7~~

Leahy Health Behavioral Health Community Partners Implementation Plan *the plan and timeline will be revised to be in line with the new 8.1.18 start date and start of budget period 1.

* NOTE: Budget period 2 activities are repeated in subsequent budget periods.

7.3.G. Sustainability

LHBS understands and appreciates the level of investment that MassHealth is making into building a strong care delivery system for MassHealth members. We believe that we can play a critical role in the transformation of the care delivery system in the northeast region of the Commonwealth, and more broadly through the development and sharing of best practices. We also believe that we have a responsibility to the Commonwealth to do our best to make this program succeed both in terms of improving quality and decreasing cost.

Our 10-Point Plan to Ensure Sustainability:

1. **Invest in the Future.** Over the next five years, LHBS will use DSRIP funds to develop the infrastructure and invest in the capacity to provide CP supports over the Contract Term and after the initial Contract Term. We will use these funds to develop the tools, resources and processes that are needed to bring effective supports to person with high BH needs, and to bring what is currently lacking in our care delivery system.
2. **Invest in Capacity and Infrastructure.** Broadly speaking, DSRIP funds should be used to invest in building capacity and infrastructure that we cannot build today because they are not funded under the fee-for-service system. Over the course of the next five years, we will invest in hiring and training a staff and paying for a care management software.
3. **Build Partnerships with Social Service and Community Organizations.** Over the course of the next five years, we will enter into a variety of relationships with social service agencies and community organizations to expand our ability to address the social determinants of health of our members.
4. **Deploy Best Practices.** There is a great deal that we know about the needs of individuals with high BH needs. We have developed many best practices in care coordination, which we have put to work in the ICC, CSP, HFY and CHART programs. This new BH CP program provides LHBS with an opportunity to advance what we know and to support ACOs and MCOs in providing better care with better outcomes for members at lower cost to individuals with high BH needs.
5. **Develop a Reputation for Quality and Responsiveness.** Part of what leads to success is simply being an excellent business partner. We can do that by establishing a reputation in the BH community and in the ACO and MCO communities for being fair, timely, responsive and manifesting the other essential attributes of what make a good business partner.
6. **Establish Strong Relationships with ACOs and MCOs.** Building strong relationships is key to our future. We plan to work closely with our ACOs and MCOs from day one. LHBS' VP of Population Health and the newly-hired BH CP Director will work with the ACOs and MCOs to establish a framework for measuring and evaluating the implications of CP supports on ACO total costs of care and MCO capitation rates.
7. **Create the Evidence Base.** We believe that we will generate a quantifiable return-on-investment to ACOs and MCOs from our delivery of CP supports to individuals with high BH needs. We see the next five years as the time during which we must make our business case to ACOs and MCOs that our services provide great value to outcomes of cost and quality. We will develop the evidence base needed to demonstrate to both ACOs and MCOs that our services directly contribute to positive outcomes for shared members..
8. **Move to Alternative Payment Methods (APMs).** Over the course of the next five years, we intend to establish APMs and new pricing methodologies that reflect our value add to

ACOs and MCOs to capture a share of the health care cost savings that ACOs and MCOs will capture under prospective payment systems. We intend to pilot and test these APMs in the early years to prepare for the final year of DSRIP when we will no longer receive funds via MassHealth but will need ACOs and MCOs to provide the funding for our services.

9. **Diversify Business.** We also see opportunities to develop business relationships with commercial payers, whose members with high BH needs may also benefit from CP Supports. Over the next five years, we will develop a portfolio of CP Supports that we can specifically market to commercial payers.
10. **Continue to Change and Improve.** At LHBS, we are committed to change and improvement beyond the five years of the initial Contract Term.

7.3.H. Quality Management and Performance Monitoring

As a CP, LHBS will meet all contract requirements related to quality management and performance monitoring by establishing and maintaining an EOHHS-approved quality improvement plan. The plan will include: (1) a systematic approach to improving processes and outcomes through the application of continuous quality improvement principles; (2) at least one specific quality improvement initiative that addresses–at a minimum–at least one of the following areas: quality of life; chronic disease management; caregiver stress; community tenure, isolation and social connectedness; care coordination and care management; or care transitions; and, an annual submission of its Quality Improvement Plan to EOHHS annually.

Approach to Improving Processes and Outcomes

LHBS prides itself on a culture of quality that is uniquely its own, where quality is the focus of the organization and its workforce every day. Quality is not an "add on" to the job, but it is woven into the fabric of the whole organization. LHBS is committed to innovation and to continuous quality improvement at all levels of the organization and in all programs. Within LHBS, we often turn to our clients and their families as one of the most important metrics of quality. The testimonials that we have included in the highlight below represent an honest reflection of what we are trying to achieve every day.

Highlight on What Our Clients Say About Our Quality*: LHBS offers a summary of what our clients say about us. We are committed to improving lives, and using resources most effectively.*

"This is the best help my daughter and I have ever received for learning how to talk with each other, and IHT helps guide what we expect of each other so that our expectations are realistic."

"The tools they have taught both myself and my son to learn how to better our relationship have been great."

"Ability to get treatment promptly. Therapist allowing me to be included in my treatment plan"

"The medication clinic is always helpful for me. Having therapy in the same place is very convenient… Flexibility in scheduling to meet our needs."

LHBS has a well-established quality management program today that we will leverage for the CP. This is articulated in LHBS Quality and Patient Safety Plan which describes the framework by which Lahey Health Behavioral Services (LHBS) continuously safeguards care and drives continuous performance improvement based on principles of best practice. The goal of this plan is to provide the highest value to patients by improving quality of care and the patient experience in the most effective and efficient way

The LHBS Quality and Safety Plan is designed to engage the entire workforce, ensure continued engagement and partnership with patients and their families, develop organizational improvement capabilities and provide support to make improvements within divisions of the

organization. Because LHBS is programmatically diverse and geographically dispersed, there is an effort to balance local quality efforts with strategic initiatives. Likewise, the LHBS' Quality Improvement Plan is based upon an organized framework for ongoing and systematic measurement, assessment and performance improvement activities. Components of this plan include a quick fix process for problems that do not need a comprehensive approach to problem solving and solution implementation, and quality assessment activities, such as patient satisfaction surveys, chart audits, medication therapy reviews. These activities help assure that standards are met and maintained and identify areas for review by quality improvement teams.

Current implementation of the Quality Improvement Plans are done through Quality Improvement Teams, which may be inter or intradepartmental. These committees, look at key issues to identify opportunities to improve process and outcomes using internal or external benchmark data to compare outcomes and focus improvement efforts. The committees use both LEAN process improvement methodologies and Plan-Do-Study-Act tests of change to find solutions that address the issue and the larger context of LHBS programs.

BH CP Quality Initiative: Improve Enrollee Engagement

LHBS will leverage the Quality Improvement Committee infrastructure, as well as a dedicated CP Quality Committee, to track progress on quality and process measures and goals, initiating improvement processes as needed. In the first year of the program, LHBS anticipates a focus on the implementation of a quality initiative around enrollee engagement (*Table 7.3-16*). Engagement is critical to improving the health and well-being of CP enrollees. It is challenging which is why we have proposed this for Year 1.

Table 7.3-16: LHBS' Quality Initiative for Budget Period 1
Promote Engagement Rates

Description	• LHBS proposes to implement in Budget Period 1 a quality initiative to promote engagement rates. Engagement is foundational to our ability to improve the quality of life and achieve the quality goals under DSRIP. • We know from our experience in our other care coordination/care management work of HFY and CHART that engagement rates in a medically and behaviorally complex population are a challenge. Specifically, our engagement rate for members served by our HFY CCs is 42 percent. It is markedly lower, at 25%, for our CHART members who are high ED utilizers.
Domains	• Engagement is a key component to a member's successful care coordination. • Engagement impacts all seven quality domains; prevention and wellness, chronic disease management, BH/SUD, member experience, integration, avoidable utilization and engagement. • We believe this quality initiative addresses the categories of Community Tenure, Isolation and Social Connectedness, Quality of Life, as well as Chronic Disease Management. Our strategy to tackle these categories is to leverage the lived experience of our members and draw upon best engagement practices.
Goals	• Our goal for the end of Year 1 is to achieve an engagement rate of 55 percent. • Design an engagement strategy that will help to build our business and engage members to operate at full capacity in the 9 service areas.

Table 7.3-16: LHBS' Quality Initiative for Budget Period 1 Promote Engagement Rates	
Definitions	• Engagement, as defined under the contract, is: "an Assigned Enrollee for whom (1) the Contractor has completed a Comprehensive Assessment and Person-Centered Treatment Plan, (2) the Person-Centered Treatment Plan has been approved by the Assigned Enrollee's PCP or PCP Designee and the Assigned Enrollee (or the Assigned Enrollee's legally authorized representative, as appropriate), and (3) the Contractor has submitted a "Person-Centered Treatment Plan complete" Qualifying Activity, as described in Section 2.5.C."
Design	• LHBS will create a quality initiative around the value of improving the rate of engagement among individuals with lived experience of SMI and SUD. • Engagement is critical to improving health outcomes. Many people who seek mental health care drop out after the first or second visit. (Source: NAMI, 2016.)
Strategies/ Methods	• Hire a dedicated engagement specialist who will be tasked primarily with outreach and engaging members to our BH CP. • Hire and train Care Coordinators who are culturally and linguistically appropriate for the members in the service areas. • Create materials that are linguistically and culturally appropriate. • Utilize the appropriate tool and best practices, including a strengths-based process. The Care Coordinators will outreach to the community through use of appropriate tools, including phone, email and text. • Train staff in tools and best practices. • Leverage the expertise of persons with lived experience of SMI and/or SUD.
Outcome Measures	• Our success in reaching our goal of achieving an engagement rate of 55 percent will be demonstrated by the recruitment and retention of qualified personnel, having optimal person to care coordinator ratios, and building relationships with ACO's to enlarge our referral base.

Quality Committee

LHBS has a Quality Safety Council that meets on a quarterly basis. This council is chaired by the Board of Trustees, and consists of the Chief Medical Officer (CMO), the Vice President of Quality, Safety, Compliance, and the Chief Nursing Office (CNO). The council also includes VPs, as well as LHBS Board of Trustee membership and other key system leaders.

The Council holds primary responsibility for the functioning of LHBS's quality assessment and performance improvement program; has primary responsibility for monitoring the Quality and Safety Program to assure that there is measurable improvement with indicators related to Health Outcomes, Error Reduction, Quality, Patient Safety and Performance Improvement; and, provides a quarterly Quality and Safety Summary Report to LHBS Board of Trustees.

LHBS also has a Quality and Safety Advisory Committee which advises the Quality and Safety Council of the current status of quality and safety within LHBS and makes recommendations for continuous improvement in quality, safety and client satisfaction as well identifies priorities in these areas. Participants on this committee include representatives from the Divisions and Programs throughout LHBS. This committee meets monthly and reports regularly to the Quality and Safety Council on Quality/Safety indicators in dashboard format, including roll-up measures of clinical quality, patient safety and customer service, progress on major performance

improvements and patient safety goals, Root Cause Analyses, Sentinel event summary and Accreditation status.

7.3.I. Coordination with ACOs and MCOs

LHBS has prepared a plan for contracting with the ACOs and MCOs that reflects our vision for the future, and responds to the questions in this RFR.

Our Vision

It is our goal to establish a glide path that lays the foundation for the eventual exchange of care coordination payments from ACOs and MCOs to LHBS CP. At the end of five years, CPs and ACOs must be ready with a new strategy for paying for care coordination.

LHBS will contract with all ACOs and MCOs in the northeast region to provide CP supports to ACO enrollees in the Northeast region with high BH needs to improve the well-being of persons with lived experience of SMI and/or SUD, and to make an essential contribution to ACO and MCO performance under DSRIP and beyond. We will work to develop strong relationships with our ACO and MCO partners to achieve the goals under DSRIP and the long-term sustainability of our program. We will delineate our relative roles and responsibilities, performance standards for all parties, and data sharing obligations to each other to measure outcomes that are relevant to demonstrating our value.

We will leverage our rich history of working collaboratively with the MCOs and hospitals operating in MassHealth's northern region. As an ESP for 20 plus years, we have provided emergency services to 10 EDs in the northeast. (See *Table 7.3.-17*. below for a summary of the ACO bidders, as represented by the hospital names, with whom our ESPs work today.) Over the last three years, we have also collaborated closely with Lowell General under the CHART Grant Program to reduce 30-day ED "re-visits" by providing care coordination.

Table 7.3-17: Lahey's Existing Relationships with Potential ACOs and MCOs

MassHealth ACO Bidders	Participating MassHealth MCOs
• Anna Jaques Hospital • Addison Gilbert Hospital • Beverly Hospital • Lahey Hospital and Medical Center • Winchester Hospital • Lawrence General Hospital • North Shore Medical Center • Holy Family Hospital (Haverhill) • Holy Family Hospital (Methuen) • Lowell General Hospital (Main Campus) • Lowell General Hospital (Saints Campus)	• All plans operating in the northeast region: • Boston Medical Center HealthNet • Neighborhood Health Plan • Tufts Health Plan • Fallon Community Health Plan

Communication to ACOs and MCOs

We will communicate our skills, expertise and value to potential ACO and MCOs. The LHBS Leadership Team, Program Directors, and marketing and communication experts will work collaboratively to increase and sustain awareness of our capacity to provide high-quality BH and care management services to ACOs and MCOs within the relevant service areas. In collaboration with each local Program Director, we will create an annual plan to keep ACOs and MCOs informed of our capacity, expertise and the role BH plays in that community's overall population health. We will support, provide opportunities and coach local Program Directors. We will provide expert speakers and panelists to community and regionally-based educational events or conferences on relevant topics, such as integrated care, addiction, public health awareness, mental health treatment access and overdose prevention. We will provide no-cost trainings such as presentations on pain management and addiction, overdose prevention, medication-assisted treatments, and integrated care and cost savings.

Branding and Marketing

Branding: LHBS is a forward-thinking innovator in integrated care, at the forefront of providing a continuum of services that are seamlessly delivered by a community-based network of health providers which are responsive to current and emerging local needs. LHBS will emphasize four unique synergies of strength: clinical expertise; cost-efficient quality; superior patient experience; and "force for good" within the communities that we serve.

Marketing: LHBS will rely upon a combination of marketing approaches–some old, some new–to market this program. Key strategies include: in person, media, digital, paid for advertising campaign, and printed collateral.

Engagement and Strategy with Multiple ACOs and MCOs in the Service Areas

We will engage and collaborate with multiple ACOs and MCOs. As a BH CP, LHBS intends to convey to ACOs and MCOs our 50+ years of experience and skill serving the MassHealth population, our robust continuum of behavioral health services, and our experience in providing care coordination and care management to MassHealth members through our ICC and Here For You program with NHP that lead to better outcomes. We will hold in-person meetings with ACO leaders to support the goals of the ACO and BH CP.

Strategy for Conflict Resolution

LHBS will establish a process for resolving conflicts that is based on a model of streamlined governance. The Director of the BH CP will attempt to resolve any conflicts with ACOs and MCOs. However, if the matter cannot be resolved at that level, then the VP of Population Health and Emergency Services will address the conflict. LHBS strongly believes that all conflicts can and should be resolved.

Fringe Item	Total Salary	Fringe Rate	Fringe
Fringe Item	$ 144,045.00	19.3%	$ 27,801
Total Fringe (Program Budget Line 2)			**$ 27,801**

Total Personnel*	**$ 171,846**

* Should align with Personnel Costs row in Program Budget

For each position listed above, provide a brief statement of the position's responsibilities:

Program Director (1.0FTE) Overall supervision and accountability for the program development and implementation. Program Director also serves as Director of Case Management. BH CP Program Director will be the main point of contact for leadership from the three affiliated organizations as well as the ACO/MCO partners and community based organizations.

Lead RN (1.0 FTE): Program development on ongoing clinical oversight for the case managers. Lead RN will lead team to review the assessments and complete medication reconciliation. Clinical back-up for Case Managers and Community Health Workers

Medical Director (0.25 FTE): Medical Director will provide clinical oversight of the program and provide consultations to case managers and RNs

Case Managers (Care Coordinators) -- 2 BA level, one LCSW (3.0 FTE): Primary contact with members for care coordination

RN (1.0 FTE)- Support all teams of case managers with assessments, medication reconciliation and clinical care

Community Health Worker (3.0 FTE): Collaborate with Case Managers to provide face-to-face contact for members, coordinate services including LTSS and Flexible Support

Peer Specialist (1.0 FTE): Provide extra support to members with SMI, resource to the Case Managers

Recovery Coach (1.0 FTE): Provide extra support to members in recovery from SUD, resource to the Case Managers

Admin Assistant (1.0 FTE): Provide administrative support to entire program

Admin Assistant (1.0 FTE): Provide administrative support to entire program.

Intake Coordinator (1.0 FTE): Outreach to new members to engage in the program, schedule comprehensive assessments

Staffing pattern for the PBP listed above does not align with the staffing model for BP 1 (tab 7) due to

Row 3 - Training and Professional Development

Description of Service	Unit Cost (if applicable)	# Staff (if applicable)	Total Cost
Professional Development funding	$400	8	$3,200
Total Training and Professional Development (Program Budget Line 3)			**$ 3,200.00**

Provide a description of each Training and Professional Development line item included in the table above:

$400 per clinical staff member (8 FTE) to support training programs on clinical case management, CEUs or licensing fees

Row 4 - Travel

Position	Est miles per month	# months	Mileage reimbursement rate	Total Cost
Program Director	100	6	0.535	$ 321.00
Lead RN	100	3	0.535	$ 160.50
Case Managers	100	3	0.535	$ 160.50
Community Health Workers	100	3	0.535	$ 160.50
				$ 803.00

Travel Expense Description	Cost
Total Mileage	$ 803.00
Parking and tolls	$ 50.00
Public transportation	
Enrollee travel	

	A	B
89	**Total Travel**	
90	**(Program Budget Line 4)**	**$ 853.00**

Please describe how mileage estimates and other travel expenses listed above were determined . If including enrollee travel expenses above, please explain how these expenses will be used by enrollees.

Reimbursement for travel calculates at IRS approved rate of $.535

We estimate that the Program Director will travel approximately 100 miles per month to meetings and other engagements to establish the program.

The Lead RN will also travel approximately 100 miles per month after they start.

The Case Managers and Community Health Workers will travel an estimated 100 miles per month each for the last month of the pre-budget period to establish relationships with community based organizations.

Parking in the Lowell service area is typically low cost or free. Minimal parking included in budget to cover costs for travel outside of our service area.

Row 5 - Equipment

Description of Equipment	Unit Cost or Cost/FTE	#units or FTEs	Cost
Rent photo copy machine	300/ month	3 months	$ 900.00
Total Equipment (Program Budget Line 5)			**$ 900.00**

Provide a brief description of the intended use for each Equipment line item listed above and how the estimated costs were determined:

The program will rent one photo copy machine to support all program functions. The cost is $300 per month including toner.

Row 6 - Supplies

Description of Supplies	Unit Cost or Cost/FTE	# Units or FTE	Cost
General office supplies	140	14	$1,960
Total Supplies (Program Budget Line 6)			**$1,960**

Provide a brief description of the intended use for each Supply line item listed above and how the estimated costs were determined:

Office Supplies to establish workstations for staff during the preparation period. Includes paper, notebooks, pens and other basic supplies for each of three staff locations.

Estimates from the costs of similar sized programs.

Row 7 - Contract Services

Name of Contractor	Contractor Type	Goods and Services Provided	Cost
Health Management Associates	Consultant	Consulting	$ 15,000.00
Verill Dana	Legal	Legal	$2,228.00
Total Contract Services (Program Budget Line 7)			**$ 17,228.00**

Provide a brief description of the purpose/need for each Contractor line item listed above, how each will support the CP's performance and how the costs for each were determined. Note that a Statement of Work must also be submitted to EOHHS.

Health Management Associates will provide support as Acting Program Director until the Program Director is hired to initiate program development and consultation on strategic decisions. Resources not used for preparation for contracting.

- Task 1: Strategic consulatation to clarify the model of care and infrastructure resources across three affiliated partners. 20 hours. Rate: $270 per hour.

***- Task 2: Establish cross-agency workplan to ensure program is set up to achieve the goals and deliverables as outlined u the proposal to the Commonwealth*. 30 hours. Rate: $270/ hour.**

- Task 3: Provide strategic guidance and support, as needed, to address issues. 4 hours. $275/hour

- Task 3: Provide strategic guidance and support, as needed, to address issues. 4 hours. $375/hour

Verill Dana Lawfirm will provide legal assistance to outline terms of the affiliation agreement between partners. Legal counsel not used for contracting with EOHHS.

- 5.50 hours. Rate: $405/hour

Row 8 - Software Licensing

Description of Software	Cost per License	# Licenses	Cost
		Total Software Licensing (Program Budget Line 8)	

Provide a brief description of how each Software Licensing line item listed above will support the CP's performance and how the costs were determined:

There is no software licensing fees in this pre-budget period.

The program will pay $2,300 per month to license software for IT platform starting in year 1.

Row 9 - Telecommunications

Type of Service Plan	Cost per Service Plan	# Service Plans	Cost
Cell Phone with Data	$64/ month	22	$ 1,408.00
MiFi Hot Spots	$35/ month	13	$ 455.00

	A	B	C	D	E	F
230	Tablet Data Plan via Verizon	$35/ month	10	$ 350.00		
231						
232						
233			**Total Telecommunications**	**$ 2,213.00**		
234			**(Program Budget Line 9)**			

Provide a brief description of how each Telecommunications line item listed above will support the CP's performance and how the costs were determined:

22 staff months (for cell phone eligible staff) x $64.00 per month for cell phone and plan. Will enable staff to communicate with members and other staff when in the field
13 staff months (for staff needing hot spots for job functions) x $35 per month for MiFi hotspot. Will enable home visits by granting access to the internet when out of the office.
10 staff months for clinical staff needing a tablet for home visits x $35 per month for data plan. Will allow efficient completion of assessments and care plans through mobile platform.

Row 10 - Occupancy

Occupancy Expense	**Total SqFt**	**Cost/SqFT**	**Cost**
Rent and Facilities Fee Dec - Feb	260	2.083/ mo	$ 1,625.00
Rent and Facilities Fee Mar - May	960	2.083/ mon	$ 5,999.00
			$ -
			$ -
			$ -
Total Occupancy (Program Budget Line 10)			**$ 7,624.00**

Provide a brief description of how each Occupancy line item listed above will support the CP's performance and how the costs were determined:

Annual facility cost (rent) for lead agency is $25.00/ sq ft

Annual facility cost (rent) for lead agency is $25.00/ sq ft; .

The space demands will grow during the pre-bedget period as staff are hired.

December, January and February (3 months):
Program Director Office = 100 Square Feet
IT Program Manager and Admin Assistant cubicles = 160 square feet total
These staff will all be located in Lowell Community Health Center space.

March, April and May (3 months)
Program Director Office = 100 Square Feet
Lead RN Office = 100 Square Feet
IT Project Manager, Admin Asst, RN 2, Intake Coordinator 1, Intake Coordinator 2 = 80 square feet workstations = 400 Square Feet total
Care Coordination Teams = 6 staff – shared workspaces, floating: 60 Square Feet per person = 360 SQ
These staff will be hired by all affiliated partners (a combination), housed either in Lowell Community Health Center space or with other affiliated partners depeding on space availability.

Additional occupancy costs include $2.50/ square foot allocated costs for maintenance (based on the current experience of lead agency) and $1.50/ square foot allocated costs for housekeeping. These costs will not be attributed to the BH CP for the prep budget period.

Row 11 - Other

Other Direct Expense Description	Cost
Cost of initiating consumer advisory board, including food, materials and transportation	$800
Cost of initiating governanace committee meetings, including food and materials	$400
Contributions to program development and implementation from non-program clinical staff at LCHC, MHA and LHI	$12,400
Total Other (Program Budget Line 11)	**$ 13,600.00**

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Contributions from existing staff: Existing staff at each of the three partner organizations will contribute to

program development, engagement of ACOs and community-based organizations, recruitment and strategic decision-making through the preparation period. Staff include clinical ledership from each organization.

Funds are allocated to 60% to Lowell CHC, 20% to MHA and 20% to Lowell House to cover this time.

Funds to launch the Consumer Advisory Committee will be used for meeting materials, food and transportation as needed for members to participate in meeting(s). 2 meetings in prep budget period.

Funds to launch the Governance Committee will be used for meeting materials and food. 2 meetings in prep budget period.

Row 12 - Indirect Cost/Administrative Overhead

Indirect Cost/Administrative Overhead	Rate	Total Indirect Cost
Total Indirect Cost/Administrative Overhead (Program Budget Line 12)	19.00%	$41,691

Provide a brief description of each line item listed above will support the CP's performance and how the costs were determined:

Federally approved overhead rate for Lowell Community Health Center, Lead Agency, is 29%. We will use an overhead rate of 19% for this budget period.

Community Partner Infrastructure Budget Report - Technology - Prep Budget Period

Only complete this Infrastructure Budget Narrative using amounts anticipated for PBP.

Lines may be added to the Infrastructure Budget Narrative tables as necessary

Row 1 - IT Staffing including Fringe

Position	Annual Salary	FTEs	# Months	Total
IT Project Manager	$70,000	1	6	$ 35,000
	Total Salary			$ 35,000
	Fringe rate	19.3%	Total Fringe	$ 6,755
			Total IT Staffing including Fringe (Infrastructure Budget Line 1)	**$ 41,755**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

The IT project manager is a key part of the program development team during the preparation period. The Manager will be responsible for developing an RFP to select an IT vendor to provide a case management system, working with the program director and clinical teams at all affiliated organizations to define the specifications for the IT platform and for the implementation of the system. IT Manager will also participate in discussions with the ACOs about information sharing and interfaces.

All infrastructure expenses in the PBP allocated 60% to Lowell CHC (lead agency), 20% to Mental Health Association of Greater

Row 2 - Development/Adaptation of EHR and/or Care Management System

			Total Workforce Development Staffing including Fringe (Infrastructure Budget Line 5)	**$ -**

For each position listed above, provide a brief statement of the position's responsibilities, and how each will assist in meeting the terms of the CP's contract:

No new workforce development staff are proposed for this program. Workforce development activities will be managed by Program Director in concert with existing resources at organizations.

Row 6 - Recruitment Expenses

Description of Expense	Cost
Cyber Recruiter to manage recruitment process	$ 935.00
Sponsored Jobs of Indeed -- online postings	$ 4,200.00
Mass Association of Social Workers	$ 1,600.00
Materials and Flyers	$ 435.00
Total Recruitment Expenses (Infrastructure Budget Line 6)	**$ 7,165.00**

Provide a description of each recruitment expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

External Recruitment for RN, Case Managers, Community Health Workers and Admin Assistant positions, including local marketing. Additional recruitment done through informal channels by all affiliated partners within the Lowell area.

Costs include:
Allocated cost for Cyber Recruiter -- vendor organization to support recruitment activities, tracking ($935 allocated based on volume of recruits)

Sponsored Jobs on Indeed. Sponsored Jobs are highlighted in search results and receive greater visibility than free job listings to increase return. $300/position/month. 6 positions for 2 months- $300 X 6 positions X 2 months = $4,200

Mass Association of Social Workers- approx. $400 for publishing a 1/8 page advertisement in Social Work Voice and 6-8 weeks on-line. $400 X 4 issues= $1,600

We will partner with local Community Health Worker training programs to advertise positions to graduates, using matierals and flyers.

Recruitment expenses in the PBP allocated 60% to Lowell CHC (lead agency), 20% to Mental Health Association of Greater Lowell

Row 7 - Training Expenses

Description of Expense	Cost
Developing training curriculum with local community based organizations	$ 2,500.00
Producing resources and training binder for staff	$ 500.00
Certification training for CHW and Case Managers (as needed)	$ 3,850.00
Total Training Expenses (Infrastructure Budget Line 7)	**$ 6,850.00**

Provide a description of each training expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Training expenses in the prep budget period include working closely with other community based providers to develop the curriculum for program staff to continually build skills in referrals, services available within the community, cultural competence and best practices. We estimate that developing the curriculum will cost $2,500 and supporting materials will cost $500.

$4400 has been allocated to support clinical staff to gain or maintain certification in case management or as a CHW, as needed. Cost estimated at $550 per FTE, with up to 7 staff eligible for the funding. Will be driven by need once staff are recruited.

All infrastructure expenses in the PBP allocated 60% to Lowell CHC lead agency), 20% to Mental Health Association of Greater Lowell and 20% to Lowell House Inc based on anticipated distribution of staff

Row 8 - Retention Expenses

Description of Expense	Cost
Total Retention Expenses (Infrastructure Budget Line 8)	

Provide a description of each retention expense line item included in the table above, how each will assist in meeting the terms of the CP's contract and how the costs were determined:

Retention expenses are not anticipated in the preparation budget period.

Community Partner <u>Infrastructure</u> Budget Report - Business Start Up Costs - Prep Budget Period

Row 9 - Office Equipment

Description of Expense	Cost
Office equipment for 14 new staff including computers, phones, printers	$14,560
Total Office Equipment (Infrastructure Budget Line 9)	**$14,560**

Provide a description of purpose for each office equipment expense listed in the tables above, including how the costs were determined:

Cost of office equipment for new staff estimated at $1,040 per workspace based on previous experience and current rates. 14 staff will receive new office equipment in the prep budget period.

All infrastructure expenses in the PBP allocated 60% to Lowell CHC (lead agency), 20% to Mental Health Association of Greater Lowell and 20% to Lowell House Inc based on anticipated distribution of staff

Row 10 - Office Furniture

Description of Expense	Cost
Desks for 14 Staff people	$ 7,868.00
Chairs for 14 staff people	$ 2,828.00
Cubicles for 12 staff people	$ 7,200.00

BH Community Partner - Staffing Model

Greater Lowell BH Community Partners/ Lowell Community Health Center

line #			
1	Estimated number of Engaged Enrollees (including CBFS if applicable) at the end of Budget Period 1	750	*Should align with Program Budget*

	BH CP Program Staff	FTEs (Do not duplicate FTE - FTE's may be allocated across staffing positons as applicable)	Comment
2	BH CP Director and Assistant/Deputy Director	1	*Total management oversight of BH CP*
3	Medical Director	0.25	*Portion of Medical Director allocated to BH CP for the number of enrollees shown in line 1*
4	RNs	1	*Lead RN*
5	Clinical Care Managers (RN)	2	*Do not include FTEs listed in line 4*
6	Clinical Care Managers (LPHA)	2	*LPHA includes LICSW, LMHA, LADC I*
7	Supervisors/Team Leaders		*Do not include FTEs listed in lines 4, 5 or 6*
8	Other Licensed Staff		*Do not include FTEs listed in lines 4, 5, 6 or 7*
9	Care Coordinators	13	*FTEs providing Care Coordination (may include Health Outreach Workers, Community Health Workers, Peer Specialists, Recovery Support Navigators providing care coordination)*
10	Peer Specialist/ Recovery Coaches (non-Care Coordination)	2	*Do not include FTEs of Peer Specialists or Recovery Coaches included in line 9*
11	Intake Coordinators/Engagement Specialists	2	
12	Administrative Support	1	
13			
14			
	Total FTE	24.25	

	Staff Ratios - Please calculate the following ratios:		
15	Ratio of RN and Clinical Care Manager (RN) to Assigned and Engaged Enrollees	1:250	*Estimated number of Assigned and Engaged Enrollees at the end of BP1 divided by total FTEs of (RN+RN Clinical Care Managers)*
16	Ratio of Care Coordinator Supervision to Care Coordinators	1:4	*Total Care Coordinator FTEs divided by Total Care Coordination Supervision FTEs*

Please describe which Program staff listed in lines 2 through 8 above directly supervise Care Coordinator staff: In our model of care, Community Health Workers will be supervised by the Care Coordinators that they work most closely with. Care Coordinators are either licensed BH or unlicensed BH staff, depending on the needs of the organization. All Care Coordinators will do this supervision. Care Coordinators will be supervised by either the Lead RN or in-kind staff in affiliated partners (Lowell House and Mental Health Association of Greater Lowell). The Peer Specialist and the Recovery Coach will be supervised by in-kind staff at the organizations. The Program Director and the Medical Director are available to all staff in support of member case reviews, skills development and consultations. The Lead RN, RN, Peer Specialist and Recovery Coach will support members and Care Coordination teams across all three affiliated partners.

Section 7.3 Initial DSRIP Participation Plan

A. Executive Summary

As the Lead Agency on this Request for Responses (RFR) submission to participate with the Executive Office of Health and Human Services (EOHHS) as a Behavioral Health Community Partner (BH CP), the Lowell Community Health Center (Lowell CHC) and two Affiliated Partners known as Lowell House, Inc. (LHI) and The Mental Health Association of Greater Lowell, Inc. (MHA) (Greater Lowell BH CP) represent three best practice Behavioral Health (BH) organizations in serving the Greater Lowell area.

The Greater Lowell BH CP partners bring over 300 years of experience in total providing evidence-based BH to residents in Northern Massachusetts. We provide data-driven BH care coordination, care management, and BH services and supports to more than 7,600 individuals with disabilities and mental health challenges annually, helping some of the most underserved consumers in the State live as independently as possible in the community, while achieving their wellness and recovery goals. We serve individuals with Serious Mental Illness (SMI) and Substance Use Disorders (SUD) as well as Long Term Services and Supports (LTSS) needs. The Greater Lowell BH CP seeks to improve member satisfaction, quality, and cost-effectiveness and are highly innovative in our approach to BH care delivery for underserved individuals.

1. Goals and Challenges

The Lowell CP goals align closely with the State's goals to:

- **Support individuals with high BH (and LTSS) needs** to help them navigate the complex BH system providing coordinated support services
- **Improve the Enrollee experience** by holistically engaging individuals with high BH needs with services that strengthen, enhance and diversify access for individuals and families we serve
- **Assist individuals in integrating into the community** through attaining valued community roles, active membership in local organizations and meaningful relationships
- **Incorporate an enhanced data-driven decision-making process** to guide clinical and administrative decisions to improve capabilities that enhance care delivery
- **Support community first values, SAMHSA recovery principles, and culturally competent care delivery** by adopting evidenced- based, best practices
- **Collaborate with ACOs, MCOs, CPs, and community organizations** to integrate care and address the social determinants of health

Challenges and solutions associated with meeting the State's BH CP Contract requirements:

Challenges	Solutions
Support true care integration	Utilize a single system that supports a full continuum of behavioral health care service and data integration among Affiliated Partners, ACOs, and others; Educate Enrollees and providers regarding integration

Challenges	Solutions
Connect Enrollees to Community-based Organizations (CBOs) to address social determinants of health	Leverage our close relationships with local organizations that serve BH CP Enrollees
Collaborate with multiple ACO Partners, each with different IT systems and processes	Work with ACO partners to create assessments and care plans and, to create a "bridge" between the ACO data system and the BH CP data system

2. Assigned and Engaged Enrollees

Greater Lowell BH CP currently serves an estimated 1,000 BH CP eligible Enrollees and has the capacity to support a total of 1,750 within the proposed Service Area. Greater Lowell BH CP is prepared to add capacity over the Contract period.

3. Service Area

Greater Lowell BH CP proposes to serve MassHealth Enrollees in the Greater Lowell area. Lowell CHC, LHI, and MHA are crucial organizations within the community, which is bound geographically by the Merrimack and Concord Rivers and surrounding elevations which, together create a naturally occurring community where local health care delivery is essential. For this reason, the Greater Lowell BH CP chose to bid on this single service area to serve Lowell residents, many of whom already utilize our facilities.

4. Plans to Operationalize the CP Program

To operationalize the CP program, we will engage in the following crucial implementation activities, based on time frames indicated below:

Activity	Timeline
Develop and execute contractual agreements with MCO and ACO partners	Upon Selection
Develop and implement Contractor Governance structure	Upon Selection
Identify, hire and recruit staff to meet all mandatory and other contractually required positions associated with the Contract	Throughout the Preparation Budget Period
Orient and train staff regarding Contract requirements	Within the Preparation Budget Period
Develop the process to accept Assigned enrollees from EOHHS and other referral sources and, to distribute appropriate materials; develop workflows associated with assignment/engagement	Upon Selection
Identify and develop general operational business functions	Upon Selection
Develop a Consumer Advisory Board consistent with Contract requirements	Within 60 days of Contract Execution
Develop, distribute and implement a Conflict of Interest policy	Within 60 days of Selection
Identify, secure and develop CP Support capabilities	Upon Selection
Develop and implement a comprehensive Quality Management (QM) Quality Improvement (QI) strategy	Within 90 days of Selection
Develop IT capabilities to track and report on Qualifying Activities included in the Contract including, but not limited to, IT testing and securing assurances	Upon Selection

B. Supporting Populations and Community Engagement

1. Community Connections

Health care is very local in Lowell, given geographic boundaries imposed by the Merrimack and Concord rivers and highways. Lowell CHC, LHI, and MHA share responsibility with many CBOs for delivering care to Lowell residents. Current and planned collaborations follow.

Community-based organizations: Our organizations actively collaborate with CBOs including, the Cambodian Mutual Assistance Association, Latin American Health Institute, MA Alliance of Portuguese Speakers, and the African Assistance Center. These relationships reflect the cultural and linguistic diversity of the population served by the Greater Lowell BH CP. We work with: Community Teamwork; Elder Services of Merrimack Valley; Renaissance Club; Merrimack Valley Legal Services; Family Resource Center; Boys and Girls Club; Lowell Senior Center; Lowell Transitional Living Center; Lowell Career Center; Merrimack Valley Food Bank; Learn2Cope; Center for Hope and Healing; The Merrimack Valley Food Bank; Lowell Adult Education; and UTEC, Lowell and area Police and Fire Departments, Health Departments, and Trinity EMS.

Advocacy groups: Our organizations will maintain ongoing collaboration with the Greater Lowell Health Alliance and the Substance Abuse and Mental Health Task Forces, the City of Lowell Youth Council the Association for Behavioral Health among others. All three agencies participate in the Middlesex Opioid Task Force, and GLEAN, a domestic violence high-risk team. Additional information regarding affiliations is available to EOHHS upon request.

BH providers: The Lowell CHC, LHI, and MHA refer individuals seen by Greater Lowell BH CP participants to the following BH and SUD providers: Lowell General Hospital, Circle Health Care Team, Lahey Behavioral Health, Children, Friend and Family, McPap, Center for Hope and Healing, Alternative House, Habit OPCO, Clean Slate, Bridgewell and Middlesex Recovery.

Housing/shelter providers: We work closely with the Lowell, Chelmsford, Westford and Tewksbury Housing Authorities, Community Teamwork, Alternative House, local sober houses, and the Transitional Living Center to support homeless individuals. We also have personal relationships with many Lowell area landlords. LHI has Residential programs, transitional housing, sober housing, and permanent housing supportive case management services.

Public agencies: The Lead Agency in this submission, the Lowell CHC, contracts with MassHealth as well as All MassHealth MCOs including Fallon, Neighborhood, Tufts, Celticare.

The Greater Lowell BH CP collaborates with MassHealth, Department of Public Health (DPH), Mass Rehabilitation Commission, Department of Developmental Disabilities (DDS), Department of Mental Health (DMH), Bureau of Substance Abuse Services (BSAS), Department of Children and Families (DCF) and others. We also work with the Department of Transitional Assistance; Department of Motor Vehicles, Middlesex Sherriff's Department; Department of Housing and Community Development; Offices of Adult and Juvenile Probation; and, local health departments.

2. Growing Community Connections

We will continue to expand such connections under the BH CP Contract. The Greater Lowell BH CP will achieve this goal by leveraging and building on existing relationships and, by identifying and pursuing new relationships as one means to enhance access, integration, and continuity for Enrollees. We will systematically identify where Enrollees receive services and continually seek Enrollee, family and community-based expansion strategies.

Participation in community health needs assessments: All three Greater Lowell BH CP organizations have participated in focus groups to share our views of community health status during the development of the 2016 Greater Lowell Community Needs Assessment.

Examples of successful community connections: Lowell House partnered in the development of the Community Opioid Outreach Program (COOP) in 2016, with the Lowell Police and Fire Departments, Lowell Health Department, Trinity EMS, and MHA. The COOP team has learned of and attempted outreach to at least 307 individuals in their homes. At least 104 people had follow-up visits with the team after initial contact. In addition, MHA works with these partners and the Middlesex DA's office on a program to support the children and family members of opioid abusers.

The Lowell CHC and LHI, in partnership with the Middlesex County Sheriff's Office, connects individuals reentering society after incarceration with primary, behavioral and SUD treatment if necessary. Through this partnership, we link individuals to needed services to prevent recidivism.

Link to Business Plan: One of Greater Lowell BH CP's organizational goals is to grow our collaborative efforts with CBOs over the course of the BH CP Contract. To meet this goal, we will implement initiatives that address social determinants of health, partnering with local, CBOs that address Enrollee's needs for housing, food, safety and other issues.

3. Informing Staff of Community Resources

Informing Staff Regarding Community Resources

Greater Lowell BH CP will ensure that staff fully understands community resources to meet the needs of our BH CP Enrollees. We will update information as changes occur in a shared electronic database. Our plans to inform and update staff follow:

Community resource guide: Greater Lowell BH CP will develop and maintain an electronic and hard copy community resource guide as a reference for staff.

Staff training: We will organize and conduct on-going educational sessions for staff to support collaboration with CBOs including information on community resources and updates. Our organizations will jointly hold staff conferences with invited CBOs and guest speakers. We will hold grand rounds within the Lowell CHC will include updates and training on evidence-based best practices, and best practices in CBO supports.

Interdisciplinary Care Team meetings: All three participating Greater Lowell BH CP partners will utilize some portion of the ACO's ICT meeting times to educate staff on the BH CP program.

C. Community Partner Supports and Activities

1. Outreach and Engagement

a. Planned strategies for outreaching to and engaging with Assigned Enrollees, including individuals homeless and hard to reach individuals

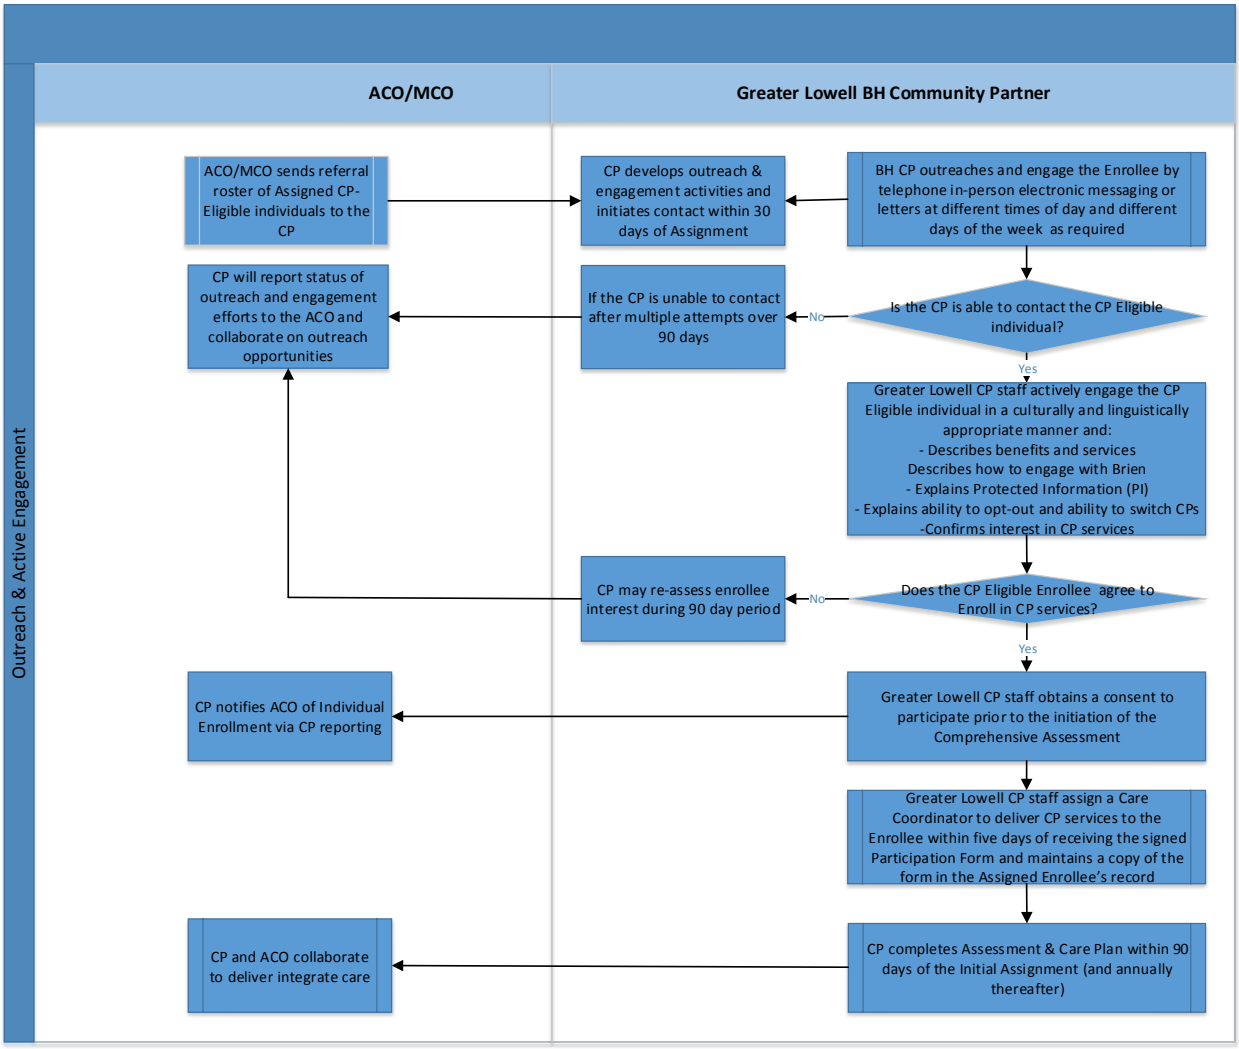
The Greater Lowell BH CP provides key access points to services in the Lowell area. Between our three agencies, we will identify and engage many Enrollees through our provided services as a part of our daily operations. For these cases, personnel within each agency will work closely with the BH CP care coordinator. The Greater Lowell BH CP subscribes to Substance Abuse and Mental Health Service Administration's (SAMSHA) philosophy and approach to locate, outreach and engage Assigned Enrollees who have not otherwise been engaged in services. This philosophy begins with our learning about the Enrollee's current BH provider relationships and the importance of meeting the Enrollee's basic needs. As we initiate contact with the Enrollee, we begin building rapport and trust, focusing on strategies to connect Enrollees to services without making them feel uncomfortable, judged or threatened. Key outreach strategies are as follows:

Greater Lowell BH CP meets the Enrollee at any available location in the community where the individual is personally comfortable, which may include but not be limited to their home, neighborhood locations, tent cities, motels, shelters, or congregate meal sites among other locales. We seek to truly connect with the Enrollee and build trust, regardless of where we physically meet. We feel strongly that asking the Member to select the location that would be most comfortable for them is an important step toward building the Enrollee's confidence in the BH CP and trust. Our knowledge of the Greater Lowell community and culture is a great asset in approaching this important strategy.

Our organization makes the process of building a relationship with the Enrollee as primary and does so by being highly respectful toward Enrollees and their families. We seek to create an open, safe, friendly environment that is trauma-sensitive in which to meet. And, we immediately seek to assess and meet Enrollee's basic needs.

We hire highly qualified, skilled individuals who are trained in motivational interviewing and are very skilled at engaging and interacting with individuals who have SMI and SUD diagnoses. Furthermore, we hire staff who are experienced in serving the target population and understand their needs and preferences that go well beyond cultural and linguistic needs. **Figure 1** illustrates the Outreach and Engagement process.

Figure 1. Outreach and Engagement Process



Our primary strategies to outreach and engage Enrollees, including individuals who are homeless, reflect the philosophy and strategies described above. For individuals who are homeless, our efforts notably include direct community outreach in areas where homeless individuals congregate and live, including tent cities, under bridges, in downtown areas, outside shelters, and at Living Waters Drop-in Center.

The Greater Lowell BH CP will employ specialized Intake Coordinators, to conduct outreach to and connect with Eligible Enrollees, supported by our BH CP Care Coordinators and Community Health Workers as needed. The goal of this initial outreach will be to welcome the Enrollees to our program, explain the benefits and schedule the first in-person contact BH CP Care Coordinators and Community Health Workers. We will make a minimum of one outreach activity to each assigned Enrollee within one month of receiving an Assignment from the ACO. In practice, we will attempt to reach the Enrollee several times by phone within 30 days of Assignment. While we will normally contact Enrollees in the community, if an Eligible Enrollee is

hospitalized, we will attempt to make the first in-person contact during an acute care event at the hospital, taking care to ensure that the Enrollee is comfortable. In this manner, we will proactively participate in the Enrollee's transition of care at the outset of their enrollment. Whenever possible, based on the Enrollee's willingness to meet, we will meet with the individual face-to-face within the first three calendar months of the Enrollee's assignment. If the Enrollee is not willing to meet, we will continue to identify opportunities to introduce BH CP services. Enrollees will also be able to request assignment to a different staff member within our organization or assignment to a different BH CP organization at any point in time.

We will make every effort to contact Enrollees who cannot be reached telephonically by going to community locations where we know we may locate the individual (e.g. at home, at a congregate meal site, etc.). We will make at least three attempts to establish contact and anticipate that we may need to make several attempts to contact an Enrollee to schedule a time and location for an initial meeting.

Our staff will meet with the Enrollee in a location, and at a time that is most comfortable for the individual with a family member or caregiver, if desired by the individual. If agreed to by the Enrollee, we will meet with him/her in their home to obtain insight into the Enrollee's social determinants of health and home safety.

At our initial meeting, the Greater Lowell BH CP staff will provide Enrollees with introductory materials including information regarding the benefits and the design and purpose of BH CP supports. This information will be offered in written and verbal formats and will be available to Enrollees' in their primary preferred language for the most commonly spoken languages among the population served.

We will provide information regarding the BH CP service delivery process to help the Enrollee understand how to engage with our organization and will explain that the Enrollee can opt out of receiving BH CP services at any time. We will further provide information regarding how to reach our website, participate in the Consumer Advisory Board, and contact a BH CP Care Coordinator or Community Health Worker or Community Health Worker.

During the first in-person contact, The Greater Lowell BH CP staff will employ motivational interviewing to understand the Enrollee's health status, their needs and preferences and, their aspirations and/or frustrations with barriers to care delivery that require attention. At a minimum, the Care Coordinator will describe benefits and services, describes how to engage with Greater Lowell BH CP staff, explains Protected Information (PI) and the purpose of this practice; explain the individual's ability to opt-out of BH CP services as well as the ability to switch CP agencies entirely. Ultimately, the Care Coordinator will confirm the Enrollee's interest in CP services and obtain a signed Participation Form, which will be filed in the Enrollee's records.

After the Participation Form is signed, we will perform the Comprehensive Assessment and work to truly understand the Enrollee's needs and preferences in their primary preferred language with attention to cultural beliefs. Individuals who choose not to enroll will be provided with

contact information should the individual choose to enroll later, and will be asked if periodic outreach from an advocate is acceptable.

Where possible, and when desired by the Enrollee, the individual who performs the initial contact and assessment will serve as the BH CP Care Coordinator or Community Health Worker and take a leadership role in delivering services as part of our BH CP team. If the Enrollee prefers a different Care Coordinator or Community Health Worker, another staff member from our organization will be assigned based on the Enrollee's preferences.

b. Planned Strategies for Outreaching to, and Engaging with, Assigned Enrollees with SUDs

We will tailor our approach to outreaching Enrollees with a SUD diagnosis based on his/her readiness to participate in treatment, utilizing a harm reduction approach. We will engage Enrollees with SUD diagnoses by assigning staff with appropriate expertise including cultural and linguistic alignment, and use staff who have lived experience and are in recovery using a process that resembles the contractually required process described above.

The Greater Lowell BH CP will emphasize the relationship development process as primary in the CP service delivery process for individuals with SUD and other diagnoses, as described above. As is the case today, our staff will continue to be highly respectful toward Enrollees and their families regardless of the struggles associated with their diagnoses. We seek to create an open, safe, friendly environment in which to meet without judgment regarding substance use and will provide appropriate services if the individual is actively using substances. And, we will immediately attempt to assess and meet Enrollee's basic needs to gain their trust and, to provide immediate and tangible support as needed. We will seek to address their housing, food, medical issues, and safety as basic needs from the outset.

c. **Planned Process to Obtain and Document Assigned Enrollee's Agreement** to Participate in CP Supports Through a Participation Form

At the initial visit, prior to the assessment, each Enrollee will be asked to sign a participation form. Our staff will thoroughly explain the purpose of the participation form to the Enrollee and confirm their desire to participate in the BH CP program. We will further explain the concept of protected information and how we intend to gather, store, utilize and protect any information provided by the Enrollee. The BH CP Care Coordinator or Community Health Worker will explicitly inform the Enrollee, in their primary preferred language and in a cognitively appropriate way, so that the Enrollee can fully comprehend why we need to obtain their written authorization to provide quality CP support services.

Following receipt of the participation form, we will formally assign a BH CP Care Coordinator or Community Health Worker within five business days of receipt of the signed participation form. A copy of the form will be maintained in the Enrollee's record.

2. Comprehensive Assessment and PCTP Development

a. Process for Conducting Comprehensive Assessments

We place the Enrollee at the center of the assessment and treatment planning processes and constantly engage them to identify their needs, priorities, and preferences. Our assessment process will begin with a review of medical records and any available documentation regarding the Enrollee's needs and condition by one of our registered nurses, who is a part of our clinical team. Specifically, staff will review the Enrollee's medical history, medical needs, and medications and will summarize them for our BH CP Care Coordinator or Community Health Worker, prior to completion of the full Comprehensive Assessment. Our Clinical Care Managers will review the final assessment upon completion.

Starting in budget year 1, we have budgeted funding for additional Comprehensive Assessment support through contracted entities. These additional, dedicated contract staff resources will enable us to complete the comprehensive assessments and engage members quickly in the BH CP to meet their needs most efficiently.

If the Enrollee has an existing relationship with a Primary Care Provider (PCP), state agency care/case managers or other treatment providers, we will engage these key individuals in the Comprehensive Assessment and the PCTP processes at the outset. We anticipate involving DMH, BSAS and others in the treatment process, seeking to eliminate duplication and conflicting efforts where all care management supports are seeking to support the Enrollee's primary, stated goals and needs.

The Greater Lowell BH CP's goal is also to leverage any information already collected by the Enrollee's ACO partner. We believe this is important to maintaining a person-centered, efficient process that minimizes duplication and demands on the Enrollee. We are already engaged in conversations with the potential ACOs in our geographic area regarding information sharing strategies to inform the Comprehensive Assessment and other processes. We hope to work with the ACOs in our region to develop a single integrated assessment that builds on information already obtained from the Enrollee. Gathering the same information from the Enrollee or other sources could be disruptive to the Enrollee as well as wasteful and inefficient.

Ideally, with the Enrollee's permission, we will incorporate any available data from the ACO into the BH CP Comprehensive Assessment. Our Care Coordinator will then meet with the Enrollee to complete the BH Assessment, following the Enrollee's signing of a Participation Form, and specifically assess the Enrollee's immediate care needs, current services, personal and familial medical history, medications, health communications skills, existing primary care utilization and emergency department utilization history with a specific focus on BH and SUD needs and preferences. At the same time, our Care Coordinator or Community Health Worker will also reach out to the ACO Care Manager to integrate across physical, BH and other care needs together, in a team-oriented manner. We will participate on the Enrollee's ACO Care Team if possible, with the goal of jointly preparing a truly integrated Comprehensive Assessment.

Following the completion of the Comprehensive Assessment by the Enrollee's Care Team, ACO and other key providers, we will communicate the results of the Assessment to the Team and jointly determine implications for on-going care planning.

The Greater Lowell BH CP will use a combination of the Massachusetts Standardized Data Project (MSDP) forms to perform Comprehensive Assessments for BH CP Eligible individuals. We agree to meet all EOHHS requirements pertaining to mandatory data elements mandated in the Model Contract. We will select appropriate forms based on adult, child/adolescent, SMI or SUD status. Our goal is to maximize person-centeredness, minimize duplication and maximize efficiency. We plan to review and discuss the MSDP tools, included as Attachment 7.3.C to this RFR submission with local ACOs, prior to sharing our final selection of forms with EOHHS. The attached MSDP forms include a Comprehensive Assessment for Adults, a Physical Health Assessment (in the event that such information is not available from the ACO); a Child and Adolescent Assessment; and an Addictive Behavior and Substance Use History Addendum.

b. Process for Conducting PCTPs

After the Comprehensive Assessment is completed, our BH CP Care Coordinator will use the assessment data, combined with other available information (e. g. medical records information and other relevant data) to develop the PCTP with the Enrollee. We will seek to develop a truly integrated PCTP that addresses each Enrollee's medical, behavioral, substance use and psychosocial support needs. The Greater Lowell BH CP will employ specialized staff to serve individuals with SUD diagnoses including Recovery Coaches as well as Peer Specialists to assist in the care of members with SMI.

The BH CP Care Coordinator and/or Community Health Worker will collaborate with the Enrollee and their family member or informal caregiver to create a truly person-centered plan that reflects the Enrollee's needs, preferences, and goals. We will encourage the Enrollee to take a lead role and making sure the individual can develop their PCTP goals.

As stated above, we will seek to participate in the ACO or MCO Interdisciplinary Care Team (ICT) meeting for individuals that we serve. We will also consistently invite the ACO to participate in BH CP Enrollee care plan meetings. Regardless of who requests the meeting, a The Greater Lowell BH CP Care Coordinator will seek to lead an integrated discussion of BH CP needs, rather than requiring the Enrollee to attend separate meetings with their ACO and our BH CP staff.

If the ACO does not plan to hold a meeting to discuss the Enrollee's PCTP, we will hold a separate meeting to discuss the Enrollee's BH needs and will invite the ACO or MCO to participate. If the Enrollee prefers a separate meeting specifically to discuss their BH needs, we will offer a session with the Enrollee's BH CP Care Coordinator or Community Health Worker and other BH CP Care Team members as requested. Regardless of when this initial meeting is held, we will complete the PCTP within three months of the Enrollee's assignment to The Greater Lowell BH CP.

The BH CP PCTP will include, but is not limited to: Enrollee goals and objectives, specific action steps to achieve goals, a method for tracking goal progress, referral needs to obtain care and services, educational needs, and any other necessary information. PCTPs may also include a crisis

plan, especially for individuals with BH needs with a history of crisis service utilization. The Person-Centered Treatment Plan (PCPT) will include actionable steps, responsible parties and timeframes for implementation.

Planned processes for documenting the PCTP. The Greater Lowell BH CP Person-Centered Treatment Plan will be documented in the integrated case management platform selected by and implemented across the three organizations in the BH CP. We intend to build interfaces across systems and to the Mass Hi-Way to assure the PCTP can be easily shared across providers with enrollee consent.

We will provide our care coordination staff with tablets, smart phones and other mobile technology to facilitate engagement of the enrollee in the PCTP process in community locations most convenient and comfortable for them.

Planned processes for updating the PCTP. The Greater Lowell BH CP Care Coordinator will update the PCTP in collaboration with the Enrollee, their family member/caregiver, the ACO and other key stakeholders identified by the Enrollee. Our BH CP Care Coordinator, in collaboration with the Registered Nurses and other members of the care team, will be responsible for updating PCTPs at any major change in the Enrollee's condition (e. g. loss of housing, loss of informal caregiver, BH crisis, new BH diagnosis, BH or medical hospitalization, multiple ED visits) progress toward treatment goals, a decline in functioning, or transition between levels of care. If the Enrollee's quality of life is not improving or the Enrollee feels that the plan needs an update, we will also update the PCTP.

The BH CP Care Coordinator will share PCTP updates with the Care Team within the Enrollee's ACO and, internally within the BH CP. Recognizing that Enrollee's needs are fluid, our BH CP Care Coordinator and Community Health Worker will review the PCTP and the Enrollee's progress during each interaction and inform key stakeholders as necessary and appropriate while respecting the Enrollee's privacy and wishes.

The Greater Lowell BH CP will complete thorough re-assessments which will include, but are not be limited to: updates that review past progress toward goals, health status, future goals, monitoring of compliance with the PCTP, recommended follow-up and a complete update to the PCTP. Each time a re-assessment occurs, or if the PCTP changes because of a review, we will update and distribute the PCTP appropriately. We will conduct reassessments and update to the PCTP at least every year and following a change in Enrollee status that is self-limiting, impacts their health status and requires a review.

We will develop a process that is consistent with the creation of the original PCTP where the Enrollee and the PCP approve the PCTP prior to implementation. We will further review and provide a copy of the Plan to the Enrollee and the PCP upon completion.

Ensuring the Assigned Enrollee and PCP or PCP Designee approve the PCTP. Ideally, the PCTP will be developed by the BH CP with input from the ACO ICT, if an ICT is in place. The BH CP Care Coordinator will review the PCTP and other information with the Enrollee including but not

limited to, the Enrollee's right to appeal any denial, termination, suspension or reduction in services or any change in providers, services or medications included in the PCTP. The Care Coordinator will inform the Enrollee of their right to approve the PCTP and obtain such approval. The Greater Lowell BH CP intends to obtain sign-off from the PCP who will receive a copy of the PCTP upon completion. Upon Enrollee and PCP approval of the PCTP, the BH CP will provide the Enrollee and the full team with a copy. The Greater Lowell BH CP will coordinate care with the PCP and Care Team based on the PCTP.

If the ACO is unable to develop the PCTP directly in collaboration with the Enrollee and the BH CP, the BH CP Care Coordinator or Community Health Worker will share the PCTP with the Assigned Enrollee. All BH CP Assessments will be reviewed and approved by one of our staff registered nurses working with the BH CP care teams.

3. Care Coordination and Care Management

a. Identifying All Stakeholders Involved in an Enrollee's Care

The Greater Lowell BH CP will identify all stakeholders involved in the Enrollee's care through multiple methods. First and foremost, we will ask the Enrollee which individuals they most want to be involved in the care team. Our BH CP Care Coordinator or Community Health Worker will contact the individuals' PCP, involved State agencies and community-based organizations who are involved in the Enrollee's care. The Greater Lowell BH CP staff will also contact the Enrollee's ACO to determine what care management efforts are underway so that care is fully integrated and coordinated and, no duplication of service delivery occurs.

The Enrollee's Care Coordinator will assemble an ICT that includes, but is not limited to: the PCP, The Greater Lowell BH CP's Clinical Care Manager, the Enrollees' Care Coordinator and Community Health Worker, and the individual's BH clinician and others as appropriate (e.g. family, caregivers, advocates, state agency staff or other care managers). We will also include LTSS providers who are aware of the Enrollee's LTSS needs and preferences and will counsel the Enrollee regarding LTSS options, including a choice of at least two LTSS service providers. Likewise, our BH CP Care Manager will facilitate access to, and the delivery of LTSS for eligible individuals and will assist in servicer navigation.

b. Exchanging Information with Such Stakeholders

The Greater Lowell BH CP will share information with stakeholders verbally and in writing. We will hold community meetings and visit key community partners to explain the use of BH CP services. Each time we integrate care for an Enrollee, we will educate stakeholders regarding the relationship between BH CP services and the services that they provide.

c. Identifying and Organizing Members of the Enrollee' Care Team

The Greater Lowell BH CP describes our process to identify members of the Enrollee's Care Team in response 3.a above. Our goal is to be available to the ACO or MCO's team and/or to facilitate a meeting of the Enrollee's full team (e.g. including not just our BH CP Care Team but the entire ICT, including the Enrollee and family or caregivers, if appropriate) to participate in the

development and implementation of a fully integrated person-centered assessment and PCTP for each BH CP eligible Assigned Enrollee.

d. Ensuring Effective Ongoing Communication Across All Stakeholders

The Greater Lowell BH CP will assure effective ongoing communication across stakeholders through multiple means. First, we will maintain close contact with the Enrollee to ensure that the individual's needs and preferences are met. In addition, we will regularly communicate with the Enrollees' PCP and key agency and community-based caregivers to ensure coordination and integration. While we plan to participate in, or hold, an ICT meeting to initially create a PCTP to meet the Enrollee's needs, we will reach out to key stakeholders telephonically as needed and initiate ICT meetings when appropriate and necessary.

To make sure that Enrollee's needs and preferences are addressed, we will share the PCTP with the Enrollee and their family or informal caregiver, the Enrollee's PCP, specialist and other providers or key stakeholders. We will further coordinate medical, prenatal, outpatient BH and preventative care reminders with the ACO. We will assist Enrollees in scheduling medical and BH appointments and, will conduct follow-up in collaboration with the ACO or MCO, to ensure that appointments are kept and, that the Enrollee's situation has not changed.

The Greater Lowell BH CP will select an information technology vendor to provide a communication platform between care settings, including between providers in different ACOs with whom we will partner. The system will be selected by competitive bid, configured and implemented in the preparation period.

4. Care Transitions

The Greater Lowell BH CP is aware that transitions of care represent an important opportunity to promote quality, Enrollee satisfaction and cost-effectiveness of care delivery. We will deliver transitional services to assist the Enrollee successfully transition from a hospital, skilled nursing facility or rehabilitation stay to their chosen living situation. In establishing a strong transition to the community, we will further seek to proactively plan services and supports and avoid or decrease unnecessary Emergency Department (ED) visits or hospitalizations. Our goal is to support the Enrollee's ability to live successfully in the community, in the setting of their choice.

We will participate, in collaboration with the ACO or MCO and other providers, in transition planning prior to an inpatient discharge. We will maintain strong relationships with the ACO or MCO, participate in discharge planning meetings and follow-up with hospitalized Enrollees through a face-to-face visit that will occur within three business days following discharge. We feel strongly that visits to Enrollees who were recently hospitalized must be coordinated with the ACO or MCO so as not to overwhelm them.

As part of the transitions process, we will update the PCTP and coordinate clinical and support services as needed. We will further assist the Enrollee to access additional supports from providers (with warm hand-offs as needed and appropriate) and follow-up to ensure that the Enrollee attends the appointment. Where Enrollee's miss appointments, we will address any barriers to care, such as providing transportation assistance.

5. Medication Reconciliation

The Greater Lowell BH CP adheres to evidence-based practices in all aspects of care management, transition planning, and medication administration. Our registered nurses, active members of the Enrollee's Care Team, will perform medication reconciliation as part of transition planning upon discharge, and at appropriate times when delivering BH CP services. We will contact the Enrollee's PCP to verify medication orders and will review with the Enrollee, whether all prescriptions were filled appropriately.

Our BH CP Care Coordinator or Community Health Worker will review medications during the transition visit within three days of discharge and will assist the Enrollee in adhering to their medication regimen. The BH CP Care Coordinator or Community Health Worker and the registered nurse will identify additional supports to assist the Enrollee with taking medications appropriately. If the Enrollee is in a Medication Assistance Program (MAP), the BH CP will work with the Enrollee's PCP to update the medication order forms with the MAP provider.

6. Health and Wellness Coaching

a. Health and Wellness Education, Coaching and Health Promotion Programs

The Greater Lowell BH CP believes that evidence-based health and wellness promotion activities are an integral component of improving the overall wellness and recovery for individuals with SMI and SUD and related disorders.

As described in our response to Section 7.2.D.2, we have significant experience providing health and wellness education to our Enrollees. For example, we maintain an active Health and Wellness Committee, provide staff training in Executive Order 509 nutrition standards with many programs offered related to nutrition, connect Enrollees to tobacco cessation programs, and educate Enrollees on self-management of chronic medical conditions. We will leverage our experience and existing processes to establish a comprehensive, evidence-based Health and Wellness program that meets or exceeds the requirements detailed in Section 2.3.F of Attachment A.

In our experience, some Enrollees have a greater need for health and wellness education, coaching, and intervention than others. In some cases, general educational information will suffice. In others, such as when an Enrollee is significantly overweight, sedentary, or is struggling with tobacco use, more intensive interventions may be required. For these Enrollees, we will offer wellness programs of longer duration (3 or more months), which combine education and activity, and incorporate both nutrition and physical exercise are more likely to be effective than are programs of shorter duration, those focusing only one factor (e.g. nutrition or exercise), or unstructured, education-only programs. As a BH CP, we will establish collaborative Health and Wellness programs with ACOs.

b. Methods for Ensuring the Engaged Enrollee's Goals for the Health and Wellness Programs Are Recorded and Tracked

As part of the Comprehensive Assessment, we will evaluate the Enrollee's need for Health and Wellness information, coaching, or other interventions. We will identify any high-risk behaviors, including poor nutrition, overweight or obesity, lack of exercise, and other risk factors and share this information with the Care Team, and the Enrollee's ACO. The Enrollee's self-identified goals and objective for addressing these needs will be documented in the Enrollee's PCTP. The Care Team will monitor Enrollee's participation in recommended Health and Wellness program(s), and periodic updates will be provided to the Enrollee's ACO Contact Person or Care Management Team.

7. Connection to Community and Social Services

a. Plans to Evaluate Engaged Enrollees for Social Service Needs

The Greater Lowell BH CP employs a person-centered approach that considers the total care needs of Enrollees with SMI or SUD. As a BH CP, we will foster an integrated system of care by collaborating with medical providers, Care Managers, ACOs, and other stakeholders, beginning with a Comprehensive Assessment to identify, among other needs, social service needs that can be met by social services and supports agencies.

Our assessment tool, which will be approved by EOHHS prior to use, will assess such needs as housing, utility assistance, social and cultural engagement, employment services, transportation, child care, food and nutrition supports, physical security, and any additional Flexible Supports that an ACO partner identifies.

As described in response to Section 7.3.B. above, The Greater Lowell BH CP's has long-standing relationships with community and social service agencies in our service area and will leverage these relationships to ensure Enrollee access to needed supports and Flexible Services.

b. Ensuring Care Coordinators are Familiar with a Wide Breadth of Social Services and Supports, and Providers of These Supports

The Greater Lowell BH CP currently has processes in place to refer to and coordinate with community services providers and social service agencies. We will use these existing processes to facilitate ongoing communication and information-sharing and ensure that Enrollees have timely access to needed community supports.

Our formal current and planned approaches include:

- Developing comprehensive referral and community resource guides for Engaged Enrollees and ACO staff
- Appointing dedicated points of contact for ACOs and MCOs
- Executing memoranda of understanding with providers and community organizations regarding the delivery and coordination of services
- Appointing liaisons to foster relationships and communication with community agencies

c. Planned Strategies for Collaborating with ACOs to Recommend Flexible Services

We will jointly develop processes and procedures with ACOs in our service area to coordinate access to Flexible Supports authorized by the ACO. Care Managers will work with ACO Care Managers for Engaged Enrollees to identify supports (as documented and authorized by the ACO) and jointly establish a plan for providing or arranging for them (as appropriate). These services will be included in the Enrollee's PCTP and monitored by the Care Team. Specific strategies for collaborating with ACOs and MCOs include:

- Upon the execution of the partnership, we will orient the ACO to our organization, services provided or facilitated, structure and operations of our Care Team model, and provide contact information.
- Establish and facilitate a joint Care Coordination Planning Committee to develop processes and procedures to ensure communication and collaboration between the two organizations' care management teams.
- Establish and maintain periodic joint care management meetings (telephonic, WebEx, face-to-face) to ensure appropriate communication, collaboration, follow-up, and accountability.
- Develop and maintain a common community resource directory for use by Enrollees and staff.
- Conduct joint training (initial and periodic) for care management, care coordination staff.
- To the extent allowed by the Enrollee, share care plans, progress reports, status reports, and other pertinent information about Engaged Enrollees with the ACO.

D. Innovative technologies for service delivery

Lowell CHC and our Affiliated Partners are proficient in the use of technology to facilitate consistent and accurate documentation and provide effective and efficient services to Enrollees in their homes and community settings. The Lowell BH-CP have technology solutions in place to support their day to day operations. In the case of Lowell CHC, it uses eClinicalworks to support the delivery of integrated care. Lowell House uses Credible Software which is designed for behavioral health documentation. Mental Health Associates of Greater Lowell uses Netsmart which is also designed for behavioral health documentation. The technology solutions all have the capability to exchange information via HL7 interfaces. This will allow the Lowell BH-CP to implement a care management tool which will be able to support information exchange using this industry standard.

Lowell CHC as an example has leveraged its electronic health record platform to support activities such as home visits. Community Health Workers can access the electronic record via secured connection to retrieve information and document their encounter. The health center has recently piloted the use of Apple iPad tablets to enhance the staff and patient experience. Additionally, Lowell CHC has deployed iPads to assist with patient interpretation using video. This is particularly important for patients who communicate via American Sign Language.

The health center has robust clinical informatics reporting capabilities which allow the generation of patient population reports. Specifically, Lowell CHC has been working with the Massachusetts League of Community Health Centers and Azara Healthcare to develop a clinical reporting tool which allows the health center to have a clinical outcomes dashboard. This tool also allows the health center to compare itself to almost 50 other community health centers.

As the lead agency, Lowell CHC will work with its Affiliated partners to share best practices and offer technical assistance to ensure that all elements associated with technology and innovation are in alignment with the model of care requirements.

Additional information and sample reports are available upon request from EOHHS.

E. Personnel and staffing

1. Organizational Chart

We provide our organizational chart as **Attachment 7.3.E-1** to this RFR submission, identifying personnel who will be assigned to accomplish the Contractor responsibilities described in Attachment A of the RFR.

2. Sample Staffing Model

We propose serving 1,750 BH CP eligible Enrollees within our overall Service Area, as detailed in **Attachment D**. Capacity and staffing will grow over time, starting with capacity for 750 Enrollees in year 1. Our staffing model will include the following positions and number of full-time equivalents (FTEs). Administration positions will support all affiliated partners and will be hired in the preparation budget period or year 1. Care Coordination staff will be hired on a rolling basis, aligned with increases in membership throughout the first four years of the program.

Table 7.3.E.2. Staffing Model

Position	**FTE**
Administration	
Director of BH Community Partner	1.0
Intake Coordinator	2.0
Medical Director	0.25
Data Analyst	0.5
Quality Improvement Coordinator	0.5
Administrative Assistant	1.0
Supervision	
Lead Registered Nurse	1.0
* Care Coordinators have supervision responsibilities for Community Health Worker staff	
Care Coordination Staff	
Registered Nurse	3.0
Licensed Clinical Social Worker	2.0
Care Coordinator	9.0

Community Health Worker	20.0
Peer Specialist	2.0
Recovery Coach	2.0

The approximate ratio for Care Coordination Staff is 1:57 Enrollees for direct case management, ratio is 1:46 enrollees including all supportive care coordination roles.

3. Recruitment Plans

Upon award and we will begin recruitment for the management, clinical care, nursing and care coordinator positions. Working with the ACO/MCO's to determine Eligible enrollee numbers and geography in our service area to aid in planning for the care management staff needed for program launch in April. We will expand partnerships with local colleges to recruit using programs that include career fairs, internships, shadowing, and may include innovative programs like student loan payment stipends.

The Greater Lowell BH CP anticipates starting the program with care management staffing that includes: one Lead RN, one Registered Nurse, one LCSW Clinical Care Manager, three Care Coordinators, one Clinical Care Manager, one RN, three Care Coordinators, eight Community Health Workers, one Peer Specialist and one Recovery Coach. We will continue to recruit for positions in advance of program growth, using the budget periods as milestones for assessment of enrollment and attrition rates, so that all staff is appropriately trained before they interact with individuals served.

One approach that this team will employ is utilizing the Recovery Coaching Model and hiring trained recovery coaches. The Recovery Coaching Model is a model that is derived out of the research that peer support facilities recovery and reduces health care costs (SAMSHA). SAMSA has provided a definition of recovery that includes not only a persons' sobriety or abstinence from a substance but is a broader definition that encompasses an individuals' overall health, home, purpose, and community. The Recovery Coaching Model aims to address all of these domains with each person in an individualized way.

Initial Recruitment Plan		
Position	**Begin Recruitment**	**Target Hire Month**
In-kind Senior Management Positions Required by the RFR in Section 7.2.B.	Already in place	Already in place
Director of BH CP Services/Care Coordination	October 2017	December 2017
Lead RN	January 2018	March 2018
Registered Nurse	March 2018	May 2018

Care Coordinators/Community Health Workers	March 2018	April/May 2018
Recovery Coordinator/ Peer Specialists	March 2018	May 2018
Application/Intake Coordinators	March 2018	May 2018
Admin Assistant	December 2017	January 2018
Data Analyst and QI Coordinator	May 2018	June 2018
Intake Coordinator	March 2018	May 2018
