<sup>a</sup> For some measures, the measurement period for the numerator, denominator, or continuous enrollment period varies depending on a specified date for each enrollee (such as enrollee birthdates, prescription or treatment start dates, and discharge dates). For these measures, two ranges are shown. The first date range identifies the full range of possible dates that states will need to use to calculate the measure for all measure-eligible enrollees. The text in parentheses describes the measurement period that should be used for each eligible enrollee.

<sup>b</sup> When reporting each measure to CMS, states should indicate whether they defined the measurement period according to Core Set specifications. For many measures, this date range corresponds to calendar year 2023 (January 1, 2023 – December 31, 2023). Some measures also require states to review utilization or enrollment prior to this period to identify the measure eligible population. For example, the AMM-AD measure instructs states to identify enrollees with antidepressant prescriptions that started May 1, 2022 through April 30, 2023 (the first date range). However, states will also need to review enrollee medication history for 105 days prior to the start of the index prescription (the second date range). States that followed the FFY 2024 Adult Core Set specifications (that is, calculated the denominator using prescriptions from May 2022 through April 2023) should select “Yes, our state adhered to Core Set specifications in defining the measurement period for calculating this measure.” States that used a different date range, should answer “No” to this question and provide the Start Date and End Date they used to identify the Denominator (based on the first date range and not the look-back period). States should note any deviations to any measurement period (numerator, denominator, continuous enrollment) in the “Deviations from Measurement Specifications” section.

<sup>c</sup> No more than one gap in enrollment of up to 45 days during the continuous enrollment period.

<sup>d</sup> No more than one gap in enrollment of up to 45 days during each year of the continuous enrollment period.

<sup>e</sup> No more than one gap in enrollment of up to 45 days for each full calendar year of continuous enrollment. No gaps are allowed during the first three months of the continuous enrollment period (October 1, 2021 – December 31, 2021)

<sup>f</sup> Blood pressure reading must occur on or after the date of the second diagnosis of hypertension.

<sup>g</sup> Applies to both the Most or Moderately Effective Contraception rate and Long-Acting Reversible Contraception (LARC) rate.

<sup>h</sup> No more than one gap in continuous enrollment of up to 31 days during the measurement year.

<sup>i</sup> No more than one gap in enrollment of up to 45 days during the last six months of the measurement year. In addition, the beneficiary must be enrolled in Medicaid or CHIP at the time of the survey.

<sup>j</sup> Applies to all rates: Alcohol use disorder, Opioid use disorder, Other substance use disorder, and Total.

<sup>k</sup> No more than one gap in enrollment of up to 45 days during the 365 days prior to the index discharge date and no gap during the 30 days following the index discharge date.
